ADDITIONAL TERMS AND CONDITIONS

See attached document(s) for additional Terms and Conditions

SOLICITATION NUMBER: CRFP 0511 BMS2000000002
Addendum Number: 1

The purpose of this addendum is to modify the solicitation identified as ("Solicitation") to reflect the change(s) identified and described below.

Applicable Addendum Category:

[ ] Modify bid opening date and time

[ ] Modify specifications of product or service being sought

[ ] Attachment of vendor questions and responses

[ ] Attachment of pre-bid sign-in sheet

[X] Correction of error

[ ] Other

Description of Modification to Solicitation:

To clarify the location, date, and time of the mandatory pre-bid meeting.

THE MANDATORY PRE-BID MEETING WILL BE HELD AT:

ONE DAVIS SQUARE
SUITE 100E, CR134
CHARLESTON WV 25301

ON JANUARY 8, 2020, AT 10:00 AM EST

No other changes.

Additional Documentation: Documentation related to this Addendum (if any) has been included herewith as Attachment A and is specifically incorporated herein by reference.

Terms and Conditions:

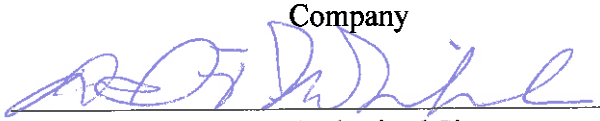
1. All provisions of the Solicitation and other addenda not modified herein shall remain in full force and effect.

2. Vendor should acknowledge receipt of all addenda issued for this Solicitation by completing an Addendum Acknowledgment, a copy of which is included herewith. Failure to acknowledge addenda

may result in bid disqualification. The addendum acknowledgement should be submitted with the bid to expedite document processing.

ADDENDUM ACKNOWLEDGEMENT FORM
SOLICITATION NO.: CRFP 0511 BMS2000000002

Instructions: Please acknowledge receipt of all addenda issued with this solicitation by completing this addendum acknowledgment form. Check the box next to each addendum received and sign below. Failure to acknowledge addenda may result in bid disqualification.



Acknowledgment: I hereby acknowledge receipt of the following addenda and have made the necessary revisions to my proposal, plans and/or specification, etc.

Addendum Numbers Received:
(Check the box next to each addendum received)

[✓]	Addendum No. 1	[ ]	Addendum No. 6

ADDITIONAL TERMS AND CONDITIONS

See attached document(s) for additional Terms and Conditions

SOLICITATION NUMBER: CRFP BMS2000000002
Addendum Number: 4

The purpose of this addendum is to modify the solicitation identified as CRFP BMS2000000002 ("Solicitation") to reflect the change(s) identified and described below.

Applicable Addendum Category:

[ ] Modify bid opening date and time

[ ] Modify specifications of product or service being sought

[ ] Attachment of vendor questions and responses

[X] Attachment of pre-bid sign-in sheet

[ ] Correction of error

[ ] Other

Description of Modification to Solicitation:

To provide the pre-bid meeting sign-in sheets.

No other changes.

Additional Documentation: Documentation related to this Addendum (if any) has been included herewith and is specifically incorporated herein by reference.

Terms and Conditions:

1. All provisions of the Solicitation and other addenda not modified herein shall remain in full force and effect.

2. Vendor should acknowledge receipt of all addenda issued for this Solicitation by completing an Addendum Acknowledgment, a copy of which is included herewith. Failure to acknowledge addenda may result in bid disqualification. The addendum acknowledgement should be submitted with the bid to expedite document processing.

ADDENDUM ACKNOWLEDGEMENT FORM
SOLICITATION NO.: CRFP BMS2000000002

Instructions: Please acknowledge receipt of all addenda issued with this solicitation by completing this addendum acknowledgment form. Check the box next to each addendum received and sign below. Failure to acknowledge addenda may result in bid disqualification.

Acknowledgment: I hereby acknowledge receipt of the following addenda and have made the necessary revisions to my proposal, plans and/or specification, etc.

Addendum Numbers Received:
(Check the box next to each addendum received)

[ ]	Addendum No. 1	[ ]	Addendum No. 6

SOLICITATION NUMBER: CRFP 0511 BMS2000000002
Addendum Number: 6

The purpose of this addendum is to modify the solicitation identified as CRFP 0511 BMS2000000002 ("Solicitation") to reflect the change(s) identified and described below.

Applicable Addendum Category:

[ ] Modify bid opening date and time

[ ] Modify specifications of product or service being sought

[X] Attachment of vendor questions and responses

[ ] Attachment of pre-bid sign-in sheet

[ ] Correction of error

[ ] Other

Additional Documentation: This purpose of this addendum is to:

1. Provide Agency responses to additional Vendor questions.

Bid Opening will remain 02/18/2020 at 1:30 PM ET

No other changes.

Terms and Conditions:

1. All provisions of the Solicitation and other addenda not modified herein shall remain in full force and effect.

2. Vendor should acknowledge receipt of all addenda issued for this Solicitation by completing an Addendum Acknowledgment, a copy of which is included herewith. Failure to acknowledge addenda may result in bid disqualification. The addendum acknowledgement should be submitted with the bid to expedite document processing.

CRFP 0511 BMS2000000002
Agency responses to additional Vendor questions

1.) Is it the State's intent that Attachment 4: Project Organization and Staffing Approach (25 pages) and Attachment 5: Mandatory Requirements (10 pages) be double-spaced? We want to ensure we have interpreted this correctly and all bidders will be held to this requirement under the same page limits.

Answer: Yes, this is the State's intent. However, as noted in prior responses, this requirement is not applicable to resumes and bulleted lists which may be single spaced.

2.) Can the state confirm that required supplemental documentation previously excluded from page counts (organizational charts, resumes, forms, descriptions of roles associated with organizational charts) do not count towards applicable page counts?

Answer: Attachments should correspond to the page limits defined by the applicable section. The vendor is permitted 2 pages per resume, as outlined within Attachment 4. Please note that no documents referenced within Appendix 4 is due at time of bid, and thus should not impact page availability. For any plans requested as part of the specifications, the vendor may provide narrative describing their plans, should the plan itself exceed the allotted number of pages.

ADDENDUM ACKNOWLEDGEMENT FORM
SOLICITATION NO.: CRFP 0511 BMS2000000002

Instructions: Please acknowledge receipt of all addenda issued with this solicitation by completing this addendum acknowledgment form. Check the box next to each addendum received and sign below. Failure to acknowledge addenda may result in bid disqualification.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

ATTACHMENT 3: VENDOR QUALIFICATIONS & EXPERIENCE

1. Organization Overview

This section of the Vendor's Technical Proposal should include an overview of the Vendor and any subcontractor(s), excluding direct-care providers. The Vendor should provide their response as part of their bid in accordance with the template(s) below. Unless otherwise stated, requested documentation must be provided to the Department as part of the bid submission.

1.1 Vendor Overview

Provide all relevant information regarding the general profile of the Vendor. The Vendor should provide their response as part of their bid in accordance with the template below.

The Vendor is NOT to change any of the pre-filled cells in the following tables.

Table 5: Vendor Overview[1]

Vendor Overview	
Corporate (Legal) Name	Coventry Health Care of West Virginia, Inc. dba Aetna Better Health of West Virginia (Aetna Better Health of West Virginia)
Name of Parent Company (If Applicable)	Aetna Health Holdings, LLC is Aetna Better Health of West Virginia's direct parent. Aetna Inc. and CVS Pharmacy, Inc. are indirect parents of Aetna Better Health of West Virginia. CVS Health Corporation (CVS Health) is Aetna Better Health of West Virginia's ultimate parent.
Tax Identification Number	55-0712129
Industry (North American Industry Classification System [NAICS])	NAIC# 95408
Type of Legal Entity	For-profit corporation
Company Ownership (e.g., Private/Public, Joint Venture)	Aetna Better Health of West Virginia's direct parent, Aetna Health Holdings, LLC, is a private company, as are two of its indirect parents, Aetna Inc. and CVS Pharmacy, Inc. Aetna Better Health of West Virginia's ultimate parent, CVS Health Corporation, is a publicly traded company.
Number of Full-Time Employees	Aetna Better Health of West Virginia has approximately 247 full-time staff, as of January 2020. (This total includes staff for both Mountain Health Trust and Mountain Health Promise).

[1] Aetna Better Health of West Virginia is a dba for Coventry Health Care of West Virginia, Inc. and is used for Coventry Health Care of West Virginia, Inc.'s Medicaid line of business. Separate from its Medicaid line of business, Coventry Health Care of West Virginia, Inc. also conducts Medicare business. Unless otherwise indicated, the responses in Table 5, Vendor Overview, pertain to Aetna Better Health of West Virginia's Medicaid line of business. If the Department seeks information about Coventry Health Care of West Virginia, Inc.'s Medicare business, we will provide it upon request.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Vendor Overview	
Last Fiscal Year Company Revenue	Aetna Better Health of West Virginia's last fiscal year company revenue was $561,337,096 (2018).
Last Fiscal Year Company Net Income	Aetna Better Health of West Virginia's last fiscal year company net income was $17,218,971 (2018).
% of Revenue From State Government Clients in the United States	100% of Aetna Better Health of West Virginia's revenue is from state government clients.
Number of Years in Business	23 years[2]
Number of Years Vendor Has Been Providing the Type of Services Specified in the RFP	Aetna Better Health of West Virginia has been providing Medicaid services of the type specified in the RFP since 1996. The Aetna Medicaid organization has been administering Medicaid services for over 30 years.
Number of Employees Providing the Type of Services Specified in the RFP	Aetna Better Health of West Virginia has approximately 247 full-time staff, as of January 2020. (This total includes staff for both Mountain Health Trust and Mountain Health Promise).

[2] Aetna Better Health of West Virginia is the dba used by Coventry Health Care of West Virginia, Inc. for its Medicaid line of business. Coventry Health Care of West Virginia, Inc., formerly known as Carelink Health Plans, Inc., has been serving West Virginia's Medicaid population since 1996 and was previously a subsidiary of Coventry Health Care, Inc. (Coventry). In May of 2013, Coventry and all its subsidiaries were acquired by Aetna Inc. On January 1, 2014, Coventry was merged into Aetna Health Holdings LLC. In December of 2015, Coventry Health Care of West Virginia, Inc. began using the dba Aetna Better Health of West Virginia for its Medicaid line of business.

REQUEST FOR PROPOSAL

Department for Health and Human Resources

CRFP 0511 BMS2000000002

Vendor Overview	
Name of Contact Person for Bid	Todd White, Chief Executive Officer

The Vendor should provide a list of all counties for which the Vendor intends to serve members, and indicate whether the Vendor has received approval from the Department of Insurance to serve Medicaid and WV CHIP members in each county. *All counties must be served under the contract resulting from this solicitation.*

Counties to be Served

Aetna Better Health of West Virginia has approval from the Department of Insurance and currently serves Medicaid members in all 55 West Virginia counties. We intend to continue to serve members in all 55 West Virginia counties.

- The Vendor should describe the business type of the Vendor and its parent company, as applicable.

Business Type of the Vendor and Its Parent Company

Aetna Better Health of West Virginia is a for-profit corporation. Aetna Better Health of West Virginia is wholly owned by Aetna Health Holdings, LLC, a for-profit limited liability company. Aetna Health Holdings, LLC is a wholly owned subsidiary of Aetna Inc., a for-profit corporation. Aetna Inc. is a wholly owned subsidiary of CVS Pharmacy Inc., also a for-profit corporation. CVS Pharmacy Inc. is wholly owned by CVS Health Corporation, a for-profit, publicly traded company. **Figure 3.1.1-1** depicts the relationship between Aetna Better Health of West Virginia and its parent entities.

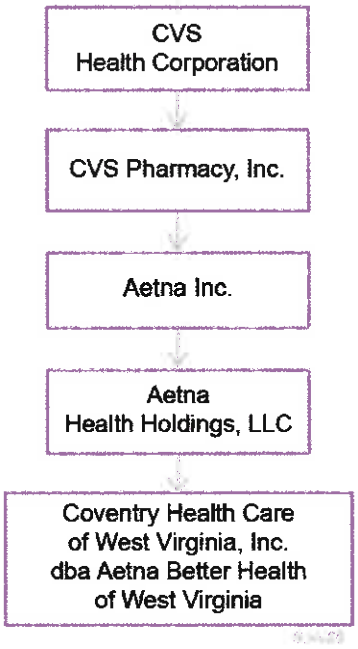

Figure 3.1.1-1: Aetna Better Health of West Virginia's Relationship to its Parent Entities
Aetna Better Health of West Virginia is a local health plan supported by national resources.

- The Vendor should provide the number of current Medicaid and CHIP members in other states, by state, and describe any experience managing services for members in other Medicaid programs or other lines of business within West Virginia.

With more than 23 years serving as a committed partner to the people of West Virginia and the Department of Health and Human Resource (Department), Aetna Better Health of West Virginia has a deep understanding, years of experience and a proven, longstanding history of providing innovative solutions that improve health outcomes for West Virginia's Medicaid population. Since 1996, we have had the honor and privilege of providing access to care through the delivery of comprehensive services supporting the program's goals and full scope of work. Every day, our entire team—both locally and nationally—is focused on fostering robust relationships, collaborations, and alignment with each of our system partners to provide our members with needed supports and services in the most integrated, appropriate, and cost-effective way possible. Our member obsessed approach to helping our members achieve their health ambitions means we are with our members every step of the way.

This commitment is reflected in Aetna Better Health of West Virginia's many successful outcomes and the ongoing innovations that allow us to inspire and optimize performance and service.

Aetna Better Health of West Virginia's Medicaid Experience

We have had the privilege of serving the West Virginia's Mountain Health Trust populations since 1996 and the West Virginia Health Bridge Medicaid expansion population since 2015 and we were recently honored to be awarded Mountain Health Promise. We currently serve more than 137,000 West Virginia Medicaid beneficiaries and will serve approximately 18,000 Mountain Health Promise members across all 55 counties once implemented in the first quarter of 2020. The Aetna Medicaid organization's established presence in the state as an original Medicaid managed care organization provides us with important insights and depth regarding the unique needs of our members and providers across all regions of the State. As a long-term, committed partner of the Department, Aetna Better Health of West Virginia has the structure and resources, a proven whole-person approach, and the innovative and collaborative drive to deliver high-quality, cost-effective health care services to West Virginia's Medicaid and Children's Health Insurance Program (CHIP) beneficiaries.

Demonstrated History of Success

Aetna Better Health of West of Virginia has a demonstrated history of supporting the Department in achieving its program goals and improving the health and lives of West Virginians. We have maintained 'Commendable' status from the National Committee for Quality Assurance (NCQA) without interruption since 2016. Additionally, for three of the last four years, we have earned 100% in all areas—grievance and appeals, Healthcare Effectiveness Data and Information Set (HEDIS) performance measure validation, and performance improvement plans—of the External Quality Review Organization (EQRO) reviews, with a score of 99% in 2017.

Our in-depth understanding and established local presence in communities throughout the State informs our organizational framework to provide integrated, person-centered services—to develop and maintain a high-quality, accessible provider network and develop innovative approaches to

achieve improved health outcomes, enhance quality, reduce fragmentation, and offer seamless continuity of care. Under the leadership of Chief Executive Officer Todd White, a proud, lifelong West Virginian from the Charleston area, Aetna's experienced team has a deep understanding of the critical health issues and members' needs in the State. Chief Financial Officer Tina Bailes has more than 20 years of experience in health care, including 17 years with the West Virginia Bureau for Medical Services in progressive positions, including serving as the Deputy Commissioner of Finance and Administration. Compliance Officer Alva "Fuzzy" Page III, Esq. has more than 15 years of health care experience, including six years serving as general counsel for the West Virginia Bureau for Medical Services and six years serving as a West Virginia Assistant Attorney General.

As a leader in innovation, we continually strive to identify and develop new approaches to improve health outcomes for West Virginia's Medicaid and CHIP members. Aetna Better Health of West Virginia's deep understanding of West Virginia uniquely allows us to customize national models to the specific geographic and cultural needs through the state. For example, we are customizing the Family First program, a national model, to meet the challenges and needs that are specific to West Virginia's Mountain Health Promise members and families. A few examples of new innovations we continue to develop and implement for the Mountain Health Trust and West Virginia CHIP populations include the following:

- System of care (SOC) model: Our SOC model assess factors that negatively impact health and addresses them through a comprehensive array of supports and services. Aetna's integrated approach is inclusive of physical health, behavioral health, oral health, health literacy, and functional needs, as well as social needs such as housing, employment, healthy food, and transportation. Our SOC is based on the principles of trauma-informed care, culturally and linguistically appropriate services, and recovery.

- Regionally based Care Connection teams (CCTs): We understand the impact geographic and regional differences have on our West Virginia members, and have established regional Care Connection Teams who live in, know, and understand the communities in which they work. Additionally, we pair our members with care coordinators whose expertise, credentials, and training are aligned to the clinical and social needs of the member. We have developed comprehensive regional and statewide initiatives and programs to address key health disparities West Virginians face such as the following:
  - Neonatal abstinence syndrome (NAS) program: Our NAS care management program focuses on providing supports to keep moms engaged in treatment and increase the number of babies staying with their moms. **In 2019, 87 percent of mothers in our NAS care management program stayed in opioid treatment and/or counseling during pregnancy and for the first year after delivery.**
  - Diabetes management program: Aetna's diabetes management program seeks to assist members with a diagnosis of diabetes and their supports to understand the health risks of living with diabetes, as well as the benefits of adhering to blood glucose testing and prescribed treatment regimens. The program elicits changes in members' behaviors, positively impacting their current and future health and wellness.
  - Social determinants of health (SDOH): We have implemented a closed loop referral system to connect members to services that address SDOH needs. This closed loop system, coupled with the CCTs' intimate knowledge of regional needs, allows us to provide appropriate and timely referrals that reduce SDOH-related barriers in accessing care.

Impact of Local Care

Our regional Care Connection teams provide highly effective services because they live and know the communities in which they work. The impact of our local approach to care is demonstrated by the following outcomes:

- Increased face-to-face visits 300%
- Decreased opt-out rate 41%
- Reduced readmissions 14%
- Reduced emergency room visits 7%

- Strategic collaborations: Aetna Better Health of West Virginia has also worked to develop key programmatic partnerships with federally qualified health centers such as Williamson Health and Wellness to offer co-located care management in collaboration with their community health workers. Additionally, we have longstanding relationships with many community-based organizations, such as West Virginia's two food banks, Facing Hunger and Mountaineer Food Banks, including providing $13,000 to the two food banks during the 2018 teacher's strike to provide students with access to quality food during school closures and purchasing a box truck for the Mountaineer Food Bank to help with their mobile food pantry events.

Aetna Better Health of West Virginia understands that each population has unique service needs, and our local, member-devoted approach focuses on our individual members' holistic health needs. We are fully committed to collaborating with the Department and other West Virginia agencies, members,

providers, and community-based organizations, and we are excited to leverage our local and national experience to provide individualized, quality care and exceptional customer service for members and providers.

Aetna's National Medicaid and CHIP Experience

With over 30 years of experience serving Medicaid members, the Aetna Medicaid organization possesses the expertise necessary to provide a quality-driven, health care delivery model that directly aligns with the Department's objectives. Aetna has a long history of responding to the holistic needs of our members by expanding our focus to go beyond the delivery of physical health care services to include coordinated, team-based approaches to care delivery, promote community-based public health initiatives, mitigate SDOH, and increase access to needed services for underserved populations and rural communities. Our health plans are always locally based and supported by national resources as we continuously seek new and innovative ways to serve the most vulnerable individuals in their communities with quality benefits, services, and improved outcomes.

Aetna's Medicaid and CHIP Members Served by State

In addition to our 23 years of locally based experience in West Virginia, Aetna's national Medicaid organization currently serves approximately 2.3 million people in 16 states, including nearly 145,000 CHIP members in 12 states. Our extensive Medicaid managed care experience is summarized in **Table 3.1.1-1**, and includes serving the full spectrum of Medicaid populations, including Aged Blind Disabled/Social Security Income (ABD/SSI), Affordable Care Act (ACA) adults, behavioral health (BH), Children's Health Insurance Program (CHIP), children with special health care needs (CSHCN), dually-eligible individuals (Duals), intellectually/developmentally disabled (I/DD), long-term services

and supports (LTSS), serious mental illness (SMI), and Temporary Assistance for Needy Families (TANF) populations.

[10] Aetna Better Health of West Virginia was recently awarded the Mountain Health Promise contract, which is scheduled to go live first quarter 2020.

Aetna's National Experience Managing Services for Members in Medicaid and CHIP Programs

Over the years, we have contributed to, learned from, and helped to shape the evolution of programs in West Virginia and across the country. Our fully integrated, person-centered, and holistic approach guides our decision-making, informs our policies and culture, and fosters our ongoing relationships with State agencies, providers, community partners, and members and their families to align economic incentives with quality outcomes. We have national experience in implementing, managing, and caring for populations similar to those served by the West Virginia Medicaid and CHIP programs. Our programs focus on member wellness, prevention, acute care, and chronic care needs results in improved access to culturally competent care, higher quality care, and a simplified member experience. Aetna is creating innovative ways to work with providers to deliver greater value to patients. Instead of concentrating solely on treating people when they are sick, we place a greater emphasis on keeping them healthy. In pursuit of this ambition, Aetna partners with provider organizations to improve health outcomes, decrease care costs, and provide a more streamlined member experience. In addition, we address social determinants of health in communities to help our members achieve their health goals. Through continual innovation, openness, and collaboration, we help to transform the health care system by taking a holistic approach to health and well-being.

Aetna health plans in other Appalachian states such as Kentucky, Ohio, Pennsylvania, and Virginia face some of the same unique challenges experienced by West Virginia, including living in large rural areas with transportation and provider access challenges, as well as mitigating the effects of the opioid epidemic. For example, Aetna has developed a multifaceted strategy for combating the complex issue of opioid use disorder (OUD) that emphasizes care coordination and continuity of care by reducing barriers that restrict access to medication-assisted treatment, support programs, and non-

pharmaceutical alternatives. We created an innovative opioid dashboard, which uses pharmacy and medical claims data to trend key metrics to help us combat inappropriate use of opioids. Data from our opioid dashboard demonstrate our success across all Medicaid plans. **Between July 2016 and October 2018, the Aetna Medicaid organization increased the rate of non-opioid treatment for chronic pain by 52.9 percent and decreased the rate of opioid prescriptions for members with OUD by 44 percent.**

Aetna's Medicaid organization has also demonstrated long-term success in managing CHIP programs, including serving CHIP members for more than 25 years in both Pennsylvania and Florida. Each health plan has developed localized best-practice initiatives to serve the individualized needs of the members and demonstrated sustained improvements in member health outcomes. To further demonstrate Aetna's experience managing services for Medicaid and CHIP populations, we provide three examples of other states where the proposed solution of similar size and scope has been implemented. These examples include Virginia, New Jersey, and Florida.

Example 1: Virginia

Aetna Better Health of Virginia contracts with Department of Medical Assistance Services to provide Medicaid, CHIP, LTSS, and Dual Eligible Special Needs Plans managed care services to our members. The scope of services includes medical, behavioral health, pharmacy, vision, and non-emergency medical transportation. Populations include pregnant women, infants, children, low-income adults, children/youth with special health care needs, children in foster care and individuals formerly in foster care, and individuals receiving SSI.

Aetna Better Health of Virginia serves its members through a holistic approach that incorporates a coordinated network of physical and behavioral health care providers, as well as community-based organizations. Our integrated care management program and care coordination system facilitates

collaboration among members, practitioners, providers, care coordinators, family members, the member's circle of support, community organizations, and existing case management entities, thus resulting in a seamless system of services. Aetna Better Health of Virginia works to understand each member's readiness to change, individual preferences and goals, and physical and behavioral health care needs. We assess family and community supports, strengths, and any barriers affecting the member's access to care. In doing so, we help each member achieve their goals and optimize their level of self-care and independence. Our fully integrated system of care is specifically designed to manage members with complex needs. Aetna Better Health of Virginia uses analytic methods to identify our most bio-psychosocially complex and vulnerable members for whom we have an opportunity to make a significant difference.

Simply stated, health care occurs beyond the boundaries of clinical care settings. With a community-focused population health approach, Aetna Better Health of Virginia addresses SDOH in a meaningful way by providing locally tailored solutions that integrate community initiatives with the health care delivery system. We assess SDOH by capturing data through multiple mechanisms including health risk assessments, condition-specific assessments, existing care plans, gaps-in-care reports, reports through our health care equity dashboard, predictive modeling, care coordination claims data, provider feedback, community health workers, community and advocate outreach, member surveys, member advocacy committees, and focus groups. Our health care equity dashboard tracks utilization and identifies members who may benefit from additional interventions and education. It also provides inpatient and emergency department usage by gender, age, race, ethnicity, and county. Similarly, providers access real-time admission, discharge, and transfer information for emergency department, inpatient, and outpatient utilization at the individual member level in collaboration with the Commonwealth's Emergency Departments Information Exchange program.

The effectiveness of this integrated, person-centered wholistic approach has helped to achieve improved member health outcomes, while also demonstrating cost-effectiveness for the program. A few examples of outcomes include the following:

- Focus on one- and two-day admissions for inpatient-to-observation combined and experienced a decrease from 67.9 percent in September to 66.5 percent in August
- Pharmacotherapy management of chronic obstructive pulmonary disease exacerbation (PCE) bronchodilator measure is 89.90 percent, which is at the 95th percentile
- The medication management for people with asthma (MMA) measure for people 51-64 years at 65.22 percent compliance is in the 75th percentile
- Persistence of beta blocker treatment after a heart attack (PBH) is at 83.33 percent, which is the 75th percentile
- Statin therapy for patients with diabetes (SPD) statin adherence of 80 percent is at of 78.95 percent, which is the 75th percentile
- Evaluated the utilization of behavioral health services by provider identifying potential overutilization and rectifying the authorization and utilization when appropriate, resulting in a savings $4.5M FY 2019
- SDOH multidisciplinary team that includes registered dietician, employment and housing specialists, peer support specialists, and community health workers
- Deployed community activation efforts including collaboration with CVS Health and trusted community partners to address SDOH such as Feeding America (food insecurity), Health Wagon/RAM (access to care), and Alive RVA/Mental Health of America (behavioral health)
- Attended 307 local events with 134,510 attendees
- Successfully welcoming significant new membership growth in 2019, including 56,000 new ACA Expansion members and 30,000 new TANF/Family Access to Medical Insurance Security members

Example 2: New Jersey

Aetna Better Health of New Jersey's approach employs best practices for integrating the delivery of care for members, including TANF, CHIP, ABD, and LTSS recipients, throughout the entire continuum of care, including acute care, behavioral health treatment, institutional and facility services, and home- and community-based services. The New Jersey Medicaid Family Care program provides a wide range of services including doctor visits, hospital services, prescriptions, tests, vision care, mental health care, dental, nursing home care, and other health care services, depending on the person's eligibility category.

Aetna Better Health of New Jersey supports a collaborative model among state agencies, providers, community-based organizations, and members, as well as strong interdepartmental coordination to optimize communication to address members' needs within the structure of the benefit. Aetna Better Health of New Jersey excels at care management, which is individualized and addresses the whole member in a model that integrates physical health, behavioral health, and social determinants of health. This dedication has contributed to Aetna Better Health of New Jersey achieving improved member outcomes including but not limited to the following:

- Achieving low rates of hospital readmission, averaging between 5 and 8 percent
- Exceeding the state benchmark for home visits (10 percent of members in care management) by achieving 16 percent
- Achieving 91 percent from IPRO and the Division of Medical Assistance and Health Services on the annual Medicaid audit in 2018
- Achieving a score of 49 out 50 possible points on the NCQA onsite review, attaining full NCQA accreditation

Example 3: Florida

For 25 years Aetna Better Health of Florida has served the Florida Healthy Kids Corporation. We remain as passionate and dedicated as we were on day one to providing the coverage, services, and supports needed to benefit the state's school-age children. Our organizational mission to build a healthier world—one person, one community at a time—directly aligns with our approach to care based in a child-centered, family-oriented model that provides comprehensive, quality health care services. As a holistic health partner, we have provided health care services and supports to children in the Florida Healthy Kids program to bridge the health insurance gap among low-income children ages 5 through 18.

We work closely and collaboratively with our provider networks to integrate our innovative solutions in ways that complement their existing technology and health care service delivery goals. Specific offerings include a progressive payment model, innovative data-sharing technology, care

management and care coordination resources, and technical support that work in harmony to assure alignment across the care continuum. Aetna's progressive approach to driving high-quality, positive outcomes gives providers an array of payment arrangements for increasing clinical and financial complexity and sophistication in risk-sharing.

We offer our members in all 67 counties across the state a variety of enhanced benefits and programs at no cost to both subsidized and full-pay members. We chose our enhanced benefits to improve access to care and promote healthy behaviors, fitness, and safety. These benefits address social determinants of health that positively impact outcomes and satisfaction. Our recent achievements in improving the lives of Florida members include, but are not limited to the following:

- Decreased readmissions by 18 percent in 2018-2019
- Decreased emergency room use by 14 percent
- We achieved 86 percent provider satisfaction scores in 2019—the national average score is 66 percent for Medicaid plans
- Achieved 100 percent in our EQRO review
- Achieved a Consumer Assessment of Healthcare Providers and Systems member satisfaction composite score of 4.0 and a Florida Healthy Kids provider satisfaction rate of 92.9 percent, demonstrating our commitment to quality care and the best possible service for our members, their families/circles of support, and our providers
- Provided 18,000 volunteer hours in the first 11 months of 2019 and made significant community contributions to local community organizations and programs

The Aetna Medicaid organization is dedicated to being a collaborative local partner to each of the state agencies we serve. The above are just a few examples of how our local approach, supported with national experience and resources, have had a positive impact on the lives of our members and helped our state partners in achieving their program goals.

Aetna's Experience Implementing Medicaid and CHIP Programs

The Aetna Medicaid organization has a long history of implementing our proposed approach with organizations of similar size and scope to West Virginia in compliance with all federal and state regulations. Aetna has developed and refined its implementation approach and best practices based on three decades of Medicaid managed care experience. This process enables us to serve the needs of members as we work to achieve full compliance and a seamless transition to new regulatory and contractual requirements.

In 30 years, Aetna's national Medicaid organization has never failed a readiness review. We will use this experience and proven work plan process to implement the West Virginia Managed Care program in a timely and compliant manner.

Aetna's National Implementation Resources

Our local health plan expertise is supported by the unparalleled backing of the Aetna Medicaid organization's extensive clinical, operational, and technology implementation experts. Using our proven approach, the Implementation team manages and monitors a timely process that will meet the Department's objectives. A crucial part of our implementation process with every new program implementation is gathering, confirming, and incorporating all federal and state regulatory and technical requirements into our clinical services, administrative operations, transactional platforms, and program management.

The national Aetna Medicaid organization has successfully implemented over 30 Medicaid programs in the past 10 years. Our approach to implementations, which have supported our successful implementations over the past 23 years in West Virginia, includes the following key elements:

- Developing and maintaining strong relationships early and setting up regularly occurring meetings with system stakeholders and state agencies
- Configuring and maintaining health plan data systems to securely share information with providers, community-based organizations, and state agencies
- Holding regular membership feedback forums specifically for stakeholders serving Medicaid and CHIP members

- Continual training for all staff, including those in member services, utilization management, integrated care management, long-term services and supports, pharmacy, and quality on Medicaid program changes, as well as special needs and requirements of the CHIP population and program
- Continuing to train all staff in trauma-informed care and adverse childhood experiences

Aetna Better Health of West Virginia's Implementation Experience

Aetna Better Health of West Virginia's experience in the state, supported by the national resources and expertise of the Aetna Medicaid organization, provides the foundation for our ability to serve the Medicaid and CHIP populations. We have extensive West Virginia experience and understand the state's culture, and we are well-positioned to adapt to meet the unique challenges facing West Virginia today. As an incumbent health plan, Aetna Better Health of West Virginia has an established network of providers and subcontractors with whom we collaborate with a shared commitment to providing the services needed to improve member outcomes. We have good relationships with our providers, who can trust us to provide the training and resources needed to build their capacity to serve the needs of West Virginia's Medicaid and CHIP members. Aetna Better Health of West Virginia is flexible and focused on solutions that work for our communities.

Implementation Success Story

When Aetna commenced implementation of the Mountain Health Promise program in West Virginia in late 2019, we were able to hire more than 90 new staff quickly using a detailed hiring work plan that included posting positions on the Aetna website, LinkedIn, and other electronic venues, West Virginia Nurses Association, community-based organizations, and other national clinical associations. We also offered an enhanced employee referral bonus that generated numerous referrals and conducted a virtual job fair with 108 registrants. We received over 2,330 resumes, screened more than 393 candidates, and conducted more than 286 individual interviews, as well as second and third interviews depending on the position. Aetna completed background checks and hired 95 new employees in less than 2 months.

Aetna Better Health of West Virginia has a proven record of successfully implementing new contracts and expanding our services to new populations. These include the following:

- Welcoming over 21,000 new Medicaid members with three months preparation in July 2019, when another plan exited the West Virginia Medicaid market, which included reviewing

staffing levels, office space, care patterns for the incoming membership, and assessing the provider network. After the transition of the members occurred, we identified several opportunities to improve the utilization and care management activities for the newly transitioned members. Aetna Better Health of West Virginia care management staff engaged in intensive outreach to the new membership to help coordinate needed services to address their complex needs.

- Implementing changes to benefits in support of the State's Medicaid program, including the following:
  - Pharmacy (carved in) in April 2013
  - Children's dental benefit in January 2014
  - Behavioral health benefit in July 2017
  - Pharmacy (carved out) in July 2018
  - Institutions for mental disease in January 2019
  - Substance use disorder in July 2019

Additionally, we are currently in the process of implementing the Mountain Health Promise program, and are honored to work with several state agencies, community-based organizations, and stakeholders, to improve the lives of the approximately 18,000 children and youth who will be served under this new program.

- The Vendor should provide the following information in accordance with 42 CFR § 455.104 (https://www.govinfo.gov/app/details/CFR-2007-title42-vol4/CFR-2007-title42-vol4-sec455-104):
  - The name and address of any person (individual or corporation) with an ownership or control interest in the Vendor. The address for corporate entities should include, as applicable, the primary business address, every business location, and the P.O. Box address.

Individuals and Corporations with Ownership and Control Interest

In **Table 3.1.1-2**, we provide the name and address of any person (individual or corporation) with an ownership or control interest in Aetna Better Health of West Virginia, other than institutional investors with a beneficial ownership of 5 percent or more of CVS Health Corporation's common stock.

Please note that Aetna Better Health of West Virginia's ultimate parent, CVS Health Corporation, is a publicly traded company listed on the New York Stock Exchange and registered with the Securities Exchange Commission (SEC). As a publicly traded company, CVS Health Corporation does not track the identity of individual shareholders but relies on disclosures of beneficial ownership of CVS Health

Corporation stock, which the SEC requires investors to file on Schedules 13D and 13G and related amendments. From time to time, certain institutional investors have filed Schedules 13D and 13G with the SEC, indicating beneficial ownership of 5 percent or more of CVS Health Corporation's common stock. In such filings, the beneficial owner certifies that their shares were acquired in the ordinary course of business and were not acquired for the purpose of changing or influencing the control of CVS Health Corporation.

[12] The first bullet point on page 59 of the RFP requests, "[t]he name of any other organization in which a person with ownership or control interest in the Vendor also has an ownership or control interest." The sentence immediately preceding the RFP questions requesting ownership and controlling interest information instructs Vendors to "provide the [requested] information in accordance with 42 CFR §455.104." See RFP page 58. As worded, the first bullet point on page 59 appears to be broader than what is requested by the corresponding CFR provision, which instead requires "the name of any other disclosing entity (or fiscal agency or managed care entity) in which an owner of the disclosing entity (or fiscal agent or managed care entity) has an ownership or control interest." See 42 CFR §455.104(b)(3). Per the instruction on page 58, the information we provided in response to bullet point one on page 59 is in accordance with what is requested in 42 CFR §455.104(b)(3). If the Department seeks what appears to be the broader information requested in the first bullet point on page 59, we will provide additional information upon request.

- The Vendor should complete the Disclosure of Interested Parties to Contract Form, located at (http://www.state.wv.us/admin/purchase/VRC/Ethics_DisclosureInterestedParties_2018.pdf).

Disclosure of Interested Parties to Contract

Aetna Better Health of West Virginia has included the completed Disclosure of Interested Parties to Contract Form under the **Signed Forms** tab.

Please describe if the Vendor has ever sought, or is currently seeking, NCQA accreditation status, and indicate: if NCQA-accredited, its current NCQA accreditation status and its accreditation term effective dates; and if not accredited, a statement describing whether and when NCQA accreditation status was ever denied. NCQA accreditation is required within nine (9) months of the contract effective date.

National Committee for Quality Assurance

Aetna Better Health of West Virginia's NCQA accreditation status is 'Commendable' for service and clinical quality that meet or exceed NCQA's rigorous requirements for consumer protection and quality improvement.

Aetna Better Health of West Virginia was the first Medicaid managed care organization with Commendable status in West Virginia and the only plan to maintain Commendable status without interruption since 2016. Our accreditation term effective dates are September 20, 2019 through September 20, 2022. A copy of our certificate is included in **Appendix B.** In addition to our successful NCQA outcomes, ABHWV has achieved a 100 percent final EQRO audit score in three of the last four years, with a 99 percent final score in calendar year 2017. Aetna Better Health of West Virginia's NCQA and EQRO results are evidence of our focus on quality outcomes to support our mission to improve every life we serve.

1.2 Subcontractor Overview

If the proposal includes the use of subcontractor(s), excluding direct-care providers, provide all relevant information regarding the profile of each subcontractor. The Vendor should provide their response as part of their bid in accordance with the template below. This section may be duplicated in its entirety, and a page created per subcontractor included.

In **Table 6: Subcontractor Overview** below, we provide the requested information for each of the following subcontractors[1] that Aetna Better Health of West Virginia will utilize to support the Medicaid and WVCHIP programs, if awarded:

- Active Health Management, Inc.
- Aetna Health Management, LLC
- Aetna Medicaid Administrators LLC
- Center for the Study of Services
- Change Healthcare Solutions, LLC
- Cotiviti, Inc.
- CQ Fluency
- Equian, LLC
- eviCore healthcare MSI, LLC d/b/a eviCore healthcare (f/k/a MedSolutions, Inc.)
- First Choice Services, Inc.
- Health Management Systems, Inc.
- Inovalon, Inc.
- MCMC, LLC
- NantHealth, Inc.
- Prest & Associates, LLC
- SKYGEN USA, LLC
- Symphony Performance Health, Inc. d/b/a SPH Analytics
- Vision Service Plan Insurance Company
- Welltok, Inc.

[1] Aetna Better Health of West Virginia delegates credentialing to certain providers in its provider network. We do not understand the definition of "Subcontractor" to include providers performing credentialing functions for themselves. Accordingly, we have not listed them as Subcontractors or provided for them the information and disclosures required of Subcontractors throughout the RFP. If our understanding is incorrect, we will provide any additional information the Department seeks regarding these providers upon request.

The Vendor is NOT to change any of the pre-filled cells in the following tables.

Active Health Management, Inc.

Table 6: Subcontractor Overview

Subcontractor Overview	
Corporate (Legal) Name	Active Health Management, Inc. (ActiveHealth)
Name of Parent Company (If Applicable)	ActiveHealth's direct parent is Aetna Inc. CVS Pharmacy, Inc. is an indirect parent of ActiveHealth. CVS Health Corporation is ActiveHealth's ultimate parent.

Name of Contact Person for Bid	Mohamed Diab, CEO

The subcontractor should provide the following information in accordance with 42 CFR § 455.104 (https://www.govinfo.gov/app/details/CFR-2007-title42-vol4/CFR-2007-title42-vol4-sec455-104/summary):

- The name and address of any person (individual or corporation) with an ownership or control interest in the subcontractor. The address for corporate entities should include, as applicable, the primary business address, every business location, and the P.O. Box address.

We have included the requested information in **Table 3.1.2-1** for any person (individual or corporation) with an ownership or control interest in ActiveHealth, other than institutional investors with a beneficial ownership of 5 percent or more of CVS Health Corporation's common stock.

Please note that ActiveHealth ultimate parent, CVS Health Corporation, is a publicly traded company, listed on the New York Stock Exchange and registered with the Securities Exchange Commission ("SEC"). As a publicly traded company, CVS Health Corporation does not track the identity of individual shareholders but relies on disclosures of beneficial ownership of CVS

Health Corporation stock, which the SEC requires investors to file on Schedules 13D and 13G and related amendments.

From time to time, certain institutional investors have filed Schedules 13D and 13G with the SEC, indicating beneficial ownership of 5 percent or more of CVS Health Corporation's common stock. In such filings, the beneficial owner certifies that their shares were acquired in the ordinary course of business and were not acquired for the purpose of changing or influencing the control of CVS Health Corporation.

Table 3.1.2-1: Name, Address and Tax ID Number of Any Person (Individual or Corporation) with an Ownership or Control Interest in ActiveHealth

Name	Address[2]	Tax ID Number (entities)
CVS Health Corporation (Ultimate Owner)	One CVS Drive Woonsocket, RI 02895	05-0494040
CVS Pharmacy, Inc. (Indirect Owner)	One CVS Drive Woonsocket, RI 02895	05-0340626
Aetna Inc. (Direct Owner)	151 Farmington Drive Hartford, CT 06156	23-2229863
Mohamed Diab Sole Director – Principal Officer, Chief Executive Officer & President	1333 Broadway New York, NY 10018	N/A
Matthew J. Asmus Principal Officer -- Executive Vice President & Chief Financial Officer	1333 Broadway New York, NY 10018	N/A
Tracy L. Smith Principal Officer – Vice President & Treasurer	200 Highland Corporate Dr. Cumberland, RI 02864	N/A
Edward Chung-I Lee Principal Officer – Vice President & Secretary	151 Farmington Drive Hartford, CT 06156	N/A

[2] Please refer to **Appendix A** for a complete listing of office locations for CVS Health Corporation and Aetna Inc.

- Tax identification number for a corporation with an ownership or control interest in the subcontractor or in a subcontractor in which the subcontractor has a five (5) percent or more interest.

We have included the Tax Identification Number for each corporation with an ownership or control interest in ActiveHealth in **Table 3.1.2-1** in response to the question immediately preceding this one. Please note there are no subcontractors in which ActiveHealth has a five (5) percent or more ownership or control interest.

- Whether the person (individual or corporation) with ownership or control interest in the subcontractor and/or subcontractor is related to any other person with ownership or control interest, such as a spouse, parent, child, or sibling.

In **Table 3.1.2-2**, we indicate whether a person (individual or corporation) with ownership or control interest in the Subcontractor and/or subcontractor is related to any other person with ownership or control interest, such as a spouse, parent, child, or sibling.

Table 3.1.2-2: Relationships Among Persons with Ownership or Control Interest in ActiveHealth

Name	Relationship to other Owners or others with Control Interest
CVS Health Corporation (Ultimate Owner)	CVS Health Corporation is the direct owner of CVS Pharmacy, Inc. CVS Health Corporation is the indirect and ultimate parent of Aetna Inc. and ActiveHealth.
CVS Pharmacy, Inc. (Indirect Owner)	CVS Pharmacy, Inc.'s direct and ultimate owner is CVS Health Corporation. CVS Pharmacy, Inc. is the direct owner of Aetna Inc. and an indirect parent of ActiveHealth.
Aetna Inc. (Direct Owner)	Aetna Inc.'s ultimate owner is CVS Health Corporation, and its direct owner is CVS Pharmacy, Inc. Aetna Inc. is ActiveHealth's direct parent.
Mohamed Diab	None
Matthew J. Asmus	None
Tracy L. Smith	None
Edward Chung-I Lee	None

- The name of any other organization in which a person with ownership or control interest in the subcontractor also has an ownership or control interest.

ActiveHealth provides the following information in accordance with 42 CFR 455.104(b)(3), as applied to Subcontractors.[3]

---

[3] The sentence immediately preceding the RFP questions requesting ownership and controlling interest information instructs Subcontractors to "provide the [requested] information in accordance with 42 CFR §455.104." Please refer to RFP page 60. The requirement in 42 CFR 455.104(b)(3) appears to most closely mirror what is requested here. As worded, however, this RFP request is broader than what is required by 42 CFR 455 104(b)(3), which if re-worded to apply to Subcontractors would require disclosure of "the name of any other disclosing entity (or fiscal agency or managed care entity) in which an owner of the [Subcontractor] (or fiscal agent or managed care entity) has an ownership interest." Applying the instruction on page 60, the information we provided in response to this request is in accordance with what is requested in 42 CFR §455.104(b)(3), as reworded to apply to Subcontractors. If the Department disagrees with our approach or seeks what appears to be the broader information requested here, we will provide additional information upon request.

The subcontractor should provide the following information in accordance with 42 CFR § 455.104 (https://www.govinfo.gov/app/details/CFR-2007-title42-vol4/CFR-2007-title42-vol4-sec455-104/summary):

- The name and address of any person (individual or corporation) with an ownership or control interest in the subcontractor. The address for corporate entities should include, as applicable, the primary business address, every business location, and the P.O. Box address.

We have included the requested information in **Table 3.1.2-3** for any person (individual or corporation) with an ownership or control interest in Aetna Health Management, other than institutional investors with a beneficial ownership of 5 percent or more of CVS Health Corporation's common stock.

Please note that Aetna Health Management ultimate parent, CVS Health Corporation, is a publicly traded company, listed on the New York Stock Exchange and registered with the

Securities Exchange Commission (SEC). As a publicly traded company, CVS Health Corporation does not track the identity of individual shareholders but relies on disclosures of beneficial ownership of CVS Health Corporation stock, which the SEC requires investors to file on Schedules 13D and 13G and related amendments.

From time to time, certain institutional investors have filed Schedules 13D and 13G with the SEC, indicating beneficial ownership of 5 percent or more of CVS Health Corporation's common stock. In such filings, the beneficial owner certifies that their shares were acquired in the ordinary course of business and were not acquired for the purpose of changing or influencing the control of CVS Health Corporation.

Table 3.1.2-3: Name, Address, and Tax ID Number of Any Person (Individual or Corporation) with an Ownership or Control Interest in Aetna Health Management

[6] The sentence immediately preceding the RFP questions requesting ownership and controlling interest information instructs Subcontractors to "provide the [requested] information in accordance with 42 CFR §455.104." Please refer to RFP page 60. The requirement in 42 CFR 455.104(b)(3) appears to most closely mirror what is requested here. As worded, however, this RFP request is broader than what is required by 42 CFR 455 104(b)(3), which if re-worded to apply to Subcontractors would require disclosure of "the name of any other disclosing entity (or fiscal agency or managed care entity) in which an owner of the [Subcontractor] (or fiscal agent or managed care entity) has an ownership interest." Applying the instruction on page 60, the information we provided in response to this request is in accordance with what is requested in 42 CFR §455.104(b)(3), as reworded to apply to Subcontractors. If the Department disagrees with our approach or seeks what appears to be the broader information requested here, we will provide additional information upon request.

% of Revenue From State Government Clients in the United States	Inovalon does not have any state government clients.
Number of Years in Business	21 years. Inovalon and its predecessor companies have been operating since 1998.
Number of Years Subcontractor Has Been Providing the Type of Services Specified in the RFP	Inovalon, Inc. provides complete administrative and hybrid rate reporting services in support of Aetna's National Committee for Quality Assurance (NCQA) Healthcare Effectiveness Data and Information Set (HEDIS)® submission process. As an NCQA-certified vendor for the past 18 years, Inovalon's experienced teams will support the Aetna Medicaid organization team as they complete the key milestones and tasks associated with the HEDIS® reporting requirements using Inovalon's quality measurement and reporting software. Production tasks included data transformation and loading, building events and discharges, running preliminary rates, generation of the Consumer Assessment of Healthcare Providers and Systems/ Qualified Health Plan survey sample frames, sampling of the hybrid measures, calculation of interim and final rates, assisting the plan with the HEDIS® Compliance Audit, as well as submissions to NCQA, Centers for Medicare & Medicaid Services, and other regulatory

Subcontractor Overview	
	agencies. In support of Aetna's state regulatory reporting requirements, Inovalon creates and maintains multiple, custom, state measure catalogs, outside of the standard HEDIS® measure set. In addition to Aetna, Inovalon has worked collaboratively with hundreds of plans to ensure that each client-specific reporting requirement is fulfilled. Aetna's HEDIS® project(s) are managed in a client cloud access model within Inovalon's vendor-controlled environment. In this option, the health plan pushes its data onto Inovalon servers through a secure connection where Aetna's teams are responsible for all aspects of the rate production. Inovalon maintains the hardware and software infrastructure, as well as the storage capacity necessary to host the project. All software upgrades and system backups are Inovalon's responsibility.
Number of Employees Providing the Type of Services Specified in the RFP	Two products service managers will cover the types of services covered under the RFP.
Headquarters in the United States	Yes. Inovalon Inc. is headquartered in the United States.
Headquarters Mailing Address	4321 Collington Road, Bowie, MD 20716
Street Address	4321 Collington Road, Bowie, MD 20716

Fax Number	N/A

Subcontractor Overview	
Locations in the United States	In addition to our Denver headquarters, we also have offices Burlington, Massachusetts; Roswell, Georgia; and Newport Beach, California.
Name, Mailing Address, Street Address, Telephone Number, and Fax Number of Business Unit Administering This Bid (If Different From Above)	**Name:** same as above **Mailing Address:** same as above **Street Address:** same as above **Telephone Number:** same as above **Fax Number:** same as above
Name of Contact Person for Bid	Beth Cappucci, Account Relationship Manager

The subcontractor should provide the following information in accordance with 42 CFR § 455.104 (https://www.govinfo.gov/app/details/CFR-2007-title42-vol4/CFR-2007-title42-vol4-sec455-104/summary):

- The name and address of any person (individual or corporation) with an ownership or control interest in the subcontractor. The address for corporate entities should include, as applicable, the primary business address, every business location, and the P.O. Box address.

N/A

- Tax identification number for a corporation with an ownership or control interest in the subcontractor or in a subcontractor in which the subcontractor has a five (5) percent or more interest.

N/A

- Whether the person (individual or corporation) with ownership or control interest in the subcontractor and/or subcontractor is related to any other person with ownership or control interest, such as a spouse, parent, child, or sibling.

N/A

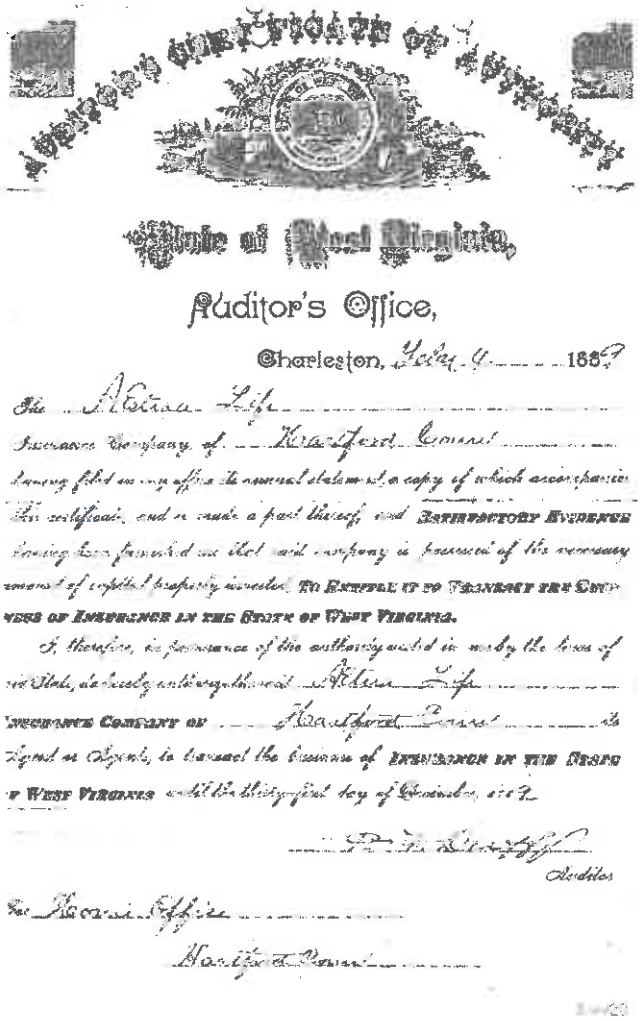
- The name of any other organization in which a person with ownership or control interest in the subcontractor also has an ownership or control interest.

N/A

2. Mandatory Qualifications

The Vendor must complete this section to demonstrate that it has the experience needed to meet requirements set forth in this RFP. The table below lists each mandatory qualification; the Vendor must provide narrative demonstrating fulfillment of the requirement and note the page number of its bid that provides this information. The Vendor should provide their response as part of their bid in accordance with the template below. The Vendor must list each project experience separately and completely every time it is referenced. Unless otherwise stated, requested documentation must be provided to the Department as part of the bid submission.

Table 7: Mandatory Qualifications



Mandatory Qualification Item(s)	Page Number
The Vendor must demonstrate adherence to Certificate of Authority (COA) requirements as outlined by the West Virginia (WV) Office of the Insurance Commissioner and be in good standing in West Virginia. The Vendor shall provide a copy of its COA as part of its Readiness Review documentation.	**App E-3**
The Vendor must be a NCQA-accredited entity within nine (9) months of the contract effective date, and remain so for the duration of the contract.	**App B-3**
The Vendor must provide an organizational chart outlining the internal organizational structure for this project.	**Att 4 – Page 15**
The Vendor must provide a description of the roles, responsibilities, and skill sets associated with each position outlined in the organizational chart.	**Att 4 – Pages 4-9**
The Vendor must provide a summary description of individual key staff members and the experience that qualifies them for their roles in this project. If any subcontractor is leveraged, the Vendor shall describe the assurance of quality and timeliness of the work to be done.	**Att 4 – Pages 31-73**
The Vendor must demonstrate experience within the last three (3) years as the prime contractor for at least three (3) federal, state, or private healthcare entities, in an MCO, where the proposed solution of similar size and scope is currently being or has been implemented.	**Att 3 - Page 5-18**
The Vendor must demonstrate at least five (5) years' experience in Medicaid.	**Att 3 - Page 5-9**
The Vendor must include at least three (3) references from clients served within the last three (3) years that demonstrate the Vendor's ability to perform the scope of work described in the RFP. Vendors may only use one reference per client served. The Department requests three (3) references from different state engagements where the proposed approach is currently in progress or has been implemented.	**Att 3 - Page 117-127**
The Vendor must have at least three (3) years' experience implementing the proposed approach with an organization similar size and scope to the State, in an MCO capacity.	**Att 3 - Page 19-21**

3. Existing Business Relationships With the State

Describe any existing or recent (within the last five [5] years) business relationships the Vendor or any of its affiliates or proposed subcontractors have with the State, the State's counties, and/or the State's local municipalities. The Vendor should provide their response as part of their bid.

Existing Business Relationships

The Aetna organization has over 160 years of experience as one of the nation's leading diversified health care benefits companies, including 30 years of continuous, active participation in Medicaid managed care. Aetna's deep-rooted history in West Virginia spans over a century, dating to 1889, when our affiliate, Aetna Life Insurance Company, was first granted authority to do business in West Virginia, as depicted in the Certificate of Authority shown in **Figure 3.3.1-1**. Aetna Better Health of West Virginia has provided Medicaid managed care services for the Mountain Health Trust populations since 1996[1] and the West Virginia Health Bridge Medicaid expansion population

State of West Virginia,

Auditor's Office,

Charleston, May 4 1889

The Aetna Life Insurance Company of Hartford Conn. having filed in my office the annual statement a copy of which accompanies this certificate, and is made a part thereof, and SATISFACTORY EVIDENCE having been furnished me that said company is possessed of the necessary amount of capital prescribed by law, to entitle it to transact the business of INSURANCE IN THE STATE OF WEST VIRGINIA.

I, therefore, in pursuance of the authority vested in me by the laws of said State, do hereby authorize the said Aetna Life Insurance Company of Hartford Conn. its Agent or Agents, to transact the business of INSURANCE IN THE STATE OF WEST VIRGINIA until the thirty-first day of January, 1890.

Auditor.

Secretary's Office

Hartford Conn.

Figure 3.3.1-1: Affiliate Aetna Life Insurance Company's 1889 Certificate of Authority

Aetna began proudly serving West Virginians more than 130 years ago.

[1] Aetna Better Health of West Virginia is the dba used by Coventry Health Care of West Virginia, Inc. for its Medicaid line of business. Coventry Health Care of West Virginia, Inc., formerly known as Carelink Health Plans, Inc., has been serving West Virginia's Medicaid population since 1996 and was previously a subsidiary of Coventry Health Care, Inc. (Coventry). In May of 2013, Coventry and all its subsidiaries were acquired by Aetna Inc. On January 1, 2014, Coventry was merged into Aetna Health Holdings LLC. In December of 2015, Coventry Health Care of West Virginia, Inc. began using the dba Aetna Better Health of West Virginia for its Medicaid line of business.

since 2015. We will begin to serve West Virginia's Mountain Health Promise program in the first quarter of 2020.

During our longstanding tenure in West Virginia, Aetna has worked to become an integrated member of communities throughout the State and understand how the unique needs of West Virginians vary from town to town. We know our enrollees, their needs, and communities they live in. We have developed, and continue to evolve, our services to respond to our enrollees' unique needs and their specific conditions, reduce disparities, and build upon our already comprehensive network of high-quality providers and relationships with community-based organizations.

Aetna Better Health of West Virginia's Business Relationships

Coventry Health Care of West Virginia holds contracts with the State in connection with 1) its Medicaid line of business, which utilizes the dba Aetna Better Health of West Virginia, and 2) its Medicare line of business, which does not operate under a dba. These contracts are included in **Table 3.3.1-1.** Coventry Health Care of West Virginia, Inc. has not had any business relationships with any of the State's counties or local municipalities in the last five years.

Table 3.3.1-1: Coventry Health Care of West Virginia, Inc.'s Business Relationships with the State of West Virginia, the State's Counties, and/or the State's Local Municipalities

Entity Name	Client	Tenure in West Virginia	Subject Matter of the Contract
Coventry Health Care of West Virginia, Inc. dba Aetna Better Health of West Virginia	West Virginia Department of Health and Human Resources	1996 — Present	Medicaid Managed Care Services
Coventry Health Care of West Virginia, Inc. dba Aetna Better Health of West Virginia	West Virginia Department of Health and Human Resources	1Q 2020 — Present	Specialized Managed Care for Children and Youth

Entity Name	Client	Tenure in West Virginia	Subject Matter of the Contract
Coventry Health Care of West Virginia, Inc.	State of West Virginia Bureau for Medical Services	1/1/2020 – Present	Dual Eligible Special Needs Plan

Aetna Better Health of West Virginia Affiliates' Business Relationships in West Virginia

In **Table 3.3.1-2**, we describe any existing or recent business relationships that any of Aetna Better Health of West Virginia's affiliates have had with the State, the State's counties, and/or the State's local municipalities in the last five years[2].

Table 3.3.1-2: Aetna Better Health of West Virginia Affiliates' Business Relationships with the State of West Virginia, the State's Counties, and/or the State's Local Municipalities

Entity Name	Client	Contract Start and End Date	Subject Matter of the Contract
Aetna Behavioral Health, LLC	West Virginia University Medicine	2015 – Present	Provision of Employee Assistance Program (EAP) services, including a 5-session EAP model, 24/7/365 telephonic consultation, work-life services, employee training, and other related services
Aetna Life Insurance Company	HealthSmart Benefit Solutions and the West Virginia Public Employees Insurance Agency	2015 – 2019	Network access and stop loss for the State of West Virginia employee health program
Aetna Life Insurance Company	West Virginia University	2010 – Present	Student Health Insurance Program
Aetna Life Insurance Company	West Virginia School of Osteopathic Medicine	2017 – Present	Student Health Insurance Program

[2] We understand "business relationships…any…affiliates have with the State, the State's counties, and/or the State's local municipalities" to be limited to contracts such affiliates hold directly with the State of West Virginia, the State's counties, and/or the State's local municipalities. Accordingly, we did not include situations where an affiliate provides subcontracted services to another entity that is contracted with the State, the State's counties, and/or the State's local municipalities. If our understanding of this question is incorrect, we will provide additional information upon request.

Entity Name	Client	Contract Start and End Date	Subject Matter of the Contract
CaremarkPCS Health L.L.C. through its predecessor AdvancePCS Health, L.P.	West Virginia Bureau of Senior Services as assignee to the West Virginia Public Employees Insurance Agency	2001 — Present	Managed Pharmaceutical Benefit Agreement — Consumer Card Program to provide a drug discount card option to retirees
CaremarkPCS Health, L.L.C.	West Virginia Public Employees Insurance Agency (PEIA) and West Virginia Children's Health Insurance Program (CHIP), through a joinder agreement with PEIA	2016 — Present	Pharmacy services; agreement to provide pharmacy benefit management services to State employees and CHIP enrollees
Compass Health Services, LLC dba Omnicare of Morgantown	John D. Good Recovery Center (part of West Virginia University United Summit Center)	2014 — Present	Pharmacy services

In addition to the contracts provided, during the last five years, legacy CVS affiliates have enrolled certain pharmacy locations physically located in the State of West Virginia, as well as a limited number of out-of-state locations, into the West Virginia Medicaid Program. If the Department seeks additional information regarding any of these pharmacy enrollments, we will provide it upon request.

Business Relationships of Aetna Better Health of West Virginia Unaffiliated Proposed Subcontractors[3]

In **Table 3.3.1-3**, we describe any existing or recent business relationships that unaffiliated proposed subcontractors of Aetna Better Health of West Virginia have with the State of West Virginia, its counties, or local municipalities.

Table 3.3.1-3: Aetna Better Health of West Virginia Unaffiliated Proposed Subcontractors' Business Relationships with the State of West Virginia, the State's Counties, and/or the State's Local Municipalities

Entity Name	Client	Contract Term	Subject Matter of the Contract
First Choice Services, Inc. (FCS)	West Virginia Department of Health and Human Resources, Bureau for Behavioral Health and Health Facilities	6/2015-Present	FCS operates the Help4WV line by grant agreement. HELP4WV is a 24/7 resource and referral center designed to streamline the process of seeking help for substance abuse and behavioral health issues. It includes a helpline and chat line. Callers are connected to community-based treatment programs and behavioral health services near them. Most callers are able to enter treatment within one day of calling the helpline. The program features an online public database, of more than 1,000 community resources. FCS answers over 10,000 calls per year from West Virginians seeking assistance through this program.
First Choice Services, Inc. (FCS)	West Virginia Department of Health	7/2017-Present	FCS operates the Tobacco Quitline by grant agreement.

[3] Any business relationships Aetna Better Health of West Virginia's affiliated subcontractors have with the State of West Virginia, its counties, or local municipalities are listed in Table 3.4.1-3 above titled "Aetna Better Health of West Virginia Affiliates' Business Relationships in West Virginia."

Entity Name	Client	Contract Term	Subject Matter of the Contract
	and Human Resources, Bureau for Public Health		The WV Tobacco Quitline is a complete tobacco cessation quit line. Helpline operators refer callers to a coach, counseling, and nicotine replacement therapy help. FCS answers over 11,000 calls per year from West Virginians seeking assistance through this program.
Health Management Systems, Inc. 4. Business Disputes

List any regulatory actions, sanctions, citations, deficiencies, audit findings, investigations, contingencies, or recommendations received in any state within the last two (2) years, along with the Vendor's response and plan of correction.

Regulatory Actions

Aetna Better Health of West Virginia strives to be a dependable, transparent, and trusted partner of the Department of Health and Human Resources (Department) in creating solutions to key public health issues. This includes collaborating with stakeholders to design effective policy and achieve the Department's goals, especially the requirements of the contract. From time to time, an Aetna Medicaid organization health plan may receive a notice of action, an important indicator of an opportunity for improvement. Our multidisciplinary approach to identifying, remediating, and monitoring compliance issues is companywide. We perform root-cause analysis and employ the Plan-Do-Study-Act method to address the underlying issues that lead to a notice of action. Results and recommendations are reported to Aetna organization leadership and translated into improved policies and procedures. Aetna is committed to a culture of continuous quality improvement. **We listen. We learn. We take action. We improve.**

Aetna Better Health of West Virginia has not been subject to an investigation within the last two years. Other Medicaid health plans managed by Aetna's Medicaid organization have been subject to the following three investigations[1] in the last two years:

- On September 25, 2017, the Department of Health and Human Services Office of Civil Rights (HHS-OCR) opened an investigation after receiving a complaint alleging that Aetna Better Health of Illinois engaged in unlawful discrimination based on race. On May 22, 2018,

[1] As regulated entities, Aetna Better Health of West Virginia, health plans managed by Aetna's national Medicaid organization and other affiliates that conduct Medicare, or other federal health program business are routinely subject to reviews, regulatory inquiries, audits, and examinations by various state insurance and health regulatory authorities and other state and federal authorities, including State Attorneys General. Aetna Better Health of West Virginia's understanding of the request for information pertaining to "investigations" is that it does not include such reviews, audits, examinations, or regulatory inquiries and is limited to matters that have been deemed "investigations." If our understanding is incorrect, we will produce additional information upon request.

HHS-OCR found that there was not enough evidence to show that Aetna violated any law and closed the investigation.

- On March 23, 2018, the HHS-OCR opened an investigation after receiving a complaint alleging that Mercy Maricopa Integrated Care engaged in unlawful withholding of medical records covered under Health Insurance Portability and Accountability Act. On June 05, 2018 HHS-OCR closed the case without further action.
- In October 2019, Aetna Better Health of Pennsylvania received a Civil Investigative Demand (CID) from the United States Attorney's Office for the Western District of Pennsylvania. The scope of the government's CID is presently unknown, but it appears to inquire into the adequacy of Aetna's network of Medicaid pediatric providers. Aetna is fully cooperating with this CID.

Aetna Better Health of West Virginia's parent companies, including other managed care subsidiaries of the parent companies that conduct Medicare or other federal health program business, have been subject to the following investigations within the last two years:

- The United States Attorney's Office for the Eastern District of Kentucky investigated a complaint it received against Coventry Healthcare of Missouri, Inc. (Coventry), alleging a violation of Title III of the American with Disabilities Act of 1990, as amended, 42 USC 12181-12189, and its implementing regulation. Effective January 30, 2019, Coventry entered into an informal resolution on the matter, which was not an admission of liability.
- In April 2016, Aetna Health Inc. received a subpoena from the New Jersey Attorney General's Office regarding an investigation into the award of the state's group Medicare contract. Aetna is cooperating with the investigation, which is currently pending.
- In May 2017, CVS Health received a CID from the U.S. Attorney's Office for the Southern District of New York requesting documents and information concerning possible false claims submitted to Medicare by SilverScript Insurance Company in connection with reimbursements for prescription drugs under the Medicare Part D program. The Company has been cooperating with the government and providing documents and information in response to this CID.

CVS Health acquired Aetna Inc. on November 28, 2018. **Appendix C** includes the sections of Aetna Inc.'s 10-K or 10-Q filings that describe certain legal proceedings, including investigations, affecting Aetna Inc. for the portion of the applicable 2-year lookback period before CVS Health acquired Aetna Inc., which includes Aetna Inc.'s 2017 10-Ks and 10-Qs for the first three quarters of 2018. **Appendix C** also includes the section of CVS Health's 10-Ks

and 10-Qs, which describe certain legal proceedings, including investigations, affecting CVS Health for the applicable 2-year lookback period, which includes 10-Ks for the 2017 and 2018 calendar years and 10-Qs for the first three quarters of 2019. CVS Health's 2019 10-K is scheduled to be released on February 18, 2020, which is the same day as the response to the Request for Proposal is due. Due to production, printing, and delivery schedules, we were unable to include a copy of CVS Health's 2019 10-K in **Appendix C**. If the Department would like to review CVS Health's 2019 10-K we will provide it upon request, or the Department may directly access the document at https://investors.cvshealth.com/investors/sec-filings/default.aspx.

Appendix C also includes regulatory actions, sanctions, citations, deficiencies, audit findings, contingencies[2], or recommendations received in any state within the last two years, along with the response and plan of correction, for Aetna Better Health of West Virginia, its parent companies, and any other managed care subsidiaries[3] of the parent companies, as they existed at the time this Request for Proposal was issued, that conduct Medicaid, Medicare or any other federal health care program business.

On January 23, 2020, our ultimate parent, CVS Health, acquired the stock of IlliniCare Health Plan, Inc. (IlliniCare), which is now a subsidiary of CVS Health and an affiliate of Aetna Better Health of West Virginia. Regulatory actions, sanctions, citations, deficiencies, audit findings, investigations, contingencies, or recommendations received by IlliniCare in the last two years in

[2] Aetna Better Health of West Virginia understands the term 'contingencies' to mean threatened regulatory actions, sanctions, citations, deficiencies or open audits. If our understanding is incorrect, we will produce additional information upon request.
[3] The table in Appendix C titled "Sanctions for Vendor and Medicaid Health Plans Managed by Aetna" also includes known regulatory actions, sanctions, citations, deficiencies, audit findings, contingencies, or recommendations received in any state within the past two years by Medicaid health plans that are managed by Aetna's national Medicaid organization, but which are not subsidiaries of our ultimate parent company, CVS Health.

connection with its Medicaid, Medicare or other federal health program business are included in **Appendix C** in the table titled Sanctions for IlliniCare Health Plan, Inc.

Disclose if the Vendor or its parent company (including other managed care subsidiaries of the parent) has had a Medicaid, Medicare, or any other federal health program managed care contract terminated or not renewed for any reason within the past five (5) years, or if it has elected to terminate or non-renew. In instances of involuntary termination or non-renewal, the Vendor should describe the issues and the parties involved, and provide the address and telephone number of the principal terminating party. The Vendor should also describe any corrective action taken to prevent any future occurrence of the problem(s) that may have led to the termination or non-renewal. In instances of voluntary termination or non-renewal, the Vendor should describe the factors contributing to its decision.

Contract Terminations and Non-Renewals

Aetna Better Health of West Virginia is proud that we have no contract terminations or non-renewals to report pertaining to our health plan.[4]

In the past five years, managed care subsidiaries of Aetna Better Health of West Virginia's ultimate parent company have not had a Medicaid, Medicare, or any other federal health program managed care contract terminated or not renewed for cause. **Table 3.4.1-1** and **Table 3.4.1-2** disclose instances where, in the past five years, managed care subsidiaries of Aetna Better Health of West Virginia's ultimate parent company have had a Medicaid, Medicare, or any other federal health program managed care contract terminated before the contract end date or not renewed for reasons unrelated to poor or non-performance, or where such managed care subsidiaries have elected to terminate or non-renew a Medicaid managed care contract.

[4] In 2016, the State of West Virginia re-procured its managed Medicaid contracts, and, pursuant to that procurement process, entered into a new contract with Aetna for state fiscal year 2017 (i.e., July 1, 2016 through June 30, 2017), even though the prior fiscal year's contract still had unused renewal options. There was no gap in Aetna's coverage/service as a Medicaid managed care organization (MCO) in West Virginia. We do not understand this to constitute a non-renewal that would fall within the scope of this question.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Table 3.4.1-1: Contract Terminations and Non-Renewals for Medicaid Managed Care Subsidiaries of Aetna Better Health of West Virginia's Ultimate Parent[5]

Entity Name	Client Name	Date of Action	Name, Address, and Telephone Number of Terminating Party, If Applicable	Reason(s) for Termination or Non-Renewal	Corrective Action Taken, If Applicable
Aetna Better Health Inc. dba Aetna Better Health of Illinois	Illinois Department of Healthcare and Family Services	12/2017	Illinois Department of Healthcare and Family Services Bureau of Managed Care, Division of Medical Programs 100 So. Grand Ave. East Springfield, IL 62762 217-524-7478	After the 2017 re-procurement of the State of Illinois' Medicaid program, the Illinois Department of Healthcare and Family Services partially terminated (other than runout) this contract known as the Family Health Plan/Affordable Care Act contract, with all incumbent MCOs before the scheduled end date to accommodate the start date of the newly awarded contracts to successful bidders. The contract was in runout through 12/31/19.	N/A

[5] We understand the term "managed care subsidiaries" to be limited to subsidiaries of our ultimate parent that hold Medicaid, Medicare, or other federal health program managed care contracts directly with state or federal agencies rather than companies that provide services to managed care plans that, in turn, hold such contracts. Similarly, we understand the term "managed care contract" to be limited to Medicaid, Medicare, or other federal health program contracts that managed care subsidiaries hold directly with a state or federal agency to provide managed care services to enrollees. Accordingly, we have not included terminations of contracts held by subsidiaries of our ultimate parent to provide services (e.g., pharmacy benefits services, plan management services) to other entities that, in turn, hold Medicaid, Medicare, or other federal health program managed care contracts with a state or federal agency. If our understanding is incorrect, we will produce additional information upon request.

[6] We understand the term "managed care subsidiaries" to be limited to subsidiaries of our ultimate parent that hold Medicaid, Medicare, or other federal health program managed care contracts directly with state or federal agencies rather than companies that provide services to managed care plans that, in turn, hold such contracts. Similarly, we understand the term "managed care contract" to be limited to Medicaid, Medicare, or other federal health program contracts that managed care subsidiaries hold directly with a state or federal agency to provide managed care services to enrollees. Accordingly, we have not included terminations of contracts held by subsidiaries of our ultimate parent to provide services (e.g., pharmacy benefits services, plan management services) to other entities that, in turn, hold Medicaid, Medicare, or other federal health program managed care contracts with a state or federal agency. If our understanding is incorrect, we will produce additional information upon request.

5. References

The State may conduct reference checks to verify and validate the past performance of the Vendor and its proposed subcontractors.

5.1 Vendor (Prime) References Form

Include at least three (3) references from clients served within the last three (3) years that demonstrate the Vendor's ability to perform the scope of work described in this RFP. The Vendor should provide three (3) different clients in order to demonstrate its experience.

The Vendor should include client description, contract dates, and contact information (customer points of contact, addresses, telephone numbers, and email addresses). The Vendor should explain whether it performed the work as a prime contractor or as a subcontractor. The Vendor should provide their response as part of their bid in accordance with the template below. The Vendor may add additional Reference Tables as necessary.

Table 8: Vendor References #1

	Contact Email:	Jennifer.Jacobs@dhs.state.nj.us
Project Information		
Total Vendor Staff:	188	
Project Objectives: The New Jersey Medicaid FamilyCare program supports health promotion, disease prevention, specialty care for those who require such care, diagnostic and intervention strategies, home therapies, and ongoing ancillary services, as well as the long-term management of ongoing medical complications, and continuation of existing relationships with out-of-network providers when considered to be in the best interest of enrollees with special health care needs. Aetna Better Health of New Jersey's integrated approach employs best practices for integrating the delivery of care for enrollees, including Temporary Assistance for Needy Families (TANF), Children's Health Insurance Program (CHIP), Aged, Blind or Disabled (ABD), and long-term services and supports (LTSS) recipients, throughout the entire continuum		

of care, including acute care, behavioral health treatment, institutional and facility services, and home- and community-based services (HCBS).

Project Description:

The New Jersey Medicaid FamilyCare program provides health coverage to children, pregnant women, parents/caretaker relatives, single adults, childless couples, the aged, blind, disabled, and individuals qualified for long-term care services. New Jersey FamilyCare's comprehensive health coverage provides a wide range of services including doctor visits, hospital services, prescriptions, tests, vision care, mental health care, dental, nursing home care and other health care services, depending on the person's eligibility category.

Vendor's Involvement:

Aetna Better Health of New Jersey offers Medicaid, CHIP and Managed Long-Term Services and Supports (MLTSS) to New Jersey FamilyCare members in all 21 counties. Aetna Better Health of New Jersey administers care management. Aetna Better Health of New Jersey collaborates with the relevant State agencies and community resources in accordance with contract requirements and Aetna's Members with Special Health Care Needs policies. Every year, the plan invites staff from State agencies to participate in joint meetings to discuss current issues and update processes and contractual requirements. Members receiving care management, and their families, are invited to attend quarterly Member Advisory Meetings, which are held on a rotating basis in different areas of the state, where they can receive in-person consultations with Aetna staff.

Aetna Better Health of New Jersey Integrated Care Management (ICM) and Utilization Management (UM) teams collaborate both informally and through joint attendance at rounds and case conferences to assure that the needs of our members are met, with special attention to those with special needs. One or more ICM representatives attend daily UM rounds to help ensure effective communication. When special issues arise, representatives from ICM and UM attend a case conference with the medical director to discuss opportunities and develop solutions.

In addition, the medical director reviews and discusses all cases in which individuals require private duty nursing to help ensure members' needs are met and to address under- or over-utilization of services appropriately; this occurs regardless of whether the member is in Core Medicaid (with an Early and Periodic Screening, Diagnostic and Treatment [EPSDT] benefit) or the MLTSS program.

The special needs dental director addresses all issues related to dental care, including communication with the dental vendor and review of special cases. Aetna Better Health of New Jersey also covers the benefit for Pediatric Medical Day Care, intended for young children who are medically complex or technology dependent. This benefit allows children to remain at home while receiving supportive care daily.

Project Benefits:

Aetna Better Health of New Jersey supports a collaborative model among departments, including Utilization Management, Care Management, and Behavioral Health, to optimize communication to address members' needs within the structure of the benefit. Aetna Better Health of New Jersey excels at care management, which is individualized and addresses the whole member in a model that integrates physical health, behavioral health, and the social determinants of health (SDOH). This dedication has contributed to Aetna Better Health of New Jersey achieving low rates of hospital readmission, averaging between 5 and 8 percent. The plan's MLTSS Care Management team achieved a $1 million State incentive for MLTSS quality. Aetna Better Health of New Jersey exceeded the State benchmark for home visits (10 percent of members in care management) by achieving 16 percent. Aetna Better Health of New Jersey received a 91

percent from IPRO and the Division of Medical Assistance and Health Services on the annual Medicaid audit in 2018. During the National Committee for Quality Assurance (NCQA) onsite review Aetna Better Health of New Jersey received a score of 49 out 50 possible points, attaining full NCQA accreditation.

Project Information		
Total Vendor Staff:	508	

Project Objectives:

The focus of Medallion 4.0 is to evolve from the Medallion 3.0 foundation, engage health systems and stakeholders, provide holistic and integrated care, add new services and populations, provide flexible delivery systems and payment models, and to grow stronger through improved quality, data, and reporting.

The Department of Medical Assistance Services (DMAS), hereinafter referred to as the Department or DMAS, is the single State Agency in the Commonwealth of Virginia that administers the Medicaid program under Title XIX of the Social Security Act and the Children's Health Insurance Program (known as FAMIS) under Title XXI of the Social Security Act. Medallion 4.0 is the next iteration of DMAS' longstanding Medallion II and Medallion 3.0 Medicaid and FAMIS Managed Care Programs and is focused on improving quality, access, and efficiency.

Medallion II was Virginia's first mandatory managed care program. As the program expanded wide (statewide) and deep (additional populations), Medallion II was rebranded Medallion 3.0 with a renewed focus on the areas of systems integration, contract and quality monitoring, compliance, and program integrity. Virginia seeks to strengthen and reinvigorate this model by adjusting the included populations and services.

Project Description:

Virginia Medicaid provides access to medical services, including outpatient care (primary or specialty care services), hospital care, nursing facility services, and behavioral health services. Medicaid/FAMIS covers vital health care services including preventive screening, treatment, or care for acute illness, and dental services. Medicaid/FAMIS focuses on giving Virginia's children a healthy start in life by keeping pregnant women healthy. Services for pregnant women include prenatal care, other comprehensive health care services, and dental health.

The scope of Medallion 4.0 includes medical, behavioral health, pharmacy, vision, and non-emergency medical transportation. Populations include pregnant women, infants, children, low-income adults, children/youth with special health care needs, children in foster care and individuals formerly in foster care, and individuals receiving Supplemental Security Income. The Medallion 4.0 program builds on the

strengths and experience of the 20-year Medallion program and will closely align with the new Commonwealth Coordinated Care Plus (CCC Plus) program. Together and where feasible, Medallion 4.0 and CCC Plus, both of which Aetna Better Health of Virginia actively participate in streamlined policies and processes related to a value-based purchasing, common core formulary, data integrity, quality, etc.

The Medallion 4.0 program:

- Continues to serve children, pregnant women, and parents
- Covers and coordinates services, such as early intervention and non-traditional behavioral health services, which were previously "carved out" and paid through traditional fee-for-service Medicaid
- Supports alternate payment methods in Virginia.

The goals and expectations of the Medallion 4.0 Program include the following:

- Improving quality of life and health outcomes for enrolled individuals
- Providing a seamless, one-stop system of services
- Facilitating communication between providers to improve the quality and cost-effectiveness of care
- Providing systemwide monitoring and quality improvement
- Ensuring the use of culturally, linguistically, and ability-appropriate consumer and family educational materials
- Increasing appropriate use of screening and prevention services

Vendor's Involvement:

Aetna Better Health of Virginia contracts with DMAS to provide managed care services to members in the Medicaid (Medallion), CHIP(FAMIS), Long Term Supports and Services (Commonwealth Coordinated Care Plus, and Dual Eligible Special Needs Plans (D-SNP) populations.

Aetna Better Health of Virginia is licensed as a health management organization and as a Managed Care Health Insurance Plan in the State of Virginia. Aetna Better Health of Virginia is also a NCQA-accredited Medicaid health plan. Aetna Better Health of Virginia has more than 20 years of experience in serving Virginia Medicaid recipients. This longstanding relationship has allowed us to understand, build, and foster relationships with our communities to facilitate fully integrated systems of care and offer a consumer-centric delivery system of care for our members.

Aetna Better Health of Virginia continues to invest time and support in our members, to change behaviors, follow their physician's treatment recommendations, and adopt healthier lifestyles. Aetna Better Health of Virginia understands that each member is unique, which is why we collaborate to deliver individualized, person-centered care to each of our members. We do this by caring for, empathizing with, listening to, planning for, and educating enrollees to reach a common understanding of trust and shared goals to reduce health disparities and promote health population.

Aetna Better Health of Virginia has developed and managed a robust provider network in the Commonwealth, capable of meeting the health care needs of our members in an accessible, timely, and convenient manner in all six regions. Our provider network is the foundation to our fully integrated systems and is designed to support members in providing a seamless system of services.

Project Benefits:

The scope of Medallion 4.0 includes medical, behavioral health, pharmacy, vision, and non-emergency medical transportation.

Fully Integrated System of Care and Integrated Care Management

Our members are best served by a holistic approach that incorporates a coordinated network of physical and behavioral health care providers, as well as community-based organizations. Our integrated care management program and care coordination system—the cornerstone of our approach for the Medallion 4.0 program—facilitates collaboration among members, practitioners, providers, care coordinators, family members, the member's circle of support, community organizations, and existing case management entities, thus resulting in a seamless system of services.

Aetna Better Health of Virginia works to understand each member's readiness to change, individual preferences and goals, and physical and behavioral health care needs. We assess family and community supports, strengths, and any barriers affecting the member's access to care. In doing so, we help each member achieve their goals and optimize their level of self-care and independence. Our fully integrated system of care is specifically designed to manage members with complex needs. Aetna Better Health of Virginia uses analytic methods to identify our most bio-psychosocially complex and vulnerable members for whom we have an opportunity to make a significant difference.

Aetna Better Health of Virginia is addressing social determinants of health (SDOH) in a meaningful way and providing locally tailored solutions that integrate community initiatives with the health care delivery system. We assess SDOH by capturing data through multiple mechanisms including health risk assessments, condition-specific assessments, existing care plans, gaps-in-care reports, reports through our health care equity dashboard, predictive modeling, care coordination claims data, provider feedback, community health workers, community and advocate outreach, member surveys, member advocacy committees, and focus groups. Our health care equity dashboard tracks utilization and identifies members who may benefit from additional interventions and education. It also provides inpatient and emergency department usage by gender, age, race, ethnicity, and county.

Similarly, providers access real-time admission, discharge, and transfer information for emergency department, inpatient, and outpatient utilization at the individual member level in collaboration with the Commonwealths Emergency Departments Information Exchange program, Pre-Merge.

Behavioral Health

Aetna Better Health of Virginia provides both traditional and non-traditional behavioral health services including intensive in-home services, day treatment/partial hospitalization, residential, psychosocial rehabilitation, crisis services (including trauma-informed care and adverse childhood events), intensive community treatment, and mental health skill building for adults.

School-based Services

Aetna Better Health of Virginia supports members through school-based services, and we have expanded these services across the Commonwealth. We employ a multidisciplinary team to provide the services through a youth-centered approach that is sensitive, non-judgmental, responsive, comprehensive, accessible, and culturally competent. Aetna Better Health of Virginia established an advisory board comprised of students, family, teachers, staff, and community representatives to provide assistance in the implementation and ongoing operational monitoring of the program and to gain feedback and build upon effective experiences, as well as challenges. As we have in multiple states, we collaborated with the schools to build memoranda of understanding and mixed services protocols to ensure every child and family receives the services they need.

Dental Services

Our community-based outreach team meets with oral health stakeholders within Virginia and has demonstrated that existing oral health inequities affect both adults and children. By providing additional

preventive and therapeutic services, Aetna Better Health of Virginia leads the charge for better health outcomes in Virginia—fulfilling our mission to improve our members' overall health by integrating oral health care into total wellness. We currently administer a suite of dental services, including diagnostic, preventive, restorative/surgical procedures, and orthodontia services. We also collaborate with primary care providers, pediatricians, federally qualified health centers, hospitals, and other stakeholders to educate our members—particularly pregnant women, children, and those with comorbidities and special needs—about the importance and impact of preventive care on overall wellness.

Plan First Family Planning

Aetna Better Health of Virginia promotes family planning services for men and women, including yearly exams, pap tests, sexually transmitted infection (STI) testing, lab services, family planning education, counseling, sterilization procedures, prescription contraceptives, over-the-counter contraceptives, and securing transportation for members to attend appointments. Aetna Better Health of Virginia leverages our network across the Commonwealth and provides 180 days of care transitions to make sure members receive uninterrupted services if their providers are not yet contracted with us. We assume the responsibility for the management of all services available to Plan First members, which include the addition of treatment for any STIs identified during testing. Aetna Better Health of Virginia leverages the strengths of the current program and facilitates adjustments (as needed) to enhance access and engagement of members. Additionally, we work with schools and community organizations to share knowledge, provide services, and offer classes to youth and new families. In doing so, Aetna Better Health of Virginia manages a successful program, thus decreasing unintended pregnancies and infant mortality rates, while increasing positive birth outcomes.

Project Information		
Total Vendor Staff:	351	
Project Objectives: The Agency's overall objective is for Medicaid enrollees to receive all medically necessary services in a timely manner and in the most appropriate setting, thereby achieving the best possible quality outcomes while containing costs. The Agency awarded contracts to nationally accredited managed care plans that offer comprehensive, quality-driven provider networks, streamlined processes that enhance the enrollee and provider experience, expanded benefits targeted to improve outcomes for enrollees, top quality scores, and high rates of enrollee satisfaction to deliver an efficient, high-quality, innovative, cost-effective, and integrated health care delivery model. In addition to the objectives stated above, the Agency awarded contracts to managed care plans that offer innovative and evidence-based approaches in meeting the following goals under the Medicaid program: • Reduce potentially preventable inpatient and outpatient hospital events, and unnecessary ancillary services • Improve birth outcomes		

- Rebalance long-term services and supports systems by increasing the percentage of enrollees receiving services in the community instead of an institution

Project Description:

The State of Florida has offered Medicaid services since 1970. Medicaid is funded by both the State and federal government to provide health care coverage for eligible children, seniors, adults with disabilities, parents of children and pregnant women. The annual budget for the program is more than $25 billion and makes up the largest part of the total Florida budget. The 2011 Florida Legislature passed House Bill 7107 (creating part IV of Chapter 409, Florida Statutes) to establish the Florida Medicaid program as a statewide, integrated managed care program for all covered services, including long-term care services. This program is referred to as Statewide Medicaid Managed Care (SMMC) and includes two programs: Managed Medical Assistance (MMA) and Long-term Care (LTC). More than 3.2 million Floridians are enrolled in Florida's SMMC program.

Vendor's Involvement:

Aetna Better Health of Florida serves the CHIP, TANF, ABD, LTSS, and dually eligible populations under the SMMC/ Florida State Medicaid contract. We hold a comprehensive MMA and LTC contract in Regions, 6, 7 and 11; representing the three largest metropolitan areas of the State: Tampa, Orlando, and Miami-Dade County.

In partnership with providers, community organizations and resources, and other key stakeholders, we offer an extensive suite of programs and services that work in concert to meet the individual needs of our enrollees. Our integrated, person-centered approach drives our decision-making, informs our policies and culture, and fosters our ongoing efforts with physicians, hospitals, and health networks to align economic incentives.

We work closely and collaboratively with our provider networks to integrate our innovative solutions in ways that complement their existing technology and health care service delivery goals. Specific offerings include a progressive payment model, innovative data-sharing technology, care management and care coordination resources, and technical support that work in harmony to assure alignment across the care continuum. Aetna's progressive approach to driving high-quality, positive outcomes gives providers an array of payment arrangements for increasing clinical and financial complexity and sophistication in risk-sharing.

Provide all managed medical services including inpatient, outpatient and ancillary services. Our scope of services includes the following activities/services:

- Utilization Management: prior authorization, concurrent review, discharge planning, retrospective review
- Quality Management: HEDIS® and other benchmarks, evidence-based clinical guidelines, inter-rater reliability reviews, clinical studies, over and under-utilization reviews, drug utilization reviews, grievance and appeal trend reviews, surveys, quality of care complaint management
- Care Coordination: case management – telephonic and face to face, predictive modeling, risk stratification, transition of care, assessments (health risk assessments, assessments and reassessments of chronic and complex conditions, EPSDT, perinatal-maternal/child health assessments), screening for behavioral health and substance abuse, care plan development, multidisciplinary rounds, transportation coordination, prevention and wellness initiatives, referrals, medication maintenance
- Disease Management: chronic conditions
- Member Services: primary care provider (PCP) assignments/selection, inquiries/hotline, outreach, complaints, education, handbook, website
- Provider Services: contracting, inquiries/hotline, provider manual, education, outreach, website

- Compliance and cultural competency program
- Manage and coordinate services for members residing in skilled nursing facilities, assisted living facilities and home and community-based settings with acute care and behavioral health services, including case management
- Operations/claims processing and payment
- State and regulatory reporting

Project Benefits:

The SMMC program covers a range of services including outpatient, hospital, behavioral health, substance abuse, community case management, targeted care management, transportation, pharmacy, Nursing Home and Assisted Living Facility Services, medical foster care, vision, and family planning.

Aetna Better Health of Florida works closely and collaboratively with our provider networks to integrate our innovative solutions in ways that complement their existing technology and health care service delivery goals. Specific offerings include a progressive payment model, innovative data-sharing technology, care management and care coordination resources, and technical support that work in concert to align across the care continuum. Aetna's progressive approach to driving high-quality, positive outcomes gives providers an array of payment arrangements for increasing clinical and financial complexity and sophistication in risk-sharing.

This integrated approach has helped us to improve care and achieve high levels of provider satisfaction, including decreasing readmissions by 18% in 2018-2019, decreasing emergency room use by 14%, and achieving 86% provider satisfaction scores in 2019.

Project Information	
Total Vendor Staff:	ActiveHealth has approximately 820 staff members, which are employed by Aetna Resources LLC (Aetna Resources), an Employee Management Company and Aetna affiliate that provides labor services.

Project Objectives: The focus of Medallion 4.0 was to evolve from the Medallion 3.0 foundation, engage health systems and stakeholders, provide holistic and integrated care, add new services and populations, provide flexible delivery systems and payment models, and to grow stronger through improved quality, data, and reporting.

The Department of Medical Assistance Services, hereinafter referred to as the Department or DMAS, is the single State Agency in the Commonwealth of Virginia that administers the Medicaid program under Title XIX of the Social Security Act and the Children's Health Insurance Program (known as FAMIS) under Title XXI of the Social Security Act. Medallion 4.0 is the next iteration of DMAS's long-standing Medallion II and Medallion 3.0 Medicaid and FAMIS Managed Care Programs and will focus on improving quality, access, and efficiency.

Medallion II was Virginia's first mandatory managed care program. As the program expanded wide (statewide) and deep (additional populations), Medallion II was rebranded Medallion 3.0 with a renewed focus on the areas of systems integration, contract and quality monitoring, compliance, and program integrity. Virginia seeks to strengthen and reinvigorate this model by adjusting the included populations and services.

Project Description:

The scope of Medallion 4.0 includes medical, behavioral health, pharmacy, vision, and non-emergency medical transportation. Populations include pregnant women, infants, children, low-income adults, children/youth with special health care needs, children in foster care and individuals formerly in foster care, and individuals receiving SSI.

Medicaid covers 1 in every 3 births in Virginia and almost 1 in 3 children. Virginia Medicaid provides access to medical services, such as: outpatient care (primary or specialty care services); hospital care, nursing facility services, and behavioral health services. Medicaid/FAMIS covers vital health care services like preventive screening, treatment, or care for acute illness, and dental services. Medicaid/FAMIS focuses on giving Virginia's children a healthy start in life by keeping pregnant women healthy. Services for pregnant women include prenatal care, other comprehensive health care services, and dental health.

Vendor's Involvement:

ActiveHealth provides a disease management program, tools, and services; services relating to NCQA accreditation. Active Health, an affiliate of Aetna Better Health of West Virginia, is a clinically based, technology-driven health management services company covering over 20 million enrollees. ActiveHealth has established capabilities, stability, and credibility with nearly 20 years of market leadership and innovation.

Project Benefits: ActiveHealth provides data process and program support for Aetna's disease management program to identify gaps in care and interventions.

	Contact Title:	Deputy Secretary of Medicaid
Customer Address: 2727 Mahan Dr, Mail Stop #8, Tallahassee, Florida 32308	Contact Phone:	850-412-4000
	Contact Email:	Beth.Kidder@ahca.myflorida.com
Project Information		
Total Vendor Staff:	ActiveHealth has approximately 820 staff members, which are employed by Aetna Resources LLC (Aetna Resources), an Employee Management Company and Aetna affiliate that provides labor services.	

Project Objectives:

The Agency's overall objective is for Medicaid enrollees to receive all medically necessary services in a timely manner and in the most appropriate setting, thereby achieving the best possible quality outcomes while containing costs.

The Agency awarded contracts to nationally accredited managed care plans that offer comprehensive, quality-driven provider networks, streamlined processes that enhance the enrollee and provider experience, expanded benefits targeted to improve outcomes for enrollees, top quality scores, and high rates of enrollee satisfaction to deliver an efficient, high-quality, innovative, cost-effective, and integrated health care delivery model.

In addition to the objectives stated above, the Agency awarded contracts to managed care plans that offer innovative and evidence-based approaches in meeting the following goals under the Medicaid program:

- Reduce potentially preventable inpatient and outpatient hospital events, and unnecessary ancillary services
- Improve birth outcomes
- Rebalance long-term services and supports systems by increasing the percentage of enrollees receiving services in the community instead of an institution

Project Description:

The State of Florida has offered Medicaid services since 1970. Medicaid is funded by both the State and federal government to provide health care coverage for eligible children, seniors, adults with disabilities, parents of children and pregnant women. The annual budget for the program is more than $25 billion and

makes up the largest part of the total Florida budget. The 2011 Florida Legislature passed House Bill 7107 (creating part IV of Chapter 409, Florida Statutes) to establish the Florida Medicaid program as a statewide, integrated managed care program for all covered services, including long-term care services. This program is referred to as Statewide Medicaid Managed Care (SMMC) and includes two programs: Managed Medical Assistance (MMA) and Long-term Care (LTC). More than 3.2 million Floridians are enrolled in Florida's SMMC program.
Vendor's Involvement: ActiveHealth provides a disease management program, tools, and services; services relating to NCQA accreditation. Active Health, an affiliate of Aetna Better Health of West Virginia, is a clinically based, technology-driven health management services company covering over 20 million enrollees. ActiveHealth has established capabilities, stability, and credibility with nearly 20 years of market leadership and innovation.
Project Benefits: ActiveHealth provides data process and program support for Aetna's disease management program to identify gaps in care and interventions.

Project Information	
Total Vendor Staff:	All staff of Aetna Health Management are employed by Aetna Resources LLC, an Employee Management Company and Aetna affiliate that provides labor services. Aetna Resources LLC has over 40,000 employees. Staffing assignments are based on staffing needs necessary to meet contract requirements. The number of Aetna Health Management staff that will support any contract awarded as a result of this RFP will be based on the number of staff needed to fulfill our contractual obligations and will be sufficient to meet those obligations.

Project Objectives:

The New Jersey Medicaid FamilyCare program supports well-child care, health promotion, disease prevention, specialty care for those who require such care, diagnostic and intervention strategies, home therapies, and ongoing ancillary services, as well as the long-term management of ongoing medical complications, and continuation of existing relationships with out of network providers when considered to be in the best interest of enrolled children with special health care needs. Aetna Better Health of New Jersey's integrated approach employs best practices for integrating the delivery of care for enrollees, including TANF, CHIP, ABD, and LTSS recipients, throughout the entire continuum of care, including acute care, behavioral health treatment, institutional and facility services, and HCBS.

Project Description:

The New Jersey Medicaid FamilyCare program provides health coverage to children, pregnant women, parents/caretaker relatives, single adults, childless couples, the aged, blind, disabled, and individuals qualified for long-term care services. New Jersey FamilyCare's comprehensive health coverage provides a wide range of services including doctor visits, hospital services, prescriptions, tests, vision care, mental

health care, dental, nursing home care, and other health care services, depending on the person's eligibility category.				
Vendor's Involvement: Aetna Health Management provides after-hours call center, provider credentialing, and Aetna's nurse-staffed Informed Health Line, among other functions. Aetna Health Management has performed services for Medicaid health plans since 2004.

Project Description:

The New Jersey Medicaid FamilyCare program provides health coverage to children, pregnant women, parents/caretaker relatives, single adults, childless couples, the aged, blind, disabled, and individuals qualified for long-term care services. New Jersey FamilyCare's comprehensive health coverage provides a wide range of services including doctor visits, hospital services, prescriptions, tests, vision care, mental health care, dental, nursing home care, and other health care services, depending on the person's eligibility category.

Vendor's Involvement:

Aetna Medicaid Administrators employs the nearly 200 staff that support Aetna Better Health of New Jersey. Aetna Medicaid Administrators will provide services for functions that further supports Aetna Better Health of New Jersey performance related to enrollment processing, claims payment, program

integrity monitoring, internal audit, executive oversight, information systems, finance, actuarial, procurement, insurance, risk management, and compliance oversight. Additionally, they will provide oversight and guidance for locally serviced operations such as care and disease management, quality management, and utilization management.

Aetna Medicaid Administrators will provide a streamlined experience for members, providers, and the Department by offering a system of care (SoC) model to improve delivery system capability. A SoC includes a full spectrum of effective, community-based physical, behavioral, and oral health care treatment services along with psychosocial services and supports for individuals, their families, and circles of support.

Project Benefits:

Aetna Better Health of New Jersey supports a collaborative model among departments, including utilization management, care management, and behavioral health, to optimize communication to address members' needs within the structure of the benefit. Aetna Better Health of New Jersey excels at care management, which is individualized and addresses the whole member in a model that integrates physical health, behavioral health, and the social determinants of health. This dedication has contributed to Aetna Better Health of New Jersey achieving low rates of hospital readmission, averaging between 5 and 8 percent. The plan's MLTSS Care Management team achieved a $1 million State incentive for MLTSS Quality. Aetna Better Health of New Jersey exceeded the State benchmark for home visits (10 percent of members in care management) by achieving 16 percent. Aetna Better Health of New Jersey received a 91% from IPRO and DMAHS on the annual Medicaid audit in 2018. During the NCQA onsite review ABHNJ received a score of 49 out 50 possible points, attaining full NCQA accreditation.

Project Objectives:

The focus of Medallion 4.0 was to evolve from the Medallion 3.0 foundation, engage health systems and stakeholders, provide holistic and integrated care, add new services and populations, provide flexible delivery systems and payment models, and to grow stronger through improved quality, data, and reporting.

The Department of Medical Assistance Services, hereinafter referred to as the Department or DMAS, is the single State Agency in the Commonwealth of Virginia that administers the Medicaid program under Title XIX of the Social Security Act and the Children's Health Insurance Program (known as FAMIS) under Title XXI of the Social Security Act. Medallion 4.0 is the next iteration of DMAS's long-standing Medallion II and Medallion 3.0 Medicaid and FAMIS Managed Care Programs and will focus on improving quality, access, and efficiency.

Medallion II was Virginia's first mandatory managed care program. As the program expanded wide (statewide) and deep (additional populations), Medallion II was rebranded Medallion 3.0 with a renewed

focus on the areas of systems integration, contract and quality monitoring, compliance, and program integrity. Virginia seeks to strengthen and reinvigorate this model by adjusting the included populations and services.

Project Description:

Aetna Better Health of Virginia is licensed as an HMO and as a Managed Care Health Insurance Plan in the State of Virginia. Aetna Better Health of Virginia is also an NCQA-accredited Medicaid health plan.

Aetna Better Health of Virginia has more than 20 years of experience in serving Virginia Medicaid recipients. This long-standing relationship has allowed us to understand, build, and foster relationships with our communities to facilitate fully integrated systems of care and offer a consumer-centric delivery system of care for our members.

With over 465 dedicated employees throughout the Commonwealth, Aetna Better Health of Virginia continues to invest time and support in our members, in an effort to change behaviors, follow their physician's treatment recommendations and adopt healthier lifestyles. Aetna Better Health of Virginia understands that each member is unique, which is why we collaborate to deliver individualized, person-centered care to each of our members. We do this by caring for, empathizing with, listening to, planning for, and educating enrollees to reach a common understanding of trust and shared goals to reduce health disparities and promote health population.

Aetna Better Health of Virginia has developed and managed a robust provider network in the Commonwealth, capable of meeting the health care needs of our members in an accessible, timely, and convenient manner in all six regions. Our provider network is the foundation to our fully integrated systems and is designed to support members in providing a seamless system of services.

The scope of Medallion 4.0 includes medical, behavioral health, pharmacy, vision, and non-emergency medical transportation. Populations include pregnant women, infants, children, low-income adults, children/youth with special health care needs, children in foster care, and individuals formerly in foster care, and individuals receiving SSI.

Medicaid covers 1 in every 3 births in Virginia and almost 1 in 3 children. Virginia Medicaid provides access to medical services, such as: outpatient care (primary or specialty care services); hospital care, nursing facility services, and behavioral health services. Medicaid/FAMIS covers vital health care services like preventive screening, treatment, or care for acute illness, and dental services. Medicaid/FAMIS focuses on giving Virginia's children a healthy start in life by keeping pregnant women healthy. Services for pregnant women include prenatal care, other comprehensive health care services, and dental health.

Vendor's Involvement:

Aetna Medicaid Administrators employs the more than 500 staff that support Aetna Better Health of Virginia. Aetna Medicaid Administrators will provide services for functions that further supports Aetna Better Health of New Jersey performance related to enrollment processing, claims payment, program integrity monitoring, internal audit, executive oversight, information systems, finance, actuarial, procurement, insurance, risk management, and compliance oversight. Additionally, they will provide oversight and guidance for locally serviced operations such as care and disease management, quality management, and utilization management.

Aetna Medicaid Administrators will provide a streamlined experience for members, providers, and the Department by offering a system of care (SoC) model to improve delivery system capability. A SoC includes a full spectrum of effective, community-based physical, behavioral, and oral health care

treatment services along with psychosocial services and supports for individuals, their families, and circles of support.
Project Benefits: The scope of Medallion 4.0 includes medical, behavioral health, pharmacy, vision, and non-emergency medical transportation. Fully Integrated System of Care and Integrated Care Management: Our members are best served by a holistic approach that incorporates a coordinated network of physical and behavioral health care providers, as well as community-based organizations. Our integrated care management program and care coordination system—the cornerstone of our approach for the Medallion 4.0 program—facilitates collaboration among members, practitioners, providers, care coordinators, family members, the member's circle of support, community organizations, and existing case management entities, thus resulting in a seamless system of services. Aetna Better Health of Virginia works to understand each member's readiness to change, individual preferences and goals, and physical and behavioral health care needs. We assess family and community supports, strengths, and any barriers affecting the member's access to care. In doing so, we help each member achieve his or her goals and optimize his or her level of self-care and independence. Our fully integrated system of care is specifically designed to manage members with complex needs. Aetna Better Health of Virginia uses analytic methods to identify our most biopsychosocially complex and vulnerable members for whom we have an opportunity to make a significant difference. Simply stated, health care occurs beyond the boundaries of clinical care settings. With a community-focused population health approach, Aetna Better Health of Virginia is addressing social determinants of health in a meaningful way and providing locally tailored solutions that integrate community initiatives with the health care delivery system. We assess social determinants of health by capturing data through multiple mechanisms including health risk assessments, condition specific assessments, existing care plans, gaps-in-care reports, reports through our health care equity dashboard, predictive modeling, care coordination claims data, provider feedback, community health workers, community and advocate outreach, member surveys, member advocacy committees, and focus groups. Our health care equity dashboard tracks utilization and identifies members who may benefit from additional interventions and education. It also provides inpatient and emergency department usage by gender, age, race, ethnicity, and county. Similarly, providers access real-time admission, discharge, and transfer information for emergency department, inpatient, and outpatient utilization at the individual member level in collaboration with the Commonwealths Emergency Departments Information Exchange program, Pre-Merge.

Project Information		
Total Vendor Staff:	Over 5,000	
Project Objectives:		

The Agency's overall objective is for Medicaid enrollees to receive all medically necessary services in a timely manner and in the most appropriate setting, thereby achieving the best possible quality outcomes while containing costs.

The Agency awarded contracts to nationally accredited managed care plans that offer comprehensive, quality-driven provider networks, streamlined processes that enhance the enrollee and provider experience, expanded benefits targeted to improve outcomes for enrollees, top quality scores, and high rates of enrollee satisfaction to deliver an efficient, high-quality, innovative, cost-effective, and integrated health care delivery model.

In addition to the objectives stated above, the Agency awarded contracts to managed care plans that offer innovative and evidence-based approaches in meeting the following goals under the Medicaid program:

- Reduce potentially preventable inpatient and outpatient hospital events, and unnecessary ancillary services
- Improve birth outcomes
- Rebalance long-term services and supports systems by increasing the percentage of enrollees receiving services in the community instead of an institution

Project Description:

The State of Florida has offered Medicaid services since 1970. Medicaid is funded by both the State and federal government to provide health care coverage for eligible children, seniors, adults with disabilities, parents of children and pregnant women. The annual budget for the program is more than $25 billion and makes up the largest part of the total Florida budget. The 2011 Florida Legislature passed House Bill 7107 (creating part IV of Chapter 409, Florida Statutes) to establish the Florida Medicaid program as a statewide, integrated managed care program for all covered services, including long-term care services. This program is referred to as Statewide Medicaid Managed Care (SMMC) and includes two programs: Managed Medical Assistance (MMA) and Long-term Care (LTC). More than 3.2 million Floridians are enrolled in Florida's SMMC program.

Vendor's Involvement:

Aetna Medicaid Administrators provides the approximately 350 staff that support Aetna Better Health of Florida staff members. Aetna Medicaid Administrators will provide services for functions that further supports Aetna Better Health of New Jersey performance related to enrollment processing, claims payment, program integrity monitoring, internal audit, executive oversight, information systems, finance, actuarial, procurement, insurance, risk management, and compliance oversight. Additionally, they will provide oversight and guidance for locally serviced operations such as care and disease management, quality management, and utilization management.

Aetna Medicaid Administrators will provide a streamlined experience for members, providers, and the Department by offering a system of care (SoC) model to improve delivery system capability. A SoC includes a full spectrum of effective, community-based physical, behavioral, and oral health care treatment services along with psychosocial services and supports for individuals, their families, and circles of support.

Project Benefits:

The SMMC program covers a range of services including outpatient, hospital, behavioral health, substance abuse, community case management, targeted care management, transportation, pharmacy, Nursing Home and Assisted Living Facility Services, medical foster care, vision, and family planning.

Aetna Better Health of Florida works closely and collaboratively with our provider networks to integrate our innovative solutions in ways that complement their existing technology and health care service delivery goals. Specific offerings include a progressive payment model, innovative data-sharing

technology, care management and care coordination resources, and technical support that work in concert to align across the care continuum. Aetna's progressive approach to driving high-quality, positive outcomes gives providers an array of payment arrangements for increasing clinical and financial complexity and sophistication in risk-sharing.

This integrated approach has helped us to improve care and achieve high levels of provider satisfaction, including decreasing readmissions by 18% in 2018-2019, decreasing emergency room use by 14%, and achieving 86% provider satisfaction scores in 2019.

Project Information		
Total Vendor Staff:	22	
Project Objectives: The Oregon Health Plan provides health care coverage for low-income Oregonians from all walks of life. This includes working families, children, pregnant women, single adults, and seniors. Oregon Health Authority oversees the activities of 16 coordinated care organizations (CCOs). The goal of this project is to measure Medicaid member experience.		
Project Description: The project includes administering three CAHPS surveys for each CCO: adult Medicaid, child Medicaid with chronic conditions, and child Medicaid without chronic conditions and reporting survey results to both the state and the CCOs. Oregon does not adhere to the NCQA protocol allowing them some flexibility in sampling, fielding protocol, and timeline.		
Vendor's Involvement: CSS's responsibilities include developing and designing survey materials in both English and Spanish; Processing the sample frame and drawing the survey sample; Reaching out to sample members using mail and telephone; Collecting, cleaning and processing survey responses; Analyzing and reporting results to help the state and the CCOs identify performance differences and identify opportunities for improvement. CSS also provides advice to help the state make fielding decisions given the flexibility they have in this project.		
Project Benefits:		

The project provides information to individual CCOs to support quality improvement efforts. The project also provides information to the state that is used to manage the effectiveness of the program and to help consumers make informed decisions when comparing CCOs.

Project Information	
Total Vendor Staff:	22

Project Objectives:

HealthChoice is Maryland's Medicaid managed care program. HealthChoice oversees the activities of nine Managed Care Organizations. The Maryland Department of Health also administers the Rare and Expensive Case Management (REM) Program. The goal of this project is to measure Medicaid member experience with the programs and to measure provider experience with HealthChoice MCOs.

Project Description:

The project includes (1) administering two NCQA HEDIS CAHPS surveys for each HealthChoice MCO – adult Medicaid and child Medicaid with chronic conditions, reporting survey results to both the state and the MCOs; (2) developing and administering an REM experience survey for both adults and children and reporting results to the state; (3) developing, administering, and reporting on the results of a survey of PCPs to measure their satisfaction with MCOs.

Vendor's Involvement:

CSS's responsibilities include developing and designing survey materials in both English and Spanish; processing the sample frame and drawing the survey sample; reaching out to sample members using mail, telephone, and email; collecting, cleaning, and processing survey responses; analyzing and reporting results to help the state and the MCOs identify performance differences and identify opportunities for improvement.

Project Benefits:

The project provides information to individual MCOs to support accreditation and quality improvement efforts. The project also provides information to the state that is used to manage the effectiveness of the program and to help consumers make informed decisions when comparing MCOs.

Actual Start and Completion Dates:	From:	2004	To:	current

Reason(s) for Difference Between Estimated and Actual Dates: N/A
If the Vendor performed the work as a subcontractor, the Vendor should describe the scope of subcontracted activities:

Reviewing clinical charts to validate that key diagnoses and procedures on claims are properly supported is costly and time-consuming. Much of the data is unstructured, such as handwritten physician's notes. Reviews require validating hundreds or even thousands of pages of information. When payers concentrate on reviewing as many charts as possible, they waste time and resources while risking their provider relationships. In addition, although coding errors and documentation issues are important to catch, they do not always add up to high-dollar overpayments.

Cotiviti's clinical chart validation solution goes beyond coding and documentation review to find more value with fewer charts, reduce unnecessary provider requests, and keep costs sustainable.

Project Information		
Total Vendor Staff:	**2 assigned staff**	
Project Objectives: To produce and deliver regulatory, required, quality measurement and reporting, as well as prospective/monthly reporting.		
Project Description: 2 projects: Annual_National_All and Monthly_National_All		
Vendor's Involvement: Inovalon oversees Aetna's projects, addresses client questions, and provides maintenance and project upgrades, as required, in Inovalon's Cloud environment.		
Project Benefits: Inovalon provides industry-leading toolsets, services, and experience that allows Health Care Services Corporation to successfully report annual HEDIS® rates to NCQA, Centers for Medicare & Medicaid Services (CMS), and other state regulatory entities. Under the Inovalon ONE® platform, the health plan also has the capability to generate prospective, twice-monthly, analytical runs in order to identify gaps in care, and to use towards calculation of provider incentives.		
Key Personnel		
Name: Alan Boyett	Role: HEDIS® Director	
Name: James Trout	Role: Manager, Health Care QM, Data and Reporting	

Project Measurements:				
Projected Membership of Vendor's Contract: 4.3 million		Actual Membership of Vendor's Contract: 3,122,938		
Reason(s) for Change in Membership: Members are added/removed to/from the Plan's prospective project, on a monthly basis, which may cause shifts in overall membership counts from one month to the next.				
Estimated Start and Completion Dates:	From:	6/1/2016	To:	8/31/2020 (with a 1-year auto-renewal)
Actual Start and Completion Dates:	From:	6/1/2016	To:	8/31/2020 (with a 1-year auto-renewal)
Reason(s) for Difference Between Estimated and Actual Dates: There is no difference in Estimated and Actual start/completion dates.				
If the Subcontractor Performed the Work as a Subcontractor, the Subcontractor Should Describe the Scope of Subcontracted Activities: Inovalon, Inc. provides complete administrative and hybrid rate reporting services in support of Aetna's NCQA HEDIS® submission process. As an NCQA-certified vendor for the past 18 years, Inovalon's experienced teams assist Aetna with the key milestones and tasks associated with the HEDIS® reporting requirements, including data transformation and loading, generation of preliminary rates, generation of the CAHPS/Qualified Health Plan (QHP) survey sample frames, sampling of the hybrid measures, calculation of interim and final rates, assisting the Plan with the HEDIS® Compliance Audit, as well as submissions to NCQA, CMS, and other regulatory agencies. In support of Aetna's state regulatory reporting requirements, Inovalon creates and maintains multiple, custom, and state measure catalogs, outside of the standard HEDIS® measure set. Aetna's HEDIS® project(s) are managed in Inovalon's private Cloud environment, under the Client Cloud Access (CCA) implementation type. Under the CCA implementation, Aetna loads and manages their HEDIS® project and is responsible for the plan's overall quality measurement and reporting timeline. While Aetna performs all of the tasks associated with HEDIS® reporting, Inovalon assigns a dedicated team with an experienced product service manager and technical manager to assist and train those Aetna team members who are dedicated to the project. When technical or software issues occur, the CCA implementation provides the quickest time-to-solution as Inovalon can immediately look at the health plan's project, determine what the problem is, and quickly implement a solution. Additionally, the CCA-hosted option requires fewer resources from Aetna, from a technical and software perspective, and offers the health plan more control over the HEDIS® project. In this option, Aetna pushes its data onto Inovalon servers through a secure connection. Inovalon maintains the hardware and software infrastructure, as well as the storage capacity necessary to host the project(s). Lastly, all software upgrades and system back-ups are Inovalon's responsibility.

If the Subcontractor Performed the Work as a Subcontractor, the Subcontractor Should Describe the Scope of Subcontracted Activities:

Inovalon, Inc. provides complete administrative and hybrid rate reporting services in support of Health Care Services Corporation's (HCSC) NCQA HEDIS® submission process. As an NCQA-certified vendor for the past 18 years, Inovalon's experienced teams assist HCSC with the key milestones and tasks associated with the HEDIS® reporting requirements, including data transformation and loading, generation of preliminary rates, generation of the CAHPS/QHP survey sample frames, sampling of the hybrid measures, calculation of interim and final rates, assisting the plan with the HEDIS® Compliance Audit, as well as submissions to NCQA, CMS, and other regulatory agencies. In support of HCSC's state regulatory reporting requirements, Inovalon creates and maintains multiple custom and state measure catalogs outside of the standard HEDIS® measure set.

HCSC HEDIS® project(s) are managed in Inovalon's private Cloud environment, under the CCA implementation type. Under the CCA implementation, HCSC loads and manages their HEDIS® project and is responsible for the plan's overall quality measurement and reporting timeline. While HCSC performs all of the tasks associated with HEDIS® reporting, Inovalon assigns a dedicated team with an experienced product service manager and technical manager to assist and train those HCSC team members who are dedicated to the project. When technical or software issues occur, the CCA implementation provides the quickest time-to-solution as Inovalon can immediately look at the health plan's project, determine what the problem is, and quickly implement a solution.

Additionally, the CCA-hosted option requires fewer resources from HCSC, from a technical and software perspective, and offers the health plan more control over the HEDIS® project. In this option, HCSC pushes its data onto Inovalon servers through a secure connection. Inovalon maintains the hardware and software infrastructure, as well as the storage capacity necessary to host the project(s). Lastly, all software upgrades and system back-ups are Inovalon's responsibility.

Project Information		
Total Vendor Staff:	**2 assigned staff**	
Project Objectives: To produce and deliver regulatory, required, quality measurement and reporting, as well as prospective/monthly reporting.		
Project Description: 2 projects: HEDIS19 and Monthly20		
Vendor's Involvement: Inovalon oversees the projects and provides all output directly to the client, addresses client questions, as needed, and provides required maintenance and upgrades to WellCare's project and Cloud environment.		
Project Benefits: Inovalon provides industry-leading toolsets, services, and experience that allows Health Care Services Corporation to successfully report annual HEDIS® rates to NCQA, CMS, and other state regulatory entities. Under the Inovalon ONE® platform, the health plan also has the ability to generate prospective, analytical runs in order to identify gaps in care and to use towards rate trending and benchmarking.		
Key Personnel		
Name: Danny Sharpe	Role: Director, Quality Data Integrity	
Project Measurements:		
Projected Membership of Vendor's Contract: 6 million	Actual Membership of Vendor's Contract: 4,764,741	
Reason(s) for change in membership: Members are added/removed to/from the Plan's prospective project, on a monthly basis, which may cause shifts in overall membership counts from one month to the next.		

Estimated Start and Completion Dates:	From:	8/17/2010	To:	6/30/2020
Actual Start and Completion Dates:	From:	8/17/2010	To:	6/30/2020

Reason(s) for Difference Between Estimated and Actual Dates:

There is no difference in Estimated and Actual start/completion dates.

If the Subcontractor Performed the Work as a Subcontractor, the Subcontractor Should Describe the Scope of Subcontracted Activities:

Inovalon, Inc. provides complete administrative and hybrid rate reporting services in support of WellCare's NCQA HEDIS® submission process. As an NCQA-certified vendor for the past 18 years, Inovalon's experienced teams assist WellCare with the key milestones and tasks associated with the HEDIS® reporting requirements, including data transformation and loading, generation of preliminary rates, generation of the CAHPS/QHP survey sample frames, sampling of the hybrid measures, calculation of interim and final rates, assisting the plan with the HEDIS® Compliance Audit, as well as submissions to NCQA, CMS, and other regulatory agencies. In support of WellCare's state regulatory reporting requirements, Inovalon creates and maintains multiple custom and state measure catalogs outside of the standard HEDIS® measure set.

WellCare's HEDIS® project(s) are managed in Inovalon's private Cloud environment, under the Service Bureau implementation type. With this implementation option, the health plan pushes data, from all sources, onto Inovalon servers through a secure connection. Inovalon is in charge of all the tasks associated with HEDIS® reporting, including data loading/transformation, running analytics to produce preliminary rates, generating hybrid sample frames, as well as generating final rates and NCQA and CMS final submission files. Additionally, in the service bureau implementation, WellCare assists Inovalon in reviewing and signing off on tasks such as cross reference files for provider specialty and homegrown/non-standard codes, data load check figure reports, CAHPS sample frames, preliminary HEDIS® rates, HEDIS® hybrid sample frames, final HEDIS® state-specific rates and outputs, IDSS and CMS submissions, and the HEDIS® compliance audit.

Overall, the service bureau option requires the fewest resources from WellCare, placing the burden of the labor and the associated technology tasks on Inovalon. In the service bureau implementation, Inovalon maintains the Cloud environment and is responsible for all software upgrades and system back- ups related to WellCare's projects. This implementation option frees up WellCare staff, who would otherwise be focused on managing the technical aspects of the HEDIS® project and allows the team to focus on other quality initiatives. However, with Inovalon's unparalleled reporting technologies, WellCare has overall control of the project, with real-time access to detailed information, down to the member- and claims-level detail, and insight into the status of deliverables throughout the project lifecycle.

SKYGEN USA

Table 9: Subcontractor References #1

Vendor Information		
Vendor Name: SKYGEN USA	Contact Name:	Mark Dasek
	Contact Phone:	262.946.4537
Customer Information		
Customer Organization: Horizon Blue Cross Blue Shield New Jersey	Contact Name:	Dr. Fred DiOrio, DMD
	Contact Title:	Dental Director
Customer Address: 1427 Wyckoff Road Farmingdale, New Jersey 07727	Contact Phone:	732-256-5485
	Contact Email:	Fred_DiOrio@horizonnjhealth.com
Project Information		
Total Vendor Staff:	**Approximately 600**	
Project Objectives: SKYGEN USA provides administrative dental services for Horizon's Medicaid members.		
Project Description: SKYGEN performs all services necessary to administer the dental benefit to Horizon New Jersey Health, including implementation, network development, provider relations, credentialing, member services, member outreach, intensive care management, quality, utilization management, appeals and grievances, and reporting. In addition to our policies and procedures that proactively ensure members receive appropriate services and treatment, we have built sophisticated reporting and analytics into our dental benefits software system, the Enterprise System. Our system allows us to run reports designed specifically for Medicaid dental programs that monitor utilization and member outcomes. Using this data, we create interventions, outreach initiatives, and educational campaigns as appropriate for Horizon Blue Cross Blue Shield New Jersey.		
Vendor's Involvement: SKYGEN USA has managed Horizon Blue Cross Blue Shield of New Jersey's Medicaid members since 2012, with a focus on holistic program integrity and stewardship. To address Horizon Blue Cross Blue Shield of New Jersey's most immediate needs, we used a combination of data analytics, fee schedule analysis, and geo-access reporting to analyze costs. We are delegated to perform the following activities for the dental program: • Provider recruitment, credentialing, education, and retention • Authorizations		

- Utilization review and management
- Claims processing and provider payment
- Call center services
- Reporting
- Member services
- Quality assurance
- Complaints, grievances, and appeals
- Fraud, waste, and abuse monitoring

Project Benefits:

For Horizon Blue Cross Blue Shield New Jersey, SKYGEN reduced their per member per month costs, resulting in significant saving while achieving over 80 percent provider satisfaction from 2015 to 2017. We also consulted with Horizon Blue Cross Blue Shield New Jersey to improve their providers' performance and helped protect nearly 1 million members by reducing and preventing fraud, waste, and abuse.

Total Vendor Staff:	**Approximately 600**	
Project Objectives: SKYGEN USA provides administrative dental services for United Concordia's Medicaid members.		
Project Description: **SKYGEN is a dental administrative services organization. We perform all services necessary to** administer the dental benefit to United Concordia in Pennsylvania, Ohio, Kentucky, North Carolina, and West Virginia, including implementation, member services, quality, and reporting. In addition to our policies and procedures that proactively ensure members receive appropriate services and treatment, we have built sophisticated reporting and analytics into our dental benefits software system, the Enterprise System. Our system allows us to run reports designed specifically for Medicaid dental programs that monitor utilization and member outcomes.		
Vendor's Involvement: SKYGEN has been the dental administrator managing United Concordia's Medicaid members since 2012, currently totaling nearly 400,000 members. SKYGEN USA performs the following activities for United Concordia: • Authorizations • Claims processing; provider payment		

- Reporting
- Member services
- Quality assurance

Project Benefits:

SKYGEN USA has effectively managed the dental benefit program for United Concordia, creating efficiencies, working to increase provider and member satisfaction, and improving automated claims processing. Project benefits include improving access to care, reducing program overhead, containing benefit costs, and safeguarding patients.

Customer Information		
Customer Organization: AmeriHealth Caritas Family of Companies	Contact Name:	Dr. Larry Paul
	Contact Title:	Dental Director
Customer Address: 100 Stevens Drive, Philadelphia, Pennsylvania 19113	Contact Phone:	215-937-7303
	Contact Email:	LPaul@amerihealthcaritas.com
Project Information		
Total Vendor Staff:	**Approximately 600**	

Project Objectives:

SKYGEN USA provides administrative dental services for the AmeriHealth Caritas Family of Companies' approximately 1 million Medicaid members.

Project Description:

SKYGEN is a dental administrative services organization. We perform all services necessary to administer the dental benefit to AmeriHealth Caritas in Pennsylvania, Washington D.C., Delaware, and Michigan, including implementation, member services, quality, reporting, and network development.

Vendor's Involvement:

SKYGEN has been the dental administrator managing AmeriHealth Caritas's Medicaid members since 2011.

We perform the following activities for AmeriHealth Caritas:

- Authorizations
- Claims processing; provider payment
- Reporting
- Call center
- Member services
- Quality assurance
- Complaints, grievances, and appeals

Project Benefits:

SKYGEN USA has effectively managed the dental benefit program for AmeriHealth Caritas, creating efficiencies, working to increase provider and member satisfaction, and improving automated claims processing. For example, in one market we have achieved an auto adjudication rate of over 99%. The

average auto adjudication rate for all AmeriHealth markets was greater than 95% in 2019. Project benefits include reduced program overhead, containing benefit costs, safeguarding patients, and improved access to care. As an example, SKYGEN USA contracted with AmeriHealth to build dental networks in several markets. Combined, we contracted with over 2,000 providers on behalf of AmeriHealth. Additionally, in one market we were able to achieve an access to care rate of 65% for Medicaid members in 2019.

	Contact Email:	KoblensM@aetna.com
Project Information		
Total Vendor Staff:	2,600 VSP Vision Care employees VSP will leverage the experience of 10-12 employees to manage this project.	
Project Objectives: To identify Diabetic members of Aetna Better Health of Ohio and implement several initiatives to improve Diabetic Member experience and service utilization.		
Project Description:		

With national prevalence rates for diabetes and pre-diabetes soaring, VSP is committed to helping reverse these trends and assist our members in managing these conditions and their complications. We are proud to introduce a new program, VSP Healthy Innovations.

VSP Members get great preventive care with VSP. Now, through the new VSP Healthy Innovations Program, with a special focus on diabetes, they will get an integrated approach to managing overall health through a WellVision Exam® provided by a VSP network doctor. The result is healthier employees, increased productivity, and lower healthcare costs.

With 60% of Americans having at least one chronic condition, and 42% have more than one*, the program focuses on member engagement and education as well as on data collection and exchange with clients, health plans, and disease management vendors.

** RAND Corporation Chartbook, 2017*

Here's how VSP helps Aetna Better Health Members with Diabetes:

1. The EyeRemind Program automatically sends a letter to VSP members who have diabetes and have not received their eye exam within 14 months of last exam. Clients can customize the program with additional reminders, like e-mail or future mailings, for members who still need to receive an eye exam.
2. Engaging in new innovations through partnerships with companies that share our mission. This includes testing new technology and approaches to diabetes care with formal pilots to ensure the best experience and outcome for our clients and members.
3. Diabetes Patient Protocol was developed by a nationwide group of VSP Vision Care providers using guidelines established by the American Optometric Association and American Academy of Ophthalmology. It is followed when treating patients with diabetes and pre-diabetes and includes Exam components, VSP's collaboration with the Member's Primary Care Provider, and Patient education regarding their condition.

Vendor's Involvement:

VSP's Healthy Innovations Program is established and lead by VSP as part of our commitment to improving the health and wellness of Aetna Better Health Members.

Integration: VSP integrates with clients' existing vendors by sharing diabetes and other medical data to help employees manage their chronic conditions. When VSP sends a file to a third party, this helps increase enrollment in the clients' existing disease management/wellness programs.

When a third party sends VSP a file, this allows us to include identified diabetic members in our eye exam reminder program and alerts a VSP doctor of the member's condition prior to their visit. This helps their VSP doctor provide more personalized care.

Innovation: Through new innovations and partnerships with companies and network providers that share our vision, we are continually working to find new ways to identify and manage diabetes and pre-diabetes.

Cultivation: VSP is committed to providing our clients resources that emphasize the importance of an annual VSP® WellVision Exam for their employees. Through a WellVision Exam, a VSP network doctor can detect signs of chronic conditions before they become serious.

Project Benefits:

- **2-Way Data Exchange:** Established a 2-way data exchange to identify and communicate Diabetic members or Members with other chronic conditions to and from both Aetna Better Health and Member Primary Care Providers.
- **Targeted Messaging:** In 2019, VSP identified 5,986 Diabetic members who had not received a WellVision Eye Exam within the last 14 months. VSP issued Exam Reminder letters to these members, resulting in the following success metrics: 225 Diabetic Members received an Eye exam within 90 days of letter receipt. 101 Members received an eye exam within 91-180 days of letter receipt. 326 members received an eye exam within 180 days of letter receipt. Within 12 months of establishing our targeted messaging campaign, Aetna Better Health Medicaid program saw a 6% increase in Diabetic Members utilizing Vision exam and services.

Customer Address: 3 Independence Way # 400 Princeton, New Jersey 08540	Contact Phone:	609-282-8213
	Contact Email:	LopiccoloJ@aetna.com
Project Information		
Total Vendor Staff:	Welltok has approximately 430 staff members who support all of our clients.	

Project Objectives:

Health Programs are automated population health and condition support programs developed in collaboration with third-party content partners, including the American Academy of Pediatrics (AAP) and the American Diabetes Association (ADA). Health Programs currently include programs focused on adult and pediatric preventative health ("Txt4health" and "Text4kids"), maternal health ("Text4baby"), diabetes health ("Care4life") and smoking cessation ("Text2quit").

Welltok provides and customizes quality campaign templates for the Health Plan. These templates are pre-built, evidence based, modifiable templates that can be tailored to supplement or integrate with clinical workflows. Campaigns can be deployed to a full population or targeted cohort. Topics include but are not limited to areas such as chronic condition management, appointment reminders, medication adherence, health risk assessments, gap-in-care alerts, benefits and resources, and re-enrollment reminders.

Project Description:

Implementation, delivery, and support of health messaging platform.

Health Programs are automated population health and condition support programs developed in collaboration with third-party content partners, including the American Academy of Pediatrics (AAP) and the American Diabetes Association (ADA). Health Programs currently include programs focused on adult and pediatric preventative health ("Txt4health" and "Text4kids"), maternal health ("Text4baby"), diabetes health ("Care4life") and smoking cessation ("Text2quit").

6. Financial Stability

The Vendor should provide the following components for this section:

6.1 Dun & Bradstreet (D&B) Ratings

The Vendor should provide the industry standard Dun & Bradstreet (D&B) ratings that indicate its financial strength and creditworthiness, assigned to most U.S. and Canadian companies (and some companies of other nationalities) by the U.S. firm D&B. These ratings are based on a company's worth and composite credit appraisal. Additional information is given in credit reports (published by D&B) that contain the company's financial statements and credit payment history.

The Vendor should provide the following D&B measures:

- PAYDEX
- Commercial Credit Score Percentile (Delinquency Predictor)
- Financial Stress Score
- D&B Viability Rating
- Bankruptcy Found
- D&B Rating

Dun & Bradstreet (D&B) Ratings

Coventry Health Care of West Virginia, Inc. dba Aetna Better Health of West Virginia (Aetna)[1] is proud of our more than 23 year history as a West Virginia Mountain Health Trust plan working to deliver needed supports and services in the most integrated, appropriate, and cost-effective way possible. Our excellent quality scores and strong financials demonstrate our commitment to providing exceptional member service while ensuring financial sustainability, which is a key to Medicaid member access to services. Aetna ensures compliance with all financial security obligations by maintaining a high net worth, exceeding solvency requirements, and by providing transparency into lines of credit and provider risk arrangements.

[1] For simplicity throughout this proposal, we will use "Aetna" to refer to the vendor, one of its parents, Aetna Inc., and/or any Aetna Inc. subsidiary that has conducted Medicaid/CHIP business or has participated in any other line of business discussed in this proposal. Where clarity dictates differentiating between Aetna entities, we will refer to the entity by name, which will include using Aetna Better Health of West Virginia to refer to the vendor, and Aetna Inc. to refer to one of Aetna Better Health of West Virginia's indirect parents. On November 28, 2018, CVS Health Corporation acquired Aetna Inc. and its subsidiaries, including Aetna Better Health of West Virginia. Throughout the proposal, we will refer to our new ultimate parent as CVS Health Corporation or CVS Health.

In support of our commitment to full transparency and to ensure the Department has all financial documentation that may be relevant to confirming the fiscal soundness of our business, we have provided the current D&B Ratings Report for Aetna Better Health of West Virginia and its ultimate parent, CVS Health Corporation (CVS Health). Aetna Better Health of West Virginia has a Favorable viability rating of 34CZ and is identified as having a low risk of insolvency. CVS Health has a Favorable viability rating of 15AB and a Fair D&B Rating of 5A3 with low credit risk. The full list of requested D&B Measures for Aetna Better Health of West Virginia and CVS Health are in included **Table 3.6.1-1.**

Table 3.6.1-1: D&B Measures for Aetna Better Health of West Virginia and CVS Health

D&B Measure	Aetna Better Health of West Virginia	CVS Health
PAYDEX	N/A[2]	69
Commercial Credit Score Percentile (Delinquency Predictor)	72	68
Financial Stress Score	51	48
D&B Viability Rating	34CZ	15AB
Bankruptcy Found	None	None
D&B Rating	N/A[3]	5A3

To support and confirm the fiscal soundness of Aetna Better Health of West Virginia further, we have also provided the ratings for Aetna Better Health of West Virginia from AM Best. AM Best is a credit rating agency that focuses on the insurance sector to provide financial documentation and information to support robust and accurate ratings. The current ratings, effective November

[2] As the ultimate parent, CVS Health is the primary debt-issuing entity. Aetna Better Health of West Virginia is not a debt-issuing entity and therefore does not have ratings beyond what is identified in Table 6.1-1.
[3] Please see the D&B Rating for CVS Health Corporation, provided in Table 6.1-1, as there is not a D&B Rating available for Aetna Better Health of West Virginia.

21, 2019, demonstrate an Excellent financial strength rating of A with stable outlook and an Excellent issuer credit rating of 'a' with stable outlook.

In **Appendix D**, we provide the following documents:

- Dun and Bradstreet report for Coventry Health Care of West Virginia, Inc. dba Aetna Better Health of West Virginia
- Dun and Bradstreet report for CVS Health
- AM Best report for Aetna Better Health of West Virginia

6.2 Financial Capacity

The Vendor should supply evidence of financial stability sufficient to demonstrate reasonable stability and solvency appropriate to the requirements of this procurement. The Vendor should provide their response as part of their bid in accordance with the template below.

Financial Capacity

Aetna has served Medicaid members in West Virginia since 1996 and has maintained financial solvency and stability throughout our tenure in the State. This longstanding history and ongoing financial stability allow us to help ensure our main focus of putting our members first. Should there be a concern at any time regarding net worth, solvency, or surplus requirements, Aetna will continue to receive financial support in the form of capital contributions from its parent company, Aetna Health Holdings, LLC (Aetna Health Holdings), whose ultimate parent is CVS Health, a Fortune 10 company.

The CVS Health Capital Management team routinely assesses the financial position of each subsidiary. This team completes an estimated net worth calculation one month prior to the close of quarterly financials. If capital contributions are required, the team initiates the transfer of funds prior to the close of each quarter. Aetna Health Holdings, the immediate parent of Aetna Better Health of West Virginia, will provide unconditional financial support to Aetna Better Health of West Virginia in the form of capital contributions to meet State solvency and capital

requirements. We have provided the current Capital Support Letter in **Appendix D**, which details the capital support from Aetna Better Health of West Virginia's parent.

Aetna currently maintains a Certificate of Authority (COA) with the West Virginia Office of the Insurance Commissioner (OIC), which confirms good standing with the State and compliance with all financial requirements to maintain the COA with the West Virginia OIC. This documentation is included in **Appendix** E as part of the requirements for Attachment 3, Section 2, Mandatory Qualifications. We have provided the contact information for the West Virginia OIC in **Table 10** as a credit and financial health reference.

Aetna contracts with Aetna Medicaid Administrators LLC (Aetna Medicaid Administrators), an affiliate company, through a Plan Management Services Agreement for administrative services. Because of this, Aetna Medicaid Administrators is a primary creditor of Aetna Better Health of West Virginia, and we have included them as a credit reference in **Table 10.** We have also included Aetna Medicaid Administrator's bank account institute, Bank of America, as credit reference in **Table 10**. CVS Health holds lines of credit for all its subsidiaries, including Aetna Better Health of West Virginia. CVS Health renewed and refinanced its unsecured revolving credit facilities during the second quarter of 2019. The aggregate amount of its credit facilities is $6 billion, as reflected in **Appendix D** CVS Health 10-Q filing for third quarter of 2019.

Please list credit references that can verify the financial standing of your company.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

ATTACHMENT 4: PROJECT ORGANIZATION AND STAFFING APPROACH

Instructions: The Vendor should employ staffing strategies to ensure all requirements and service levels are met to the Department's satisfaction. The evaluation of the Vendor's staffing approach shall be based on the ability of the Vendor to satisfy the requirements stated herein. Therefore, the Vendor should present detailed information regarding the expertise of the proposed staff and an Initial Staffing Plan.

For ease of formatting and evaluation, ***Attachment 4: Project Organization and Staffing Approach*** provides the required outline for the Vendor's response to staffing. The Vendor's response to the following should not exceed 25 pages, excluding organizational charts, the forms provided in this Attachment, and any supplemental documentation requested as part of the submission.

Please refer to ***Appendix 2: Staff Qualifications, Experience, and Responsibilities*** of the RFP for details pertaining to staff qualifications, experience, and responsibilities.

1. Initial Staffing Plan

As part of the Vendor's bid response, the Vendor should provide an Initial Staffing Plan. In addition to the requirements described in ***Attachment 5: Mandatory Requirements*** and ***Appendix 1: Detailed Specifications***, the Vendor's narrative description of its proposed Initial Staffing Plan should include the following:

- A succinct description of the Vendor's proposed project team that should exhibit the Vendor's ability and capability to provide knowledgeable, skilled, and experienced personnel to accomplish the scope of work as described in this RFP.
- A detailed proposal for providing all resources necessary to fulfill the requirements as specified in this RFP. This includes details covering not only key staff, but also support staff.
- An organizational chart showing the corporate structure, lines of responsibility, and authority in the administration of the Vendor's business as a health plan.
- An organizational chart showing:
    - The organizational structure for this project and how it relates to the proposed service area(s), including staffing and functions performed at the local level.
    - As available, the names, titles, and contact information for the key staff positions or functions listed in ***Appendix 2: Staff Qualifications, Experience, and Responsibilities***. If any individuals are to be hired in the future, provide an approximate timeline for appointment.
    - The reporting relationships of each individual listed.
    - The city and state where each position will be located.
    - Identification of subcontractor staff, if applicable.
- An organizational chart showing how subcontractor(s), excluding direct-care providers, will be managed within the Vendor's West Virginia organizational structure, including the primary individuals at the Vendor's organization and at each subcontractor organization responsible for overseeing such subcontract. This information may be included in the West Virginia organizational chart listed previously or as a separate organizational chart(s).

- A brief narrative explaining the submitted organizational charts, and highlighting the key functional responsibilities and reporting requirements of each organizational unit relating to the Vendor's proposed management of the Vendor program(s).
- A narrative describing tools and processes used to screen available staff to fill positions.
- A narrative describing the process for replacing key staff within defined timeframes, and procedures for backfilling key staff during any transition.
- A hiring plan for administration of the contract awarded through this solicitation.
- Information on how Vendor staffing numbers will reflect adequate access to service populations indicated in this solicitation.
- Information on any additional training or materials—including, but not limited to, the content, methods, and timeframe to initiate and complete training—the Vendor will provide to the Contract Liaison/MHT Administrator to support enrollment.
- Subcontractor Monitoring Plan
    - If the Vendor retains a subcontractor for claims processing, dental benefit management (DBM), behavioral health management, utilization management, or network development, describe activities and monitoring tools for each subcontractor.
    - Provide sample subcontractor agreements for review. The successful Vendors will submit finalized agreements to the Department for approval prior to implementation.
    - If contracting with a benefits manager, provide a separate listing/table of benefit manager vs. Vendor functions in administering the benefits (e.g., provider recruitment, member and provider calls, utilization management, provider education).
    - Identify types of reports/data the subcontractor will provide to the Vendor to help manage medical benefits or other benefits. Indicate the overall content of reports and the frequency with which they will be provided to the Vendor. Please provide sample reports where available.
    - Provide a description of how the Vendor will use reports/data from each subcontractor to ensure appropriate vendor oversight and member access/satisfaction/continuity of care.
    - Identify the frequency of contact/status calls with each subcontractor upon go-live and on an ongoing basis.
    - Describe a plan that will be followed if a subcontractor does not fulfill its contract or service obligations, including, but not limited to, details on any corrective action plan processes.
    - Describe the Vendor's contingency plan if the Vendor or a subcontractor terminates its contract, including plans to identify another subcontractor and transition steps that would take place to ensure uninterrupted member access.
    - Describe whether each subcontractor is an affiliate of the Vendor or an unrelated third party.

As the first managed care organization (MCO) to serve all 55 counties in West Virginia, Coventry Health Care of West Virginia, Inc. dba Aetna Better Health of West Virginia (Aetna) has been a dedicated partner to the Department for over 23 years. Throughout this partnership with West Virginia Medicaid, we have collaborated on multiple program and benefit expansions and bring proven solutions to ensure the State's vulnerable populations receive the services they need to improve their lives. These efforts are supported by a **staff that is deeply entrenched in the state's culture, with the vast majority being native West Virginians or long-term residents.** Aetna can immediately provide the seasoned staff to support Mountain Health Trust's (MHT) West Virginian Medicaid and West Virginia Children's Health Insurance Program (WVCHIP) through to the next decade. Our staff is ready to quickly update processes and systems to implement new contract requirements with little risk to the Department or disruption to our current enrollees or providers while welcoming new enrollees.

Initial Staffing Plan

Aetna Better Health of West Virginia is staffed to serve the populations for this contract, as we have been supporting our managed care program for over the last 23 years. However, we will hire upon contract award three key staff to staff our team optimally. Our Member Services, Prior Authorization, and Operations functions are all based in our Charleston office. Our Care Management staff is placed throughout the state, which provides a better opportunity for enrollee and provider interaction and understanding of local resources and barriers to care. Our staffing plan is based on the number of projected enrollees and consideration of the special needs of the populations, and it uses a staffing ratio algorithm that includes clinical, non-clinical, and program-wide community-based support workers. Our health plan is authentically West Virginian, rich in experience serving the proposed West Virginia Medicaid populations. **We also**

have extensive experience serving children throughout the state and are prepared to welcome the WVCHIP program with little additional readiness required.

Description of Proposed Project Team Staff Experience and Knowledge

Our proposed project team staff for this new contract has more than 300 combined years of specific, dedicated West Virginia health plan and Medicaid experience. Our staff experience includes working collaboratively with organizations such as schools, Family Resource Network, Mountaineer Food Bank and Facing Hunger Food Bank, Adverse Childhood Experiences Coalition, Healthy Kids, libraries, after-school programs, and the Affordable Healthcare 'Medicaid Matters' group. Our staff members serve on the Perinatal Partnership Substance Use in Pregnancy Committee, supporting child and adolescent behavioral health (BH) and evidence-based practices and interventions, as well as assisting enrollees with a variety of safe, family-oriented events at the Marcum Terrace Family Resource Center. Any key staff changes will be sent to the Department within 14 days. **Table 4.1.1-1** illustrates our staff strengths.

Table 4.1.1-1: Key Staff Knowledge and Experience

Proposed Key Staff	Role	Brief Description: Knowledge and Experience
Greg Carpenter, Master of Arts	Contract Liaison/ MHT Administrator	A native West Virginian with 13 years of health care industry experience and 6 years of managed Medicaid experience in West Virginia, Mr. Carpenter's expertise includes interpersonal communication skills, sales management skills, and organizational and process-improvement skills. He manages the overall direction and day-to-day operations of the entire plan including attending Department meetings and legislative committee hearings; maintaining client relationships and providing timely responses to inquiries; and offering status reports and responses to issues involving health plan functional areas while ensuring enrollees receive care appropriate to their needs, among other duties.
Todd White	Chief Executive Officer	A native West Virginian with 24 years of health care experience, Todd White has developed multiple partnerships with hospital systems, physician practices, and community and state-based agencies, including one of the nation's first neonatal abstinence

Proposed Key Staff	Role	Brief Description: Knowledge and Experience
		syndrome (NAS) facilities, Lily's Place. Employed by Aetna for over 22 years, Mr. White oversees all state contractual requirements and the plan's financial condition and provides direction to and manages more than 172 staff. Under his leadership, Aetna increased its service area from 16 counties in 2006 to all 55 counties in West Virginia by 2012 and achieved the Commendable rating with the National Committee for Quality Assurance (NCQA) with a 4.0 rating.
Tina Bailes	Chief Financial Officer	Tina Bailes' experience includes 16 years working in the Medicaid program, holding various fiscal roles prior to her current role as chief financial officer with Aetna, which she has held for the last 5 years. In her prior role at the state, she served as the deputy commissioner of finance for the West Virginia Bureau for Medicaid Services and was responsible for providing fiscal oversight of the state's (then) $3 billion Medicaid program. Through her state experience, she gained an in-depth understanding of the Medicaid and CHIP programs and the enrollees they serve, the financing structure that supports the programs and the provider landscape.
Alva "Fuzzy" Page III, Esq.	Compliance Officer	Raised in Kanawha County, Mr. Page has extensive health care law experience in government affairs and compliance with 15 years of health care and Medicaid experience and 3 years of managed Medicaid in West Virginia. He is responsible for developing and implementing policies, procedures, and practices, ensuring plan compliance with contract and state and federal requirements. He creates internal controls, policies, and procedures to prevent/detect fraud, waste, and abuse, and he develops our formal Medicaid compliance plan, monitors our Special Investigations unit (SIU) activities, and serves as our primary contact for MHT compliance requests/concerns. Mr. Page also served as the general counsel for the West Virginia Department of Health and Human Resources, Bureau for Medical Services, as assistant attorney general.
Donald Gibbon, Doctor of Osteopathy	Chief Medical Officer/Medical Director	Dr. Donald Gibbon has practiced medicine for 20 years and has 6 years of managed Medicaid experience, 6 years serving as a medical director, and 5 years serving West Virginians. He has worked with enrollees/patients in their recovery from drug and alcohol use for more than 20 years and served as an Open Door Alcohol and Other Drug Treatment Center board member from 1997 to 2006 and past president from 2001 to 2003. His expertise includes leadership roles in emergency, occupational, and urgent care; adult/child trauma treatment; and substance use and trauma; and he has treated children since 1990. Dr.

Proposed Key Staff	Role	Brief Description: Knowledge and Experience
		Gibbon was involved in the collaboration between Aetna and the Bureau of Medicaid Services to develop their opioid management plan.
Frank Angotti III, Doctor of Medicine	Behavioral Health Medical Director	A native West Virginian, Dr. Angotti is an experienced psychiatrist and BH management professional with 10 years of health care experience including over 3 years serving the Medicaid population in West Virginia and over 3 years of managed Medicaid health plan experience. His focus includes leadership roles in child and adolescent psychiatry, behavioral clinic health, and substance use/trauma arenas. He has forged relationships in the West Virginia community as it relates to appropriate therapeutic care for clients and available programs and has extensive experience managing children with complex BH needs under the Medicaid system. Currently, he leads and supports the BH staff, works with upper management to develop the strategic direction of the department, and oversees BH utilization management.
Kimi King, Bachelor of Science in Nursing (BSN), Registered Nurse (RN)	Medical Management Director	Ms. King, a sixth-generation West Virginian, is a clinical services executive with 35 years' health care industry experience and 11 years of managed Medicaid experience in West Virginia. Her expertise includes nursing, clinical management, accreditation preparation, and strategic insights in the medical management arena. As our senior director of health services, Ms. King oversees all areas of medical management for the Medicaid health plan and serves as a member of the Perinatal Partnership Substance Use in Pregnancy Committee. She also works with pregnant women with substance use disorder and babies with NAS and has implemented programs for babies with NAS and high-risk youth.
Johna Easter, RN, Certified Case Manager	Care Management Director	Johna Easter is a certified transplant specialist who has served infants and children needing organ and bone marrow transplants. She is a native West Virginian who grew up in Charleston. Ms. Easter has 36 years of health care experience—26 in managed care and 5 years of managed Medicaid experience in West Virginia. Her expertise includes nursing, clinical case management, and strategic insights in the medical management arena. She oversees staff members, reporting, planning, and developing new care coordination programs. Prior to joining Aetna, Ms. Easter served as the director of care management for HealthSmart Care Management Solutions, where she supervised nurses and performed precertification and case management.

Proposed Key Staff	Role	Brief Description: Knowledge and Experience
Elaina Wickas, RN, BSN	Quality Director	Raised in the Point Pleasant area, Ms. Wickas has 34 years' health care experience and 6 years of managed Medicaid experience in the state, including managed care quality improvement, managing large-scale teams and projects, regulatory and accreditation compliance, and audit oversight. She is responsible for developing/implementing the Quality Assessment and Performance Improvement programs and policies in addition to running the department's operations. She is also an NCQA-certified auditor.
To be hired upon contract award	Member Services Director	Our West Virginia-based Member Services director will have at least three years' experience working with the public in an educational capacity on health insurance-related matters, call center experience, and a bachelor's degree or higher. This key staff member will oversee call center and enrollment/disenrollment activities, grievances, and other enrollee-related inquiries and will assist enrollees in obtaining covered services, handle questions and complaints, and ensure performance requirements.
To be hired upon contract award	Claims Payment Director	Our West Virginia-based claims payment director will have at least three years' health insurer claims processing and encounters experience and a bachelor's degree or higher. This key staff member will oversee the physical and BH claims payment- and encounter-related activities to ensure timely, accurate provider claims payment and to monitor claims processing.
Dorsen McConnaughy, Master of Business Administration (MBA)	Network Development Director	Dorsen McConnaughy is an experienced network development executive who has lived in West Virginia for almost 30 years and has 19 years of managed Medicaid experience, including network development, contract negotiation, provider relations, credentialing, provider billing, and process improvement. Currently, he oversees network development and contracting activities for physical and BH services. Prior to joining Aetna, Mr. McConnaughy served as a network contractor at Wexford Health Sources, where he negotiated contracts with hospitals, ancillaries, and physician groups.
Sarah White, MBA	Provider Relations Director	With 17 years' health care experience and 11 years' managed Medicaid experience in the state, Sarah White's expertise includes provider relations, credentialing, provider billing, and process improvement. A native West Virginian, Ms. White oversees day-to-day staff operations, education, service, reimbursement, and network management, and she ensures contractual metrics are met/exceeded. She has also served as a

Proposed Key Staff	Role	Brief Description: Knowledge and Experience
		senior provider relations representative overseeing credentialing and contracting.
Shannon White-Metz, Master of Hospital and Health Administration	Program Integrity Lead	Ms. White-Metz is a West Virginia native with 20 years' health care experience and 3 years' managed Medicaid experience in West Virginia. Her expertise includes health care fraud investigation, strategic and tactical planning, risk analysis and mitigation, and regulatory compliance. In this role, Ms. White-Metz is the primary contact person for all Department program integrity inquiries and leads all compliance and program integrity efforts for the health plan. Prior to joining Aetna, she served as a paralegal for the Leighway Consulting, where she performed legal research, case planning, development, and management.
Brad Liston, Master of Science	Information Technology Director	A native West Virginian, Mr. Liston has 22 years of health care industry experience and 4 years of managed Medicaid experience in West Virginia and he offers a broad understanding of business processes, information technology (IT) capabilities, IT operations and integration. Currently, he is responsible for supporting health plan systems, data, hardware activities, and required reporting. Prior to joining Aetna, he served as a database administrator of management information systems for the State of West Virginia Department of Health and Human Resources, where he was responsible for data loads, backups, validation, and general financial and medical reporting, data integrity, and data security.
To be hired upon contract award	Community Engagement Director	Our West Virginia-based community engagement director will have at least three years' experience working with the public and will understand insurance and the health care environment and will have knowledge of West Virginia and its population needs. This individual will have a bachelor's degree or higher and will be responsible for marketing, public relations, and community engagement activities. He or she will develop and maintain State-approved marketing policies/procedures, develop a written plan, and submit all marketing materials to the Department while ensuring prohibited marketing activities do not occur.
Jessica Feeney, MBA, Master of Education	Encounter Data Integrity Manager	Ms. Feeney is an experienced manager of business information systems and analytics with a comprehensive background in information technology, data analysis, and project management. She has been with our plan since 2012 and has been our encounter data integrity manager (manager of business information systems and analysis) since 2015. Ms. Feeney leads our Six Sigma initiatives to identify the root cause of errors and solutions to reduce errors while improving overall operational efficiencies. Her duties include ensuring timely,

Proposed Key Staff	Role	Brief Description: Knowledge and Experience
		accurate and complete reporting of all encounter data submissions, including oversight of subcontractor data, oversight of resubmissions due to rate changes or claim resubmissions, and overall responsibility for the data integrity of encounter claims.
LaKeisha Barron-Brown	MHT Member Advocate	Our MHT member advocate, Ms. LaKeisha Barron-Brown, a long-time Charleston resident, has more than 17 years' experience offering counseling to a board range of clients, including patients referred by the Pregnancy Connections Program, navigating patients through the assessment, treatment, and management of drug/alcohol use during pregnancy, managing and coordinating various components in the Drug Court program, and working closely with the West Virginia Department of Health and Human Resources. As our member advocate, Ms. Barron-Brown collaborates with the care management director/care coordinators; provides member support related to enrollment, access, and continuity of care issues; and supports members throughout grievance/appeals activities.
Diane Paletta, Doctor of Dental Surgery	Dental Director	Practicing dentistry for over 40 years in West Virginia, Dr. Paletta has 5 years of managed Medicaid experience, and 40 years serving West Virginians. Her expertise includes general dentistry and Medicaid dental programs. She also serves as the West Virginia dental director for SKYGEN USA. She served as a professor of pharmacology and periodontology in the Division of Dental Hygiene at West Virginia University Tech and as clinical advisor for the West Virginia Board of Dentistry. She has served as a Capitol City Give Kids a Smile volunteer and as the chairperson for the West Virginia Donated Dental Services for the Handicapped Council.

Specialized Staff

As we evaluate needs for the MHT and WVCHIP program, we will explore opportunities to integrate in the care coordination model the use of System of Care (SOC) staff. These individuals have extensive experience in the delivery and implementation of tailored services and supports for West Virginians and are professional leaders who demonstrate passionate support through consultation to help enrollees address and overcome systemic barriers. The following includes a brief description of suggested SOC administrators and their roles:

- Recovery and resiliency SOC administrator, who would develop and implement supportive programs and interventions to address mental health, substance use, care delivery, and coordination, including resiliency training, development, and recovery maintenance
- Child SOC administrator, who would build stakeholder relationships for planning and delivering services and community-based supports for members in all regions
- Adult SOC administrator, who would collaborate with the Department and stakeholders to help enrollees with waiver applications, durable medical equipment, and referrals for independent living skills supports

Extended Support Staff

Aetna will hire two additional case manager associates upon contract award to further support the enrollees who will be joining our health plan. Because we are an incumbent already serving Medicaid members, our extended support staff are already in place and serving these new populations. They include care management, customer service, quality, clinical liaison, special needs representation, and network and operations roles, among others. The knowledge and experience for these positions are highlighted in **Table 4.1.1-2.**

Table 4.1.1-2: Extended Support Staff Knowledge and Experience

Support Staff Positions	Brief Description: Knowledge and Experience
Community Development Coordinator	Develops, facilitates, and implements outreach activities, special events/programs, and presentations to support member education/health plan awareness within the Medicaid or Medicare population and will maintain relationships with community contacts and marketing guidelines/compliance with the State's laws and regulations
Supervisor, Customer Service	Provides overall supervision of customer service employees and will be accountable for member/provider satisfaction, retention, and growth by efficiently delivering competitive services
Care Management Associate	Provides comprehensive health care management to facilitate delivery of appropriate quality health care and promotes cost-effective outcomes and improve program/operational efficiency involving clinical issues
Contract Negotiator	Negotiates and executes contracts to maintain and enhance provider networks to meet/exceed accessibility, compliance, and quality goals
Clinical Liaison	Acts as the clinical lead for integrating enrollee care/clinical coordination; leads the development, implementation, and ongoing monitoring of program and quality initiatives; collaborates with state government, key stakeholders, community organizations, advocacy groups, and our CMO/leadership team
Case Management Coordinator	Collaborates and informs the case management process to facilitate proper health care outcomes for members by providing care coordination, support, and education for members through care management tools and resources

Support Staff Positions	Brief Description: Knowledge and Experience
Customer Service Representative	Serves as the face of Aetna and influence members' service experience through customer service inquiries and making sure problems via telephone, Internet, or written correspondence are handled; also engages, consults, and educates enrollees based on their care needs, preferences, and understanding of plans, tools, and resources
Case Manager, RN	Assesses, plans, implements, and coordinates all case management activities and evaluates medical needs for overall enrollee wellness; develops a proactive course of action to enhance short- and long-term outcomes and to enhance enrollees' overall wellness, including providing input for strategies, policies, and programs for network management and clinical coverage policies
Senior Inbound and Outbound Queue Associate	Supports comprehensive coordination of medical services including intake, screening, and referrals; promotes and supports quality effectiveness of health care services; also serves as a training resource, mentor, and subject matter expert
Manager, Clinical Health Services	Performs oversight/management of clinical team processes, including the development of high-performing teams
Special Needs Representative	Serves as a proactive identifier of enrollees with special needs based on referrals from within or outside the health plan; also coordinates access to care and services appropriate to the enrollee's condition or circumstance
Network Contract Specialist	Loads, implements, and maintains standard provider contracts, schedules, and agreements and files to support business contracting initiatives
Health Care Quality Management Consultant	Develops and maintains ongoing implementation of quality management (QM) work plan activities; also improves quality products and services by using measurement and analysis to process, evaluate, and make recommendations to meet QM objectives
Supervisor, Clinical Health Services	Oversees health care management staff, including high-performing teams; works closely with functional area managers to ensure consistency in clinical interventions; and is accountable for meeting the financial, operational, and quality objectives of the unit
Network Operations Consultant	Serves as the subject matter expert to support contracting initiatives and data audits to enhance provider networks while meeting and exceeding accessibility, compliance, quality, and financial goals; is responsible for reviewing, building, and auditing complex contract and network data
Outreach Coordinator, Healthcare Effectiveness Data and Information Set	Facilitates provider and enrollee outreach to ensure enrollee receipt of important clinical services to improve health outcomes; provides support for healthcare effectiveness data and information set (HEDIS) quality initiatives and regulatory/contractual requirements, including outreach to members who are noncompliant in the designated outreach services; supports effective medical record capture for HEDIS medical record review and abstraction of supplemental data

Support Staff Positions	Brief Description: Knowledge and Experience
Analyst	Gathers initial data in support of research on various projects and may generate reports for internal programs; ensures data quality and programs or retrieves simple reports and generate standard reports for the unit; may assist with analysis and research
Network Relations Consultant	Serves as the primary resource for assigned, high-profile providers or groups (e.g., providers, small groups/systems) to establish, oversee, and maintain positive relationships; assisting/responding to complex issues regarding policies and procedures, plan design, contract language, service, claims, or compensation issues
Clinical Solutions Medical Director	Maintains a balance of internal/external activities to support a higher-touch, patient-centric focus; develops, implements, supports, and promotes population health strategies, tactics, policies, and programs to drive the delivery of high-value health care; manages strategies, policies, and programs comprised of care management, utilization management, quality improvement, and network management and clinical coverage protocol
Health Care QM Analyst	Provides data collection and administrative/technical support to the QM staff to support completion of QM department business plans.
Manager, QM	Maintains oversight of quality management functions; consults and works cross-functionally to influence and promote change to deliver quality service to our internal and external customers
Director, Clinical Pharmacy	Develops and promotes strategies and policies that enhance quality of pharmaceutical care in a cost-effective manner
Finance	Assists with internal and external financial reporting obligations, internal control objectives, and financial system design and operation
Complaint and Appeal Analyst	Manages resolution complaint/appeal scenarios for all products, which may contain multiple issues and may require coordination of responses from multiple business units; ensures timely, customer-focused response to complaints/appeals; identifies trends and emerging issues and report and recommends solutions
Inbound and Outbound Queue Associate	Supports comprehensive coordination of medical services including intake, screening, and referrals to medical services programs; promotes/supports quality effectiveness of health care services
Complaint and Appeal Program Manager	Establishes/maintains, in collaboration with other business units, consistent policies and procedures defining administration and resolution of complaints, grievances, and appeals from enrollee and provider legislative, regulatory, and accreditation requirement complaints
Clinical Case Manager, BH	Uses advanced clinical judgment and critical thinking skills to facilitate appropriate member physical health and BH care through assessment and care planning, direct provider coordination/collaboration, and coordination of

Support Staff Positions	Brief Description: Knowledge and Experience
	psychosocial wraparound services to promote effective use of available resources and optimal, cost-effective outcomes

Resources Necessary to Fulfill Program Requirements

Aetna Better Health of West Virginia is staffed with leadership and support staff currently in place to address the needs of our current enrollees and anticipated WVCHIP enrollees joining our health plan. Support staff roles are described in **Table 4.1.1-2**. Our clearly defined staffing plan is continuous, integrated, and scalable and meets the needs of the programs we administer. It also allows us to remain flexible to address staffing needs as they arise. To support this contract, we are committed to attracting additional professional staff with experience serving West Virginia Medicaid and the WVCHIP program population. Our project leadership includes local staff who are experienced with the Medicaid health care delivery system and the State's culture and who meet the West Virginia licensures and certifications required by law and the contract.

Our contract execution team uses a focused, proven protocol to serve our enrollees. In our 23-year history working with the Department, our implementation processes and readiness reviews have passed all state requirements and met all go-live deadlines within required timeframes. Additionally, our national Medicaid organization has never failed a readiness review, and we will tap into this experience to support the readiness review of this new contract.

Our leadership team will oversee the readiness review for this new contract and includes the regional vice president for Aetna, the plan's CEO, CMO/medical director, CFO, and other health plan staff. It also includes departments such as Grievances and Appeals, Medical Management, Member Services, Network, Pharmacy, Program Integrity, Provider Services, Quality, and Compliance, among others. Our national Medicaid organization team will offer support as needed.

Organizational Chart

As illustrated in **Figure 4.1.1-1**, our key staff will be led by Todd White, CEO of Aetna Better Health of West Virginia and will include Greg Carpenter, the contract liaison/MHT administrator. Our integrated, collaborative team will support this new initiative through consultation, incorporating lessons learned from previous implementations and programs managed. This leadership team will oversee and direct the delivery and operations of the program, leveraging our longstanding, positive relationships with providers, community resources, advocacy groups, regulatory agencies, and other State organizations. Our project leadership team will leverage years of West Virginia Medicaid program experience and best practices gained in other states through connections within the organization. Plan leadership is empowered to make rapid-cycle decisions, ensuring timely and responsive action while delivering high-quality care and services. We will provide the Department with a final organizational chart upon contract award notification and by October 1 of each contract year. The organizational chart will include the names, titles, and contact information for all required key staff positions highlighting any changes.

Key Staff and Service Area Organizational Chart

Figure 4.1.1-1 illustrates our functional operating structure and how each of our key staff report up to top-line plan management. All plan functions ultimately report to Todd White, CEO; whereas the contract liaison/MHT administrator, Greg Carpenter, will oversee the day-to-day operations of the contract. He will be responsible for attending meetings and hearings of legislative committees as requested; making contractual, operational, and financial decisions; overseeing provider relations/contracting; ensuring that each enrollee has an ongoing source of care appropriate to their needs and a person or entity formally designated as primarily responsible for coordinating the services accessed by the enrollee per 42 CFR § 438.208(b)(1), and meeting requirements

stipulated by the Department. He will also oversee information technology, encounters, member services, and subcontractors Cotiviti, eviCore, SKYGEN USA, and VSP Vision Care.

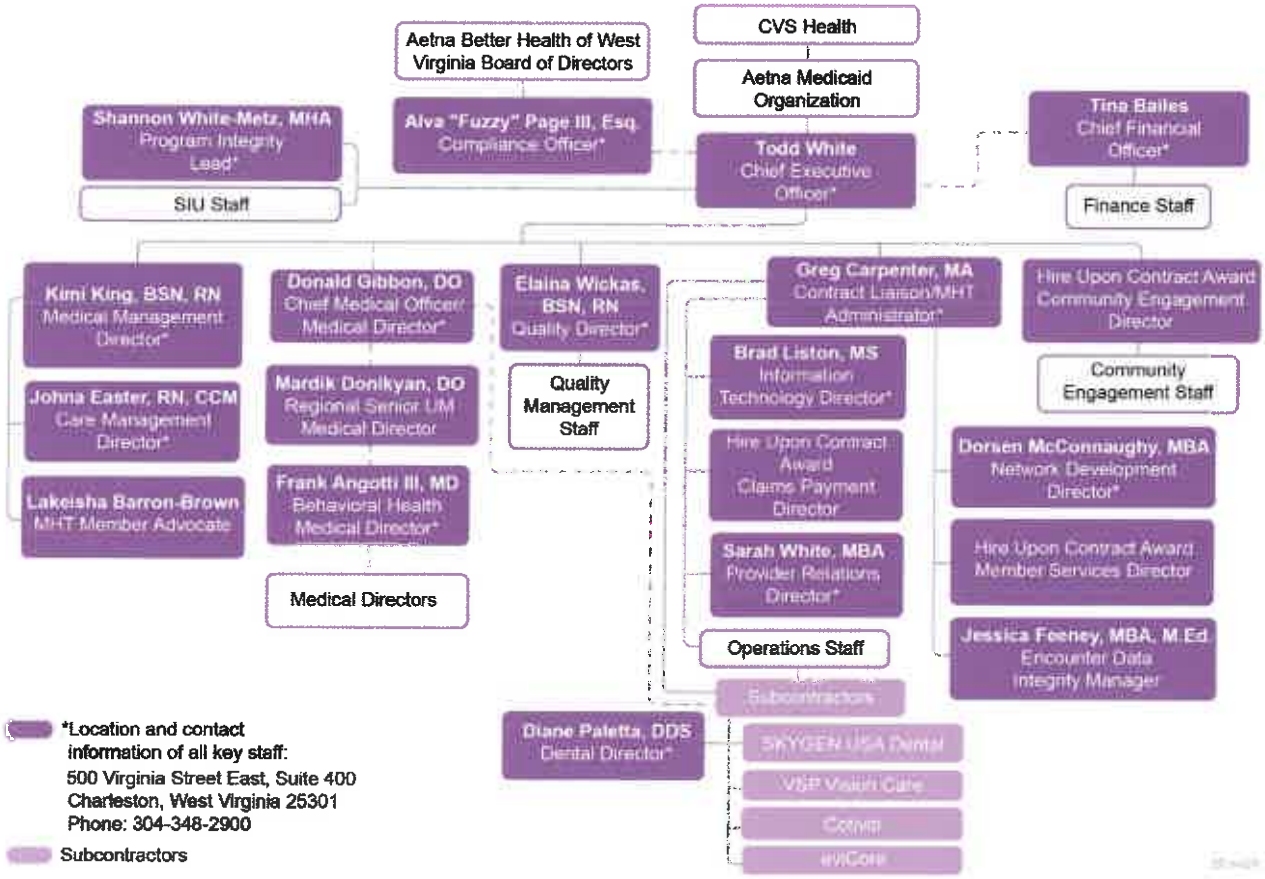

Figure 4.1.1-1: Aetna Key Staff and Proposed Service Areas
Our staff and organizational chart emphasizes experience, accountability, and flexibility.

Organizational Chart Showing Subcontractor Management

Figure 4.1.1-2 illustrates our functional subcontractor structure, which is overseen by our Medical and Operations Management team. We will provide the Department with a final subcontractor organizational chart upon contract award notification. Aetna is dedicated to a cohesive leadership and governance structure to support the West Virginia Medicaid program and the WVCHIP population, providing expert personnel committed to ensuring quality and innovative programming in fulfillment of all contract requirements.

Figure 4.1.1-2: Aetna West Virginia Subcontractor Organizational Chart
Our subcontractor organization chart emphasizes oversight for accountability, compliance, and conscientious stewardship of West Virginia resources.

Figure 4.1.1-2 illustrates ultimate responsibility, key function positions, reporting relationships, and how subcontractors fit into our organization and report up to top-line plan management. Greg Carpenter, our contract liaison/Medicaid administrator will maintain direct operational oversight of subcontracted vendors, including dental and vision, and will be responsible for contractual monitoring activities and reporting. CMO/Medical Director Dr. Donald Gibbon will maintain direct clinical oversight of all our subcontractors and the Joint Oversight Committee (JOC) and Delegated Vendor Oversight Committee (DVOC), which monitor subcontractor performance.

Tools and Processes Used to Screen Available Staff to Fill Positions

As a well-established West Virginia health plan, Aetna uses proven methodologies to maintain staffing. We only hire experienced candidates who meet the qualifications and requirements, and we use screening and hiring tools and techniques that define by position the knowledge, education, skills, and competencies candidates must possess. The hiring process includes the following:

- Using job descriptions to define and communicate properly to candidates the scope of work, job expectations, required knowledge, skills, competencies, and licenses/certifications required, and to assist us further in the targeted evaluation and selection of qualified finalists
- Posting positions specific to experience serving managed care populations and using publications, websites, and other outlets such as organizations that assist those with disabilities and those that support diversity; postings will be available on internal and external job sites, advertising on recruiting websites, job boards, and niche sites
- Launching activities that include virtual job fairs; social sharing of job postings on LinkedIn, leadership networking, resume mining, and web sourcing

- Promoting our internal employee referral program and using employee referral campaigns review of candidate applications by our recruiters
- Prescreening telephonically candidates identified by our recruiters
- Using targeted job-specific interview guides, including behavior-based interview questions and candidate evaluation tools
- Conducting interviews of candidates by our hiring teams and plan leadership; this may include panel interviews and multi-round interviews for select positions
- Vetting key staff finalists with the state and securing state approval for key staff roles
- Offering recruitment incentives to boost candidate interest, such as sign-on bonuses

Our hiring team is comprised of experienced subject matter experts skilled in interviewing and equipped with tools, including competency-focused, behavior-based interview questions, to assess the candidate's ability to perform and their organizational fit. Aetna uses a pre-employment screening when hiring external candidates. Our Human Resources department examines each candidate's job qualifications, including education, experience, and professional references. Candidates are further examined by the supervisors and managers in their individual departments to determine whether they have the proper qualifications, knowledge, and experience. To help ensure enrollee/employee safety, we conduct background screening and criminal background checks on all employees. This process validates that a potential employee is not on the Medicare or Medicaid exclusion list or is liable for or currently facing criminal or civil action for False Claim Act violations; Medicare, Medicaid, consumer, or health care fraud; or similar findings in any jurisdiction. We do not employ or contract with anyone who has been debarred, suspended, or lawfully prohibited from participating in any public procurement/non-procurement activity.

Aetna's national Medicaid organization and its parent company, CVS Health, value a diverse staff and continually work to promote diversity/inclusion at all levels of our health plan, including our hiring and retention practices. We know the value of hiring staff who live in the communities in which they work and who see the effect of what we do with local populations. Our staff

demonstrates its commitment to the communities we serve through developing strong relations with diverse community-based organizations and providing extensive local volunteer services.

Aetna's reputation as an employer of choice enables us to attract the best-qualified candidates, as evidenced by the recognition we have received from a variety of organizations. For example, the United States Business Leadership Network recently recognized the Aetna organization as a best place to work and the American Association of People with Disabilities honored Aetna for our disability-inclusive business practices. Additionally, we were included for the 11th time since 2001 on *DiversityInc's* list of the Top 50 Companies for Diversity. Other examples of our diversity and inclusion include the following:

- Aetna has received a 100 percent rating on the Human Rights Campaign Foundation Corporate Equality Index every year since 2002
- Aetna and CVS both received a 100 percent rating from the American Association of People with Disabilities Disability Equality Index
- National Organization on Disability recognized Aetna with the Leading Disability Employer Seal for exemplary disability hiring and employment practices in 2019
- Aetna has been named to DiversityInc's Top 50 Companies for Diversity for the last 10 years
- National Association of Female Executives (NAFE) ranked Aetna as one of the Top Companies for Executive Women for 20 years, placing Aetna in the NAFE Hall of Fame
- Aetna and CVS were both named to Professional Woman's Magazine's "2019 Best of the Best" Top Employers, Top Supplier Diversity Programs, and Top LGBTQ+ Friendly Companies
- The Hispanic Association of Corporate Responsibility Corporate Inclusion Index recognized Aetna's business practices and corporate strategies
- *Black EOE Journal* named Aetna and CVS to its 2019 Best of the Best lists: Top Employer and Top LGBTQ Friendly Employer
- CVS was also named to the Top Supplier Diversity Program list
- Aetna and CVS were named to the Latina Style Top 50 Companies list for 2018

Process for Replacing Key Staff and Backfilling Positions Within Timeframes

Aetna has a robust talent acquisition and talent succession process designed to ensure smooth delivery of services under the contract. We place a high priority on identifying the best talent from a diverse pool of candidates throughout the state. Once a qualified candidate is hired, the new employee undergoes a structured job orientation. As part of our hiring plan, concurrent with

external sourcing activities, our Talent Acquisition team also identifies internal interim replacement staff who are subject matter experts until permanent replacement staff are hired. In compliance with contract/RFP requirements, Aetna will notify the Department in writing of key staff vacancy or hiring and seek approval of replacement staff.

Hiring Plan for Administration of the Contract Awarded Through This Solicitation

As an incumbent MCO, we are currently staffed and fully operational and as such, we require only minimal staff additions to ensure that there will be no downtime or long implementation. We anticipate a smooth continuum of all program benefits and services and will monitor this by continually reevaluating resources as population and program demands necessitate. Initially, our staffing plan assumes membership of approximately 146,000 for WVCHIP, MHT, and WVHB. It is our practice to hire and train additional staff, refine processes, provide backup resources, and institute other changes to meet the State's requirements if there is an unexpected increase in volume. Successfully calculating our membership's needs is based on data gathered from our Provider Network and Member Services teams and through our community engagement efforts. We work to make sure providers are at the right location within the appropriate timeframe. Key elements of our network strategy include demonstrating compliance with network adequacy and provider accessibility requirements, continuing to enhance our network of high-quality, member-focused providers, offering a comprehensive network to maximize member choice and accessibility, and integrating network development activities with clinical practice models.

Our Member Services team begins enrollee outreach upon enrollment through high-touch, frequent interactions that exceed state requirements for outreach and education. We offer enrollees support through multiple communication methods such as phone calls, letters, and

questionnaires to discover what our enrollees need to receive optimal care and services. Our Community/Stakeholder Engagement team, an in-the-field extension of our Member Services department, interacts with community-based organizations to gain information, resources, and referrals to better serve our enrollees.

How Staffing Numbers Reflect Adequate Access

We anticipate approximately 172 staff members to support this contract. **Table 4.1.1-3** is a breakdown of staff who will support the new contract. We performed a full evaluation in the second quarter of 2019 to confirm whether we needed additional staff and will continue to perform periodic evaluations to maintain optimum staffing ratios. Additionally, we are supported by our national Medicaid organization from functional areas such as Claims, Encounters, and Finance.

Table 4.1.1-3: Functional Departments (FTEs)

Functional Department	FTEs
Leadership and Administration	8
Case Management	62
Community Engagement	4
Compliance	1
Finance	2
Grievance and Appeal	3
Medical Management	4
Member Services	15
Network and Provider Relations	10
Operations	8
Quality	10
Utilization Management	45
Total FTEs supporting the program	172

Our employee training program provides the appropriate orientation, training, and education necessary for all staff to fulfill the requirements of individual positions while adhering to the state's policies and procedures and federal guidelines, laws, and regulations. As new employees join the West Virginia team, they are required to complete onboarding, orientation, and West Virginia-specific and national Medicaid policy training. Ongoing refresher training for employees includes reviews of updated policies, continued competency building, and topics relevant to the West Virginia Medicaid population. Our training approach and knowledge transfer

ensures operational continuity as staff join the team or transition to new roles. New staff members are also linked with more experienced health plan staff for mentorship. In addition to having to pass written, verbal, or case scenario tests, **new employees shadow experienced staff members and are monitored to be sure they meet our standards at 45 to 60 days after training**. They must then submit an attestation confirming training is complete.

Our multimodal West Virginia Medicaid and WVCHIP training includes live instruction, web-based tools, and role playing and will occur throughout the year for new hires and ongoing training is held annually for all incumbent staff. Examples of Aetna's training plan include the following:

- General new hire onboarding followed by functional job training (lasting two to six weeks)
- Trauma-informed care training to achieve the plan's goal of 100 percent trained staff
- Comprehensive overview of our culture, including our values and ethics
- Cultural competency initiatives and training to address enrollees' specific social, behavioral, cultural, language needs and health literacy training
- Training to dispel myths and stigmas related to disabilities and negative attitudes often associated with mental illness and physical/sensorial disabilities
- Examples of mandatory compliance and ethics training include topics such as the Health Insurance Portability and Accountability Act; ethics/code of conduct; compliance; preventing fraud, waste, and abuse (FWA); and diversity
- Job-specific training to include education from experienced personnel in a hands-on environment, access to job-specific policies, procedures, and helpful resources, timeframes to complete assessments, identification of risks/issues, and job shadowing
- Training on technology and systems tools that will support employees in performing their duties and enhance their ability to work efficiently
- West Virginia Medicaid and WVCHIP program-specific assessments and timeframes
- Benefits and coordination of benefits and services

All Aetna employees must complete annual retraining of required policies and procedures:

- Medicare Compliance and FWA Training (Course 210159)
- CVS Health Code of Conduct (Course 209782)
- Recognizing and Preventing Workplace Violence (Course 209725)

Additional Training Materials

Our proposed contract liaison/MHT administrator's duties will be performed by Greg Carpenter.

Mr. Carpenter brings 13 years of health care industry experience and 6 years of managed

Medicaid experience in West Virginia to this position. He is fully qualified to fulfill the position's responsibilities and requires no additional training. However, if the State requires supplementary information for this position, we will confirm with the State the best way to communicate.

Subcontractor Monitoring Plan

Aetna uses qualified, experienced subcontractors only when it adds value for our enrollees. We engage subcontractors for specific deliverables and services relative to improving outcomes for enrollees by providing appropriate, coordinated care and services in a financially responsible manner. Our current subcontractors (VSP Vision Care, eviCore, Cotiviti, Inc., and SKYGEN USA) have an established relationship with our health plan and currently demonstrate sustained quality performance serving our Medicaid enrollees, fulfilling all required quality metrics. Aetna accepts financial, legal, ethical, and all other forms of responsibility for the conduct of all subcontractors and other entities supporting or working on the West Virginia Medicaid/WVCHIP program.

Activities and Monitoring Tools

Prior to contracting with a subcontractor, Aetna evaluates the prospective organization's ability to perform subcontracted activities. Aetna performs a pre-delegation review audit to determine staff qualifications, clinical and administrative capabilities, integration capabilities, data transfer capabilities, operational readiness, and alignment with the project scope of work. Our quality management program includes formal, multilayered processes and comprehensive policies and procedures to monitor contract compliance, quality of care, services, and reporting provided under any subcontract, and all aspects of the contract are evaluated through our Compliance Committee to ensure compliance with contractual requirements. The subcontractors we will use for this contract include VSP Vision Care as our vision provider; SKYGEN USA as our children's dental provider; eviCore as our high-end radiology and pain management subcontractor and for

utilization management (UM) and concurrent reviews; and Cotiviti, Inc. as our retrospective claims processing provider. Local oversight for these providers includes monitoring for VSP Vision Care, SKYGEN USA, eviCore, and Cotiviti through the following tools and processes:

- Monthly: reporting file, provider complaint and appeals file, provider liaison meeting (for VSP), and meeting either in person or telephonically (for all subcontractors); all-MCO meetings (as all the West Virginia health plans that provide Medicaid benefits use SKYGEN USA)
- Quarterly: A DVOC meeting, which may be attended by representatives from all areas of the plan, including the medical director, vendor liaison, CFO, CEO, compliance officer, quality representative, provider relations manager, member services manager, and the vendor's representative, where minutes are reviewed, issues are discussed, and resolutions are tracked; a JOC meeting that may be attended by representatives from all areas of the plan, including the medical director, vendor liaison, CFO, CEO, compliance officer, Quality representative, Provider Relations manager, Member Services manager, and the vendor's representative
- As needed: Field representative/provider meetings to support providers with issues/concerns/education; SIU meeting when there is a possible fraud issue
- Annually: a health plan provider forum activity, which is attended by the SKYGEN representative (for SKYGEN USA)

Oversight also includes a national, local, and financial focus, detailed in the following narrative:

- National oversight: We have a centralized team of delegation oversight experts that manage the process across Aetna's national Medicaid organization's lines of business to ensure all delegated agreements are represented and that all requirements, such as state- and contract-required elements for each plan and delegate, are accounted for. This team includes staff from our national Delegation Management, Quality Management, and Finance departments. Appropriate national Medical Management, Credentialing, Grievance and Appeals, and other teams conduct audits as directed by the Medicaid-specific Quality Management department. The Audit team reports audit findings to Aetna's National Vendor Delegation Oversight Committee (DOC), National Medicaid DOC, and the local health plan DOC to identify opportunities for improvement and solutions that are disseminated across our health plans.
- Financial oversight: Aetna maintains financial oversight by assessing each material subcontractor's financial condition to determine their ability to maintain financial solvency. This due diligence includes a financial review of all delegated entities at least annually to provide oversight of the contractor's continuing compliance to meet Aetna standards. Our Finance team reviews audited and unaudited financial statements and provides an assessment of the results of operation, liquidity of current assets, and sufficiency of cash to pay claims payable and financial reserves. This detailed review helps us determine the risk to Aetna and provides a basis for calculating a letter of credit or insolvency reserve. The Finance team will make recommendations regarding increasing the frequency of additional reviews and will distribute a report to the various oversight committees.
- Annual risk assessment: Aetna will present an annual risk assessment to the State. In turn, we require each of our subcontractors to submit an annual risk assessment to us. Each

subcontractor will conduct an annual risk assessment of their FWA and program integrity procedures. Subcontractors to whom we delegate claims adjudication activities on our behalf will be subject to the same standards as Aetna's claims adjudication. This includes our vision, dental, transportation, and pharmacy subcontractors. All subcontractors' assessments will include a listing of their top five vulnerable areas for that year, plus an action plan of how they will mitigate those risks. We require the risk assessment be submitted within 30 days of its completion each year.

Sample Subcontract Agreements

Attached as **Appendix F** are the sample base subcontractor agreements in support of Aetna's Managed Care program and CHIP business in West Virginia. Our subcontractor agreements also include a regulatory compliance addendum (**Appendix F**) to incorporate pertinent requirements of the state contract and state law. The current Addendum, approved by the Department on September 24, 2018, is attached as **Appendix F.** For any new subcontractors, we will provide the Department with the subcontractor agreement within the timeframe required.

Benefits Manager

Amber Rucker, our internal plan-based network relations manager, monitors benefit functions, including provider recruitment, enrollee and provider calls, medical and behavioral services, UM, reporting, provider education, and others for our subcontractors SKYGEN USA, eviCore, VSP Vision Care, and Cotiviti. These four external, non-affiliated subcontractors serve our enrollees through their own contracted network.

Types of Reports/Data Subcontractors Provide

Our subcontractors supply data and metrics needed to track enrollee access and continuity of care and enrollee and provider satisfaction. Reports we receive include the following:

- **VSP Vision Care reports** (monthly): provider complaint and appeals file report tracks enrollee complaints; customer service report tracks calls answered in 30 seconds, total calls received, calls abandoned, and average rate; claims processing turnaround times tracks number of claims processed in 1 – 30, 31 – 45, 46 – 90, and 90+ days; claims not adjudicated and adjudicated; financial, payment, and overall accuracy; complaint summary measures enrollee and provider complaints received; provider appointment survey measures waiting times for emergency/urgent/routine care, office contacted, number completed, providers surveyed, and number of compliant providers; UM, inter-rater reliability, UM authorization

- **SKYGEN USA reports**: Monthly and quarterly: Managed care FWA report provides information on FWA; Monthly: Provider appointment survey measures waiting times for emergency/urgent/routine care, office contacted, number completed, providers surveyed, and number of compliant providers; third-party recovery report; appeals report provides appeals information; complaints report provides complaints from enrollees; provider directory report provides accuracy of directory; payments to providers tracks payments; received claims report provides claims received by Aetna; claims paid interest provides interest paid by Aetna; claims summary report provides a summary of all claims; claims denial report provides claims denied by Aetna; claims aging report tracks claim aging; credentialing term-suspend report providers suspended due to credentialing issues
- **eviCore reports** (monthly): out-of-network report for review measures out-of-network use; metric report shows all the metrics required of eviCore; eviCore issues log review report that tracks issues/resolution; complaint summary provides turnaround time for response to enrollee complaints; provider appointment survey measures waiting times for emergency, urgent, routine care, office contacted, and number completed and providers surveyed and number of compliant providers
- **Cotiviti reports** (monthly): dashboard report findings tracks financial summary reports such as overpayments and recovered payments; claims processing turnaround times reports the number of claims processed in 1 – 30, 31 – 45, 46 – 90, and 90+ days; and claims adjudicated/not adjudicated financial, payment, and overall accuracy; UM report provides UM prior/retro-authorization, compliance, same-/next-day services, and multi-procedures

Using Reports/Data from Each Subcontractor

Aetna has a well-established Quality Assurance and Performance Improvement (QAPI) program to direct organization-wide initiatives for improving the health and well-being of our enrollees. The data and reporting we gather through the previously discussed reports are used by several committees (described in this section) to help ensure our subcontractors maintain member satisfaction, access to care, and continuity of care. These committee members provide their expertise to assess areas for improvement. Committee members review recommendations, make suggestions, monitor status of corrective actions, and assist in prioritizing resources to achieve the Department's goals. Committees that use reporting and data to monitor and improve enrollee satisfaction, access, and care include the following:

- **Quality Management Oversight Committee (QMOC):** Chaired by the CEO with cross-functional representation, provides executive oversight of the QAPI program and makes recommendations to the board of directors about Aetna quality management and performance improvement activities including the annual QAPI program description, QAPI work plan, and

QAPI evaluation; works to make sure the QAPI plan is integrated throughout the organization/departments, delegated organizations, and network providers/practitioners

- **Delegation Committee:** Chaired by the director of quality management with cross-functional representation, advises/makes recommendations to the QMOC about delegated relationships
- **Complaint Committee:** Chaired by the complaint and appeals supervisor and reviews issues of expression of dissatisfaction by enrollees, practitioners, or providers
- **Service Improvement Committee:** Chaired by the CEO/COO with cross-functional representation, advises and makes recommendations to the QMOC and/or Aetna management about customer, enrollee, and practitioner issues
- **Appeal Committee:** Chaired by the complaint and appeals supervisor with cross-functional representation, reviews appeal trends and may render decisions on administrative or benefit-related appeals filed by enrollees or providers
- **Member Advisory Committee:** Chaired by the Member Services manager with cross-functional representation and enrollee representatives, provides feedback to Aetna regarding strategies for improving enrollee care and services, including health education

Frequency of Contact and Status Calls with Subcontractors During Go-live and Ongoing

During go-live/program readiness we interact with subcontractors at least daily, starting as soon as we receive the first 834 file. For new subcontractors, there may be up to four contacts a day for the first five days (this includes holidays and weekends) to resolve issues. Contact decreases to once a day for approximately seven days and then twice a week for approximately two to four weeks and then once a week for about 30 to 60 days post go-live. We do not decrease contact until leadership confirms that there are no issues and or concerns. After go-live, the health plan begins monthly calls to ensure subcontractors are meeting metrics and once that is confirmed, the frequency moves to a quarterly basis. While formalized reporting occurs quarterly, our provider relations staff maintains frequent contact with key subcontractor staff to ensure collaboration and information-sharing. For example, our Provider Relations staff often contact SKYGEN USA once a week or more depending on ongoing activities.

Plan for a Subcontractor that Does Not fulfill the Contractor or Service Obligations

If we identify a potential deficiency, we work with the subcontractor to ensure compliance to the contract, which includes working with them on customer service techniques, assisting providers, and fulfilling contract service requirements. If noncompliance or risks are identified, we take

immediate action and begin remediation that may include training, more frequent monitoring, corrective action plans (CAPs), sanctions, notices to cure, or subcontractor termination. We implement a CAP to help the subcontractor become compliant and require improvement and resolution on a short timeline, typically 30 or 60 days. Unresolved CAPs may lead to contract termination. Subcontractors are required to follow Aetna's quality improvement process and to report progress quarterly at our JOC meetings. On a quarterly basis, subcontractors report metrics, claims turnaround time, and accuracy. Reports are provided to our various quality management committees, including the Delegation Oversight Committee and the Quality Management Oversight Committee. If the CAP is not successful and the subcontractor's performance remains poor, we may terminate the contract based upon contractual provisions.

Contingency Plan in the Event of Contract Termination

Our processes include a subcontractor contingency plan to protect our enrollees, the Department, and the health plan. We follow subcontractor agreements in the event one is terminated. For example, our dental provider's agreement would require that organization to give us at least written notice 60 days prior to termination. This allows us time to vet a new subcontractor, maintain care standards, and help ensure continuity of care through secure transfer of enrollee records. Our vendor liaison would work with the Department and both the terming and new subcontractors to create a seamless transition.

Affiliated and Non-affiliated Subcontractors

The following subcontractors are non-affiliated with Aetna: VSP Vision Care, SKYGEN USA, eviCore, and Cotiviti. These subcontractors report directly into our operations function with a dotted line to Dr. Gibbon, our CMO/medical director. We will provide the Department with a final organizational chart upon notification of contract award.

2. Key Staff and Resumes

Key staff consist of the Vendor's senior leadership for Mountain Health Trust Managed Care Procurement project. These resources are responsible for providing leadership, and creating the standards and processes required for the successful implementation, operation, and maintenance of the program. Resumes for key staff named in the Vendor proposal should indicate the role of the staff on the Mountain Health Trust Managed Care Procurement project and demonstrate how each staff member's experience and education will contribute to successful implementation and operations. The Vendor's proposed key staff should be available for an in-person interview upon the Department's request.

To ensure successful operations for this contract, the project should be led by key staff identified in the list below:

- Chief Executive Officer/Chief Operating Officer
- Contract Liaison/MHT Administrator
- Chief Financial Officer
- Compliance Officer
- Medical Director
- Behavioral Health Medical Director
- Medical Management Director
- Care Management Director
- Quality Director
- Program Integrity Lead
- Network Development Director
- Provider Relations Director
- Information Technology Director
- Member Services Director
- Claims Payment Director
- Encounter Data Integrity Manager
- Community Engagement Director
- MHT Member Advocate

- Dental Director

The qualifications, experience, and responsibilities for each key staff role are defined in ***Appendix 2: Staff Qualifications, Experience, and Responsibilities***.

3.1 Resumes

The Vendor should complete Table 11 and embed resumes of all proposed key staff as part of their bid. Each resume should demonstrate experience relevant to the position proposed. If applicable, each resume should include work on projects cited under the Vendor's corporate experience, and the specific functions performed on such projects. This section should include the following:

- Resumes (not exceeding two pages each) for key staff and support staff members assigned to this project, including their licenses, credentials, and experience. The Department considers key staff resumes as a key indicator of the Vendor's understanding of the skill sets required for each staffing area. Resumes should be in 12-point font, and double-sided.
- A letter of intent for each proposed staff member not currently employed by the Vendor. Each letter of intent should be signed by the named individual, indicating that the individual is willing to accept employment if the Vendor is awarded the contract.

Aetna Better Health of West Virginia (Aetna[1]) is fully prepared and ready to seamlessly incorporate additional enrollees into our West Virginia Medicaid program and welcome West Virginia Children's Health Insurance Program (WVCHIP) enrollees. For more than two decades, Aetna (previously as Coventry Health Care) has served populations including Temporary Assistance for Needy Families (TANF), children with special health care needs, those receiving supplemental security income, those receiving benefits and services through the Affordable Care Act, and children and pregnant women through our Medicaid and TANF programs. Additionally, we are also just completing our readiness review to begin serving our newest population through the Mountain Health Promise project. Through this combined experience, we

[1] For simplicity throughout this proposal, we will use "Aetna" to refer to the vendor, one of its parents, Aetna Inc., and/or any Aetna Inc. subsidiary that has conducted Medicaid/CHIP business or has participated in any other line of business discussed in this proposal. Where clarity dictates differentiating between Aetna entities, we will refer to the entity by name, which will include using Aetna Better Health of West Virginia to refer to the vendor, and Aetna Inc. to refer to one of Aetna Better Health of West Virginia's indirect parents. On November 28, 2018, CVS Health Corporation acquired Aetna Inc. and its subsidiaries, including Aetna Better Health of West Virginia. Throughout the proposal, we will refer to our new ultimate parent as CVS Health Corporation or CVS Health.

are well-positioned to meet the unique challenges facing West Virginia today, as well as continuing to enhance coordination of care and access to services, including physical health, behavioral health, pediatric dental, and vision care for these populations.

We are West Virginians committed to providing enrollees the benefits, services, and health care solutions that support a higher quality of life. Our staff have proven, local experience delivering this care. These are the individuals who 'make it happen.' They are dedicated, innovative, and provide consistent, quality care through a thoughtful, comprehensive approach that reaches across the entire continuum of care. Additionally, the vast majority of our staff are native West Virginians or long-term residents who are deeply connected to their communities throughout the state and understand their neighbors' needs, as is reflected by our superior staff efforts to win and maintain National Committee for Quality Assurance (NCQA) 'Commendable' status for more than three years.

Through this contract, Aetna will fulfill our mission to provide services, benefits, and supports to help lift all vulnerable individuals to a better, more promising future. Our WVCHIP program will be led by our seasoned key staff and senior leadership, who together offer more than 300 years of local, collective health care experience in areas such as social determinants of health, substance use, high-risk youth, social work, and behavioral health, among others. Our key staff's specific experience with these populations, which is highlighted in the following information, details how we currently and will continue to provide meaningful value to every enrollee.

Each key staff resume highlights the education, knowledge, and expertise specific to the populations and the contract requirements that will support and enhance our West Virginia

Managed Care/WVCHIP programs. Support staff is currently in place to manage this new contract and job descriptions are addressed as part of the Initial Staffing Plan response. Key staff resumes and **Table 4.3.1-1** include experience and relevant project information, as well as educational and any applicable licensure information.

Table 4.3.1-1: Resumes for Proposed Key Staff

Name	Proposed Role	Experience in Proposed Role	Currently Employed by the Vendor?
Todd White	Chief Executive Officer	Todd White, a native West Virginian based in our Charleston office, currently serves as the chief executive officer and is responsible for delivering on all state requirements, such as contractual, operational, and financial decisions for the contract related to business, claims payment, provider relations/contracting, and all other functions of Aetna. Additionally, he provides direction and oversight to more than 160 direct reports. Under his leadership, Aetna increased its service area from 16 counties in 2006 to all 55 counties in West Virginia by 2012. Aetna has also achieved the 'Commendable' rating from the NCQA and is currently the only state managed care organization scored at that level. During his 24 years of health care industry experience, Mr. White has developed multiple partnerships with hospital systems, physician practices, and community- and state-based agencies—including one of the nation's first neonatal abstinence syndrome facilities, Lily's Place. Mr. White has been employed by Coventry Health Care, then after the acquisition, Aetna, for over 22 years. Prior to his experience working at the health plans, Mr. White worked with vulnerable youth at the West Virginia Rehabilitation Center. He is a longtime member of the West Virginia Association of Health Plans and serves as the secretary/treasurer. He earned his Bachelor of Science in Electrical Engineering and Technology from West Virginia Tech in Montgomery.	Yes
Greg Carpenter, MA	Contract Liaison/Mountain Health Trust (MHT) Administrator	Greg Carpenter, a native West Virginian, is an experienced executive who has 13 years of health care industry experience and 6 years of managed Medicaid experience in West Virginia. His expertise includes interpersonal communication skills, sales management skills, and organizational and process improvement skills. In his role as the chief operating officer for Aetna Better Health of West Virginia, Mr. Carpenter	Yes

Name	Proposed Role	Experience in Proposed Role	Currently Employed by the Vendor?
		is responsible for overall direction and day-to-day operations of the entire plan. Prior to joining Aetna, he served as the West Virginia director of Medicare sales and service for The Health Plan, where he was responsible for directing and overseeing the activities of the Medicare sales department in the state. Additionally, Mr. Carpenter serves at Cross Lanes Baptist Church and has ministered to children who have experienced hardship. He earned his Master of Arts (MA) in Theology from Liberty Baptist Theological Seminary and Graduate School in Lynchburg, Virginia where he graduated Cum Laude. He also earned a Bachelor of Arts in Business Administration from West Virginia State University.	
Tina Bailes	Chief Financial Officer	Tina Bailes' experience includes 16 years of service working in the state Medicaid program, holding various fiscal roles prior to transitioning to her current role as chief financial officer. Ms. Bailes, a lifelong West Virginian, has been chief financial officer of Aetna since 2014. She is located at the Charleston office and is responsible for oversight of our provider payment arrangements, including alternative payment models (APMs); data certification forms, including all encounter data and financial data, and reporting for payments to contracted providers; and certifying payment information used for rate-setting purposes or any other payment-related data required by the Department. Previously she served as the deputy commissioner of finance for the West Virginia Bureau for Medicaid Services and provided fiscal oversight of the State's (then) $3 billion Medicaid program. Through her experience, she has developed an in-depth understanding of the Medicaid program and the enrollees served through the program, as well as the financing structure for access to needed services and provider participation to ensure services are delivered. Ms. Bailes has a Bachelor of Science in Business Administration from West Virginia State College in Institute.	Yes
Alva "Fuzzy" Page III, Esq.	Compliance Officer	Alva "Fuzzy" Page III, Esq., based in our Charleston office, is an executive with extensive health care law experience and success in government affairs and compliance. He is a West Virginia native with 15 years of health care and Medicaid industry experience and 3 years of managed Medicaid experience in the areas of program integrity and fraud prevention in West Virginia. His expertise includes experience	Yes

Name	Proposed Role	Experience in Proposed Role	Currently Employed by the Vendor?
		in Medicaid matters in federal and circuit courts, as well as strategic and tactical planning. Currently, Mr. Page is responsible for developing and implementing policies, procedures, and practices to ensure compliance with all contractual, state, and federal requirements; he also creates policies and other control measures to prevent and detect fraud, waste, and abuse. Additionally, he monitors Special Investigations Unit (SIU) activities and supervises our program integrity lead; he established our policies and procedures to maintain and protect member data and serves as our main contact for all MHT compliance communication, among other duties. Mr. Page has a Doctor of Jurisprudence from Capital University School of Law from Columbus, Ohio, and a Bachelor of Science in Accounting from Salem-Teikyo University in Salem.	
Donald Gibbon, DO	Chief Medical Officer/Medical Director	Donald Gibbon, Doctor of Osteopathy (DO), is an experienced executive who has practiced emergency medicine for more than 20 years. Based out of the Charleston office, he has 6 years of managed Medicaid experience, 6 years serving as a medical director, and 5 years serving West Virginia as well as working with enrollees and patients to support them in their recovery from drug and alcohol use for more than 20 years. His expertise includes leadership roles in the emergency occupational and urgent care medicine fields, adult and child trauma treatment, and substance use disorder arenas. He also served as an Open Door (alcohol and other drug treatment center) board member from 1997 to 2006 and was president from 2001 to 2003. From routine complaints to physical abuse, sexual abuse, suicidal ideation and attempts, trauma, and other behavioral issues, Dr. Gibbon has examined and treated children and adults of all ages. Currently, he is responsible for oversight of our medical and care coordination activities for the health plan. He develops and implements strategies for utilization management, quality improvement, network management, and clinical policies to drive excellence in patient care; leads a team of medical directors and other clinical staff; attends in person, when requested by the Department, meetings and hearings of legislative committees and interested governmental bodies, agencies, and officers; participates in the Quality Assurance and Performance Improvement Committee (QAPI); and	Yes

Name	Proposed Role	Experience in Proposed Role	Currently Employed by the Vendor?
		responds to requests of the Department's medical director or contract administrator. He holds a Doctor of Osteopathy from Kirksville College of Osteopathic Medicine in Kirksville, Missouri, and a Bachelor of Science in Biology from Mercyhurst College in Erie, Pennsylvania. He has a registered medical license from the West Virginia Board of Medicine (license: 2974).	
Frank Angotti III, MD	Behavioral Health Medical Director	Frank Angotti III, Doctor of Medicine (MD), is an experienced psychiatrist and behavioral health management professional and a native West Virginian residing in Morgantown. Dr. Angotti has 10 years of health care industry experience, including over 3 years serving the Medicaid population in West Virginia and over 3 years of managed Medicaid health plan experience. His expertise includes leadership roles in child and adolescent psychiatry, behavioral clinic health, and substance use/trauma arenas. Dr. Angotti is responsible for oversight of our behavioral health clinical and quality activities and participates in behavioral health service utilization review decisions; he responds to behavioral health clinical issues, utilization review, and behavioral quality of care inquiries. He also attends, in person and when requested by the Department, meetings and hearings of legislative committees and interested governmental bodies, agencies, and officers. Todd White
Chief Executive Officer

Todd White is a native West Virginian and currently serves as the chief executive officer of Aetna Better Health of West Virginia (Aetna), where he is responsible for delivering on all state contractual requirements. Additionally, he provides direction and oversight to more than 160 directly reporting staff. Under Mr. White's leadership, Aetna increased its service area from 16 counties in 2006 to all 55 counties in West Virginia by 2012. Aetna has also achieved the Commendable rating with the National Committee for Quality Assurance, the only West Virginia managed care organization currently scored at that level for more than three years. During his 13 years of Medicaid experience and his 24 years of health care industry experience, Mr. White has been responsible the implementation for new state programs and populations for Aetna; responsible for all contractual requirements and the financial performance of the health plan; and developed multiple partnerships with hospital systems, physician practices, and community and state-based agencies. One of them is the nation's first neonatal abstinence syndrome facility, Lily's Place. Prior to his experience working at the health plans, Mr. White worked with vulnerable youth at the West Virginia Rehabilitation Center. He is a long-time member of the West Virginia Association of Health Plans and serves as the secretary/treasurer. He earned his Bachelor of Science in Electrical Engineering and Technology from West Virginia Tech in Montgomery, West Virginia.

Donald Gibbon, DO
Chief Medical Officer/Medical Director

Donald Gibbon, DO, is an experienced executive who has practiced medicine for 20 years. He has six years of managed Medicaid experience, six years serving as a medical director, and five years serving West Virginians. As a lifelong resident of Appalachia, Dr. Gibbon understands the health care needs of the most vulnerable people in West Virginia and served on his county's Children and Youth Services multidisciplinary team, where they worked with many foster children and their foster families. He was also the physician in charge at the county's Children's Advocacy Center. In addition, Dr. Gibbon served as the EPIC-SCAN educator for seven counties in Pennsylvania, where he trained other physicians to identify suspected child abuse and neglect and has served on court cases involving abuse as an expert witness for the prosecution. From routine complaints to physical abuse, sexual abuse, suicidal ideation and attempts, trauma, and other behavioral issues, Dr. Gibbon, as an emergency medicine physician for over 20 years, has treated children and adults of all ages. He has also worked with enrollees and patients to support them in their recovery from drug and alcohol use for more than 20 years and served as an Open Door (alcohol and other drug treatment center) board member from 1997 to 2006 and past president from 2001 to 2003. His expertise includes leadership roles in the emergency, occupational, and urgent care medicine fields, adult and child trauma treatment, and substance use disorder arenas. Dr. Gibbon was also intimately involved in the collaboration between Aetna Better Health of West Virginia and the Bureau of Medicaid Services for the development of their opioid management plan. Dr. Gibbon currently serves as the chief medical director of Aetna Better Health of West Virginia, where he is responsible for leading strategic activities concerning quality of care, utilization management, network management, and clinical policies.

Experience

Aetna Better Health of West Virginia 2015 – Current

Frank Angotti III, MD
Behavioral Health Medical Director

Frank Angotti III, MD, is a native West Virginian who is an experienced psychiatrist and behavioral health (BH) management professional with 10 years of health care industry experience and 6 years of managed Medicaid experience, including over three years serving the Medicaid population in West Virginia and over three years of managed Medicaid health plan experience, as well as leadership roles in child and adolescent psychiatry, behavioral clinic health, and substance use/trauma arenas. He has forged several relationships in the West Virginia community as it relates to appropriate therapeutic care for clients and available programs for those in need. He also has extensive experience managing children with complex BH needs under the Medicaid system and within the State of West Virginia. In his role as a BH medical director for Aetna, Dr. Angotti leads and supports the BH staff, works with upper management to develop the strategic direction of the department, and oversees the utilization management of BH, assisting in the resolution of presenting issues and reducing risk factors. Dr. Angotti also leads the Aetna National Medicaid initiatives in the improvement of foster care. Prior to joining Aetna, Dr. Angotti served as the child and adolescent psychiatrist for United Summit Center in Clarksburg, West Virginia, where most of the population received the Medicaid benefit. His educational background includes a Doctor of Medicine and a Bachelor of Science in Biology, both from West Virginia University. Dr. Angotti is also licensed to practice medicine in West Virginia, Kentucky, and North Carolina.

Experience

Aetna Better Health of West Virginia 2017 – Current
Behavioral Health Medical Director

- Oversees the utilization management, quality improvement, and network monitoring of the behavioral health activities of the population
- Develops services that improve care within the Aetna foster care membership
- Responds to BH clinical issues, utilization review, and behavioral quality of care inquiries
- Attends in person, upon Department request, meetings and hearings of legislative committees and interested governmental bodies, agencies, and officers
- Communicates strategic plan and specific tactics to meet plan
- Identifies opportunities to implement best practice approaches and introduce innovations to better improve outcomes

United Summit Center, Clarksburg, WV 2013 – 2016
Child and Adolescent Psychiatrist

- Provided outpatient psychiatric services to children and adolescents
- Provided care to children and adults in their crisis levels of care
- Provided detox and stabilization to patients and coordinated care at the time of discharge

Frank Angotti III, MD

Cherry Hospital in Goldsboro, NC 2012 – 2013
Inpatient Child Psychiatrist
- Responsible for evaluation and treatment of children with complex BH needs, working within a multidisciplinary team
- Provided longer term and subacute services for those who were difficult to find placement

Education
- Fellow in Child and Adolescent Psychiatry, University of North Carolina Hospitals, Department of Psychiatry, Chapel Hill, North Carolina

Elaina Wickas, RN, BSN
Quality Director

Elaina Wickas is a native West Virginian who was raised in the Point Pleasant area. She is a results-oriented and versatile leader with 34 years of health care industry experience and 6 years of managed Medicaid experience in West Virginia. Her expertise includes managed care quality improvement, managing large-scale teams and projects, regulatory and accreditation compliance, and audit oversight. In her role as quality director for Aetna, Ms. Wickas is responsible for developing and implementing the Quality Assessment and Performance Improvement (QAPI) programs and policies in addition to running the Department's operations. Prior to joining Aetna, she served as the director of quality improvement for the Mid-Atlantic Region for Coventry Health Care, where she coordinated and supervised activities that promoted continuous quality improvement and monitored the agency's compliance. Ms. Wickas' educational background includes a Bachelor of Science in Nursing from West Virginia University in Morgantown, West Virginia.

Experience

Aetna Better Health of West Virginia 2014 – Current
Quality Director

- Develops, administers, and oversees the quality management processes and initiatives, QAPI program, and Healthcare Effectiveness Data and Information Set operations
- Manages a staff of eight employees
- Responsible for compliance with the state Medicaid contract, including annual External Quality Review Organization audits
- Is responsible for all aspects of National Committee for Quality Assurance (NCQA) survey readiness from application through IRT submission
- Serves as an accreditation subject matter expert with the Aetna Medicaid organization
- Oversees and participates in all local committees that support the QAPI program
- Participates in the development of approaches to monitoring provider performance, in collaboration with the Network and Provider Relations staff
- Initiates and maintains quality improvement projects that focus on quality indicators
- Engages in activities related to alternative payment models as they relate to quality of care measures and performance indicators

Aetna Inc. 2013 – 2014
Director, Health Care QM for Accreditation

- Served as a member of Aetna's national Quality Management (QM) team, managing a staff of 6 employees in locations across the United States
- Was responsible for NCQA accreditation readiness for Aetna Corporate NCQA Survey annual submissions
- Was responsible for the mock audit process to prepare all Aetna plans for local NCQA accreditation surveys
- Managed Aetna's patient safety program as well as additional QM work plan requirements in order to meet regulatory and accreditation requirements

Elaina Wickas, RN, BSN

Coventry Mid-Atlantic Region 2012 – 2013
Director, Quality Improvement

- Managed a staff of 11 employees in 5 locations in Pennsylvania, West Virginia, and Delaware
- Performed daily oversight of NCQA accreditation activities for Coventry Health Care's Mid-Atlantic Region
- Managed ongoing survey readiness preparation for renewal surveys in Pennsylvania and West Virginia as well as 'new' survey preparation for preferred provider organization exchange business in all states and first survey readiness for Delaware/Maryland health plan
- Managed all aspects of survey readiness from application process, mock audits, management of all sections of ISS tool, and onsite audit preparation
- Managed all credentialing and disease management oversight in all states in the region

Coventry Health Care 2007 – 2012
Director, Quality Improvement

- Managed a staff of 16 employees in 3 locations across Pennsylvania
- Performed daily oversight of all quality improvement operations statewide including quality improvement (QI) program and process development, credentialing, and disease management functions
- Developed and monitored clinical performance metrics
- Led performance improvement operational meetings and drove initiatives toward improvement of Centers for Medicare & Medicaid Services (CMS) STAR ratings
- Served on the Corporate QI team that discussed strategies for ensuring compliance with NCQA, CMS, and Utilization Review Accreditation Commission requirements
- Managed the credentialing and utilization management delegates as well as Health Insurance Portability and Accountability Act of 1996-certified vendors
- Managed compliance with Pennsylvania Department of Health and Department of Public Welfare Quality and Credentialing requirements

Coventry Health Care 1990 – 2007
QI Special Projects Coordinator

- Managed the administration of the interactive survey tool and facilitated NCQA survey process
- Facilitated various internal Quality Improvement Committees as well as meetings with external vendors such as behavioral health partners
- Prepared quality improvement documentation such as annual work plans, program description, program evaluation, policies and procedures, and various reports
- Conducted delegation oversight of various external vendors to evaluate their compliance with quality improvement, credentialing, and other plan requirements

Education
Bachelor of Science in Nursing, West Virginia University, Morgantown, West Virginia

Licensures and Certifications
Registered Nursing License, West Virginia Board of Nursing (License [redacted]

Shannon White-Metz, MHA

Jessica Feeney, MBA, M.Ed.
Encounter Data Integrity Manager

Jessica Feeney is an experienced manager of business information systems and analytics with excellent organizational and communication skills and a comprehensive background in information technology (IT), data analysis, and project management. She has been with our plan since 2012 and has been our encounter data integrity manager (manager of business information systems and analysis) since 2015. Ms. Feeney contributes to our health plan's performance through impeccable research and analytics and is adept at analyzing data using appropriate data mining methods and creating clear and impactful reports and presentations. Ms. Feeney leads our Six Sigma initiatives to identify root cause of errors while providing solutions to reduce errors and improve overall operational efficiencies. She supervises the department, including providing technical vision, mentoring, coaching, training, performance development plans, budgeting, and expenses.

Experience

Aetna 2015 – Current

Encounter Data Integrity Manager (Manager of Business Information Systems and Analysis)

- Responsible for the submission and integrity of state files and regulatory reports, including Mountain Health Trust Quarterly, 5010 electronic data interchange encounter files, and the monthly proprietary encounter file. This includes ensuring timeliness, accuracy, corrections, and completeness and oversight of Aetna and subcontractor data.
- Manages Analytics team responsible for the design, development, and delivery of health care information to internal and external stakeholders, including claims, care management, provider, and financial data
- Gathers business requirements and builds, tests, and deploys analytical reports, including univariate and multivariate statistical analysis, outlier identification, and data visualization
- Ensures strategic alignment between operations, finance, and IT projects and the organization's broader goals
- Assists in the development/direction of corporate strategy through data governance, analysis, and evaluation of revenue and cost drivers in conjunction with potential opportunities
- Drives cross-functional and cross-alliance integration of operational activities, including coordinating across workgroups, issue identification and resolution, problem solving, contingency planning, and decision-making
- Develops/participates in presentation/consultation to existing/prospective customers and the state.
- Leads Six Sigma initiatives to identify root cause of errors and solutions to reduce errors
- Supervises unit, including providing technical vision, mentoring, coaching, training, performance development plans, budgeting, and expenses

Informatics Analyst 2012 – 2015

- Reviewed contract requirements to design and report monthly, quarterly, semiannual, and annual data to meet regulatory compliance

Jessica Feeney, MBA, M.Ed.

- Collaborated with key stakeholders including Contracting, Health Services, Provider Relations, Operations, Finance, and Pharmacy, among others, to assess data and technology needs
- Performed trends and forecasting analysis on claims, utilization, and provider data
- Interpreted state contracts and documentation to determine state's payment system and files to create financial, risk score, and membership reconciliation
- Worked with large data sets; data mined and programmed in SAS, SQL, SSRS, Visual Basic, Power BI, and Access to track, report, analyze, and interpret different functional areas' data

Consultant 2004 – 2012

Technology and Reporting Consultant

- Extracted, collected, and analyzed provider practices' patient and financial data to determine insights into business costs, patient utilization, and current market conditions
- Recommended new avenues of business, which resulted in some businesses changing marketing avenues and expanding services; built and maintained company Internet sites
- Developed reporting to analyze businesses' financial progress, including accounts outstanding, expenses versus income, and product pricing

Wilmington Trust 1999 – 2004

Technology Analyst/Project Manager

- Led companywide projects from start to completion, finding the best possible solution fulfilling the time, financial, and quality goals defined by the company or business area need
- Defined project scope, developed proposals and detailed timelines, and created and delivered status reports
- Designed and presented final project data and recommendations to upper management and executives
- Performed business analysis, data manipulation, and financial analysis daily using Access, Excel, and SQL

Education

- Master of Business Administration in Information Systems, Wilmington University, Delaware, 2019
- Master of Education, Wilmington University, Delaware, 2004
- Bachelor of Arts in Economics, University of Delaware, Delaware, 1999

Licensures and Certifications

- Aetna Six Sigma Certification, Yellow and Green Belt
- Finance in Health Care (America's Health Insurance Plans)

Technology Skills

SAS, SQL, SSRS, Power BI, Quick Base, Access, Visual Basic, Visio, Microsoft Office Suite including Excel and PowerPoint, Crystal Reports, MS Project, SharePoint

LaKeisha D. Barron-Brown
Mountain Health Trust Member Advocate

Ms. LaKeisha D. Barron-Brown, a long-time resident of Charleston, has more than 17 years of experience offering counseling and therapy to a broad range of clients, including providing support to patients referred by the Pregnancy Connections Program; navigating patients through the assessment, treatment, and management of drug and alcohol use during pregnancy; managing and coordinating various components in the drug court program; and working closely with the West Virginia Department of Health and Human Resources.

Experience

Aetna Better Health of West Virginia 2020 – present
Mountain Health Trust Member Advocate
- Collaborates with the care management director and care coordinators
- Provides enrollee support related to enrollment, access, and continuity of care issues

- Provided personal and academic counseling to traditional and non-traditional students
- Developed and coordinated campus and community-wide events that address diversity awareness and social justice concerns
- Maintained a collaborate relationship with community agencies
- Provided counseling to students that have been sanctioned by Judicial Affairs
- Responsible for writing reports and making recommendations to Judicial Affairs regarding the status of the student

Education

- Master of Arts, Counseling, Marshall University, South Charleston, West Virginia, with specialization in Correctional Counseling, 2002
- Bachelor of Arts, Marshall University, Huntington, West Virginia, with emphasis in Criminal Justice/Corrections

Licensures and Certifications

Temporary Permit – West Virginia Board of Examiners in Counseling

Diane Paletta, DDS
Dental Director

Diane Paletta, DDS, a West Virginian, is an experienced professional who has practiced dentistry for over 40 years. She has 5 years of managed Medicaid experience, 5 years serving as a dental director, and over 40 years serving West Virginians. Her expertise includes general dentistry and Medicaid dental programs. Dr. Paletta has been treating children and making decisions about their dental care since she started as a dental hygienist in 1978. She served as a professor of pharmacology and periodontology in the Division of Dental Hygiene at West Virginia University Tech and has served as clinical advisor for the West Virginia Board of Dentistry. Dr. Paletta currently serves as the dental director of Aetna Better Health of West Virginia, where she is responsible for the oversight of the administration of dental services within the contract. Prior to joining Aetna, she served as the West Virginia dental director for SKYGEN USA. Dr. Paletta served as a Capitol City Give Kids a Smile volunteer and served as the chairperson for the West Virginia Donated Dental Services for the Handicapped Council. She also volunteers in the West Virginia community by restoring the mouths of abused spouses and children as part of the American Academy of Cosmetic Dentistry. She earned her Doctor of Dental Surgery (DDS) from West Virginia University in Morgantown, West Virginia, and a Bachelor of Science in Dental Hygiene, Magna Cum Laude, from West Virginia University as well. She is a member of several organizations such as the American Academy of Cosmetic Dentistry, American Association of Dental Boards, American Academy of General Dentistry, and the West Virginia Rural Health Development Council, among others.

Experience

Aetna Better Health of West Virginia 2019 – Current
Dental Director

- Performs oversight of the utilization of covered dental services under this contract
- Performs dental utilization review decisions and is authorized to respond to dental clinical issues, utilization review, and dental quality of care inquiries

SKYGEN USA 2013 – Current
West Virginia Dental Director

- Provides local clinical representation for SKYGEN USA
- Maintains a deep understanding of Medicaid dental plans and strong Medicaid clinical program knowledge in order to accurately review and provide authorizations through the Enterprise system
- Identifies aberrant conditions and trends related to reviewing provider authorization of dental services
- Refers SKYGEN Utilization Management staff to appropriate research and resolution
- Conducts clinical reviews, peer clinical reviews, and appeal considerations
- Uses resources available from SKYGEN Utilization Management staff to maintain current knowledge and understanding of dental coverage services requiring her review

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

ATTACHMENT 5: MANDATORY REQUIREMENTS

Instructions: The mandatory requirements must be met by the Vendor as a part of the submitted proposal. Failure on the part of the Vendor to meet any of the mandatory requirements will result in its disqualification of the proposal, at the sole discretion of the Department. The terms "must" and "shall" stipulate and identify a mandatory requirement. The Vendor is to demonstrate compliance with mandatory requirements in its proposal. If the Vendor's proposal meets the mandatory requirements, the Vendor's proposal will be included in the next part of the technical evaluation of this RFP. For mandatory requirements that necessitate a future action, the Vendor will respond in ***Attachment 7: Terms and Conditions*** with an attestation that it will meet all mandates. For mandatory requirements involving documentation to be submitted for this bid submission, Vendors must include that documentation with its technical proposal as part of this bid submission. The Vendor's narrative response for **Attachment 5** should not exceed 10 pages.

See the attached Microsoft Excel® file titled, "***MHT_Attachment_5_ Mandatory_Requirements.***"

Aetna attests to meeting all of the mandatory requirements found in **Attachment 5** in serving enrollees within the West Virginia Medicaid managed care programs, including the Mountain Health Trust (MHT), West Virginia Health Bridge, and the West Virginia Children's Health Insurance Program (WVCHIP), effective July 1, 2020.

Compliance with Applicable Requirements

MD001	The Vendor must comply with all applicable requirements outlined in this procurement, as well as the Service Provider Agreement (SPA) and any modifications pursuant to changes to State policy, State or federal laws and regulations, waiver amendments, or State Plan amendments.
MD002	The Vendor must comply with all Service Level Agreements (SLAs), as indicated in the Service Provider Agreement (SPA).

Aetna acknowledges, understands, and will continue to comply with all applicable requirements outlined in this procurement in addition to the Service Provider Agreements (SPA) and all Service Level Agreements. We will also comply with any modifications required pursuant to changes to the policy, state or federal laws and regulations, waiver amendments, or State Plan amendments.

Acceptance of the Rate Established by the State

MD003	The Vendor must accept the rate established by the State on a per member per month (PMPM) basis for managed care physical health and behavioral health services.

Upon full disclosure of final rate and evaluation of rate adequacy, Aetna will accept the rate established by the State of West Virginia on a per member per month basis for managed care physical health and behavioral health services.

Physical Health and Behavioral Health Provider Network

MD004	The Vendor must establish a physical health and behavioral health provider network that provides adequate access, as defined by the Service Provider Agreement (SPA), and serves all counties in the State.

We will continue to meet requirements to maintain a physical health and behavioral health provider network that provides adequate access as defined by the SPA and serves all counties in the State.

Submission of Provider Contract Template and Addenda

MD005	The Vendor must submit its provider contract templates and addenda to the Department for approval.

Aetna will continue to submit provider contract templates and addenda to the Department for approval and respond timely to any questions or comments.

Submission of Value-Based Payment (VBP) Plan

MD006	The Vendor must submit an initial Value-Based Payment (VBP) plan to the Department and annually thereafter.

Aetna will submit an initial Value-Based Payment (VBP) plan to the Department and annually thereafter. Our approach to VBP aligns with the Bureau for Medical Services (BMS) goals through the use of contracts that achieve improved health outcomes for our enrollees.

Accreditation by the National Committee for Quality Assurance

MD007	The Vendor must be accredited by the National Committee for Quality Assurance (NCQA) no later than nine (9) months from its operational start date in the State.

Aetna was the **first West Virginia Medicaid plan** to achieve a **Commendable National Committee for Quality Assurance (NCQA) accreditation** as a Medicaid organization and the **only plan to maintain it without interruption since 2016**, with a current NCQA rating of 4.0.

Requested Supporting Documentation

MD008	The Vendor must provide all requested supporting documentation as specified by the Request for Proposal (RFP), and according to the requirements described in Section 3: General Terms and Conditions, as well as Appendix 4: List of Requested Documents.

We will provide all requested supporting documentation as specified by the Request for Proposal and according to the requirements described in **Section 3: General Terms and Conditions**, as well as **Appendix 4, List of Requested Documents** within the timeframes specified by the Department.

24-hour Access to a Provider or Service in Emergency Situations

MD009	The Vendor must provide twenty-four-hour access seven (7) calendar days a week to a provider or service in emergency situations.

We will continue to provide 24/7/365 access for medical, behavioral health, dental, and crisis stabilization services. In providing 24-hour access to services in emergency situations, we create incentives for providers in value-based purchasing contracts for provision of after-hours care. We provide specific education on after-hours resources, including urgent care services.

Monitoring Primary Care Provider Panels for Compliance

MD010	The Vendor must monitor Primary Care Provider (PCP) panels for compliance with the Bureau for Medical Services (BMS) and West Virginia Children's Health Insurance Program (WVCHIP) limits of members assigned per PCP.

We will continue to monitor primary care provider (PCP panels for compliance with the BMS and WVCHIP limits of members assigned per PCP, for applicable populations. We take seriously and comply with PCP panel requirements to assure members receive the attention and access needed to optimize their health outcomes. We review open panel status to confirm where we can assign new members and identify providers that have reached their capacity and/or referral limits on an ongoing basis. We have an enrollee limit built into our electronic system for each PCP of 2,000 enrollees. If BMS or WVCHIP notifies us that a provider has exceeded their panel limit across all MCOs, their panel will be closed to new members. Aetna acts upon every PCP assignment by analyzing the potential PCP's panel to ensure the panel has not reached the

maximum number of members assigned. If the maximum panel size has been reached, we will assign new members to an alternative PCP that will meet the member's needs.

Network Standards Documentation and Geographic Mapping Reports

MD011	The Vendor must submit network standards documentation and geographic mapping reports in accordance with the reporting instructions in the Service Provider Agreement (SPA).

Aetna acknowledges, understands, and will continue to comply with the requirement to submit network standards documentation and geographic reports in accordance with the reporting instructions within the SPA. On an annual basis, we provide network standards documentation to the Department ensuring that our network meets physical and behavioral needs.

Screening Processes

MD012	The Vendor must establish screening processes (per applicable federal and State requirements, as defined by the Department) designed to ensure that the Vendor does not subcontract with entities that are prohibited, suspended, or excluded from participating in Medicare, Medicaid, or other federal healthcare programs.

We have established screening processes to make certain we do not utilize subcontractors that are prohibited, suspended, or excluded from participating in Medicare, Medicaid, or other federal health care programs. Our background screening process includes validation that the potential entity is not on the Medicare or Medicaid exclusion list nor was found liable for or currently facing criminal or civil action for False Claim Act violations; Medicare, Medicaid, consumer, or health care fraud; or similar findings in any jurisdiction. We obtain the ownership information for our subcontractors and check them against the Foreign Earned Income Exclusion (FEIE) database and require all of our subcontractors to complete an initial screening of the FEIE database for all of their contracted providers.

Public Meetings and Other Events

MD013	The Vendor must participate in public meetings and other events at the request of the Department.

We will continue our existing community collaborations and participation in public meetings and events at the request of the Department. Chief Executive Officer of Aetna Better Health of West

Virginia Todd White instills a collaborative, **neighbor helping neighbor** approach to create solutions for complex health concerns. Donald Gibbon, DO, chief medical officer (CMO)/medical director, collaborates with Department staff and other MCO CMOs within standing meetings to improve and streamline medical processes across the Medicaid enrollee population. Dr. Gibbon and Frank Angotti III, MD, our behavioral health director, are intimately involved in the collaboration between Aetna and BMS for the development of their opioid management plan and their Safe and Effective Management of Pain Initiative. Under the new MHT contract, we will engage and collaborate with WVCHIP in meetings upon state direction.

Current and Future Security Policies and Procedures

MD014	The Vendor must comply with all current and future security policies and procedures of the Department and the West Virginia Office of Technology (WVOT), which can be found at the following links: http://www.wvdhhr.org/mis/policies.asp https://technology.wv.gov/security/Pages/policies-issued-by-the-cto.aspx http://www.state.wv.us/admin/purchase/privacy/default.html

Aetna acknowledges, understands, and will continue to comply with, all current and future security policies and procedures of the Department and the West Virginia Office of Technology (WVOT). Aetna exceeds industry standards with robust information security policies, procedures, and standards based on the information we need to protect, who uses the information, and laws/regulations that apply to Aetna and its industry.

Compatibility with Versions and Standards

MD015	The Vendor must ensure compatibility with the most current West Virginia Office of Technology (WVOT) supported versions and standards.

Aetna complies with West Virginia standards and requirements for file formats, ensuring compatibility with the most current WVOT supported versions and standards. Aetna has had no local technology breaches and will continue that level of commitment.

Accepting the Medical Assistance Identification

MD016	The Vendor must ensure that the health information system accepts the Medical Assistance Identification (MAID) generated by the Department for all members for data collection and billing purposes.

Aetna's health information system accepts the Medical Assistance Identification (MAID) generated by the Department for all members for data collection and billing purposes. We support the State's efforts to utilize the MAID to integrate MCO data into a warehouse for better coordination of member care and reporting of member outcomes.

Producing Reports in Accordance with Standardized Reporting Template

MD017	The Vendor's information management system must have the capability to produce reports in accordance with the State's Medicaid Fraud Control Unit's (MFCU's) standardized reporting template upon request, as referenced in Appendix 5.

Aetna has demonstrated capability to produce reports in accordance with the State's Medicaid Fraud Control Unit (MFCU)'s standardized reporting template upon request, as referenced in **Appendix 5**. Our Special Investigations Unit and Compliance departments have successfully submitted four versions of the template to both BMS and MFCU.

Adherence to All State-Defined File Formats and Templates

MD018	The Vendor must adhere to all State-defined file formats and templates including, but not limited to, 834 enrollment and 837 encounter files.

On a weekly and monthly basis, Aetna successfully transfers files to and from the Department in accordance with State-defined file formats. These files are supported and are compatible with Aetna systems, and include the following:

- 837 encounter file (weekly); the 837-encounter file also includes vendor encounter information for both dental and vision benefits
- 834 enrollment file (monthly)
- 820 and 835 payment files (monthly)
- Encounter files will be submitted consistent with the National Council for Prescription Drug Programs, (NCPDP) D.0 communication standard; Aetna is not limited to the NCPDP D.0 standard and we will adhere to state-required formats as defined by the state (weekly)

Approval for All Key Staff Hired and All Personnel Assigned

MD019	The Vendor must obtain approval from the Department for all key staff hired under the contract and all personnel assigned to this contract. In all circumstances, key staff must be replaced only with persons of equal or greater experience and qualifications.

We are appropriately staffed to continue to manage this contract as we have been supporting our West Virginia Managed Care program for over 23 years; we will bring on additional resources as appropriate. We will obtain Department approval in hiring each key staff member hired under the contract and all personnel assigned to this contract. With each new key staff hire, we will ensure that new staff with equal or greater qualifications are hired through continual updating of job descriptions and qualification requirements as position responsibilities change and our operations progress.

Key Staff Assigned to the Project

MD020	The Vendor must employ Key Staff, defined as those responsible for providing leadership and creating the standards and processes required for the successful implementation, operation, and maintenance of the program, assigned to the project on a full-time basis. Each Key Staff role must be a full-time position, to be filled by one staff member only, unless otherwise approved by the Department. All Key Staff members must enter the project within thirty (30) calendar days of the contract award.

Key staff will be assigned to the project on a full-time basis. We will make certain that each key staff role will be full-time and filled by one specific staff member only, unless otherwise approved by the Department. We will ensure that we are operating the project at full capacity within 30 calendar days of the contract award with each staff member in place providing full service prior to contract start date.

Financial, Legal, Ethical, and All Other Forms of Responsibility

MD021	The Vendor must accept financial, legal, ethical, and all other forms of responsibility for the conduct of all business partners, independent contractors, subcontractors, and other entities supporting the Vendor or working with the Vendor on the project.

We will continue to accept responsibility as required for financial, legal, ethical, and all other forms of responsibility for the conduct of all business partners, independent contractors, subcontractors, and other entities supporting us or working with Aetna on the project. To create compliance with subcontractors, we have a system of subcontractor monitoring to bring extensive oversight to assist in selecting subcontractors and successfully monitoring and

overseeing their performance. These tools include initial and ongoing monitoring and pre-assessments, policies and procedures, and audits. We monitor our business partners, independent contractors, subcontractors, and other entities' processes through our vendor management systems with routine checks and audits of our subcontracted entities.

Drug-Free Workplace

MD022	The Vendor must provide a drug-free workplace for employees and all applicable agents including, but not limited to, subcontractors. All agents of the Vendor must not engage in the unlawful manufacture, distribution, dispensation, possession, abuse, or use of alcohol or a controlled substance during the performance of the contract.

Aetna acknowledges, understands, and will continue to comply with the requirement to provide a drug-free workplace for its staff and all applicable agents, including but not limited to subcontractors. All personnel are expected to report to work free from the negative effects of drug or alcohol use and be able to fully perform their work duties. All personnel are screened as part of the pre-employment hiring process. We will make certain that all staff, agents, and subcontractors will not engage in the unlawful manufacture, distribution, dispensation, possession, abuse, or use of alcohol or a controlled substance during the performance of the contract. We also provide an employee assistance program that provides services and supports regarding substance abuse. To assure compliance with this requirement for our subcontractors, we have a system of subcontractor monitoring to bring extensive oversight to their processes, including ensuring a safe and drug-free workplace and applicable provisions in subcontracting agreements.

Expenses Required to Access Department Systems

MD023	The Vendor must be responsible for all expenses required to obtain and maintain access to the Department systems. Such expenses include, but are not limited to, hardware, software, network infrastructure, and any licensing costs.

Aetna acknowledges, understands, and will continue to comply with the requirement to be responsible for all expenses required to obtain and maintain access to Department systems. We

understand these costs include but are not limited to hardware, software, network infrastructure, and any licensing costs.

Responsible for Costs Associated with Reports

MD024	The Vendor must be responsible for costs associated with reports requested and any action that involves the work of the State fiscal agent due to mock request or mock failure to meet State standards, as applicable.

Aetna acknowledges, understands, and will continue to be responsible for all costs associated with reports requested and any action that involves the work of the State fiscal agent due to mock request or mock failure to meet State standards, as applicable.

Results of Third-Party Audits

MD025	The Vendor must make available to the Department the results of any third-party audit conducted including, but not limited to, the Service Organization Control (SOC) 2, on the Vendor's organization.

Aetna acknowledges, understands, and will continue to comply with the requirement to make available to the Department the results of any third-party audit conducted, including but not limited to the Service Organization Control 2 on our organization. Aetna performs comprehensive penetration testing and vulnerability scanning, and we will upon request share numerous software security attestations such as security scorecard reports, penetration test reports, and BSIMM (Building Security in Maturity Model) assessments. Other assessments available include PCI HIPAA (Health Insurance Portability and Accountability Act), SIG (Standardized Information Gathering), SCA (Standardized Control Assessment), NIST (National Institute of Standards and Technology) 800-53, and CSF (Cyber Security Framework).

Authorization to Access Records

MD026	The Vendor must provide authorization from a parent, affiliate, or subsidiary organization for the State to have access to its records if such a relationship exists that impacts to the Vendor's performance under the proposed contract.

Aetna acknowledges, understands, and will continue to comply with, the requirement to provide the Department access to our records. We currently routinely respond timely to requests from BMS for documents. In the event the Department determines that our relationship with a parent,

subsidiary of a parent, or an affiliate impacts our performance under the proposed contract, we will provide the Department authorization to have access to the applicable records.

Litigation Bond

MD027	The Purchasing Director reserves the right to require any Vendor that files a protest of an award to submit a litigation bond in the amount equal to one percent of the lowest bid submitted or $5,000, whichever is greater. The entire amount of the bond shall be forfeited if the hearing officer determines that the protest was filed for frivolous or improper purpose, including, but not limited to, the purpose of harassing, causing unnecessary delay, or needless expense for the Agency. All litigation bonds shall be made payable to the Purchasing Division. In lieu of a bond, the protester may submit a cashier's check or certified check payable to the Purchasing Division. Cashier's or certified checks will be deposited with and held by the State Treasurer's office. If it is determined that the protest has not been filed for frivolous or improper purpose, the bond or deposit shall be returned in its entirety.

Aetna acknowledges, understands, and will comply with the litigation bond requirements.

Meeting All Operational Requirements as Agreed Upon

MD028	The Vendor must have all requirements operational, as agreed upon with the Department, by July 1, 2020.

As an MCO within the State of West Virginia for over 23 years, Aetna will have all requirements operational, as agreed upon with the Department, by July 1, 2020. We develop a comprehensive work plan that incorporates the contract requirements to address all activities, work streams, and variables as part of our approach to a successful implementation. We use a multitiered approach to make sure that through transparency, integration, timely decision-making, and action execution, we deliver all implementation requirements from project initiation to operational performance—meeting all operational requirements at contract start date.

Primary Workplace in the State of West Virginia

MD029	The Vendor must maintain a primary workplace in the State of West Virginia.

As an active Medicaid MCO in West Virginia since 1996, we have had the vast majority of our staff residing in West Virginia for over 23 years. We are West Virginians continuing to maintain a primary workplace in the Mountain State. Our primary workplace in the State of West Virginia is located at 500 Virginia Street, East, Suite 400, Charleston, West Virginia 25301.

MD029	The Vendor must maintain a primary workplace in the State of West Virginia.	Attachment 5 Mandatory Requirements - Primary Workplace in the State of West Virginia	Att 5 - Page 10

2. Benefit Administration

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Benefit Administration (BA) as part of their bid. The Vendor's narrative response should not exceed 100 pages.

Aetna Better Health of West Virginia (Aetna) is honored to serve the State of West Virginia's most vulnerable populations through Mountain Health Trust (MHT) for over 23 years. In 2019, Aetna was the single managed care organization awarded the Mountain Health Promise (Specialized Managed Care for Children and Youth) business. We are dedicated to serving West Virginians, and we are prepared to expand our services to serve West Virginia Children's Health Insurance Program (WVCHIP) populations. We look forward to collaborating with the Bureau of Medical Services (BMS) and WVCHIP Agency to assist with the transformation of the system of care and services provided to both Medicaid and WVCHIP members through MHT in 2020.

Aetna's approach to benefit administration supports high-quality, whole-person care for all members by considering individual member needs and identifying and addressing potential disparities to accessing care. Our daily benefit administration processes and workflows integrate utilization management and care management functions as well as social needs to support holistic care. Aetna's coordinated comprehensive approach ensures members receive timely, appropriate care through individualized, innovative programs and coordination of services and community supports. We are continually evaluating opportunities to reduce administrative burden and to eliminate barriers to medically necessary medical and behavioral health services, while avoiding the provision of unnecessary or inappropriate care. Aetna staff at

all levels of the organization have the deep expertise and commitment essential to serving the populations included in this response through the full scope of work.

Our programs and systems are guided by a team of local experts who understand the resources and strategies needed to work collaboratively with communities and the Department of Health and Human Resources (the Department) to support all members in achieving their health goals.

We understand key populations, disparities, health indicators, areas of need for population health improvement, and regional differences because our **Care Connection teams** are local and reflect the diversity of the communities where our members live, work, and play. Regionally focused Utilization Management (UM) staff are vital members of the Care Connection teams serving those communities.

Aetna believes a comprehensive, holistic approach to benefit administration is best informed by utilization data that is reviewed in the context of national standards of care and an understanding of state-specific population health characteristics and regional environmental differences. This data allows us to identify and impact specific regional disparities in health outcomes facing West Virginians and provides broader insight into authorizing and administering benefits for our members statewide. For example, understanding key health data, such as prevalence of diabetes, behavioral health issues, deaths from drug overdoses, rates of adult smoking, teen births, availability of specialists, and current health outcomes including low birthweight provide valuable insight into developing action plans and policies to increase access to care and improve health outcomes.

Throughout this response, we will demonstrate Aetna's understanding of the complexity of managing utilization and care for Medicaid and WVCHIP members and illustrate how our

experience has prepared us to administer benefits to adults and children statewide as well as support communities to implement sustainable solutions. One example of a program developed through use of utilization management (UM) data is found in our work to address the devastating impact of opioid use disorder on our members.

Opioid Program Champion
Aetna's opioid program champion is a dedicated position responsible for supporting, communicating, and coordinating the goals and objectives of our opioid program and all care management opioid-related initiatives. Coordinating with other departments, the opioid champion serves as a point-of-contact for opioid-related care management projects, questions, news, and communication from Aetna's national leadership.

Combatting the opioid crisis in West Virginia:

Nationally, under the leadership of Don Gibbon, DO, the chief medical officer (CMO)/medical director of our Medicaid plan in West Virginia, Aetna Medicaid has implemented a multifaceted opioid strategy in West Virginia and 15 other states focusing on prevention, early intervention, and support for members. Aetna supports our providers and members through care coordination that meets members' needs in their home communities and facilitates continuity of care by reducing barriers to substance use disorder (SUD) treatment, including access to medication assisted treatment (MAT), support programs, and non-pharmaceutical alternatives to treat pain. Data from our opioid dashboard demonstrate that between January 2017 and August 2019, Aetna has achieved impressive results in addressing the opioid use crisis in West Virginia:

Aetna's CHIP Experience
Aetna's UM processes, staff education on clinical guidelines, provider education, trends identified through advanced reporting, and transition of care processes have facilitated successful administration of CHIP benefits in 12 states—experience we will leverage to enhance our existing West Virginia insight and knowledge to benefit WVCHIP members. Interventions used in other states have impressive results, including a 42 percent reduction in readmissions for CHIP members in Florida. Another initiative for members with attention deficit hyperactivity disorder (ADHD) resulted in an 18 percent increase in follow up visits.

- Rate of treatment with non-opioid procedures for members with chronic pain increased by 52.8 percent
- Rate of opioid prescription in members with a prior overdose decreased by 56.6 percent
- Rate of seven-or-more-day opioid prescription after an acute procedure decreased by 65.9 percent

In the following pages, we outline how our benefit administration policies, guidelines, and procedures support Aetna's whole-person approach to ensure our MHT, West Virginia Health Bridge (WVHB), and WVCHIP members can access timely, appropriate care. This response covers a broad spectrum of topics related to benefit administration as outlined in the State's request for proposal, including the following:

- UM guidelines and staff training
- Prior authorization
- Medical necessity
- Supporting continuity of care: in-network and out-of-network access
- Coordinating care: member reminders, behavioral health changes, dental coordination
- Family planning
- Crisis stabilization
- Early and Periodic Screening, Diagnosis, and Treatment Services
- Monitoring and tracking member co-pays and out-of-pocket maximums
- Fraud and abuse
- Pharmacy rebates

At the request of the Department, when responding to questions about the administration of pharmacy benefits, we have provided narrative addressing both carve-out and carve-in pharmacy scenarios throughout this response.

Utilization Management

BA004	The Vendor should describe its process for development and revision of Utilization Management (UM) guidelines, as indicated in the Service Provider Agreement (SPA).
BA005	The Vendor should provide its training curriculum for Utilization Management (UM) and clinical staff.
BA006	The Vendor should describe its Utilization Management (UM) monitoring guidelines that operate in conjunction with fraud and abuse detection activities, including, but not limited to, the following:
BA007	Ongoing monitoring of Emergency Room (ER) utilization
BA008	Ongoing monitoring of potential abuse of inappropriate utilization of controlled prescription medications

BA009 Reports and other tools that will be used to monitor and manage service utilization

Aetna's utilization management (UM) program's purpose is to deliver high-quality, whole-person care for our Medicaid and WVCHIP members by identifying, evaluating, managing, and improving clinical care and services. While managing utilization of services, the focus of UM is to promote delivery of high-quality and cost-effective care to our members by considering individual member characteristics, unmet health care needs, and disparities. Our guidelines conform to the requirements of the Model Purchase of Service Provider Agreement, Section 5.6, Utilization Management, and we will meet state-specified standards for service authorization identified in the contract.

Aetna Better Health of West Virginia's UM program is led by an exceptional clinical team of five West Virginian healthcare professionals. Dr. Gibbon is the CMO/medical director and leads Aetna Medicaid's national opioid initiative. Frank Angotti III, MD, the plan's behavioral health medical director, is a double-boarded psychiatrist and child psychiatrist. He sits on the WV Governor's Advisory Council on Substance Use Disorder. Kimi King, RN, is the medical management director and has 12 years' experience as the plan UM lead. Adam Breinig, DO, serves as a medical director and was the president of the WV State Medical Association and the WV Academy of Family Physicians. Wanda Hembree, MD, is an OB/GYN specialist who has expertise in neonatal abstinence syndrome and serves as a medical director.

The scope of our UM program spans all clinical aspects of physical and behavioral health, including preventive, diagnostic, dental, and treatment services in inpatient, outpatient, community, and home-based treatment settings. Our unique regionalized model features local Care Connection teams that include UM staff to address member and provider issues locally.

UM nurses are regionally assigned and develop relationships with providers and hospital groups to improve exchange of information and overall processes. Our providers have single points of contact for all UM and care management (CM) concerns or needs. UM and CM staff meet daily to collaborate on member needs. Our goal is to fully integrate our UM staff and Care Connection teams with all the tertiary care facilities to be available to providers locally as well as centrally.

Our UM program, under the direction of the CMO/medical director, is an integral component of our Quality Assessment and Performance Improvement program, which promotes continuous monitoring and evaluation of member care. The program aligns activities, such as quality outcomes and target goals, for value-based purchasing strategies.

With the understanding that provider demographics differ in each region of the state, the characteristics of the local delivery system and available resources are considered with each utilization request. Our local Community Connection teams know the providers serving their communities and assist members in finding providers. For example, in some parts of the state we have inpatient behavioral health facilities, but in other communities where these facilities are not available, Aetna local staff work with members to help them access facilities in other communities or find alternative care solutions in their community. In addition, all UM determinations are made by considering member characteristics such as age, comorbidities, complications, progress of treatment, psychosocial situation, and home environment.

Although there are some differences in Medicaid and WVCHIP benefits, UM processes and criteria for WVCHIP are generally in alignment with Medicaid. We are adept at modifying our processes when necessary and will accommodate WVCHIP-specific criteria as appropriate to meet the requirements of the Model Purchase of Service Provider Agreement for Fiscal Year

2020. Our national experience makes training and implementation resources immediately available to our West Virginia staff.

[BA004] Developing and Revising Utilization Management Guidelines

Aetna uses nationally recognized, evidence-based criteria as UM guidelines, which we apply based on the needs of individual members, to align with the Department's clinical coverage policies outlined in the Model Purchase of Service Provider Agreement for Fiscal Year 2020. Our UM clinical criteria policies and procedures define eligible criteria sources and the processes for adoption, review, and approval of clinical criteria. Aetna regularly reviews our processes to develop and revise physical health and behavioral health service UM guidelines accordingly. We evaluate UM criteria by reviewing utilization, approvals and denials, and provider performance. In West Virginia, Aetna assesses all services provided to assure full parity of physical health and behavioral health (BH) services for Medicaid and WVCHIP members in compliance with the Mental Health Parity and Addiction Equity Act of 2008 through ongoing direct comparison of all medical and BH utilization and prior authorization (PA) requirements. We maintain a Mental Health Parity Compliance Plan, which is reviewed quarterly by our Services Improvement Committee and submitted to BMS annually.

Aetna reviews provider-specific approvals and denials to identify opportunities to streamline services for members and processes for providers by reducing the number of procedures requiring prior authorization. The Services Improvement Committee makes decisions on benefit changes identified in the parity analysis. Our licensed independent clinical social worker reviews BH utilization with the UM director and BH medical director, and their recommendations are forwarded to the CMO/medical director when warranted.

We review and update clinical criteria sets annually or as applicable when national or community evidence-based clinical criteria guidelines are released or revised. The annual review process involves a broad range of specialties such as emergency medicine, behavioral health, pediatrics, surgery, family medicine, internal medicine, and pharmacy to develop, adopt, and review criteria. Aetna ensures clinical criteria sets are sufficient to address the services necessary for diagnosis or treatment of illness or injury to attain, maintain, or regain functional capacity, or to achieve age-appropriate growth and development. Aetna develops clinical criteria policies using peer-reviewed medical literature, regulatory action notices, technology assessments, structured evidence reviews, evidence-based consensus statements, expert opinions of health care providers, and evidence-based guidelines from nationally recognized professional health care organizations and public health agencies.

Aetna uses the following medical review criteria for physical health (PH) and BH medical necessity decisions consulted in the order listed below:

- Criteria required by the Department or federal regulatory agency
- American Society of Addiction Medicine (ASAM)
- Milliman Care Guidelines (MCG) for physical and behavioral health criteria
- Level of Care Utilization System (LOCUS): BH services for adults
- Children and Adolescent Service Intensity Instrument (CASII): BH services for children
- Aetna Clinical Policy Bulletins
- Aetna Clinical Policy Council Review
- eviCore Healthcare Clinical Guidelines
- National Comprehensive Cancer Network Guidelines

Aetna's **Clinical Policy Council Committee**, made up of medical directors at the national level and external practicing clinicians with expertise in providing the types of services in the clinical criteria policies, conducts a comprehensive review process of both new and revised policies. This committee meets twice monthly and reviews changes to clinical review policies and reviews clinical literature to make sure we are congruent with national evidence-based clinical criteria.

We advise providers that criteria are available upon request in the notice of adverse benefit determination, and via provider webinars, email/fax blasts, face-to-face visits, and the provider manual in the provider portal. We advise members that criteria are available upon request and free of charge by contacting the Member Services department, in the notice of adverse benefit determination, and in the member handbook (available in print and through the member portal).

Aetna's lines of accountability strictly follow Department requirements and promote National Committee for Quality Assurance (NCQA) health plan standards for UM programs. Aetna's West Virginia and national UM leadership provide oversight of the UM program through the **UM Steering Committee**, including developing the UM program description and adopting PA codes. The **Quality Management/Utilization Management Committee (QM/UM Committee)**, made up of local providers and West Virginia Aetna leadership, provides governance, evaluates, and approves various reports. Additional insight is provided by the UM Resource Meeting, a group of UM and medical management leaders across Aetna nationally, who meet regularly in an informal forum to identify best practices and brainstorm new ideas. Aetna's board of directors has ultimate responsibility for oversight of the UM program, including adherence to program policies and procedures and review/approval of the annual UM program description and evaluation.

[BA005] Training for Utilization Management and Clinical Staff

Aetna employs highly qualified staff with clinical expertise and training to apply medical management criteria and practice guidelines. Individuals who conduct clinical utilization review are health professionals and possess West Virginia active relevant professional licenses. Staff conducting clinical reviews have access to consultation with our medical directors, who are licensed and board-certified physicians, licensed health professionals in the same licensure category as the ordering provider, or health professionals with the same clinical education as

the ordering provider in clinical specialties where licensure is not issued. Aetna uses BMS' medical necessity definition for medical necessity determinations, and all determinations of medical necessity are made by qualified licensed and trained practitioners in accordance with state and federal regulations.

Aetna UM staff has expertise in physical and behavioral health, and waiver programs, as well as experience and training working with adults and children with disabilities and/or special health care needs. Staff receive training to combine clinical skills with service techniques to support Aetna UM processes, including PA, concurrent review, and retrospective review of services. Aetna staff participate in a broad variety of learning and performance activities on a regular basis, but no less than annually (please refer to **Table 6.2.1-2).** Only licensed clinical professionals with appropriate clinical expertise in the treatment of a member's condition or disease may issue service authorization and/or refer potential denials to a medical director. Our UM staff participate in a rigorous, comprehensive core training program that includes daily, monthly, quarterly, and annual ongoing training opportunities, as shown in **Table 6.2.1-1**.

Table 6.2.1-1: Core Training for UM Clinical and Non-clinical Staff

Training	Description/Modules	Clinical Staff	Non-clinical Staff
Core Welcome to Aetna	Introduction to Aetna's mission and core values	x	x
Core Utilization Management	Introduction to UM	x	x
	Receiving Service Requests	x	
	IP Census/Referrals/Identifying Issues During a Review	x	
	Processing Outpatient Requests	x	
	Processing Inpatient Requests	x	
	Defining Cultural Competency	x	x
	Broadening the Definition of Culture	x	

Training	Description/Modules	Clinical Staff	Non-clinical Staff
Core Cultural Competency 101	The Link Between Culture and Health	x	
	Culture and Healthcare	x	
Quarterly Cultural Conversations	Team discussions on assigned cultural competency topics	x	x
Trauma-informed Care	A 3-day training presented by the National Council for Behavioral Health in trauma, trauma-informed care, and its impact on our members	x	x
Core CMS	Medical Necessity Defined	x	
	Navigating CMS.gov	x	
	CMS Forms	x	
	Documentation and Practice	x	
Core MCG	Medical Necessity	x	
	Introduction to MCG	x	
	MCG Ambulatory Care	x	
	MCG Inpatient and Surgical Care	x	
	MCG General Recovery Guidelines	x	
	MCG Recovery Facility Care	x	
	MCG Home and Chronic Care	x	
	Aetna Clinical Bulletins	x	
	Learning Management System	x	
State Specific Materials	Sample modules: BH carved in benefit for medical management and required statement for member letters, Aetna Better Health of WV profile describing our plans and programs, populations served, footprint, benefits and services, value-added services, member costs, and prior authorization	x	x
Self-paced Learning Courses	EncoderPRO Vignettes: Encoder Pro is an online coding and reference tool	x	x
	IP Census Vignettes: IP Census is a web-based database that provides up to date information about members currently receiving inpatient care	x	

Training	Description/Modules	Clinical Staff	Non-clinical Staff
	Notice of Action (NOA) Database Vignettes: NOA system provides an automated method for generating and recording member and provider letters related to UM	x	x
	ProFAX Vignettes: ProFAX is a Medicaid enterprise-wide PA fax management web-based application for receiving, sending, and storing UM-related faxes	x	x
	QNXT Call Tracking: QNXT is a web-based system used to document communication with our members and providers	x	x
	QNXT Searching for a Member	x	x
	QNXT Searching for a Provider	x	x
	RxClaim Vignettes: RxClaim system can verify eligibility for drug coverage (if pharmacy is carved in)	x	x

UM Clinical Staff

Aetna's UM clinical staff utilize their clinical experience, criteria/guidelines, policies, and procedures to make timely and accurate medical necessity and benefit determinations. They review the member's specific clinical presentation and information to support authorization of requested services. UM clinical staff provide oversight to non-clinical staff to support quality care for our members. Our UM training curriculum prepares clinical staff in the consistent application of medical necessity criteria and minimizing denials, resulting in effective, efficient medical necessity determinations and compliance with requirements. UM supervisors are responsible for tracking the completion and accuracy of training by their staff. All courses are online, and individual completion is tracked and reviewed by supervisors.

UM clinical staff are assessed for competency immediately following the initial onboarding training period. After successfully passing the initial competency assessment, UM clinicians are assigned an

experienced mentor who provides on-the-job shadowing opportunities and additional orientation to ensure they are optimally prepared for their role. They also receive training annually on changes to review criteria. Clinicians have access to supervisors via instant messaging and readily accessible, online medical necessity criteria and policies and procedures when making review determinations. Our UM and Pharmacy teams, including medical directors, conduct quality chart review audits to assess consistency in medical necessity decision making and adherence to policies, procedures, and NCQA-based timeliness standards. Our UM team conducts quarterly quality chart audits with an internal goal to score 90 percent or above. If staff do not meet the goal, supervisors provide feedback and educate about related policies and procedures, regulations, and standards. An average review score less than the plan's benchmark requires development of a training plan and reassessment until demonstrated improvement occurs.

Aetna's UM initial and ongoing training timetable for clinical staff is outlined in **Table 6.2.1-2:**

Table 6.2.1-2: Timetable for UM Clinical Staff Training

Training	Timeframe	Training Curriculum
Initial Training	Weeks One and Two	Training on Aetna systems and mandatory staff training: compliance; Health Insurance Portability and Accountability Act (HIPAA); minimizing denials; and fraud, waste, and abuse; and clinical criteria guideline self-paced training and health plan contractual requirement training.
	Week Three	UM clinical staff shadow a mentor and review workflows, including denials and extensions, experiences application of clinical criteria; and self-paced training.
	Weeks Four and Five	UM clinical staff is assigned a limited number of cases, each reviewed by the mentor or the supervisor prior to processing; clinical criteria guideline self-paced training is completed by end of week five.
	Week Six, Seven, and Eight	Supervisor review with the mentor: collaboratively review chart audit findings, discuss forwarding denials to medical directors, communicating reasons for denials, peer-to-peer review, and appeal rights.

Training	Timeframe	Training Curriculum
	After Week Eight	Supervisor review of staff readiness for full caseload.
Program Training	Ongoing	Online training, which include processes to test ability to appropriately apply criteria; group training for all contractual or policy level change; for example, training on the International Classification of Diseases, 10th Edition (ICD-10) conversion; interdisciplinary case rounds to address consistency of applying criteria and to minimize denials.
	Daily	Question and answer sessions led by the UM team.
	Monthly	Management feedback on monthly audit reports on operational quality, including compliance with timeframes and adherence to policies and procedures (P&Ps).
	Quarterly	Management team to review utilization trends and regulatory changes; staff audits, quarterly compliance, and cultural diversity trainings.
	Annually	Management feedback on IRR results and case reviews to validate adherence to P&Ps.

Medical directors: Medicaid medical directors participate in a comprehensive orientation, education, and training program upon joining Aetna. The CMO is responsible for the development and individualized training curriculum for each medical director that includes, but is not limited to, the following:

- Health plan contractual requirements, plan benefit matrix, and medical necessity criteria
- Overview of quality, utilization, and care management programs with emphasis on specific activities for which the medical director will participate, including regionally specific UM trends and strategies for minimizing provider administrative burden and denials
- Plan benefit matrix
- Medical necessity criteria
- Process and requirements for chart assessments
- Process and requirements for Inter-rater Reliability (IRR)

In addition to the trainings for UM clinical staff outlined earlier, all medical directors who participate in the UM process also complete the Core Medical Directors Training, which includes the Medical Director's Role, Integrated Care Management, Tools and Systems, and Overview of the UM Process. Additional curricula include comprehensive training on the usage of clinical criteria.

Inter-rater reliability: The IRR test is a valuable process used to determine consistency in the application of medical necessity clinical guidelines and to identify educational opportunities. The use of MCG, LOCUS/CASII, ASAM, and Clinical Policy Bulletin criteria facilitates consistency and integrity in the process of making medical determinations. Uniformity in applying medical necessity criteria is essential in member satisfaction and compliance with the state and regulatory guidelines. We conduct annual IRR testing with clinical reviewers and medical directors. Our 2019 IRR results indicate a high level of understanding of UM processes and the application of nationally accepted medical necessity guidelines for both PH and BH services.

Inter-Rater Reliability Scores
Aetna's West Virginia staff scores exceeded the minimum compliance threshold of 85 percent with a **99.9 percent pass rate** for physical health case studies and a 98.85 percent pass rate for behavioral health case studies. Every individual score exceeded the 85 percent goal.

Physician review: Aetna's national Medicaid organization conducts quarterly audits of physician decision-making utilizing a tool that scores specific elements of the process. We audit initial determinations and appeals quarterly. Individuals not meeting the minimum criteria of 90 percent must complete a corrective action plan and receive further education.

[BA006] Utilization Management Guidelines Supporting Fraud and Abuse Detection

Aetna uses UM guidelines, policies, and data for **monitoring utilization** and **deviations from quality of care standards** as the foundation for fraud and abuse prevention and detection activities (please refer to additional detail about our fraud and abuse activities in **[BA010]** herein). At Aetna, preventing and detecting fraud and abuse is everyone's job. All staff are trained in detecting and preventing fraud, waste, and abuse (FWA), and staff are comfortable forwarding their concerns to the SIU, which is the hub for all FWA activities. Information

exchange between UM and SIU is key to ensuring vigilance in fraud and abuse detection. When appropriate, Aetna modifies our Medical Management policies to address emerging schemes and trends. Aetna processes and guidelines encompass three types of reviews:

- **Prospective review** includes the review of medical necessity for the performance of services or scheduled procedures. Prior authorization evaluation is based on state contract/manual requirements and then Milliman national standards and guidelines. PA processes detect and prevent FWA by setting guidelines and limits requiring medical necessity prior to services being performed.
  Concurrent review includes review of medical necessity decisions made while the member is currently in an acute, sub-acute (psychiatric residential treatment facility), rehabilitation, SUD residential, partial hospitalization (BH only), intensive outpatient, crisis stabilization unit, post-acute, and observation (out-of-network only) setting. Evaluation of decision-making in documentation reviews that use Aetna Clinical Policy Guidelines, long-term treatment plans and programs, and peer evaluation of treatment plans and protocols resulting in an eagle's-eye view of peer-to-peer outliers of treatment behaviors that can be considered FWA.
- **Retrospective review** involves a review of coverage after treatment is provided and data analysis of peer outliers across the network. This includes national schemes and trends.

Utilizing a multidisciplinary team approach, our Quality Management (QM), Provider Services, Pharmacy, and SIU departments work with the UM department to identify, track, and address over-utilization and under-utilization and to identify solutions and/or resolve FWA within the provider community. In utilization trend meetings, UM clinical staff look at patterns of usage for spikes to identify outliers in services, supplies, and prescription medications. The Aetna Medicaid organization identifies national

Medication Assisted Therapy

MAT for substance use disorder is complex. Treatment of pregnant patients with SUD adds another layer of complexity. The patient is identified as having a high-risk pregnancy since the newborn could develop neonatal abstinence syndrome after delivery. While using weekly urine drug screens for drug use is recommended for these patients, some providers were also administering weekly urine pregnancy tests at the same time. Ordering urine pregnancy tests for known pregnant patients—sometimes up to the week of their delivery date—was a clear indication of waste and abuse. The UM department is working with the SIU, who is developing a report identifying inappropriate urine pregnancy tests to recoup the cost.

trends in utilization, such as codes that are being abused in other states. In West Virginia, this information provides awareness of potential issues.

UM staff review data to identify potential **deviations from accepted standards of care** to determine if care complies with Aetna's standards of medical care and to ensure members are receiving appropriate and effective care. Data sources may include member complaints, such as inappropriate treatments or poor outcomes of care.

Our UM/QM Committee reviews West Virginia UM reports and dashboards weekly and monthly to identify trends and implement interventions. The clinical group of the FWA Committee reviews the UM reports and dashboards to identify provider patterns for potential fraud, waste, and abuse. On a quarterly basis, the SIU analytics group runs a minimum of 25 outlier reports of known categories of fraudulent schemes, such as up-coding, double billing, and billing for services that were not provided, based on specialty and current procedure terminology codes to identify the top providers of certain services. The medical management director, CMO/medical director, and BH medical director attend monthly meetings where these reports are discussed and broken out for further investigation. The CMO/medical director and SIU senior investigator meet monthly to discuss current cases and additional projects derived from the Code Team (an interdepartmental team of Operations and Medical Management staff which meets monthly to review code changes), UM analysis, and the SIU quarterly data mining.

Aetna's UM program includes processes, guidelines, review criteria, decision-making timeframes, and qualifications of health plan staff involved in UM processes. As an NCQA-accredited health plan with a 'Commendable' rating, we continually monitor our policies and

procedures for our UM processes through audits. We conduct an annual review of policies and procedures, which the Policy and Procedure Committee reviews and approves.

[BA007] Ongoing Monitoring of Emergency Room Utilization

Aetna's approach to monitoring emergency room (ER) utilization involves close collaboration between CM and UM staff and utilizes a variety of modalities, including near real-time data feeds and a geographic and demographic dashboard. We share ER utilization data through our population health information platform and work with providers through value-based purchasing agreements. We communicate ER visits with our internal service coordinators, home care providers, primary care providers, and specialty providers and work with hospitals to identify members with medium or high risk of returning to the ER so we can contact members during and after discharge to assess needs and create follow up plans.

Admission, discharge, and transfer feeds: We currently receive ADT feeds from PreManage via Collective Medical Technologies and the West Virginia Health Information Network into our population health platform and share the information with our providers in near real-time. We will continue to work with the state on clinically integrating data to reduce barriers for our members.

Demographic distribution for ER utilization dashboard: This dashboard allows Aetna staff to monitor ER utilization data through demographic and health equity lenses. The dashboard sorts and filters member ER utilization data to identify possible demographic-related disparities related to race, ethnicity, language, geography, or adverse incidents. We map where high ER utilizers reside, which allows us to assess local hospitals, urgent care centers, and providers with after-hours care to assist members with finding appropriate, available services when possible. This provides for a region-specific, targeted approach to ER diversion through data identification and clarification of existing inequities.

[BA008] Ongoing Monitoring of Inappropriate Utilization of Controlled Prescription Medications

Aetna's drug utilization review (DUR) approach to managing inappropriate utilization of controlled prescription medications is consistent with 42 CFR 438.3(s)(4) and (5), and requirements described in Section 1927(g) of the Social Security Act and 42 C.F.R. Part 456, Subpart K. Our collaborative and integrated member-centered approach to DUR programs promotes appropriate medication use with special focus on controlled prescription medications. Our approach decreases fragmentation and increases integration across providers and care settings thus minimizing unsafe medication use. Programs led by our pharmacy director under the guidance of our CMO/medical director foster collaboration among community-based retail pharmacists and Aetna CM and Medical Services teams when working with members identified with DUR opportunities. Aetna delivers DUR programs structured to ensure outcomes measurement to our West Virginia members, providers, and the State.

A Team Approach

A prior authorization nurse reviewing urine drug screen requests noticed an overutilization pattern, which she presented to our SIU. A review of medical notes accompanying the PA requests by Aetna's medical director uncovered an abnormal prescribing pattern. Using the Prescription Drug Monitoring Program (PDMP), our pharmacy director discovered a provider was prescribing Suboxone® and a benzodiazepine together, which is prohibited by the WV pharmacy preferred drug list criteria because the combination is potentially lethal.

Members were using Medicaid to pay for Suboxone® and paying cash to the pharmacy for the benzodiazepine prescription, which was documented in the PDMP reports. Aetna's BH medical director and pharmacy director's reviews confirmed our concerns.

Aetna opened an investigation in late 2019, which included information from another provider suggesting members were leaving her practice because of the other practice's willingness to write benzodiazepine prescriptions. We are researching further with the WV Office of Program Integrity, who will determine recommendations and next steps to the WV Medicaid Fraud Control Unit and/or the WV Board of Pharmacy for review.

In **Table 6.2.1-3** we have noted a sampling of controlled medication reports used to monitor and analyze utilization patterns and trends providing detailed claims information and comparative

data points. These reports, created using pharmacy claims from West Virginia, are generated and used on daily, weekly, monthly, and quarterly bases.

Table 6.2.1-3: Controlled Prescription Medication Reports

Report	Description
Controlled Substance High Utilizer	Members with 10 or more prescriptions in 30 days, or members with 3 or more prescribers in 30 days
Opioid High Utilizer	Members filling 10 or more opioid prescriptions from 4 or more prescribers filled at 4 or more pharmacies in the date range specified
Controlled Substance Activity	Members filling or attempting to fill prescriptions for stimulants, narcotic antagonists, opioid dependence medications (e.g., Suboxone), and opioids
Top Prescriber of Controlled Substances	Providers with highest activity by controlled substance drug cost and number of controlled substance prescriptions
Prescriber Abuse	Providers overprescribing or exceeding cumulative quantity limits for controlled substance
Pregnancy – Opioids	Pregnant members filling opioid and/or Suboxone
Multiple Controlled Substances	Members filling prescriptions for controlled substances in multiple drug categories, for example, stimulants and benzodiazepines, opioids and benzodiazepines, opioids and skeletal muscle relaxants, and opioids or stimulants and gabapentin as well as other controlled substance combinations

In addition to the reports above, Aetna's clinical pharmacy staff, using information on medication use and prescribing from multiple sources, including the PDMP, works closely with our CM and QM departments to exchange ideas to improve member and provider access and use of medications. When faced with a challenge, such as misuse of controlled substances, we convene our interdisciplinary team to identify and implement solutions.

If BMS determines the pharmacy benefit should be carved into services provided by Aetna, we can deploy additional tools and resources to monitor and act on inappropriate use of controlled substances. In collaboration with our pharmacy benefit manager (PBM), CaremarkPCS Health,

we would utilize our pharmacy point of service claims adjudication system's Prospective Drug Utilization Review (ProDUR) alerts and safety edits to identify unsafe prescribing and prescription filling behaviors by implementing edits that alert the pharmacist to unsafe medication use. Triggered pharmacy claim edits will send messages to pharmacists and request action by the pharmacist and/or prescriber. Examples of edits include controlled substance high dose or high quantity, duplicate therapy, unsafe drug combinations (opioids and benzodiazepines), and high cumulative opioid morphine equivalent daily dose. Aetna also has the ability to implement member-specific controlled substance edits when our integrated care team determines a member's safe medication use requires assignment to a specific prescriber and our pharmacy. Members selected for assignment are managed by an Aetna care manager who works closely with the member and their medical and pharmacy providers. Additionally, Aetna could utilize reports (e.g., early refill attempts for controlled substances) generated by our PBM's reporting platform to identify and take action on inappropriate use of controlled substances; these reports would supplement reports we currently create and utilize.

Targeted interventions: Aetna's written policies and procedures help establish consistency in the processes we use to detect the inappropriate use of controlled substance medications by our Medicaid and WVCHIP members. Aetna applies our DUR tools to assess member and provider opioid utilization patterns and drive development and implementation of interventions and educational programs. Interventions include, but are not limited to, the following:

- Our pharmacists and care managers identify members whose use of opioids may not be appropriate for their conditions and reach out to the member's prescribing providers to alert them of our findings and create a plan of care.
- Our pharmacy analytics team identifies outlier prescribers with algorithms matching national drug code, primary and secondary diagnosis, and place of service to support identification of use of opioid medications by our members. If a prescriber is identified with abnormal or problematic prescribing patterns, we refer the situation to the State's pharmacy director.

- Care managers coordinate medication reconciliation for members in moderate and high-risk levels and provide education on side effects and proper use promoting alternative medications or strategies to relieve pain versus opioid medications.
- The Patient Utilization Management and Safety Committee evaluates identified members' utilization to determine whether they are candidates for prescriber assignment. When the pharmacy benefit is carved in, Aetna has the ability to assign a member to a specific pharmacy, prescriber, and/or specific emergency provider for their medications.
- Quality of care referrals for outlier prescribers are submitted by our CM, UM, DUR, and Grievance and Appeals teams. Our CMO/medical director, pharmacy director, or a clinical pharmacist contacts the identified practitioner to review their prescribing patterns. The outreach focuses on reviewing results and educating on appropriate prescribing practices. Information from this interaction is brought to our QM/UM Committee for review and action, including corrective action plans, claims denial, or termination from the network.
- Aetna's SIU reviews cases of outlier prescribing to identify potential FWA by members and providers. The SIU recovers identified overpayments and refers cases to the Health and Human Resources Office of Inspector General for further investigation/potential sanctions.

If the pharmacy benefit is carved into managed care organization (MCO) services, we can utilize additional resources and tools provided by our PBM, CaremarkPCS Health, to monitor for and take action on instances of inappropriate use of controlled substances. The Aetna Pharmacy team could work with our PBM, who manages the pharmacy network and conducts claims review and pharmacy audits to prevent, detect, and act on inappropriate use of controlled substances by pharmacies, members, and prescribers. CaremarkPCS Health performs paid drug claims reviews for all pharmacies in our network and performs rejected claims review using targeting logic built to validate accurate clinical adjudication. If an issue is detected, the team escalates the issue to ensure expedient remediation and the safety of our members.

To identify potential member safety issues due to the inappropriate utilization of controlled substances, Aetna will use CaremarkPCS Health's Retrospective Safety and Monitoring program that employs staff pharmacists to review and intervene on claims reports generated daily, monthly, and quarterly. This program identifies, corrects, and/or deters potential cases of overutilization at the member and provider level for high-abuse drugs. It targets high-risk drug

classes such as opioids, benzodiazepines, muscle relaxants, and stimulants in addition to inappropriate use related indicators such as multiple drugs, provider shopping, and high-total controlled substance claims volume. The unique risk score stratification prioritizes interventions, and claims are screened according to preset edit criteria. Based on these criteria, a risk score is calculated, and cases are created for pharmacist review and intervention, which includes a letter to the prescriber and/or pharmacy and continual follow up and monitoring. Additionally, on a quarterly basis, clinical pharmacists evaluate controlled substance claims and supporting medical data to identify potential medication misuse for intervention. During subsequent quarters, pharmacists conduct follow-up activities utilizing physician responses and current claim activity, and potentially inappropriate situations are referred to our pharmacy director, a care manager, or Aetna's SIU.

[BA009] Monitoring and Managing Service Utilization

Aetna uses utilization and gaps in care data, inpatient alerts, and value-based purchasing contracts to monitor and manage service utilization and detect and prevent fraud and abuse. Onsite UM staff at high-volume provider sites review gaps in care, meet with members, assist in discharge planning, identify barriers (including transportation) and individual circumstances, and offer a warm transfer to CM services to members needing ongoing follow-up or further resources. Inpatient cases are discussed in UM/CM rounds with medical directors daily. In monitoring and reviewing claims, UM staff identify outliers and discrepancies between claims and authorizations or abnormal patterns of utilization. Quality staff focusing on Healthcare Effectiveness Data and Information Set (HEDIS®) measures in chart reviews identify over-utilization and under-utilization and refer those issues to UM for further research and follow up. Potential fraud and abuse issues can also be uncovered in regional daily rounds in which UM and CM staff participate.

UM Performance Dashboards: We use a suite of UM dashboards to identify high utilizers and engage care managers for immediate intervention. Dashboards include the following measures:

- Readmissions (please refer to **Figure 6.2.1-1**)
- Observations vs. one- to two-day stays
- ER utilization by facility, level billed, and primary system chief complaint
- Neonatal intensive care unit admission patterns
- Medical claims trends
- Outpatient authorization trends
- Inpatient performance to target trends

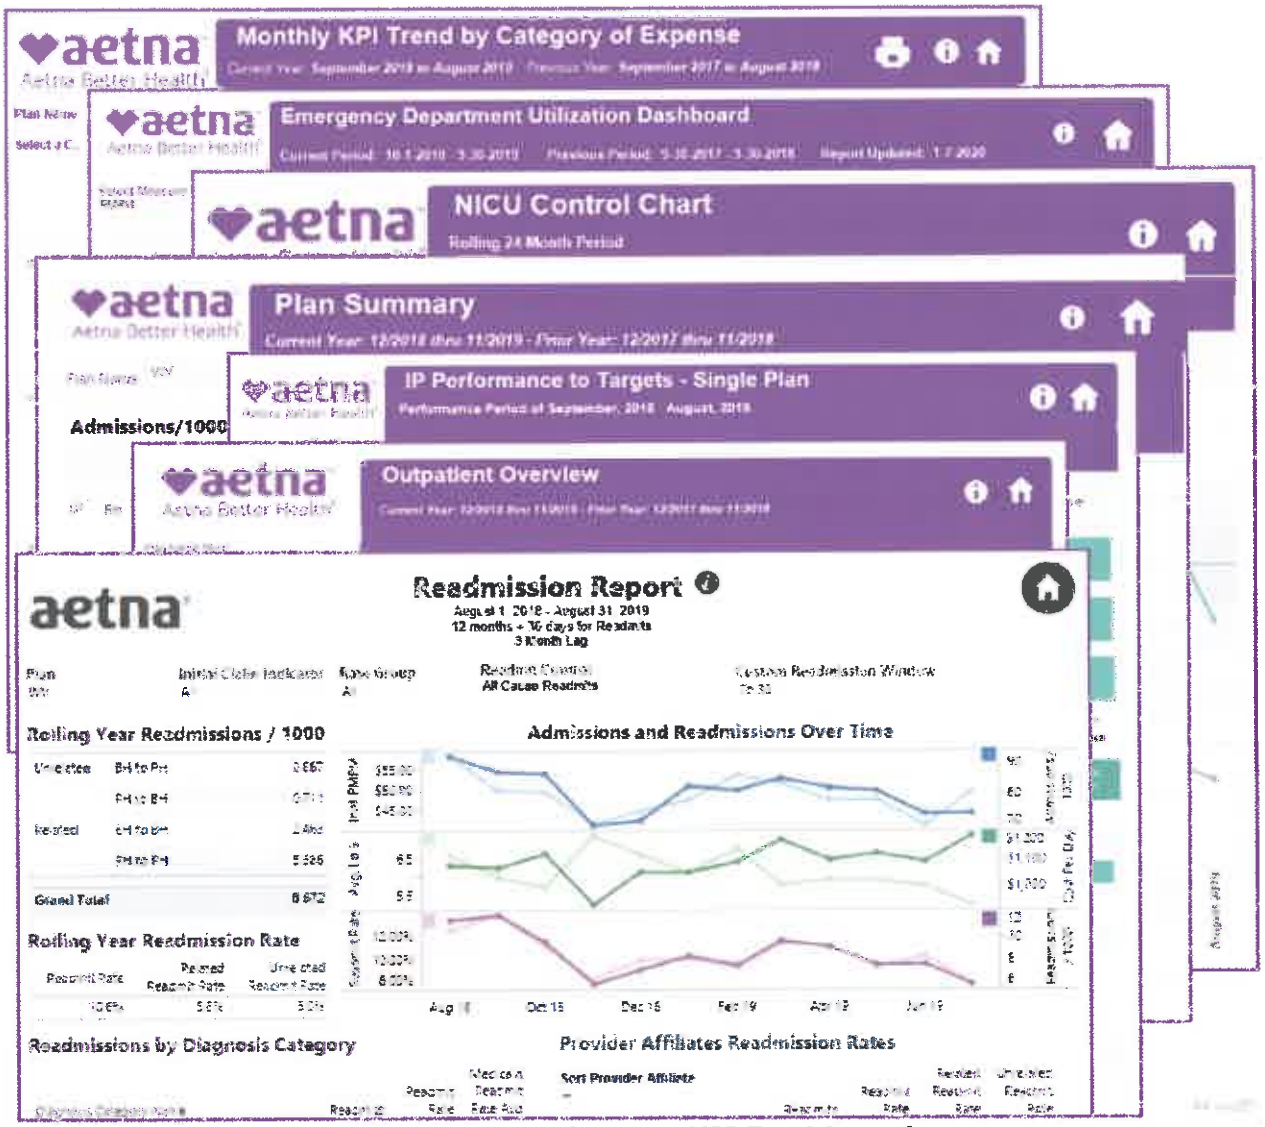

Figure 6.2.1-1: Sample UM Dashboards

Aetna uses near real-time UM dashboards to monitor utilization data to identify opportunities to take timely actions to improve provider and member experience.

Gaps in care reporting: We utilize gaps in care reporting internally and externally to address under-utilized services. This allows us the opportunity to encourage needed care such as screenings, well visits, and follow-up care and help the member get to the appointment. Based on the gaps in care report and indication of under-utilization, we look at primary care provider (PCP) assignment, high ER utilization, and readmission rates to determine if a member needs specific outreach or resources in completing care. We have been utilizing gaps in care reporting since 2015 with our value-based purchasing (VBP) collaborators and have seen a positive impact on our compliance rates for HEDIS measures such as diabetes, immunization, and screenings, as well as decreased ER utilization and readmission rates. We also share gaps-in-care reports with our providers and work with them to assess member needs in closing those gaps. Our team (CMO/medical director, medical director, health services director/manager, network account manager, and clinical pharmacy advisor) meet onsite with providers to discuss ways to encourage members' adherence to treatment and explore alternatives to inpatient admissions.

Value-based purchasing: Aetna has an established alternative payment model (APM) program in West Virginia affecting 21 percent of our membership today. Our current APM options include pay-for-quality, shared risk, shared savings, and capitation. From physician incentive plans with patient-centered medical homes/advanced medical homes to shared risk and then to full-risk capitation, we work with our value-based purchasing providers on their areas of focus using data from UM dashboards. As providers move along the APM value continuum, we link incentives to improved quality, reduced costs, and increased member satisfaction and engagement. One of our value-based purchasing collaborators, Marshall Health, identified

utilization concerns, and we are actively collaborating with them around ER rates and reviewing their ER dashboards to determine if the ER visits could be addressed in primary care settings. We are working with them to review the data, assess for any root causes, and identify appropriate interventions. Already we have seen a trending decrease in ER visits.

Utilization Management for Members with Special Health Care Needs	
BA011	The Vendor should describe its process for modifying its standard Utilization Management (UM) protocols when reviewing referral and treatment requests for members with special health care needs, including, but not limited to, the following:
BA012	Standing referrals
BA013	Expedited utilization review processes
BA014	The Vendor should describe its process for any condition-specific protocols or standards that will be used to manage members with special health care needs, defined as individuals with complex or serious medical conditions
BA015	The Vendor should describe its process for how condition-specific protocols and conditions will be updated and shared with primary and specialty care providers

Aetna recognizes the need for flexibility and care when managing services for individuals with complex or serious medical conditions and modifies our UM protocols accordingly to ensure our members receive the care they need in a timely manner.

[BA011] Modifying Utilization Management Protocols for Members with Special Health Care Needs

Aetna modifies our standard UM protocols to reduce provider burden and avoid delays for members when reviewing referral and treatment requests for members with special health care needs (individuals with complex or serious medical conditions). Examples of factors that may require modification include the following:

- **Benefit limits:**
  - **Lifetime benefit:** e.g., for members in need of orthopedic braces due to scoliosis or spina bifida, exceptions can be made for new braces as the child grows
  - **Benefit exceptions for therapeutic services:** e.g., for members with developmental delays in need of physical therapy, occupational therapy, or speech therapy, Aetna makes exceptions to benefit limits for therapeutic services, such as allowing additional physical

therapy treatments past the benefit limit for the treatment of an acute injury or chronic pain condition when medically necessary, or allowing additional urinary catheters beyond the benefit limit when medically necessary

- **Time limit exceptions:** e.g., for members in the course of ongoing treatment, Aetna makes exceptions to time limits during the transition phase to make sure treatment is completed
- **Place of service exceptions:** e.g., for members with mobility limitations, Aetna makes exceptions to place of service requirements to allow for services to be provided in the home
- **Early and Periodic Screening, Diagnostic and Treatment Program (EPSDT):** e.g., any service requested under EPSDT that is not otherwise covered as a Medicaid benefit can be covered when it meets EPSDT criteria
- **Medical foods:** e.g., for members with feeding difficulties who require special medical foods otherwise not covered through Women, Infants, and Children (WIC) benefits, Aetna makes exceptions to assure nutritional needs are met

[BA012] Standing referrals: Aetna members who require specialized care over a prolonged period for life-threatening, degenerative, or disabling conditions may be allowed a standing referral to a specialist or specialty care treatment centers with expertise in treating their condition or disease. This includes conditions with a complicated treatment regimen requiring ongoing monitoring of the member's adherence, such as rheumatology or neurology, and BH services for members with a history of trauma or adverse childhood experiences.

The determination and notifications must be made within the timeframes appropriate to the condition of the member (e.g., urgent, non-urgent, concurrent), not to exceed seven calendar days from the receipt of the request. If clinical information is not sufficient to determine medical necessity, UM staff make multiple attempts to obtain needed information to ensure the appropriate decision is made without delay. The process includes authorizing requests for standing referrals for members requiring more than one visit to a specialist or specialty care center for treatment of a condition. Aetna care coordinators and UM staff research a member's authorization history to avoid duplicating services the member is currently receiving or

authorizations already documented in the system and authorizing services that are not in the member's benefit or treatment plan.

[BA013] Expedited utilization review processes: Prior authorization enables us to monitor utilization of defined services and procedures and non-emergent hospitalizations before the member receives the service. For services requiring PA, we confirm services as follows:

- Requested for eligible members
- Included in the covered benefits
- Provided at an appropriate level of care or place of service to meet the member's needs
- Appropriate, timely, and cost-effective to best meet the member's needs
- Coordinated as necessary with quality management or care management, and information is communicated to applicable operations areas (e.g., Finance, Enrollee Services, and Provider Services) or per contractual requirement with external contractors
- Accurately documented to facilitate timely reimbursement and accurate reporting

At any point in the UM processes (e.g., PA, concurrent review) a member or a provider acting on the member's behalf may request an expedited review if a delay in the decision could seriously jeopardize the member's life, health or ability to attain, maintain or regain maximum function. **We make an expedited authorization decision as quickly as clinically needed given the member's health condition and provide notice no later than 48 hours after receipt of the request for service.**

[BA014] Condition-specific Protocols or Standards for Members with Special Health Care Needs

Aetna provides specialized medical care for children and adult members who have or might have a chronic, disabling medical condition(s). On a monthly basis, Aetna care coordinators reach out to members who have special health care needs to inform them of Aetna's Specialty Care Program, which provides care management and access to specialty services through a system of outreach specialty clinics. Members identified with special health care needs are

referred to providers who have the training to meet the individual member's unique needs. The program enables members with special health care needs to receive a patient-centered medical home approach to comprehensive, coordinated services, and supports including the local Care Connection teams and needed community resources. The Aetna care team remains the single-point of contact guiding the member's choices in his or her journey.

Pregnancy and HIV

Julie[1], a 36-year-old newly pregnant member, was advised that she was HIV positive early in her pregnancy. Aetna's care manager, who was embedded at a high-risk OB clinic, met with Julie immediately following her diagnosis to help relieve her panic and concerns. The care manager spent time with Julie discussing her options and helping her understand HIV treatment, terminology, and preventing infection of others.

Aetna's care manager coordinated care essential for Julie to deliver a healthy baby and manage her HIV. After referring Julie to an infectious disease specialist for HIV treatment, our case manager continued to see Julie regularly during her prenatal visits at the OB clinic, helping Julie understand how to manage pregnancy and HIV simultaneously, resolve issues with her boyfriend, and apply for income assistance to facilitate financial stability.

Julie delivered a healthy baby girl, who has so far tested negative for HIV. Julie is established in HIV treatment and is aware that HIV is a lifelong condition she will be able to manage with regular care and medication.

Eligible medical conditions for members with special health care needs include, but are not limited to, the following:

- Conditions of bones, joints, or muscles
- Heart conditions
- Epilepsy and other convulsive conditions
- Neurological conditions such as cerebral palsy and spina bifida
- Neonatal abstinence syndrome
- Organ transplants
- Human immunodeficiency viruses
- Hemophilia
- Certain operable eye conditions, such as crossed eyes and congenital cataracts
- Kidney and urological conditions, including those requiring dialysis
- Cleft lip/palate and other conditions requiring treatment by an otolaryngologist
- Ear, nose, and throat conditions requiring treatment by an otolaryngologist

[1] Not her real name

- Hearing loss, including hearing aid placement, and related services
- Other chronic conditions, such as cystic fibrosis, and sickle cell anemia

Most children with special health care needs receive high-risk intensive care management with frequent face-to-face meetings at enrollment and quarterly thereafter, comprehensive bio-psychological assessment, condition-specific assessments, integrated care and service planning, chronic condition management provided by a clinician, monthly member contact and care plan reviews, annual re-assessments based on member needs and indicated by changes in condition, and complex care coordination. Aetna conducts collaborative activities with family-centered, community-based systems of coordinated care for children with special health care needs, including early intervention and screening, linkage with parent support groups and forums, and adolescent pregnancy prevention programs. We collaborate with the Office of Maternal, Child and Family Health (OMCFH) to improve members' sense of safety, enhance the member experience and access to services, coordinate care through the sharing of care plans, and reduce barriers to achieving health goals. Currently, we attend a monthly meeting with OMCFH to discuss strategies to remove or mitigate service barriers for individual children with special health care needs.

[BA015] Developing, Updating, and Sharing Condition-specific Protocols or Standards with Providers

Condition-specific protocols and standards are reviewed at least annually by our local QM/UM Committee and nationally by the Aetna Clinical Council Policy Committee. When a protocol or standard is substantially changed, our internal policy and criteria change as well. If this change occurs prior to the annual review, it is presented sooner. These changes are brought to our QM/UM Committee for review and approval. Updated information is communicated to our

providers through electronic notification and posting on our website. Examples of condition-specific protocols and standards adopted by Aetna include, but are not limited to, the following:

- National Heart, Lung and Blood Institute- Expert Panel Report 3: Guidelines for the Diagnosis and Management of Asthma Full Report
- American Academy of Pediatrics Diagnosis, Evaluation and Treatment of ADHD in Children and Adolescents
- American Diabetes Association Standards of Medical Care in Diabetes
- U.S. Department of Health and Human Services Clinical Guidelines for Treatment of HIV/AIDS
- Centers for Disease Control & Prevention Cessation Materials for State Tobacco Control Programs, multiple guidelines
- Centers for Disease Control & Prevention Guideline for Prescribing Opioids for Chronic Pain
- American College of Cardiology Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults

Prior Authorization

BA016	The Vendor should describe its process to honor authorization approvals from previous coverage during the transition period, defined as the period in which members are moving from one Managed Care Organization (MCO) to another, or from Fee-For-Service (FFS) to an MCO, or private insurance to an MCO. These processes should include, but are not limited to, the following:
BA017	Medical services (includes Physical, Behavioral Health, Dental, and Vision)
BA018	Pharmacy
BA019	The Vendor should describe how providers and/or members will be notified regarding the expiration of medical authorizations, and pharmacy authorizations, if applicable.

Aetna's member transition process works to ensure members' care continues without interruption or delay during the transition of moving from one MCO to another, from fee-for-service to an MCO, or from private insurance to an MCO. In alignment with the requirements set forth in the Model Purchase of Service Provider Agreement for Fiscal Year 2020, Section 5.4.6, Transition of Care, Aetna will honor authorization approvals from previous coverage during the member's transition period from another MCO, fee-for-service plan, or private insurance for medical and pharmacy services, in accordance with our transition of care policy and PA guidelines for Medicaid and in adherence to WVCHIP guidelines for WVCHIP members.

[BA016] Honoring Authorization Approvals from Previous Coverage During Transitions

Aetna will honor authorizations from Medicaid and WVCHIP members to maintain continuity and quality of care and services during the transition after enrolling in our plan. We understand some WVCHIP members may experience challenges in moving from fee-for-service to managed care. All WVCHIP members will receive a welcome packet and a welcome call. During the call, they are given the opportunity to transfer to a Member Services representative to answer any questions they may have. WVCHIP members will also receive an automated outreach call to complete a health risk questionnaire with the opportunity to request a call back from Aetna staff or immediate transfer if responses indicate that level of urgency. We ensure our member-facing staff are well informed on WVCHIP benefits and regulations so they can assist these members in understanding and adjusting to processes around member concerns, provider selection, PA, or any information which may be unfamiliar to them.

[BA017] Physical, Behavioral Health, Dental, and Vision Services: Aetna's standard transition of care procedures include honoring existing medical and BH authorizations for 90 days, or until the current treatment is completed (e.g., supporting a

Continuing Care in Therapy

Jimmy[2], a nine-year-old member with generalized anxiety disorder, was afraid to go to school because he was worried something would happen to his mother, who has a brain tumor. Working with horses as part of his therapy has helped Jimmy cope with his anxiety. The therapist providing the therapy with horses was not an Aetna network provider, and the closest provider having similar services is more than an hour away from Jimmy's home.

Our prior authorization nurse advocated on Jimmy's behalf and secured authorization for continued services. We are now working with the therapist to join the Aetna network, providing another valuable behavioral health provider resource for our Medicaid members in Marlinton.

[2] Not his real name

pregnant mother through the delivery of her child or a member in treatment for cancer) to assure continuity of care and honoring previously established therapeutic relationships for our members. Our local staff are focused on our members and providers and the quality of their experience with us. When Medicaid and WVCHIP members transition to Aetna from another MCO, private insurance, or fee-for-service, they are identified by a rate code or otherwise flagged in our informatics system. This allows UM staff to identify current authorized services that should be continued during the transition period to support continuity of care. In addition, the Claims Processing department uses rate code information to assure claims received during the transition period are paid timely and correctly without an Aetna PA via our electronic claims management system.

[BA018] Pharmacy: Aetna supports Medicaid and WVCHIP member transition from previous coverage by providing access or ensuring access to covered medications consistent with state requirements by ensuring availability of two fills of a medication up to a 34-day total transition supply within 90 days from the date the member becomes eligible with Aetna. When the pharmacy benefit was carved in prior to July 1, 2017, most of the transition medications adjudicated by Aetna were for non-formulary maintenance medications or any formulary medications that have a prior authorization or step therapy requirement, and excluded Suboxone®/Subutex, statutory excluded medications, and specialty medications. Additionally, Aetna ensured that members received letters from CaremarkPCS Health about the transition fill medication, expiration of transition coverage, and the needed next steps to ensure continuity of care. A copy of the member transition letter with instructions for action was sent to prescribing provider each time the member received a transitional fill. Letters to members and prescribers were sent within 24 hours of transition fill.

Aetna ensures continuity of care for new members on protected medications, such as immunosuppressants for organ transplant, antidepressants, antipsychotics, anticonvulsants, antiretrovirals, anti-neoplastics, and BH medications by providing access to the medication as long as the prescriber writes for the medication. For members stabilized on any medication during an inpatient hospital stay, Aetna ensures access to the medication if medically necessary as determined by the prescriber's written prescription and plan of therapy. Aetna understands each member's experience is unique, and we work directly with our members to assure their medications and treatments are not interrupted with any of their transitions.

[BA019] Notifying Members and Providers when Medical and Pharmacy Authorizations Expire

The original service authorization notification sent to providers clearly outlines the duration of all authorized services and outpatient prescription drug products, and thereby provides advance notice of authorization expiration dates. In the rare occasions when the authorization is terminated before the original expiration because of new information that makes the previously authorized service or product no longer medically necessary or clinically appropriate for the member, Aetna will send an electronic/written NOA to member and providers informing them of the status change. The notification includes information on how to obtain criteria used to make the decision as well as member appeal rights and provider appeal rights. Our NOA process complies with 42 CFR 438.404, including timeframes for notice and notice contents. Following an initial decision to deny a service authorization request or to authorize a service in an amount, duration, or scope that is less than requested, we send written notice to the member and provider. Our notice is on the Department-required template, is thoroughly completed in easily understandable language, and includes all required information detailed in 42 CFR 431.210.

Medical Necessity

BA038	The Vendor should describe its policies and procedures that outline how cases of medical necessity will be handled when medical service limitations are imposed.
BA039	The Vendor should describe its policies and procedures that outline how cases of medical necessity will be handled when prescription limits are imposed.

We adopt evidence-based clinical practice guidelines from nationally recognized sources to promote consistent application of evidence-based treatment methodologies, facilitate improvement of health care, and reduce unnecessary variations in care. Our processes conform to the Model Purchase of Service Provider Agreement for Fiscal Year 2020, Section 5.4, Service Authorization (Prior Authorization) requirements. Aetna uses the following criteria determining medical necessity for authorization of physical health, behavioral health, dental, vision, and pharmacy services (please refer to clinical criteria guidelines listed to **[BA004]**) herein).

Aetna's standard prior authorization process: Aetna receives PA requests from the member's provider by phone, fax, or provider portal. The request is reviewed to determine if the member is actively enrolled with Aetna and does not have other insurance, if the provider is in our network, if the service is a covered benefit, and if the service requires an authorization. When clinical information has not been provided, we request it from the provider. To ensure timely access for our members, PA requests are prioritized based on urgency. Any request that could seriously jeopardize the life or health of the member or the member's ability to regain maximum function, based on a prudent layperson's judgment, or in the opinion of a practitioner with knowledge of the member's medical condition would subject the member to severe pain that cannot be adequately managed without the care or treatment that is the subject of the request, will be treated as an urgent request. The determination of whether a service is medically necessary is made on a case-by-case basis, considering the needs of the member and allowing for consultation with requesting providers

when appropriate. When a clinical review is in order, a nurse clinician reviews the request specific to the member's needs, including the following:

- Appropriateness of proposed service/treatment (service history)
- Past treatment
- Physicians treatment plan
- Age
- Co-morbidities
- Complications
- Progress of treatment
- Psychosocial situation
- Home environment
- Review characteristics of the delivery system for availability of services in the area to support the member
- Practitioner/facility ability to provide all recommended services

Once medical necessity criteria are met, we notify the requesting provider and the member's assigned care manager, as appropriate. Certain medically necessary medical services may exceed established coverage guidelines. In these circumstances, coverage determination is based on Aetna UM alternative procedures, such as referral to a licensed physician with the appropriate clinical expertise for review.

[BA038] Policies and Procedures for Medical Necessity with Medical Service Limitations
Consistent with Aetna West Virginia Policy, 7100.05, Prior Authorization, and Policy 7000.30 Process for Approving and Applying Medical Necessity Criteria and Fee for Service Medicaid provider manuals on the West Virginia Department of Health and Human Resources website, Aetna conducts medical necessity reviews when medical service limitations are imposed. Medical directors use formal criteria to support the clinical review of continuing services beyond the benefit limitation. Determinations of medical necessity are made by qualified and trained practitioners in accordance with state and federal regulations, and only a medical director can reduce or deny a request for services beyond set limits based on a medical necessity review. The medical director reviews the request, the member's need, and clinical information. Using the approved criteria and medical director's clinical judgment, a determination is made to

approve, deny, or reduce the service. If the reviewing medical director determines that applicable medical necessity criteria are not clear or application of criteria to this situation is in question, the medical director may submit a request to the Aetna Clinical Policy Council, which will research applicable literature and respond to the medical director with a determination.

The medical director may contact the requester to discuss the case or consult with a board-certified physician from an appropriate specialty area before determining medical necessity. All medical director discussions and actions, including discussions between medical directors and treating practitioners or providers, are documented in our authorization system.

Throughout the process and after the determination, Aetna medical directors conducting clinical reviews are available to discuss determinations with attending physicians or other ordering providers via peer-to-peer consultations for any request that may result or has resulted in denied authorization. If a peer-to-peer conversation or review of additional information does not result in an approval, or if the provider elects not to request a consultation, the denial letter informs the provider and member of the right and procedure to initiate an appeal.

Aetna makes written and telephonic notification available to the provider, and we complete an NOA and send it to the member for any decision made to deny, reduce, suspend, or terminate a service authorization request. Our UM program description and policies and procedures describe the information contained in the NOA, which includes a description of members' rights and the process to file an appeal or request a State Fair Hearing. Our Member Services line assists members with questions about care determinations, NOAs, and appeal processes.

[BA039] Policies and Procedures for Medical Necessity with Prescription Limitations

Consistent with Aetna policy, we conduct medical necessity reviews for physician administered prescription medications as well as outpatient medications dispensed at the pharmacy when the pharmacy benefit is carved in. We provide medications sufficient in amount, duration, and scope to reasonably expect to achieve the purposes for which the prescription medications are furnished and are no less than the amount, duration, or scope for the same services furnished to members under the Medicaid State Plan. Aetna uses formal protocols and processes to support the clinical review of physician administered drugs under the medical benefit that require PA and/or medical necessity review for prescription limits. Aetna may also refer to the BMS Preferred Drug List drug criteria when making determinations for physician-administered drugs as well as outpatient prescriptions drugs dispensed at the pharmacy when the pharmacy benefit is carved in. The Aetna Clinical Policy Review Unit develops and updates Aetna Clinical Practice Bulletins and guidelines to support the medical necessity review of prescription drugs in alignment with nationally recognized treatment standards (i.e., American Psychiatric Association, National Comprehensive Cancer Network, evidence in peer-reviewed published medical literature, expert opinions of health care providers, and information from public health agencies and the U.S. Food and Drug Administration.

During the medical necessity review, appropriate Aetna staff researches a member's authorization history before approving medications to avoid duplicating medications the member is already receiving, authorizing medications that are not in the member's benefit plan, and duplicating medication authorizations already documented in our system. Individuals who conduct the review are health professionals who possess an active professional relevant license

and are under the supervision of a medical director or designated licensed clinical professional qualified by training, experience, and certification/licensure to conduct case reviews. Determinations of medical necessity are made by qualified and trained practitioners in accordance with state and federal regulations. Only a medical director can reduce or deny a request for service based on a medical necessity review.

Authorization requests for medications that have no established medical necessity criteria, or for which application of medical necessity criteria are unclear, are sent to a medical director for review. The medical director conducting the review must have clinical expertise in treating the member's condition and be qualified by training, experience, and certification/licensure. The medical director reviews the request, the member's need, and the clinical information presented. Using the approved criteria and medical director's clinical judgment, a determination is made to approve, deny, or reduce the service. If the reviewing medical director determines that all applicable medical necessity criteria are not clear or application of criteria to this situation is in question, the medical director may do as follows:

- Submit a request for a position determination to the Aetna Clinical Policy Council, which will research literature applicable to the specific request and respond with a determination.
- Contact the requester to discuss the case or consult with a board-certified physician from an appropriate specialty area before determining medical necessity.

Throughout the process and after the determination, Aetna makes peer-to-peer consultation available to our treating practitioners with Aetna medical directors related to medical necessity requests and members' care needs. The Aetna CMO/medical director is responsible for directing and overseeing medical necessity review services and for ensuring the appropriateness of our clinical decision-making.

Members and prescribing practitioners are annually notified of medical pharmaceutical criteria and updates by mail, fax, email, or on our website. Additionally, medical necessity criteria and practice guidelines are distributed at no charge upon request to providers, members, and potential members.

To improve efficiency and ensure parity in coverage of outpatient prescription drugs which includes physician administered drugs, Aetna has implemented our Pharmacist Review of Medical Drug (PRMD) program for many of our state Medicaid plans with great success. We can implement the PRMD program in West Virginia consistent with West Virginia Department of Health and Human Resources, BMS, Chapter 518A Physician Administered Drugs.

Our team of clinical pharmacists comprise our highly effective PRMD program team. As depicted in **Figure 6.2.1-2,** they ensure that outpatient medical drugs are reviewed appropriately and meet medical necessity coverage requirements stated in BMS Chapter 518A and consistent with BMS Chapter 518, Pharmacy Services.

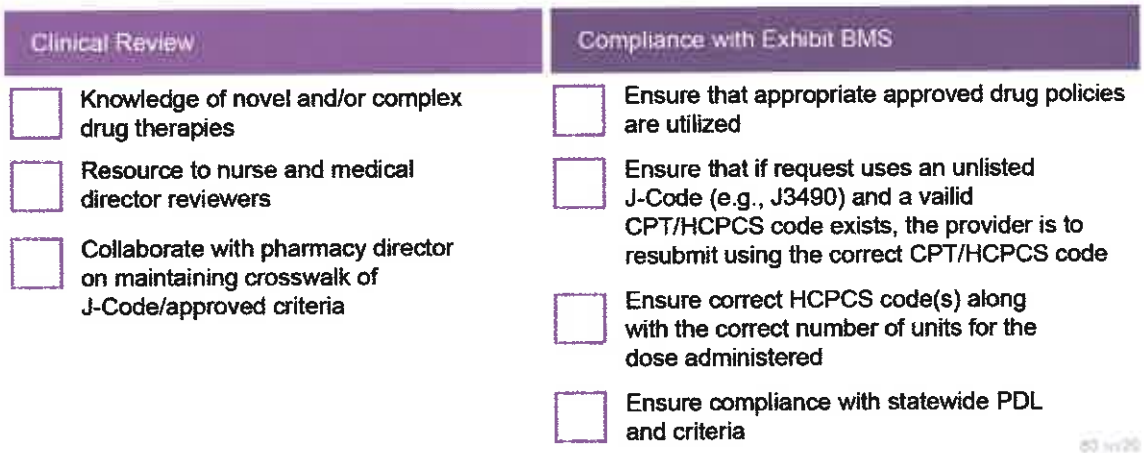

Figure 6.2.1-2: Pharmacist Review of Medical Drug Program Clinical Review and Compliance

Clinical pharmacist review of compliance with BMS requirements for outpatient medical drugs.

Since the PRMD program's inception in 2017 for one of Aetna's largest Medicaid plans, we have found that the clinical pharmacist's extensive knowledge of novel medications and injectable drug therapies assists our medical director and nurse reviewers. In the first half of 2019, PRMD clinical pharmacists reviewed 1,782 outpatient medical drug requests, approving 64 percent of cases based on medical necessity criteria and providing the nurse and Claims team with appropriate Healthcare Common Procedure Coding System (HCPCS) dosing for the authorizations. They consulted with the medical directors on the remaining cases recommending denial due to request not meeting medical necessity (17.1 percent) or needing additional clinical information (18.9 percent).

Access to Care

BA020	The Vendor should describe its process for authorizing out-of-network access including, but not limited to, the following:
BA021	Emergency Services, including transportation
BA022	Medically Necessary Travel, for the West Virginia Children's Health Insurance Program (WVCHIP)
BA023	Medical Necessity
BA024	Out-of-State Providers (for example, members who are students, live in proximity to State borders, etc.)
BA025	The Vendor should describe its process for circumstances under which a member might be granted a standing referral to a specialist provider
BA026	The Vendor should describe the extent to which a specialist provider may refer services
BA027	The Vendor should describe its process for out-of-network referrals, including, but not limited to:
BA028	Members and/or providers requesting out-of-network referrals
BA029	Processes in which a member may continue an existing relationship with an out-of-network providers, or a provider that leaves the Vendor's network, if considered to be in the best medical interest of the member
BA030	Durations permitted for members to see out-of-network providers that refuse to contract with the Vendor for ongoing courses of treatment past the first 90 days of enrollment

BA031	The Vendor should describe its procedures for ensuring that member information from non-network providers is shared with the member's Primary Care Provider (PCP).
BA032	The Vendor should describe its process to assist in enrolling and pairing the member with an appropriate in-network provider within 90 days of enrollment.
BA033	The Vendor should describe its process for transferring necessary clinical information to a member's new provider.

Currently, Aetna has contracts with approximately 11,000 providers, including primary care providers (PCPs), medical specialists, BH specialists, and all federally qualified health centers (FQHCs) and rural health clinics across West Virginia. In cases where a member's current provider is not contracted or when a provider type does not exist in the area, we will authorize services to provide continuity of care for our members. Aetna is already contracted with the majority of WVCHIP providers and is performing outreach to contract with others.

To ensure continuity and coordination of care, especially during times of transition, Aetna will work with providers and members to provide access to out-of-network providers and services and transition members to in-network providers when appropriate, in compliance with all relevant requirements presented in the Model Purchase of Service Provider Agreement for Fiscal Year 2020, Section 5.2, Out-of-Network Services. Within our role as a managed care organization, Aetna's provider contract language covers the appropriate and confidential exchange of information among providers and requires that all providers request information from other treating providers as necessary to provide care. When a member chooses a new provider within Aetna's network, we assist them with requesting the transfer of their records to the new provider.

[BA020] Authorizing Out-of-Network Access to Providers and Services

When necessary to meet a member's unique, whole-person needs, Aetna allows out-of-network services for both non-emergency and emergency situations. Prior authorization is never

required for in- or out-of-network emergency services. Out-of-network providers are invited to join the network, and single-case agreements are initiated when necessary.

We will follow WVCHIP referral and PA regulations and policies for our WVCHIP members, recognizing those guidelines and benefits differ from Medicaid. We will modify our tracking systems to accommodate these differences to ensure our WVCHIP members do not experience gaps in continuity of care.

[BA021] Emergency Services

Aetna permits the delivery of medical and BH services for the treatment of emergency conditions in-network or out-of-network without PA in the following situations:

- To screen and stabilize the member when a medical practitioner deems emergency services are required
- When an attending physician determines the member's life will be endangered or other serious injury could occur if the member is discharged and/or treatment is delayed
- When a delay or lack of treatment would subject the member to severe pain that cannot be adequately managed without the health care service or treatment being requested
- For service or treatment of an SUD or co-occurring mental health disorder within a partial hospitalization program or crisis stabilization unit needed to keep a member from requiring inpatient services

If a member requires medically necessary acute care after an out-of-network emergency room visit, Aetna covers the out-of-network hospital fees until care can be transferred to a network hospital or through discharge. **Aetna informs our members that emergency care is available 24/7/365, at the nearest facility available, regardless of the emergency room's provider participation status**. Aetna covers services for emergency transportation by ambulance for emergency medical conditions.

[BA022] Medically Necessary Travel for WVCHIP Enrollees

Aetna will adhere to WVCHIP benefits for emergency ground or air ambulance transport to the nearest facility able to provide needed treatment when medically necessary. Hospital-to-hospital

and all air ambulances, except emergencies (which are subject to retroactive review), require prior authorization. WVCHIP members participating in the hemophilia program will be reimbursed for travel and lodging expenses in accordance with program guidelines: lodging expenses for a child and one or two adults/guardians incurred to enable the member to receive services; and travel expenses incurred between the member's home and the medical facility to receive services in connection with program, including gas reimbursement for one vehicle and meal expenses up to $30 per day per person.

Members in the organ transplant program will be eligible for travel allowance up to $5,000 per transplant. Because transplant facilities may be located some distance from the member's home, benefits include up to $5,000 per transplant for member travel, lodging, and meals related to visits to the transplant facility or physician. A portion of this benefit is available to cover the travel, lodging, and meals for a family member or a friend providing support. Receipts are required for payment of this benefit. No alcoholic beverages will be reimbursed. Mileage will be reimbursed at the federal mileage rate for medical expenses. The travel allowance benefit applies only to services pertaining to the transplant.

[BA023] Medical Necessity for Out-of-Network Access

In non-emergency situations, PA for out-of-network providers is a two-part process: 1) review of medical necessity for the requested service, and 2) verification the services cannot be performed by in-network providers. In our review, consideration is made to assure our member's smooth transition of care. The initial step in reviewing a service request is the same for both in-network and out-of-network providers. When a request is received, the clinician applies medical necessity criteria per the clinical guideline hierarchy. If the service is determined to not meet

medical necessity criteria, the request goes to a medical director for further review. The UM clinician reviews network adequacy to provide the requested service to determine whether it can be provided in-network. The clinician may approve the request when medical necessity and network deficiency are determined. The request is forwarded to the medical director for a determination when the clinician cannot determine medical necessity or network deficiency, since only physicians can authorize denials. If there is an adverse determination based on network adequacy for a service that is considered medically necessary after review by the medical director, our CM staff works with the provider and member to access an in-network provider for delivery of care.

[BA024] Out-of-State Providers

Prior authorization processes for out-of-state providers are the same as for out-of-network providers, excluding for those out-of-state providers who are in our network. Except for emergency and family planning services, PA is required for all out-of-state, out-of-network providers to service our membership. To serve our members who live near state borders or who are attending school in other states, we have approximately 4,000 out-of-state in-network providers, many of whom are located in communities near state boundaries.

[BA027] Out-of-Network Referrals

Aetna covers out-of-network services for emergency services, family planning services, and those services we have prior authorized. If Aetna is unable to provide necessary medical services covered under the contract within our network of contracted providers, we will coordinate these services adequately and in a timely manner with out-of-network providers, for as long as we are unable to provide the services in-network. All out-of-network services are

covered as adequately and timely as in-network services, and member costs for covered benefits are the same whether the provider is in-network or out-of-network.

Aetna works with out-of-network providers to bring them into the network when possible and uses single-case agreements requiring the provider to treat our members with the same degree of care and skill they provide to patients who are not Medicaid members. If the provider declines to contract with Aetna, the Provider Relations team will identify opportunities to fill the possible service gap via recruitment, telemedicine options, or identifying a vendor. Aetna assists members with accessing State-funded transportation and room and board for out-of-network services that are out-of-state or that a member cannot access without additional support.

For medically necessary admissions resulting from out-of-network emergency services, Aetna covers a member's out-of-network hospital fees until the member's records, clinical information, and care can be transferred to a network hospital, no longer meets medical necessity for continued hospitalization, or until such time as the member is discharged, whichever is shorter.

Aetna's written policies, procedures, and workflows outline the criteria and methods we use to review and process medical referrals. The average duration of medical referrals varies, based on the type of service requested and our UM guidelines. For example, the average referral for home health is approved within five to seven days, while the average referral for therapeutic services (e.g., physical therapy) is approved within two weeks.

Aetna follows National Committee for Quality Assurance or West Virginia-required timelines (based on which is most stringent) for our decision and notification processes. Our written UM policies and procedures are in accordance with 42 CFR § 438 Subpart F, 1915(c) Waivers or

State policy. Aetna consistently exceeds the required decision and notification timeframes outlined in **Table 6.2.1-4**.

Table 6.2.1-4: Authorization Request Types and Decision/Notification Timeframes

Request Type	Decision/Notification Timeframe	Timeframe Met (2019)
Drugs/medications urgent concurrent request	24 hours from receipt of request	98.44%
Urgent pre-service request (including drugs/medications)	2 calendar days from the receipt of the request	97.39%
Non-urgent pre-service request (including drugs/medications)	7 calendar days from the receipt of the request	99.71%
Post-service request	30 calendar days from the receipt of request	99.97%

[BA028] Members and Providers Requesting Referrals

We educate members to contact Aetna's Member Services or their PCP to discuss referrals to out-of-network providers. The ordering provider must submit a service authorization request to Aetna for approval of out-of-network services. We inform members and providers they can appeal if we do not approve a service authorization request, and we describe the process to request out-of-network services in our provider manual and member handbook.

If Aetna is unable to provide necessary medical services covered under the contract within our network of contracted practitioners and providers, we will coordinate these services adequately and in a timely manner with out-of-network providers, for as long as we are unable to provide the services in-network. We will provide information for the member to arrange the service. The member does not incur additional cost for seeking these services out of network.

[BA029] Continuing Existing Relationships with Out-of-Network Providers

Although PA is required for out-of-network providers, we grant accommodations during transitions of care to allow new members to maintain established relationships with out-of-network providers for 90 days, or longer in special circumstances, as we work to establish in-network options to meet the member's ongoing needs. For example, if a member is in the course of cancer treatment or has an established relationship with an important provider, when requested by a member or provider, Aetna may grant an extension to complete the course of therapy to avoid a disruption in care, depending on the type of service and the member's place in the timeline of treatments. Concurrently, we work with members and providers to find providers within our network to provide the service, facilitating a smooth transition of care for our members if we are unable to contract with the provider to join our network. Aetna establishes single-case agreements with out-of-network specialists in West Virginia or outside the state when medically necessary and the specialty care is not available within our network.

[BA030] Durations Beyond the First 90 Days of Enrollment

Requests for continuation of out-of-network services beyond the first 90 days of enrollment are reviewed individually. Approval or denial of these requests are dependent on the availability of services in-network, within reasonable travel distances, and the condition that resulted in the request. As outlined above, Aetna may extend extensions in special circumstances.

[BA031] Sharing Information from Out-of-Network Providers with PCPs

Sharing information across multiple in-network and out-of-network providers is of prime importance to ensure the highest quality of care for our members. Aetna requires out-of-network providers to share information with other providers as appropriate contractually through single-case agreements. Aetna actively reviews claims data to identify when members see out-of-

network providers, and we send letters to our PCPs notifying them and reminding them of their contractual obligation to request the member's records from the out-of-network provider. Our staff follow up with PCPs to ensure they request member records when needed.

As an enhancement to our current processes, we encourage all providers, in-network and out-of-network, to use the West Virginia Health Information Network (WVHIN) to access and share information using continuity of care documents, as well as admission, discharge, and transfer (ADT) information, which contains the minimum necessary information to coordinate care. Leveraging technology developed for the recently awarded Mountain Health Promise contract, **Aetna is building an integrated care platform using WVHIN and continuity of care information.** The system will significantly enhance information-sharing capabilities and options between the health plan and out-of-network providers and PCPs.

For our members who are enrolled in care management, Aetna's regionalized local Care Connection teams foster information sharing through the strong relationships they have developed with providers of all types across West Virginia. We assist our members in requesting and acquiring their service authorizations, care plans, and claims history through Aetna's member portal, which they can share with their new provider. Care coordinators share information regarding non-network provider claims and services with the member's PCP. Aetna network PCPs are also invited to use our electronic population health management platform, which collects and displays data on their utilization, including non-network providers. Our new enhanced care planning processes feature a single document, the **enhanced care plan output letter**, containing easy-to-read information from the member's care plan, including diagnoses,

treatment, medications, and other community-based services, that is shared with the member's PCP. Behavioral health information is shared with appropriate member consent.

Aetna's single-case agreements require the provider to cooperate promptly with requests for information and records necessary for Aetna to properly administer claims, resolve member grievances, comply with reporting requirements related to the Affordable Care Act, perform quality management activities, and fulfill data collection and reporting requirements (e.g., HEDIS). When requested, medical records must be provided within 14 days.

[BA032] Pairing Members with In-Network Providers

Aetna works with members to ensure their transition to a provider within our network is as seamless as possible. In line with our member-centric focus, Aetna's methodology for connecting members to an in-network provider within 10 days of enrollment takes into consideration member preference, claims history, proximity, and existing relationships with PCPs or specialists. In cases where the assignment is to a PCP, we inform members that they have the right to select their PCP at any time by calling Member Services. We are continuously building our network, and if a member requests a PCP who is not currently a participating provider, we will contact the provider to discuss the provider's interesting in becoming a par provider within the Aetna network. If a new member does not select a PCP with the Department during initial enrollment, Aetna assigns a PCP. If a member was previously enrolled with Aetna, we auto-assign them to their previous PCP.

All WVCHIP members will be assigned to a PCP or medical home. If they do not have a medical home, or if their current PCP is not in our network, Aetna's Member Services staff will assist WVCHIP members in finding an in-network medical home PCP. We understand WVCHIP

members have been encouraged to participate in medical homes and certain co-pays are waived for office visits to their medical home provider. We will work to credential all enrolled PCP medical homes to add them to our network and will assign WVCHIP members with these providers when possible.

[BA033] Transferring Clinical Information to Member's New Provider

Aetna facilitates the transfer of pertinent medical records, recognizing that providers are responsible for making member records available to health plans to which members are transferring and/or to other providers upon request, in compliance with confidentiality requirements of Health Insurance Portability and Accountability Act of 1996, CFR42, part 2, and all state and federal regulations. Our network provider contracts require providers to obtain consents or authorizations to release information and records from the members they serve. All in-network provider contracts and single-case agreements with out-of-network providers require providers to share medical records with other providers. At a minimum, providers should transmit medical records related to diagnostic tests and determinations in the past 60 days, current treatment services, all immunization and EPSDT records, hospital discharge summaries within the past year, current medications, specialist referrals within the past 60 days, BH quarterly summaries, and emergency care summaries.

For over 23 years, Aetna has successfully integrated care for new West Virginia populations and services. For example, in July 2019 we successfully transitioned over 20,000 new members in West Virginia. We understand the challenges related to accessing comprehensive and historical data for some new Medicaid and WVCHIP members may require us to seek information from multiple sources, such as claims data from the State and health risk questionnaires.

We assist our members in requesting and acquiring their service authorizations, care plans, and claims history through Aetna's member portal, which they can then share with their new providers. For our most vulnerable members, those receiving intensive or supportive care management, care coordinators share information regarding provider claims and services with the member's PCP. Our new enhanced care plan output letter contains easy-to-read information from the member's care plan, including diagnoses, treatment, medications, and other community-based services. The enhanced care plan output letter is shared through Aetna's provider portal. BH information is shared with appropriate member consent.

We notify providers when their patients see other providers and remind them of their responsibility in requesting member records from these providers. Our electronic population health management platform houses ADT data from WVHIN and other health information exchanges and Aetna member gaps in care data. In addition, we encourage all providers, in- and out-of-network, to use the WVHIN to access and share information using the available data and continuity of care documents, which contain information necessary to coordinate care in near real-time. Aetna is actively collaborating with WVHIN to increase the amount of data available by increasing provider participation throughout the State.

Accessing Specialty Care

Aetna has an open-access network where members may self-refer or directly access in-network specialty providers without notice from their PCP or prior authorization. This means all Aetna members have access to any in-network specialist, regardless of specialty or subspecialty, without service limits to the duration or number of visits. We encourage all members to discuss specialty care with their PCPs, who can coordinate specialty services, which must be obtained

from an in-network Aetna practitioner or provider (when available). Emergency, family planning, FQHC, and rural health center services do not require PA for in- or out-of-network practitioners or providers. Members may access these services from any qualified practitioner or provider enrolled with the State of West Virginia Medicaid program.

Aetna will adapt our current PA processes, if necessary, to accommodate WVCHIP-specific benefit requirements and service limits, such as requiring PA after 26 specialty visits, 26 primary care visits, or 26 behavioral health visits.

[BA025] Granting Standing Referrals to Specialist Providers

If the specialist is in-network, no PAs or referrals are required. Aetna members who require specialized care over a prolonged period for a life-threatening, degenerative, or disabling conditions may be allowed standing referrals to out-of-network specialists or specialty care treatment centers. Determinations and notifications are made within the timeframes appropriate to the condition of the member (e.g., urgent, non-urgent, concurrent), not to exceed seven calendar days from the receipt of the request. If clinical information is not sufficient to determine medical necessity, UM staff will make multiple attempts to obtain the needed information to ensure the appropriate decision is made as to not delay care. The process includes authorizing requests for standing referrals for members requiring more than one visit to a specialist or specialty care center for treatment of a condition.

[BA026] Allowing Specialists to Refer Members to Other Providers

When members have health conditions and needs that cannot be managed adequately by the specialist, Aetna allows direct referrals to other providers by the member's specialist or PCP. If the other provider is in-network, no PA is required, and our network providers are listed in the provider directory and via a searchable link on the Aetna website to facilitate these referrals. When access to

other providers is limited due to geographical and demographic barriers, Aetna's Care Management team facilitates identification of an out-of-network provider who can meet the member's needs. If the other provider is not in our network, PA is required for the service. We make every effort to bring these providers into our network to build capacity and enhance our ability to provide high-quality, accessible care for members.

Coordination of Care

BA040	The Vendor should describe its process for informing Primary Care Providers (PCPs) regarding changes in a member's behavioral health status including, but not limited, to:
BA041	What constitutes a change in behavioral health status
BA042	How the member will be assisted to access additional services as a result of a change in behavioral health status
BA043	The Vendor should describe its coordination of care activities between Primary Care Providers (PCPs) and children's dental providers, especially for children with special health care needs
BA044	The Vendor should describe its mechanisms to remind members of upcoming appointments, including, but not limited, to:
BA045	Medical Appointments and Screenings
BA046	Dental Appointments, and Screenings, including monitoring utilization and interventions if a member has not had a screening in over one year
BA047	Adherence to the periodicity schedule as dictated by the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program, as indicated by the Centers for Medicare & Medicaid Services (CMS) at https://www.medicaid.gov/medicaid/benefits/epsdt/index.html

Aetna's Care Connection Team and System of Care models support and complement each other to provide a comprehensive approach to achieve optimal health outcomes and reduce costs and barriers to accessing care. While Aetna's regionalized Care Connection teams focus on the direct needs of our West Virginia members, our System of Care (SOC) model provides an overarching philosophy of care coordination based on addressing external factors that negatively impact health at the population level. For example, if the root

cause to a barrier to access for dental care is provider availability, our SOC would address the provider gap. If the barrier is transportation, our Care Connection team would assist the member in meeting that need. Our Care Connection teams are local regional teams that are from the communities in which they work and understand local concerns and complexities.

> *"Aetna currently collaborates with us to establish a payment model that support innovative programs in which community health workers become a recognized member of the health care workforce. I stress the word 'innovative,' because their leadership has always responded with an open mind whenever we present a new idea. Their attitude has always been to figure out how to make new ideas work, rather than to present obstacles. They do not stand on the sidelines; they truly are partners, in that they roll up their sleeves and participate in planning and problem-solving. Their work with us on the community health worker projects is a model that is transforming health care for high-risk populations. It is refreshing to work with people who genuinely care about the well-being of people in need."*
>
> **— Richard Crespo, PhD**
> **Professor, Department of Family and Community Health**
> **Joan C. Edwards School of Medicine at Marshall University**

Aetna has embedded UM and CM staff with providers to ensure direct, face-to-face interactions with our members and foster seamless access to services. **Our staff are co-located in more than 20 physical and behavioral health provider locations throughout West Virginia,** working with providers in real-time to ensure our members are receiving the highest quality of care. In recognition of the importance of additional support for our members with BH needs, Aetna employs a statewide peer support specialist and a recovery and resilience administrator.

Our goal is to expand our members' care team and integrate Aetna teams with local providers and resources. Aetna collaborates with community programs to provide community health worker (CHW) resources to the Care Connection teams. CHWs meet with Aetna's onsite care management staff weekly to discuss member care plans, gaps in care, social needs, and care coordination. Recognizing the importance and value of the vital services CHWs provide in care

coordination, Aetna has led efforts to support CHWs in FQHCs by paying for CHW services and integrating these services into our member's care teams.

[BA044] Reminding Members of Appointments and Screenings

Aetna reminds and encourages our members to use benefits to prevent illness in compliance with requirements set forth in the Model Purchase of Services Agreement for Fiscal Year 2020, Section 3.5.2, Health Education and Preventive Care. Aetna has well-developed mechanisms to remind members who are enrolled in care management of medical, dental, and EPSDT appointments and screenings. Recognizing many new Medicaid and WVCHIP members will not require care management services, we will hire two additional care management associates who will be dedicated to providing reminders to members not enrolled in care management to provide follow ups and outreach to all EPSDT service members, in compliance with requirements outlined in Model Purchase of Services Agreement for Fiscal Year 2020, Section 1.2.1.1, Provide Information on EPSDT and Notification of Screening Due Dates.

In collaboration with our CVS retail pharmacies, Aetna can add member messages on prescription bags, called HealthTag™, reminding members identified as not having completed routine screenings to schedule an appointment to get the screen. Examples include reminding members with diabetes to get their A1c screening or for adolescents to schedule well-child appointments.

[BA045] Reminding Members of Medical Appointments and Screenings

Aetna reminds our members of screenings annually through multiple modes of communication, including the following:

- Mailings
- Text campaigns
- Live telephone calls
- Aetna staff embedded at provider offices and hospitals
- Care management staff (if applicable)

For Aetna members enrolled in intensive or supportive care management (adults and children), each member's primary care coordinator reminds members, parents, or guardians of appointments and assists with scheduling and rescheduling appointments with support from the local Care Connection team. Aetna care managers encourage members to keep scheduled appointments by sending an email or text message prior to scheduled appointments, which includes the date and time of the appointment and the phone number to notify when the member may arrive late or miss the appointment. Aetna care managers embedded in provider locations provide reminders related to follow-up appointments for members. The care coordinator reminds members of needed medical appointments and screenings.

Aetna Member Services representatives have access to gaps in care information in the electronic care management system and provide reminders to members and their families to schedule needed appointments when a gap in care is identified in their record. Care coordinators make calls to members to improve attendance at scheduled appointments and reduce missed appointments. The care coordinator also works with the member's providers to identify immediate gaps in care and unaddressed needs. If the member cannot continue with an established care provider, the care coordinator will assist the member in requesting the transfer of records and make sure the new provider addresses member needs.

Aetna's **texting campaigns** provide all members who accept the option to receive texts with notifications for physical, dental, and routine screenings (including family planning) based on member age, gender, and eligibility. We send these messages to members or their parents for whom the date of their last physical examination has either not been received or is more than

one year in the past. Aetna uses text messaging to provide periodic reminders to encourage members and their families to attend preventive care appointments. We assist members in acquiring Lifeline mobile phones if they do not have a phone to receive texts. Messages are delivered in either English or Spanish, depending on member preference, and members can choose not to receive text messages at any time.

Aetna uses text messaging, which we will extend to WVCHIP members who accept the option of receiving texts, to encourage families of children receiving EPSDT services to access dental care, well-child visits, and to complete lead screenings. Our educational text messaging program provides the Lifeline smartphone and sends targeted messages to remind income-level qualified members to get tests and screenings. Campaigns send routine reminders to support health goals related to weight management, diabetes, substance use, prenatal and postpartum care, well-child visits, and flu shots. Many campaigns function as virtual health coaches allowing members to interact and learn more about their specific conditions. Some of the unique monthly broadcast messages include reminders on keeping contact information current with the local Bureau for Children and Families office, emergency room diversion, and the importance of seeing their PCP first.

[BA046] Reminding Members of Dental Appointments and Screenings

Aetna reminds pregnant members to get bi-annual dental cleanings covered by Aetna during pregnancy. We send mailings to our qualifying diabetic members letting them know Aetna will cover quarterly periodontal scaling and root planing as a value-added service. Aetna's HEDIS outreach coordinators and/or prevention and wellness coordinators call all members to advise of care gaps and provide education regarding the importance of dental care for

children beginning at an early age. We help members find a dental providers and invite members to dental wellness events typically held in targeted regions or offices with below average HEDIS dental rates in collaboration with PCPs.

Aetna and SKYGEN USA, our dental benefits administration subcontractor, and our Care Connection teams use written and verbal methods to inform members about upcoming initial and periodic dental screenings. Aetna's approach covers both medical and dental outreach services. SKYGEN USA has 25 years of experience working with Medicaid and CHIP populations and leverages multimodal communications strategies to notify members of upcoming and periodic dental screenings for applicable populations, including interactive voice response (IVR) outreach campaigns and education materials for members.

SKYGEN USA provides a call center to educate members and assist with making appointments. When members reach out to the call center, they are educated about the importance of keeping appointments and their responsibility for calling the dental provider to reschedule if they cannot keep an appointment. This messaging is also included in our member handbook, member portal, and member outreach materials. Aetna supports member needs for regular dental care and maintenance and helps providers understand the importance of oral health in every primary wellness examination and transition.

Dental services for members with special needs: When communicating with and making arrangements for members with special health care needs, Aetna's care coordinators encourage the identification and consideration of past trauma (including dental trauma), the member's cultural beliefs, and provider office environment. We emphasize the importance of choosing a dentist experienced in meeting the member's needs and an office that includes the

environmental setting most appropriate to meet the individual's specific needs. When appropriate, our care coordinators conduct warm handoffs to SKYGEN USA to obtain further support. These coordination efforts are vital to ensuring the member receives all necessary dental services and all services are provided in a trauma-informed and trauma-sensitive manner. With support from Aetna staff when necessary, SKYGEN USA's local provider representatives provide trauma-informed care training for participating dentists.

If the SKYGEN USA call center is contacted to arrange for the provision of dental services for a member with special needs at an inpatient or outpatient facility, the customer service representative can call the provider's office on behalf of the member to confirm the provider serves individuals with special needs and treats the member's specific needs. Additionally, the call center will confirm that the provider sees members in the appropriate inpatient or outpatient facility and that the facility can provide dental services under anesthesia or sedation for children who are unable to be served in a general dental office.

Monitoring dental screening utilization: Dental gaps in care are monitored on an ongoing basis by Aetna's QM Outreach team through our electronic care management system. Members enrolled in care management are monitored for gaps in care, including the need for dental examinations. When we identify individuals who need dental examinations, a QM outreach coordinator reaches out to provide education and assist in scheduling appointments. For members who are not in care management, designated care management associates will monitor and screen for EPSDT standards of dental services, then provide outreach to members as appropriate to ensure compliance.

SKYGEN USA develops specific reports to monitor and analyze dental screening utilization and periodic (monthly/quarterly/annual) analysis of demographics, claims, and encounter data to identify high-risk populations within the membership. Aetna will work closely with SKYGEN USA to define the required data and data integration strategies needed to appropriately monitor dental screening utilization on an ongoing basis.

Intervening with members not having annual dental screenings: Aetna collects information about members' dental screenings and access to dental care during the initial health risk questionnaire as well as EPSDT screenings and during member transitions of care. Aetna's local Care Connection team identifies dental gaps in care and collaborates with the ICT to address them as part of the care planning process, particularly for new members. We regularly evaluate access data, emergency room data, and claims to better understand the gaps in some of our most remote areas. Our QM Outreach team conducts data analysis on claims and encounters to determine service areas with the highest volume of care gaps. The QM Outreach team collaborates with dental wellness providers in these geographic areas to increase access and health literacy for members needing services. Aetna quality management outreach coordinators conduct outreach to members and their families with gaps in care residing in these areas to provide education on the need of dental exams.

To incentivize dental care, we currently offer a $25 Walmart gift card to the parents of two- to three-year-old members who complete an annual dental visit and to members 0 to 20 years old who attend one of our dental wellness events by invitation. In 2019, Aetna members earned 349 gift cards by participating in these programs. Aetna's evidence-based **Diabetes Oral Health program** for adult members with diabetes increases member engagement with PCPs and

dental providers to improve HbA1c levels and medication adherence and reduce emergency room visits and hospital admissions.

[BA047] Reminding Members about Early and Periodic Screening, Diagnosis, and Treatment Services Guidelines

Aetna maximizes the opportunity to enhance member and parent education about the HealthCheck program and EPSDT services and requirements with every interaction. Aetna's National Quality Team sends telephonic reminders and periodic EPSDT mailings to all age-appropriate members based on age and the periodicity schedule. We routinely work with our members and parents to arrange for an EPSDT screening within 30 days of enrollment. Care coordinators also educate members on the periodicity schedule. We explain the EPSDT guidelines to parents and caregivers in plain language, paying particular attention to the guidelines immediately applicable to their children, with actionable next steps. Aetna care coordinators are experts in EPSDT guidelines and closing gaps in care and are well-versed in the scope of services, products, and treatments available under the HealthCheck program. Aetna identifies gaps in care, missed appointments, and immunizations through our electronic care management system and assigns staff to monitor EPSDT compliance. **Aetna will hire two additional care management associates to ensure all eligible members receive reminders, follow ups, and outreach for EPSDT services.**

We promotes comprehensive awareness and education for parents and caregivers of children and youth. We provide all new members and families with welcome contacts, information on medical homes, and resources (e.g., Medicaid dental list, vision care provider list, and transportation assistance). Aetna will augment prevention efforts through preventive screening reminders and additional education and training throughout the year to help members, parents,

and caregivers understand the importance and potential health impacts of timely and complete screenings. These efforts include IVR (interactive voice response) calls, mailings, text messaging, member services, website information, and live events:

- **Print media and mailings:** All our print media is carefully created to be concise and easily understood. We mail postcard reminders and newsletters with age-appropriate recommendations as well as growth charts printed with the well-child visit schedule.
- **Electronic text reminders:** We use text messaging to remind parents, caregivers, and members with phones that support text messaging about the importance of well visits, and send reminders about upcoming appointments, lead screening, and more.

SKYGEN USA supports increased utilization of EPSDT screening services and necessary diagnostic and treatment services for members under the age of 21 through the following:

- Assisting members with finding appropriate in-network dental providers and scheduling appointments
- Assisting members with arranging or scheduling transportation to appointments
- Arranging interpreter services for members with limited English proficiency or members who are hearing impaired, deaf, and/or blind
- Sending out communications to heads of households and PCPs for members who are due or overdue for their EPSDT appointments based upon their birthdates and utilization data
- Collaborating with the dental director and the local Care Connection team if any medical or other complex needs are identified for our members
- Provide data to enhance our informatics system platform for a single care plan for our members

[BA040] Communicating Changes in Behavioral Health Status

As a National Committee for Quality Assurance-accredited managed care organization, Aetna analyzes collaboration between our PCPs and BH providers annually. When we have the required consent of members, strong communication links between PCPs and BH providers facilitate two-way exchange of relevant information, such as medical history, current medications, diagnosis, treatment, and changes in BH status. Our Provider Services team provides education about the importance of coordination of care and encourages sharing of information across the plan to improve care for our members. Medicaid and WVCHIP members

can give permission to their BH providers to communicate with their PCP, including treatment and changes in their BH status. Information is only shared with the consent of the member or their parent or guardian.

Aetna annually assesses all members for new PH and BH needs and conducts reassessment more often as indicated by a change in condition. We review the member's care plan and develop a specific follow up schedule based on risk level. All initial and subsequent care planning activities are tracked in the written care plan and in Aetna's care management business application system. Aetna has designed an information management system for the purpose of integrating all components of the delivery of care to our members. The system has the capability to securely store and transmit information and interfaces with subcontractors and other relevant systems, including the West Virginia Health Information Network, the Department's Medicaid Management Information System, and report data in a format specified by the Department. The Aetna Medicaid organization has years of experience with HL7 transaction format and will be Fast Healthcare Interoperability Resources-compliant as directed by the Centers for Medicare & Medicaid Services. The data systems are integrated so that the member's data can be compiled in one central source. The information is housed within our integrated informatics system.

[BA041] Defining a Change in Behavioral Health Status

Aetna understands challenges West Virginians face with mental health issues, addiction, and trauma, and we are committed to helping our members access the care they need in the least restrictive treatment setting possible to maintain safety and facilitate recovery. A change in BH status is identified when a member's BH needs can no longer be safely met in an outpatient setting and a higher level of care is indicated. This includes admissions to inpatient BH, crisis

stabilization units, psychiatric residential treatment facilities, and any of the ASAM residential levels of care. A change in BH status would also include subsequent discharge back to outpatient services.

[BA042] Assisting Members in Accessing Additional Services

Following notification of admission, our UM staff refer members for CM services if the member is not already assigned. In multiple settings, our onsite CM staff meet with members during their stays to begin planning post-discharge services, or CM staff reach out to members following discharge for assessment and continued coordination of care. In instances where we are given consent by the member, we can reach out to the member's PCP and other providers for further coordination of care.

To serve our members who qualify for our CM program as a result of their BH needs best, we conduct initial and annual comprehensive assessments to identify new or emerging needs. On an individualized basis, Aetna or the member's provider may determine the need for additional services, and we assist the member in accessing these services. For example, a member being discharged from an inpatient setting for substance use disorder may benefit from participation in an intensive outpatient program, or a young person being discharged from a psychiatric residential facility may require intensive services within their home or therapy services while attending school.

Regularly scheduled contact and use of assessments following events which may have altered a member's health status provides valuable feedback to evaluate a member's progress toward their person-centered goals and to determine if the current care plan is meeting the member's current needs. Working closely with the member, we identify providers for services identified in

the care plan, and the member selects a provider based on their preferences and cultural considerations. We assist with scheduling appointments and addressing any barriers to accessing services as needed.

[BA043] Coordinating Care between Dentists and Primary Care Providers Especially for Children with Special Health Care Needs

Aetna care coordinators facilitate coordination of care between dental providers and PCPs, especially for children with special health care needs. These efforts are vital to ensuring the member receives all necessary dental services and that all services are provided in a trauma-informed and trauma-sensitive manner. Our model of care coordination provides a seamless, cohesive experience for members and their parents or guardians. We review gaps in care for all members in CM, and we help find dental providers and schedule appointments, documenting all activity in the member's enhanced care plan. The enhanced care plan output letter (a summary of the member's care plan) is sent to the member's PCP when formulated upon enrollment and with updates as the member's condition or situation changes. The care plan is shared with specialty providers, including dentists, upon request with the appropriate signed release of information. Our Care Connection teams and SKYGEN work with members and their families to ensure care is coordinated between dentists and PCPs and assist members with any issues they may experience in accessing dental care.

Family Planning

BA034	The Vendor should describe its process for member access and coverage of Family Planning

Aetna provides access to and coverage of family planning services for our Medicaid and WVCHIP members of childbearing age in compliance with the Model Purchase of Service

Provider Agreement for Fiscal Year 2020, Section 1.2.4, Family Planning and Section 5.3.3.1, Family Planning.

Ensuring Access to and Coverage of Family Planning Services

We provide members with direct access to women's health/family planning specialists and PCPs for routine and preventive health care services within our network. Our members also have the opportunity to choose qualified family planning providers outside our expansive network of providers if desired. We make every reasonable effort to contract with all local family planning clinics and providers throughout the state, such as local health departments, health system-affiliated family planning clinics, and FQHCs. We are currently contracted with 45 of the 49 West Virginia public health departments to ensure our members have access to family planning services statewide. Of those public health departments not contracted with Aetna, one has decided to not contract with plans, and the remaining three are in the process of becoming Aetna network providers.

Perinatal Partnership

Aetna's senior director of medical management and our obstetrics/gynecology (OB/GYN) medical director are working with the Perinatal Partnership in quarterly meetings to provide education to providers on LARCs and other family planning options.

We work to assure timely payment for family planning services, and our claims system processes family planning-related services with limited edits. In accordance with OBRA 1987 Section 4113(c)(1)(B), Aetna does not require co-pays, PA, or referrals for family planning services accessed through any in- or out-of-network Medicaid provider. Aetna tracks and monitors family planning services utilized by our members to identify gaps in services and to improve our education efforts. Family planning services are included in encounter data reported to the Department.

Our System of Care team also tracks the data reported and identifies opportunities to improve access to services for our members and reduce administrative burden for our providers. When the CM team identified an issue with providers not routinely providing long-acting reversible contraception (LARC) because reimbursement of the medication was bundled into delivery, Aetna unbundled the LARC payment from the delivery payment.

Informing Members about Family Planning Services

Aetna provides members with information about the types of family planning services available, their right to access these services in a timely and confidential manner, and their freedom to select their provider of choice. We are committed to providing health education and counseling services to our members so they can make informed choices concerning contraceptive methods and are knowledgeable about the diagnosis and treatment of sexually transmitted diseases. Our care coordinators provide education in a culturally sensitive manner, including information on the LARC program and other forms of birth control. Our Care Connection teams provide local resources for our providers and members. Each of our regional Care Connection teams has a specialized OB care manager to assist our high-risk members with access, care coordination, family planning education, and resources on all benefits, including LARC.

In 2019 we expanded our local resources and now co-locate care management staff at high-risk OB/GYN offices and tertiary care facilities, including the Charleston Area Medical Center Women and Children's Clinic and Marshall high risk OB/GYN clinic, to provide education on LARCs and other forms of birth control face-to-face. Additionally, CM staff reach out to all our new mothers to encourage them to discuss family planning and birth control options with their providers during postpartum appointments. Our care managers

complete a postpartum assessment in our electronic care management system that reviews family planning and reach out to members with any gaps in care.

The Aetna website contains a women's health section describing well-woman checkups, as well as pregnancy and family planning information. All information related to members' access to family planning services is available in the member handbook. Every pregnant member receives *Aetna's Baby Book*, which focuses on the importance of postpartum care, and these members can access educational materials on a variety of family planning topics available in electronic and print formats, including the following:

- Birth control choices and types
- Understanding conception
- Tubal sterilization surgery
- Using a condom (for teens and adults)
- How birth control works
- Understanding vasectomy

Crisis Stabilization

BA035 The Vendor should describe its process for accessing crisis stabilization services

Aetna recognizes and applauds the Department's efforts to expand access to BH services for residents of West Virginia in crisis. This includes the addition of services through the Substance Use Disorder (SUD) waiver, including improved access to Institution of Mental Disease facilities and the expansion of

Crisis Intervention

Mary[3] called Aetna's Member Services line looking for immediate help to keep her from using drugs. Our member services representative contacted a care manager through instant messaging while the member was still on the line and completed a warm transfer.

Mary disclosed to the care manager how abusing substances was ruining her life and that she feared if she did not get into treatment today, she would use drugs this evening.

Our care manager was able to connect Mary with a drug treatment center of her choice, and together they spoke with a crisis counselor at the center. Once Mary was comfortable, our care manager dropped off the call so Mary could discuss options and make plans for treatment with the center.

[3] Not her real name

residential rehab facilities across the ASAM continuum, funding of Quick Response teams to help engage individuals with SUD, expansion of children's mobile crisis response and stabilization teams, and the development of additional services through the Children with Serious Emotional Disturbance waiver.

Aetna has over 23 years of experience working with all inpatient BH facilities, crisis stabilization units, and State-approved residential rehab facilities in West Virginia to coordinate crisis services for our members when care at a lower level would not provide adequate safety. Aetna is made aware of members in crisis in multiple ways: face-to-face visits, a member contacting his or her care manager directly, members presenting in crisis at a site in which an Aetna care manager is co-located, admission alerts to higher levels of care, and our internal 24/7/365 toll-free BH Crisis Services hotline.

Any time of day or night, every day of the year, we are available to assist members during vulnerable episodes. As shown in **Figure 6.2.1-3**, when members call our Member Services line in crisis, staff follow Aetna's crisis situations desktop protocols. We prepare our Member Services and Care Connections team

Peer Support Provides a Lifeline

David[4], a member with substance use disorder, suicidal ideations, hypertension, atrial fibrillation, and depression, suffers from post-traumatic stress syndrome from traumatic childhood events from foster care placement and serving in the Army in Iraq.

He had been admitted as an inpatient for substance abuse and suicidal ideation three times before engaging with Aetna's peer support specialist late in 2019. Within a month, David has secured a job, attends Narcotics Anonymous meetings, and has made all his PCP appointments.

Our peer support specialist provides coping techniques and strategies for combatting depression, providing positive reinforcement for David's simple goal - to stay clean and sober one day at a time.

[4] Not his real name

staff to effectively help members in crisis by providing extensive training, including trauma-informed and BH training. For members presenting with a life-threatening emergency or those who are deemed a threat to themselves or others, Member Services staff warm-transfer calls to Care Connection team care managers who help de-escalate the crisis while working with appropriate team members to engage emergency services. We stay on the line until emergency services arrive. The member's primary care manager is notified of the crisis call to engage in follow up after the event. If crisis situations arise when Care Connection team staff are onsite with the member, we remain with the member throughout the incident. They continue to check in with the member on a regular basis to make sure the crisis is adequately addressed.

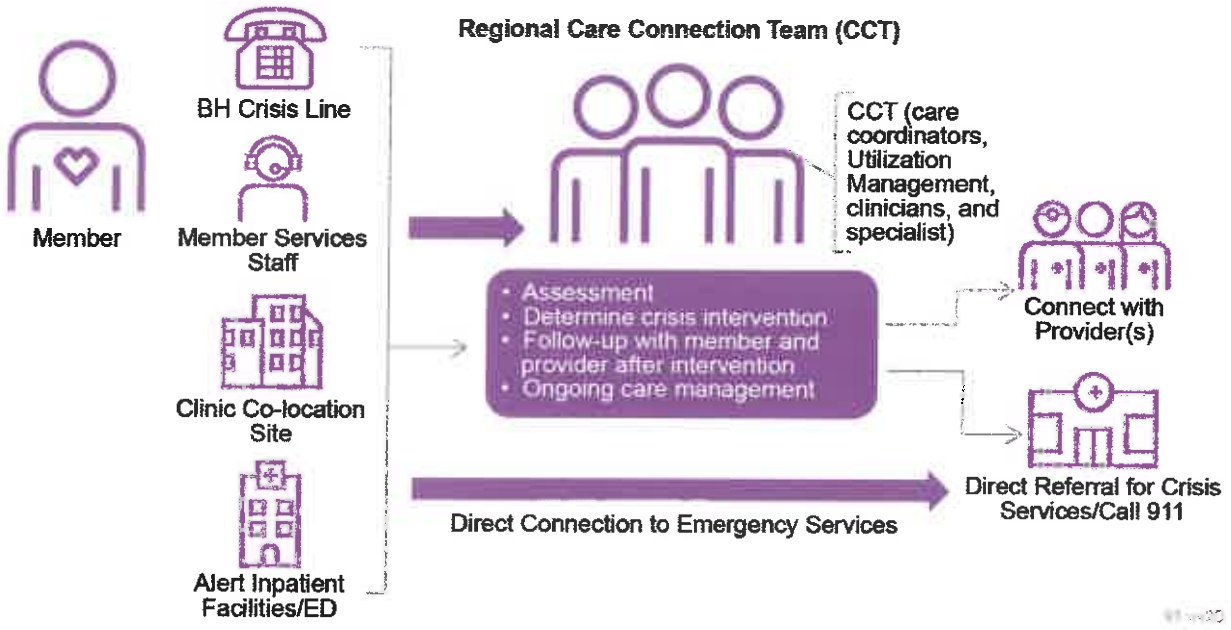

Figure 6.2.1-3: Pathways to Crisis Management

Aetna's goal is to ensure our members in crisis have immediate access to the appropriate level of services in the highest quality, least restrictive setting compatible with member safety and clinical efficacy.

In addition to direct contact initiated by the member, Aetna also identifies members in crisis through alerts to higher levels of care, including admission to inpatient BH crisis stabilizations

units and State-approved residential rehabilitation centers. Our Care Connection team care managers reach out to these members in-person through Aetna staff co-located within the facility, Care Connection team staff living in the community, or by telephone following discharge.

To ensure there are services for any member in crisis at all times in West Virginia, Aetna's internal, 24/7/365 toll-free BH Crisis Services hotline is fully and seamlessly integrated into our overall service array. Staffed with independently licensed BH professionals trained in supporting the needs of our members, the BH Crisis Services hotline connects members who may also call immediately to the crisis response system and can patch directly to 911 emergency services. Aetna's recruiting and hiring practices include strategies to hire personnel that represent similar cultural considerations to our members. We employ BH Crisis Services hotline staff who are certified bilingual in Spanish, and we use Language Line for 24/7/365 real-time interpretation of more than 200 languages.

Aetna will support West Virginia in becoming a national leader in disrupting the crisis cycle at all levels of the system by thinking creatively and exploring innovative ideas to solve intractable challenges, including building capacity around positive behavioral support, facilitating short-term respite, and taking a prevention-first approach.

Early and Periodic Screening, Diagnosis, and Treatment

BA036	The Vendor should describe how they will comply with Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program requirements, as indicated by the Centers for Medicare & Medicaid Services (CMS) at https://www.medicaid.gov/medicaid/benefits/epsdt/index.html

Aetna's network provides accessible comprehensive and preventive health care services to all eligible members. These services, which do not require PA, include EPSDT requirements of routine screenings, developmental screenings, and social/mental/physical health screenings as

listed in Section 1950(a) of the Social Security Act as mandated by the Omnibus Budget Reconciliation Act of 1989. Aetna provides notification of screening due dates, complies with the State-determined periodicity schedule, makes and tracks referrals and treatments, and reports results in our encounter reporting and as necessary to meet federal requirements.

Aetna has written policies and procedures for providing the full range of EPSDT services to all eligible Medicaid and WVCHIP enrollees up to age 21, in compliance to provisions in the Model Purchase of Service Provider Agreement for Fiscal Year 2020, Section 1.2.1 Early and Periodic Screening, Diagnosis and Treatment Services. We recognize members will go back and forth between Mountain Health Promise and Medicaid and WVCHIP, and we will leverage our years of successfully managing services for MHT's children and youth as well as the experience we will gain as the sole managed care organization for the West Virginia's new Mountain Health Promise program to ensure these transitions are smooth.

Aetna also works with providers through value-based purchasing to encourage compliance with EPSDT. For example, our value-based agreement with Marshall includes quality measures for well-child visits (three to six years), adolescent well care, and childhood immunizations; and our value-based agreement with Charleston Area Medical Center includes quality measures for annual dental visits (children two to three years) and childhood immunizations.

Table 6.2.1-5 provides key HEDIS® measures for child and adolescent wellness and preventive services for Aetna's current West Virginia Medicaid members.

Table 6.2.1-5: Selected EPSDT 2019 HEDIS Measures for Aetna West Virginia Medicaid Members

HEDIS Measure	HEDIS 2019	HEDIS 2018	HEDIS 2017	HEDIS 2016	Quality Compass 50th Pctl Met/Not Met
Adolescent Well Care	61.31%	58.39%	55.90%	39.86%	Met
Adolescent Immunization (Combo 1)	85.16%	86.62%	85.14%	83.90%	Met
Well Child Care 3-6 Years	76.40%	75.91%	71.93%	72.13%	Met
Well Child Care 0-15 Months (6 visits)	73.24%	72.99%	63.68%	66.59%	Met
Annual Dental Visit (Total)	64.18%	63.06%	61.04%	58.95%	Met

Informing Members about EPSDT

Aetna sends telephonic reminders and EPSDT mailings to all age-appropriate members based on age and the periodicity schedule. As detailed in our response to **[BA047]**, we routinely work with our members and parents to arrange for an EPSDT screening within 30 days of enrollment. Care managers explain the EPSDT guidelines and services available under the HealthCheck program to parents and caregivers in plain language, paying particular attention to the guidelines that are immediately applicable to their children.

Determining Medical Necessity for EPSDT Services

Aetna determines medical necessity for EPSDT services for our members on a case-by-case basis, taking into consideration the needs of each child. EPSDT services, offered via the HealthCheck program in West Virginia, are fully covered and are key to making sure children and adolescents receive appropriate preventive, dental, vision, BH, developmental, and specialty services. Members are entitled to as many doctor visits, hours, and amount of any services as medically necessary for their individual conditions if authorized under EPSDT. Some

EPSDT services may require PA, and the HealthCheck program consistently reviews evidence-based guidelines to determine medical necessity. Aetna's guidelines cover the entire continuum of care and include specific considerations for children and adolescents.

Aetna also maintains a process for review of program exception requests. For example, as a result of providing EPSDT services for a member, a PCP may request a service that is not an Aetna-covered benefit. The process for reviewing a PA request for a program exception (a requested service that is not a covered benefit) includes the following:

- The provider requests coverage for items or services noted to be for a program exception or the request outlines benefits not covered
- The nurse collects all necessary information and provides it to the medical director, who uses the EPSDT federal criteria in accordance with the medical necessity criteria specific to EPSDT defined in 42 U.S.C. § 1396d(r) and 42 C.F.R. §§ 441.50- 62. These criteria are taken into consideration in the course of each service authorization. We use the following guidelines when reviewing the request:
  - Payment or the procedure is not allowable according to the fee schedule, is a type of service covered by the program, and is generally accepted by the medical community (e.g., enclosed safety beds, lead abatement, adaptive car seats, adaptive strollers, or an air conditioning unit for a child with significant asthma)
  - The procedure is not experimental
  - There is medical necessity for the item or service
- We fax or mail the determination to the requesting member and provider and document activity in our electronic claims management system

Processes Specific to EPSDT Services

Aetna is committed to working with providers to make sure all Medicaid-eligible and WVCHIP members under the age of 21 receive EPSDT services through the HealthCheck program and their parents, caregivers, and providers use resources effectively. Staff from our UM, CM, QM, Provider Relations, and Member Services departments are all instrumental in the implementation of our EPSDT policy to meet West Virginia's requirements for making EPSDT services available and accessible to our members. Aetna leverages our extensive experience

implementing and maintaining EPSDT programs in West Virginia and other states to ensure children and adolescents receive comprehensive preventive, dental, BH, and developmental and specialty services.

Early detection, screening, and interventions are fundamental to identifying developmental, physical, and behavioral issues. To make sure children receive all necessary EPSDT services through the HealthCheck program, both members and providers are made aware of how to access services to identify possible delays in growth and development, when steps to address issues can be most effective. Aetna provides EPSDT screenings according to West Virginia's periodicity schedule and include, but are not limited to, the following:

- A comprehensive health and developmental history (including assessment of both physical and mental health development)
- An unclothed physical exam
- Laboratory tests (including blood lead screening appropriate for age and risk factors)
- Vision testing
- Appropriate immunizations, in accordance with the schedule for pediatric vaccines established by the Advisory Committee on Immunization Practices
- Hearing testing
- Dental services (furnished by direct referral to a dentist for children beginning 6 months after the first tooth erupts or by 12 months of age)
- Health education (including anticipatory guidance)
- Inter-periodic screenings to determine the existence of a suspected illness or condition, or a change or complication to a pre-existing condition

Aetna follows the Bright Futures/American Academy of Pediatrics recommendations for Preventive Pediatric Health Care as the guide for EPSDT services. We understand the challenges in meeting all the health care needs of our members and have a specific strategy to assist members and families in completing EPSDT through covered benefits in local pharmacies including immunizations, urgent care visits, follow up urgent care visits, and assistance with transportation and scheduling.

Aetna has been training the entire Medicaid organization, both department and plan staff as well as providers, to understand and implement trauma-informed principles. Aetna is collaborating with the National Council for Behavioral Health, a nationally recognized leader on trauma-informed care organizations, and our West Virginia staff completed the trauma-informed training in January of 2019. We are bringing a provider collaborative to West Virginia to support local communities with trauma-informed training and resources early in 2020.

Through our collaborative efforts and education activities with PCPs, parents, caregivers, and others, we promote timely completion of EPSDT services. We offer families a choice of providers who conduct ongoing developmental surveillance in accordance with medical necessity criteria specific to EPSDT. Aetna also educates members and families on the availability of a comprehensive suite of benefits, stressing well-child and preventive health visits.

Working with providers: Aetna engages in a robust provider education process to inform them about the West Virginia EPSDT periodicity schedule and requirements that PCPs must perform oral health assessments, evaluations, prophylaxis, and oral hygiene counseling. We also educate providers on adopting a trauma-informed approach while performing all EPSDT services, including conducting routine physical examinations; screening for developmental delay through the fifth year; screening for autism spectrum disorder; conducting a comprehensive unclothed physical examination; and all appropriate immunizations, laboratory testing, and health education during each medical screening. Education activities emphasize the importance of the use of validated developmental screening tools, with the expectation that providers will assist families with scheduling appointments for timely early periodic screening visits, and any

additional assessments, referrals, and follow up, as well as following up with families whose children miss their screening visits.

Reports Monitoring EPSDT Compliance

Aetna has implemented various strategies to monitor compliance in West Virginia and in 12 other states in which we serve children and youth that have proven highly effective in improving engagement in screenings and preventive services. We analyze our EPSDT screening and well-visit rates monthly and quarterly. Regular monitoring helps us to identify strategies that are working well and provides insights into areas where we may be able to overcome our members' barriers to care. Aetna will submit a report to the Department within 45 calendar days after the end of each quarter regarding EPSDT outreach services, and rates of screening and referrals, well-care child visit, dental visits, and immunization.

Aetna's regionalized local Care Connection teams review gaps in care and set task reminders for follow up visits for children age 5 and under with no screening, targeting children and youth with special health care needs who are behind on their screenings, and conducting outreach to parents/caregivers of members ages 0-20 who are behind in their in well-visit screenings. We track EPSDT requirements and related HEDIS measures, and the data is utilized to generate reports identifying early deficiencies. We use care alerts (which identify high- and medium-risk members who are behind in their care), priority lists, quarterly measures, provider profiles, tracking phone calls (automated and direct), and face-to-face contacts. Pediatric measures are shared with the network and practices quarterly for quality improvement purposes. We will generate an EPSDT profile for each provider or practice, which will include scorecards on items such as well-visit rates.

Aetna utilizes data and reporting to identify areas for continuous quality improvement. We examine the data collected to look for gaps in performance as well as measures with positive outcomes. We look for member, provider, and geographic differences, and search for any data issues that may be affecting performance. EPSDT oversight and compliance reviews include the following:

- Timely EPSDT screenings completed
- Timely completion of services members are referred to as part of EPSDT
- Authorizations for EPSDT services in utilization management
- Turnaround time reporting for key services related to EPSDT exams
- Claims audits to test claim edits and rules
- Identification of members who may need EPSDT screening or who have no record of completed services

In the event a member elects to have a specialist serve as his or her PCP, Aetna care managers reach out to the specialist to participate in care planning. If the specialist is new to performing the functions of a PCP, we educate them on the requirements of being a PCP and monitor them through gaps in care reports for relevant HEDIS measures and member feedback on appointment access or practitioner behavior. We provide ongoing support and use the same interventions as we would use for non-specialist PCPs.

For providers (both PCPs and specialists who function as PCPs) who show low compliance rates, the QM team reviews a sample of records for additional investigation. This assessment of outcomes becomes a part of the quality plan, and both the UM and QM teams review outcomes with the providers and CM team. We also encourage providers to perform well visits in tandem with acute visits to record preventive services through coding and emphasize that providers can either address EPSDT requirements while the member is in the office or schedule additional follow up for an EPSDT visit.

Member Co-Pays

BA001	The Vendor should provide its plan to impose, monitor, and track member co-pays and quarterly household maximums for including, but not limited to, the following:
BA002	Medical Services (includes Physical, Behavioral Health, Dental, and Vision)
BA003	Pharmacy Services

Aetna's plan to impose, monitor, and track member co-pays and quarterly household maximums for medical (physical, behavioral, dental, and vision) services is based on the member's income tier and is in compliance with requirements specified in the State Plan and the requirements set forth in 42 CFR §§447.50 - 447.82, as outlined in the Model Purchase of Service Provider Agreement Section 3.9, Cost-Sharing Obligations. **Aetna has never been sanctioned by the State for incorrect co-pay assessments.** We recognize the benefit and co-pay differences between MHT/ WVHB Medicaid and WVCHIP members and will adapt our processes to comply with all requirements. **[BA001]**

[BA002] Member Co-Pays and Quarterly Household Maximums for Medical Services

For Medicaid members: Medicaid members are assessed co-pays for non-emergency use of the ER, acute care inpatient stays, office visits, outpatient surgical services (except those provided in the ER), and pharmacy. With the exception of pharmacy, the amount of co-pay required is dependent upon the income tier level to which the member is assigned. Quarterly caps or maximum out-of-pocket payments are established based on family income. Pharmacy co-pays are the same for all Medicaid members regardless of income; however, out-of-pocket maximums do apply. Consistent with State Plan and contractual requirements, Medicaid exempts children under 21 years, pregnant women (including 60 days postpartum), foster children, members covered through the Breast and Cervical Cancer Treatment Program, individuals receiving hospice care, individuals whose medical assistance for services furnished

in an institution is reduced by amounts reflecting available income other than required for personal needs, and American Indians or Alaska Natives. Exempt services include BH services, emergency services, pregnancy-related services, family planning, preventive services provided to children under 18 years of age, and provider preventable services.

For WVCHIP members: WVCHIP members participate in cost-sharing (co-pays and premiums) based on enrollment group, except for children registered under the federal exception for Native Americans or Alaska Natives, and for those enrolled in WVCHIP Pregnant Women's coverage. Co-pays are waived for all office visits to a member's medical home. Aetna's system processes at the individual and family member levels by using the member's enrollment group benefit level. WVCHIP has three enrollment groups, each having a different cost share (Gold, Blue, Premium). Out-of-pocket maximums are applied during a benefit year and differ based on enrollment group, number of children, and amount is associated with medical or prescription services. Dental out-of-pocket maximums apply only to the WVCHIP Premium group. We will apply the value of premiums to the household maximum. The benefit set-up in the system ensures the correct co-pay amount is applied to claims. The system also tracks yearly member out-of-pocket based on the head of household indicted on the state enrollment file.

Processes for Medicaid and WVCHIP: Aetna will calculate the difference between the paid amount and the Medicaid-allowed amount compared to the sum of the co-insurance, co-payment, and deductible amounts, and will pay the lesser of either the difference amount or the summed amount. For FQHCs, the payment is defined as the encounter rate less the primary paid amount without consideration of cost-sharing. Aetna has a close relationship with SKYGEN USA and will be able to integrate dental co-pay accumulators with no issues.

Aetna educates contracted providers on the policies and procedures to collect co-payments from MHT/WVHB Medicaid and WVCHIP members. We reduce payments to network providers by the amount of the member's co-pay, regardless of whether the provider collects the co-pay.

Aetna has a process to track and monitor co-pays at the member and household levels for both the Medicaid and WVCHIP populations. Co-pays are established at the member level and household level in our system in the benefit administration module for medical claims. Yearly and quarterly maximums are also tracked at a household level for medical claims off-system. To incorporate pharmacy and dental co-pays (for WVCHIP), two-way data sharing is utilized. Internally, our analysts are able to incorporate medical, pharmacy, and dental data weekly to determine if the household maximum has been reached. This data is sent to SKYGEN USA, the PBM, and our internal claims system to place a hold on co-pays being charged to the member's household until the end of the quarter for Medicaid members and the end of the year for WVCHIP members. Additionally, we perform a quarterly reconciliation process using accumulative data shares to verify if households have exceeded co-pay limits, and if limits have been exceeded, claims are adjudicated to reimburse the provider, who will in turn reimburse the member.

[BA003] Member Co-Pays and Quarterly Household Maximums for Pharmacy

Aetna will leverage our experience from when pharmacy benefits were carved into the MCO responsibilities to impose, monitor, and track member co-pays and quarterly household maximums for Medicaid and yearly household maximums for WVCHIP members. We will work with the Department to implement systems to impose, monitor, and track member cost-sharing obligations that meet the State's expectations. If the pharmacy benefit is carved in to services

provided by Aetna, our PBM, CaremarkPCS Health, is able to perform out-of-pocket tiering based on member benefit level for pharmacy claims. Additionally, CaremarkPCS Health and Aetna have performed daily file shares to continually monitor and communicate household out-of-pocket limits in the past and have the capabilities to perform this in the future if needed.

Fraud and Abuse

BA010 The Vendor should describe its process for preventing and detecting fraud and abuse related to all administered services including Pharmacy, if applicable

Aetna takes our role as a steward of MHT taxpayer-funded appropriations very seriously. We are a member of the National Association of Medicaid Program Integrity, the Centers for Medicare & Medicaid Services (CMS) Health Care Fraud Prevention Partnership, and multiple health care anti-fraud task forces at the state and federal levels As a NCQA-accredited health plan with a 'Commendable' rating, we continually monitor our policies and procedures for fraud and abuse related to all administered services, including pharmacy, through audits. We conduct an annual review of policies and procedures, which our Policy and Procedure Committee reviews and approves.

Located in Charleston, Alva "Fuzzy" Page III, Esq., is the point of contact for the Department as well as internal Aetna staff regarding compliance and program integrity. Shannon White-Metz serves as program integrity lead and is the primary contact for all Department program integrity inquiries and issues, as well as conducting all program integrity efforts for the health plan. Aetna currently has three full-time Special Investigations Unit (SIU) staff dedicated to West Virginia. The West Virginia-based Program Integrity staff work

Aetna is a founding member of the National Health Care Anti-Fraud Association and the Medical Identity Fraud Alliance.

directly with our SIU and Compliance teams regarding FWA activities and Aetna's local prevention and detection efforts.

Aetna's West Virginia Program Integrity plan establishes internal goals identifying controls, policies, and procedures to ensure the prevention, detection, and deterrence of FWA in accordance with state and federal requirements. **Aetna enforces a zero-tolerance policy toward any form of FWA by staff, subcontractors, providers, members, or others.** The plan includes detection and prevention program activities for staff, members, caregivers, and providers, including reporting and follow up, continuous monitoring of compliance, identification and reporting of issues, and ongoing training and education.

Fraud, waste, and abuse training: All Aetna staff receive initial and annual training on our FWA and program integrity policies, Code of Conduct, and ethics. Initial provider training in FWA takes place during orientation, with ongoing supplemental training (such as self-auditing), conducted through provider forums, our secure online provider portal, the provider handbook, and individual communication with Provider Services staff. Provider training includes definitions of FWA, provider program integrity and compliance responsibilities, methods for preventing FWA, responsibility for reporting overpayments, and ways to report FWA to Aetna, BMS, West Virginia Medicaid Fraud Control Unit, and/or CMS.

We require all subcontractors to follow strict hiring and training processes to fulfill West Virginia Medicaid obligations, and we provide oversight and monitor their performance and compliance with our contractual requirements, which includes training their employees in FWA. We require our subcontractors provide documentation that verifies and certifies that their employees have received annual FWA training that is consistent with Aetna Medicaid and BMS regulatory

requirements. We hold quarterly joint operating meetings with our subcontractors to discuss goals and objectives, performance, and FWA.

Suspension of payments: Aetna complies with 42 CFR 455.23, which requires the state Medicaid agency to suspend all Medicaid payments to a provider after determination of a credible allegation of fraud for which an investigation is pending. We ensure all participating providers are enrolled with BMS as Medicaid providers prior to executing a provider agreement, and we cooperate with BMS when payment suspensions are imposed. **Aetna's program integrity savings for 2019 were more than $27 million, including overpayment and retractions.**

Preventing and Detecting Fraud and Abuse

Aetna uses a variety of techniques, analyses, and technologies to detect questionable billing practices and avoid fraudulent claims payments, including business intelligence software to identify providers whose billing, treatment, or member demographic profiles differ significantly from those of their peers. The Medical Management department may review claims to determine if the provided documentation supports the billing, if billed charges are necessary and reasonable, and to identify non-covered supplies and services,

Developing Policies to Combat Fraud and Abuse

As part of our ongoing, cross-departmental program integrity evaluation of substance use disorder treatment, urine drug screens (UDS), and related testing over treatment national FWA schemes within medication assisted treatment (MAT) programs, an analysis of claims data showed a significant increase in breath alcohol tests (BAT).

Claims review showed BAT being performed on the same day as UDS in a majority of MAT. Our medical directors consistently found there was no documentation of intoxication in the office or suspected alcohol use at the time of the visit that impacted treatment plans.

After discussion in the monthly FWA meetings and interdepartmentally with Provider Relations and Prior Authorization, a policy change was instituted in January 2019 requiring that all BAT claims require medical records for review of medical necessity.

in addition to inappropriate and undocumented charges. Cases of potential FWA are referred to the SIU department for review and disposition. Details on how UM guidelines support the detection and prevention of fraud and abuse are outlined earlier in this response in **[BA006-BA009].**

Member service verification process: Aetna sends letters to a random sampling of members each month containing billed claim information specific to that member. The notice asks the member to contact a telephone hotline manned by our Member Services staff if the services identified were not actually received. To generate the random sampling, we use a stratified sampling methodology with a segregation of professional and institutional claim type, each with three categories. Notices are generated within 45 days of payment of claims via United States Postal Service first class mail. All responses to the verification of services letters are tracked, and the SIU alerts the Department should a credible allegation of fraud be detected.

Fraud and abuse reports: Aetna's SIU analytics group runs case- and scheme-specific reports using Structured Query Language, Statistical Analysis System software, and Crystal reporting technology to support current investigations and identify new cases. The SIU performs on going reviews of the plan to identify high-dollar specialties, high-utilization providers, and procedures codes. These reviews suggest to the SIU investigators which specialties/providers/codes to review for outlier behavior indicative of FWA.

In addition, on a quarterly basis, the SIU analytics group runs a minimum of 25 outlier reports generated from Aetna medical claims and West Virginia State Medicaid pharmacy claims data of known categories of fraudulent schemes, such as up-coding and billing for services that were not provided, based on specialty and current procedural terminology codes to identify the top

providers of certain services. At data mining meetings, SIU staff, the SIU medical director, and certified procedural coders discuss and prioritize data mining studies to better analyze trends and schemes identified through various sources. SIU investigators review the data mining report and take appropriate action. These reports are frequently updated and refined to stay current with evolving trends.

Aetna's rules-based electronic claims management system maintains and processes health care administration data, providing increased efficiency. The provider module contains a unique provider identification number generated by the system, plus all provider billing and tax reporting information. The QNXT claims module shows the date of receipt, history of actions taken on the claim, and date of payment, including the remit number. The electronic claims management system stores claims by specific benefit limits/lifetime benefit rules. It edits data for accuracy during claims processing and payment. Aetna's Medicaid Claim Quality Control department independently assesses the effectiveness of the Medicaid claims system configuration and claim procedures against the resulting adjudication process.

The electronic claims management system data (and legacy claims payment data) is utilized by Aetna's SIU through the Universal Web Information Directory (UWID) system, a decision support and reporting system that authorized Aetna SIU staff can utilize to meet business information needs. There are 45 unique static reports across, member, provider, pharmacy, and dental data. In 2018, over 4500 reports were run in the UWID system.

Aetna's SIU data mining is enhanced by Healthcare Fraud Shield (HCFS), a platform that has approximately 600 health care business rules and algorithms maintained and updated quarterly. HCFS business rules and algorithms are customizable at the health plan level to account for

benefit variations and can be applied pre- and post-payment. This platform identifies providers with potential FWA behaviors, allows for plan and national peer group comparison, and assigns risk scores. Aetna's SIU uses HCFS application screens to visualize all FWA leads and provider billing activity as well as download the past 24 months' worth of claims for each lead. This helps Aetna's SIU further avoid inappropriate billing, identifies and mitigates provider abrasion, and deters criminal activities by utilizing key FWA concepts.

Our SIU fosters a comprehensive approach to addressing both member and provider fraud by leveraging all available data sources to detect emerging fraud patterns. Aetna's SIU also receives and uses leads provided by the Aetna Enterprise Analytics Fraud team. Our data analytics system provides efficient and proactive discovery of new fraud schemes, allowing for near real-time prepayment review capabilities to flag suspicious claims and/or providers prior to adjudication. The data analytics of all Aetna plans are shared between the plans (commercial, federal, Medicare, Medicaid, et al.) to leverage the information on common providers and provider types. This information sharing leads to cost reductions for analytics and in the process of 'pay-and-chase' methods of recoveries.

Aetna Dental Super-Prescriber Program

As part of our commitment to combatting the opioid epidemic in West Virginia, Aetna implemented a Dental Super-Prescriber program to reduce the average days' supply of opioids prescribed by dental providers. Aetna is implementing initiatives to encourage non-opioid alternatives for treatment of pain after dental surgery, and we send educational letters to dental providers and oral surgeons with pharmacy claims exceeding a three-day supply of an opioid within the preceding one-year period. During the period of January to June 2019, as compared to July 2017 to June 2018, there was an 82 percent reduction in dental providers giving prescriptions with four or more days' supply of opioids (from 34 to 6 providers).

Preventing and Detecting Fraud and Abuse in Pharmacy

Aetna's SIU project lead for pharmacy tracks and reports ongoing pharmacy cases and audits monthly and handles medical pharmacy cases, including preparing cases to respond to requests from the West Virginia Office of Program Integrity and West Virginia Fraud Control Unit. Aetna's SIU, Pharmacy, and Medical Services teams work collaboratively with our providers and utilize the West Virginia Board of Pharmacy Physician Drug Monitoring Program to identify members at risk for adverse medication events and inappropriate or fraudulent use of prescription medications.

Aetna's collaboration with the Department around preventing and detecting fraud and abuse in pharmacy has evolved since the pharmacy benefit was carved out in July 2017. The Aetna Pharmacy team conducts ongoing monitoring activities, including routine audits, to prevent and detect FWA through the review of pharmacy claims made available from the State. Even with the pharmacy benefit carved out, pharmacy claims provided by the state enable Aetna's Pharmacy team to run, analyze, and take action on monthly and quarterly reports to identify members, pharmacies, and prescribers of concern. These reports are shared with appropriate CM, UM, QM, and Compliance team members to take next steps.

Providers (prescribers and pharmacies) of concern are discussed by the Pharmacy team with the medical director and Medical Services teams. When the Pharmacy team reviews prescriber utilization reports, they pay special attention to prescribers and practice group trends around high-cost medications, high-cost drug therapy classes, high-cost drug national drugs codes, high-dosage controlled substances, and the use of specific pharmacies for these medications. After review of the concerns, the medical director or designee may reach out to prescribers to

gather information to help the Aetna team gain a better understanding of the provider's prescribing behaviors. Additionally, as instructed by the medical director, a pharmacist will contact the identified provider for a review of their prescribing patterns. Outreach to the identified provider focuses on review of the analysis and education on appropriate prescribing practices. Information gathered by the pharmacist is brought to the team. When appropriate, the Aetna team, under the direction of the medical director, will engage our QM/UM Committee and Provider Services team to act, which may include quality of care referrals and investigations for outlier prescribers. Investigations may result in QM/UM Committee action, including corrective action plans, claims denial, or termination from the network. Lastly, if provider prescribing behavior necessitates, Aetna's SIU will be called in to review cases of outlier prescribing to identify potential FWA. The SIU will refer cases of FWA to the West Virginia Health and Human Resources Office of Inspector General for further investigation and potential sanctions.

Aetna's Interdisciplinary Care team (ICT), including our CMO/medical director, pharmacy director, a clinical pharmacist, and CM staff, reviews members of concern during member care conferences, paying special attention to member medication use indicating duplicative prescribed medications from more than two prescribing providers as well as excessive use of drug targets recently involved with fraudulent schemes, such as gabapentin, diabetic tests strips, asthma medications, Suboxone® and buprenorphine with concomitant opioids, and controlled substance cocktails of drugs (benzodiazepine and opioid combinations). With the goal of member safety, members identified with medication use behaviors consistent with fraud or abuse are outreached to by care managers who assess the member's medical, prescription medication, and social needs with the goal of better understanding the member's medication

use. Additionally, our care managers, with the support of our pharmacy director, will consult with the member's prescribers to identify needs and develop a plan for care. Members identified and acted upon for medication use issues are reviewed at least semi-annually by the ICT, and when indicated, our care manager will refer the member to the Pharmacy Supportive Care Management program.

In the **Pharmacy Supportive Care Management program**, monthly reports are used to monitor pharmacy utilization data to identify potential fraud or abuse. Medication use reports identify members who fill opioid prescriptions from more than 10 prescribers in 90 days, as well as members with possible doctor shopping behavior demonstrated by filling controlled substances (e.g., opioids, stimulants, etc.) from more than three prescribers or more than three pharmacies in the past 90 days. These targeting edits are combined with other **Supportive Managed Care Program (SMPC)** (our member restriction program) edits, such as presence of opioid abuse disorder or MAT to create a member ranking report based on total number of edits triggered by a member. This ranking report is reviewed to determine next steps within the program. If restriction is recommended by committee, referral is made to the state in accordance with Aetna's Supportive Managed Care Program (SMPC) Member Restriction Policy 7500.03:

- The focus of the SMCP program is to support members and their families with whole person needs, assisting members to improve their pharmacy and benefit utilization as appropriate to their health care needs and coordinating care with the member's primary care provider and other practitioners/providers as needed.
- Referrals to the SMCP may come from Aetna staff, practitioners, providers, caregivers/family members, or any state entity. All members proposed for enrollment in the program must be approved by the medical director. The member can be restricted to a practitioner, provider, or pharmacy. The restriction will be in effect for a period of up to one year or longer, depending on the state-specific contract.

In the event the pharmacy benefit is carved into the services provided by Aetna, we will work with our PBM, CaremarkPCS Health, who will adjudicate prescription claims consistent with the State's prescription benefit requirements and conduct retrospective claims reviews, audits, and investigations to prevent, detect, and take action on fraud and abuse demonstrated by pharmacies, members, and prescribers. Our PBM performs paid and rejected claims reviews using targeting logic built to validate accurate claims adjudication based on the benefit structure coded and monitors each pharmacy on all claims submitted. The team monitors claims to ensure appropriate fees and payment are adjudicated per contract terms. If an issue is detected, the team escalates the issue for expedient remediation; and if payment recoveries occur, they are provided to Aetna. Desktop audits occur daily, and onsite audits occur as needed to detect FWA at the pharmacy level, with results reported to Aetna for action as needed.

All pharmacy claims submitted by pharmacies via our point-of-service claims processing system are subject to edits that confirm pharmacy compliance with program parameters even before prescriptions are dispensed. A report is produced daily to check claims for inconsistencies in quantity and days' supply. When errors are detected, outreach is completed to the submitting pharmacy for resolution. All pharmacies are subject to desk audits based on high-cost reports. An automated statistical review, the Pharmacy Exceptional Activity Report (PEAR), is employed to identify pharmacies with unusual or improper claim activities that might indicate noncompliance with plan guidelines and pharmacies for an onsite audit to review prescription documentation to verify the integrity of the claims submitted and processed for payment.

To prevent fraudulent use of medications by members and prescribers, Aetna's pharmacy claims system can be set up with edits to stop inappropriate prescriptions from payment.

Examples of edits to prevent potential fraud and abuse include refill too soon, quantity limits, duplicate prescriptions, expired prescriptions, and maximum quantities of targeted drugs or products (such as muscle relaxants, anabolic steroids, gabapentin products, diabetes test strips, and rescue inhalers).

Additionally, to identify potential cases of fraud by members, Aetna can use CaremarkPCS' Retrospective Safety and Monitoring program that uses staff pharmacists to review members' medication profiles with claims identified as potentially fraudulent by proprietary algorithms and software This program identifies, corrects, and/or deters potential cases of misuse and fraud. The Safety and Monitoring program targets high abuse drug classes such as opioids, muscle relaxants, and stimulants and misuse behaviors such as provider shopping and duplicate therapy. Interventions include a letter to the prescriber and/or pharmacy and continual follow up and monitoring until case resolution or plan referral. All pharmacist activities are reported to the Aetna Pharmacy team on a monthly and quarterly basis. Situations identified as being potentially fraudulent are referred to our pharmacy director, SMCP team, and/or the SIU team pharmacy lead.

Aetna's Pharmacy, Medical Services, QM, and UM teams have implemented strategies to prevent and detect fraud and abuse in pharmacy whether the pharmacy benefit is carved out or carved in. Currently, the Aetna Pharmacy team conducts ongoing monitoring activities, including routine audits, if needed, to detect FWA through the analysis of monthly and quarterly reports derived from pharmacy claims from the State and takes actions as described above. Added layers of fraud and abuse detection, prevention, and management can be provided through pharmacy point-of-service claims, processing edits, and analysis of the triggering of those edits.

Analysis of drug use and prescribing and filling patterns of members, prescribers, and pharmacies, when the pharmacy benefit is carved in.

Pharmacy Rebate Resolution

BA037	The Vendor should describe its policies and procedures for assisting the State or fiscal agent with the pharmacy rebate resolution process including rejected or disputed physician administered drug claims.

Aetna has an established relationship with the State to maximize the rebate process, and we are working together to improve our encounter reporting to optimize the data to provide accurate and timely information regarding rebates. This includes utilizing the State's HCPCS-to-National Drug Code (NDC) crosswalk to deny claim lines that do not meet the specifications on the crosswalk. We meet with the State monthly to receive and provide feedback on the process. These meetings have also included discussion on how Aetna can be used as a catalyst in resolving rebate disputes. Since the spring of 2019, our information technology (IT) director has been working closely with the State's Office of Program Integrity and DXC to improve the State's rebate process as it pertains to MCO encounter files. Recommendations to the State include utilizing the type of bill to determine outpatient claims so universal billing (UB) claims can be properly processed for rebate purposes and removal of certain HCPCSs from the crosswalk that are non-rebatable. In addition, Aetna has continued to improve our system's scrub in conjunction with the State-provided crosswalk so there are a minimal number of rebate errors in the encounters sent to the State. Aetna continues to educate providers about proper billing to maximize rebatable data, including the utilization of the 340B indicator. Through the State's feedback from our monthly meetings, we educate our providers on improved rebate data on claims. As requested by the State, our encounter data integrity manager serves as the appointed plan liaison on all items regarding rebates.

Aetna understands and complies with 42 U.S.C. § 1396r-8, as applied to Medicaid managed care in accordance with 42 C.F.R. § 438.3(s), and all requirements set forth by BMS Chapters 518, Pharmacy Services and 518A, Physician Administered Drugs. We cover all outpatient drugs listed on the BMS Drug Rebate Detail Report crosswalk, regardless of the setting in which the drug is dispensed or administered and regardless of the billing provider type. The State drug list ensures that for drug codes requiring an NDC, coverage depends on the drug NDC status (e.g., rebate eligible, non-Drug Efficacy Study Implementation, non-termed, etc.) on the date of service. Additionally, Aetna understands drugs dispensed to Medicaid beneficiaries purchased under the 340B Drug Pricing program do not qualify for Medicaid rebates.

The most recent 2019 Aetna medical claims file submission resulted in a 99.99% state acceptance rate for over 48,000 claims with drug NDCs.

Limiting payment to only rebate-eligible outpatient covered drugs: Aetna, under the direction of the Department, has established business rules and processes that use the State of West Virginia Bureau of Medical Services' monthly NDC crosswalk file titled 'WVREFR054_Drug Rebate Detail Report,' which is sent via email from DXC to guide the payment of CMS rebate-eligible outpatient prescription drugs. If pharmacy is carved in, Aetna can work collaboratively with the State and our designate PBM to utilize this file to guide outpatient prescription claims processed at our pharmacies.

Upon receipt of the monthly crosswalk, Aetna uploads the crosswalk into our system for the Aetna Claims department to process physician-administered drug (PAD) claims. Provider-submitted PAD claims are matched against the Drug Rebate Detail Report data weekly, and medical claim lines with HCPCS and NDCs that do not match the crosswalk are denied. We

send remittance advise documents with the denied line and information about the invalid NDC and HCPCS to providers. The remittance denial language is "Missing NDC; CPT/HCPCS requires NDC data but claim is missing NDC data CPT/HCPCS requires NDC data and submitted NDC data is not on State file or is not active on State file." Our robust NDC medical claims edits validate all NDCs on physician-administered or outpatient hospital drugs and ensure accurate claims and encounter submission as depicted in **Figure 6.2.1-4**.

By the 15th of every month, Aetna submits a file for medical claims (including PADs) paid in the prior month consistent with the claims submission file requirements. Aetna reports the necessary outpatient drug encounter data to assist the Department in invoicing drug manufacturers for rebates for medical outpatient drugs. This includes NDC level information on drugs, biologics, and other provider-administered products as directed by the Department, including, but not limited to, HCPCS codes (e.g., J-code, Q-code, A-code) and diagnosis codes, units, and conversions consistent with federal and Department requirements, administering prescriber information (e.g., National Provider Identifier [NPI], professional address, etc.), and required financial elements and dates of service and payment. In turn, the State/Molina sends a monthly NDC rejection report via email to Aetna. Consistent with State expectations, Aetna corrects and resubmits information within 30 days of notice. Common data elements reviewed for CMS rebate compliance include claim status, payment status (claim level

Figure 6.2.1-4: Overview of Medical Claim Edits
Medical claims edits validate all national drug codes for physician-administered or outpatient hospital drugs to ensure accurate claims and encounter data.

and line item), procedure code, units of service equals procedure units, NDC code, metric quantity of the injectable equals NDC units, prescriber NPI, and current procedural terminology (CPT)-4 modifier/modifier 2 (340B identification). Per State direction, any request for the correction of fields specific to collecting rebates does not supersede the requirements listed.

340B Drug Indicator on Outpatient Prescription Drugs Claims

Consistent with Aetna's contract with West Virginia, we ensure all outpatient prescription drugs purchased at the 340B price and provided to our members are submitted to the state via pharmacy and medical claims encounters and include at the time of billing a 340B indicator supplied by the provider that verifies whether or not a 340B drug was dispensed/administered to the member. The PAD 340 modifier 'UD' is reported using the standardized template supplied by the State (State Contract, Article III §§ 5.11.12). 340B pharmacy claims and encounters are submitted with National Council for Prescription Drug Programs (NCPDP) field Submission Clarification Code (SCC) = 20, and/ or Basis of Cost (BOC) = 10.

Aetna educates our 340B entity providers on appropriate flagging of 340B claims.

Outpatient Medical Drug Audit

Aetna collaborates with Cotiviti to identify duplicate payments made on both a member's medical benefit platform and pharmacy benefit platform (when carved in). Provider verification is often required to validate who supplied the medication and to where the medication was shipped (e.g., facility, office, patient). In addition to this cross-platform audit of pharmacy and medical claims found within their respective platforms, other aspects are described in **Table 6.2.1-6**.

Table 6.2.1-6: Auditing Medical Outpatient Drug Claims

Component	Description
Excessive Drug Units	Claims and/or claim lines billing erroneous unit quantities for drug service codes. These billing errors are typically the result of a simple data entry mistake or an incorrect conversion of the drug's administered dose to the corresponding code's defined billing unit (HCPCS) increment.
Duplicate Services	Claims and/or claim lines where services are billed and paid in duplicate. These billing errors are often the result of services being billed by both physicians or outpatient clinics as well as the hospital in which these physicians and clinics provide their services.
Services not Rendered	Claims and/or claim lines in which a service was billed but not provided. This overpayment occurs when the drug code is billed but the drug is not given (billing error). These billing errors are often caused by situations such as appointment rescheduling, patient illness, or the incorrect inclusion of the drug with complementary services that took place on other dates (administration of other drugs, office visits, laboratory testing, etc.).
Charges/ Contracts	Claims and/or claim lines billing/paying incorrectly for drug service codes. These payment errors are typically the result of a simple data entry mistake or the incorrect application of a provider's fee schedule and/or contract when adjudicating claims.
Policy	Claims and/or claim lines billing/paying inconsistent with Department or Aetna policy.

All validation failure responses are captured on an NDC pend report, which is reviewed by the claims team and the pharmacy director to resolve issues. This is done before the check run (provider payment) to ensure valid NDCs are present, units are appropriate, and claim provider and financial information are present as predicted.

Manufacturer Invoice Dispute Resolution:

A CMS-participating manufacturer may dispute claim utilization provided within their respective quarterly invoice. Currently in West Virginia, the Department handles this process; however, Aetna has engaged in preliminary discussions on how to make the process more efficient by partnering with the Department. The Aetna Medicaid organization nationally also has experience creating dispute resolution procedures to resolve manufacturer/labeler invoiced and disputed

claims with other state Medicaid agencies' rebate vendors. Aetna works with these designated vendors to resolve manufacturer disputes and communicates with the billing provider to verify the NDC utilized on the claim and confirm the billed units dispensed. This process includes the following steps:

- If any information is incorrect, the billing provider is advised to reverse/void the original encounter claim and resubmit the corrected encounter claim
- The resubmitted claim(s) will contain the following: the correct NDC dispensed and quantity dispensed, and will have correct provider payment, considering any third-party payer on the claim
- Aetna adds dispute resolution comments and uploads to State-designated vendors' portals consistent with timeliness requirements
- If a provider has not responded to Aetna inquiries, the vendor is informed of the next steps that will be taken by Aetna to correct/resolve the claims in question

Provider Education on Proper Outpatient Drug Billing

We value our providers and continuously monitor claims to identify provider medical and pharmacy (when carved in) education opportunities for incorrect NDC/HCPCS outpatient drug billing. The pharmacy director collaborates with our local Provider Experience staff to engage those providers. We provide an overview document on NDC/HCPCS billing, which is distributed during provider orientation and ongoing visits and included in provider resources (welcome packet, provider manual, quarterly newsletters, and provider notices). We also include reference documentation on the provider portal and website. In addition, Aetna has hired a Provider Relations representative (PRR) to bring local support and quality expertise to the providers. The PRR works in collaboration with Provider Experience staff to deliver face-to-face provider education, and Aetna will further leverage its office presence for education on proper NDC/HCPCS billing. If pharmacy is carved in for prescription claims processed at the pharmacy, Aetna's pharmacy director works collaboratively with our PBM to ensure our network pharmacies are billing prescriptions claims consistent with requirements.

3. Care Management

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Care Management (CM) as part of their bid. The Vendor's narrative response should not exceed 125 pages.

For more than 23 years, Aetna has been focused on and dedicated to addressing the whole person needs of the children and adults enrolled in the West Virginia Medicaid program, currently known as Mountain Health Trust (MHT) and West Virginia Health Bridge (WVHB). Through our deep connection with West Virginians as a trusted managed care organization (MCO), we have learned that our members possess the solutions and skills to reach their full potential, and our job is to offer effective coordination to support them in their journey to better health and overall quality of life. As we will describe throughout this section, we offer excellence in our infrastructure, through **care management (CM) delivered by West Virginians in our regional Care Connection teams (CCTs) established throughout the state.** We promote self-sufficiency, recovery, and resiliency using person-centered care management approaches that are delivered locally, in the communities in which our members live. We meet members where they are, often through **face-to-face interactions** at members' homes or in their doctor's offices. We utilize evidence-based practices in the delivery of care management including motivational interviewing and the Charting the LifeCourse™ framework. We employ a fully **integrated care management framework,** a model we developed here in West Virginia that other Aetna programs across the country (including our Pennsylvania and Kentucky Medicaid plans) are now adopting. We conduct evidence-based assessments and develop **individualized enhanced care plans** to meet the unique needs of members, based on their conditions, self-identified health goals, and cultural preferences. Our population health management (PHM)

approach and activities to address prescription drug abuse focus on prevention in addition to the delivery of the right care at the right time. We operate within a **System of Care (SOC) model** that is committed to reducing barriers, improving access to care, and identifying and solving for system process needs through multi-department and community collaboration.

Our local team tailors our care management approach based on outcomes, while incorporating lessons learned in the other Medicaid markets we serve and best practices we have implemented in other states. In addition to our extensive experience serving adults and children in the West Virginia MHT and WVHB, **the Aetna Medicaid organization presently has Children's Health Insurance Program (CHIP) experience in 12 states** including Arizona, California, Florida, Kansas, Kentucky, Louisiana, Maryland, Michigan, New Jersey, Pennsylvania, Texas, and Virginia. For over 30 years, Aetna's national Medicaid organization has provided comprehensive medical services and coverage to CHIP enrollees, delivering strong health care outcomes in a cost-efficient and prudent manner. This experience informs our approach and drives our dedication to meeting the needs of the CHIP population in West Virginia. Our integrated, member-centered, family-oriented, and holistic methods guide our decision-making, inform our policies and culture, and foster our ongoing efforts with State agencies and their partners, providers, hospitals, health networks, and community partners to align economic incentives with quality outcomes.

Florida Healthy Kids Outcomes

Aetna Better Health of Florida had 54,000 Florida Healthy Kids enrollees in nine regions and recently received a statewide award adding 40,000 additional enrollees for this CHIP plan for a total of 94,500. Additionally, we achieved an 18% reduction in readmissions from 2018 to 2019 and a 14% reduction in ER visits in our Florida Healthy Kids plan.

Aetna recognizes that the **holistic evaluation of a member's circumstances and identification of rising risk, accompanied by delivery of services customized to their needs, can change the trajectory of members' lives**. According to a publicly available study by Population Health Advisor, approximately 18 percent of members identified with rising risk will escalate to high-risk status, if we do not identify the risk and offer the appropriate care in a timely manner.[1] Aetna is committed to identification of rising risk and throughout our response we describe our processes programs to address it.

As an indicator of assessing rising risk for adults, our focus on pre-diabetic screening resulted in a 2019 Healthcare Effectiveness Data and Information Set (HEDIS®) rate for hemoglobin HbA1c testing of 87%.

Our regional care management model is also designed with an understanding of the specific health care challenges and disparities West Virginians face. Based on analysis of the 2017 West Virginia Health Disparity report[2] and the *State Rural Health Plan 2018 – 2022*[3], Aetna understands that West Virginians face high rates of infant mortality, low birthweight, teen births, substance use (including smoking), diabetes, and chronic obstructive pulmonary disorder (COPD). West Virginia has been an epicenter for the opioid epidemic as evidenced by a 50 percent increase in drug deaths in the past three years.[4] We understand that social determinants of health (SDOH) have unique regional impacts, and that **where a person lives**

can have a greater influence on health outcomes than family medical history. Our regional CCTs have deep understanding of the particular SDOH factors that most impact members in the cities and counties where they live and work. We know that members in Putnam county identified a need for more employment opportunities and summer/after school programs and that in Boone county, members said they need better transportation to services and help with access to nutritious food.[5]

Additionally, Aetna understands that the West Virginia population faces increased likelihood of having experienced adverse childhood experiences (ACEs), which can be a barrier to accessing health care, achieving optimal health outcomes, and meeting personal goals for health and wellness.[6] We know that children who have experienced ACEs and trauma often have special health care needs early in life and chronic health conditions later in life. They need the highest quality of care and seamless coordination of services offered through individualized treatment to achieve the best possible health outcomes. The impact of ACEs and trauma on children and families cannot be overstated.

To address the key health disparities and unique challenges West Virginians face including the high incidence of opioid use disorder (OUD) and its impact on pregnancy and infants, chronic conditions such as diabetes and coronary artery disease, the prevalence of ACEs, and SDOHs, we have developed comprehensive, regional, and statewide care management initiatives and programs. These include our Neonatal Abstinence (NAS) Care Management Program,

[6] Adverse Child Experiences Coalition of West Virginia, "Stumbling Blocks or Stepping Stones: Findings on Adverse Childhood Experiences (ACEs) in West Virginia," (2018): accessed January 23, 2020; https://docplayer.net/96887761-Stumbling-blocks-or-stepping-stones.html.

known as Moms and Babies, our Diabetes Collaborative program, and the implementation of Unite Us, a closed-loop social needs referral platform. CCTs use the Unite Us platform to facilitate referrals that reduce SDOH-related barriers in accessing care. We have provided mobile food pantries in Boone and Kanawha counties where we know food insecurity is prevalent. We understand the impact of trauma and toxic stress on our members and have established trauma-informed care (TIC) as a cornerstone. We have taken proactive measures to become a trauma-informed transformed organization both nationally and at the local level. In collaboration with the National Council for Behavioral Health, we have also completed an organizational self-assessment of TIC awareness and policy implementation to identify additional opportunities for training, practice, or communication improvements and have provided extensive training to our staff and providers. Additionally, we developed programmatic relationships with federally qualified health centers (FQHCs) such as Williamson Health and Wellness to offer co-located care management in collaboration with their community health workers (CHWs) to offer one-stop hubs of care management and health services. We are expanding this model with other FQHCs including Cabin Creek, Community Cares, and Family Care. These programs, in addition to others we will describe throughout this response, are customized to the needs of individual West Virginia enrollees, and are delivered in collaboration with members and their care teams in their communities, to address the State's goals of enhanced coordination of care and access to services, enhanced quality of care, and reduced fragmentation to offer seamless continuity of care, to name a few. We continually work in partnership with members, their circles of support, their providers, and care teams to build on the individual strengths of our members. Collectively, we will be steadfast in our mission to

support West Virginians enrolled in the MHT, WVHB, and CHIP programs achieve the highest level of physical and mental health possible.

Local Care Management Staff Infrastructure

CM023	The Vendor should describe its staff qualification and training requirements for individuals who will be involved in coordinating care, including, but not limited to, any specialized care managers utilized for certain conditions
CM024	The Vendor should describe its process for hiring care management staff including, but not limited to, the following:
CM025	Staff qualifications
CM026	Plan for hiring
CM027	Timeframe for hiring
CM028	Total number of care managers to be hired
CM029	Maximum caseloads and ratios per care manager for Vendor-defined risk tiers
CM030	The Vendor should describe its process for monitoring and evaluating care managers in regard to establishing relationships with members including, but not limited to, statistics collected and frequency of collection

At Aetna, we support our members' attainment of a meaningful quality of life, optimal health, and overall wellness. CCTs operate within the context of our SOC model, and work to reduce the inequities and barriers members often face. Care management activities are delivered by Care Management staff who understand the available resources and employ effective strategies that support stability, build on members' capabilities, and help members achieve their life goals, in collaboration with provider, stakeholder, and community partners.

Care Connection Teams

Our regional CCTs include care coordinators, utilization management (UM) representatives, concurrent review clinicians, obstetrical (OB) specialists, behavioral health (BH) specialists, Serious Emotional Disturbance (SED) specialists, and SUD specialists who live in the regions in which they work. CCT Care Management staff titles include care management associates (CMAs), care management coordinators (CMCs), and

clinical care managers (CM-nurse, and CM-licensed clinical social workers [LCSWs]) that have extensive experience and training in conducting assessments, facilitating integrated care planning, utilizing clinical models, navigating the Medicaid system, and conducting ongoing care coordination. The configuration of our CCTs is flexible and is designed to meet the specific needs of local communities. If needed, we adjust staffing to meet regional demands (e.g., we increase the number of care managers with specific BH background or increase UM team staffing for members with complex medical needs). A **statewide peer support specialist** also supports the CCT to offer members additional support. Roles and qualifications for CCT members will be described later in the response. **Figure 6.3.1-1** depicts our regional Care Coordination teams as they are currently configured in West Virginia.

Given our longstanding presence in health care delivery in West Virginia, our regional CCTs have nurtured relationships over many years with state stakeholders and other community resources. We have established productive working relationships with the Department of Health and Human Resources (the Department), Child Protective Services (CPS), the Division of Corrections, the Bureau for Medical Services (BMS), the Bureau of Behavioral Health (BBH), Right from the Start (RFTS), Birth to Three, and Perinatal Partnership. CCTs have also built relationships with the local providers and community-based organizations to support smooth coordination of care with regard to care planning and securing services for members. We coordinate with multiple community agencies and have invited many to speak to our Care Management and UM staff during staff meetings. Some examples include guest speakers from the Children with Special Health Care Needs (CSHCN) program, the Ryan White Foundation, Resolve Family Abuse/YWCA, Women, Infants, and Children (WIC), and LogistiCare. Additionally, **we embed Care Coordination staff in many community locations** as described

in **Table 6.3.1-1.** These co-located relationships foster seamless access to service, increased communication, and improved coordination of care due to the proximity of CCT members to the direct service providers.

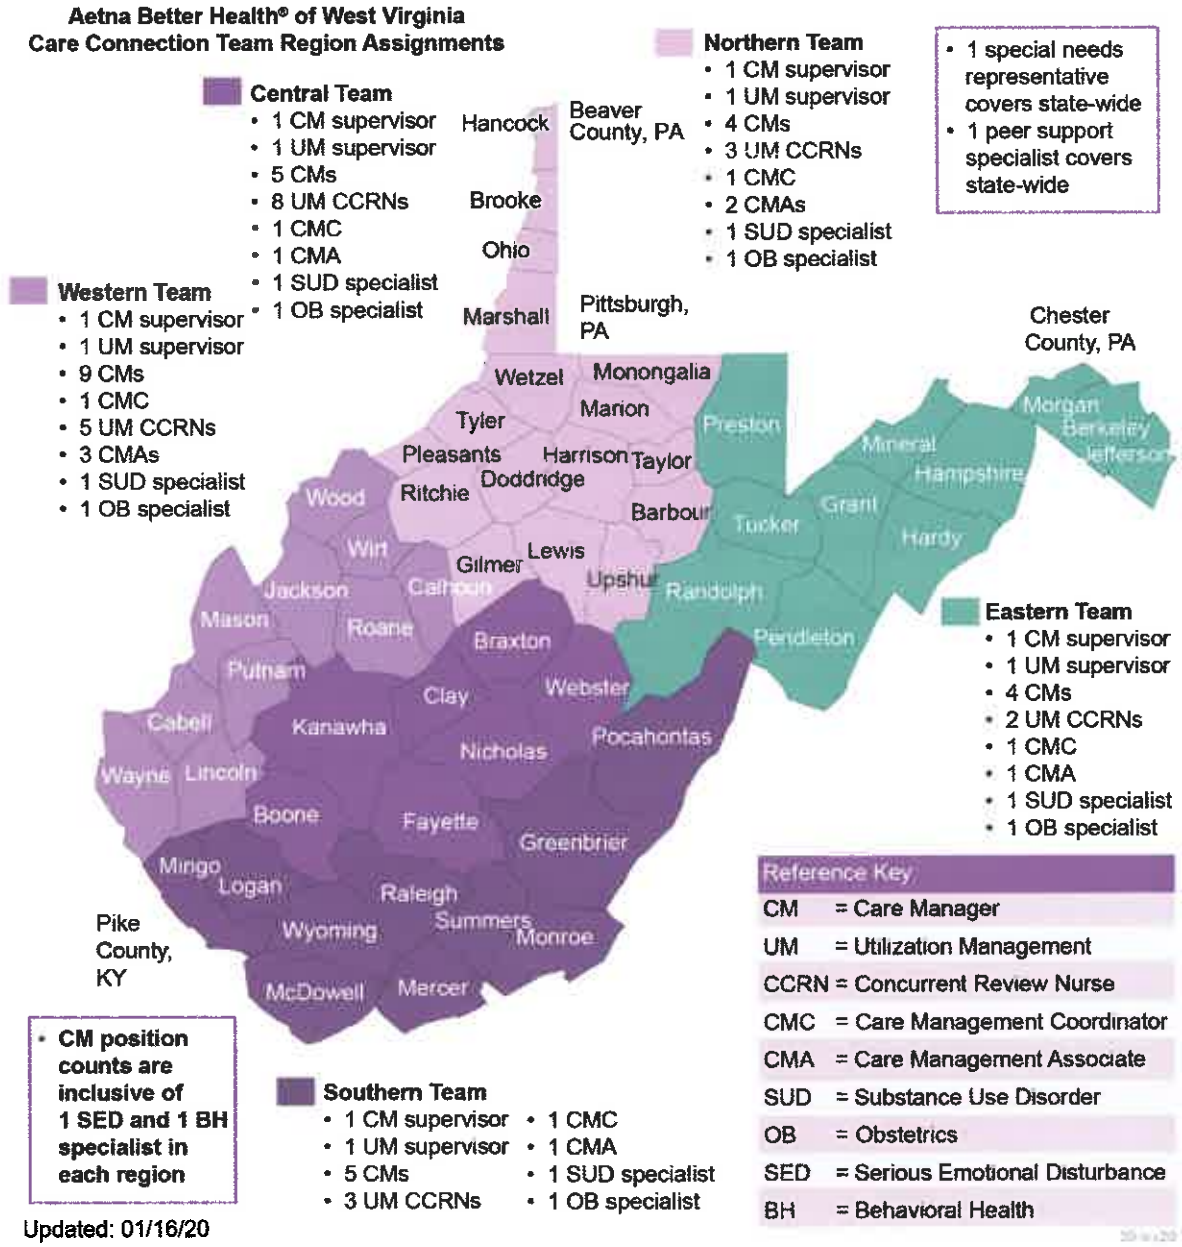

Figure 6.3.1-1: Regional Care Connection Teams
Aetna has well-established local Care Connection teams in West Virginia that are experts in regional health care needs and available services.

Table 6.3.1-1: Care Connection Team Co-Location Sites

Region	Provider Location	Region	Provider Location
Northern	• Chestnut Ridge (BH) • Weirton Hospital • Wheeling Hospital (NAS program only) • WVU Ruby Memorial	Western	• Camden Clark • Dr. James Bailes, Cabell Huntington Pediatrics • Edwards Comprehensive Cancer Center • Lily's Place • Marshall Health
Central	• Charleston Area Medical Center (CAMC) (UM and CM): Women and Children's Hospital, General Hospital, Memorial Hospital, and Obstetrics/Genecology (OB/GYN) Center • Dr. Ammar Shammaa-Women Care Clinic • St. Francis Hospital (UM and CM) • Thomas Memorial Hospital	Southern	• Beckley Appalachian Regional Hospital (BH) • Dr. Ammar Shammaa, Logan, WV • Greenbrier Valley Medical Center Mercer County • Pavilion (BH) • Williamson Health & Wellness Center (FQHC)

Embedded Care Coordinators Make a Difference—A Letter from a Provider

"Rebecca Lawrence, registered nurse (RN) care coordinator with Aetna, works within the Charleston Area Medical Center's OB/GYN Center regularly during our high-risk obstetrical clinics. Rebecca meets with the patients and builds a rapport with them that is invaluable. The CAMC OB/GYN Center provides care to a many number of patients that can and do benefit from the experience, care, and compassion that Rebecca brings to her job. Rebecca helps work with the patients and our staff to provide them with the resources they need at a time that can be very overwhelming for the patient and their families. Rebecca aids in helping patients with medication approvals, transportation issues, appointment scheduling with staff, referrals, cellphone services, housing, and any social service resources the patient may need. Rebecca's background in obstetrical nursing aids in her understanding of the type of patients we serve and what their medical needs may be. In closing, the staff here at the CAMC OB/GYN Center feels Rebecca is an integral member of the health care team and we look forward to continuing the relationship with Aetna."

Byron Calhoun, MD, FACOG
Angie Casto, MHA, BSN, RN
Jennifer DePond, MSN RN
Paul Dietz, MD, FACOG
Charleston Area Medical Center's OB/GYN Center

[CM023, CM025] Care Management/Coordination Staff Qualifications

Aetna's CCTs are comprised of seasoned health care professionals across varied disciplines who have received and continue to receive extensive training and education. **"Care**

coordinator" is the umbrella term we will use throughout the response to refer to the dedicated staff person who acts as the single point of contact for the member in the delivery of supportive or intensive care management. Care coordinators may be CMCs or nurses or LCSW clinical care managers (CM-Nurse or CM-LCSW). We employ specialized care coordinators including clinically trained OB nurses in each region, a certified wound care nurse, and 11 certified case managers. Our team members offer an array of clinical experience in pediatric, BH, oncology/hematology, neurology, nephrology, ophthalmology, cardiology, surgery, and trauma care. We are also proud of the inclusion of two certified lactation consultants in our CCTs. Three other care managers are currently training for this certification, so that we will have a certified lactation consultant in each region later this year. Each CCT also includes an SED specialist care manager (RNs or social workers who receive specialized population-specific training), a BH specialist care manager (LCSW), and a SUD specialist care manager (nurses or LCSWs) who offer expertise around regional resources and referral processes as they relate to SUD services. All Care Management staff are encouraged to complete case management certification when they are eligible. Staff qualifications and role descriptions for care coordination staff titles within the Care Management department are as follows:

- **Care management associate (CMA):** assists members with limited needs and/or low risk conditions in our Tier 1 population health care coordination program (details regarding care management tier criteria and tier-specific interventions are provider later in this response); **Qualifications:** High school diploma or General Educational Development (GED) with background check for work experience in health care settings or customer service.
- **Care management coordinator (CMC):** assigned as the care coordinator for members with moderate acuity or risk in Tier 2 supportive care management. **Qualifications:** Bachelor's degree or non-licensed master level clinician required, with either degree being in behavioral health, medical field, or human services preferred (psychology, social work, marriage and family therapy, counseling) and field work experience in health care.

- **Care manager-nurse (CM nurse):** assigned as the care coordinator for members in Tier 3 intensive care management whose primary needs relate to multiple or complex chronic conditions. **Qualifications:** Registered nurse with current unrestricted state licensure and three to five years' clinical experience. MCO and Medicaid experience preferred. Bachelor of Science in Nursing preferred.
- **Care Manager-BH (CM BH):** assigned as the care coordinator for members in Tier 3 intensive care management whose primary needs related to behavioral health conditions. **Qualifications**: One of the following behavioral health clinical licenses in the state required: LCSW-LPC–LICSW or LISAC minimum of a master's degree in behavioral/mental health or related field with three to five years' clinical experience.

We have identified opportunities to expand BH and SUD services utilizing peers. Peers are individuals with lived experience and can be extremely effective in engaging people in care, reducing the use of emergency rooms, and helping our members understand their healthcare resources. We have hired one peer support specialist to offer support primarily in the Western and Central regions where we see high rates of SUD, although they can help state-wide when requested. Given the prevalence of SUD as a contributing factor to trauma and poor health, our peer support specialist is a valuable member of the CCT, as they **possess the ability to engage and connect with members and their circles of support in a unique and meaningful way that only those with lived experience can.** The peer support specialist helps the assigned care coordinator and member in the identification of community resources and offers shared perspectives and encouragement through face-to-face visits with the member. The peer support specialist receives specialized training and coaching to serve on the CCT and participates in assessment and care planning, when requested by the member. When a member, care coordinator, and care team members identify that the peer support would be beneficial, the assigned care coordinator makes a referral to the peer support specialist. As this program continues to evolve, we are considering further expansion of peer support with the possible addition of more peer support specialists, particularly in regions of high OUD.

Our team also includes an SED project manager who has oversight over waiver management reporting, serves as a liaison for SED providers, and educates CCT members regarding the children and adolescents with SED. Additionally, our Special Needs Representative offers members assistance in applying for benefits. This role will be described in greater detail later in the response.

[CM023] Care Management/Coordination Staff Training

Aetna CMAs, CMCs, and CMs possess extensive knowledge and training across a variety of content areas, processes, and approaches. Upon hire, staff are trained both through live training sessions and through online Relias Learning Management System modules. Training topics include not only processes, but clinical models and approaches such as TIC, motivational interviewing, and ethics. Completion of initial training for new employees is tracked by care management supervisors through our training and orientation checklists. Our *Integrated Care Management Basics for Care Managers* manual is provided to new care management/coordinator employees and reviewed during the initial training phase. The manual covers topics such as the following:

- The role of the care coordinator
- The role of the interdisciplinary team includes the following:
  - Supporting providers in medical homes, assist in assuring integration of services and coordination of care, and help provide care management for members
  - Ensuring appropriate and efficient care transitions including discharge planning
  - Assessing the physical, social, and behavioral risks and needs of each member
  - Providing medication review
  - Providing member health education on complex clinical conditions and wellness programs
  - Assuring integration of primary, specialty, BH, and referrals to community-based resources
  - Maintaining frequent contact with member including face-to-face visits, email, and telephone options
  - Assisting in developing, updating, and monitoring a person-centered care plan
- Clinical guidelines for chronic conditions and other special health care needs
- Review of the Recovery Model, which focuses on the possibility of recovery, that the path of recovery is individualized, and that there is hope through recovery
- Case scenarios

- Documentation standards
- Care management policies

Other clinical content training provided upon hire includes the following:

- TIC (described in greater detail herein)
- Motivational interviewing
- Mental Health First Aid
- Family First Prevention Services Act and other federal and State policy.
- Conducting face-to-face visits
- Cultural competency
- Gaps in care
- Use of available member education materials
- Assessment and treatment of SUDs and American Society of Addiction Medicine (ASAM) criteria
- Behavioral health services
- Lesbian, gay, bisexual, transgender, and queer self-identifying (LGBTQ) community
- Addressing obesity in individuals with mental illness
- Lactation
- National Diabetes Prevention Program
- Individuals rights
- Introduction to Milliman Care Guidelines
- Improving health care quality and identification of quality of care issues
- Medical necessity
- Confidentiality
- Service excellence
- Medicaid 101
- Review of BBH and BMS policies
- Local review of State and county health improvement plans, United States Department of Agriculture local WIC/Supplemental Nutrition Assistance Program (SNAP) numbers-data and education on demographics and socioenvironmental factors
- Children with Special Health Care Needs
- SDOH resource tools including Aunt Bertha, Unite Us, and other community resource sites

Staff also receive extensive information systems trainings as it relates to the documentation and sharing of screenings, assessments, and care plans with members, providers, and others given permission by the member.

Our staff training occurs through multiple modalities to reinforce learned skills. Some trainings are provided by teleconference with live presenters, some through online trainings, and others are delivered in person at onsite trainings. All trainings emphasize opportunities for care and

community collaboration. Care coordination staff continue to receive ongoing monthly and quarterly training and assessments through our Relias (online training) offerings on a variety of topics and Aetna required compliance trainings. Care coordinators are encouraged to attend a health care summit or conference (pertinent to their background, role, and the care being coordinated) once per year and licensed staff are required to complete continuing education units as required to maintain licensure.

Aetna is leading managed care with our innovative approach to make an organizational trauma-informed care transformation. We are working with the National Council for Behavioral Health (National Council) for this cultural transformation, working with all levels of the organization including our national shared services staff, local health plan staff, and health plan providers to affect the outcomes of our members in all areas of interaction. In West Virginia, we have already made significant gains towards TIC transformation. Our Care Coordination, Member Services, and Community Outreach staff receive comprehensive and ongoing TIC training upon hire, annually, on demand through our Relias training system, and on an ad hoc basis, as new training modules are added to our trauma toolkit throughout the year. We established the training content in collaboration with the National Council. The West Virginia Aetna team was one of the first plans in the country trained in advanced coursework on TIC. We had a kickoff event with the National Council specific to West Virginia in January 2019, including a day-long training event for all staff. In total, Aetna's national Medicaid organization has trained approximately 2,500 Medicaid staff in foundational trauma training since 2018. In West Virginia specifically, 93 percent of staff in have completed the National Council's onsite TIC training and our goal is to have 100 percent trained prior by Q4 2020 (including our new Mountain Health Promise staff). We have advanced trainings scheduled for staff and providers

on February 11th, 12th, and 13th, 2020. Many providers and some representatives of BCF have registered for this training. Some of the training topics include the following:

- Defining trauma
- Prevalence and impact of trauma and ACEs
- Building resiliency and hope for recovery in the face of trauma and self-care
- Introducing TIC
- The importance of TIC for the populations served by the Aetna Medicaid organization
- Four assumptions of TIC
- Six principles of TIC

[CM024 – CM029] Care Management Hiring and Monitoring Process

Based upon our longstanding service in West Virginia, **we have a robust Care Management team already in place throughout the state that is ready to continue to provide care management activities on day one of the new contract period**. To ensure we remain adequately staffed, we continually review our staffing model and should a need for additional staff arise (and/or to address normal staff turnover), any hiring and staffing will begin immediately when the need is identified **[CM026, CM027]**. Should additional hiring occur, our intention is to have all new staff hired and beginning their training and orientation one month to six weeks prior to the go-live implementation date. Health fairs will be held throughout the state if needed, along with teleconference interviewing. Aetna has an active database of potential candidates and has access to a full support team within the Aetna Medicaid organization to assist with identifying candidates who meet position level requirements previously described **[CM024, CM025, CM026]**. This support team also assists with hiring, onboarding, and training as needed and to cover any potential deficits that may arise. Our staffing model includes training staff and mentors with extensive knowledge of this population. At this time, we anticipate we will not need to hire additional staff and estimate that staff counts will remain a total of 58 full-time equivalent positions to deliver care coordination for children and adults in MHT, WVHB, and

CHIP: 37 care managers (inclusive of OB, SED, BH, and SUD specialists), 5 care management coordinators, 8 care management associates, 1 peer support specialist, 1 special needs representative, 5 care management supervisors, and 1 manager of care management **[CM028]**. Maximum care coordinator to member caseloads ratios for each care management tier are as follows **[CM029]**:

- Tier 1 Population Health Care Coordination: 1:400
- Tier 2 Supportive Care Management: 1:125
- Tier 3 Intensive Care Management: 1:41

In addition to matching members' care needs to the care coordinator with the most relevant experience, appropriate staffing ratios are essential to a balanced and successful care management program. The staffing ratio tool we use to develop caseloads is based on workload studies that consider time elements, such as how long it takes to schedule and complete an assessment, call a member, or drive to a member's home, as well as time for case rounds with the medical director, community-based service collaboration, interdisciplinary care team meetings, personal development enrichment, training, supervision, and documentation. Supervisors review caseload ratios and case weights (which factor in the mix/numbers of Tier 2 and Tier 3 members assigned to an individual care coordinator) on a monthly basis. When a care coordinator's caseload approaches maximum thresholds (based on maximum ratios and case weights), our leadership team conducts a staffing review. Based on the results of this review, we submit a requisition to hire additional care coordinators or reallocate resources, without exceeding the maximum target ratios, in a manner that enables us to provide members the services they need in an agile manner.

[CM030] Monitoring and Evaluating Establishment of Care Coordinator/Member Relationships

Numerous care coordinator training modules previously listed (including The Role of the Care Coordinator, Motivational Interviewing, Conducting Face-to-Face Visits, Cultural Competency, and TIC) focus on the importance of care coordinators building compassionate, person- and family-centered relationships with members. The steps care coordinators take to develop these relationships will be discussed in greater detail throughout the response. In order to monitor and evaluate care coordinators' success in establishing relationships with their assigned members, care coordination leadership conduct **audits (monthly) and periodic review of tenure reports to ensure that screenings, assessments, care coordination tier identification, and integrated care plans are completed within all initial and ongoing/update required timeframes**. Audits of assessment and care plan documentation also identify whether the care coordinator is efficient and thorough in their interactions, which can indicate the degree to which they are building positive relationships with their members. Care coordinators also self-monitor timely completion of these elements through a search function in our electronic care management system that allows them to see when update tasks (such as an annual reassessment or required care plan update) are coming due or if any are overdue. Additionally, **leadership monitors the ability and success of care coordinators' establishment of relationships with their assigned members through an audit tool (which is developed with input from the Quality Management Oversight Committee) that evaluates the care coordinators' use of motivational interviewing techniques.** During the first three months after an employee is hired or after a new plan/contract is implemented, monthly audits are conducted on each employee, consisting of a minimum of three file reviews per employee. Additional audits occur as follows:

- If the employee's score is lower than ninety percent, the manager is required to review two additional records (totaling five records monthly)
- When the employee has achieved the ninety percent threshold for three consecutive months, audits are done quarterly
- When the employee has achieved an average score of ninety-five percent or higher for two consecutive quarters, audits are done twice per year

Observational reviews are accomplished by phone monitoring and/or face-to-face observation:

- Phone monitoring of at least five telephone calls using the applicable observational worksheets and/or business application system assessment tool for management staff to assess the quality of verbal exchange between the caller and the care manager
- For any staff providing face-to-face care management, one face-to-face observational visit is conducted with the care coordinator, the member, and family/supports as applicable. Additional face-to-face audit visits may be completed for any staff member at the discretion of the supervisor or manager.

Throughout all audit processes, if leadership identifies a care coordinator who is performing below expectations, a training plan is developed to help the staff member improve their knowledge and/or skills. As described above, leadership continues to ongoing audits of employees' performance to identify if training support is leading to desired improved outcomes.

Leadership also checks care management opt-in versus opt-out percentages on a monthly basis. If a particular care coordinator's opt-out rates are rising, it may be an indicator of an opportunity to improve relationship-building skills (such as motivational interviewing) and the staff member is required to attend relevant training. Finally, a care coordinator's success in establishing strong relationships with members and their guardians can be assessed through responses in member satisfaction surveys, which members complete if or when they disenroll from care management services. Any problematic patterns or trends identified through the auditing process results in additional continuous quality improvement activities to develop or enhance protocols or policies, or to provide additional training to staff.

System of Care

A high-performing SOC is a collection of integrated services and supports that help members achieve goals that are important to them without barriers or delays. The integrated services and supports may include all forms of health services, as well as housing, employment, healthy food, transportation, and other living supports to optimize resiliency and independence. **The SOC is grounded in the demonstration of TIC, culturally and linguistically appropriate services, and recovery principles.** Aetna recognizes the increasing importance of having a robust SOC strategy to serve members of complex, diverse populations. Enhancing, leveraging, and developing community-based systems of care better connects people to the treatments, services, and supports they need, when they need them. Aetna's SOC strategy addresses SDOH and health care disparities as part of the optimal approach to improving population health as well as health care utilization. The goal of Aetna's SOC framework is to reduce barriers, improve access to care, and identify and solve for any system process needs. We engage and participate in cross-sector collaboration to address adverse community conditions where people live, learn, work and play.

When we implemented services for the Mountain Health Promise contract, we hired four SOC administrators to lead our SOC efforts for that program. As we evaluate needs for the MHT, WVHB, and CHIP program, we plan to utilize three of these staff in a shared capacity for the MHT/WVHB/CHIP SOC. These individuals have extensive experience in the delivery and implementation of tailored services and supports for West Virginians. They are professional leaders who demonstrate passionate support through consultation to address and overcome systemic barriers that members may encounter during the care and service delivery. The descriptions below explain some of the functions/roles these administrators will offer for the MHT/WVHB/CHIP population:

- **The recovery and resiliency administrator**: actively participate in meetings such as rounds to ensure that member voice and choice is addressed; develop relationships with community-based organizations focused on recovery and resiliency and leverage those relationships to support members in maintaining community tenure; ensure member voice and choice is embedded within health plan operations; cultivate a recovery and resiliency environment within the health plan; participate in Member Advisory Council; work with Care Management Opioid Program Champion on initiatives which promote reduction in OUD and SUD
- **The adult SOC administrator:** conduct data analysis to identify service gaps with special attention to adults with complex needs, adult specialty populations, and SDOH; engage in cross-sector collaboration (with care management, quality, network teams) to identify and implement solutions for gaps in care; work with state and community stakeholders to support the needs of adults; identify community-based organizations that focus on supportive services for adults and educate internal departments about these resources; work with children's SOC administrator to confirm children who age out into the adult service system have needed services; promote TIC principles; participate in Member Advisory Council
- **The children's SOC administrator:** identify and outreach potential partners to enhance the service array for youth members and their families; support care management staff to identify resources to provide support to families and youth; analyze data to identify service gaps and, through cross-departmental collaboration, identify programs and strategies to resolve these gaps; attend Member Advisory Council; participate in rounds to ensure the needs of youth members are addressed

We believe that the recovery and resiliency administrator, in particular, will offer crucial support for the MHT, WVHB, and CHIP populations, especially with regard to TIC and initiatives related to the opioid epidemic. As an expert in community-based services and supports that promote holistic health, the recovery and resiliency administrator plays a key role in helping West Virginia personnel hold true to a recovery-focused perspective which emphasizes the importance of the individual in identifying their goals for wellness and health. The recovery and resiliency administrator advocates for service environments that are supportive, welcoming, and recovery oriented.

In alignment with our SOC framework, we identify and collaborate across sectors to address gaps and barriers that contribute to improved health outcomes for well-defined populations including people with complex needs or members of marginalized populations. The following departments engage in collaboration with our SOC administrators:

- Medical Management (Utilization Management and Care Management)
- Quality
- Finance
- Provider Experience
- Network
- Member Services
- Claims
- Fraud/Specialized Investigative Unit

West Virginia's state goals to deliver enhanced coordination of care and access to services, enhance quality of care, and reduce fragmentation to offer seamless continuity of care provide the SOC administrators direction on what services are needed to promote, restore, and maintain the health of members. Aetna is aware that service gaps are present, including the absence of specific services and providers, insufficient coordination of service delivery, and inadequate capacity of present services. The collaborative nature of a SOC approach allows the team to communicate systemic solutions (such as the addition of new providers, contracting of traditionally out-of-network providers, or coaching existing providers to develop new evidence-based programs) for MHT, WVHB, and CHIP enrollees, which improves access to quality services. Health literacy, SDOH, and navigating the health care system are major challenges for many of our members. As challenges or barriers are identified, most often through multidisciplinary rounds, SOC administrators assist in addressing the barrier and developing solutions so that members' experiences are streamlined, and providers can have seamless access to services for their members. SOC administrators are trained in community, local, federal, and national resources and participate in community stakeholder discussions as well as public health meetings. **Figure 6.3.1-2** depicts our integrated SOC and demonstrates our comprehensive focus on the member and their circle of support (i.e., the people the member wants to be involved from outside the health care system), primary needs, and goals.

Figure 6.3.1-2: Aetna's Integrated System of Care
Aetna's integrated system of care includes all health care and related services and supports necessary for members to achieve improved health outcomes.

Care Management Processes and Member Identification Overview

CM001	The Vendor should describe its Care management program, including, but not limited to:
CM002	Processes to organize its care management department by disease or problem type
CM003	Processes to identify members for participation in the care management program, including screening and timeliness of enrollment, risk levels, tiers, Social Determinants of Health (SDOH)
CM004	Processes and timeframes for assigning members to a care manager
CM005	Processes for identifying members for care management, or those receiving high-cost care, who would benefit from care management
CM006	Processes for how care managers will establish relationships with members, including frequency and timeliness standards after the initial health assessment
CM007	Processes to ensure that members who have specialists as Primary Care Providers (PCPs) are receiving primary care services on an ongoing basis, and interventions if adequate services are not being provided
CM008	Processes to ensure continuity and coordination of care
CM009	Processes to identify pregnant women at enrollment and on an ongoing basis
CM010	Processes for promote "early and often" prenatal care for women identified as being pregnant
CM011	Processes for Supplemental Security Income (SSI) members, if different
CM012	Processes for administering care management for both adults and children

CM013	Processes for administering care management for members with special health care needs, defined as individuals with complex or serious medical conditions
CM014	Processes for administering care management for children with special health care needs (CSHCN)
CM019	Clinical, social, or other criteria used to determine which members require care management and assignment to care managers
CM031	The Vendor should describe its protocols for addressing a member that would benefit from a care manager, including alternatives for members that do not want a care manager, members who cannot be reached, and members who have missed medical appointments.

[CM001] Upon enrollment and/or referral for care management, **all members are screened for needs that indicated they may benefit from care management.** If a member's response to initial screening meets certain criteria (to be described later in the response), they are assigned into one of three levels of care management. Aetna uses a range of screening, risk stratification, and clinical assessment tools to evaluate life adversities, acute and chronic conditions, risks, strengths, SDOH, and resilience factors to assign children and adults enrolled in the West Virginia MHT, WVHB, and CHIP program into a level of care management that meets their unique, holistic needs and addresses their particular SDOH. Our initial screening and engagement activities encourage member and circle of support participation from the beginning and are designed to understand each unique member in the context of their lives. The three care management levels into which a member may be assigned include: intensive care management (Tier 3); supportive care management (Tier 2); and population health care coordination (Tier 1). For purposes of this response, we call the treatment plan the 'care plan.' Members in Tier 1 develop care plans as needed with their PCP. Aetna care coordinators partner with members in Tiers 2 and 3 to develop a person-centered care plan that enhances their quality of life and assists them to build resiliency and maximize self-sufficiency as they achieve their individual health care goals. Care coordinators continue to collaborate with

members, their circle of support, and providers to conduct ongoing assessment, care coordination, and care plan updates. **Figure 6.3.1-3** provides an overview of our care management processes. The details of each step in the care management process overview **will** be provided following this overview figure and throughout the response.

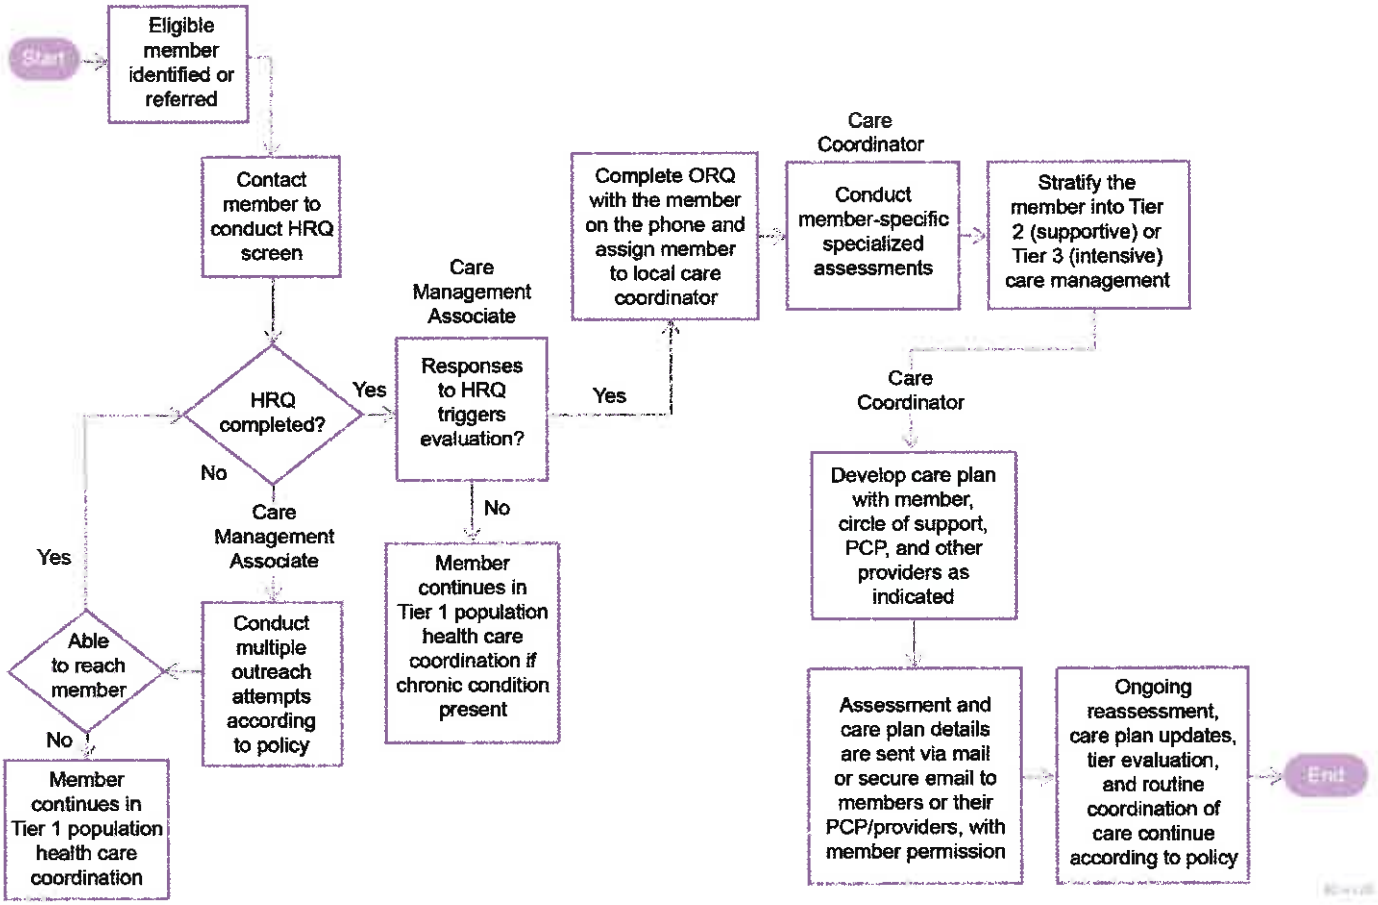

Figure 6.3.1-3: Routine Care Coordination Process Flow
Care coordination processes include screening, assessment, the assignment of a dedicated care coordinator, creation of the initial care plan, and ongoing coordination of care.

[CM002] Disease or Problem Related Care Management Organization

Aetna's CCTs are structured and organized by region, based upon membership in each region, rather than by disease or problem type. As a result, members receive care management from CCTs and care coordinators who live in the regions where they work and are familiar with

unique challenges and resources at the local level. However, we do provide condition-specific care management within the CCT as **each regional CCT includes a complement of specialized care managers** such as the OB specialist, SUD specialists, BH specialist, and other specialized care managers/coordinators who have condition specific expertise or training, as described earlier in our response relative to staff qualifications. Members are connected to specialized care coordinators who possess the expertise and education needed to address their unique circumstances and conditions. Care coordinators conduct condition-specific assessments and interventions with members based upon individual needs such as high-risk pregnancy, SUD, chronic health conditions, cancer treatment, and BH, to name a few. As care plans are developed and health goals are monitored, care coordinators evaluate whether health care interventions and services are addressing the member's specific condition or problems. Additional information regarding the assessment, care plan creation, care coordination interventions, and outcomes monitoring process is provided throughout the remainder of this response.

While the care management staffing configuration is not organized specifically by condition or problem type, **we have designed many condition-specific care management programs and interventions**, which will be described in detail throughout this response. As one example of condition-specific care management, Aetna's Diabetes Management program assists members with a diagnosis of diabetes understand the health risks of living with their condition, the benefits of adhering to blood glucose testing and prescribed treatment regimens, and elicits changes in members' behaviors, positively impacting their current and future health and wellness. Care coordinators conduct diabetes- and weight-management assessments and develop care plans to target goals related to outcome improvement with respect to diabetes indicators and

symptoms. Care coordinators are educated regarding Aetna, state, and national resources which they share with members with diabetes including our informational mailers regarding diabetes; Dining for Diabetes; Juvenile Diabetes Association; the Camp Kno-Koma pediatric diabetes camp; and ActiveHealth wellness programs, to name a few. Through our **Diabetes Collaborative** project, we have coordinated with eight different entities throughout the state to provide Diabetes Self-Management Education classes to our members. We reimburse the providers of these classes and provide a $25 gift card for members who complete the classes and have an HbA1c test. Additionally, in collaboration with the Williamson Health and Wellness Center in Mingo County (which employs CHWs), our onsite care manager works with the CHWs weekly to enroll members with chronic diseases such as diabetes into care management. The CHWs help to link patients with community services and conduct regular home visits to assist patients with medication adherence, chronic disease self-management, healthy eating, and active living goals. The CHWs receive their instructions for patient care at the weekly care coordination meetings and are in regular contact with the team nurse.

[CM003, CM004, CM005] Member Identification and Assignment to a Care Manager

Aetna employs tested processes to identify members transitioning from another MCO to Aetna or new Medicaid and CHIP enrollees assigned to our plan to conduct screening, risk stratification, and assignment to an appropriate level of care management and a dedicated care coordinator, as will be described in detail below.

Transition of Current MHT/WVHB/CHIP Members from other MCOs

Aetna's transformative vision drives our model for enhanced care coordination supporting the children and adults enrolled in MHT, WVHB, or CHIP. To identify and coordinate care for members enrolled with another MCO who are transitioning to Aetna, we follow our Transition of

Care policy and procedure to identify and assist transitioning members. Our transition plan for members with the most immediate and complex service needs is described here.

All transitions have the potential to be traumatic, and we take action to facilitate smooth and thoughtful transitions. We will work with the originating MCO and treating providers leading up to the transition of the member to obtain necessary medical records, prior authorizations, medication lists, and any additional pertinent details that we can use to discern members with immediate needs. The timeliness of obtaining these records, as documented in our Transition of Care policy, is essential to minimizing disruption in services for members that require our unwavering commitment, collaboration, and compassion. Aetna maintains the continuity and the quality of members' care and services as they enroll in Aetna plan. Aetna's activities are aimed at supporting and avoiding unexpected complications associated with these transitions and include but are not limited to the following:

- Active participation of health plan care team in identifying and adjusting the member's care and service plan for members in transition, particularly for those who need special care during the transition
- Involving applicable Aetna staff members including pharmacy, practitioners, and providers, advocates, and other health plans as necessary so that services will continue without disruption
- Monitoring transfers to minimize unnecessary complications and to foster continuity and quality of care during care transitions
- Ensuring that member has access to needed medications utilizing Aetna or the BMS pharmacy claims data

In addition to collaborating with the MCO and incorporating enrollment data provided, we utilize the following data sources to identify the service history of transitioning members with immediate and/or complex needs (such as those who are inpatient at the time of transition or those who receive multiple psychotropic medications):

- Population health platform: If a member is returning to Aetna (i.e., they have a history of enrollment with us in the past), our population health platform may offer historical

information, such as admission, discharge, and transfer (ADT) information that proves useful during transitions of care

- West Virginia Health Information Network (WVHIN): We obtain prior medical history, testing, pharmacy, labs, and other pertinent clinical information through the WVHIN

A specialized CCT comprised of interdisciplinary staff that is experienced in serving children and adults served through this procurement outreaches to high needs/medically complex transitioning members, as needed to facilitate a smooth transition. During the initial outreach conversation, the care coordinator obtains information about existing services and the member's ongoing support needs and any current concerns. The care coordinator reviews the member's person-centered care plan (if applicable), enrollment file, and any other functional assessment and health and service authorization records provided by the Department. We ensure that our care coordinators understand the impact of previous trauma and the importance of creating an environment of safety that does not cause re-traumatization. With this in mind, at each step, the care coordinator involves the member, providers, and the member's CCT in the transition process to ensure the member feels supported and heard throughout the change. Our staff facilitates the development of a comprehensive transition plan that contains clear explanation of the continuation of services and medications and explains the role of the Aetna care coordinator as the point person for transition-related questions. Our goal is to provide a seamless and welcoming transition for members. The specialized CCT makes a preliminary determination of which care management tier to connect the member to for ongoing care coordination based on available data regarding the member's historical service and claims data, assessment, and care plan information, the initial conversation with the member and their family, and our clinical tier criteria and risk stratification tool (described later in this response).

[CM005] Identification of New Members or Need to Re-evaluate Current Members for Higher Level Care Management

Aetna uses enrollment data sent by the Department to identify new members who need screening for assignment to care management. Additionally, Aetna may receive referrals from other sources, who through their day-to-day work with current Aetna members, identify individuals that could benefit from a higher or different level care management services than the level in which they are enrolled. These referral sources include the following:

- State staff from the BMS and BBH
- Providers, including primary care, BH, and specialist providers
- School-based health centers, faith-based groups, and social service organizations including Unite Us and SDOH providers, such as food banks
- Through our relationship with local retail pharmacies, community pharmacists assist in identifying members who need care management services and refer them to Aetna
- Utilization Management, Quality Management, Member Services, or other internal departments
- Alert within care coordination system upon West Virginia member discharge from inpatient stay prompting care coordinator to connect with member to assess for barriers to receiving care
- Member Services and Grievances staff referrals resulting from historical data that we assess and trend at the member level
- Community organizations such as Perinatal Partnership

Existing members and/or their guardians/families may also self-refer and directly contact our Member Services line for assistance related to care management assignment. Additionally, enrollment data, claims data, annual rescreening and reassessments, monthly surveillance reports (to include SUD diagnosis information, inpatient alerts, and historical referral information), and monthly risk stratification processes (described later) help CCTs identify when current Aetna members should be contacted and considered for a different level of care management. For example, claims reports identify members who are on antipsychotic medication and/or multiple other medications and may require a higher level of care management. In these cases, our Care Coordination staff may outreach the member and their

family to assess whether they are receiving all necessary services or need lab tests, and whether they should be referred to a higher level of coordination.

[CM003] Screening and Enrollment Timeliness Inclusive of SDOH

Upon receipt of a referral or member self-referral for care management, or notification of enrollment of any new member (based on notification via Department 834 files) Aetna begins the initial care management screening process. Aetna's automated outbound screening process is our first attempt to complete the health risk questionnaire (HRQ) screening with the member. The outbound system contacts the member to attempt to complete the screening within 90 days of notification of enrollment. We disclose to the member how we use the information gathered in screening tool. The HRQ is available in English and Spanish and can be completed via multiple avenues based on member and family needs. In addition to completing the HRQ through contact by the outbound automated system, HRQs may be completed in person, or via printed or web-based forms. Further detail regarding domains evaluated by our screening tools and processes is provided later in the response.

The HRQ screening process includes questions related to SDOH and allows for initial and immediate 1) determination that the member does not require care management, 2) stratification to Tier 1 population health care coordination, or 3) indication of the need for additional assessment to determine whether referral to Tier 2 (supportive) or Tier 3 (intensive) care coordination is appropriate. All members providing positive responses to any initial screening question on the HRQ, and who may have multiple chronic conditions, SDOH barriers, or other special health care needs, receive further screening via the outreach questionnaire (ORQ). Immediately following completion of the HRQ through the outbound call process, these members are warm transferred to a care management associate for immediate additional ORQ

screening and assignment to a care coordinator who will later complete the health care equity (HCE) contact event, health needs assessment, and stratification into the appropriate care coordination level (2 or 3). Members who hang up during the warm transfer process appear on a report care management uses to identify those who need follow up to complete the ORQ. Members who were matched with Tier 1 population health care coordination after completion of the HRQ are given information on how to reach out to care management and the number to call if they need assistance. They will receive other care coordination intervention as described later in this response.

To maximize the number of members completing the initial HRQ screening process, Aetna uses multiple telephonic and written engagement strategies as well as in-person navigation for those new members requiring additional support. Aetna makes five attempts to contact the member by phone, each occurring on different days and different times to improve the probability of contact and completion of screening. After these attempts, Care Management staff sends a letter to the member stating that the telephonic outreach attempts have been unsuccessful and invites the member to contact Aetna to complete the screening. If the member does not contact us, Care Management staff review the claims management system, including the call-tracking notes and member records, to identify another means of reaching the member. Our regional CCT teams also work with Utilization Management staff and local hospitals for our adults, children, and youth discharged from an inpatient setting to identify member contact information in order to complete the screening. Care Management staff use medical, BH, and pharmacy claims as well as ADT data from WVHIN to identify contact information which may improve success in reaching the member to complete the screening. Additionally, care management staff has access to our CVS retail pharmacy member contact information in our **Engagement**

Dashboard, a database of phone contact information for Aetna members who utilize CVS for their prescriptions. We are also implementing in-store engagement campaigns that notify CVS pharmacists to have a conversation with a member about a gap in care. For example, if an Aetna member who presents at the pharmacy for a prescription is someone we have been unable to reach to complete an HRQ or annual care management assessment, the pharmacist can reinforce the importance of the screening or assessment and provide the member with the phone number to Member Services to request to speak with a care management representative. The pharmacist could also document interaction notes and the best day/time for the member to be reached and send the information back to Aetna to increase the likelihood of care management engagement.

With multiple entry points, data review, and member contacts, we maximize opportunities to engage members to complete HRQ screenings within 90 days and conduct outreach to those missed through initial outbound screening. Aetna reaches out to 100 percent of members and has established several additional practices to increase screening completion success via multiple points of access, including the following:

- **Member portal:** Members may complete a self-assessment via a link in our website which provides condition specific recommendations and education in response to specific member answers within the assessment; the Care Management team receives a report of completed self-assessments and members with an identified need are outreach for further assessment.
- **Member services:** Member Services representatives may identify, through conversations with members, the potential need for the member to complete screenings or further discuss care management service options; in these cases, Member Services will warm transfer member calls (with member agreement) to Care Management staff for completion of the screening to determine if they may benefit from a higher level of care management.
- **Aetna mobile application**: We are evaluating the possibility of enhancing our mobile application to allow members to complete the HRQ through our secure mobile application. The HRQ data would feed directly into our electronic care management system. If it is determined we will add this functionality, it would likely be implemented in 2021.
- **HRQs completed in the community:** The HRQ tool is available for completion with embedded care coordination staff and at other provider locations.

[CM003, CM005] Risk Stratification

Consolidated Outreach and Risk Evaluation (CORE™): Proprietary and evidence-based, CORE is a stratification tool that uses time-tested analytic methods honed for more than 10 years. CORE contributes to member stratification from internally developed algorithms based on population data and our clinical and informatics expertise. CORE includes census track and ZIP code data to incorporate social determinant elements at the population level in its predictive modeling. CORE, in conjunction with the data sources described below, determine each member's potential risk level (please refer to the bullet points below in conjunction with **Figure 6.3.1-4):**

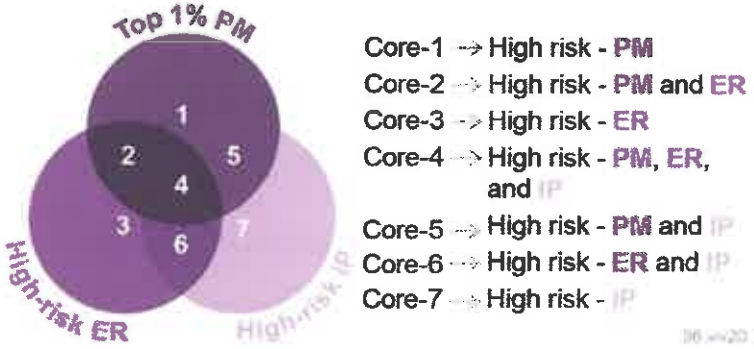

Figure 6.3.1-4: Aetna's CORE Model
CORE allows Aetna to identify members with a potentially high-risk for costly utilization who may benefit from enrollment in care management.

- **Predictive Modeling (PM) General Risk Score**: members in top one percent of population based on medical and BH diagnoses, medical service utilization, and pharmacy use
- **Emergency Room (ER) Risk Score**: risk of an ER visit within the next 12 months
- **Inpatient (IP) Admission Risk Score**: risk of an IP admission within the next 12 months

CORE has identified that 2.6 percent of our West Virginia enrollees fall into CORE level 4 (highest risk), as compared to 0.5 percent in another Aetna Medicaid health plan with the next highest percentage of members in this category.

Aetna uses several indicators in addition to CORE, including the HRQ, ORQ, additional assessments, surveillance or referrals, concurrent review, and real-time medical and pharmacy utilization data to ensure that members are receiving care management at the appropriate intensity and tier level. We run the model for our entire population monthly and the results of CORE stratification are sent to a work queue in our electronic care management system, which

is monitored by care coordinators and their supervisors. CORE's internal algorithm communicates in the work queue when a member's risk level has changed, which informs care coordinators and supervisors when a member might possibly need further assessment to determine if a different level of care coordination is appropriate. For example, if a member is identified with CORE level 4 (the highest, most intensive risk stratification), the care coordinator will modify the member's tier level to level 3 for intensive care management services and will outreach the member to initiate services in alignment with expectations for that tier (described later in the response).

Predictive Model of CORE

CORE results are predictive in multiple dimensions:

- The ER model has a positive predictive value of 72.1%, meaning that 72.1% of the time, the predicted ER utilization occurs in the next 12 months with a positive predictive value of 95.4%
- These factors, coupled with our utilization management and quality management surveillance strategies, enable us to assign members to the most appropriate levels of care

Rising risk model: Because Aetna believes in a prevention and early intervention approach wherever possible, we have developed a rising risk model to identify children and youth with key risk indicators and health outcomes that may be impactable by prevention and early intervention of trauma-informed practices, approaches, and care. This practice allows the care coordinator and the member's care team to intervene at an earlier point with newly enrolled members to provide increased support and services to avert potential traumatic events or utilization of more restrictive or intensive levels of care. **Aetna's rising risk model uses 28 different measures to stratify and score members age 17 and under** including measures around specific BH disorders, opioid use, physical/sexual/psychological abuse, self-harm claims, comorbidities, risk stratification score, engagement in care coordination, PCP assignment, frequency of changing PCP over the course of a year, total medical spend, ER utilization, pregnancy, justice system

involvement, sexually transmitted disease diagnoses, household opioid use, household self-harm claims and household physical, sexual, or psychological abuse. Weighted scoring is assigned relative to specific diagnoses, treatments, or services. Using this method, the care coordinator can rapidly identify members and who are at elevated risk that may need to receive services at a higher tier of care management. Once a member is identified for rising risk, the care coordinator will outreach the member to further assess the situation and determine the next best course of action. This may include assignment to a higher care management tier if warranted, based upon review of all available information including the rising risk score and the updated assessment. Members with rising risk may need other types of increased assistance such as help with obtaining transportation or addressing needs related to upcoming surgeries. While our current rising risk analysis activities focus on children, we are expanding this model to adult populations with a condition-specific focus.

[CM005] Monitoring members with high physical or behavioral health needs/high-cost care: Aetna is committed to care management for children and adults with high needs/high-cost care. Members are identified within this category based upon indicators found in high-cost reports and screening data, presence of multiple behavioral diagnoses, recurrent ER visits, complicated medication regimens, and/or social isolation, to name a few. Members with high-need/high-cost care receive coordinated and comprehensive monitoring through care management that emphasizes member- and family-centered care and strengths-based approaches. These strengths-based approaches are integral when supporting members with high needs as it is recognized that these members may have experienced difficulties with accessing and receiving care due to a variety of variables and thus need to be actively engaged in the care delivery process to drive optimal health outcomes. Our approach focuses on cultural sensitivity, peer-to-peer support,

coordinated care, and goal setting. Thus, member care is monitored closely to ensure the CCT is apprised of any changes in status and need for more or less supportive services. Before final determinations and/or changes are made, the care coordinator and the member will collaborate to discuss all potential options in a collaborative fashion. The care coordinator also works with the member to discuss progress toward care plan goals, address any barriers they may have, and additional individual needs will be assessed informing whether more or less intensive services and supports are needed based on the member's feedback. We leverage our relationships with community organizations to stay connected to members during critical times ensuring a seamless system of care. For example, we have Care Management staff embedded in 10 hospitals and BH facilities who can convene with all collaborators, the member, and the member's supports, to ensure the best plan is in place.

[CM003, CM006, CM019] Care Management Tiers and Frequency of Contact

Based upon HRQ screening outcomes (inclusive of clinical and SDOH information to be described later), risk stratification predictions described above, as well as assessments (described later), Aetna uses a person-centered approach to assign eligible members to one of three care management tiers that matches their individual needs. **Table 6.3.1-2** depicts the clinical and SDOH criteria for each care management tier **[CM019]**.

Table 6.3.1-2: Clinical Criteria for Care Management Tiers

Care Management Level, Ratio and Staff Type	Clinical and/or SDOH criteria
Intensive Care Management (Tier 3) CC to member ratio: 1:41 Care Coordinator Staff Type: CM Nurse, CM LCSW	• Individuals with multiple complex chronic conditions, comorbidities, or co-occurring conditions, special health care needs, medically complex • Individuals with three or more ER visits or previous BH inpatient admissions • Pregnant women with a history of substance use or who are currently using substances • Pregnant women with current or historical high-risk pregnancy

Care Management Level, Ratio and Staff Type	Clinical and/or SDOH criteria
	• Infants with NAS • Children and young adults with abuse and/or trauma histories with significant SDOH needs or with other complex diagnoses • Adults and adolescents who are homeless or have a history of residential instability (four or more residences over the past year) • Children with SED • Individuals with HIV/AIDS, cancer, chronic renal failure, and other chronic complex conditions
Supportive Care Management (Tier 2) CC to member ratio: 1:125 Care Coordinator Staff Type: Care Management Coordinator	• Moderate acuity, not at risk of crisis • Individuals with ambulatory care-sensitive conditions or a disease management condition (e.g., asthma, chronic heart failure, chronic obstructive pulmonary disease, diabetes, or depression) • Referrals from within the plan or a provider that indicates care coordination or service needs and/or readmission risks
Population Health Care Coordination (Tier 1) CC to member ratio: 1: 400 Care Coordinator Staff Type: Care Management Associate	• Individuals with limited health care needs • All members with chronic conditions needing ongoing surveillance and support identified for care management and not enrolled in Tier 2 or Tier 3 • Members able to self-manage condition(s) • Low-risk pregnant members • Members with identified SDOH in need of education and resources • Member showing improvement who moved from Tier 2 to Tier 1

The frequency and intensity of care management interventions differ depending on the needs of the member and the care management tier to which they are assigned. **[CM006] Table 6.3.1-3** outlines the minimum frequency of contact expectations and services provided in each care management tier and demonstrates the various activities that promote the building of relationships between care coordinators and their assigned members. These interventions are tailored as needed to address each individual's unique circumstances.

Table 6.3.1-3: West Virginia MHT/WVHB/CHIP Tiers Contact Frequency and Intervention Types

Care Management Tier	Services Provided
Intensive Care Management (Tier 3)	• Face-to-face visit offered upon enrollment in care management and quarterly thereafter based on member needs, preferences, or change in condition • Comprehensive bio-psychosocial assessment including BH, substance abuse, and functional screening within 30 days of enrollment • Condition specific assessments for physical and BH within 30 days of enrollment • Case formulation/synthesis (summary of the member's story) • Integrated care and service planning, including covered and wraparound services • Chronic condition management provided by a clinician • Monthly member contact and care plan reviews and updates based on progress toward prioritized goals and communication of the care plan with the member, PCP, and others of the members' choosing, including barriers to care plan • Prioritized goals reflect issues identified in the assessment and documentation includes the supporting rationale for goal selection. • Annual re-assessments and based on member needs or as indicated by a change in condition. Interval assessment completed every 30 days. • Complex clinical and psychological care coordination
Supportive Care Management (Tier 2)	• Face-to-face visits, as indicated or required by contract • Condition specific assessments for conditions of focus every 90 days • Biopsychosocial, person-centered care plan which includes activities for chronic conditions, and service plans every 90 days • Chronic condition management support and referral to a clinician for clinically based needs associated with the condition(s) • Coaching on the management of conditions and issues and self-care • Encouraging members to communicate with their care and service providers • Education on disease process, self-management skills, and adherence to recommended testing and treatment • Quarterly (minimum) care plan review with discussion of goals and progress toward achieving them, revisions, and communication of updated care plan with the member, PCP, and others at the request of the member • Member contacts as clinically indicated by the member's needs, change in condition, or CM's judgement (every 90 days at minimum) • Annual re-assessments and based on member needs and as indicated by a change in condition

Care Management Tier	Services Provided
	• Care team coordination informed and supported by health plan-based multidisciplinary case as indicated
Population Health Care coordination (Tier 1)	• HRQ upon enrollment and annually thereafter; Krames family planning materials • Low-/no-risk pregnant members: quarterly screening to identify risk factors • Special populations: monitoring/tracking per state requirements • Aetna will educate members and their caregivers on how to contact the health plan should needs arise prior to outreach • Health education mailings

[CM004] Assignment to a Dedicated Care Coordinator

The thoughtful matching of a member to a dedicated, regional care coordinator serves as the foundation for the building of rapport and successful condition-focused care planning and ongoing coordination. **The care management associate, upon completion of the ORQ during the initial screening phone call, immediately identifies the most appropriate care coordinator to assign the member to,** and either warm-transfers the member to that care coordinator or arranges to have the care coordinator call them back, whichever the member prefers. In either case, the CMA provides the member with the care coordinator's contact information. Additionally, the CMA explains the care coordinator's role and what the member can expect to see happen next as care coordination continues. The CMA ensures the assigned care coordinator has all the screening and other preliminary information obtained during the initial screening contact process.

Due to Aetna's existing care management footprint in West Virginia, which has developed over many years, we possess significant expertise in the challenges and needs of West Virginia communities at the regional and local levels. As a result, **the CMA assigns members to care coordinators who work and live in the member's community and who have contacts with**

local partners and providers to coordinate care. The assigned care coordinator is knowledgeable of the health disparities of the region. Additionally, members are paired with care coordinators whose expertise, credentials, and training are aligned to the clinical and social needs of the member, as described earlier in our staff qualifications explanation. The CMA who initially assigns the care coordinator also utilizes their knowledge of tier based clinical criteria as well as the relative current caseload sizes of available care coordinators when they assign care coordinators. The CMA considers all these factors when assigning the 'most appropriate care coordinator.' For example, children that determined to have medically complex conditions, or infants with a diagnosis of NAS, are paired with a local registered nurse care manager and placed in intensive care management. Members with a BH diagnosis or BH claims are paired with a licensed BH care manager who works in their region, and those with SUD will be connected to a SUD specialist care manager in their region. Care management supervisors monitor care coordinator assignments and identify and resolve potential mismatched assignments through assignment to another care coordinator.

[CM006] Processes Care Coordinators Use to Build Relationships

The established expectations for the frequency of care coordinators' contact with members based on their assigned care management tier (previously described) foster the development of relationships between care coordinators and their assigned members. However, relationships are strengthened not just by completing the required number of contacts, conducting assessments, and helping to develop care plans, but through the quality and way in which these interactions occur. Care coordinators offer active listening, face-to-face visits, and collaborative partnership to members in their journey to better health as they seek to understand the member's worldview and experiences. Care coordinators are trained in

motivational interviewing, TIC, person-centered planning, cultural competency, and resiliency, all which encourage the use of member-centric approaches during the assessment and care planning process that result in the creation of caring and meaningful professional relationships. Care coordinators actively engage the member to encourage their continued involvement in achieving health and life goals and maintain positive relationships by demonstrating respect for the member's preferences and cultural perspective. Care coordinators' commitment to follow through with the member and their care team conveys to members that their care coordinator is someone they can trust to be an advocate in their care.

Making a Meaningful Connection with an Aetna Member

Linda[7] is an Aetna member with type 2 diabetes, atrial fibrillation, asthma, chronic obstructive pulmonary disease, hypertension, urinary retention with frequent urinary tract infections, essential tremors, morbid obesity, depression, and anxiety. Linda was assigned to care management due to her frequent utilization of the emergency room (ER) and multiple chronic conditions. For many years, Linda had been a caretaker of other family members and reported to her care manager that she felt she had "let myself go." When the care manager first met Linda, she had a PCP, but was not attending appointments, nor was she connected with any specialists. Linda stated she did not feel that anyone cared about her. When the case manager assured Linda that she cared about her, Linda was genuinely taken aback that someone she just met wanted to help her and was concerned for her wellbeing. Knowing that someone cared about her gave her the motivation and confidence to take the first steps towards focusing on her health. Linda's case manager assisted her with establishing care with multiple specialists, including: a cardiologist, neurologist, urologist, psychiatrist, and psychologist. Linda's case manager arranged transportation reservations for her appointments and helped her create lists to track her appointments. At times when Linda felt overwhelmed, her care manager offered emotional support. Linda now attends her appointments, takes her medications consistently, and has not gone to the ER again since establishing relationships and services with her specialists. She has lost over 100 pounds, no longer requires medication to treat diabetes or hypertension, has greater self-confidence, and has increased her mobility to the point where she can work in her yard. She describes her care manager as her "Aetna friend" and vows to continue to manage her health.

[7] Not her real name

[CM008] Processes to Ensure Continuity and Coordination of Care

The assigned dedicated care coordinator acts as a single point of contact for the member and their identified circle of support. The care coordinator is responsible for coordination of care for all necessary physical health, BH, functional, and wraparound social support services to promote improved health outcomes and member quality of life. While the assigned care coordinator has primary responsibility for care coordination, they work in close contact with the member's PCP or medical home, who also has a leadership role in the care planning and coordination process. Additionally, they communicate and coordinate with other providers involved in the member's care such as healthcare specialists, school representatives, community organizations, agencies that address SDOH, CSHCN, and pharmacies. Continuity and coordination of care activities are monitored and evaluated by CCT leadership as described in our response to **CM030**. Continuity and coordination of care is delivered based on member need and care management tier level. Examples of care coordination processes are described in the following narrative.

Facilitation of Interdisciplinary Care Team Meetings

Care coordinators facilitate Interdisciplinary Care Team (ICT) meetings (for members with complex medical conditions who have established an ICT) to ensure that all members of the care team (as identified and permitted by the member) are able to provide input in the care planning process, and that they remain informed regarding the member's progress or when barriers or new concerns arise. During these meetings, the care coordinator supports the member as the lead voice, while engaging the expertise of other medical and BH providers and stakeholders who participate on the team. These meetings are critical for reviewing and updating the member's goals, confirming services are being delivered and attended as expected, and evaluating whether the member's overall health is improving.

Assistance in Scheduling Appointments and Appointment Reminders

Care coordinators assist members in Tier 2 and 3 care management in scheduling ongoing appointments, if needed. CCT staff can enter task reminders in our electronic care management system regarding required appointments that are coming due, as well as reminders regarding scheduled appointment dates. We also work with the West Virginia Primary Care Association to ensure that PCPs understand the importance of informing the CCT when a member has missed an appointment. CCT members may contact the member following missed appointments to assist in rescheduling. Members enrolled in Tier 1 care management may receive reminders about important health screenings via mailers and collaborative community events. A more detailed description of activities to address SDOH and connect members to community resources and services is provided later in the response.

Integration and Coordination of Behavioral Health Services

The care coordinator and CCT also consults with our local BH medical director, Dr. Frank Angotti III, MD, to offer specialized coordination, as needed, for any members with BH needs. For example, the BH medical director may suggest beneficial treatment options that can then be proposed to the member's PCP, BH providers, or patient-centered medical home. If needed, a telephone conversation between the BH medical director and PCP or BH provider can occur.

Assistance with Pharmacy Needs

Care coordinators and the CCT play a critical role in working with members and providers to ensure coordination for pharmacy needs and medication management, including coordination related to psychotropic medications. The care coordinator completes medication reconciliation with the member by accessing the Department's Rational Drug Therapy and preferred drug list. The care manager can assist the member with medication questions, issues, or concerns by reviewing and contacting DXC Technologies Help Desk regarding any prescription questions.

For providers with authorization questions, the care coordinator can contact Rational Drug Therapy.

[CM007] Oversight for Members with Specialists as PCPs

Aetna respects the importance of member voice in the selection of a PCP. It is critical that members have confidence in their selection of this critical provider. In the event that a member elects to have a specialist perform as their PCP, Aetna recognizes the specialist as a PCP in our data and electronic care management systems, and they are outreached by the Aetna care coordinator for involvement in care planning, just as non-specialist PCPs are. If the specialist is new to performing the functions of a PCP role, we monitor them through gaps in care reports for HEDIS measures that need to be met and review any member complaints on appointment access or practitioner behavior. We provide ongoing support and monitoring through the care coordination process and use the same interventions we utilize for non-specialist PCPs who are not providing adequate services. This may include resolution through care coordination and planning discussions, involvement of their provider relations representative, or a quality of care referral, to name a few.

[CM009 – CM014] Population-Specific Processes

While many elements of care management processes are standardized for all member populations, Aetna does utilize specialized processes for identification and care management of members in certain populations groups.

[CM009, CM010] Prenatal and Maternal Care Management

Timely and high-quality prenatal care is critical for both mothers and newborns. Beginning prenatal care within the first trimester and receiving the recommended number of prenatal care visits is essential to reducing the likelihood of maternal complications and premature deliveries. Aetna offers prenatal and maternal care management interventions that encourage regular

prenatal care, address high-risk pregnancy concerns, and provide postpartum support to foster positive health outcomes for moms and their infants.

[CM009] We emphasize early identification of pregnant women so we may engage them in prenatal care and provide more intensive care management to those with potentially high-risk pregnancies. We use mechanisms such as the HRQ, trimester screeners, prior authorization information, prenatal claims reports, pharmacy data, and direct referrals from providers, community-based organizations, and Member Services staff to identify pregnant women early at enrollment and during our ongoing service delivery of members. Our electronic care management system includes a flag for pregnant women, so newly assigned care coordinators are aware of the change in the member's health status. We stratify pregnant women with a history of or current SUD and those with current or historical high-risk pregnancies into our intensive care management (Tier 3) program. Pregnant members in Tier 1 and 2 care management also receive pregnancy-specific care management interventions. Prenatal and postpartum interventions will be described throughout this response.

[CM010] Babies of mothers who do not get prenatal care are three times more likely to have a low birthweight and five times more likely to die than those born to mothers who do get care, according to the U.S. Department of Health and Human Services[8]. In 2018, West Virginia's preterm birthrate was 11.8 percent, which correlates to a grade of F. Additionally, in West Virginia, the preterm birth rate among African American women is 22 percent higher than the rate among all other women.[9]

We promote healthy pregnancies by encouraging pregnant members' early and frequent use

[8] Early Prenatal Care Important to You and Your Baby," Johnson Memorial Health: accessed January 21, 2020; http://blog.johnsonmemorial.org/prenatal-care-important-for-you-and-baby
[9] "2019 March of Dimes Report Card": accessed January 21, 2020; https://www.marchofdimes.org/mission/reportcard.aspx

of prenatal care. Upon identification of the pregnancy of an enrolled member, the member's provider completes the Prenatal Risk Screening Instrument (PRSI) during the first prenatal visit with the member. The results of this screening are sent to the Aetna care coordinator via fax or mail. To encourage providers to complete the PRSI, we offer a $25 incentive. The care coordinator uses the information in the PRSI to inform care planning strategies. Members in supportive or intensive care management are outreached by their care coordinator to complete additional pregnancy-related assessments (such as the perinatal assessment). The care coordinator collaborates with the member to begin the care planning process to ensure all of the member's needs are identified, to educate the member on the importance of attending prenatal visits, and to ensure prenatal services are scheduled.

All pregnant members receive a copy of Aetna's "Healthy You, Healthy Baby, A Guide for Moms and Families." This comprehensive document offers education regarding prenatal care, delivery, and how to take care of a newborn, including information regarding recommended well-child visits.

Pregnant members with high-risk pregnancies are typically be assigned to an OB specialist care manager who is skilled not only in offering pregnancy-related education but in offering support to first-time moms who may feel overwhelmed or anxious regarding pregnancy. Our care managers offer reassurance and compassion to promote healthy pregnancies and healthy babies. Pregnant members with historical or current SUD may enroll in our NAS care management program called Moms and Babies, which is described in greater detail later in the response where we discuss prescription drug abuse. Pregnant members with low-risk who are assigned to Tier 1 population health care coordination receive educational mailings regarding prenatal care services and pregnancy-related topics. We conduct trimester screeners with these

members as well to evaluate for any changes which might suggest a higher level of care management is necessary.

Our Healthy Pregnancies, Healthy Babies program aims to increase the timeliness of prenatal and postpartum care by two percent, year over year. This program encourages pregnant members to make early and frequent prenatal visits and to follow through with needed postpartum visits, to have the healthiest pregnancy and birth possible. It is supplemented with the availability of the following value-added benefits:

Cribette® Distribution for Pregnant and New Moms

Since 2016, Aetna has distributed 1,321 Cribettes to pregnant and new moms participating in our specialized programs for pregnant members and new moms.

- Cribette® (portable crib) for pregnant members who attend six prenatal visits; these portable cribs discourage or reduce the likelihood of co-sleeping, which can be a contributor to infant fatalities;
- $50 gift card for a postpartum visit between 7 and 84 days after delivery
- Pregnant enrollees receive up to two preventive dental visits

Women enrolled in the NAS Moms and Babies program receive the following incentives:

- Cribette or baby carrier to pregnant members who enroll in the NAS program for moms and babies upon delivery
- Program graduation gift

Aetna utilizes a regionalized model to impact disparities related to maternal health and birth outcomes in each identified CCT region and individually with members. Throughout all counties in the state of West Virginia, Aetna has implemented the following interventions and value-added services to address disparities in each region or identified member need:

- OB case managers embedded at seven OB practices, inclusive of Lily's Place, which includes NAS programming components
- One-on-one consultation with lactation specialists
- Care coordination through baby's first year for the following:
  - Mothers with high-risk pregnancies or SUD during pregnancy
  - Neonatal intensive care unit babies or babies with chronic or complex conditions

- Text4baby messages to keep mom and baby healthy, for those who accept text message communications
- Up to two preventive dental visits during pregnancy and a dental hygiene kid
- Trimester risk screening assessments inclusive of assessment of the use of smoking tobacco and referral to the West Virginia Quitline as appropriate; smoking cessation education
- Distribution of welcome packets to pregnant members with information on how to enroll in the WIC program for access to subsidies related to food products

In addition to these activities, we utilize targeted programs to engage pregnant members in prenatal care and education. Targeted programs address teen pregnancy, maternal/family wellbeing during pregnancy, and awareness programs to help new parents be thoughtful caregivers to their newborns.

Teen pregnancy: **Aetna provides care to teens who are pregnant through care coordination co-located with three high-risk obstetric providers in West Virginia.** This team provides both physical care and case management. Together they offer education to the teen and her support system. Comprehensive assessments are conducted to determine not only the physical and behavioral health of the teen but also environmental, educational, social, and economic situations. These assessments set the foundation for additional referrals, including transportation, specialists, inpatient residential, and further BH services. Aetna collaborates with Crittenton Services, the only residential program in the state for pregnant teens or teen girls who are parenting. Providing a continuum of BH services with residential care for girls 12 to 21 in 28 counties, Crittenton leads West Virginia in providing TIC to vulnerable young women who are pregnant. Aetna provided funding for foster families of girls in residential treatment for a weekend retreat to assist in preparation for the girls and their babies to return home. Crittenton therapeutic staff created the Family Integration in Treatment (FIT) program to improve outcomes for girls (many with babies) that are discharged from congregate care and return to their families, kinship care, or foster care. For girls in the residential program, distance, custody

issues, and resources limit the amount of contact with their families during the residential stay. FIT brings families to the residential facility for a weekend of intensive therapy and aftercare planning, at no cost. This program will be available to all Aetna Medicaid and CHIP members.

Supporting maternal/family wellbeing during pregnancy: Aetna care coordinators also work closely with Right from the Start and the West Virginia Healthy Start/Helping Appalachian Parents and Infants (HAPI) program. Pregnant members are referred to Right from the Start by Aetna care management staff, and those who are eligible are educated on the HAPI program. **HAPI services are targeted to improve maternal wellbeing** during pregnancy, prenatal care, postpartum, and during the inter-conceptional period. HAPI strives to offer services, education, referrals (e.g., for postpartum depression or maternal dental care), resources, and support to the whole family—this includes fathers/male partners of active HAPI participants. The Fatherhood Initiative focuses on providing information and support to fathers through the Fathering in 15 program. This program was developed by the National Fatherhood Initiative and is a free tool that allows fathers/male partners of active HAPI participants to access information to further their understanding of parenting and fathering skills.

Educational campaigns for new parents: Aetna is the only MCO in West Virginia to train all of its care coordinators in the Safe Sleep awareness campaign. We collaborate with Our Babies: Safe and Sound on the Safe Sleep campaign to provide education to members regarding safe infant sleep positions and offer onesies to parents that say "This Side Up" as a reminder of proper sleep positioning. As a value-added benefit, we offer Cribettes to offer portable safe sleep environments. Additionally, all our care coordinators are trained on the Keep Your Cool material, which offers education regarding the careful handling of babies and self-calming techniques for parents to prevent shaken baby syndrome.

OB Specialist Care Manager Embedded within MAT Program Helps Aetna Member

Rachel[10] was using Fentanyl and heroin when she found out she was pregnant. She began attending MAT services in the Logan area and was enrolled in Aetna's NAS/Moms and Babies care management program. Rachel's care manager connected her to needed services and resources including Right from the Start, a cribette, the Gabriel project, LogistiCare, and Heart and Hand. Allison delivered a full- term baby girl. After weaning successfully from Methadone while inpatient in the Thomas Memorial Hospital NAS/BabySteps unit, Rachel and her baby were discharged home with Rachel's grandmother. At last contact, Rachel reported her baby is thriving at home, is gaining weight, meeting milestones, and continues to work with RFTS services. Rachel continues in her weekly appointments and therapy in MAT program and has successfully maintained her sobriety.

[CM011] Processes for Supplemental Security Income (SSI) Members

We utilize our standard care management processes described throughout this response for members with SSI. However, we do offer a **special needs representative** who meets face-to-face with members that may qualify for SSI to help them complete SSI applications. Members are connected to this representative through referral by UM, CM, providers, and Member Services. The special needs representative offers both face-to-face and telephonic assistance to members to complete applications. They also provide education to Aetna Care Coordination staff to ensure they understand SSI eligibility criteria and can more readily identify which members should be referred to the special-needs representative for assistance.

Aetna's Special Needs Representative Provides Critical Support for Members Applying for SSI

Ellen[11] was hospitalized twice for pneumonia and was placed on continuous oxygen. She had struggled with substance use and had recurring severe yeast infections in her spinal column as a result. She had experienced mental health challenges, including bipolar disorder, and was homeless. She was offered short-term shelter at her father's home. Ellen's care coordinator referred her to Aetna's special needs representative (SNR) for assistance in applying for disability benefits. The SNR spent extra time with Ellen to gather all the necessary information, which at times was difficult for Ellen as she could not recall or find key information and often became frustrated with the process. In addition, several medical setbacks leading to ER visits

[10] Not her real name
[11] Not her real name

and a hospital admission occurred during this time, causing delays in her application and interview process. Ellen authorized the SNR to be her non-attorney authorized representative so the SNR could speak on her behalf during the SSI application process, participate in interview proceedings, and ensure all necessary paperwork was submitted. As a result of these efforts, Ellen was approved for SSI with back pay for months spent in the application process. She is now financially independent and able to obtain housing. Ellen says that her health will improve now that she will be able to rest in a bed instead of on a couch. She stated that the relief of not feeling like a burden to her father will also relieve a lot of stress and anxiety. Ellen continues to work with her care manager to coordinate care and substance abuse treatment.

[CM012] Processes for Administering Care Management for Both Adults and Children

The care management processes described throughout this response apply to both adults and children, except where explicitly stated otherwise. However, we do offer specialized, age-based care management interventions.

Program for At-risk Youth: Aetna defines rising risk, or at-risk youth as minors, 17 years of age or younger, who have received three or more treatments or services for high-risk diagnoses or behaviors. These members may be at risk for long-term physical health, mental health, substance abuse, and socio-economic issues, including placement in foster care, homelessness, incarceration, physical abuse, and violence. Health disparities and rural isolation in West Virginia are significant contributors to rising risk, and Aetna places critical importance on confirming that at-risk children and youth with unmet physical and psychosocial needs are identified and receive needed care. Furthermore, there is a need to provide support and establish some sense of hope to children and adolescents who are attempting to cope with harsh environments. The known barriers and challenges encountered by these children now provide opportunity for the health care system to respond with innovative approaches that: 1) take advantage of the extensive network of community health centers and school-based health centers in our rural state; 2) link PCPs and BH providers with specialist psychiatric consultation, and; 3) provide more intensive and continuous care through the inclusion of community health

workers in the primary care team. Our collaboration with Cabin Creek Health Systems and Marshall Health Systems offers team-based intensive care management for at-risk youth in Elkview Middle School, Herbert Hoover High School, and Riverside High School in Kanawha County. The care team members include the following:

- Project coordinator
- Primary care provider
- Doctoral or master's level BH provider
- Community health worker/care coordinator
- Aetna care manager
- School representative
- Legal advocate
- Medical assistant
- Consulting psychiatrist

Referrals of high-risk youth come from Aetna as identified by its risk algorithm, as described earlier. Additional referrals may come from Cabin Creek, from the school, and from courts. The CCT is the hub for receiving input on the status of the youth and developing a coordinated plan that serves the holistic needs of the youth. It receives referrals, assesses the youth's level of risk, invites youth and their family members to be enrolled, and coordinates developing care plans. Team members may vary depending on the youth's needs, but the core group includes a medical provider, a mental health provider, a clinical care coordinator (medical assistant or nurse), a community health worker (CHW), a school representative, and parent or guardian. The role of the CHW is to work with the youth and their family in implementing the care plan. The CHW also helps families address social determinants that raise barriers to their wellbeing through identification of relevant community resources advocating for them when barriers to services arise. The program integrates BH and needed specialty care into school-based health centers and links at-risk youth to community-based resources to address social service and other personalized needs.

Programs for CHIP Members: We offer several opportunities for all WVCHIP members with specialized pediatric or adolescent needs. These programs are designed to help the member and family/circle of support engage proactively in their health care. Programs include the following:

- **Weight management:** Assists children and young adults (ages 10-18) with the reduction in childhood obesity through coordination with PCPs, education providers, nutritional specialists, or other community resources to promote healthy behaviors aimed at weight and health risk reduction. Members are encouraged to participate in Ted E. Bear, M.D.® events, community gatherings, and 4-H clubs. Aetna provides parents $50 towards participation in 4-H activities. We also offer nutritional counseling.
- **Texting programs:** Health-related text messages are delivered, including text4kids messages, which remind families of important health topics, such as education and milestone visit reminders.

Care Coordination for a Child with Complex Needs in the Eastern Region

Katy[12] is a six-year-old living in the eastern panhandle of the state who experienced seizures at birth and was recently diagnosed with cerebral palsy. She has difficulty walking and learning. Her mom homeschools her and needed help finding specialists, therapists, and durable medical equipment (DME) in her area. Katy's care coordinator offered face-to-face support for the family and connected Katy's mom to a local DME provider who arranged for Katy to receive a custom-to-fit jogging stroller, allowing Katy's mom to take her to the park. Katy's care coordinator also connected Katy's mom to an agency that helped her apply for a grant to cover special vision therapy that was not a covered benefit under MHT. She also referred Katy to West Virginia University Hospital for completion of neurodevelopmental testing. To address SDOH needs, the care coordinator pointed Katy's mom to a grant application for assistance in the purchase of new tires for the family's van and connected her to LogistiCare for additional transportation assistance. The care coordinator also helped the family apply for CSHCN eligibility. Katy's mom said she would not have known about these resources without the help of the care coordinator. Katy is now doing well in her services and at school and is able to have her ongoing needs met through supportive care management as a result of her progress and access to services.

- **Children's Health Administration of Medications Monitoring Program (CHAMMP):** CHAMMP involves a multidisciplinary team approach between Aetna and CVS Health to review the prescribing of psychotropic medications in children. Candidates under the age of 12 are identified through prescription claims data for multiple psychotropic medications, use of selective serotonin reuptake inhibitors, atypical antipsychotics, or mood stabilizers. We review data and outreach to the prescribing physician, the member, or family/circle of support to discuss prescribed medications, current services being received, and any identified needs. Our CM team

[12] Not her real name

then connects members to a BH specialist and provides continued follow-up as needed. We offer education around each medication and proper monitoring of labs if indicated.

- **Attention-deficit/hyperactivity disorder (ADHD) program:** Children with ADHD need timely, ongoing follow-up with their doctors. We send mailings to children receiving first fills of ADHD medication. Letters are sent at 3 and 5 months following first fills to remind members and their families/circles of support. We send a Tip Sheet to providers to encourage appointment scheduling. We assist with making the appointment and provide reminders to the PCP when follow-up is recommended. As a priority area, we have a quality improvement initiative to outreach calls to families of members with ADHD to ensure members receive timely follow-up care after an ADHD prescription.
- **Maternity care management for CHIP members:** Our CCTs will offer specialized prenatal care management for CHIP members; OB specialists are embedded in the offices of providers who deliver high-risk pregnancy services.
- **Autism spectrum disorders:** Aetna's board-certified child psychiatrist is available for consultation with Applied Behavior Analysis-credentialed providers throughout the state as well as for peer-to-peer consultations.

Programs for Adults: We offer a variety of care management interventions and programs for conditions and issues adults are more likely to face. These include the following (to name just a few):

- **National Diabetes Prevention Program:** Care coordinators refer pre-diabetic members or those with a diagnosis of obesity to our structured program, which includes providing education through weekly classes. Classes include education regarding healthy behaviors, goal setting activities, and weigh-ins.
- **Mammogram reminders and services:** Aetna conducts outreach calls and sends mailings to remind members of necessary mammogram screenings. Additionally, we collaborate with the West Virginia University Cancer Institute's Bonnie's Bus to offer mobile mammogram screenings.
- **Flu vaccination campaign:** We send text messages reminders about the importance of flu shots once per month from September through February to members who participate in our text4health Lifeline or cell phone text messaging programs. Care coordinators also inform vulnerable members (such as those who are pregnant or who have multiple chronic conditions) of the availability of the online educational material from Krames, which reinforces the importance of obtaining flu vaccinations.
- **Smoking cessation:** Aetna care management provides one-on-one coaching through our CCTs, which include a respiratory therapist and a care manager who has completed the Council for Tobacco Treatment Training Program to counsel members on smoking cessation and offer education regarding the negative effects of smoking/vaping. Additionally, we provide access to online educational and self-management tools to help members achieve their quit goals. Care managers assigned to pregnant members conduct assessments to determine if members are actively (or are at high risk for) smoking or vaping and target care plan goals to address any concerns.
- **Congestive heart failure program**: Aetna sends scales to members with congestive heart failure (CHF) and offers education regarding weight management; members complete weight

diaries for review with their provider and/or care coordinator. Care coordinators conduct condition-specific assessments and develop care plans with members that outline goals specific to CHF.

- **Compassionate care and end of life care management**: All CCT staff are trained on the stages of dying and incorporate this knowledge as they offer support to members facing terminal illness. Our oncology nurse on staff provides compassionate care interventions including educating members on advance directives and other end-of-life planning concerns
- **SUD specialists and peer support**: Aetna employs a SUD specialist care manager in every regional CCT as well as a peer support specialist with lived SUD experience who is available to offer support state-wide. These individuals have had SUD-specific training (such as ASAM) and possess experience that is critical in the engagement of members who are struggling with addiction. Additional information regarding SUD and OUD care management is provided throughout this response.

[CM013] Processes for Administering Care Management for Members with Complex or Serious Medical Conditions

Members with complex or serious medical conditions are enrolled in Tier 2 or Tier 3 care management and receive care management interventions based on those intensity levels, as previously described. Our chronic condition management program engages members with activities and services based on the identified needs of the member and structured to support the highest degree of member self-management. This program focuses on members with diabetes, congestive heart failure, coronary artery disease, depression, asthma, and COPD.

Risk-based activities and interventions include the following:

- **Low Risk:** Bi-annual-condition specific newsletter, health plan website, and links to resources; online resources including health appraisal and self-management tools.
- **Moderate Risk:** All interventions of the low-risk/population health program, in addition to care manager telephonic outreach to members to assess general and condition-specific needs; BH screening and support; condition-specific and preventive health education; information and resources, identification of person-centered goals, and development of an individualized care plan with measurable interventions; scheduled follow-up.
- **High Risk:** All interventions of the low-risk/population health and moderate-risk programs plus member outreach at least monthly; condition-specific in-depth education and care coordination provided by clinically licensed care managers; options for face-to-face visits in the member's residence or provider office.

Intensive Care Management for a Member with Serious Medical Conditions in the Central Region

Matthew[13] is a 51-year-old living in Kanawha County. He has chronic kidney disease, coronary artery disease, hypertension, peripheral artery disease, hyperlipidemia, arthritis, sleep apnea, cerebrovascular disease, seizures related to conduction disorder, and is dependent on insulin for diabetes management. He smokes cigarettes, and lives with migraines, depression, and anxiety. Matthew recently moved to Charleston from Cottageville due to his complex medical issues and the availability of more family support in Charleston. His care coordinator (who lives in the area and previously worked at CAMC Memorial Hospital for 20 years) has significant knowledge of the doctors and specialists in the region. Matthew needed a cardiothoracic doctor for recommended open-heart surgery and needed to find a new PCP since his move to the area. His care coordinator connected him to a cardiologist in Charleston as well as a new PCP that was close to his home. The PCP saw Matthew every two weeks for three months to work with him on diabetes management. When the care coordinator had first met with Matthew, his HbA1c was 14, and after working closely for several months with his PCP and care coordinator, his HbA1c was brought down to 6.9, and he had lost about 25 pounds in the process. The care coordinator also obtained transportation assistance for Matthew and went to every appointment with him, as Matthew was unsure he would understand all of the information the doctors shared with him. Matthew had open heart surgery and healed well. He continued with follow-up appointments and later saw a vascular surgeon at the CAMC Vascular Center of Excellence for surgery related to blood clots in his leg and foot. Matthew reports that he is feeling better and more confident that he can maintain his health. Since Matthew had open-heart surgery, vascular surgery, and got his diabetes under control, he has been able to get out and do the things that he loves to do, like mowing grass, working on his cars, and hunting. He verbalized to his care coordinator how much he appreciates the help feels his care coordinator truly saved his life.

[CM014] Processes for Administering Care Management for Children with Special Health Care Needs (CSHCN)

Most CSHCN receive Tier 3 intensive care management. We have provided a detailed description of typical Tier 3 interventions previously in this response. Aetna conducts collaborative activities with family-centered, community-based systems of coordinated care for CSHCN, including early intervention and screening, linkage with parent support groups and forums, and adolescent pregnancy prevention programs. We collaborate with the Office of Maternal, Child, and Family Health (OMCFH) to make and receive referrals between programs for members who may be eligible based on diagnostic eligibility criteria, improve members'

[13] Not his real name

sense of safety, enhance the member experience and access to services, coordinate care through the sharing of care plans, and reduce barriers to achieving health goals. Currently, we attend a monthly meeting with OMCFH to discuss strategies to remove or mitigate service barriers for individual children with special health care needs and to avoid duplication of services. We offer pediatric nurse care managers onsite at pediatric offices, and the nurses and office supervisor meet monthly to discuss and coordinate member care.

[CM031] Working with Members Who Do Not Want a Care Manager or Who Are Not Actively Engaged

Our screening tool does allow for members to opt out of care coordination if they choose. The option to opt out is also presented in the welcome letter that goes out to members. Through conversation and in our letters, we provide the contact number for Member Services and the local CCT for the members who have opted out should they later decide to engage in care management services. Members who have opted out of care management still receive educational newsletters twice per year and new member packets. Specialized mailings for pregnant women, wellness reminder mailings, and community outreach events are also available for members who have opted out of care management. As described earlier, training to support relationship development is provided to all new staff. Additionally, care management leadership monitors opt-out trends at the care coordinator level and deliver additional supervision and training as needed for care coordinators whose opt-out numbers are increasing.

We have previously described our protocols to make multiple attempts to engage members in the completion of their initial screening and our appointment reminder process to prevent members from missing a scheduled appointment, as well as the training provided to care coordinators to encourage the development of strong relationships with members. If a member

who is assigned to care management begins to demonstrate a pattern of disengagement from services (for example, misses multiple appointments or does not attend their ICT care plan review meetings), the care coordinator will conduct outreach calls to the member to discuss the importance of appointment attendance and offer solutions should the member report barriers to attendance.

Screening, Assessment, and Education

CM016	The Vendor should describe its process for performing screenings or assessments as part of its care management program, including, but not limited to, the following:
CM017	Members with special health care needs, defined as individuals with complex or serious medical conditions
CM018	Children with special health care needs (CSHCN)
CM019	Clinical, social, or other criteria used to determine which members require care management and assignment to care managers
CM020	Performance of health assessments
CM021	Implementation of targeted education programs
CM022	The Vendor should describe its process for creating educational materials and educating members and care management staff

Aetna's screening and assessment processes are designed to understand the holistic needs of members in order to identify the types of services and supports they need.

[CM016 – CM019] Initial Screening of New Members

[CM016] Upon receipt of a referral or enrollment notification, Aetna begins the initial screening process for all members. Aetna recognizes that West Virginia members may have, or may be at high risk for, a chronic physical, developmental, behavioral, social, neurological, or emotional condition requiring a broad range of evidence-based primary and specialized medical or BH and/or related services. These needs are screened in the initial contact with the member and their guardian/circle of support (if applicable) and on an annual basis (or as the member's life or health circumstances change). Aetna believes it is important to get members into the right care at the time they need it. We also understand that a lengthy screening process can be an

obstacle to a person who may be in crisis or has urgent needs. The most important goal for the initial contact with the member is to build trust and to stabilize the crisis if there is one. The initial screening process includes motivational interviewing techniques and is modified by assessing the needs of the member (in crisis situations, for example). All screening and assessments will fare better when relationships are forged based on values and a shared vision of a better life.

Health risk questionnaire: Upon notification of enrollment of any new member (via Department 834 files) or referral of a member for care management assignment, Aetna's automated outbound screening process is our first attempt to complete the HRQ with the member. The outbound system contacts the member (or the member's guardian, if applicable) to attempt to complete the HRQ, as has been described earlier in our response to **CM003**. We disclose to the member and their guardian how we will use the information gathered in screening tools. The HRQ is available in English and Spanish and can be completed via multiple avenues based on member and family needs. In addition to completing the HRQ through contact by the automated outbound system, HRQs may be completed in person, or via printed or web-based forms. **The HRQ screens several domains (inclusive of SDOH) and aims to identify members with complex or serious medical conditions and children with special health care needs [CM017, CM018].** The following areas **[CM019]** are reviewed in the initial HRQ screening:

- Confirmation and review of basic demographics
- Preferred language read/spoken
- General health and emotional health
- Condition-specific questions
- SDOH concerns (food, transportation, employment, housing and utilities, and interpersonal safety concerns)
- Utilization of services (PCP, Dental, BH, physical therapy, occupational therapy, etc.)
- Medications
- School attendance
- Smoking history
- Pregnancy status

The HRQ screening process allows for initial identification of those who may need care management. As described previously relative to criteria for care management tiers, members with low risk pregnancy or a chronic condition that requires some ongoing surveillance/support are immediately assigned to Tier 1 population health care coordination. If member responses to the HRQ screening meet clinical/SDOH criteria to trigger further evaluation, they are immediately warm transferred from the outbound call system to an Aetna CMA for additional assessment and referral to a dedicated, local care coordinator who will determine if they are assigned to Tier 2 (supportive) or Tier 3 (intensive) care coordination. All members providing positive responses to any screening question on the HRQ, and who may have multiple chronic conditions, SDOH barriers, or special health care needs receive this further screening **[CM017, CM018, CM019]**.

Outreach questionnaire (ORQ): When the member is warm transferred to the CMA, the CMA immediately completes a telephonic ORQ with members identified through initial screening for possible referral to Tier 2 or 3 care management. Aetna completes this additional screening to further identify care needs and engage members in care coordination. The CMA educates members on the tool and the establish a relationship with the member before asking questions that can be considered intrusive. They take account of the cultural needs of members and families when completing the tool. **[CM017, CM018]** The ORQ also identifies special, serious, or complex health care needs as it addresses the following: 1) immediate, current, and past health care, mental health, and SUD needs; 2) psychosocial, functional, and cognitive needs; 3) SDOH, including education and housing status; 4) ongoing conditions or needs that require treatment or care monitoring; 5) current care being received, including health care services or other care coordination; 6) current

medications, prescribed and taken; 7) support network, including caregivers and other social supports, and; 8) other areas as identified by Aetna or the Department.

Upon completion of the ORQ, the CMA warm-transfers the member to the care coordinator they have assigned (as described previously for **CM004**) who will continue further assessment, finalization of Tier 2 or 3 assignment, care planning, and general care coordination activities with the member, as described in the following sections.

[CM017, CM018, CM020] Additional Comprehensive Assessments

The assigned, dedicated care coordinator speaks with the member following completion of screenings for introductory purposes and to schedule an appointment for further assessment. If the member/family chose not to be warm-transferred to the assigned care coordinator following the initial screening and the assigned care coordinator has difficulty reaching the member, they will conduct the same outreach attempt process as described in our initial screening process. For a member who has experienced trauma, it is critical to find ways to minimize the need for them to recount painful events multiple times. Aetna understands members may become overwhelmed with providing responses to various screeners and assessments. In an effort to reduce any trauma associated with answering questions on these assessments/screeners, as well as to reduce redundancy and duplicative efforts, the member's care coordinator will reach out (with the authorization of the member) to agencies currently working with the member and their family, as well as previous providers, facilities, and sister agencies to obtain the results of their assessments, screens, and treatment history information. The results will be incorporated into the member's file, ensuring the care coordinator has access when needed. Additionally, and if authorized or requested by the member and their family/guardian, stakeholder agencies, providers, facilities, and sister agencies will be invited to join the ICT, to provide insight into

building a comprehensive member-driven integrated care plan, which will consider the unique needs of the member and their family/caregiver(s).

Aetna uses a range of assessments that are tailored to the West Virginia population. Due to their training in the field, care coordinators use their professional knowledge and information regarding the member's life and health experiences to decide which specialty assessments to conduct to ensure all potential special health care needs are addressed **[CM017, CM018]**. In addition, care coordinators use an algorithmic approach to choosing screening options. The system provides suggestions to care coordinators about detail to solicit during the in-person comprehensive assessment process. Care coordinators are educated on spending time efficiently with members, and by skillfully using motivational interviewing, they obtain the information necessary to complete special assessments without overburdening the member with multiple questions. Descriptions of many of these assessments follow here.

Health Care Equity Contact Event

The HCE, housed in our electronic care coordination system, is an assessment the assigned care coordinator conducts with members to determine if assignment into Tier 2 or Tier 3 care management is appropriate. The HCE documents, tracks, and reports on members' social determinants needs, and is inclusive of housing, transportation, food insecurity, personal safety, employment, education, and social cohesion, and identifies members who may benefit from additional interventions and education to address them. The demographic characteristics included in the HCE include age, race, ethnicity, gender, sexual orientation, and geographic location, among others. The intent is for the captured SDOH data to be incorporated into the development of the individualized person-centered care plan. When an SDOH need is identified, care coordinators can use technology, such as Aunt Bertha and Unite Us, to connect with community-based organizations

to identify resources to meet their needs. We also utilize this information to address root causes of members' challenges as well as to identify disparities and/or gaps in care. Details regarding our activities to address SDOH will follow later in this response.

Assessment of Trauma

Care coordinators use the Trauma Screening Questionnaire, when indicated, to conduct more thorough trauma assessments.

Assessment of Behavioral Health Needs

A comprehensive assessment of all potential special health care needs must include thorough evaluation of behavioral health. For members responding positively in the screening to questions related to emotional or BH needs, the care coordinator completes evidence-based assessments and screenings to evaluate BH concerns, which may include the following:

- Early and Periodic Screening, Diagnostic and Treatment Mental Health Assessment
- Child and Adolescent Needs and Strengths
- Child and Adolescent Service Intensity Instrument (CASII)
- University of California Los Angeles Child/Adolescent Post-traumatic Stress Disorder Reaction Index
- CRAFFT (adolescent SUD)
- UNCOPE (SUD)
- Patient Health Questionnaire-9 (for children 12 and older)
- Psychosocial Pediatric Symptom Checklist 17
- Generalized Anxiety Disorder 7
- Edinburgh Postnatal Depression
- Depression Assessment

Assessment of Chronic Conditions

Care coordinators use their clinical expertise and knowledge of the member's health to identify which condition-specific assessments to complete. The following is an example of some of the condition-specific assessments we use to identify special health care needs **[CM017]**:

- Diabetes assessment
- Hepatitis-C assessment
- HIV assessment
- Infant assessment
- Interval assessment
- Adult asthma assessment
- Pediatric asthma assessment
- Chronic obstructive pulmonary disease assessment
- Cancer assessment
- Heart failure assessment
- Hypertension assessment
- Sickle cell assessment
- Coronary artery disease assessment

- Perinatal assessment
- Weight management assessment

Condition-specific medication adherence is evaluated during interactions between the care coordinator and members diagnosed with targeted conditions such as diabetes or asthma. Condition-specific assessments are used to identify adherence issues and opportunities. Findings are discussed by the member's care team, and strategies to improve adherence are included in the care plan.

Upon enrollment in supportive or intensive care management, we send an Enhanced Care Plan notification letter to the PCP to inform them of the member's status with our care management program. With the member's authorization, we share all screening and assessment results the member's assigned PCP and permitted provider and stakeholder members of the ICT via letter or securely via email to providers upon request, as authorized by the member. This information is also available to the provider via the provider portal.

The care coordinator utilizes information gained through the assessment process to determine which care management tier (2 or 3) best meets the needs of the member (according to tier criteria previously mentioned) and assigns the member to the appropriate tier. The screening and assessment process lays the foundation for the creation of the member's initial care plan (to be described later in the response). Ongoing screening and assessment also continue throughout the member's enrollment. Screenings and assessments are repeated annually, at a minimum, or as triggered by a change in the member's functional or health status, or a change in their placement or residence.

[CM021, CM022] Targeted Education and Creation of Educational Materials for Members and Care Coordinators

Aetna offers member materials, education, and outreach in order to assist members with system navigation and the realization of their health care goals. **Equipping members with tools regarding the prevention or management of chronic medical or behavioral health conditions and how to access care is a key component to members' successful journey to improved health.** Educational materials support member self-sufficiency and reinforce other interventions identified through the care plan.

[CM021] Targeted Education Programs

Our targeted member education approach includes providing information to members and their families/guardians, which helps them better manage chronic conditions, offers them education and encouragement to learn self-management skills, and provides information to access the appropriate services and supports. Our efforts aim to educate and support members to prevent exacerbations of conditions and prevent hospitalizations and other high-cost health care resources. In this section, we provide descriptions of a few member educational materials and campaigns we already have available and plan to offer to new enrollees under this contract. Many are geared for adults or the guardians of child and youth enrollees; however, some specifically target younger children/youth.

Aetna's **Ted E. Bear, M.D.℠ Cub Club** provides children up to age 13 with health education regarding diet, exercise, and daily hygiene. Members receive notifications and challenges related to attending appointments and practicing healthy behaviors. Examples include challenges around brushing teeth, getting a healthy amount of sleep, and eating five servings of fruits and vegetables daily. Cub Club materials are specialized for children. Children receive rewards (such as blankets or a dental kit) for completion of challenges and activities and

graduate from the program at age 14. We also have an annual Ted E. Bear, M.D. Fair hosted in collaboration with CAMC. The event incorporates several educational interaction stations for children. Through our **National Diabetes Prevention Program,** we offer members with a diagnosis of obesity and/or prediabetes weekly, local one-hour classes over a period of 22 weeks with a specially trained lifestyle coach. During the classes, the member is weighed weekly and review their activity log from the previous week. They are provided education on making healthy lifestyle choices, educational handouts, and support to set goals and keep members motivated. Our **Family, Information, Support, and Help (FISH)** program provides education regarding common mental health issues that affect children and adolescents. The program offers support for the identified issues and coordinates resources to help. Additionally, Aetna sponsors **Baby Showers** in various regions across West Virginia. The events are marketed to the pregnant population in a given area/region and provide health and wellness information to help improve outcomes for women's pregnancies. During these events, we also provide door prizes such as Cribettes and information regarding our OB case management program. As previously described, we also offer extensive educational information to new parents through our "Healthy You, Healthy Baby" guide, as well as the "Safe Sleep" and "Keep it Cool" educational campaigns.

We have several **educational pamphlets** covering a variety of topics. These are written with an adult audience in mind, but some are relevant for the types of health issues that may impact children and youth. Educational pamphlet topics include the following:

- Getting Ready for Baby
- Staying Smoke-Free
- Depression After Having a Baby
- Your Baby's Development
- What to Do if Your Child Has a Cold
- Smart and Safe – Managing Opioid Medication
- Krames Family Planning Materials

We offer technology-based methods for providing additional health education. We inform adults and the guardians of children and youth of their option to receive text messages from us through information on the member handbook, our website, and contact with Member Services staff. If a member/guardian chooses to receive text messages, we can send them text messages, including a link to download our member mobile application. An interactive, mobile program sends personalized text messages free of charge to program members on the following topics:

- Care4life is a diabetes coaching program
- Text4kids provides reminders about well-child visits, exams for children timed to their age, and provides information as children grow
- Text4baby helps new mothers and expectant women to keep themselves and their babies healthy
- Text4health provides reminders for checkups and screenings and suggestions on what to do in between doctor appointments to help members stay healthy
- Text2quit is a program to help people quit smoking and stay smoke-free

In addition, we will employ a variety of mobile applications that are tailored to the needs of our members to cover topics like meditation and mindfulness, cognitive behavioral therapy, and acceptance commitment therapy methods to help people cope with depression, anxiety, anger, and stress. We will leverage the Breathe2Relax mobile app designed by the National Center for Telehealth & Technology to teach breathing techniques to manage stress. The skills taught may be applied to those with anxiety disorders, stress, and post-traumatic stress disorder.

[CM022] Creation of Educational Materials and Delivery of Education to Members and Care Coordination Staff

Member education materials are written with the understanding that our young members have legal guardians and extended family, or caregivers present in their lives. Our materials are geared toward educating both adult members and young members' guardians (where applicable). The materials are developed in collaboration with our community stakeholders, such as advocacy and disability groups. All materials, including member letters, are developed in

compliance with the guidelines in 42 CFR 438.104 and **Appendix D of the Model Service Provider Agreement, Marketing Policies.** This includes language with a reading level no higher than sixth grade, readable typeface, frequent headings, and short, simple explanations. We ensure that our electronic information is easily accessible and is presented in a format that can be retained or printed. Written material must be available in languages of the major population groups served, and in alternative formats such as braille. Members (and/or guardians) who require copies of assessments, care plans, or other documentation related to their care in a different language or format will receive these.

Any member materials targeted to children and youth include age-appropriate photos and language that is even more simplified than sixth-grade level, with heavier use of imagery and pictures as compared to materials for adults. Materials for older children, their families/guardians, and adult members contain more complex explanations and information.

We have already created a large library of printed and web- or electronic-based materials; therefore, we will be able to continue offering these materials for the new contract on day one. However, we are continually reviewing existing materials and adding new materials, and this will continue beyond implementation. Community Engagement staff and Care Coordination staff are trained as new education campaigns and materials are finalized, so they are immediately knowledgeable of new available educational resources. These staff members are responsible for delivering and reviewing member education materials in their respective interactions with the community and members. Care Coordination staff share educational material during their ongoing coordination of care contacts with members (e.g., during face-to-face visits, care planning meetings, etc.). Additionally, Community Engagement staff meet on a weekly basis to review member education materials and discuss

the best way to present the material. For example, training may include strategies for the presentation of material with an understanding of the culture in which the region will be presented. With many native West Virginians on our team, we are knowledgeable about these regional cultural differences and understand adapting our presentation style in the context of these differences helps to convey education material better.

Care Planning

CM032	The Vendor should describe its process for identifying members in need of treatment plans, and the development, updating and implementation of treatment plans wherein service coordination is required.
CM033	The Vendor should describe its process for the development of treatment plans, including, but not limited to, the following:
CM034	Including Primary Care Providers (PCPs) in the development of treatment plans
CM035	Sharing treatment plans with the member's PCP or other providers, as applicable
CM036	Staff responsible for sharing treatment plans with the member's PCP
CM037	Tracking of completion of treatment plans
CM038	Identification, tracking, and remediation of gaps in care
CM039	Processes for episodic and/or catastrophic care management interventions

West Virginians enrolled in Medicaid and CHIP may face vulnerabilities in their physical, social, and mental health, and Aetna provides quality care that promotes seamless access to services. Our local, regionally based CCTs understand the health disparities and risk to health equity for West Virginians, especially in the communities where they live and work. Care planning is member-centric and tailored to target these disparities. For purposes of this response, we call the treatment plan the 'care plan' and treatment planning 'care planning.'

[CM032 – CM034] Collaborative Care Plan Development, Implementation, and Updates

To provide seamless and accessible care management, collaboration is critical. Collaboration in care planning removes barriers and is vital to developing meaningful **integrated care plans which include health and life goals as identified by the member**. The care coordinator

creates an integrated care plan (ICP) with members enrolled in intensive (Tier 3) or supportive (Tier 2) care management **[CM032]** (while members in Tier 1 population health care coordination may create care plans with their PCP if they jointly identify the need for a plan).

Aetna's care management model utilizes evidence-based practices including TIC and the LifeCourse framework to create care plans in the member's voice with input from the member's chosen care team. The care coordinator facilitates care plan creation in collaboration with the member, their PCP **[CM034],** and the member's circle of support (e.g., identified family or friends), at a minimum. For members with the most complex needs, other people involved in the member's care may also participate on an ICT to contribute to the care planning process and ongoing care coordination efforts, as identified and permitted by the member. These additional team members may include physical health, dental, and BH specialty providers, the peer support specialist, CHWs, caseworkers assigned by other state agencies, school representatives, corrections representatives (if applicable), the Aetna clinical pharmacy advisor, and other SUD specialists. The ICT can also include extended family members and community members or other circle of support individuals, as identified by the member. The care coordinator serves as the single point of contact for the member. The ICT's goal is to operate with a 50/50 natural member-to-professional ratio to strengthen the impact of member and family voice and choice. The member ultimately determines the makeup of their ICT.

In alignment with national best practices and using the clinical models mentioned previously, such as LifeCourse, Aetna and our West Virginia CCTs are trained to understand and implement the core principles of member and family-centered thinking, planning, and most importantly, living. Key principles include the following:

- We acknowledge and recognize the valuable role each person in a member's circle of support plays within their social system
- We consider the impact of major life stages on members and their family and understand that their roles transform as they age
- We work together with members and their circle of support to create a clear vision of a positive quality of life and develop an attainable path toward those goals, understanding member's life stages are influenced by past experiences
- We move beyond planning for a member's health and safety by focusing on helping members and families increase their capacity to live a self-determined life in the community of their choice, while building social capital and economic stability
- We recognize that our members can and do lead complex, multifaceted lives and we account for this interconnectedness in our integrated service planning process by focusing on daily life and employment, community living, safety and security, healthy living, social and spirituality networks, and citizenship and advocacy
- We value the strengths and assets of our members and their families and support them to discover new opportunities and navigate their lives by sustaining and/or making new connections with the community, and by linking them to innovative goods and services available both internally and externally to the formal support system
- We provide opportunities and support for our members and their families to self-advocate and provide crucial feedback to Aetna through formal and informal stakeholder engagement channels. Aetna incorporates stakeholder experiences as a critical component of our continuous quality improvement process.

Figure 6.3.1-5 illustrates our member-centered approach to co-creating the integrated care plan with the member and their circle of support.

Development and implementation of the care plan [CM032, CM033, CM034]: The Aetna care coordinator develops the ICP in collaboration with the member (and their ICT where applicable) within 30 days of completion of the first screening for members in intensive care management, and within 90 days for members in supportive care management. All

Figure 6.3.1-5: Member-directed Care Planning
Aetna's care planning process seeks to understand the member's perspective to meet their unique needs.

participants in a member's ICT (including the PCP) may contribute to the development of the care plan. **[CM034]** The care coordinator sends a letter when the care plan is initiated to invite the PCP to participate in the process and contribute recommendations for the member's care plan. For those members with an established ICT, PCPs may attend ICT care planning meetings in person or by phone.

Members are empowered by the care coordinator to play a leading role in the development of goals and identification of needs as they relate to their ICP. The initial screening and comprehensive assessments completed by Aetna Care Management staff guide care plan development and help identify some of the member's needs. Goals, objectives, services, barriers, and interventions identified during care planning are included in the care plan. ICPs address all factors that impact the member's health to foster improved health outcomes. Aetna uses a numeric ranking to identify prioritization (i.e., goal #1 is the member's highest priority). Goals are specific, measurable, and timebound; timebound goals have a target completion date and intermittent time frames for reevaluation are specified. Care plans include documentation of near and long-term goals, incorporating the member's broader vision for their life. Interventions outlined in the care plan target the physical, behavioral, and social health needs of the member and make note of known barriers to care. Care plans may include special health care needs (such as obtaining durable medical equipment for a child with diabetes or arranging for SUD services for an adult who is abusing alcohol), specialty referrals, and strategies for development of skills to maintain independence and safety.

In addition to identification of needed health care services, ICPs also address members' social needs. Community services to address SDOH are included in the care plan, as are needed referrals and assessments for waiver qualifications. Care plans also include safety planning

interventions to pre-plan for natural disasters or crises. The care coordinator documents all ICP elements in our electronic care management system. **The most appropriate care plans are member-driven and provider-informed and ensure collaboration and continuity of care between physical health providers, BH providers, and others involved in the member's care to address the goals identified by the member and their circle of support.** The Aetna care coordinator serves as the facilitator of care plan development, implementation, and updates. The PCP and members of the ICT (where one is established) are valued contributors to ongoing assessment, care plan updating, and service delivery, but the care plan must be agreed upon by the member. As care coordination continues, the member, their circle of support, care coordinator, and the ICT (where applicable) meet according to the frequency described previously regarding care management tiers to review the care plan. They discuss the member's attendance with/access to services, barriers to access, member strengths, and the resulting progress (or lack of progress) towards their care plan goals.

Care plan updates [CM032]: Screenings inclusive of the HRQ are completed annually (at minimum) for all members assigned to any care management level of care. The ORQ and other specialized assessments are also completed annually (at minimum) for all members enrolled in Tier 2 or 3 care management. **Care plans are updated (at minimum) monthly for members in Tier 3 and quarterly for tier 2 care management.** Members in Tier 1 population health care coordination are assessed annually via the HRQ (with trimester screeners for pregnant members) and they collaborate with their PCP to update care plans where applicable.

Care coordinators set follow-up tasks in our electronic care management system to notify them when reassessment and care plan updates are due. The enhanced care plan module within our electronic care management system includes tracking of progress towards goals. This review

includes assessing whether the member's physical, behavioral, or social needs have changed. We run our predictive risk stratification analysis on all members on a monthly basis, as described earlier in our response, which may also alert us to changes suggesting an update to the care plan or possible assignment to different care management tier is needed. Outside of routine required assessment and care plan update intervals and monthly risk stratification, care coordinators may become aware of changes in a member's health or social needs status that would require an assessment and/or care plan update (e.g., a cancer diagnosis, loss of spouse, placement changes, inpatient admission, SDOH changes, or behavioral health crisis) through other means such as the following:

- Follow-up calls with members: every 30 days for intensive care management and every 90 days for supportive care management
- Interval assessments conducted telephonically or face-to-face with members
- Inpatient alerts or discharge planning processes

As explained previously in the description of care management tiers and the interventions associated with each, Aetna has also outlined minimum requirements regarding other types of ongoing care coordinator contact and intervention with members such as face-to-face contact. The goal of care coordination is to best meet the member's needs and aid in coordinating the services needed to reach their goals. One of the strengths of our local CCTs is the availability of face-to-face intervention and even home visits if needed when a member has experienced a significant life change or needs extra support. Care coordinators typically conduct face-to-face interventions via in person care plan update meetings, or during home visits to provide support, ad hoc assessment, or connection to additional services when a member's medications or life or health circumstances change significantly. Face-to-face visits help maintain and strengthen the rapport developed with the member and their circle of support.

At times of reassessment and update of ICPs, the member, care coordinator and their circle of support may identify that the member may be better served in a higher or lower level of care coordination intensity. If this is the case, the intensity and frequency of intervention is adjusted to the new tier-based requirements.

In 2019, Aetna conducted 1,796 face-to-face visits (an average of 156 per month) throughout West Virginia. With the rise in the number of face-to-face visits between Care Management staff and members, reports of increased rapport have been noted; member opt-out rates have decreased from June 2017 to present by 8%.

[CM035 –CM037] Tracking Completion of Care Plans and Sharing of Care Plans

[CM037] Care coordinators track timely completion of care management tasks through a search function in our electronic care management system that allows them to see when update tasks (such as an annual reassessment or required care plan update) are coming due or if any are overdue. Additionally, care management leadership conducts audits (monthly) and periodic review of tenure reports to ensure that screenings, assessments, care coordination tier identification, and integrated care plans are completed within all initial and ongoing/update required timeframes.

Copies of the current and prior assessments and care plans are stored in real time (as they are documented by the care coordinator) in our enhanced care plan module within our electronic care management system. Care coordinators mail enhanced care plan output letters (which includes detail of the care plan) to members, the PCP **[CM035, CM036]**, and permitted members of the ICT when requested, as authorized by the member. Care coordinators may also securely email assessments and care plans to providers upon request and if permitted by the member. Care plans are also available to permitted providers through the provider portal.

[CM038] Identification, Tracking, and Remediation of Gaps in Care

Aetna identifies gaps at the member and individual provider level through analysis of lists of a provider's assigned members and the preventive services delivered during a specific timeframe for members, and through routine review of the ICP and the member's access to/attendance with services. HEDIS and quality/gaps in care data are also reviewed to identify potential gaps related to many preventive health screenings and clinical care metrics, including annual dental visits, adult ambulatory or preventive care, immunizations, and colorectal cancer screenings, to name a few. When a care coordinator and ICT identify that a member's care is impacted by network gaps or a provider's inability to meet access to care standards or deliver preventive care, we mobilize resources to identify solutions for the member. The care coordinator may interact directly with the provider to identify and resolve barriers for the member's individual situation. Depending on the circumstances, the care coordinator may involve the network or Provider Relations teams to identify alternative provider options or may enlist the Utilization Management team to consider out-of-network single case agreements with providers who can meet the member's needs within timeliness expectations.

On a larger scale, Aetna conducts network gap analysis on an ongoing basis to quickly identify and respond to service gaps. We identify gaps through analysis of member density and geo-mapping data to determine the services that are unavailable in a particular region or across the state. We also utilize reports and monitoring tools to identify gaps such as the availability of network practitioners report, emergency room utilization report, network panel studies, and member and provider appeal and grievance data. When we identify a network gap, Provider Services staff develop a plan to resolve the gap with contract staff. There may be local providers who are well positioned to expand their array of services and need additional technical assistance from Aetna to

develop these new programs and service offerings. There may be out-of-network (and out-of-state) providers who have delivered services on a limited single-case agreement basis who would pursue a formal contracting relationship at locations within the state. For example, we executed contracts with Logan-Mingo (a BH/MAT provider in southern WV) and River Park Hospital (an inpatient/psychiatric residential treatment facility [PRTF]) provider in Cabell county) to close BH gaps after a period of utilizing their services through single case agreements. Provider Services staff will collaborate with Care Coordination staff, existing providers, community partners, and network counterparts at the Department to strategize and create the plan to develop the services in the regions where they are most needed.

Aetna establishes provider access to care standards in alignment with required time, distance, and appointment wait time standards as outlined in **Appendix K of the Model Service Provider Agreement**. All participating providers in our network are contractually obligated by provider agreements to adhere to timely access and appointment standards, including specific standards for specialty, urgent, and crisis services. Adherence to these standards are monitored through a variety of mechanisms including, but not limited to, the following:

- Geo-mapping analysis
- Evaluation of provider to member ratios, hours of operation, and appointment availability and after-hours coverage
- Provider surveys and site visits
- Member satisfaction surveys
- Review of closed primary provider panels
- Complaints

When we identify providers who are not meeting the access standards, Quality Management and Provider Services staff implement a series of steps (with progressively greater significance) to help providers achieve compliance. These efforts include the provision of technical assistance and analysis of barriers to achieving compliance and assistance in the creation and tracking of corrective action plans when necessary. Providers who continue to fail to meet the standards

may be referred to Aetna's Service Improvement Committee or Quality Management Oversight Committee, and ultimately may face network termination.

[CM039] Episodic and/or Catastrophic Care Coordination Interventions

Catastrophic care management is available to all enrolled members. This includes members with newly diagnosed cancer, trauma-related injury, or an acute behavioral event, to name a few. Aetna identifies catastrophic events through several avenues including utilization review activities (both prior authorization and concurrent review activities); inpatient alerts and ADT feeds; notifications by providers (physician or hospital); and notifications by community partners and parents and or guardians. **Once a catastrophic event is identified, the care coordinator immediately reaches out to the member.** If the member was not already enrolled in intensive care management (Tier 3), they are assigned to this level due to the catastrophic event and they receive a highly individualized range of interventions to help them manage the serious and complex conditions that are persistent and substantially disabling or life-threatening. Care coordination continues at this intensity until such time that reassessment and discussion with the member and their circle of

Care Management Support for Members Fighting Cancer

"Joann Good, registered nurse care manager from Aetna, collaborates with Edward's Comprehensive Cancer Center at Cabell Huntington Hospital weekly. She is embedded onsite every Tuesday, seeing Aetna members that are receiving treatment at the cancer center, including children seeing our pediatric hematologist/oncologist. She is a great resource for members diagnosed with cancer and trying to navigate their treatments when they are often feeling so overwhelmed. She assists with understanding their benefits, medications, education, transportation, gas mileage reimbursement, lodging, cell phone service, applying for disability, referrals, authorizations, community resources, nutritional supplement assistance, and any other social service resources per individual needs. She works with staff in the office to assist with coordination and care planning, approvals and denials, prior authorizations, and as a liaison to assist with any needs that may arise for the staff in dealing with patient needs. We look forward to an ongoing relationship with Joann and the team at Aetna."

—Molly Brumfield, RN, MBA, OCN
Manager of Medical and Surgical Programs
Edwards Comprehensive Cancer Center

support identify the situation has stabilized and the member's needs can be met at a lower intensity of care management. Our CCT can be highly specialized for our most complex members. For example, our high intensity specialized care team includes a **care manager who is certified in transplant management** and assists members in need of bone marrow and solid organ transplants.

During episodes of transition, such as discharge from a higher to lower level of care, Aetna employs transitional care management protocols. Transitioning from one setting to another can be unsettling and even frightening for vulnerable members and their family members. Aetna understands that effective transitions of care are paramount to maintaining and improving members' quality of care, quality of outcomes, and most importantly, quality of life. The member's assigned care coordinator promotes a seamless transition of care during discharges from inpatient facilities or placement changes with the aim of improving members' health and recovery, effectively coordinating their care, and reducing future admissions. Discharge planning begins upon admission through collaboration with the member, their circle of support, facility staff, and other members of the ICT.

Transitional care management activities are modeled after the Coleman Model, pioneered by Eric Coleman, MD, MPH, from the University of Colorado. Aetna uses the model's following four pillars to promote high-quality transitional care management:

- **Medication self-management:** We educate the member and family on medications and help them develop a medication management system
- **Use of a dynamic member-centered record:** Aetna documents all screenings, assessments and care plans in our electronic care management system and can share this information across providers and settings, where permissible
- **PCP and specialist follow-up:** Care coordinators support members to schedule and complete follow-up visits with PCPs or other outpatient specialists, and they educate members on how to be an active participant in their care

- **Knowledge of 'red flags':** We help members to identify when their situation is worsening and educate them on how to seek the appropriate level of care

Because members are at significant risk when moving from one setting to another, effective care transitions are vital to decreasing potentially preventable events. Our integrated care management model encompasses a strengths-based approach that empowers members to achieve their optimal level of functioning. Emphasizing continuity and coordination of care, Aetna collaborates with discharge planners at inpatient facilities to make sure each member receives the highest level of service and oversight to address their unique clinical and care management needs. Aetna understands that care occurs locally and has begun co-locating care managers at high-volume facilities such as CAMC, Thomas Memorial Hospital in the Central region, and West Virginia University Ruby Memorial in the Northern region. At this time, we have care management staff embedded in 10 hospitals and BH facilities throughout West Virginia. Having real-time resources locally available is key to eliminating barriers to care and supporting care coordination and providing the most immediate resources to our members.

We routinely monitor metrics (e.g., number of face-to-face visits, adverse incidents, number of members engaged in care management) to help make sure our assistance during transitional periods is impactful. CCT staff assist with transition through face-to-face visits with members, which provides valuable access to the treating physicians and other hospital staff so that that we manage discharge orders and referrals as seamlessly as possible for our member.

Our transitional care management approach relies on the availability of all medical records through connection to the WVHIN and our inpatient census. Aetna tracks ADT data and receives real-time notifications through the WVHIN. The care coordinator can retrieve the member's information, including primary care visits, SDOH-related needs, and medication and

pharmacy history to inform discharge planning. Aetna care coordinators review all elements of the provided data and coordinate discharge activities with Aetna UM staff, which conducts concurrent reviews as members' transition to new levels of care. The UM nurse coordinates with the care coordinator and other ICT members for all discharge needs so there is an efficient and safe discharge plan, meeting the needs of the member in the least restrictive setting, with all services ready for the member immediately upon discharge. We provide transitional care management for members to support transitions between institutional and community care settings, including transitions to/from inpatient hospitals, nursing facilities, psychiatric facilities, PRTFs, therapeutic group homes, residential SUD settings, and transitions out of incarceration.

Table 6.3.1-4 highlights key components of our program.

Table 6.3.1-4: Care Transition Approaches for Facilities across the Continuum of Care

Facility Type	Approach
Rehabilitation services, PRTFs, and therapeutic group homes	Care coordinators collaborate with providers and PRTFs prior to discharge to create a plan for outpatient services when the member returns to the community. Care coordinators have monthly or more frequent contact with the member and therapist and participate in care planning meetings. The care coordinator maintains contact with the member and their family following discharge to ensure attendance at follow up services.
Psychiatric hospitals	Aetna collaborates with West Virginia's psychiatric hospitals, which provide real-time discharge summary information to Aetna to allow for immediate transitional care management follow-up. Prior to discharge, Aetna care managers connect members to outpatient resources in their local community, including primary care, behavioral health, and non-medical resources.
Inpatient facilities	Transition from inpatient facilities is critical for members to succeed. Aetna's UM staff and care managers coordinate with discharge staff at the hospital to serve members where they are—close to their homes and circle of support. Aetna will continue to coordinate with hospitals to allow for timely implementation of transitional care management and outpatient services upon discharge.

Facility Type	Approach
Other transitions such as transitions out of incarceration	Aetna's Care Management staff work closely with members of the member's regional ICT to coordinate care and implement transitional care management activities. Care managers connect with incarcerated members before they are released to ensure referrals to services upon release. We have been contacted to start a program with Western Regional Jail to start transitions before release.

Pharmacy support: Care coordinators assisting members discharging from an inpatient facility or between levels of care review members' medication needs in their pre-discharge collaboration with the member and facility staff to verify that prescriptions have been sent to the member's pharmacy prior to the member's discharge and that the member (and/or their guardian if applicable) knows how and where to fill them. The care coordinator facilitates resolution of any barriers in this process with the member, the facility, or the pharmacy as needed. Additionally, medication reconciliation, defined as the process of comparing a patient's list of current medications to a physician's admission, transfer, and/or discharge orders, is known to be an effective strategy to reduce medication errors. In recognition that members discharged from the hospital are at increased risk for adverse drug events, Aetna medication reconciliation activities target those members discharged to home or other community-based residential setting. The process involves a call by the member's assigned care coordinator or by health plan staff if the member is not enrolled in care management, to the newly discharged member and/or caregiver. For those members called by a care coordinator, the care coordinator reviews the member's drug regimen, discusses the importance of medication adherence, helps the member identify barriers to adherence, and assesses the member's understanding of his/her medications. Other health plan staff conducting these calls screen for any medication changes and refer to a care coordinator if discussions are needed (review of medication regimens, the

importance of medication adherence, and assessing the member's understanding of his/her medications).

Social Determinants of Health

CM044	The Vendor should describe its approach to address Social Determinants of Health (SDOH)
CM045	The Vendor should describe its care coordination efforts that identify and address member access including, but not limited to, the following:
CM046	Employment
CM047	Food security
CM048	Housing Stability
CM049	Education
CM050	Social Cohesion
CM051	Resources that connect members to social supports and healthcare
CM052	Environmental needs
CM053	The Vendor should describe its plan to develop additional programs for Social Determinants of Health (SDOH)

Aetna recognizes the critical impact SDOH play in members' ability to access health care services. **In many cases, SDOH are the root cause barrier in members' ability to attend health care services**. If a member is unemployed, they may prioritize the need to secure a source of income first and attend to health issues later. A member living in a rural county without their own transportation is less likely to attend appointments without transportation assistance. A homeless mother of two will certainly be more concerned about obtaining shelter than making sure her children see the dentist. **Our role is to identify resources to remove SDOH-related barriers to health care** to not only resolve the SDOH concern, but to support members' ability to actively pursue and achieve all other health and life goals, free of the burden and stress of primary SDOH concerns. Aetna is aware that counties and regions have their own unique SDOH-related challenges, and that **the ZIP code or county where a**

member lives can have as much (or more impact) on a member's health outcomes as their family medical history and genetics. Aetna analyzes West Virginia data, which highlights regional SDOH challenges. For example, based on the 2018 Community Needs Assessment,[14] we know that residents of Boone, Putnam, Clay, Fayette, and Kanawha have identified a need for more employment opportunities and services. Through the 2018-2022 State Rural Health Plan,[15] we know that there are more than 40 counties in the state that are considered food deserts. Our regional CCTs, possess detailed knowledge of local challenges and needs, as well as the resources to address those needs, and offer swift assistance to help members in their communities remove or reduce SDOH-related barriers to care. Our SDOH approach is designed to address both regional and statewide needs.

[CM044, CM045] Approach to Addressing SDOH

Our approach to addressing SDOH in West Virginia is multi-faceted and includes the following:

- Local presence of Aetna care coordination staff that live and work in the communities where their assigned members reside and are keenly familiar with local resources, needs, and opportunities
- Assessment and identification of SDOH through HRQ screenings, the HCE, comprehensive assessments, and ongoing care planning with members and their ICTs
- Use of Aunt Bertha, West Virginia Family Resource Network, WV 2-1-1, Unite Us (in Clay, Kanawha, Boone, Putnam, Cabell, and Wayne counties), and internal SDOH Collaborative Resources guide to create SDOH service referrals and maintain a closed loop on service completion
- Mobilization of Care Coordination staff to connect members to SDOH services immediately when needs are identified, and additional partnership with CHWs at FQHCs where our care coordinators are onsite
- Daily integrated care management, UM, and BH rounds to discuss, identify, and find solutions to regional SDOH-related barriers
- Development of strong relationships with local SDOH service organizations
- Use of telehealth, as allowable, to promote access to care

---

[14] EnAct Community Action, Community Needs Assessment May 2018, http://enactwv.org/wp-content/uploads/2018/05/EnAct-Community-Needs-Assessment-Report-Final-without-Appendix.pdf, accessed January 18, 2020
[15] West Virginia Department of Health and Human Resources, "Creating a Culture of Health in Rural West Virginia: State Rural Health Plan 2018-2022," (2018): accessed August 5, 2019;http://wvrha.org/wp-content/uploads/2017/08/2018-State-Rural-Health-Plan-Final.pdf, accessed January 18, 2020

- SOC model that is focused on care coordination and is community-facing—working with organizations, institutions, and facilities to reduce barriers and system gaps

During the initial screening process, members experiencing SDOH impacting their ability to access care (as identified on the HRQ) are warm transferred to a Care Management associate for further screening and assessment for intensive or supportive care management services. Members that are identified to have SDOH needs not requiring care management intervention are connected to tier one population health care coordination. Care coordinators are responsible to continually assess and identify SDOH concerns as they arise and to work with members (and their ICTs where applicable) to develop and update care plans

Aetna Care Coordinator and Williamson Health and Wellness CHW Work together for a Member with Complex Issues

Robert[16] lives in Williamson. He was diagnosed with cancer, was recently divorced, lived alone, and was providing care for his mother. He was feeling anxious about his cancer diagnosis and was worried about whether he could continue to take care of his mother and even if he could take care of himself. He was referred to Aetna care management during inpatient hospital discharge planning. At the time, he had been traveling almost two hours each way to and from Huntington to receive chemotherapy and reported the car rides were extremely uncomfortable for him. The Aetna care coordinator connected Robert to a registered nurse and CHW at the Williamson Health and Wellness Center. The CHW meets with Robert in his home one or two times a week. The care coordinator also helped reduce SDOH-related issues related to his long travels for chemotherapy by connecting him with a home care agency in Logan. The agency was able to provide a travel cushion at reduced cost and staff from Williamson using CHW funds to purchase the cushion for Robert. Additionally, the care coordinator contacted a local church in Belo that agreed to deliver hot meals to both Robert and his mother. Robert uses his cushion on his trips to Huntington. He tells his care coordinator that it is a relief on his hips during the duration of the car ride. Robert stated that he feels like Aetna is so much more than "just an insurance company" and is very thankful for the support and resources. Robert has been able to avoid further emergency room visits and inpatient stays and is planning to find a church group after he completes his chemotherapy so he can increase his social interaction.

[16] Not his real name

that identify resources to address the SDOH concern. Care coordinators ensure connection to these resources and track the issue to ensure the member obtained the needed service.

[CM046 – CM049, CM050 – CM052] Care Coordination Efforts to Address Access Issues Related to SDOH

As a result of our longstanding presence in West Virginia, Aetna has identified meaningful resources to address SDOH through the development of collaborative working relationships with community organizations that provide critical supportive services and programs.

[CM046] Employment

When we identify that a member needs assistance related to employment via completion of the HRQ, HCE, and other assessment tools or during the care planning process, we access the following resources (to name a few), based on the member's unique needs:

- **Workforce West Virginia:** We refer members seeking assistance in obtaining employment to Workforce West Virginia. Care coordinators are trained to understand and share information regarding their services with their assigned members. Additionally, we send mailers to all membership regarding Workforce West Virginia services and include their phone number on our website. Our outbound interactive voice menu also offers information regarding this important resource.
- **Job Corps:** We collaborate with Job Corps to link low-income members aged 16 to 24 (24 and older for those with disabilities) in Charleston and Harper's Ferry to Job Corps programs. Members who become Job Corps students can receive training and education to develop skills in a broad spectrum of employment roles ranging from carpenter to office manager, computer technician, medical and dental assistants, and heating, ventilation, and air conditioning specialists, to name a few. Job Corps also facilitates recruitment of students into employment opportunities.
- **Temporary employment:** Care coordinators help members connect with temporary job placement agencies such as Manpower to introduce them to employment opportunities.
- **CVS Workforce Initiatives:** CVS Workforce Initiatives provides Aetna with access to existing CVS partnerships that can help Aetna West Virginia members obtain the skills needed to build career-focused employment. CVS Health Workforce Initiatives offer hands-on training programs for

Occasionally, there are events that require special assistance. In February 2018, there was a prolonged teacher's strike, and because schools were closed, school meal programs were sharply reduced and, in many locations, they were completely halted. Aetna responded immediately by giving $3,000 to Facing Hunger Food Bank and $10,000 to Mountaineer Food Bank to help make sure students facing food insecurity would be provided for during the closures.

individuals looking for employment as pharmacy technicians and retail associates. Our CVS Health National Apprenticeship in partnership with West Virginia Workforce Boards includes classroom and on-the-job training with four U.S. Department of Labor-registered apprenticeships for pharmacy. The Charleston West Virginia Job Corps provides tuition-free pharmacy technician training at the Job Corps center for youth ages 16 to 24. CVS Health Workforce Initiatives also partners with West Virginia Junior College by providing pharmacy technician externships at local CVS pharmacies. Since 2015, CVS Health has hired 1,739 new West Virginia employees through its workforce initiatives.

[CM047] Food Security

Proper nutrition is a cornerstone of optimal health. Aetna recognizes the relationship between health care disparity and food insecurity. This is especially pronounced in West Virginia, which has some of the highest rates of poverty and food insecurity across the nation. The devastating effects of poor nutrition on brain development and growth render West Virginia children at a major disadvantage early in life. This can also set them on a path of poor health and socioeconomic standing as an adult. Care coordinators identify members with food security needs through screenings, assessments, and the care planning process as previously described. They then utilize Unite Us (who provides referral status feedback) and/or the following resources to coordinate care for members with needs related to food insecurity:

- **Connection to food banks and food pantries:** Care coordinators are familiar with the food banks and food pantries available to members in their neighborhoods and connect them to these resources as needed. Aetna has a longstanding relationship with West Virginia's two food banks, Facing Hunger and Mountaineer Food Banks. In addition to supplying the funding and volunteers that make the distribution of healthy food possible, we provide health care information and personal care items.
- **WIC and SNAP:** All newly identified pregnant members receive a welcome packet with information on how to enroll in the WIC program that provides subsidies for the member to receive food products. We provide information regarding how to apply for SNAP to all members.
- **Mobile Food Pantries: Aetna is the only managed care organization in the state to offer mobile food pantries.** We offer events throughout the state **(including Boone and Kanawha counties where food insecurity is a pronounced concern)** where we distribute food we have purchased from Mountaineer Food Bank and Facing Hunger Food Bank. Typically, we distribute perishable goods (that are otherwise unable to be stored long-term at fixed food bank locations) to residents in their local communities. Our mobile food pantries are run by Aetna staff at least every two months. Since 2018, Aetna sponsored the distribution of about 66,000 pounds of food, which equates to **55,000 meals.**

- **Hunger Hotline:** Care coordinators connect members to services available through the United States Department of Agriculture's Hunger Hotline which, among other services, offers information regarding access to meals for school-aged children during the summer (when they are unable to receive meals from school).

Aetna Stands Out as Supporter of Hunger Free West Virginia

Hunger Free WV is a collaboration lead by the state's two food banks: Facing Hunger Food Bank and Mountaineer Food Bank. In addition, the group brings together a variety of members including The West Virginia Department of Education, West Virginia Department of Agriculture, and USDA as well as local food pantries and feeding programs. Hunger Free WV interacts with policy makers to improve situations that effect hunger and food insecurity. This culminated with a full day of recognition at the West Virginia Legislature in January 2020. There was also a proclamation by Governor Jim Justice recognizing the day. Aetna is proud to be the sole MCO involved with Hunger Free WV as a supporter since the program's inception in 2018. We have provided financial support to this endeavor and we had an information table at the event at the Legislature in January. We are available to assist with policy discussions from a health and Medicaid standpoint.

[CM048] Housing Stability

Availability of safe housing is a core human need. Without it, members can think of little else and are much less likely to attend health care services or engage in a healthy lifestyle. The HRQ, HCE, and other screening and assessment tools, as well as ongoing care activities, help care coordinators identify when a member has an urgent housing need. At times, the care coordinator may also be made aware of the need for a particular member by the UM or Member Services department. If the care coordinator is aware of a member's imminent housing need, the care plan is updated and the care coordinator mobilizes to find housing options, both short- and long-term. Care coordinators have the knowledge and skill to connect members experiencing housing instability to local and county-specific resources including homeless shelters, Housing and Urban Development and Section 8 application processes, and sober/transitional living options. For example, we connect members in Cabell county to Harmony House and utilize the Affordable Housing website, which allows us to search housing options by ZIP code and to request registration on housing wait lists. Additionally, Aetna care

coordinators frequently connect members to the West Virginia Coalition to End Homelessness, which offers assistance to people seeking housing.

Assistance for a Homeless Member in the Northern Region

Antonio[17] was living in his car when he met his Aetna care manager. Antonio faces several health challenges including type 2 diabetes, neuropathy, hypertension, high cholesterol, and a history of prostate cancer. He also had recently been inpatient with a brain bleed and was only able to work ten hours per week at his job, so he was under financial strain. Antonio was enrolled in Aetna's intensive care management and his care manager developed a care plan with Antonio helped him apply to Unity Housing. When Antonio was approved to move into his own apartment complex, he called his care manager and was overwhelmed with gratefulness. His application with SSI is pending. His blood sugars are now staying within normal limits, and his neurologist has released him for six months.

[CM049] Education

Education opens members up to a world of possibilities. Lack of education, on the other hand, is tied to illiteracy (in terms of academics, life skills, and health) and fewer opportunities for stable and meaningful employment and income. Using the assessment and care planning activities previously described, Aetna care coordinators identify members with goals related to education and include these goals in the care planning process. In addition to programs like Job Corps (mentioned earlier), care coordinators connect members to information regarding how to sign up for GED classes. They can also inform members about the tuition assistance programs available within the West Virginia community and technical college systems. We additionally refer members to Jobs and Hope at WV.gov, which offers a wealth of information and resources regarding education, internships, and transportation.

[17] Not his real name

[CM050] Social Cohesion

Connection to family, friends, and community is key for members in their quest for optimal health. Not only does connection foster general wellbeing and happiness, members who are connected to a circle of support have a broader safety net of people they can count on to be advocates and offer help in their attainment of health goals. Care coordinators assess members' circles of support and help identify resources to augment this support system. Care coordinators may link members to faith communities (based on member interest/preference) or condition-specific support groups such as West Virginia Cancer Crusaders, Autism Speaks West Virginia, American Cancer Society, diabetes support groups, Mountaineer Spina Bifida Camp, and social and recreational groups such as Third Base, Boy Scouts/Girl Scouts, Big Brothers/Big Sisters or 4-H, to name a few. Aetna is also proud to sponsor Camp Appalachia. This year-long camp is available to youth ages 7 to 17 who are at risk due to having special health care needs, exposure to the opioid epidemic, or who have parents who are incarcerated. The camp offers a summer residence program as well as day camps with a focus on opioid use prevention, outdoor education, resilience, and leadership skills. Aetna has provided both financial support and volunteer support from Aetna staff. Additionally, Aetna sponsors other camps for members with asthma and juvenile diabetes.

[CM051] Connecting Members to Social Supports and Healthcare

Care coordinators have primary responsibility for connecting members to organizations and services which mitigate SDOH-related barriers. As needs are identified during screening and assessment, they are included in care plan goals for follow-up by the care coordinator to ensure the resource identified to address the SDOH barrier has been contacted. Care Coordination staff receive training on a variety of tools that they use to refer and link members to the help they need:

- **West Virginia-211:** Website for SDOH resources that allows for ZIP code and county level search of SDOH-related resources
- **Aunt Bertha:** Nationally used comprehensive online directory that includes local SDOH resource information
- **Unite Us:** Aetna is currently implementing the use of Unite Us, a closed loop SDOH service referral platform in in Clay, Kanawha, Boone, Putnam, Cabell, and Wayne counties
- **WV Family Resource Networks**: Offers lists (by county) of community resources and contact persons
- **Internal resource lists:** Aetna maintains additional internal resource lists such as our SDOH collaborative worksheet to supplement any areas/services not described in the tools previously mentioned

Care coordination staff are also familiar with processes to assist members attain transportation assistance, as well as the telehealth options that may be available to them, which offer ease of access to care. At this time, telehealth is an underutilized tool that could be used to mitigate limited access to services in rural areas of the state and transportation issues with having to travel to one of the three major medical centers. **Currently, our local BH medical director and clinical liaison are participating on the State's telehealth policy panel.** We look forward to finding creative solutions to improve access to care, not just for our members but all residents of the state of West Virginia. While telehealth options are limited to particular services, provider types, and settings in West Virginia at present, we are committed to the advancement of telehealth in the state as demonstrated by our collaboration with West Virginia University (WVU) through the WVU PALS program. It is a telepsychiatry program that enables PCPs to consult with a psychiatrist about the care and management of children and adolescents. We gave WVU a $50,000 grant to assist with start-up. This program is promising because WV has a shortage of psychiatrists and oftentimes the PCP is the one who is managing psychotropic medication, educating parents/guardians, and working with therapists and other outpatient providers. We also collaborate with Anytime Pediatrics and Nationwide to provide telehealth for pediatric oncology patients.

[CM052] Environmental Needs

In times of environmental disruption or disaster, Aetna care coordinators quickly step in to assist members. This may include connecting members to churches who help with home modifications for members with disabilities or domestic violence shelters for members who need safe haven. Other examples of resources we connect members with for assistance with environmental needs include the following:

> During flooding emergencies in June 2019 in western, central, and southern West Virginia, Aetna care coordinators contacted impacted members to make sure their needs were being met. Care coordinators helped enrollees with referrals to FEMA, Red Cross, Salvation Army, Catholic Charities, and Appalachia Service Project for housing and home repairs. We also provided information regarding multiple community clothing and food drives communicated to members.

- **EnAct Community Action:** Utilities assistance
- **Federal Emergency Management Agency (FEMA)/Red Cross:** Disaster recovery
- **NEHP, Faith in Action, and Heart in Hands:** Emergency repairs of gas lines, furnaces, etc.
- **Big Creek People in Action:** An organization providing numerous supports related to home modifications for persons with disabilities and making poor housing conditions more livable; they also offer help regarding education, literacy, and GED attainment

[CM053] Plan for Development of Additional SDOH Programs

As described previously, we currently utilize Aunt Bertha, Unite Us, WV-211, and other internal resources to identify and connect members to services and organizations that address SDOH. We remain committed to easing access to these services on a statewide level and look forward to partnering with the Department as they evaluate state-wide solutions. In the interim, we will continue to evaluate our current processes and resources for enhancement. At present, we are currently looking to expand SDOH referrals to a newly identified option called The Maker's Center. The Maker's Center is offered in the central region by Bible Center Church at multiple locations. The Maker's Center offers volunteers and mentors who teach attendees skills related to construction, technology, sewing, floral design and woodworking to broaden members' marketable skills for employment opportunities.

Special Care Coordination Circumstances

CM040	The Vendor should describe its protocols for addressing a provider that does not perform coordination activities that includes, but is not limited to, the following:
CM041	Identification
CM042	Actions taken to improve coordination
CM043	The Vendor should describe its programs for coordination of care with community resources and social services for its members.
CM061	The Vendor should describe its process to refer all eligible pregnant members to the Bureau for Public Health's (BPH's) Women, Infants, and Children Program (WIC) for nutrition and services during and after pregnancy.
CM062	The Vendor should describe its process to coordinate with the Bureau for Public Health's (BPH's) Office of Maternal, Child, and Family Health (OMCFH), Office of Nutrition Services (ONS), and Office of Community health Systems and health Promotion (OCHSHP) to link members with necessary public health prevention and support services.
CM063	The Vendor should describe its protocols to coordinate care for members receiving Social Necessary Services (SNS) through the Specialized Foster Care Administrative Services Organization (ASO).
CM064	The Vendor should describe its process to share information for children enrolled in the Specialized Foster Care Managed Care Organization (MCO) including, but not limited to, authorization data, medical history, claims history, medical records, and other patient information.

Aetna's extensive experience working with enrollees across a broad spectrum of eligibility categories ensures that we offer seamless coordination and continuity of care with other stakeholders involved in member care.

[CM040, CM041, CM042] Improving Provider Participation in Coordination Activities

As ongoing care coordination continues, if the care coordinator or UM team member identifies a provider that is not contributing to collaborative activities as expected (such as not providing input to the care plan or at ICT meetings, following up on communications between team members, or participating in prior auth/concurrent review activities), they may outreach the provider liaison assigned to the provider for assistance in getting the provider to respond or step

in. If the provider does not respond to provider liaison involvement, additional steps (such as issuing a quality of care concern, if applicable) may be taken.

[CM043] Coordination with Community Resources and Social Services

Throughout the care planning process and ongoing care coordination efforts for all members, the care coordinator and ICT identify community resources and social services that may address the needs or goals outlined in the member's treatment plan. These needs are re-evaluated at the reassessment and care plan update intervals (or when there is a significant life or health change) as described previously. When a particular community resource or social service is identified as a need, the ICT establishes in the care plan the date by which the service must be procured, depending on the urgency for the individual member. Representatives of organizations offering community resources or social services may be invited for ICT meetings as needed, with permission of the member.

We have well-established relationships with West Virginia community resources and social service agencies such as the following: Right From the Start, Birth to Three, the Children with Special Healthcare Needs program, CPS, DXC Technologies Inc. (formerly Molina), Perinatal Partnership, Adverse Childhood Experiences (ACES) Coalition, American Cancer Society, Youth Advocate Program, Our Babies: Safe and Sound, Help Me Grow West Virginia, Helping Appalachian Children and Infants, Tobacco Free Families Advisory Council, March of Dimes, Mountain State Healthy Family, Circle of Parents, PROACT, WIC, and Mountains of Hope.

[CM061, CM062] Referrals to and Collaboration with WIC/Office of Nutritional Services

We deliver mailings regarding WIC program highlights and access/application processes to all membership, including pregnant members. Additionally, pregnant members and new parents receive our "Healthy You, Healthy Baby: A Guide for Moms and Families," which offers

additional information regarding WIC resources and applications. When a care coordinator identifies a member who may be eligible for WIC, they assist the referral via sending referral packets to the program. Additionally, WIC leadership have delivered trainings to staff regarding the program and we will continue to invite them to provide additional trainings in the future. We also meet with WIC leadership to collaborate around shared goals. Unite Us offers connectivity with WIC referrals as well. Our care managers refer to reduced lunch programs and refer to WIC famer's markets and grocery stores. We connect members to FQHCs that give vouchers for use in the Farmer's Market nutrition program as well.

[CM062] Referrals to and Coordination of Care with Office of Maternal, Child and Family Health (OMCFH) and Office of Community Health Systems and Health Promotion (OCHSHP)

Aetna will focus on collaborative activities with family-centered, community-based systems of coordinated care for children with special health care needs, including early intervention and screening, linkage with parent support groups and forums, and adolescent pregnancy prevention programs. Our staff work with the OMCFH to improve members' sense of safety and the member experience and access to services, with the aim of reducing barriers to achieving health goals. Currently, we attend a monthly meeting with OMCFH to discuss strategies to remove or mitigate service barriers for individual children with special health care needs. As described previously, we offer specialized care management for babies with NAS and follow them closely for their first year of life. As another example, CCTs work with schools and school districts to ensure children transitioning (from birth to age three population) to the school system have Individualized Education Programs where appropriate. We work with the OMCFH to track success and address any barriers. We collaborate with public health leadership on their

diabetes program, which offers members condition-specific education. Additionally, we attend quarterly meetings with OCHSHP leadership to collaborate around shared goals.

[CM063] Coordination of Care for Members Receiving Socially Necessary Services (SNS) Through the Specialized Foster Care Administrative Services Organization

As the recipient of the award for the Mountain Health Promise program serving children in foster care and other special eligibility categories, there is a built-in ease of coordination of SNS services between our Medicaid line of business and our Mountain Health Promise plan with KEPRO. While we comply with professional and legal boundaries between the two programs, we are confident that our standardized processes, common care management practices, and access to population health information promote exceptional cross-coordination. We will collaborate to formalize a process for KEPRO to notify our MHT/WVHB/CHIP Care Management team when our members have been referred to SNS services by CPS or a youth service worker. This notification will allow for ongoing care coordination between our plan, KEPRO, and the member and their circle of support. We will also expect that KEPRO offer these notifications to other MCOs as needed to coordinate care.

[CM064] Information Sharing for Children Enrolled in Specialized Foster Care MCO

Given our status as the managed care organization for both the Mountain Health Promise population and MHT, and WVHB services, we are confident that all Aetna staff working within these two programs are trained and competent in following our transition of care policy, which outlines requirements for the sharing of information to coordinate care. With the member's permission, information about previous service and provider history, authorizations, claims, and medical records, as well as assessments and care plans, can be shared across programs to prevent disruption of service. Per policy expectations, we will facilitate the sharing of requested information (as permissible by law and member authorization disclosures) to assure seamless transitions

between the programs and continuity of care for the member (and families) involved. Our longstanding relationships with stakeholder representatives, from CPS and other child welfare agencies, further strengthen our ability to provide prompt response to requests for information and to offer a safety net for members as they transition to foster care program enrollment status.

Addressing Prescription Drug Abuse

CM015	The Vendor should describe strategies to manage members with a history of prescription drug abuse, and processes for monitoring potential abuse or inappropriate utilization of controlled prescription medications.

Prescription drug abuse and related opioid addiction is a crisis across the country. **Aetna is committed to reversing the rising trend of polypharmacy, prescription drug abuse, and related opioid abuse**. We execute strategic solutions that focus on the needs of our members and ensure initiatives and programs integrate pharmacy, behavioral health, and physical health. Our programs and collaborations, such as our **NAS care management program** and our relationship with Provider Response Organization for Addiction Care and Treatment (PROACT), connect members to providers and give members seamless access to the right support—encompassing mind and body—to fight addiction. Everyone has a role to play if we have any hope of slowing this epidemic; this includes members, families, medical professionals, insurers, addiction counselors, and the public at large. We are applying data analytics, clinical insights, and collaborations along the continuum of addiction and recovery to implement data-driven initiatives and improved outcomes. We are working to prevent misuse and abuse, intervene when we identify at-risk prescribing or utilization behavior, and support those who are addicted through evidence-based treatments. We have SUD care management specialists and a peer support specialist with lived experience with SUD who offers members insight and guidance in obtaining needed services.

The severity of these issues in West Virginia is evidenced by high age-adjusted rates of drug overdose deaths involving opioids, increase in opioid-involved overdose deaths for synthetic opioids other than methadone, high opioid prescription to resident ratios, and increase in the rate of NAS/neonatal opioid withdrawal syndrome (NOWS) cases[18]. In many cases, these negative indicators in West Virginia represent some of the highest in the country.

Overdose may result from the use of illicit drugs but can also result from the misuse of prescription medications and over-the-counter medications. Polypharmacy-related deaths are increasing. In West Virginia, the average number of drugs involved in fatal overdoses has increased, from 2.3 drugs per fatal overdose in 2001 to 3.5 drugs per fatal overdose in 2015 (West Virginia Health Statistics Center, 2017).[19] Among the 830 West Virginians included in the 2016 West Virginia Overdose Fatality Analysis who died from overdose in 2016, 86 percent had multiple drugs in their system at the time of death.[20]

Aetna's five-year goals to combat this crisis are the most ambitious in the industry and include the following:

- Increase members with chronic pain who are treated by non-opioid treatment alternatives by 50 percent through an evidence-based multimodal approach (such as physical/occupational therapy, chiropractic care, acupuncture, psychotherapy, biofeedback, and local therapeutic injections)
- Reduce inappropriate opioid prescribing for our members by 50 percent (focus on members with known past opioid overdose, concomitant benzodiazepines and opioids, members receiving opioids with existing OUD diagnosis, and opioid prescriptions greater than one-week duration for acute condition

---

[20] 2016 West Virginia Overdose Fatality Analysis: accessed January 23, 2020; https://dhhr.wv.gov/bph/Documents/ODCP%20Reports%202017/2016%20West%20Virginia%20Overdose%20Fatality%20Analysis_004302018.pdf

- Increase members with OUD who are treated with medication assisted treatment (MAT) and other evidence-based treatments by 50 percent

The Aetna Medicaid Opioid Taskforce recently introduced our **opioid dashboard** that provides national and state-specific data regarding progress toward our project goals. The dashboard uses pharmacy and medical claims data to trend key metrics to help us combat inappropriate use of opioids. The dashboard allows for heatmapping of opioid use down to the county level, enabling targeted intervention efforts aimed at improving member health outcomes. As an example, we have engaged with providers to promote the adoption of MAT programs and have identified a Care Management Program Opioid Champion, whose role will be described in greater detail later in the response. Data from our opioid dashboard demonstrate our success across all Medicaid plans. For example, between July 2016 and December 2019, the Aetna Medicaid organization increased the rate of non-opioid treatment for chronic pain by 34.9 percent and decreased the rate of opioid prescriptions for members with OUD by 55.8 percent. **Figure 6.3.1-6** demonstrates some of the West Virginia outcomes monitored on the dashboard.

Fueled by cross-functional collaborations and insights, the Aetna enterprise's opioid initiatives have yielded meaningful results. In the first year since announcing our five-year enterprise goals, we have seen a 34% increase nationally in the rate of medication-assisted treatment or other evidence-based treatments used by members with OUD, among other accomplishments.

Aetna's comprehensive strategy to combat the prescription drug abuse epidemic includes the following:

- **Prevention:** Identification of alternatives to opioid prescribing and educating the public and providers about the dangers of prescription abuse or misuse
- **Intervention:** Identification of at-risk prescription utilization or abnormal prescribing patterns and intervention to address problems as they are found
- **Support:** Utilization and promotion of evidence-based practices to help members overcome prescription drug abuse

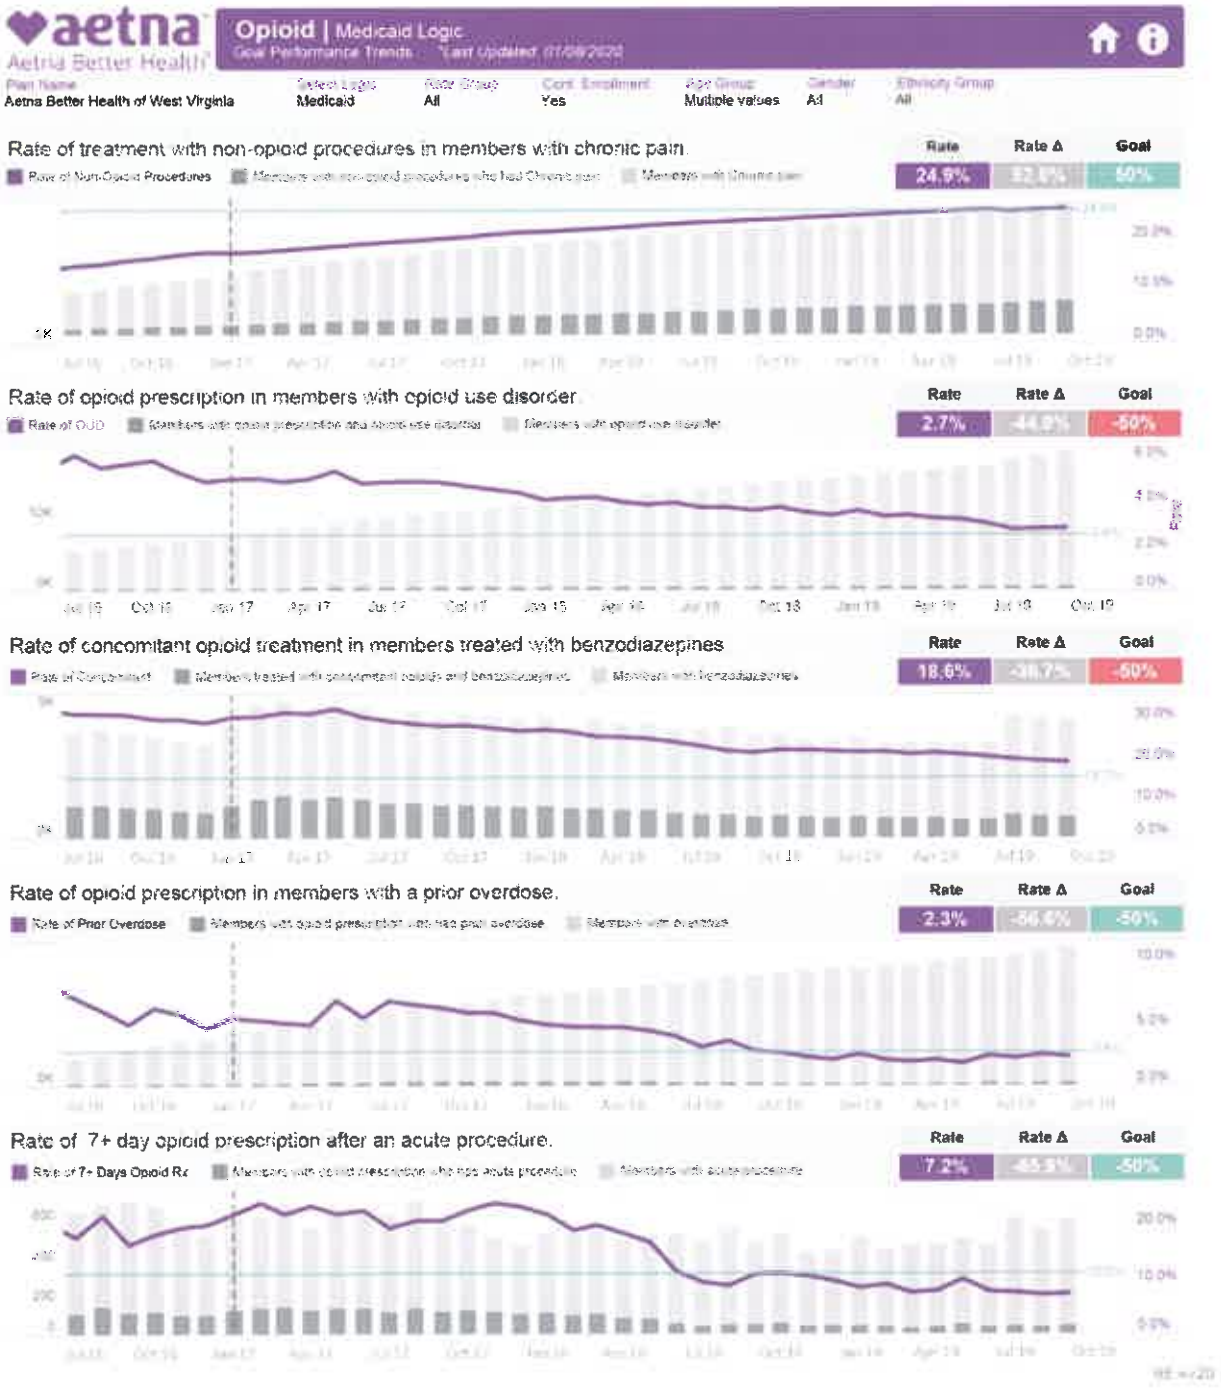

Figure 6.3.1-6: West Virginia Opioid Management Dashboard Indicators
Our Opioid Dashboard monitors progress towards our target goals relative to opioid management in West Virginia.

Aetna focuses on the following actions in support of this strategy:

- Monitor, mitigate, and prevent prescription abuse and miss-use
- Care management that connects members struggling with prescription drug abuse to care that is best suited to their needs and helps with SDOH needs including transportation
- Honor best practices and promote best outcomes through implementation of innovative programs
- Maximize harm reduction activities

Monitoring, Mitigation, and Prevention of Prescription Abuse and Misuse

Aetna engages in robust monitoring of multiple data points to identify and mitigate polypharmacy and prescription drug abuse trends. One key element of monitoring is **identification of concerning utilization or prescribing patterns as early as possible.** With actionable data we can mobilize quickly to mitigate problematic trends. We also create targeted education for members and providers to prevent or reduce polypharmacy and prescription drug abuse.

Monitoring

The Consolidated OUD Care Management Report is a monthly report (with a rolling three-month look-back period for paid claims) that calculates a total severity index based on these qualitative indicators:

- Number of controlled substance claims, with count of number of providers and pharmacies attached to these claims
- Cumulative morphine equivalency daily dose (MEDD)
- Number of naloxone claims
- Duration of overlap between opioid and benzodiazepine claims (concomitant days)

Care coordinators can review aggregate and individual member claims detail through this report. Additionally, Aetna runs other reports to identify potential concerns, which are also available to care coordinators monthly. These include the following:

- Individual reports of members filling or attempting to fill prescriptions for stimulant medications, antipsychotics, narcotic antagonist, opioid dependence medications (such as Suboxone), and opioids
- Drug utilization review report received from the Department
- Emergency room high utilizer report
- High-prescribers reports identifying the top prescribers by drug cost

- High-utilizer reports identifying members with 10 or more prescriptions in the past 30 days, OR members with 3 or more prescribers for prescriptions in the past 30 days
- Prescription opioid high-utilizer report identifying members filling 10 or more opioid prescriptions from 4 or more prescribers filled at 4 or more pharmacies in the date range specified
- Opioid and/or Suboxone® use in pregnant members
- Monthly CORE predictive model to identify at-risk and rising-risk members based on diagnostic flags for SUD or OUD

Mitigation Actions

Aetna takes several actions to address polypharmacy and the potential for prescription drug abuse when it is identified. If a particular provider has been identified with abnormal or problematic prescribing patterns, we refer the situation to the state's pharmacy director. CM and UM may also submit internal quality of care referrals for outlier prescribers. Our Quality team reviews these referrals and provides recommendations for appropriate actions. The Care Management team follows up with these recommendations when called upon. Aetna may engage in additional provider-related mitigation actions such as peer-to-peer reviews. At other times, our Special Investigations Unit (SIU) may be notified of a prescribing pattern concern and all Aetna internal departments (e.g. CM, UM) support the SIU in the investigation and identification of resolutions/solutions to address the allegation.

The following list demonstrates several other actions Aetna takes to prevent/reduce polypharmacy and/or abnormal prescribing patterns:

- Beginning in 2016, Aetna then-Executive Vice President and Chief Medical Officer Dr. Hal Paz, MD, began sending letters to the top one percent of opioid prescribers (within their respective specialties) to alert them of their prescribing patterns. Educational materials regarding prescribing for chronic pain were distributed to opioid super-prescribers. We have a dedicated email address for prescribers to respond to these letters and to obtain additional information.
- Through our controlled substance use program, Aetna monitors if a member receives multiple prescriptions from different prescribers or is filling them at numerous pharmacies. Depending on the situation, Aetna may send a letter to the prescriber and member, while also referring them to a specialist.
- Care management acts upon findings of monitoring reports via interventions with members as described later in this response.

- Engagement at the community level by collaborating with government and local law enforcement representatives to combat the epidemic through monthly meetings with the state Medicaid director to discuss trends and solutions

If Aetna were to be responsible for direct management and oversight of pharmacy benefits in West Virginia for MHT/WVHB/WVCHIP, we would look at practices we use across the country to implement additional safety and mitigation strategies as described here. Aetna's pharmacy director works with our pharmacy benefit manager and our clinical staff to enhance our member and provider pharmacy experiences. This collaboration optimizes member outcomes by ensuring access to safe and clinically appropriate medications and providing innovative support to members, prescribers, and pharmacies. We use a systematic, ongoing process to review the prescribing and dispensing of medications that preserves member access to clinically appropriate medications. Our approach involves a comprehensive review of the member's medication history before and during dispensing to achieve an appropriate therapeutic regimen and positive outcomes. Aetna utilizes evidence-based, quality-driven practices and safety messages at the pharmacy to decrease waste and harm to members. Our point of sale (POS) system utilizes computerized algorithms built into claim adjudication that sends soft alerts and hard-block alerts to pharmacists that prevent dispensing medications without further review and/or action by the dispensing pharmacists. These blocks enable us to certify appropriate utilization, safety, and avoid duplications.

Aetna implemented numerous SMART prior authorization (PA) edits in 2017 and 2018, which consider the member's pharmacy claim history and medical diagnosis (which is loaded from Aetna's medical claims adjudication system) and the prescriber's specialty type in the evaluation of prescribed medications at the POS. The use of pharmacy and/or medical claims history to adjudicate drug claims that would standardly reject at point of service and require PA allows a

member quick access to the medication and eliminates unnecessary delays when the member presents the prescription to the pharmacist. The following SMART PA POS edits used by Aetna to improve safety of medication use while easing the burden on the prescribing provider using known information and pharmacist actions include the following:

- Long-acting opioids; SMART edits to bypass PA for diagnosis of cancer or palliative care
- Morphine Milligram Equivalent (MME) dose edit for opioids except buprenorphine product; SMART PA MME edit bypass PA if diagnosis of cancer and palliative care
- Vivitrol® access with ICD-10 for OUD
- Naltrexone concurrent use with opioids requires diagnosis code F10.2 and F11.2
- MME dose edit exemption if diagnosis of burn diagnosis (T20.2-25.7) or sickle cell crisis

Education Aimed at Prevention

Aetna offers education to members and providers regarding prescription drug abuse and polypharmacy. Examples include the following:

- Providing education to members on dangers of prescription drug abuse and the availability of alternative therapies for pain relief on our preferred drug list
- Provider education on medical necessity and referral back to the National Opiate Prescribing Guides from Centers for Medicare and Medicaid Services
- Delivery of materials entitled "If at First You Don't Prescribe" for providers and the companion booklet for members, "Power Over Pain," which is part of our comprehensive educational campaign aimed at providing education for both providers and the public on the treatment of pain
- Outreaching to dental providers about members utilizing more than three days' supply of opioids. In 2019, 242 dental prescribers received letters and education, which resulted in a 70 percent reduction in prescriptions greater than a three-day supply measured three months post-outreach.
- Standard member newsletter guides on pain management, prescription management, and MAT for regular distribution in West Virginia
- Clinicians and health plan medical directors take mandated SUD American Society of Addiction Medicine and Mental Health First Aid recognition and treatment training; training also includes the use of screening for trauma, such as adverse childhood experiences, as it is critical for members' comprehensive integrated care. Relias training includes content on opioid addiction, trauma, and addiction training. CM staff attend state-sponsored in-service trainings.
- Aetna's rising risk assessment (described earlier in our response) identifies individuals potentially at-risk for SUD/OUD, and we provide these members with early intervention to prevent misuse and abuse. Our peer support specialist, who has lived experience with SUD, provides education and referral for social services for these at-risk members.

Care Management for Members with Historical/Current Prescription Drug Abuse Issues

While the prescription drug abuse crisis in West Virginia can seem daunting at times, **our CCTs possess the knowledge and optimism to help members struggling with these issues attain sobriety and healthier ways to manage pain**. Upon enrollment and throughout the screening, assessment, care planning, and ongoing care coordination process, members are evaluated for the potential for (or current indicators of) prescription drug abuse based on historical information or ongoing review of reports and risk indicators previously mentioned. Identification of these members includes review of data which demonstrate high average MEDD, concurrent opioid and benzodiazepine use, use of a controlled substance with a history of dependence, abuse, or overdose, or multiple prescribers (doctor shopping), to name a few. Members identified with a prescription drug abuse problem are assigned to Tier 3 intensive care management and receive the support of their local CCT, which includes a dedicated nurse or licensed independent clinical social worker care manager who has extensive training and experience related to SUD and OUD. **Aetna's regional CCTs also tap into the expertise of our peer support specialist**. The peer support specialist, who has successfully overcome their own SUD, can participate in care planning with the member and care coordinator, and offers sponsorship and support through telephonic and face-to-face contacts with the member.

Our care management model is tailored for members with prescription drug abuse concerns. Care planning for these members may include some or all of the following elements:

- Inclusion of Screening, Brief Intervention, Referral to Treatment (SBIRT) by providers through increased promotion of available training and coverage
- Increased availability of alternative therapies for pain relief such as physical therapy, chiropractic/osteopathic manipulative treatment, acupuncture, massage, cognitive behavioral therapy, and other effective alternative modalities
- Commitment to enhancing access to evidence-based treatment options for our members such as MAT. Aetna is collaborating with providers to increase adoption of MAT by providing

education, technical support, and promoting adoption through value-based contracting and the identification of quality MAT providers.

- Identification and resolution of factors related to SDOH, which may impact access to or utilization of available SUD services
- High ER utilizer reduction program: Care coordinators who identify one of their members on the high ER utilizer report outreach the member to identify the root causes for frequent ER visits and to develop a plan to help the member identify and use service alternatives

Intensive Care Management through The NAS Program

Andrew's mother, Tanya[21] had received SUD treatment for several years related to addiction to opioids, which she used as a means of self-treatment of a previous back injury. Her previous SUD treatment had not been successful, and she relapsed a few times. CPS had been involved with Tanya and her other children as a result of relapse and the death of her youngest child due to Sudden Infant Death Syndrome. When she learned she was pregnant with Andrew, she began taking Subutex through a local MAT program and was enrolled in intensive care management with Aetna at 27 weeks gestation. She had missed some appointments earlier in the pregnancy and was worried about her ability to retain custody of Andrew once he was born. The intensive care manager helped her access reliable transportation for services and helped her obtain infant supplies for the home. Tanya remained clean for the remainder of her pregnancy, with the help of her care manager, the MAT program, and her therapist who helped her address previous trauma. When Andrew was born, he was observed and treated in the Neonatal Transition Unit for one month. The care manager remained involved upon Andrew's discharge home and connected the family to Mountain State Healthy Families and an evaluation with Birth to Three for additional support. Tanya received in-home parent education until Andrew was six months old. Tanya now schedules and attends her appointments, using available transportation services. Andrew is now thriving at eight months old and is up to date on all immunizations and well-child visits with his pediatrician. Tanya invites the care manager to Andrew's well-child visits so the care manager can see his progress. Tanya reports that she has learned a lot and now feels worthy of being Andrew's mother.

- Medication reconciliation to evaluate issues and concerns about polypharmacy through a collaborative systematic process; member information is acquired and reviewed to assess the appropriateness of medication therapy, and medication-related problems are addressed. The member's medication record is available to the member (if appropriate). The person-centered care plan is updated to reflect the list of actions to resolve medication-related problems identified during the medication reconciliation process. The clinical pharmacy advisor provides education and medication adherence counseling. The collaboration and intervention from the clinical pharmacy advisor and CCT members are documented in the member's care plan, allowing for tracking and follow-up on any unresolved medication-related issues.
- Pharmacy restriction program: To the extent that managed care organizations could or would have pharmacy benefits management responsibility in the future, we could implement member

[21] Not their real names

restrictions to a single pharmacy and/or possibly a single prescriber due to attendance at MAT or identification as being at high-risk for SUD (need would be identified via pharmacy metrics as well as medical management reports of high ER utilization, overdoses, hospitalizations, and others).

Best Practices Initiatives and Outcomes

We have instituted several programs and best practices with impressive outcomes for our members who struggle with prescription drug abuse and/or related SUD/OUD. These programs include our NAS care management program, the Aetna Awesome Doctor program, and TIC, to name a few.

Moms and Babies Neonatal Abstinence Syndrome Program

We screen and identify pregnant women who are at risk for giving birth to opioid-dependent babies. Through an assigned care manager on the local CCT, we provide access to specialized high-risk care management through our NAS program. Specialty care managers, such the obstetrics specialists, are **embedded in neonatal intensive care units** for immediate response to pregnant women and their at-risk babies as part of the larger regional CCT. NAS program care managers coordinate needed SUD services for members. Our NAS care management program also includes the following elements:

- Members enrolled in the NAS care management program receive education, and support. Enrolled members who complete the NAS program can receive a Cribette® (portable crib) or baby carrier after delivery.
- Babies affected by NAS are enrolled in care management and followed for up to one year. The care coordinator offers education and support and tracks milestone development. Infant members enrolled in the NAS program can receive a milestone development toy after graduation from the program.
- Care coordinators are onsite at MAT facilities with the ability to meet pregnant members face-to-face when they come in for treatment. Our care coordinators are currently embedded in MAT practices in the central, southern, and western regions of the state.

As part of our commitment to collaborating with community stakeholders to support members battling opioid addiction, we engage the services of Lily's Place. **Lily's Place** opened in Huntington (Cabell County) in October 2014 as the first NAS center in the nation. Lily's Place provides observational, therapeutic, and pharmacological care to infants suffering from prenatal drug exposure. The facility is designed to make weaning as comfortable as possible in a quiet,

low-stimulation environment. Importantly, it offers non-judgmental support, education, and counseling services to families and caregivers. Aetna collaborated with Lily's Place to support the goal of allowing infants to remain in custody of their birth parents rather than entering the foster care system. Lily's Place works closely with our care managers who follow the mothers through delivery and then into Lily's Place if the child needs additional care. Our care managers meet face-to-face with the moms and spouses (if present and approved by mom) and develop a plan of care and follow-up. The care manager will follow infants for at least a year or more, as needed. **Prior to the implementation of our NAS care management program, only ten percent of babies remained with their birth mother. We have since made significant improvements in these outcomes through our NAS care management program:**

- In 2018, 59 percent of moms stayed in engaged in opioid treatment and/or counseling during pregnancy and through the first year after delivery
- In 2018, 82 percent of babies have remained with birth mom and were not removed from the home and/or placed in foster care
- For 2019, 87 percent of NAS mothers remain on opioid treatment and/or counseling during pregnancy and through the first year after delivery
- For 2019, 88 percent of babies have remained with birth mom and were not removed from the home and/or placed in foster care

Drug-Free Moms and Babies

Aetna and Drug Free Moms and Babies are developing a program with CPS to provide early intervention to mothers and babies affected by SUD This early intervention can help prevent children from being separated from their birth family and entering the foster care system by providing the birth mother support and assistance with locating necessary treatment programs. Aetna will offer care coordination and preventive approaches to improve the likelihood that the babies remain at home and avoid home removal or involvement in the foster care system, including continuity of therapies, support for social needs, and ongoing collaboration between the medical home, the social service system, and the member and circle of support.

Trauma-informed Care

We understand that, frequently, a history of trauma can be the root cause of a member's presentation with SUD or OUD. As a result, our care management approach is infused with TIC principles. Although the effects of trauma are detrimental, we know that trauma is treatable. Aetna's approach provides evidence-based, trauma-informed treatment and recovery services based on the universal precautions model that serves each member as if they had been traumatized. As a trauma-transformed organization, we ensure both Aetna staff and provider organizations have the training and resources necessary to deliver service through a TIC lens. Aetna has collaborated with the National Council for Behavioral Health to deliver this training. The next training is scheduled for February 2020.

Aetna's Awesome Doctor Program

Aetna's Awesome Doctor is national program we have added to value-based services outcome goals. Providers participate by completing education about how to treat pain safely, how to screen patients for OUD, and how to provide/refer for services. The educational program encourages providers to consider the 'disease of addiction in care model.' Providers who complete the program receive public recognition and peer comparisons and can be recognized for participation in Aetna News. The Awesome Doctor program has been highly successful in our Florida Healthy Kids market and is an excellent tool to inform communities of best practices and high-quality providers. We plan to implement this program in West Virginia to highlight providers who take these steps to be more informed.

Care Management Opioid Program Champion

We have a new dedicated position, the care management opioid program champion, on our West Virginia Care Management team. The care management opioid champion is a care manager responsible for supporting, communicating, and coordinating the goals and objectives

of the Aetna Medicaid care management opioid program and all CM opioid-related initiatives. The opioid champion serves as a point-of-contact for opioid-related care management projects, questions, news, and communications from corporate leadership. They monitor state contract, rules, and regulations related to the opioid management program's care management service requirements for updates and changes. They have a collaborative working relationship with the pharmacy director at the plan to improve communications between the departments, and they attend the quarterly Opioid Steering Committee.

Aetna was proud to provide $400,000 in impactful financial support to PROACT to advance SUD treatment in the Charleston-Huntington region. PROACT is a large community-based organization with collaborating institutions including Cabell Huntington Hospital, St. Mary's Medical Center, Marshall Health, Thomas Health and Valley Health. PROACT offers MAT/SUD treatment, peer support, job placement, and referrals to other services to address the clinical, behavioral, spiritual, and employment needs of people affected by the epidemic of substance use.

Harm Reduction

In addition to identification and prevention, targeted care management, and the use of best practices to address prescription drug abuse, Aetna takes further steps towards harm reduction. Beginning in March 2020, our **Lock it Up program** will be used to support safety by providing members with a lockbox to secure their medications. This is a national initiative and is kicking off in West Virginia in 2020 as one of our value-adds. The value-add includes a secure lockbox for any member who is prescribed ongoing opiates and/or multiple high-risk medications with education on harm reduction and avoiding accidental overdose or misuse as well as disposal information and emergency numbers for access. For members in care management, the care coordinator makes the referral to obtain the lockbox and provides education to the member regarding the importance and reasons for its use. For members not in care management, Member Services or providers may make the referral to obtain the lockbox. Additionally, 29 of

our 57 CVS Pharmacy locations offer a full-time **drug disposal unit** onsite. For stores without disposal units, beginning in 2020, CVS Pharmacy will provide DisposeRx packets at no cost to patients who are filling an opioid prescription for the first time.

Approach to Population Health

CM054	The Vendor should describe its population health approach including, but not limited to, the following:
CM055	Engaging members across the entire care continuum
CM056	Promoting and incentivizing health behaviors and disease self-management
CM057	Integrating Care Management
CM058	Advancing evidence-based practices
CM059	The Vendor should describe its process to evaluate the member population and coordinate prevention and wellness programs available to all members.
CM060	The Vendor should describe its process to collect and maintain member self-reported demographic, social determinants, and health needs assessment data for aggregate use in, at a minimum, population health management, network adequacy determination and quality improvement activities

[CM054] Adapting to the changing landscape of health care, **Aetna has responded to the needs of our members by expanding our focus to include population health improvement, SDOH, and primary prevention to promote health and well-being among our members.** Aetna's person-centered PHM program facilitates enhanced quality of care and effective management of the health of defined populations by empowering members to engage and drive their health care to improve their health outcomes. The elements of our program are in alignment with National Committee for Quality Assurance's (NCQA) PHM model and standards. Aetna has completely integrated the NCQA PHM standards into the fabric of our PHM plan. The PHM program, supported by our SOC, is integrated with our value-based purchasing (VBP) programs, and supported by our use of powerful analytics to deliver actionable data to support member identification and risk stratification. Our VBP program is aligned with our PHM strategy to advance improvements in the delivery of quality, access, and evidence-based services with the goal of improving the health of our

member population as a whole, and for specific subpopulations as well. Our VBP arrangements are designed to align with Department-specific quality and performance goals to optimize outcomes and results. As part of our VBP program, Aetna uses predictive modeling reports, gaps in care information, claims data, and provider input to target member-level intervention related to emergency room utilization, inpatient admissions, and risk for readmission.

[CM055] Engaging Members Across the Continuum of Care

Aetna embraces a 'no wrong door' approach to PHM. Members may self-refer or be referred through outside entities. Regardless of the way a member chooses to access care, their level of need is assessed upon enrollment and throughout the course of their care through a variety of touchpoints, including interactions with their local CCT, connections with embedded care coordinators at their doctor's office, or through community providers and organizations who collaborate with Aetna in service delivery throughout West Virginia. **Aetna's population health management strategy focuses on prevention, predictive risk, early identification of rising risk, and evidence-based care.** Our evidence-based, member-centered screenings and assessment provide us with a deep understanding of our members and their needs from a holistic perspective. We assess members' goals and aspirations to improve their opportunities for independence, self-determination, and self-management. Additionally, provider gaps-in-care reports (which are also sent to our value-based services providers) identify members on a provider's panel in need of a health screening or preventive exam. Information can be filtered to examine their performance by provider, by location, and for each member. This helps us target outreach for members who need more support and care. From there, members are actively engaged by their dedicated, local care coordinator throughout the care planning and service delivery process as we support them in the attainment of their health goals.

If a gap in care has been identified, the care coordinator may conduct more targeted condition-specific assessments and/or may refer to one of the condition specific self-management programs described throughout our response. For example, we offer incentives to pregnant members to attend prenatal appointments to prevent gaps related to prenatal care. As another example, when our QM department identified a trend that mothers were not attending postpartum visits, our CCTs engaged in additional postpartum outreach efforts. This resulted in **improvement in the postpartum visit rate from 60.83 percent in 2017 to 63.50 percent in 2019**.

[CM056] Promoting and Incentivizing Healthy Behaviors and Disease Self-Management

We have expanded our service model to serve all populations, focusing not on disease but rather on helping members achieve their health and wellness ambitions. We seek to engage individuals who otherwise are not engaged in their health care, including those on the continuum of care with few risk factors and rising risk, to change West Virginia's health care culture and to align with the Department's goals. **The Aetna Medicaid PHM strategy is a personalized approach that emphasizes empowering members to achieve health goals by recognizing and elevating the individual's expertise and central role in their own health.** We emphasize the importance of benefit education, including appropriate health actions, with every interaction with both members and providers. We use several tools to remind our members and their circles of support about important aspects of their care. When a member calls our Member Services team, our staff can provide real-time reminders from our gaps-in-care report for needed services. In addition, we conduct live outbound calls to help members to understand what care they may need, including preventive services and chronic condition management. We use targeted, direct mailings to remind members to access services according to recommended screening and assessment schedules. For example, **we send a direct mailing to members**

that includes growth charts for young members with attached well-visit and vaccine schedules. These mailings are sent to families of five- and six-year-old members who have not yet had a well visit. We also provide reminders to obtain immunizations during flu season. We use disease management newsletters and condition-specific patient education materials, including topics such as diabetes and asthma management. Our text program sends personalized text messages free of charge to program members and their families/circles of support who wish to receive them on a variety of topics, including the text4kids program, which provides reminders about well child visits (i.e., exams for children timed to their age).

Wellness services focused on preventing illness and injury, promoting health and productivity, and reducing risk are provided to members through our offering access to ActiveHealth Management's (AHM) health appraisal and self-management tools. AHM is a contracted vendor that is NCQA Wellness and Health Promotion-accredited.

Health Appraisal: Adult members have access to AHM's online, telephonic, and printed health assessment. The results of the health assessment summarize the member's risk factors and wellness profile and identifies opportunities for participation in targeted population health programs and services. Information is provided to the member on specific health behaviors changes that will reduce the member's risk factors. Aetna staff contact members based on their identified risks and conditions to offer targeted population health programs and services.

Self-Management Tools: Aetna provides member access to AHM's online materials and interactive videos on multiple wellness and health promotion topics, including smoking and tobacco use cessation, nutrition, and managing stress. The materials are also available in print. Members can set wellness goals and track their progress through online tools.

We offer a number of programs and incentives to promote healthy behaviors and member self-management of disease, as described previously, with respect to prenatal and postpartum care, NAS programs, diabetes screenings and education, and participation in healthy living programs (like Ted E. Bear, M.D.℠ Cub Club), to name a few. Table 6.3.1-5 provides additional information regarding member some of our other incentives to promote healthy member behaviors and condition self-management.

Table 6.3.1-5: Other Incentives to Encourage Member Healthy Behaviors and Disease Self-Management

Incentive Name	Description
Congestive Heart Failure (CHF) Program Reward	Enrollees with CHF receive digital weight scales and a weight tracking log to monitor progress with their PCP and care coordinator.
Asthma Care Program	Members with asthma who enroll in our asthma education program (with our certified respiratory therapist) will receive a peak flow meter, which measures and monitors asthma symptoms.
Dental Care for Members with Diabetes	Through our relationship with the West Virginia University Dental School, enrollees age 21 and older, diagnosed with Type 2 diabetes, and living in particular counties, can receive routine dental care that includes two exams, two cleanings, and bitewing X-rays each year.
Well-child Visits and Pediatric Dental Care	Members can earn a $25 gift card for completing a well-child exam for children aged 12 to 18 and members aged 2 to 3 who complete dental check up with a dental practitioner will earn a $25 gift card to encourage early dental care.
Adult Walking Program	Members 18 and older who enroll in our eight-week program receive a pedometer and walking/steps tracking log; those who complete the tracing log through the end of the eight weeks receive a $25 gift card.

[CM057] Integrating Care Management

Aetna employs a stratified approach in our population health and care management model. Members enrolled in care management are stratified to high-risk, medium/rising risk, and low-risk level as indicated by their known risk factors:

- Low risk (Tier 1: population health care management): Most members (86.7 percent) are identified as low risk. These members have minimal gaps in care, limited ER or inpatient utilization, few prescription medications, or have reported that they do not require a higher level of support. These members receive health promotion interventions focused on maintaining health and keeping risk low, such as annual visits to their PCP, recommended screenings, and self-management tools. The area of focus for low-risk members and programs directed toward them is keeping members healthy.
- Medium risk and rising risk (Tier 2: supportive care management): A proportion of members (5.3 percent) are identified as medium and rising risk. These subpopulations include members with chronic conditions like asthma or diabetes, behavior health concerns, high-risk pregnancy, and other special populations. These members have not yet exhibited high-risk utilization trends but likely may in the future if left unmanaged. These members receive disease management education materials and programs, supports to access health services effectively, and care management outreach at a minimum quarterly. The area of focus for medium-risk members and programs directed toward them is primarily managing emerging risk, but also includes keeping members healthy, managing multiple chronic conditions (diabetes and heart disease), and outcomes across settings where members require support to coordinate care.
- High risk (Tier 3: intensive care management): A proportion of members (7.8 percent) are identified as high-risk. These members may frequently utilize the ER or have had multiple inpatient admissions and/or may require high-risk, high-cost medications. They may have multiple chronic and/or disabling conditions like SUD and serious mental illness. High-risk members may require the highest level of resources from complex care management in addition to disease or condition management support and preventive care programs. The area of focus for high-risk members and programs directed toward them is managing multiple conditions (diabetes and heart disease) and outcomes across settings.

[CM058] Advancing Evidence Based Practices

Aetna's PHM programs follow from a locally rooted understanding of population health priorities, needs, and assets while having the underpinnings of a national structure driven by population data analytics and evidence-based practices that focus our PHM activities for distinct member populations throughout the continuum of care. Aetna encourages the use of **evidence-based clinical practice and preventive services guidelines** by our practitioners and providers. Guidelines are available on demand in the online provider portal and posted on Aetna website and are adopted from nationally recognized sources and peer reviewed medical literature. Providers are informed of the availability of new guidelines via updates posted on the provider website. Providers may request a copy of a guideline at any time by contacting their provider

representative or the office of the chief medical officer. The guidelines cover various conditions such as asthma, diabetes, coronary artery disease, and chronic obstructive pulmonary disease. They also address other topics such as medication management, prenatal care, and dental services. Additionally, Aetna promotes evidence-based practices through the development of **Clinical Policy Bulletins** that are created, reviewed, and updated annually by a dedicated medical team looking at the latest recommendations from specialty colleges, latest studies, and standards of care and that are available online.

[CM059] Evaluation of the Population and Coordination of Prevention and Wellness Programs

Aetna integrates a range of data sources, systems, care sites, and domains to identify member populations and sub-populations, understand their care needs, and operate programs designed to help meet those needs. Enrollment data is received from the Department and is integrated into Aetna's member databases and aggregated to quantify the basic demographic and benefit program eligibility category across all plan membership. This data set is used to complete the annual membership profile in order to monitor population characteristics and changes in terms of geographic distribution, age, sex and race/ethnicity distribution, language preferences, cultural diversity trends, and changes in rate-group and within the health plan membership.

Recent annual population health assessments led to Aetna's development of enhanced care planning modules, our "Healthy You, Healthy Baby" guide, pre-diabetic screening programs through the National Diabetes Prevention Program, and our collaboration with Cabin Creek and Marshall to provide coordinated care for at-risk youth, to name a few.

After the membership profile is generated, the enrollment data set is integrated with medical, behavioral, and pharmacy claims data and lab results. Together, these data sources make up the key data elements necessary to run the General Risk Model, which is a component of

identification of targeted populations for certain PHM programs. Risk stratification, medical, behavioral and pharmacy claims data—and in the cases of immunization records, member pregnancy identification, certain chronic conditions such as HIV/AIDS, and OUD, state registries or file feeds—are integrated with HEDIS gap in care identification for members missing recommended services. The presence of conditions, medical utilization trends, certain pharmacy utilization or trends, and/or open gaps in care together with membership profile characteristics based on these data sources indicate eligibility for targeted PHM programs that focus on members with specific conditions. The membership profile analysis, which integrates data from the state enrollment file and medical, behavioral and pharmacy claims, and lab results as described above, initiates the population assessment process.

The annual population assessment is performed by Aetna's Quality Management department to provide a comprehensive assessment of the West Virginia MHT population (to include WVCHIP in the new contract). Assessment results are used to understand membership population characteristics and care needs and ensure that that these are met at the highest levels. These needs include provider accessibility and availability, translation services, wellness and preventive health services, services for members with multiple or specific chronic conditions or severe injuries, community-based service resources, and continuity and coordination of care. Population assessment results inform PHM programs including prevention initiatives, self-management programs, performance improvement activities, integrated care management, and other quality initiatives that are implemented to meet member needs. These programs support cost reduction, improve health outcomes of the population, and help individual members achieve their personal health goals. The programs are intended to serve the specific needs of each group within the population. Member programs are targeted according to members'

individual risks as identified through stratification and/or member responses to individual assessments. Programs and activities directed towards practitioners or providers and across systems of care are designed to support delivery of care and resources in accordance with population and individual needs.

Each PHM program includes defined and measurable goals that are used as indicators of program effectiveness; these goals are defined within each program description. Program impact is regularly monitored and evaluated annually to determine whether the activities completed produce the stated goals within the targeted populations groups. Program evaluation results drive further analysis to identify areas for improvements or changes as needed where goals or population needs are not met. Aetna follows an analysis procedure that stipulates metrics and means of evaluation of the execution and impact of its PHM programs collectively across four focus areas. The analysis is a comprehensive document connecting the PHM strategy and evaluation by reporting performance on program goals collectively and supporting the determination of whether program activities were completed as planned and resulted in intended outcomes. As Aetna's goal is to improve and/or maintain health outcomes for the served membership through the development and deployment of its population health strategy, it is imperative to perform a multifaceted analysis looking at different aspects of the population and plan impact. Aetna selects the most appropriate, evidence-based, meaningful, and impactful measures for each program to ensure that ongoing program development can be implemented in an efficient and effective manner while keeping members at the center. Measures are selected to align with the objectives of the programs for the target population, such measures that include, but are not limited to, NCQA's HEDIS performance datasets and SF12® outcome surveys. We evaluate program-specific utilization trends and/or associated

costs that are relevant to the objectives of each program. We also assess our performance by obtaining feedback from members to confirm the characteristics and needs of the member population drive the implementation of an effective PHM strategy. Based on the results of the annual multifaceted quantitative analysis, we identify opportunities for improvement that inform development and implementation of programmatic changes.

[CM060] Collection of Data for Use in Population Health Management, Network Adequacy Determination, and Quality Improvement Activities

Aetna collects demographic, SDOH, and health related information reported by members during the HRQ, ORQ, HCE and other assessments to improve the health status of our members. Demographic, SDOH, and health assessment data is reviewed at the aggregate level to inform PHM, network adequacy determination, and quality improvement activities. Care management works in concert with SOC administrators and the Aetna Network and Quality Management (QM) departments to review all available data to identify gaps and solutions to resolve these gaps. For example, the Service Improvement Committee (SIC [a sub-committee of our Quality Management Oversight Committee]) includes members of the care management, network, and QM teams. **The SIC reviews available population health data to make recommendations that resolve network adequacy or service gap concerns.** Additionally, the QM department examines available data to design **Performance Improvement Projects** that result in population-specific projects which aim to meet measurable performance objectives to improve overall service delivery and outcomes. For example, when the data showed that only 61 percent of members aged 2 to 20 attended an annual dental visit, the QM team pinpointed the geographic areas of highest concern and collaborated with Provider Relations to host dental clinics in those areas. Parents and guardians who brought children to these events received a $25 gift card. Additionally, care management teams mobilized in those areas to provide

additional education and outreach regarding the importance of dental services and our Community Development team focused attention on the importance of dental visits during their back-to-school events in various communities across the state. Aetna also collaborated with Head Start programs in Raleigh, Mercer, McDowell, Monroe, and Wyoming counties to highlight the importance of dental screening visits. As a result of this multipronged approach to enrollee outreach, the dental visit rate changed from 61 percent in 2017 to 64 percent in 2019 (a statistically positive change). Care Management, Network, and QM departments rely on data from the following sources described (most which are originally derived from member self-reported demographic, assessment, and SDOH information) to make decisions regarding PHM, network adequacy, and quality improvement projects.

Stratification of SDOH information: In 2018, Aetna began stratifying member reported SDOH data across demographic characteristics to identify populations with health disparities. We are continuously developing new ways to stratify social determinant data to identify disparities and learn from best practices developed in Aetna health plans across the country. This stratified data helps us target interventions to improve population health. Our approach to the collection of data includes collection of both individual-level, self-report, claims data, and internal and publicly available population-level data. We analyze this data annually; it informs the development of our proprietary Regional Health Profiles, Population Assessment, and Membership Profile, where specific references to West Virginia member food, housing, transportation, and personal safety/domestic violence are addressed.

General Risk Model™ (GRM): Aetna's proprietary risk assessment application. GRM, identifies members who currently have or are at risk of developing complex and/or chronic health care needs. The GRM accomplishes this task through an internal diagnostic grouping process that

evaluates over 15,000 ICD-10 codes, including behavioral health codes and DSM-IV diagnoses, to identify specific chronic and acute conditions having long recovery timeframes (such as spinal cord injuries, chronic mental illness, or SUDs). The goal is to accurately identify chronic conditions that informs the care needed by each member.

CORE: As described earlier in this response, we also use a proprietary, evidence-based process called CORE to provide further refinement to our predictive modeling. CORE builds on GRM data-adding algorithms to prospectively identify members who are at risk for inpatient and/or emergency room utilization within the next 12 months.

Health Care Equity Dashboard: The HCE dashboard is a tool to analyze population health data to understand population characteristics such as race/ethnicity and how these correspond to geographic area, and prevalence of certain health conditions or of gaps in recommended health services. This tool informs planning activities to improve population health, quality, and care management interventions to address health disparities. The dashboard synthesizes Aetna's population demographics based on monthly member enrollment data, HEDIS data, and utilization data from medical, behavioral, and pharmacy claims. We use the tool to understand dominant population characteristics across these factors. The tool features several filters that users can apply to a number of reports meant to dissect prevalence and distribution of characteristics and factors across population groups. Available reports include the demographics dashboard, which segments benefit groups, age, gender, race/ethnicity, language, certain health conditions, and GRM category. Our demographic map dashboard displays a heat map of member distribution at the county level. Users can filter by the demographic factors previously listed and explore the geographic population distributions of filter selections. Users may also drill down to the ZIP code level within a county to explore

population distribution and concentration. The HCE dashboard allows analysis of HEDIS data through a HEDIS dashboard and HEDIS map dashboard. These reports allow analysis of groups to identify disparities in gaps in care based on geography and the demographic factors previously listed and presence of certain health conditions, including serious mental illness. The HEDIS map dashboard features a heat map visual representation of all HEDIS measure rates down to the ZIP code level using NCQA Quality Compass® national percentile benchmarks. **Table 6.3.1-6** provides an overview of some programs we offer as a result of our analysis of population health data mentioned throughout our response, as well a review of publicly available community health rankings and community survey data.

Table 6.3.1-6: Actions Taken to Address Regional Disparities

Region	Disparity	Aetna Program
North	• Food insecurity • Higher rates of uninsured individuals • Higher rates of depression • Higher rates of obesity	• Referrals to food pantries: We Feed People/Union Mission, Feeding America • Referrals to WIC/SNAP benefits • Community health fairs to educate about health insurance/plan benefits • BH care management specialist • Walking program/free pedometer; step-tracking log
East	• Higher rates of cardiovascular disease • Highest rates of chronic obstructive pulmonary disease within the state	• Online materials and interactive videos on smoking/tobacco use cessation, nutrition, and managing stress • Chronic Condition Management program delivered by local CCT • Tobacco cessation specialist on CCT • Referrals to Breathe2Relax app • Walking program/free pedometer; step-tracking log
Central	• Higher rates of depression • Higher rates of obesity • Higher usage of alcohol and excessive drinking	• BH care management specialist • Walking program/free pedometer and step-tracking log • Peer support specialist and SUD care management specialist to address alcohol and substance use
South	• McDowell County: prevalence of	• National Diabetes Prevention Program

Region	Disparity	Aetna Program
	diabetes (19.7%) and adult obesity (44.6%) • The preterm birth rate among African American/black women is 22% higher than the rate among all other women	• CHW and ICT at onsite FQHC for diabetes education, including home visits to coordinate the plan of care • Value-added Diabetes Oral Health program for members under the age of 21 who are diagnosed with Type II diabetes and the member lives in one of the 20 participating counties • Healthy Pregnancies, Healthy Babies program • Community outreach events: sponsored baby showers and health fairs • Safe Sleep initiative: Cribettes® incentive for prenatal visits; all staff are trained on the Safe Sleep and Keep Your Cool program.
West	• Higher rates of asthma • Higher rates of tobacco use in youth 12 and older • High mortality and suicide rates • High substance abuse and overdoses and excessive drinking • Higher incidence of NAS	• Access to AHM's online materials and interactive videos on multiple wellness and health promotion topics, including smoking and tobacco use cessation, nutrition, and managing stress • Asthma Care Program: peak flow meters; • SUD care management specialist • BH care management specialist • NAS care management program

4. Community/Stakeholder Engagement

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Community/Stakeholder Engagement (CS) as part of their bid. The Vendor's narrative response should not exceed 25 pages.

Aetna's Community Engagement team is an extension in the field of our health plan operation, interacting with community-based organizations (CBOs) and state agencies to gain information, resources, and referrals to better serve our enrollees. We have provided care and services to West Virginians in all 55 counties and created lasting, vibrant, and successful collaborations. We share a cultural richness that empowers us when addressing social determinants of health (SDOH), integration and quality of care, and outcomes for our fellow citizens. We strategically collaborate with organizations that most closely serve our enrollees.

We listen, we activate, and we create collaborative solutions together with community resources. Ingrained in communities throughout West Virginia for over 23 years, we understand and collaborate with CBOs from Bluefield to Weirton, Martinsburg, Ravenswood, and all points in between, listening to community needs. **We are West Virginians helping West Virginians through engagement of state and community resources and supports to facilitate opportunities for our enrollees to live their best lives.** Through extensive collaboration with community stakeholders, we gain deep understanding of the communities and those people we serve and receive insights on how to best meet Department for Health and Human Resources (Department) expectations and requirements.

Consistent, meaningful engagement with communities and stakeholders, both public and private, in every part of the state, is critical to our success in serving West Virginia's most vulnerable residents. **Our community development staff participated in over 1100**

community events and collaborative meetings in 2019 throughout the State. Based in part through our engagement with community resources and stakeholders, Aetna has identified within our health education plan key areas of focus for 2019 – 2020, including the following:

- Early and Periodic Screening, Diagnostic, and Treatment; Well-Child; and Adolescent Well Care
- Dental
- Childhood and Adolescent Immunizations
- Flu Vaccines
- Preventive Services for Women
- Prenatal and Postpartum Care
- Respiratory
- Diabetes
- Hypertension
- Nutrition and Obesity
- Tobacco Cessation
- Behavioral Health and Substance Use
- Appropriate use of Antibiotics

These are opportunities to make presentations and distribute materials on a variety of health-related topics that affect populations we serve. From these interactions together, we develop specific solutions to address community needs. As an example, we understand the health disparities of diabetes in Kanawha County and hepatitis B and C in the central region of the state. We act through effective collaborations, as identified in **Table 6.4.1-1** below, to address disparities, complex health concerns, and SDOH. Every engagement is intentional; every meeting and handshake has purpose to improve the health and well-being of the individuals we are privileged to serve.

Commencing with Chief Executive Officer (CEO) Todd White and across all levels of our West Virginia staff into our frontline teams, Aetna staff logs hundreds of volunteer hours each year as we place volunteerism and community support among our highest priorities. Aetna's goals include improving health and social outcomes for West Virginia's Medicaid population across the lifespan through person-centered holistic care approaches. Our engagement and tailored approach with **community agencies and resources** directly aligns with the Department's strategy and program objectives. We strategically reinvest our cost savings in programs that are

.

Table 6.4.1-1: Regional Approach to Community and Stakeholder Engagement

Region	Social Determinant of Health	Causes	Aetna's Collaborative Actions with Stakeholders
Statewide	• Food insecurity • Internet Access	• Large volume of food deserts • Poor internet access in many rural communities	• Mountaineer Food Bank (all regions): collaboration includes sponsoring multiple mobile food pantries and purchased Box Truck for food distribution throughout the state as well as student backpacks. Mobile pantries include locally grown fresh produce. • West Virginia Library Commission serves as internet access point in many communities • Collaborate with Women, Infants, and Children (WIC) on proper nutrition for children (prenatal through age 5)
North	• Higher rates of obesity • Higher rates of uninsured individuals	• Limited healthy food options • Limited to no access to physical activity	• Distribute healthy eating and activity information to schools to address childhood nutrition and obesity through Family Resource Network (FRN) • Participate in community health fairs in all regions: activities at these events include education about our plan, services, and benefits; disseminating health and wellness information; and addressing SDOH experienced by the community (i.e., food access) • Women's Wellness Clinic in Wheeling offering preventive exams including mammograms
East	• Low community attachment • Highest incidence of chronic obstructive pulmonary disease in the state	• A high number of individuals do not work where they live and associate with bordering states in lieu of local community • High tobacco utilization	• Aetna provides member access to Active Health Management's online materials and interactive videos on multiple wellness and health promotion topics, including smoking and tobacco use cessation, nutrition, and managing stress through community health fairs • Collaborate with WIC (all regions) on proper nutrition for children (prenatal through age 5) • Distribute information to parents of children in Head Start on wellness exams and healthy activity

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Region	Social Determinant of Health	Causes	Aetna's Collaborative Actions with Stakeholders
Central	• Higher rates of obesity • Higher usage of alcohol and excessive drinking • Acute hepatitis-B (HBV) and acute hepatitis-C (HCV) has increased 213% and 209%	• Lack of physical activity Lack of treatment for substance use and abuse	• Lewis County High School resource fair providing nutrition and information including tobacco use (vaping, tobacco, and smokeless) cessation, nutrition, managing stress, and substance use prevention • Walking program: members can receive a pedometer and log to track their steps and receive an incentive for completing the 8-week program
South	• Homelessness • Region has a high diabetes prevalence • Poverty rate above the state and national averages • Increasing rates of HBV, HCV, and HIV • Drug overdose rates above the national average • Infant health and safety	• Lack of affordable housing • Limited healthy food options • Limited employment opportunity • Lack of treatment for substance use and abuse and prevention programs • Poor prenatal care and parent education	• Covenant House, which provides homeless services in Charleston • Aetna partners with regional hospitals, public health departments, and a federally qualified health center associations (FQHCs) to provide diabetes education classes for our members • Value-added Diabetes Oral Health Program for members over the age of 21 who are diagnosed with Type II diabetes and live in one of the 21 participating counties • CVS Workforce Initiative to improve employment opportunity • Community events and health fairs: activities at these events include educating the community about our plan, services, and benefits; disseminating health and wellness information; and addressing social determinants of health • Involvement with various prevention collaboratives, such as Great Rivers Regional System for Addiction Care • Safe Sleep initiative: Cribettes® incentive for prenatal visits; all staff are trained on the Safe Sleep and Keep Your Cool program. Members receive educational materials.

working using contracting tools with data-sharing agreements and outcomes measures to best address what we know about individual communities and specific enrollee needs

Collaborative Approach to Department Agencies and State Advocacy Groups

CS001	The Vendor should describe its approach to establishing and maintaining relationships with associated Department agencies and State advocacy groups.

With deep rooted experience of West Virginia culture, we have a multipronged approach based on **listening to understand enrollee needs while tailoring our community and stakeholder engagement with a localized and focused strategy**. Our leadership team including Todd White, Aetna Better Health of West Virginia CEO, leads our engagement with the Department, its five bureaus, and other involved governmental entities, including the following:

- Bureau for Behavioral Health
- Bureau for Child Support Enforcement
- Bureau of Children and Families
- Bureau for Medical Services (BMS)
- Bureau of Public Health (BPH)
- West Virginia Children's Health Insurance Agency (WVCHIA)

Our approach to engaging state government agencies is one of collaboration to best serve our enrollees and the people of West Virginia, leveraging our experience in Medicaid managed care. We continue to seek ways to offer helpful assistance and innovative processes to aid the Department and its Bureau for Medical Services (BMS), Public Health, and Children and Families. Mr. White instills a collaborative, neighbor-helping-neighbor approach to create solutions for complex health concerns. In biweekly standing meetings with BMS, we collaborate with State staff to address emerging trends and potential solutions to best meet enrollee needs. Donald Gibbon, DO, our chief medical officer/medical director, collaborates with Department staff and other managed care organization (MCO) chief medical officers within standing meetings to improve and streamline medical processes across the Medicaid enrollee population. Dr. Gibbon and Frank Angotti III, MD, our behavioral health medical director, are intimately

involved in the **collaboration between Aetna and the BMS for the development of their opioid management plan and their Safe and Effective Management of Pain initiative.**

Under the new Medicaid and WVCHIP contract, we will engage and collaborate with WVCHIP

Collaborating with BPH. Aetna's community engagement director, in collaboration with our director of quality, meets with the BPH to maintain our strong, focused connection and to better understand the BPH perspective to create better overall wellness of the populations served. Our regional Care Coordination teams work to increase access to community supports to advance individual health outcomes and overall population health of our enrollees.

Aetna has decades of experience providing high-quality primary and secondary care, mental health, and dental care for all aged enrollees. We continue to strengthen our practice as we incorporate the remarkable changes in the provision of quality services for our enrollees to live their best lives. Our core innovations, which form the foundation of our model of practice for supporting enrollees, include complex care management and addressing SDOH. One such innovation we are currently implementing is a community health worker initiative in each region of West Virginia to engage community-based providers who serve enrollees with trauma, rising risk, toxic stress, and social isolation.

Collaboration with the BPH includes service to persons with diabetes. We emphasize serving individuals with diabetes in consideration of the fact that West Virginia's mortality rate is 53 percent higher than the national rate[1], and for this reason, we are also we are engaged with the Kanawha

[1] "Creating a Culture of Health in Appalachia," Appalachian Regional Commission: accessed January 19, 2020; https://www.arc.gov/images/appregion/fact_sheets/HealthDisparities2017/WVHealthDisparitiesKeyFindings8-17.pdf,

Diabetes Coalition. The coalition is a collaborative effort between CBOs, providers, and Aetna to create solutions to reduce diabetes rates for children and adults in Kanawha County.

Aetna partners with the State on community engagement to prevent and manage infectious disease. For example, through our collaboration with the Ryan White Foundation, our staff received training that enables referrals to assist enrollees diagnosed with HIV/AIDS

Aetna invests in the communities we serve with longstanding presence across West Virginia to uniquely leverage our understanding of communities that are geographically isolated and lacking in community resources. We are committed to assisting all West Virginians burdened by poverty, addiction, limited resources, and access, and other SDOH barriers. These are our communities, and we are their neighbors and service providers dedicated to focused, tailored, and data driven evidence-based solutions to best meet their needs.

We engage advocacy groups across West Virginia through collaborative efforts to optimize enrollee health access and outcomes at the direction of Aetna's community outreach director, Jim Smallridge, a registered nurse and West Virginia native. As a trained nurse, Mr. Smallridge has a unique perspective and leadership skills to engage community resources including at community events.

Aetna engages community stakeholders who serve community members across the lifespan. We interact with WIC and perinatal programs throughout West Virginia, including the Perinatal Partnership, in projects such as the Long-Acting Reversible Contraceptive (LARC) initiative. To further support women in prenatal care, Aetna's senior director of medical management and one of our medical directors participate on the Substance Use in Pregnancy Committee. To address the needs of SSI enrollees, we actively engage with disability-oriented stakeholders including the following:

- Appalachia Project: A program dedicated to helping with home repairs and building ramps for persons with disabilities
- Arc of West Virginia: Provider of services for persons with intellectual and developmental disabilities (I/DD)
- Disability Rights of West Virginia: Advocates for West Virginia residents with disabilities
- Easterseals: Outreach and advocacy organization for persons with autism and other disabilities
- Ryan White Foundation: Advocates and provides resources for persons with HIV/AIDS
- West Virginia Deaf Commission: Advocates for persons who are deaf or hard of hearing
- West Virginia Developmental Disabilities Council: Advocates for persons with I/DD

Our parent company, CVS Health, has been a supportive collaborator with both the American Lung Association and American Cancer Society through in-store fundraising campaigns. These efforts raise awareness and funds to support cancer research, patient services, and prevention awareness, including tobacco control. In 2019, CVS Health announced a partnership with the Alzheimer's Association, aimed at fighting Alzheimer's disease.

Aetna meets regularly with advocates and stakeholders across West Virginia, including government agencies such as West Virginia's Department of Education and school systems across the State. We work with school-based health centers (SBHCs) to stress the importance of preventive measures such as wellness exams, immunizations, and flu shots. Aetna encourages our enrollees to take advantage of the services offered by the SBHCs. We have and will continue to make presentations at Title I school parent meetings and parent-teacher organization meetings around the state. Those presentations are on a variety of wellness topics. In addition to school initiatives, our Community Engagement team collaborates with the following organizations:

- Family Resource Network
- Parent-teacher organizations within Title I schools
- TEAM for West Virginia Children
- West Virginia ACES Coalition
- West Virginia Alliance for Creative Health Solutions
- West Virginia for Affordable Health Care
- West Virginia Child Advocacy Network
- West Virginia Department of Education and school systems throughout the state

- West Virginia Family Health
- West Virginia Healthy Kids Partnership
- West Virginia Oral Health Coalition
- West Virginia Perinatal Partnership
- Women, Infant, and Children Program

"We, the West Virginia ACES Coalition, value our partnership with Aetna. You, along with your colleagues, have played a key role in establishing and growing the work of our coalition. Active participation and support over the past three years have proved invaluable … Aetna serves as a role model partner, and we look forward to their continued leadership in the health care arena for the betterment of all West Virginians."

—Tricia C. Kingery, Coordinator
West Virginia ACES Coalition

Engagement with Community Services

Our community engagement is not limited to Aetna enrollees, as we work in concert with the State and CBOs to improve all West Virginians' health and wellness. Community services can respond to basic needs, resources, and informal supports that families with young children and adults with disabilities need in concert with formal medical and behavioral health services. We are a member of the West Virginia ACES Coalition and a co-sponsor in bringing the Connections Matter initiative to West Virginia. Aetna's Behavioral Health Medical Director Dr. Frank Angotti and Mr. Smallridge have participated since its inception. Connections Matter is a research-based community initiative that explores how the connections we make in life profoundly impact our brain's ability to grow and our own individual abilities to cope and thrive. . We also sponsored the first training by the West Virginia Primary Care Association for school-based health workers regarding Adverse Childhood Experiences (ACEs).

Engagements to Advance Oral Health

Aetna will continue to engage oral health and disabilities stakeholders, including the West Virginia Oral Health Coalition, the West Virginia Healthy Kids Partnership, and others. Community Engagement staff attends meetings and provides community education on oral health issues. In 2019, we distributed more than 10,000 toothbrushes across the state via

community events, school visits, and resource events. We advocate for improved access to oral health care through school systems

Schools Engagement to Advance Supportive Services for Children

Aetna works closely with **all school systems** across West Virginia, specifically targeting schools with higher populations of Medicaid beneficiaries, such as Title 1 schools. We educate students, teachers, and parents on various health care topics, such as healthy eating and the importance of wellness exams and flu shots. Aetna works with SBHCs to provide screenings and wellness education during this school-wide events.

> *"Here at Buckhannon-Upshur High School (B-UHS), within our physical education classes we have been able to implement the use of pedometers into our various fitness and exercise units. These pedometers generously donated by Aetna have allowed for both our students and physical education teachers to track growth through these innovative exercise tools. We here at B-UHS could not be more appreciative to Aetna for donating these tools to use with our students."*
>
> **—Michael Gitzen, Physical Education Teacher**
> **Buckhannon-Upshur High School**

We also collaborate with West Virginia Head Start programs throughout the state to engage parents by connecting them with comprehensive and essential services that promote health, wellness, and education. We participate in parent and staff meetings where we distribute and discuss easy-to-understand wellness information, topics include the importance of wellness exams, healthy eating, and healthy activities/behaviors.

Through Aetna's outreach to Department of Education representatives, we understand that teachers and school health personnel often do not participate on medical care teams, which often leaves them frustrated. Our model of care is sensitive to teachers' and administrators' needs by providing tools and resources to effectively address behavioral health needs and to aid them in better managing challenging behaviors.

Creating Collaborations in Behavioral Health: According to the National Technical Assistance Network for Children's Behavioral Health, one in five children will experience a mental health disorder, and one in ten will experience a behavioral health issue that is so significant it impacts the child's ability to function socially, academically, and emotionally. To address behavioral health issues and trauma caused by ACEs in children enrolled through TANF and WVCHIP eligibility, we are collaborating with Cabin Creek Health Systems and the Marshall Health Center for Rural Health to develop an evidence-based, integrated, intensive coordination of care approach that targets high-risk children, including WVCHIP enrollees attending middle/high schools in Kanawha County, to improve health outcomes.

Aetna and CVS Health have made a significant commitment, leading our social responsibility by being the first in the nation in removing all tobacco products from our retail stores and focusing on national interventions to eliminate and reduce the use of tobacco in all ages, but especially for children and teenagers. To that end, we have partnered with Stanford University to develop the Tobacco Prevention Toolkit, which aims at preventing middle and high school students' use of cigarettes, cigars/cigarillos, chew, hookah, and electronic cigarettes. The program is deployed at schools, and Aetna is committed to implement this program in many of our West Virginia schools. **Aetna is also developing a question around vaping on the Health Risk Questionnaire**. If the respondent answers yes to participating in vaping, the individual will be transferred to the Care Management department for education.

Engagement to Address Neonatal Abstinence Syndrome

An example of a successful collaboration is with the West Virginia Perinatal Partnership, whose goal is to improve the health outcomes of pregnant West Virginian women and their babies.

West Virginia Perinatal Partnership (WVPP) enrollee outcomes have included full-term healthy babies, a family preserved, sobriety, further education, and employment. To support the WVPP in their efforts, Aetna provided them a $10,000 grant to help develop an educational program for health care providers focused on breastfeeding mothers with a history of opioid abuse or who are receiving medication-assisted treatment (MAT).

Lily's Place Achieves Positive Outcomes

Aetna supports pregnant women with TANF and other eligibility at risk of delivering babies with neonatal abstinence syndrome (NAS) by co-locating a nurse care coordinator at Lily's Place, the first NAS center in the United States. Lily's Place is a one-of-a-kind provider for babies with NAS and Aetna was the first MCO to contract with them.

Our embedded Aetna care coordinator meets with the mothers face-to-face, enrolls them in care management, and follows them throughout their pregnancy and concurrent treatment for substance use disorder (SUD).

Following birth, the baby is enrolled in care management and followed through the first year. The program has shown success in keeping the mother engaged in prenatal care as well as engaged in SUD treatment. Most importantly, most babies remain with their birth mother.

In 2018, through the NAS program, 59% of mothers remained in opioid treatment and/or counseling during pregnancy and through their first year after delivery. By the second quarter of 2019, this number increased to 88%.

Approach to Establishing and Maintaining Relationships with Provider and Medical Associations

CS002	The Vendor should describe its approach to establishing and maintaining relationships with applicable provider and medical associations.

Through our Community Engagement team, we have worked hard to establish and maintain effective, collaborative relationships with numerous provider and medical associations. We outreach to organizations around the state, including those listed below, for services for children and persons of all ages with **dedicated, focused, and tailored data-driven, evidence-based solutions to best meet their unique and complex health needs:**

- Behavioral Health Provider Association
- Charleston Area Medical Center Clinically Integrated Network
- Healthy Kids Coalition
- Marshall University
- National Association of Social Workers – West Virginia Chapter
- Provider Response Organization for Addiction and Care Treatment (PROACT)
- School Based Health Assembly
- West Virginia Board of Medicine
- West Virginia Healthcare Association
- West Virginia Hospital Association
- West Virginia Nurses Association
- West Virginia Oral Health Coalition
- West Virginia Osteopathic Medical Association
- West Virginia Partners in Health
- West Virginia Primary Care Association
  - Community health centers (CHCs)
  - FQHCs
- West Virginia Rural Health Association
- West Virginia State Medical Association
- West Virginia University Health Systems

Engaging and Maintaining Provider Association Relationships

To improve overall population health, we believe sustained engagement and collaborative relationships with provider associations is important.

> *"Great Rivers Regional System for Addiction Care seeks to begin comprehensive programs 'in' and 'with' local communities and harness the expertise of multiple partners, including health care providers, public health experts, first responders, and community-based organizations. We have the privilege of Aetna being an active participant on our advisory board. They have been a strong partner since our inception and support the four counties … in multiple ways, including financial support to develop PROACT. It brings together addiction and recovery services, primary care, social services, and spiritual care all under one roof. Aetna is dedicated to the community and the overall wellness of all individuals."*
>
> **—Tina Ramirez, Executive Director, Great Rivers Regional System for Addiction Care**

Aetna has a longstanding collaboration with PROACT as they strive to effectively serve, educate, and treat every individual through and beyond the initial stages of recovery until they become long-term, committed members of society. PROACT, located in Huntington, provides both referrals and complete assessment, education, intervention, and treatment solutions in a single accessible service hub by combining behavioral, social, and medical resources from the community to effectively triage enrollees with addiction. Aetna saw that PROACT would be an effective collaborator against opioid addiction and provided a $400,000 grant to PROACT as shown in **Figure 6.4.1-2**. PROACT offers a variety of treatment avenues, including MAT and abstinence-based services. PROACT treatment begins with a clinician conducting a comprehensive, structured clinical assessment to inform a diagnosis and recommended care plan for social or personal needs requiring further referral. Individuals

Figure 6.4.1-2: Aetna's Support for PROACT
Aetna collaborates with PROACT for addiction recovery.

entering PROACT services receive timely access to a physician as well as to all other services offered by our program.

Aetna is a founding member of Great Rivers Regional System for Addiction Care (Great Rivers), the innovative prevention and treatment program of which focuses on addiction and recovery efforts, seeking a measurable impact in saving lives and changing the course for individuals, children, and families impacted by substance use disorder.

In part due to the opioid epidemic, many grandparents in West Virginia raise their grandchildren while their adult children are unable to care for their own children due to being in recovery, in prison, or deceased. We provided the West Virginia Healthy Grand Families organization with a $15,000 grant in 2019 and provide grandparents health care education to help care for the children. Grandparents in the program participate in an eight-week training program to help them manage health care access, medications, and other supports for their grandchildren.

Efforts to address the Opioid Epidemic and Substance Use Disorders

Our Community Engagement team collaborates efforts with all Aetna departments, including Care Management, and joins forces with CBOs to make certain we understand the unique health care challenges West Virginians face so we can act as catalysts to make progress regionally. This approach leverages regional and community-based supports coupled with a thorough understanding of the health challenges West Virginians face.

National Success Addressing Opioid Crisis
Between July 2016 and October 2018, the Aetna Medicaid organization increased the rate of non-opioid treatment for chronic pain by 52.9% and decreased the rate of opioid prescriptions for members with opioid use disorder by 44%.

Aetna works in conjunction with Cabin Creek Health Systems and Marshall Health SBHCs to provide coordination of care and integration of behavioral health services through a patient-centered

health delivery approach. The system incorporates children, families, and/or other supports into a system of care team, and all care delivered utilizes a trauma-informed care approach.

Approaching and Establishing Relationships with Professional Boards

CS003	The Vendor should describe its approach to establishing and maintaining relationships with applicable professional boards.

Engagement with these professional boards assists us in gaining insights and engaging with expertise in services for children and persons of all ages **with dedicated, focused, and tailored data-driven, evidence-based solutions to best meet their unique and complex health needs**. This collaboration includes outreach, education, and training to remove barriers to care coordination and improved service for Medicaid enrollees, including those children enrolled in WVCHIP. Our relationships include the following:

- American Academy of Pediatrics (WV)
- Board of Nursing
- Professional licensing boards
- Social Worker Association
- Rural Health Collaborative
- West Virginia Board of Osteopathic Medicine
- West Virginia Health Care Association
- West Virginia Medical Professional Health Program
- West Virginia Pediatric Society
- West Virginia Primary Care Association
- West Virginia State Medical Association

To illustrate our engagement with professional boards, in 2019 Aetna was a sponsor of several conferences, including the West Virginia State Medical Association Healthcare Summit, West Virginia Medicaid Summit, and West Virginia Association of School Nurse's Conference. Aetna has also reached out to both the Boards of Medicine and Osteopathic Medicine to obtain up-to-date lists of those providers licensed in the state to increase network capacity to improve access to specialty care. We sponsor an annual event with the West Virginia Social Worker Association's annual meeting and we have also attended the West Virginia Regional Health Summit. Our Medical Directors are involved with boards. Dr. Adam Breinig, is a past president of the West Virginia Academy of Family Physicians and is currently a participating member. Dr.

Gibbon is a member of the West Virginia Health Information Network Clinical Committee. We sponsored, attended, and/or presented at many conferences and events over several years with professional boards, including the following:

- American Academy of Pediatrics Conference
- Healthcare Facility Management Association
- Perinatal Partnership Conference
- West Virginia Behavioral Healthcare Providers Association
- West Virginia Medical Office Managers Association
- West Virginia State Medical Association

We intentionally engage professional boards that focus on populations served within this contract to make certain we engage providers across the care spectrum. We actively seek continual professional board engagement to maintain effective relationships and stay on the forefront of innovative care solutions for our enrollees.

Coordinating Agencies to Provide Complimentary Services to Members

CS004	The Vendor should describe its process to coordinate with agencies providing complimentary services to the member.

Aetna has been joining forces with local organizations for over 23 years to address housing affordability and instability, food security, employment, and other barriers. Community and complimentary services can respond to basic needs, resources, and informal supports by creating connections to community resources that families need.

Relationships with Complimentary Service Providers

We coordinate with community agencies and resources and complimentary service providers to engage enrollees in comprehensive care solutions as we fully engage enrollees in their greater community. Through FRNs, we engage in and help provide resources and support, including health care, homeless services, food and nutrition, and education. Community agencies and complimentary providers that we routinely engage include the following:

- 4-H
- ABLE Families
- Adolescent Health Initiative
- Alliance for Creative Health Solutions

- American Cancer Society
- American Lung Association
- Big Creek People in Action
- Camp Appalachia
- Catholic Charities
- Children's Safety Network
- Circle of Parents Support Group
- City/county housing authorities
- Clinical Committee for the WV Health Information System
- Coalition to End Homelessness
- Community Crossings
- Coordinating Council for Independent Living
- County Boards of Education
- County Child Protective Services offices
- County health departments
- Covenant House
- Diabetes Coalition
- Eastern Panhandle Empowerment Center
- Eastern WV Community Action Agency
- Facing Hunger Food Bank
- Family Information Support and Health
- Gabriel Project
- Goodwill Industries
- Great Rivers Regional System for Addiction Care
- HAPI Project
- Hardy County Child Care Center
- Head Start
- Heart of Appalachia
- Help Me Grow West Virginia
- Homeless shelters
- Hunger Free West Virginia
- Intermountain Collaborative
- Jacob's Well
- Just for Kids
- Juvenile justice agencies
- KIDS COUNT
- Lily's Place
- Local food pantries and feeding programs
- March of Dimes
- Marcum Terrace Family Resource Center
- Maternal and Child Health Committee
- Mountain Heart
- Mountain State Educational Services Cooperative
- Mountaineer Food Bank
- Mountains of Hope
- New River Health Association
- Newborn Hearing Screening Advisory Committee
- One Voice
- Our Babies: Safe and Sound
- Parent Educator Resource Center
- Parents as Teachers
- Perinatal Partnership Substance Use in Pregnancy Committee
- Practice Based Research Network
- PRIDE of Logan
- Project Launch
- Raleigh County Community Action
- Reconnecting McDowell
- Right from the Start
- Safe at Home
- Salvation Army

- West Virginia Department of Veteran's Assistance
- West Virginia Family Health
- West Virginia Family Resource Network
- West Virginia Healthy Grand Families
- West Virginia Healthy Kids Partnership
- West Virginia Job Corps
- West Virginia Library Commission
- WV National Guard Family Programs

- West Virginia Office of Community and Rural Health Services
- West Virginia Office of Community Health Systems and Health Promotion
- West Virginia Office of Emergency Medical Services
- West Virginia Office of Nutrition Services
- West Virginia Oral Health Coalition
- West Virginia Rural Health Association
- West Virginia Statewide Afterschool Network
- West Virginians for Affordable Healthcare
- West Virginia University Extension
- YMCAs across West Virginia
- Youth Services System, Inc.

We are a company that focuses on **wellness and preventive health opportunities** for our enrollees. We act as a resource, listening and engaging in solutions for enrollees. For example, our targeted outreach identified child wellness exam scores in Doddridge County were well below the state average in our effort to address health disparities and gaps in care, so we took action attending a mobile food pantry event in the county, at which we provided health information on the value of wellness exams and childhood immunizations. Aetna will continue to approach all stakeholders with the **same respect and spirit of engagement** as we do with each enrollee. We learn from those who have divergent perspectives on the concerns at hand, and as such, these varied perspectives and areas of expertise will educate a robust and effective leadership, advocacy, and governance infrastructure.

> *"The FRN is a 501c3 agency that supports families and communities by working on issues identified as priorities for their community. Aetna has been a great source of charitable support for us. They have provided our organization with donations and generous sponsorships for several years to support our community baby showers. Raleigh County's baby showers have helped over 200 women and babies in our area. Aetna's contribution has been critical to this success. The FRN has also collaborated with Aetna to bring a food giveaway to our area distributed by Mountaineer Food Bank. Many families received much-needed food items. Again, Aetna's contribution made a huge impact on the success of this event. Their support helps us to maximize our funding sources so that we may carry out our mission of helping those in need. We look forward to many more years of partnering with this organization."*
>
> **—Deborah Williams**
> **Director, Raleigh County Community Council/FRN**

Our Approach and Methodologies to Community/Stakeholder Engagement

West Virginians put stock in the power of community. Engagement starts with enrollees and families becoming active in their communities, and then eventually moving into leadership positions to better assist and give back to their neighbors. Aetna is actively engaged with West Virginia's 47 FRNs positioning us to support quality outcomes at the individual, community, and regional levels. This comprehensive approach makes sure that we sustain quality outcomes over time as relationships take hold and deepen between our enrollees, neighbors, and Aetna employees.

> *Aetna has been and continues to be a partner to the Ohio County Family Resource Network through their attendance at General Network meetings six times a year, monthly Family Ways Community Collaborative meetings, and as exhibitors at local resource fairs. They are also generous with hygiene items and information sharing."*
>
> **— Claudia Raymer, Executive Director, Ohio County Family Resource Network**

We engage with FRNs in programs addressing food insecurity by implementing a weekend food backpack program, a community garden, and/or food drives. We also collaborate with FRN stakeholders to solve urgent problems and work on approaches such as community development, early childhood programs, child abuse prevention, and economic and resource development.

> *"The Marcum Terrace Family Resource Center in Huntington has had a relationship with Aetna Better Health of West Virginia for several years—and it continuously grows and expands. Aetna has sponsored the monthly food pantry at the FRC for over six years. Their contributions provide food boxes for approximately 80 families each month, supplying food for after-school programs and emergency food boxes. Aetna has a member of their team present each month to assist with the food ... and give helpful health care information.*
>
> *Aetna can always be counted on to support the events and activities of the FRC. They truly understand the importance of collaboration. They are a vital part of our community."*
>
> **—Shane Randolph, Coordinator Marcum Terrace FRC**

Aetna has worked with TEAM for West Virginia Children on multiple efforts, and we were the first MCO in West Virginia to pair with TEAM's *Our Babies: Safe and Sound* campaign, which focuses on promoting infant safe

sleep and preventing shaken baby syndrome. Over 20 care managers participated in an onsite training in February 2018 and the *Let's Talk About Safe Sleep* statewide meeting. Aetna supported over 500 families with safe sleep education and almost 400 families with portable cribs so that infants had safe places to sleep.

Collaborative Efforts to Support SDOH

Aetna has referred members to community resources in West Virginia for more than 23 years, but we have never had the data sharing capacity to show the results of our referral services. In 2020, Aetna will integrate the Unite Us platform in our Case Management, Member Services, and other departments to provide an automated, data-focused solution to community referrals. In addition, Aetna includes our provider network in collaboration with Unite Us to integrate provider referrals to SDOH needs of our members. The Unite Us platform provides the unifying infrastructure between health care entities and community-based organizations. This infrastructure provides the ability to track an individual's wellness journey. Unite Us will have an initial rollout in seven counties located in central and western West Virginia effective March 1, 2020 spanning rural and urban communities.

> *"Expressing my thanks and gratitude to Aetna for attending and contributing input at our local Family Issues Task Force meetings and our regional FRN meetings. Your presence at our annual Celebrate the Family event was greatly appreciated as well. We are looking forward to working with you in our Grant and Hardy County Coalition Building endeavors for the betterment of our community. We hope you will continue to partner with us in our tobacco and drug prevention efforts, Healthy Grandfamilies, foster care services, back-to-school events, baby bank and baby shower events, the Annual Community Christmas Luncheon, Family Fun Day, and numerous other events as they are planned to meet the needs of our area. The partnership with Aetna is valuable to the success of our FRN plans and allows us to implement them in the community. I fully support Aetna and the positive role it plays in foster care and Medicaid health care coverage."*
>
> **— Gina Hinkle**
> **Secretary, Grant and Hardy County Family Issues Task Force**

Aetna recognizes the relationship between health care disparity and food insecurity, especially in West Virginia, which has some of the highest rates of poverty and food insecurity across the nation. Poor nutrition impacts brain development and growth to render West Virginia children and pregnant women and their unborn children at a major disadvantage, therefore, we collaborate with the Perinatal Partnership, a program with the goal of improving health outcomes for pregnant women and their babies. Aetna has a longstanding relationship with Facing Hunger and Mountaineer Food Banks, both of which work with local feeding programs to reach children who rely on the National School Breakfast and Lunch programs and Backpack program.

In February 2018, there was a prolonged teacher's strike, and the school feeding programs were sharply reduced or completely halted. Aetna donated $3,000 to Facing Hunger Food Bank and $10,000 to Mountaineer Food Bank to help make sure students facing food insecurity maintain quality food access during school closures. We understand that more than **40 of West Virginia's 55 counties are considered food deserts.** Therefore, we have become involved with the Mountaineer Food Bank as it is a vital resource for struggling families. **Figure 6.4.1-3** shows our Aetna team volunteering at a mobile pantry event in Monongalia County, which we sponsored with the Mountaineer Food Bank. Aetna purchased a truck for Mountaineer Food Bank to help with their mobile food pantry events. In addition to supplying funding and volunteers that make the distribution of healthy food possible, we provide health care information and personal care items. **Since 2018, Aetna has sponsored the distribution of nearly 70,000 pounds of food.**

Figure 6.4.1-3: Mountaineer Food Bank Mobile Food Pantry
Aetna volunteers organize food items to distribute.

Aetna also works with faith-based organizations such as **One Voice, a nonprofit public charity that helps families and communities suffering from substance abuse.** They have been instrumental in bringing communities together to educate, train, and mentor individuals and stakeholders through community forums with support from the governor, U.S. and state senators and representatives, and the attorney general.

> *"The partnership we have with Aetna is very special to us. For a very long time, we partnered together to improve the lives of those receiving assistance through the Family Resource Center at Marcum Terrace in Huntington. As that relationship developed, we have had many occasions to have Aetna staff, with the great support of Jim Smallridge and Todd White, volunteer at mobile pantries, as well as to spend time here at the food bank—either in a group or individually—to simply work shoulder-to-shoulder with our team to aggregate food to provide to those that we collectively serve. Aetna truly 'shows up' to provide better health and well-being to those they serve, and that we serve along with them. We are grateful for their partnership and look forward to our continuing work together."*
>
> **—Cynthia Kirkhart, Executive Director**
> **Facing Hunger Food Bank**

We are also **active in supporting housing and other initiatives that address community health disparities and lack of supports** with the following entities:

- Various city and county housing authorities, such as the Housing Authority of Mingo County and Housing Authority of Wayne County **to increase access to affordable housing**
- West Virginia Library Commission and numerous local libraries to increase Internet access and to provide outreach and prevention forums
- West Virginians for Affordable Healthcare's Medicaid Matters group; we are also a sponsor of their Medicaid Summit
- West Virginia Healthy Kids Partnership to address health disparities and improve health outcomes
- Family Information Support and Health (FISH) program, which provides education to families about common mental health conditions that affect children, including ACEs. Our behavioral health medical officer provides training in concert with our training collaborative, which designs and delivers training models for each local service delivery area.

Through our Member Advisory Committee (MAC), we listen and engage in rural, urban, and community issues, listening to enrollees across West Virginia. Through the MAC we will continue to learn enrollee access concerns to transportation issues and use insights to

collaborate community stakeholders to create innovative solutions in the regions that do not have transportation resources in place.

To best address this issue, Aetna is working closely with Susan Gamble, Ed.D., director of the West Virginia Statewide Afterschool Network. Dr. Gamble will be instrumental in designing a creative response to the transportation needs for children attending much-needed after-school programs, as she has access to the numerous informal community individuals, faith-based organizations, and nonprofit agencies that have graciously stepped up to meet this community need. Aetna's Medical Management team has engaged LogistiCare, the state's medical transportation vendor, to speak to staff concerning transportation programs to aid enrollees. To address SDOH needs, an Aetna care coordinator facilitated a solution with LogistiCare for transporting a six-year-old living in the eastern panhandle who was recently diagnosed with cerebral palsy. According to the West Virginia Health Care Authority's "West Virginia State Health Plan," rural transportation is a burden particularly in West Virginia, where 64 percent of the population lives in rural areas and one of the highest rates of communities with a population of less than 2,500 persons, creating scalability difficulty for transportation providers. Aetna will continue efforts in facilitating a problem-resolution process for transportation needs.

Throughout our West Virginia experience, Aetna has joined local organizations to address housing affordability and instability, food security, employment, and more because these are direct contributors to improving SDOH for children and families.

CVS Health Workforce Initiatives (CHWI) provides Aetna with access to existing CVS partnerships to empower our enrollees to obtain the skills needed to build career-focused employment. The initiatives offer hands-on training programs and will add value to our

collaboration with Workforce West Virginia in helping individuals looking for meaningful employment as pharmacy technicians and retail associates. Our CVS Health National Apprenticeship, in partnership with West Virginia Workforce Boards, includes classroom and on-the-job training with four U.S. Department of Labor registered apprenticeships for pharmacy. The Charleston West Virginia Job Corps provides tuition-free pharmacy technician training at the Job Corps center for young people aged 16-24. CHWI also partners with a West Virginia Junior College by providing pharmacy technician externships at local CVS pharmacies. **Since 2015, CVS Health has hired 1,739 new West Virginia employees; 486 were eligible for a Work Opportunity Tax Credit, including 146 eligible for public assistance** such as food stamps, TANF, Veteran Supplemental Nutrition Assistance Program, and SSI..

Initial and Ongoing Training to Community Stakeholders

We offer Aetna training to stakeholders so that **together we embark on continuous learning.** Training is a key element of our engagement efforts, as we believe each person and every community organization is a lifelong learner. Aetna also understands that adults learn and retain information best through a multifaceted approach, including presentations, experiential, in-vivo demonstrations, and in-the-field coaching, among other modalities.

Aetna's Integrated System of Care Model

Aetna's system of care approach relies on active listening and engagement with community stakeholders. These interactions give insight to the needs of individuals as well as on a population health level to better address specific community needs. We learn what keeps CBO directors up at night and the connections needed to make a real difference in people's lives and their communities. This is how we address community health disparities like the high prevalence of asthma, diabetes, and obesity in West Virginia as compared to other states.

Aetna's integrated system of care model is community-connected to improve delivery system capability. The model includes a full spectrum of community-based physical, behavioral, and oral health care treatment services, along with psychosocial services and supports, to create tailored, holistic care approaches that achieve the following:

- Drives collaboration across agencies and community-based organizations
- Addresses cultural and linguistic needs, such as language and cultural differences that create barriers for adults with limited English proficiency. Our model considers enrollees with visual and hearing impairments/disabilities, need for American Sign Language, Braille, etc.
- Recognizes and honors enrollee voice and choice
- Acknowledges trauma's impact on enrollees and families and exacerbations of experiences in adulthood, therefore seeking innovative solutions to reduce quality of life impacts

Coordination with each stakeholder group requires different approaches based on perspectives, regulatory constraints, funding, and direct experience. A 'one size fits all' approach does not work when it comes to systemwide reforms and innovation. Our most important stakeholders are our enrollees. We engage the community to surround enrollees with effective supports and resources. We ensure enrollees get access to medical care and social needs by leveraging the expertise and leadership from CBOs across the state to ensure West Virginia enrollees have **voice, choice, and preference** in each step through their experience with us.

Community Presence Achieves Results

Because of our continual presence engaging West Virginia communities, our regional Care Connection teams provide highly effective services because they live in and know the communities in which they work. The impact of our local approach to care is demonstrated by the following outcomes:

- Increased face-to-face visits: 300%
- Decreased opt-out rate: 41%
- Reduced readmissions: 14%
- Reduced emergency room visits: 7%

5. Member Services

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Member Services (MS) as part of their bid. The Vendor's narrative response should not exceed 100 pages.

Aetna has over 23 years of proven, local West Virginia experience in delivering customized, quality-driven care supported by timely, accurate new member enrollment processes; promotion of member rights; comprehensive, integrated, evidence-based assessment methods; culturally competent staff and programs; targeted, community-level health education programs that promote meaningful member health outcomes; and a 24/7/365 Member Services (MS) call center that offers readily-accessible, service excellence. Our experience, programs, people, and outcomes support the State's goals for enhanced coordination of care, improved communication across stakeholders, reduced fragmentation, and seamless continuity of care, offering West Virginia Mountain Health Trust (MHT), West Virginia Health Bridge (WVHB), and West Virginia Children's Health Insurance Program (WVCHIP) members the opportunity to participate in their health and wellness journey in a meaningful way that enhances quality of life.

At Aetna, we operate with a **Common Purpose** in mind, which means that we advocate for our members' best health by helping them get the most from their benefits, building trust, and always providing a clear path to care. Our Common Purpose is our guiding light – it reminds us why we come to work every day and it means that we engage our employees around a shared commitment to our members. We see what is possible and we work toward that common goal—**we are member obsessed.** It means we transform our thinking, inspire employees to create an optimal member experience, collaborate with others, and activate our promises to deliver supportive, effective care and services. **In West Virginia, we stand shoulder-to-shoulder with**

our members—we act on their behalf as their voice, taking their side, putting ourselves in their shoes, and empathizing with their situation.

Member Services Staff and Community Involvement

Maria Flowers, a Member Services representative, is a native West Virginian who has been employed on Aetna's Member Services hotline for several years. Maria has attended multiple local community events that support and connect West Virginia families to critical preventive, health care services. In collaboration with Aetna's Quality Management department and Valley Health, Maria volunteered as a guide and educational resource for Aetna's diabetic eye exam and well-child health care event. The event offered families and children an opportunity to learn about Aetna resources for diabetes health education and engagement, such as our mobile phone application, and to immediately schedule their well-child visits. Maria told her director, "*The entire day was enjoyable. My last family had five small children who could not talk very well. I discovered that several of the children were deaf. I know some American Sign Language, so I was signing with the kids. The kids taught me more sign language, we were having fun, and smiling a lot. It made me so happy that I could interact with them too.*"

Helping our members get the most from their benefits means asking the unasked questions and taking that extra step when we see an opportunity for a better solution. We developed a job aid for our MS representatives that offers suggestions for how to provide member-obsessed service excellence on different call types. For example, if we enroll a new member, representatives make a new member feel welcome by recognizing the caller as a new member and offering important educational information such as the type of information available in the member handbook or how to download and navigate the smartphone mobile application offering a secure member portal.

Building trust is something we do through action and not just words. It means keeping our promises, meeting our commitments, and being trustworthy. Aetna's Common Purpose results in each member experiencing an individualized, differentiated service experience that is proactive, friendly, and efficient. This seamless continuity provides a clear path to care making it

easy and hassle-free for each member—on each call, in each interaction, and at each touchpoint, written, media, or in-person.

New Member and Member Enrollment

MS003	The Vendor should describe its methodology for assigning members to a Primary Care Provider (PCP) including, but not limited to, claims history, proximity, and within contractually defined timeframe.
MS004	The Vendor should describe how they will develop protocols to notify members of Primary Care Provider (PCP) assignment.
MS005	The Vendor should describe how they will educate members of the right to change Primary Care Providers (PCPs).
MS015	The Vendor should describe how they will distribute and provide notice of member handbooks on an ongoing basis, according to an established turnaround time, and including, but not limited to, the following:
MS016	Updates to the member handbook
MS017	Handbooks requested ad hoc by a member
MS027	The Vendor should describe its new member enrollment and education process, defined as the time of initial notification of the member's enrollment through the first month of actual enrollment, which includes, but is not limited to, the following:
MS028	Member contact, including welcome calls, welcome letters, and/or home visits
MS029	Outreach to members who are difficult to contact, including disabled members and members without telephones
MS030	Processing and issuing identification cards
MS031	Distributing member handbooks
MS033	The Vendor should describe how they will provide a secure member portal that allows members to log in and access benefit information including, but not limited to, the following:
MS034	Medical records
MS035	Authorization status
MS036	Cost sharing information
MS037	Temporary identification (identification) cards
MS038	Confirmation of Primary Care Provider (PCP)
MS039	Provision of access to guardians
MS040	The Vendor should describe its process to inform members that program information is available in paper form without charge upon request and available within five (5) business days.

MS044	The Vendor should describe its policies and procedures related to issuance of member identification cards within contractually defined timeframes.

Aetna extends our **Common Purpose** initiative to members from the point of enrollment through ongoing services by ensuring high-touch, personalized, outreach and education that meets each member's[1] unique needs. Our members not only deserve the best care, but deserve interactions that support their rights, improve continuity of care, and remove barriers to optimal health outcomes. For example, members call us seeking urgent assistance locating a specialty provider. Our MS representatives not only offer immediate support by locating the right provider and assisting the member to schedule an appointment, we take the time to offer step-by-step guidance on navigating our secure member portal or smartphone

"I was born in Charleston, West Virginia and it's been my home all my life. Every day at Aetna is an opportunity to live the Common Purpose of advocating for our members. I enjoy helping others outside of work as well. At an early age of three, I was introduced to dance. My parents felt this would help me overcome my shyness and bring the out the best in me. I now coach cheerleaders at a local middle school, I and I teach dancing to children. I also mentor young girls who have been neglected and abused. In my spare time, I do freelance photography and some of my sports action shots have been featured on the news and in local newspapers. As a Member Services representative, I get to help people every day. Recently, an elderly woman made an appointment to get a mammogram. When the member arrived, she was told they do not accept Medicaid. The member was upset because she had a family history of breast cancer, and she had just lost her sister to breast cancer a few months back. The member was so emotional and scared she was going die of the same thing. I calmed the member down by taking long deep breaths with her to bring down her heart rate. Once the member was calm, I placed several calls to providers I found doing a search of our internal resources. I was able to get the member an appointment that day. With the member's permission, I gave the provider all the member's information including her Medicaid information to make it easier on the member. She thanked me for taking time out to assist her. When the call was over, I reached out to her care manager to inform her of the steps I took for that member."

—Sonya, Member Services Representative
Aetna Better Health of West Virginia

[1] Throughout this RFP, when we use the term "member," we are collectively referring to a definition that is representative of who a member is per the populations we serve and intend to serve including adults and children and the legal custodians of children enrolled in WVHIP (e.g., parents and legal guardians).

mobile application, both which include advanced provider search functions. Our welcome and outreach begins at the time of enrollment. We have extensive experience with new member enrollment and ensuring high-touch, frequent interactions that exceed Department of Health and Human Resources (Department) requirements for outreach and education. Members have support and resources available via multiple communication methods, including translation and oral and American Sign Language (ASL) interpretation services, which allow them to understand the managed care system, navigate services and support, and progress toward optimal health.

[MS027] New Member and Member Enrollment and Education

Once the monthly enrollment roster is received from the Department, Aetna enrolls all new members in the MHT, WVHB, or WVCHIP programs, respectively. Health plan representatives welcome members to our program and conduct initial outreach using telephone and written correspondence according to the frequency and intensity of contact per contractual requirements and as designated in our intensive care management (CM) programs designed for West Virginia members. **[MS027]**

[MS028] Initial Member Contact - Welcome Calls, Welcome Letters, and/or Home Visits

Aetna supports welcome and outreach to the program through automated welcome calls, distribution and explanation of our welcome packet, member identification (ID) card, and education about member rights, grievances and appeals (G&A), enabling services, primary care provider (PCP) assignment and reconciliation. Initial contact for members occurs within one day of receiving the monthly enrollment file via our automated outbound call management and tracking system. This automated process welcomes new members to the Aetna health plan and asks members to complete the required health risk questionnaire (HRQ) using prompts on their telephone keypad. **[MS028]** If members have a working smartphone, they receive a welcome

text that reads, "Hi, it's Aetna Better Health! As a member, you can get messages with important info about your health and benefits," and they receive contact information about how to enroll in our Aetna Health text messaging plan. **[MS028]**

Aetna mails each member an ID card with information about the member's PCP. **[MS028]** We also mail a welcome packet and customized materials to meet the unique needs of West Virginia members by providing the following required items, and other printed materials deemed appropriate for the region or population served:

- A welcome kit and welcome letter
- A member notice of privacy practices outlining member rights to privacy
- A notification advising members how to request a member handbook, including written taglines in large print for prevalent languages and oral and ASL interpretation services **[MS043]**
- A letter outlining the West Virginia workforce initiative
- Contact information for the West Virginia enrollment broker
- Education on the importance of the WVCHIP PCP selection including waived co-payment for choosing a Patient Centered Medical Home (PCMH) provider
- Information on how to use different levels of service

Aetna tracks all new member welcome outreach contact, ensuring adherence to Department requirements and in alignment with the **National Committee for Quality Assurance (NCQA) standards**. We complete additional outreach via automated or live calls for all unsuccessful attempts. We track all contact attempts, whether through our automated outbound call management and tracking system or via text campaign. Our automated outbound call includes three attempts across two days, calling at varied times of the day to maximize contact. If we reach a non-designated member, a voice recording, or a busy signal, we make additional attempts across three more days. Designated staff complete a review of contact attempts and search in our system for updated demographic information, in

effort to make another attempt at contact, when necessary. If MS or CM staff identify new demographic information during initial and ongoing contact, we place a note in the member record and warm transfer callers to the Department, ensuring demographic updates are properly recorded. Demographic information entered into the Aetna system overrides other contact information, ensuring the most recent, working smartphone and/or address populates to the member's record. We report all members we have been unable to contact and the nature and disposition of those attempts within the first 30 days of enrollment to the Department in adherence with the Department's specific requirements and timeframes. **[MS027]**

We understand our members may experience transitional housing or instability in permanent housing. We support our members, especially members with special healthcare needs, by accepting addresses for shelters, temporary places of residence, and other non-traditional places of residence.

[MS029] Member Outreach for Members who are Difficult to Contact

If we are not able to reach members during our initial automated outreach, we conduct live, telephonic outbound calls. If a member does not have a telephone, we conduct in-person visits as part of our outreach attempts. All attempts are completed, documented, and tracked in alignment with State and **NCQA standards.** For our members enrolled in care management (CM) programs, CM staff complete initial live, outbound calls to members within five business days of enrollment in a CM program. If there is no contact, care managers complete a second live, outbound call attempt at a different time of day within three business days. If there is still no response after the second attempt, care managers issue a written letter on the same day of the second unsuccessful attempt that is mailed to the member's address. The letter explains the reason for the contact and includes how to contact us. **[MS029]** If a member is being prescribed

medications and we have knowledge of this at the time of enrollment, our CM staff reach out to the prescribing pharmacy to inquire if the member will be picking up medications and ask the pharmacy staff to call our department when they are onsite. Once we make contact, when applicable, we offer our members a **no-cost, Lifeline smartphone**, which offers members without telephones the ability to contact our MS and CM departments, the Department, providers, and community-based organizations (CBOs).

Aetna's national Medicaid organization has initiated innovative approaches with CVS and in partnership with the Department, we will leverage this expertise in West Virginia to improve member engagement for difficult-to-reach members. Aetna CM staff can access retail pharmacy contact information for our members through our **Engagement Dashboard.** By integrating functional areas, we can increase member engagement opportunities with members who are CVS retail pharmacy customers. This integration supports our ability to outreach difficult-to-reach members or members who may benefit from CM services. Our engagement dashboard provides member contact data from CVS retail pharmacies for Aetna CM staff to increase our reach rate for previously difficult-to-reach members. If CM staff successfully reaches a member, the contact information is added to our electronic CM system for future use. Additionally, we are evaluating opportunities for **in-store engagement conversations,** which would support the Department's goal for enhancing access to care and can improve our reach rate for difficult-to-reach members. In-store engagement conversations

CVS offers 57 retail stores statewide in West Virginia, with almost all locations accepting Supplemental Nutrition Assistance Program federal benefits and 46 locations accepting Women, Infants, and Children federal benefits for pregnant and breastfeeding women and children under the age of five. Nearly 46 percent of Medicaid members live within five miles of our CVS retail locations.

are a CVS retail pharmacy collaboration in which Aetna places a digital alert in the CVS system to alert the CVS Pharmacy staff that we are looking to engage a difficult-to-reach member. We improve engagement in CM by leveraging CVS Pharmacy in-person interactions and providing a physical takeaway card to educate members on Aetna CM programs. The CVS Pharmacy staff documents interaction notes and the best day/time for the person to be reached, which is sent back to the Aetna clinical documentation system. Clinical staff in the Care Connections department can use this information to complete outreach. Both CVS opportunities, in-store engagement conversations and the Engagement Dashboard, increase our opportunity for clinical engagement and outreach to members. **[MS029]**

We support and promote regulations and requirements that support the availability of auxiliary aids and alternate methods of communication for our members with disabilities. Aetna health plan staff are fully trained on utilizing text telephone (TTY)/telecommunication device for the deaf (TDD), ensuring communication about new member enrollment or CM programs. Our new member written materials are offered in Braille and in other languages or font size upon request. Aetna health plan staff are fully trained on member rights, including ensuring member materials such as the member handbook or treatment plans are provided in Braille upon a member's request. **[MS041]**

[MS030] Processing and Issuing Member Identification Cards

Aetna's Enrollment department is responsible for facilitating the provision of timely member ID cards within the timelines referenced in the Model Purchase of Service Provider Agreement for State Fiscal Year 2020. A card is provided for every West Virginia member. The member ID card includes the West Virginia program name and logo, the member's ID number,

Our average turn-around time for issuing member identification cards in 2019 was 3.6 days.

the name of the member's PCP, the PCP phone number, and phone numbers for Aetna MS and the Crisis hotlines.

Aetna has a **strong history of exceeding enrollment turnaround time goals for member receipt of the card.** We issue ID cards earlier than the required timeframe of within five business days of receipt of the daily enrollment file containing the member's information. **[MS044]** Member ID card images are available upon enrollment on our secured mobile application and in our secured portal. Aetna will offer a **separate member ID card for our WVCHIP members**, ensuring accurate and easy-to-find membership in the WVCHIP program. When members call the MS department, they will hear and select the prompt in the integrated voice recording for WVCHIP. Once selected, MS representatives are notified the call is from a WVCHIP member and will access WVCHIP resources to handle the call, including information about WVCHIP providers and waived co-payments for members who enroll in a PCMH. **Figure 6.5.1-1** illustrates West Virginia member ID card as viewed front and back. Aetna will seek approval from the Department as necessary for a separate WVCHIP ID card.

Figure 6.5.1-1 Aetna Member ID Card
Aetna's member ID card offers critical member and Aetna contact information in a convenient, easy-to-read manner.

Members can request a new ID card using the self-service functions embedded in our integrated voice recording automated messaging when they call the MS hotline. Members select the appropriate option and can obtain the information from our operating system. MS representatives can validate a member's address and reconcile the demographic information via

a warm transfer to the appropriate state agency. MS representatives educate and inform members of the **multiple ways to secure the information** on a West Virginia member ID card, including the following:

- **Accessing a member ID card via our member portal**
- **Viewing and using the member ID card via Aetna's mobile app**

Our MS representatives help reissue new cards 24/7/365, and we reissue an ID card within five days of the request for the following reasons:

- The member reports a lost card
- The member has a name change
- The member requests a new PCP
- Any other reason that results in a change to the information disclosed on the member's ID card

West Virginia Aetna staff verbally communicate or send a facsimile to a primary care or specialty provider as needed for members without telephones. When a member attends a medical, behavioral health (BH), dental, or vision appointment, providers can access eligibility and benefits information including the member's ID card via the secure web portal. Members can access their member ID card at any time or during provider visits via our smartphone mobile application, as depicted in the figure above. MS representatives take every opportunity to offer tutorials, educating callers on how to use and navigate the smartphone mobile application and our secure web portal during all calls. **[MS030]**

[MS044] Describe Policies and Procedures Related to Issuing Member ID Cards within Contractually Defined Timeframes

Aetna maintains policies and procedures (P&Ps) to make certain members received their ID cards within contractually defined timeframes. Policy 4500.15 New, Existing, and Reinstated Member Information describes the process in Aetna's business application system for issuing ID cards to members within five business days of official enrollment notification, and is reviewed

annually, and updated as often as needed. **In 2019, our average turnaround time for issuing member ID cards was 3.6 days.** We mail individual ID cards to each family member enrolled with Aetna. This policy is reviewed annually or as needed due to changes requested by the Department. **[MS044]**

[MS015 – MS017, MS031] Member Handbook Distribution and Updates

Aetna maintains a strong line of communication and partnership with the Department, state agencies and community stakeholders. Our implementation team coordinates with the Department on using and adhering to required templates and timelines to develop and update our member handbook, to include all requirements outlined in the Model of Purchase Service Provider Agreement for State Fiscal Year 2020. **[MS015]** Our member handbook details the following:

- Member rights and responsibilities
- Benefits for all programs and populations served including in-and out-of-network services
- Advance directives
- G&A processes and contact information
- Important phone numbers
- How to access our website and mobile application
- Availability of no cost written translation and oral interpretation services including use of our language line that offers over 240 languages, no cost auxiliary aids and services upon request from members and how to access those services **[MS041]**
- Value-added services (VAS) and descriptions
- Descriptions of and contact information for our MS, CM, Quality Management (QM), and G&A departments
- Tagines in all the prevalent, non-English languages and large print; our taglines explain the availability of written translation and oral interpretation services including TTY/TDD and toll-free numbers for the MS department. **[MS042, MS043]**

Our handbook, available on our website, is also available in English and other prevalent languages as determined by the Department, including Spanish, Chinese, French, German, Arabic, Vietnamese, Korean, Japanese, Tagalog, Italian, Thai, Nepali, Persian, Russian, and Urdu and as requested by members. **[MS041]** We mail handbooks to members, per member

request, within in five business days. **[MS015, MS017]** We notify members at least 14 calendar days in advance of program changes, and mail updated member handbooks as requested by a member and post the electronic version to our member portal in a singular file. **[MS016]** We affirm that we review our handbook at least annually and submit updates to the Department for review and approval, summarizing all changes made during the prior handbook period, along with a 'clean' current electronic version of the handbook. If any additions or changes are needed throughout the year, we request Department approval prior to member distribution.

[MS003] Methodology for Assigning Members to a Primary Care Provider (PCP)

Aetna has local, proven performance in ensuring our members receive the care they need as soon as necessary. Delivering on our **Common Purpose**, our staff extend their reach beyond what is expected ensuring each member gets the right care quickly. We recognize our members' right to make autonomous decisions about their health care providers and if applicable, to maintain relationships with PCPs and specialists already involved in their care. Aetna's methodology for assigning members to a PCP includes member preference, claims history, proximity, and existing relationship(s) with PCPs or specialists. **[MS003]** Our enrollment and PCP assignment workflow reflects the need to maintain relationships with existing health care providers. Members have a right to and can select their PCP at any time by calling MS and making that request. MS representatives make certain each member's preferences, language needs, location of PCP office, and cultural needs, are met. If a new member does not select a PCP with

> Aetna staff make sure each West Virginia member gets the right care quickly. Results of our 2019 Child and Adult Consumer Assessment of Healthcare Providers and Systems (CAHPS) demonstrate that children get care quickly (95.92%, above the 90th percentile), secure care, tests, and treatment easily (97.95%, above the 90th percentile), and when necessary, secure care needed right away as soon as needed (98.16%, above the 90th percentile).

the Department at the time of initial enrollment, we assign a PCP, based on the member's existing PCP relationship (if known), location/proximity, claims history, language needs, and cultural needs. The system can also be utilized to assist with auto-assignment using the following criteria:

- **Members with previous, active Aetna enrollment:** If a member has previous enrollment in our internal system with an active PCP per review of our claims history, we auto-assign that PCP to the new enrollment
- **WVCHIP members:** WVCHIP members are identified on our monthly enrollment roster and will be auto-assigned a PCP accordingly. When members call, MS representatives will educate members of the benefits of having a PCMH when calling for PCP selection, including waived co-payments and integrated, holistic care, customized to serve children and youth.

Figure 6.5.1-2 illustrates how multiple processes run concurrently to make sure accurate and timely PCP assignment, reconciliation, and delivery of the member's welcome packet.

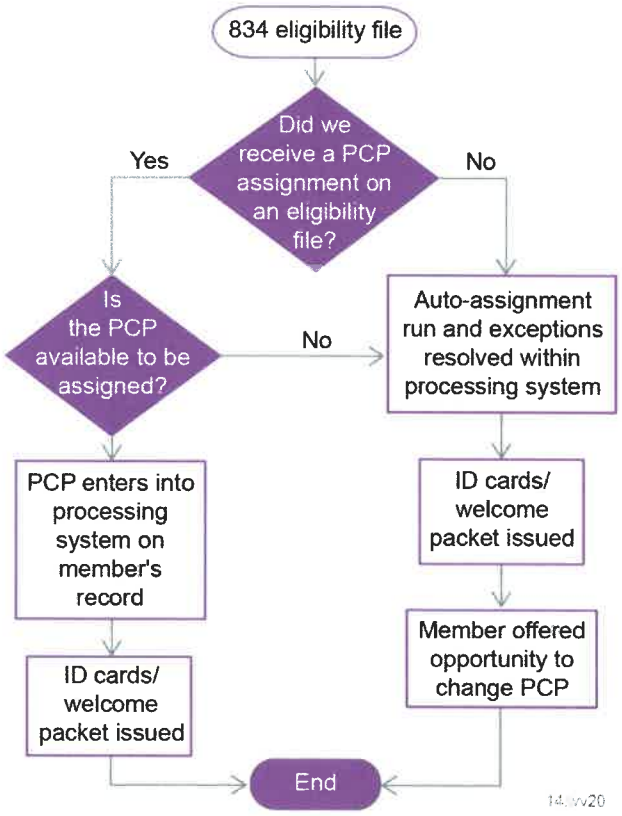

Figure 6.5.1-2: New Member Enrollment, PCP Assignment, and Welcome Packet Workflow

Aetna is equipped to effectively manage PCP assignment and distribution of the member welcome packet for our valued MHT, WVHB, and WVCHIP members.

Our members can be reassigned upon their request to a PCP that best meets their treatment needs. MS representatives are fully trained on PCP requests and the member's right to change PCPs. Representatives make sure each member's preferences are reflected in PCP choice, including language needs, cultural

needs, and location of the PCP office. All requests for PCP reassignment will be fulfilled within two days of the initial request, they are effective immediately, and the member's updated ID is issued within five days. Aetna members can also use the secure member portal on our website or their smartphone mobile application to request or make a PCP change.

[MS004] Protocols to Notify Members of PCP Assignment

Aetna uses multiple methods to notify members of their PCP assignment, and it is printed on their member ID card. PCP assignment is verbally confirmed during calls to the MS department, and this information is available via our secured web portal and secure mobile application.

[MS004] We develop protocols for notifying members of their PCP assignment based on the Model Purchase of Service Provider Agreement for State Fiscal Year 2020 required timeframes, the Department's 834 enrollment process, the unique needs of the population served, and capabilities of Aetna's management information systems for enrollment. As required, member enrollment materials are issued within five days of enrollment. For members enrolled in our WVCHIP program, we will inform members of waived co-payments for choosing a PCMH as a PCP provider in our member materials and verbally, during calls. For members who are enrolled in CM, Aetna's care manager conducts additional follow-up communication as needed with members to inform them and verify their PCP assignment and will assist in making changes as needed. Care managers identify and assist in appointment scheduling and complete follow-up calls to make sure members attend. When telephonic outreach is not successful, care managers use alternate strategies, email, text, and mobile application messaging for communicating with members. If members do not have telephones, we offer our members a no cost, Lifeline smartphone, ensuring immediate access to member information. We offer advice about how to

locate adequate smartphone service and where members can locate access to no cost internet resources, including computer access for using the secure member portal.

[MS005] Educating Members of the Right to Change PCPs

Members are notified of their rights, including the right to change PCP in our welcome packet and the member handbook. Members are also notified during interactions with any member-facing departments such as MS, CM, G&A, and other Aetna departments. When members call the MS department, representatives fully trained on member rights can easily and quickly assist members with PCP changes. Care managers can facilitate PCP changes during in-person visits by demonstrating the functionality on the Aetna smartphone application, by using the secure member portal, or by assisting the member to call the MS department. **[MS005]**

[MS033 – MS039] Aetna's Secure Member Portal and Benefit Information

In addition to the ability to call us 24/7/365, Aetna offers multiple ways for members to access their individual benefit information including via our secure member portal located on our website and Aetna's mobile application for smartphones. Members can easily navigate their personal medical records, services, and service authorization status by logging into our secure member portal. Members can call our MS line for assistance in logging onto the portal or mobile application. Each member's individual member portal contains personalized medical records, authorization status(es), temporary ID cards, and confirmation of a PCP. **[MS034, MS035, MS037, MS038]** Aetna has the capability to add cost sharing to our secure member portal and will be added for our WVCHIP members. **[MS036]** Members enrolled in CM programs such as members who are pregnant or members with substance use disorders have access to additional CM information including program-specific tools, text campaigns, and the ability to directly reach their care manager. Aetna's member portal is secure and confidential. We provide a tool to

make sure guardians have access to the member portal on a case-by-case basis when necessary. Once provision of access is determined, guardians can access comprehensive information about the care of the member they support and view electronic health record and health passport information. **[MS039]** Aetna's mobile application for smartphones offers easy and immediate access to critical member information when members need it. Members can view personalized information in the application, including the member ID card, their individualized medical record, medications, care plan, claims and authorization status(es), cost sharing information, temporary ID cards, and confirmation of their PCP.

Aetna's publicly accessible website offers a wealth of resources and educational information. It is a single, comprehensive, source of easy-to-navigate information for our members' needs. Our public website includes information and links to useful member resources including our secure member portal, covered and VAS, provider search, CM programs, important telephone numbers (e.g., MS, the BH Crisis line and the Health Information line), the member handbook and member rights, health education and prevention information and programs, a community resource library, Aetna's smoking cessation program, and member newsletters. Members can provide feedback about our website. We have a robust, responsive approach to member feedback including responses within 24 hours and taking related action to support a better member experience.

Member Rights

MS020	The Vendor should describe how they will ensure they are meeting customer use and report to the Department on customer service performance standards including, but not limited to, the following:
MS025	Turnaround time for member requests
MS032	The Vendor should describe how they will make information available for members who have Limited English Proficiency (LEP) or limited reading skills, as indicated

	per 67 Federal Regulation (FR) 41455 (https://www.govinfo.gov/content/pkg/FR-2002-06-18/pdf/02-15207.pdf).
MS040	The Vendor should describe its process to inform members that program information is available in paper form without charge upon request and available within five (5) business days.
MS041	The Vendor should describe how they will make auxiliary aids and services, as well as oral interpretation services, available in all non-English languages to all members and potential members, free of charge, including the top fifteen languages spoken in the State, which are Spanish, Chinese, French, German, Arabic, Vietnamese, Korean, Japanese, Tagalog, Italian, Thai, Nepali, Persian, Russian, and Urdu.
MS042	The Vendor should describe how they will notify members that oral interpretation services are available for any language, and that written information is available in prevalent languages and braille, and how to access those services.
MS043	The Vendor should describe how they will include taglines in all written materials in the prevalent non-English languages and large print (in a font size no smaller than eighteen [18] point) explaining the availability of written translation or oral interpretation and the toll-free and Text Telephone (TTY)/Telecommunication Device for the Deaf (TDD) telephone number of the Vendor.

The percent of adults in West Virginia who have a disability is higher than the national average. According to the Centers for Disease Control and Prevention[2], 39.2 percent of adults who live in West Virginia have some type of disability versus 25.6 percent of adults who have some type of disability in the United States. This high burden spans disability types: mobility, cognition, independent living, hearing, vision, and self-care and is correlated in West Virginia and the United States with inactivity, high blood pressure, smoking, and obesity. Aetna has proven, demonstrated, local experience—over 23 years in West Virginia—offering and promoting member rights such as access to quality-driven

Aetna's superior performance in the delivery of quality-driven, member-centric services that promote member rights and enhance West Virginians' continuity of the care they deserve is demonstrated in our External Quality Review Organization (EQRO) performance: we scored 99% in 2017 and 100% in 2015, 2016, and 2018.

[2] Centers for Disease Control and Prevention, "Disability and Health U.S. State Profile Data for West Virginia (Adults 18+ Years of Age)," Centers for Disease Control and Prevention: accessed January 2020; www.cdc.gov/ncbddd/disabilityandhealth/impacts/west-virginia.html.

care for members with disabilities. Our policies, practices, support, and community and member engagement address the health risks associated with disability and poor health and support the Department's goals for enhanced coordination of care and access to services, reduced fragmentation, and seamless continuity of care.

Our superior performance begins with strict adherence to regulations for ensuring and promoting member rights via strict compliance with State and federal regulations and the Model Purchase of Service Provider Agreement for State fiscal year 2020. We promote member rights in all we do, including every member-facing interaction and our written communication to members, providers, and stakeholders. All Aetna internal staff leverage all telephonic and email/mail/written communication, media, and in-person opportunities to educate members about their member rights. We include links to our member handbook, outlining member rights, on our Aetna website. Aetna MS hotline staff, our member advocate, care managers, and other internal staff educate callers about how to find member rights on the member website during individual calls or in-person interactions, as necessary. Aetna is and will be compliant with all requirements outlined in the detailed specifications including the following:

- Making information available in our Welcome packet, website and member handbook for members who have Limited English Proficiency (LEP) or limited reading skills **[MS032]**
- Having processes to inform members that program information is available in paper form free of charge upon request within five business days **[MS040]**
- Making auxiliary aids and oral interpretation services available free of charge for the top fifteen languages spoken in the Department (Aetna's oral interpretation services offer over 240 languages) **[MS042]**
- Notifying members how to access and the availability of oral interpretation and written translation services in prevalent languages and Braille **[MS041, MS042]**
- Ensuring processes for including taglines on all written materials in the prevalent, non-English languages, large print explaining the availability of written translation or oral interpretation and toll-free TTY/TDD telephone numbers. **[MS042, MS043]**

Aetna maintains written P&Ps formally acknowledging member rights and responsibilities and communication methods to inform members and providers of those rights and responsibilities.

Our policies include specification of rights such that each member has a right to the following:

- To receive information in accordance with standards that promote member understanding of managed care services; for example, in January 2020, one of our MS representatives made sure a member who requested the member handbook in Russian received the translated handbook in required timeframes
- To be treated with respect and consideration of their dignity and privacy
- To accessible services; Aetna makes certain our adherence to federal and state regulations that specify physical and communication accessibility and other federal standards for persons with disabilities or persons with limited English proficiency (LEP); **[MS032]** our providers are required per contract to adhere to provisions that meet the American with Disabilities Act and other federal standards; Aetna makes certain access to written translation and oral interpretation services including ASL, Braille, prevalent languages, and large print; our website and secure member portal are Web Content Accessibility Guideline compliant, which promotes standards for ensuring web content is accessible for persons with disabilities. **[MS042]**
- To choose providers from among those affiliated with the managed care organization (MCO)
- To participate in decision-making regarding their health care, including the right to refuse treatment
- To receive information on available treatment options or alternative courses of care, presented in a manner appropriate to the member's condition and with consideration for social or other supports needed to fully understand; when necessary, our member advocate offers electronic, telephonic, and in-person outreach and linkage to community and social resources to assist members in navigating managed care processes, ensuring member rights
- To request and receive medical records and to request that they be amended or corrected, in accordance with the privacy rule as set forth in 45 CFR parts 164.524 and 164.526, upon their effective dates, to the extent they apply
- To obtain prompt resolution of issues raised by the member, including complaints, grievances, or appeals and issues relating to authorization, coverage, or payment of services; **we resolve member issues quickly and effectively** – MS staff address and resolve member issues immediately on the initial call to the MS line and when necessary, document and forward all formal complaints, grievances, and appeals to the appropriate departments for timely resolution
- To offer suggestions for changes in P&Ps

Our Member Services staff resolve member issues quickly and effectively. In 2018 and 2019, we resolved nearly 100% of calls to our Member Services line during the initial call.

- To be free from any form of restraint or seclusion used as a means of coercion, discipline, convenience, or retaliation, as specified in other federal regulations on the use of restraints and seclusion, and
- To be furnished health care services as set forth in this contract

We protect and promote these rights by including taglines on all written member materials for West Virginia prevalent languages and large print, explaining the availability of written translation and oral interpretation services including TTY/TDD and toll-free numbers. We review all member materials prior to distribution for a sixth-grade reading level, and we make certain that member rights such as member privacy, accessible services, and provider choice, are included in our written policies. **[MS042, MS043]**

Our procedures make sure confidentiality of medical records is upheld and any other health and enrollment information that identifies a particular member in accordance with federal and State regulations. We make certain that all services, both clinical and non-clinical, are accessible to all members, including those with LEP or limited reading skills, with diverse cultural and ethnic backgrounds, the homeless, and individuals with physical and mental disabilities. **[MS032]** We understand the importance of member decision-making for provider and specialty services as well as provider continuity for members with special healthcare needs. We allow each member to select their

PCP from among those accepting new Medicaid members. We encourage our members and our member's parents or legally authorized representative to fully participate in decision making related to care. When necessary, our member advocate offers additional telephonic or in-person support to aid in promoting full participation.

Approximately 91% of our provider network currently have open –panels and accepts new Medicaid members.

[MS032] Information for Members with Limited English Proficiency

Aetna has over 23 years of local experience serving our valued members in West Virginia including ensuring information for members with LEP and limited reading ability can access and understand Aetna member materials. **[MS032]** We are compliant with 67 Federal Regulation (FR) 41455 and the Model Purchase of Service Provider Agreement for State fiscal year 2020. For our members with LEP or limited reading ability, having a prevalent non-English language can be a barrier to understanding benefits, accessing needed services, understanding or exercising rights, and/or fully participating in healthcare related activities. We take full responsibility to make sure our members with LEP and limited reading skills have meaningful access to all Aetna programs and services through published guidance consistent with federal guidelines. Aetna uses multiple strategies to make certain information is available for members with LEP including training MS and CM staff, our member advocate, and other health plan staff on member rights and the use of interpretation or translation services and offering written materials in prevalent languages, ensuring delivery in required timeframes. MS, CM, and other health plan staff are fully trained in understanding member rights and utilizing written translation and oral interpretation services. **[MS042]** For example, if a member calls the MS department using a prevalent non-English language, our representatives are notified that the caller is non-English-speaking and immediately engage our subcontractor for interpretation services on a three-way conference call, ensuring communication in the member's prevalent language. If a member is deaf or hard of hearing, MS and other health plan staff immediately engage with the TTY/TDD interpreter for proper communication. Aetna publishes vital member materials at a sixth-grade reading level and in prevalent languages at direction of the Department and per member request. This includes but is not limited to publication of our member handbook,

translation of a member's individual treatment plan, and if necessary, as directed by the Department or in response to West Virginia's community needs, publication of our website.

[MS040] Informing Members of Paper Copies within Timeframes

Aetna is 100% compliant with issuing paper copies within Department required timelines.

Aetna adheres to all federal and Department regulations as well as the Model Purchase of Service Provider Agreement for State Fiscal Year of 2020 requirements for informing members of their right to paper copies within required timeframes. Aetna staff follow the process written in our P&Ps to inform members that program information is available in paper form without charge upon request and available within five business days. **[MS040]** Our representatives educate members during calls to the MS department. We provide written notification of this right in our member handbook, in our welcome letter, in the written correspondence that accompanies a member ID card, and on our website.

[MS041] Auxiliary Aids and Oral Interpretation Services

Aetna uses multiple strategies to make certain auxiliary aids and services and oral interpretation services are available to our members and potential members at no cost, and we offer additional support, when needed, in the form of assistance by our member advocate. **[MS041, MS042]** Aetna subcontracts with a qualified subcontractor that offers oral interpretation and written translation services. Our subcontractor offers language access in more than 240 spoken languages and ASL, delivering high quality, accurate, professional interpretation sessions and translation results. These languages include the top fifteen non-English languages identified by the Department in this requirement and spoken in the State (i.e. Spanish, Chinese, French, German, Arabic, Vietnamese, Korean, Japanese, Tagalog, Italian, Thai, Nepali, Persian, Russian, and Urdu). **[MS041]** Our contractor has been designated as a trusted business partner

for competent language access in the healthcare industry and offer certified interpreters who apply and once hired, are tested, trained, and tested again for competency. Whenever necessary, Aetna MS and CM staff, our member advocate, or other staff can immediately access our subcontracted services based on member need. During telephonic interactions, once a member indicates that they speak a non-English, prevalent language, Aetna staff initiates a three-way conference call to our language line vendor and we make sure the caller's issues are understood, communicated, and adequately addressed. Aetna staff are fully trained on the steps to engage our oral interpretation services including use of TTY/TDD. Health plan staff assist members by arranging for interpreter or written translation services on the member's behalf, whenever it is needed. Our member advocate is responsible for ensuring members can obtain member materials in alternate formats when involved in member interactions and can provide additional support whenever a need is identified. Members can call us whenever oral interpretation services are needed, for example, at a provider appointment, and representatives assist the member in arranging for appropriate services.

[MS043] Taglines for Written Materials

Aetna adheres to federal and state regulations and the Model Purchase of Service Provider Agreement for State Fiscal Year 2020 that outline requirements supporting member rights including taglines for written materials in prevalent, non-English languages and large print explaining the availability of written translation or oral interpretation services and the toll-free TTY/TDD telephone number on all our written materials. **[MS042, MS043]** Our process for compliance to these regulations and requirements, include tagging all member materials such as our member handbook, our website, member newsletter, and CM written materials (e.g., the member's care plan), and notices of action/adverse benefit determinations.

[MS042] Notifying Members of Interpretation and Translation Services

Aetna has written P&Ps that support timely and accurate notification of interpretation and translation services, and how to access those services. Aetna notifies members of the availability and how to access oral interpretation and written translation services including ASL and Braille whenever necessary in member-facing interactions and via written publications such as our member handbook and member portal. **[MS042]** We make sure that interpreters meet members at all appointments for physical, behavioral, dental, and vision health and include written notification of accessing services via our MS department in our member handbook.

[MS020, MS025] Member Grievances and Appeals

Aetna recognizes the need for additional oversight of the quality of and access to care for our members in support of ensuring Department goals for enhanced coordination, access to care, and reduced fragmentation. We **demonstrate our superior performance promoting member rights through our member G&A system.** We include, inform, and partner with the Department and other state agencies when issues are identified and utilize our member advocate to provide the additional support necessary for members. Our member advocate is responsible for interacting with members and connecting to appropriate resources, specifically: collaborating with CM teams; providing member support related to enrollment, access, or continuity of care issues; supporting members through the grievance and appeal process; and assisting members to obtain materials in alternate formats. We make sure our contract liaison/MHT administrator monitors grievances and appeals, and implements policy level,

Aetna's superior performance in adhering to and promoting member rights is demonstrated in our 100% External Quality Review Organization (EQRO) score for 2018. This review included a detailed review of our member grievance and appeal system including policies on member complaints, grievances, and appeals, the member handbook, and notice of action, grievance, appeal, and adverse determination records.

operational, and training or program changes necessary to meet the needs of the MHT, WVHB, and WVCHIP program.

Aetna's MS department plays an important and critical role educating our members about G&A rights and procedures. We thoroughly train our MS representatives, CM team, and our member advocate about G&A policies, procedures, and Department requirements, ensuring all Aetna points of contact are opportunities to advocate for the rights of our valued members. Guardians, legally authorized representatives including any designated person such as a family member, friend, guardian, PCP, or an attorney are educated on grievance and appeal information located in our member handbook, online via our website, and by calling the MS department. Aetna's G&A system goes beyond basic requirements to foster a culture of high-quality performance throughout our operations, promoting member engagement and self-sufficiency. The specific elements of our approach discussed throughout this section describe Aetna's core processes to safeguard member rights and enhanced capabilities, demonstrating that Aetna not only fully meets the requirements of the West Virginia statutes, but exceeds and will continue to exceed the Department's expectations.

Aetna complies with all requirements and principles of the G&A system, including compliance with all Department requirements and state and federal laws and regulations referenced therein, including, but not limited to, Model Purchase of Service Provider Agreement for State Fiscal Year 2020, West Virginia Statutes 33-25A-12 and 42 C.F.R. §§438 Subpart F. Aetna retains responsibility for all G&A processing, investigations, and resolutions/decisions except for dental services, which are delegated to our dental subcontractor and monitored according to requirements for delegation oversight.

Aetna maintains a comprehensive G&A system, including State Fair Hearings, supported by our **NCQA commendable rating. We have established G&A processes that are further supported with Medicaid best practices acquired through our Medicaid experiences in 16 states.** We leverage our experience and best practices to make certain we meet and exceed the requirements in West Virginia.

Filing and Resolving a Grievance or Appeal

Members, their representatives, or the legal representatives of a member's estate may file a grievance or appeal in person, by telephone, fax, voicemail, email, through the website, or in writing. We assist members in filing grievances and/or appeals, if requested, or if we identify a need. When necessary, our member advocate is assigned to provide additional support for any steps involved in the filing or resolution of a grievance or appeal. **Figure 6.5.1-3** illustrates a high-level workflow of our member grievance process and **Figure 6.5.1-4** illustrates a high-level workflow of our member appeal process.

Continuous Quality Improvement in Alignment with NCQA Standards

Aetna makes certain continuous quality improvement occurs through accountable monitoring and follow-up processes that are in alignment with NCQA standards. In 2019, our Service Improvement Committee identified a complaint trend regarding billing members. We developed a desktop procedure and identified a system for tracking these complaints. Our MS representatives made outbound calls to providers for each identified complaint, explaining proper Medicaid billing. Resolved complaints were sent to our G&A department for trending. Our Provider Relations team made outbound calls to providers with high rates of unnecessarily billing members for further technical assistance.

Member assistance may include auxiliary aids and services such as interpretation services and numbers that have adequate TTY/TDD and interpreter capability. **[MS041]**

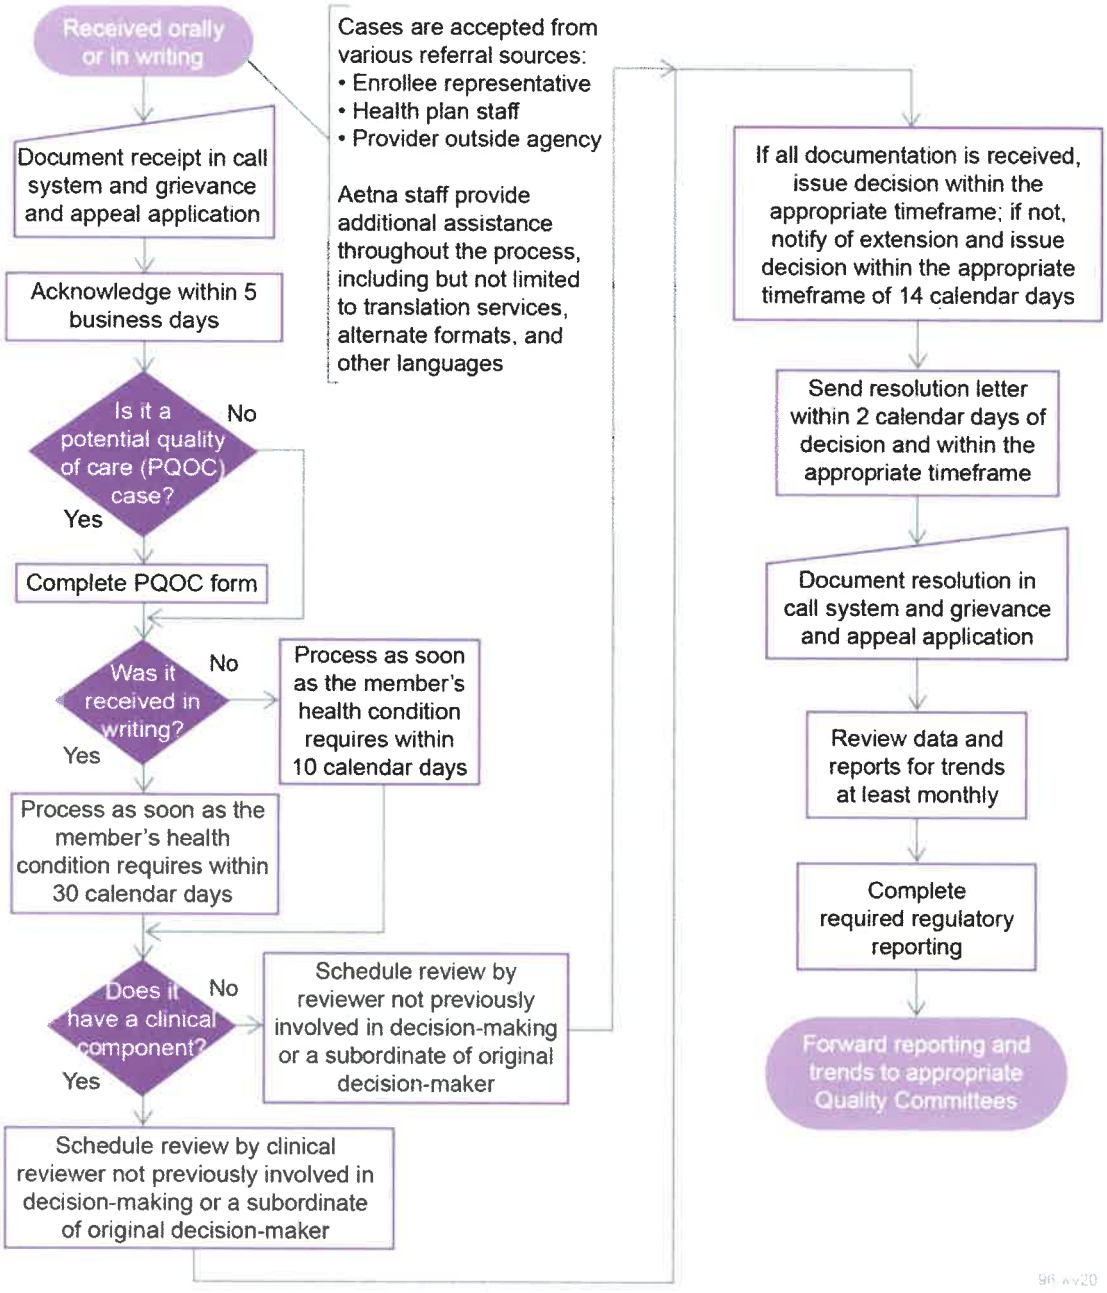

Figure 6.5.1-3: Aetna High-Level Grievance Process

Aetna's detailed, compliant member grievance process promotes and helps to ensure the rights of our valued members.

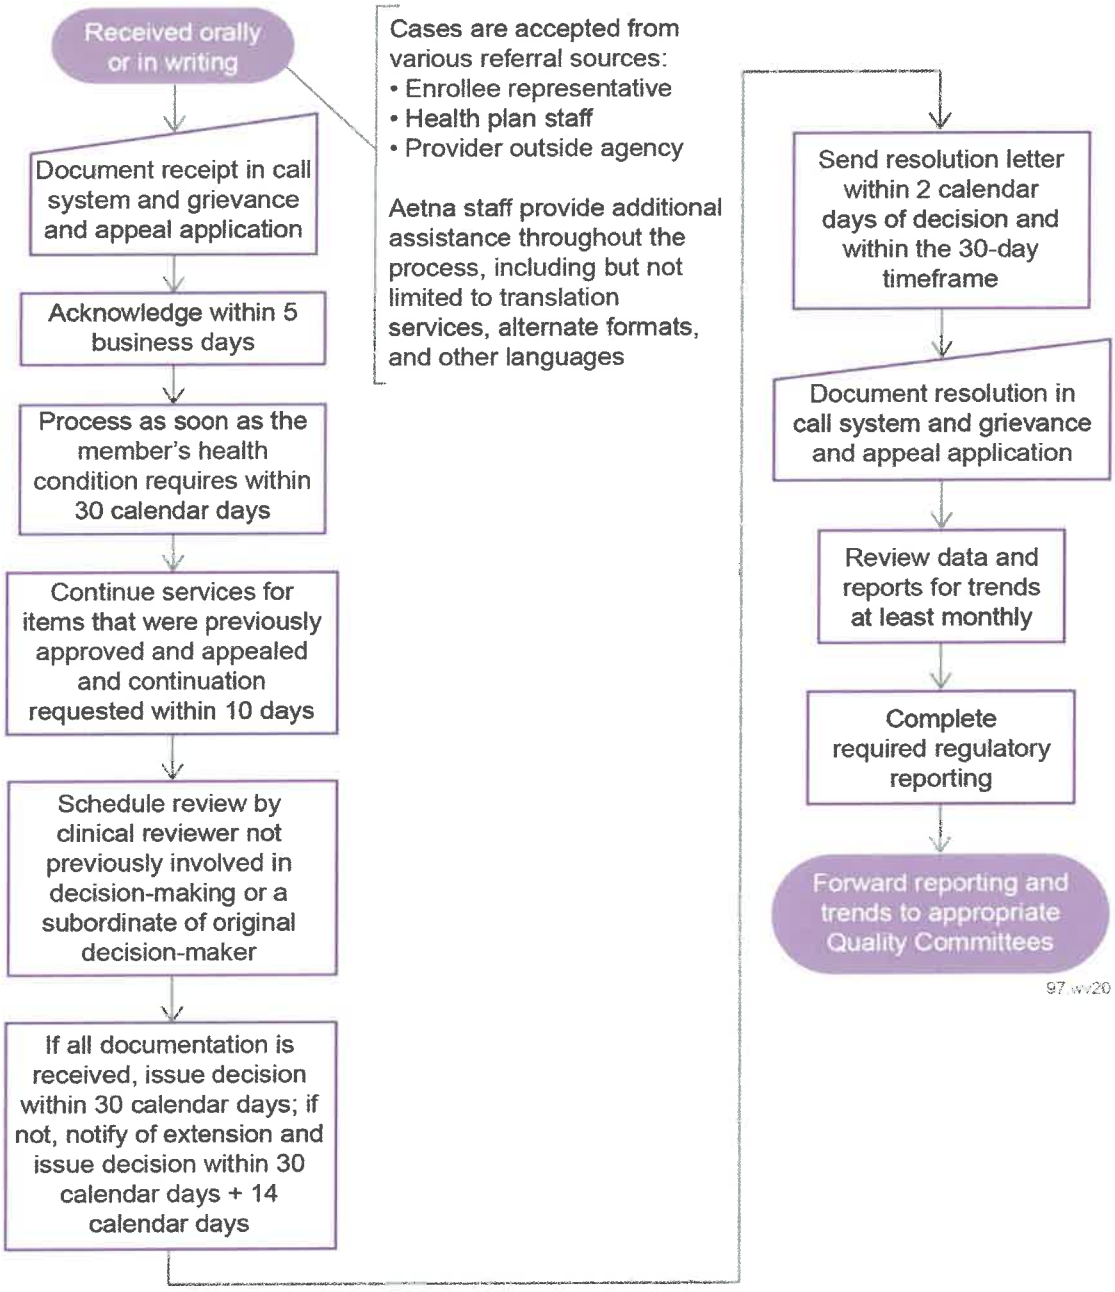

Figure 6.5.1-4: Aetna High-Level Appeal Process
Aetna's detailed, compliant member appeal process promotes and helps to ensure the rights of our valued members.

Our published member communication materials inform members how to designate a representative to act on the member's behalf at any time during the G&A process. To verify the

authority of designated representatives, Aetna requires written authorization signed by the member unless the person is a legally designated representative (e.g., parent, guardian, and conservator). Members or their authorized representative have the right to examine the member's case file, including medical records and any other documents and records considered during the grievance and appeal process, and may request copies of all documents at no cost. They may also present supporting documentation or evidence by phone, in person, or in writing on or before the date of the grievance or appeal meeting date.

To present information, the member or their authorized representative contacts the G&A department. The parties to the grievance or appeal include the health plan, the member, and their representative or the representative of a deceased member's estate.

[MS020, MS025] Data, Reporting, and Trending

Aetna's G&A records are housed in our inclusive system, which includes all correspondence, letters created, and staff actions taken on the case. MS staff receive updates on G&A trends via email and during staff meetings, including any policy or program changes supporting those trends. For example, representatives were recently trained on the updated procedures for capturing complaint and dissatisfaction information, ensuring full understanding of each member's complaint or issue. MS staff use this information to educate members as needed. Our tracking system allows us to capture and report on all information, as outlined in 42 CFR 438.416. Our system contains a standard suite of reports and queries by case type of complaint, grievance, appeal, or State Fair Hearing that we utilize to track cases throughout the process. To support the accuracy and integrity of our G&A data and reporting, Aetna has programmed its G&A

In 2019, Aetna helped to ensure appropriate decision-making during member appeals as demonstrated by having three State Fair Hearings, of which two included decisions upheld by the Department.

application to automatically calculate the due date for completion of the case, to avoid data entry or staff errors in calculating due dates. The application uses this due date when calculating the actual turnaround time on completed cases and, upon resolution, automatically marks the case as timely or untimely.

The G&A manager utilizes standard queries and reports within the application to monitor cases in real time to make certain of timely and accurate resolutions, and to manage staff workloads, including reassignment of cases during unscheduled absences such as staff illness. This includes monitoring and reporting on member request turnaround times (TAT). **Our 2019 TAT for member appeals was nearly 99 percent timely. [MS020, MS025]** If we see any evidence of an issue requiring escalation, we act on it immediately. For example, the aging report displays all cases in real time and gives their age from received date and time to date and time of the report run in calendar days. All follow-up actions such as member phone calls and the overall age of the case are color-coded in each staff person's work queue. Cases that are past due display in red, those due in 48 hours display in blue, and those due in greater than 48 hours display in black. This visual display along with traditional reports allows easy real-time identification of cases and work to be completed.

All calls received from members or their authorized representatives are tracked in the main operating system. Within that system is a call tracking module that automatically assigns the date of documentation and allows for the MS representative to document the full content of the call. Regardless of whether the MS representative can resolve the member's or their authorized representative's issue, call tracking is assigned to the G&A department. The G&A department reviews the call work queue a minimum of three times per day to begin processing any

grievances or appeals received as quickly as possible. Any case that was resolved by the MS department is documented and closed for tracking and trending. Any case that was not resolved by MS is documented in the G&A application and the formal process begins. Upon resolution of the grievance or appeal case, the call-tracking system is updated with basic information such as date of decision and the decision of 'overturn,' 'upheld', or 'partial uphold.' This information allows MS staff to be able to answer status calls in the event a member calls to check on the status of their case. It also maintains compliance with Healthcare Insurance Portability and Accountability Act regulations of communicating the minimum amount necessary for representatives to do their job. If the member has detailed questions the call will be transferred to the G&A staff who is processing the case.

Aetna is committed to our partnership with the Department on behalf of any new populations served including WVCHIP and will invite Department staff to participate on our Service Improvement Committee (SIC), ensuring communication at state and policy levels about grievance and appeal trends and related operational or program changes.

Ensuring High-Quality Services

We recently had a member submit an appeal for her child who had complex health issues. We engaged care team participants including the head of pediatric cardiology services at the preferred provider, the care manager, and other involved staff to participate in multiple meetings and reviewed what was in the best interests of the child. After several discussions, we determined care at the mother's preferred provider was best for the member and authorized services, ensuring quality-driven care.

Member Assessment

MS002	The Vendor should describe how they will leverage information technology (IT) solutions to improve access to member information.
MS006	The Vendor should describe its process for conducting initial and ongoing assessments appropriate for members' circumstances and needs including, but not limited to, the following:
MS007	Methods utilized to complete assessments, and variances by risk level

MS008	Timeline to complete assessments, and variances by risk level
MS009	Identification of the trigger(s) for completion of a comprehensive assessment
MS010	How assessments will be used to develop and update treatment plans and confirm the risk stratification level for each member
MS011	How data from a member's Primary Care Provider (PCP) will be used to prevent duplication of assessment efforts and assist with identification of priorities for the member
MS012	How a member who cannot be reached or who refuse assessments will be handled by the Vendor, including multiple contacts if initial contacts are unsuccessful
MS013	How assessment data will be stored and made available to members of the care team in order to coordinate care
MS014	How assessment data will be shared with a member's other payer(s), as applicable, in order to prevent duplication of efforts

Aetna offers excellence in our care management infrastructure through localized programs delivered by West Virginians as part of our regionalized **Care Connections** program and teams. Our Care Connections teams include robust staff of experts and approaches that provide the right amount and kind of support to members who need it most.[3] We promote self- and family-sufficiency, recovery, and resiliency using person-centered CM approaches that allow for comprehensive assessment of individual members. Our Care Connections framework is fully integrated and includes evidence-based, comprehensive assessments of members' physical, mental/behavioral, social, and family needs that drive effective care and treatment planning. With West Virginia's high incidence of opioid misuse, chronic diseases, and related social needs, we make certain to include social determinants of health (SDOH) such as food insecurity or lack of transportation as part of our treatment planning process, assuring access to whole person care. We have an established trauma-informed care process which promotes member

[3] We refer to our care management program and teams/staff for the remainder of the Member Services section as the Care Connections program and Care Connections staff. This includes but is not limited to the following staff: clinical care managers who are licensed nurses, counselors, or social workers; care management coordinators; care management associates; and where necessary, our supervisors and medical directors.

achievement of optimal health outcomes. Our process for assuring completion of comprehensive assessments appropriate for each member's individual circumstances and needs includes tailoring our methods and timelines for completing comprehensive assessments to the needs of West Virginians. This includes utilizing stratification tools that support all levels of need and include triggers and information-technology solutions for comprehensive assessments, and utilizing integrated, person-centered assessments and treatment plans stored and shared in electronic formats easily accessible in near real-time by the care team, members, providers, and when necessary, other payers for timely, seamless coordination of care.

[MS006] Conducting Initial and Ongoing Assessments

Aetna's process for conducting initial and ongoing assessments appropriate for each member's individual circumstances and needs includes the following:

- Staffing our Care Connections department with employees who offer a robust variety of experience, education, and skill across health care environments including medical, nursing, BH, substance-use disorder, lived experience, specialty care, and recovery and resiliency
- Offering a comprehensive training program customized to the unique needs of West Virginians and informed by our national expertise on trauma-informed care, recovery and resiliency, SDOH, person- and family-centered approaches, cultural sensitivity, and use of evidence-based assessments
- Supporting our **Care Connections** department with a **System of Care (SOC)** approach that includes health plan staff dedicated to address and remove barriers in the larger Medicaid system of care
- Timely screening and stratification into CM tiers that support members' unique needs including timely assignment of a dedicated Care Connections staff for members with complex needs
- Completion of comprehensive, evidence-based, customized assessments that occur within 30 days of initial screening and drive quality-drive treatment planning **[MS008]**
- Completion of additional comprehensive assessments at least annually and any time a significant life change occurs or a member's needs change, which includes adding members in new or additional Care Connections programs as indicated **[MS006]**

[MS007, MS008] Methods and Timelines to Complete Assessments and Variances by Risk Level

As the first step in completing assessments that occur within 30 days of initial screening **[MS008]**, we make sure that we hire and staff our **Care Connections** department with employees who offer the experience, education, and skill necessary to engage and guide our members toward attainment of a meaningful quality of life, optimal health, and overall wellness. **[MS007]** Our Care Connections teams are regionally located in West Virginia communities and include CM associates and CM coordinators, who support intake, screening, and care coordination. Care Connections teams also include clinical care managers—registered nurses and licensed clinical social workers and counselors—who have extensive experience and training in conducting assessments, facilitating integrated care planning, utilizing clinical models, navigating the Medicaid and WVCHIP systems, and conducting ongoing care coordination. Our Care Connections teams are guided by medical directors licensed in West Virginia—local, health care experts—who understand the resources needed and effective strategies that support stability, build on members' capabilities, and help members achieve their life goals, in collaboration with provider, stakeholder, and community partners.

Our existing Care Connections teams include specialized staff who live and work in local, West Virginia communities and possess the expertise and education to address the unique circumstances of our members. **[MS007]** Care Connections teams are **locally based in each of West Virginia's regions** and include supervisors, clinical care managers, CM coordinators, CM associates, substance use disorder (SUD) specialists, obstetric specialists,—experts in prenatal and maternal care, utilization management staff, supervisors, and concurrent review clinicians. Our team offers an array of clinical experience in **pediatrics, BH, oncology/hematology,**

neurology, nephrology, ophthalmology, cardiology, surgery, and trauma care. Given the high prevalence of substance use in West Virginia and the negative impact substance use has on health, we employ **SUD specialists**—registered nurses, licensed social workers, and licensed counselors—who offer expertise on regional resources and referral processes related to substance use and SUDs. These specialists are responsible for assessment and treatment planning as well as developing a proactive course of action that removes barriers and enhances overall wellness. Our department also employs one **special needs representative and one peer support specialist,** who have lived experience in SUDs, trauma, and supporting families. Our peer support specialist primarily offers telephonic and in-person services in our central and western regions but as necessary, is available statewide to provide support to our members.

Given the high prevalence of SUDs as a contributing factor to trauma and poor health, our peer support specialist connects with members offering an empathetic bridge to member engagement in our Care Connections program. Our special needs representative and peer support specialist receive specialized training and participate, when requested by members, in the assessment and treatment planning process, offering critical perspective on both and linking members to community resources.

Aetna's co-located relationships foster seamless access to care and enhanced coordination. Our teams are co-located with providers in the following regions:

Northern: Chestnut Ridge, Weirton Hospital, Wheeling Hospital, and West Virginia University Ruby Memorial

Central: CAMC General Hospital, Women and Children's Hospital, Memorial Hospital, and OB GYN Center, Dr. Ammar Shammaa/Women's Care Clinic, St. Francis Hospital, and Thomas Memorial Hospital

Western: Camden Clark, Dr. James Bailes/Cabell Huntington Pediatrics, Edwards Comprehensive Cancer Center, Lily's Place, and Marshall Health

Southern: Beckly Appalachian Regional Hospital, Dr. Ammar Shammaa/Logan West Virginia, Greenbrier Valley Medical Center Mercer County, Pavilion, and Williamson Health and Wellness Center

Where community needs indicate, we partner with the Department and collaborate with providers to identify and implement staffing solutions that meet the needs of West Virginia communities. We have specialized Care Connections programs for pregnancy, teen pregnancy, at-risk youth, children with special needs, and chronic conditions such as diabetes, asthma, and obesity. Aetna has well-established, locally based Care Connections teams in each region of West Virginia that are experts in regional health care needs and available services. This includes **staff who are co-located at provider offices in the northern, central, western, and southern regions, offering seamless access to care and enhanced coordination of care.** **[MS007]** Aetna also collaborates with community health workers (CHWs), who are local to West Virginia neighborhoods that link members to community resources. When necessary, when the CHW is working with someone and their circumstances change, CHWs can refer to Aetna's supportive or intensive CM services. For example, CHWs at **Williamson Health Wellness Center** in Mingo County engage and educate members who are newly diagnosed with chronic diseases such as diabetes into our intensive, disease-specific CM programs.

As the next step in completing assessments, we conduct comprehensive initial and ongoing training. **[MS007]** Upon hire, staff are trained on a variety of content areas, processes, and approaches through live training sessions and online modules. Our *Integrated Care Management Basics for Care Managers* manual is provided to new employees and reviewed during the initial training phase and includes topics such as the role of a care

Aetna collaborated with Partners in Health to provide critical training and an emergency department (ED) diversion program for providers who offer SUD services. We sponsored $30,000 to Partners in Health that supports training in medication-assisted treatment and supports development of a program for ED diversion, connecting members to the right level of provider care, support, and resources in the local community.

coordinator and the interdisciplinary care team; assuring appropriate care transitions and discharge planning; assessing physical, social, and behavioral risks and needs using evidence-based tools; recovery and resiliency; SDOH; person- and family-centered approaches; cultural sensitivity; providing member education on complex conditions and wellness programs; requirements for frequent contact by program; developing and updating treatment plans; community resources and referrals; P&Ps; and documentation standards. Clinical training topics include but are not limited to trauma-informed care; motivational interviewing; Mental Health First Aid (MHFA); cultural sensitivity; gaps in care; assessment and treatment of SUDs; BH services; SDOH; addressing obesity in individuals with mental illness; national diabetes prevention program; member rights; utilization management clinical guidelines and medical necessity; confidentiality; service excellence; and information systems training as it relates to the documentation, storage, and sharing of screenings; assessments; and treatment plans with members of the care team and in our electronic CM system. Staff receive ongoing monthly and quarterly training through online modules and are encouraged to attend external conferences as required for licensure.

We also offer support to our Care Connections staff, who operate within the context of our **SOC model**. Our SOC model is an Aetna approach to organizing and staffing our local health plans with administrators whose responsibility is to collaborate with stakeholders and providers on best practices for reducing the inequities and barriers present in our health care delivery system that impact access to quality-driven care. This includes having designated health plan administrators to focus specifically on specialty areas, such as adult services, children's services, and recovery and resiliency approaches. Our Care Connections staff are supported by

our existing West Virginia SOC staff who collaborate with the Care Connections department on a system level. Our SOC is defined as a team of specialty administrators whose primary goal is to reduce barriers, improve access, and identify and solve for any system process needs, supporting West Virginia's goals to enhance care coordination and reduce fragmentation. The SOC administrators in West Virginia will engage and participate in cross-sector collaboration to address community conditions where our members, providers, and community stakeholders work and live. By employing SOC administrators, Aetna health plans take a full view of the challenges associated with delivering high-quality care, necessitating cross-sector collaboration, and communicating with and identifying solutions with other Aetna internal departments including Care Connections.

[MS009] Screening, Stratification, Assessments, and ID of Triggers for Completion of a Comprehensive Assessment

Aetna has a detailed, proven process for screening, stratification, and identifying triggers, or items that prompt us to complete comprehensive assessments. Our process includes facilitating timely screening based on the unique needs of West Virginians that drives further assessment and risk stratification, allowing for consistency in matching each member to the right level of support and programming based on their unique needs. This includes specialized processes for identification of CM for members in specialty populations including pregnancy/maternal, pregnancy with SUDs, chronic conditions, members with disabilities, specialized pediatric and/or adolescent programs for WVCHIP members, members with complex or serious medical conditions, and children with special health care needs.

Our initial screening and engagement activities are designed to understand each unique member in the context of their lives and determine appropriate programming. Once a member is

identified as enrolled with Aetna, we initiate our automated outbound screening process that includes a telephonic HRQ. The HRQ is an automated survey that allows members to respond to brief questions about factors that impact their access to care or engagement in care using telephone prompts. The outbound system continues member outreach if the HRQ is not completed in the member's first 90 days. The HRQ is available in English and Spanish and can also be completed in-person, via printed, web-based forms, and if necessary, in alternate formats such as Braille. To maximize the number of members completing the initial screening process, we use multiple telephonic and written engagement strategies. We make five attempts to contact the member or guardian by phone, each occurring on different days and times to improve the likelihood of contact. Members can also complete the HRQ via the member portal or on the smartphone mobile application. **[MS006]**

If a member or guardian identifies a positive screen during our automated process, they are immediately warm transferred to a CM associate who completes a more detailed, health questionnaire which includes but is not limited to the outreach questionnaire (ORQ). Once screened, members are stratified into one of three levels of CM based on the complexity of need. The three levels of CM include the following: Tier 1, population health care coordination; Tier 2, supportive CM; and Tier 3, intensive CM. Members identified as needing supportive or intensive CM are assigned a dedicated care manager. Members identified for the population health level of intervention can access a CM associate whenever needed for ongoing, continuous support. **[MS007]**

Screenings, questionnaires, and assessments are completed based on each member's individual circumstances and the complexity of their unique needs. Aetna offers a wide range of

tools and evidence-based, comprehensive assessments that can be utilized depending on variances in member risk levels. For example, a pregnant member who uses substances may present with risk factors such as exposure to trauma or mental illness. Care managers are fully trained on utilizing all Aetna assessments and facilitate completion of the appropriate assessments based on the member's circumstances; in this case, assessments for substance use and trauma may be completed for this member. Aetna assigns dedicated clinical care managers based on individual member needs and condition(s). If a member is diagnosed with a chronic condition and is stratified in Tier 3, intensive CM, that member is assigned to a specialized Care Connections program and is assigned a clinical care manager with the appropriate education, experience, and training for that condition. For example, a member diagnosed with diabetes is assigned a care manager who is a registered clinician with nursing expertise and participates in Aetna's Diabetes Management program, which provides support for understanding the health risks of diabetes and the benefits of adhering to blood glucose testing and preventive activities.

Clinical care managers complete initial assessments within 30 days of enrollment based on variances in risk level using various methods, including in-person visits, reviewing Aetna's electronic CM documentation system for a member's history and previous care, and gathering assessment and intervention information from providers and involved parties (e.g., family or caregivers). **[MS007]** Clinical care managers complete an initial, in-person visit and if necessary, additional in-person visits or follow-up telephone calls to complete the initial assessment. Care managers meet with members in their preferred locations, dates, and times. If the member is a child, care managers include parents and/or legal guardians to schedule

assessments and gather assessment information. Prior to completing the initial assessment, care managers review Aetna's electronic CM system, reviewing any documentation for previous care or member interaction with other departments, such as MS. Care managers secure signed releases of information from members for coordination of care with existing and previous providers. For example, if a member has an existing relationship with a specialist for hypertension, care managers contact the specialist and gather assessment and intervention information. That information is documented and added to Aetna's electronic CM system for seamless continuity of care. Care managers complete reassessments using the methods identified herein any time there is a significant change in a member's circumstances, as often as necessary, and at minimum, annually. For example, if a WVCHIP member is newly diagnosed with autism, the care coordinator reaches out to the member and family to reassess the member's clinical status, gathers information from parents and providers, and provides support and education to the parents.

Aetna completes risk stratification initially after assessments are completed, and on a monthly basis, assuring members are aligned with appropriate programs and services customized to their individual needs. Our proprietary and evidence-based electronic risk stratification platform is a tool using analytic methods honed for more than 10 years. Our electronic risk stratification platform contributes to member stratification using internally developed algorithms based on population data and clinical and informatics expertise. It includes census tract, ZIP code data, and SDOH at the population health level in its predictive modeling. Our electronic risk stratification platform, in conjunction with predictive modeling risk scores, emergency room (ER) risk scores, and inpatient risk scores, determine each member's risk level. This stratification,

combined with Aetna screenings, questionnaires, and assessments, concurrent review information from inpatient or residential stays, and other medical and pharmacy utilization data, are combined to create an overall score that aligns members to the appropriate intensity and tiered Care Connections program. Our electronic risk stratification platform's algorithm communicates with the electronic CM documentation system, notifying care managers immediately when a member's risk level changes, triggering further assessment or reassessment.

We identify triggers or items that prompt us toward comprehensive assessments, which support clinical care managers to complete additional, comprehensive assessments through our screening tools and questionnaires and through our monthly risk stratification. If a member identifies a positive screen on any screening or questionnaire, care managers are notified to perform additional, comprehensive assessments appropriate to the member or family's needs. Aetna utilizes a variety of evidence-based, comprehensive assessments for the assessment of mental/BH conditions, trauma, chronic conditions such as hypertension and asthma, and specialized circumstances such as assessments appropriate for children involved in the juvenile justice system. **[MS009]**

[MS011] Identifying Priorities and Preventing Duplication of Assessment Efforts Using PCP Data

Aetna's Care Connections staff outreach to our members' PCPs to identify priorities and prevent duplication of assessment efforts. For members enrolled in supportive or intensive CM programs, Care Connections staff contact members' current and former PCPs to gather assessment and treatment information prior to completing additional, comprehensive assessments. This information is incorporated into Aetna's electronic CM documentation

system. Assessment information is utilized to identify priorities and prevent duplication. Aetna also uses claims history and Healthcare Effectiveness Data and Information Set (HEDIS) data to prevent duplication. For example, if a member's claims history shows the member had a well-child visit and related immunization, that information is loaded into our electronic CM system. Aetna's electronic CM system includes Admission, Discharge, and Transfer (ADT) data from the West Virginia Health Information Network (WVHIN). Care Connections staff have access to view ADT data in the WVHIN prior to completing additional, comprehensive assessments. Aetna's in-network providers can view members' claims history in our secure provider portal. The claims history offers information on member assessments and interventions. **[MS011]**

[MS012] Management of Assessment for Difficult-to-Reach Members or Members who Refuse Assessments

Aetna uses multiple strategies to engage members who are difficult to reach or who refuse assessments, including making multiple, telephonic, and in-person outreach attempts and collaborating with our co-located Care Connections staff, CVS Health retail pharmacies, and stakeholder organizations to locate members. **[MS012]** Aetna has written policies that enforce and support completing multiple attempts to locate difficult-to-reach members. Care Connections staff initiate contact via the telephone at different times in the day to increase the likelihood of reaching a member. Care Connections staff engage our co-located staff, and local CHWs and/or schools, if applicable, when telephonic and in-person attempts are not successful.

The Aetna Medicaid organization has initiated innovative approaches with our CVS Health partner. In partnership with the Department, we will leverage this expertise in West Virginia to improve member engagement for difficult-to-reach members. Aetna Care Connections staff can access retail pharmacy contact information for our members through our **Engagement**

Dashboard. By integrating functional area data, we can increase member engagement opportunities with members who are CVS Health retail pharmacy customers. This integration supports our ability to outreach difficult-to-reach members or members who may benefit from Care Connections services. Our Engagement Dashboard provides member contact data from CVS Health retail pharmacies for Medicaid Care Connections staff to improve our chances of contacting unable-to-reach members. If a Care Connections staff successfully reaches a member, the contact information is added to our electronic CM system for future use. Additionally, we are evaluating opportunities for **In-Store Engagement Conversations,** which support the Department's goal for enhancing access to care and can improve our reach rate for difficult-to-reach members or members who refuse assessments. In-Store Engagement Conversations are a CVS Health retail pharmacy collaboration in which Aetna places a digital alert in the CVS Health system to alert the CVS Pharmacy staff that we are looking to engage a difficult-to-reach member. We improve engagement in CM by leveraging CVS Health Pharmacy in-person interactions and physical takeaway card to educate members on Aetna CM programs. The CVS Pharmacy staff documents interaction notes and the best day/time for the person to be reached which is sent back to the Aetna clinical documentation system. Clinical staff in the Care Connections department can use this information to complete outreach. Both CVS Health opportunities, in-store engagement conversations, and the Engagement Dashboard, improve our opportunity for clinical engagement and outreach to members.

Members can choose to opt out of programs including Care Connections, but we offer multiple avenues for opting in at later dates and can engage local CHWs to assist in connecting with members who may benefit from Care Connections services. The option to opt out can occur

during screening and is described in the welcome letter. During conversations with members and in our letters, we provide the toll-free contact number for our MS department and the Care Connections team for members who have opted out should they later decide to engage in services. Members who have opted out of our Care Connections program still receive educational newsletters twice per year and new member packets. Specialized mailings for pregnant women, wellness reminder mailings, and community outreach events are also available for members who have opted out of Care Connections. If a member who is assigned to a Care Connections program begins to demonstrate a pattern of disengagement from services, for example, missing multiple appointments or not attending their treatment planning meeting, we complete outbound calls to engage, listen, and discuss the importance of appointment attendance. We listen carefully, offering solutions should the member report barriers to attendance. MS representatives are trained on the benefits of Care Connections programs and capitalize on opportunities to educate our members during calls to the MS department. Whenever possible, representatives offer education and warm transfers to the Care Connections department for program enrollment and immediate scheduling of comprehensive assessments

Given the importance of care coordination and engaging members in appropriate care. Aetna utilizes population health strategies in alignment with **NCQA Population Health Management** standards that support engaging difficult-to-reach members and members who refuse or opt out but may benefit from services. This includes collaborating with local based CHWs in West Virginia communities who can engage members, identify risk, educate members about the benefits of Care Connections programs, and when necessary, offer a referral to immediately

enroll members in Care Connections programs. Additionally, Aetna has established an initial program launching in spring of 2020 with **Unite Us**, a program that offers technology to monitor and track completion of, community-based referrals. We have agreements with several CBOs that offer social services and support in local, West Virginia neighborhoods, addressing needs such as assistance with food, housing, and transportation. Staff who work at the CBOs will refer members using the Unite Us platform to identify the closest, viable resources to meet each person's needs. Once the person needing assistance has received assistance, the CBO staff will document the referral and that the referral was closed, creating a closed-loop tracking system that supports Aetna's ability to help our members achieve healthy outcomes.

[MS010] How Assessments are Used to Develop and Update Treatment Plans and Confirm Risk Stratification

Both initial and ongoing assessments guide treatment plan development and help identify each member's individual needs. Aetna's comprehensive assessments allow care managers to capture needs, preferences, barriers to health care, and SDOHs that impact access to care (e.g., lack of available transportation or housing instability), and detail about specific health care issues including chronic

Aetna uses assessments and reassessments to update and reprioritize treatment plan goals. For example, Sherry's (not her real name) treatment plan goal is learning ways to manage her condition after her stroke one step at a time. It is ranked as a high priority and is identified as the first goal. The barrier identified includes Sherry's lack of motivation. The interventions address the goal and barriers and include setting up BH counseling and for her clinical care manager to assist in identifying coping skills for depression and to send her new assessment information to her provider. Sherry's second treatment plan goal is to find community resources to meet her needs. It is ranked as a medium priority. The barrier is Sherry's finances and her functional impairment. The interventions address the goal and barriers and note that her clinical care manager will mail information to the transportation vendor for registration in the program and to enroll Sherry in Aetna's adult walking program, a value-added service. The treatment plan includes dates for the next treatment team meeting as well as target dates for goal achievement.

disease and mental health. Care managers, fully trained in cultural sensitivity, trauma-informed care, motivational interviewing, and MHFA, facilitate and guide information gathering during assessments that drive individualized treatment goals and action steps. Goals are specific, measurable, and time-bound, and include rankings to determine priorities. During treatment planning meetings and in collaboration with the member, providers, and other care team staff, the clinical care manager facilitates discussions based on assessment information to develop treatment plan interventions. Care managers, who are responsible for facilitating the intervention, document intervention timeframes for completion. Ongoing assessments can be utilized in the same way as initial assessments, offering opportunity to document and celebrate accomplished goals as well as update barriers to goal achievement and solutions to address barriers. If a member's health care or social needs change or a member demonstrates successful behaviors in self-managing their diabetes, care managers can facilitate discussion and reprioritizing goals based on the new assessment information. Assessment information confirms risk stratification and aligns members with the appropriate Care Connections program or other services appropriate to their needs. For example, this same member diagnosed with diabetes may have been enrolled in Tier 3, intensive CM, but after success in achieving treatment plan goals, they may be more appropriate for Tier 2, supportive CM. **[MS010]**

[MS013] Storing and Sharing Assessment Data with the Care Team

Aetna stores and shares assessment data, treatment plans, and other critical member information via secure processes using our electronic CM platform. Members, providers, stakeholders, and other involved care team parties have timely access to assessment and treatment plan information, assuring coordination of care. Our electronic CM platform currently includes ADT data from the existing WVHIN. We are continuing efforts for full integration of the

WVHIN into our platform. Integration of data systems offers timely sharing of information across multiple stakeholders, contributing to seamless continuity of care. For example, if a pregnant member uses the ER at a local hospital, care managers have read access to that information in our electronic CM platform via the WVHIN data feed. Clinical care managers can reach out to members, providers, and the treatment team to make certain timely reassessment and coordination of care and needs. **[MS013]**

[MS014] Sharing Assessment Data with Other Payers

Aetna has written policies that support transition of care for members including sharing assessment data with other payers, after securing member consent, to prevent duplication of assessment efforts. Our policies have protections in place to prevent data breaches and allow for the sharing of information. Care Connections staff must identify and confirm the providers and organizations supporting and funding all services for each member, as part of seamless transition of care. This includes but is not limited to other payers, BH payers, waiver programs, out-of-plan services, county and legal programs, and other agencies. Care Connections staff facilitate the transition of medical records including assessments, when applicable, initiate any service authorizations required for services, send service authorization letters as appropriate to the relevant providers, and initiate letters of agreement for non-participating providers, referencing those letters with waiver programs or out-of-plan services to help to ensure effective management of payer sources. **[MS014]**

[MS002] Leveraging Information Technology Solutions to Improve Access to Member Information

Aetna has demonstrated experience leveraging information technology (IT) solutions to improve access to member Information including integrating the Department's enrollment data, Aetna's

claim data, data from WVHIN, and West Virginia's electronic platform for our Specialized Managed Care Children and Youth program with our proprietary, evidence-based stratification tool. Our electronic CM platform currently includes ADT data from the WVHIN, and we continue efforts toward full integration which will allow us to readily identify members who may be eligible for enrollment into Care Connections and in need of a comprehensive assessment. Our integration extends its reach to members, providers, and stakeholders through use of our interactive voice recording when calling the MS department, BH Crisis line, or Health Information line, and the use of our secure member and provider portals and our smartphone mobile application. **[MS002]** Our CVS Health **engagement dashboard,** as described previously, interfaces with Aetna and provides member contact data from CVS Health retail pharmacies for Medicaid Care Connections staff to increase reach rate of unable-to-reach members. If a Care Connections staff successfully reaches a member, the demographic contact information is added to our electronic CM system for future use.

Cultural Competency

MS048 The Vendor should describe how they will foster cultural competency among staff.

Cultural competency and the reduction of health care disparities have been a part of Aetna's core values throughout our history and are key initiatives nationally for the Aetna Medicaid organization. We are committed to continuously increasing cultural awareness, supporting health literacy, and developing programs to reduce health care disparities and promote equity for every member regardless of race, ethnicity, gender, socioeconomic status, disability, or other needs. We translate these values to our local West Virginia communities by making certain we understand the needs of our members. We make sure our member feedback forums optimally

engage as many members as possible and use feedback to improve the member experience, design our programs, and customize provider and staff education.

Aetna's multicultural approach to health begins with a comprehensive definition of cultural competency that includes race, ethnicity, physical/mental abilities, and preferred language, yet expands to the impacts of SDOH such as poverty, health literacy, cultural beliefs, and gender. We recognize our members and providers represent a unique mountain culture and are in one of the most impoverished states in the nation—with vast differences in SDOH, disability, and health-related behaviors across service areas. Our Cultural Competency Plan (CCP) explores the differences of lifestyle caused by each of these factors and its impact on the quality and well-being of our members' health outcomes and their health care journey—**West Virginians serving West Virginians.**

We employ multiple strategies to make sure we promote culturally competent services, including having a comprehensive CCP program, hiring bilingual and multilingual staff, using a hands-on approach to community outreach, maintaining ongoing staff and provider training, and utilizing member and health education materials that reflect the needs of the population served. **[MS048]**

Cultural Competency Plan: Our CCP uses the national standards for Culturally and Linguistically Appropriate Services (CLAS) in health and health care as the framework for developing and implementing policies that govern our delivery of services. We are committed to meeting all 15 standards and develop our CCP in a way that supports the first Principle Standard—thus advancing

health equity and reduction of health disparities.[4] Our program includes comprehensive planning and training processes, and a full complement of culturally and linguistically responsive services intended to provide an understanding of and improved access to readily accessible, high-quality health care services. The program includes compliance, oversight of linguistic and translation services, and the promotion of cultural sensitivity, health literacy education practices, and adherence to state and federal requirements. The CCP is subject to ongoing review by internal and external resources. We conduct a comprehensive evaluation that includes information from member complaints, satisfaction surveys, and Member Advisory Committee (MAC) meetings to measure improvement in knowledge and practice. We identify strengths and weaknesses, enabling us to develop a plan for improvement.

Hiring bilingual staff and assuring interpreter and translation services: Our MS department has several representatives that are bilingual. **Our current department include staff who speak Spanish, Russian, Mandarin, Cantonese, and Haitian.** All representatives who are bilingual are certified through a language certification vendor as interpretive specialists. We adhere and hire according to Department standards that recognize when non-English languages reach a high percent, and we hire accordingly. In addition, health plan representatives are fully trained in utilizing and accessing oral interpretation and written translation services for all prevalent, non-English languages, American Sign Language, and TTY/TDD for members who are deaf or hard of hearing. **[MS042]**

[4] Aetna's CCP is compliant with the following federal and State regulations: Title VI of the Civil Rights Act guidelines and the provision of auxiliary aids and services, in compliance with the Americans with Disabilities Act; and the Title III Department of Justice Regulation 28 C.F.R. & 36.303, 42 C.F.R. & 438.10(h). Aetna promotes national standards for CLAS in Health and Health Care developed and promoted by the United States Department of Health and Human Resources Office of Minority Health (HHS-OMH).

Community outreach: Our Community Outreach team takes a hands-on approach to understanding how Aetna can promote access to care and member engagement in their health care journey. Our MS staff and other health plan representatives often attend community events in collaboration with our Community Outreach team, promoting our member experience and community engagement. We attend local community and health and wellness events that support their needs. For example, our West Virginia Community Outreach team has a **longstanding relationship with the Family Resource Center at Marcum Terrace**, an area of West Virginia where residents and our members struggle with the effects of poverty and the prevalence of opioid use. Community Outreach staff participate in live events in collaboration with local food banks offering support for food insecurity and health education that promotes healthy behaviors and preventive care such as well-child visits. **Figure 6.5.1-5** illustrates our Community Outreach Director, James Smallridge, and our Chief Executive Officer, Todd White, sponsoring $3,000 to Facing Hunger Food Bank for additional backpack supplies. When necessary, staff assist members to enroll in Care Connections programs or value-added services, assuring linkage to care. Feedback gathered is forwarded to our Aetna teams and providers for consideration in training, operational, and programmatic practices.

Figure 6.5.1-5: Aetna's Donation to Facing Hunger Food Bank
Aetna Better Health of West Virginia recently made a $3,000 donation to the Facing Hunger Food Bank to help with funding for additional backpack program supplies.

Staff education and training: We underscore the relationship between cultural competency and health literacy through our initial and ongoing trainings that focus on cultural diversity, health care equity, disparities, literacy, and regulatory requirements. We review the reasons for health care disparities across populations such as low literacy, language differences, and member mistrust. Our training curriculum includes required cultural competency classes, mandatory quarterly trainings, federal CLAS standards, unique needs of special populations, SDOH and their impact on accessing care, and vignettes and scenario-based training created from actual telephone calls based on the needs of our West Virginia members. We train all member-facing health plan staff on **MHFA, trauma-informed care, person-centered training, and understanding the SDOH.** Managers promote ongoing education by facilitating discussions in staff meetings on cultural competence on a quarterly basis at our local town hall meetings for all health plan employees. As part of our ongoing commitment to culturally competent employee education, health plan staff have access to our online no-cost training system which offers a robust library of health care, cultural competency, and managed care topics. Staff is given the opportunity to attend conferences and are

Our quarterly cultural competency trainings reflect Aetna's ongoing commitment to increase staff cultural and linguistic competency through learning opportunities. Managers and directors are provided with talking points intended to help guide meaningful discussions and learning. For example, our first quarter 2020 training topic is, "A Framework for Understanding: Supporting a Culture of Inclusion," focusing on inclusion for all cultures, differences, and persons regardless of ability. The training includes an outline for helping each staff take inventory of the current state of practice within the health plan. Staff complete assessments that provide opportunity for reflection and highlight strengths and areas for improvement. Another topic asks staff to reflect on how we build cultural competency through governance and policies, how we implement best practices that improve service delivery, and how we adopt strategies into our day-to-day operations.

encouraged to attend conferences related to our members needs such as understanding evidence-based practices for opioid treatment.

Customized educational and member materials: Aetna is compliant with federal and State regulations and the Model Purchase of Service Provider Agreement for State Fiscal Year 2020 requirements assuring member rights to materials in their prevalent language, assistance if a member has LEP or limited reading skills **[MS032]**, or needs the use of auxiliary aids **[MS041]** and services, and adheres to all marketing regulations and requirements, respectively. Our educational and member materials include plain language at the sixth-grade reading level and include photos representative of the cultural, language, and unique needs of the populations we serve.

We are West Virginians serving West Virginians—we understand the regional health care disparities that exist in West Virginia and we employ multiple interventions to work with our providers on addressing health care disparities in our communities. This includes having an established Health Care Equity (HCE) program, population health initiatives, offering provider education and support, having integrated, experienced, locally based Care Connections teams, assuring a comprehensive network of providers, and facilitating MAC meetings that incorporate feedback into the continued development of our programs.

HCE program: Our West Virginia HCE program focuses on the three pillars of health care equity: cultural competency training and practice, health literacy, and reduction of health care disparities. Our HCE program provides a continuum of learning and action that includes ongoing education for providers and opportunities for providers and community organizations to collaborate in a way that aligns action to reduce health care disparities for our members. Aetna

attends monthly collaborative meetings with other Aetna Medicaid organization health plans that support health equity initiatives, using best practices identified on a national level, bringing those to our local West Virginia communities and providers. We provide our West Virginia Medical Management team **monthly reports that outline data describing individual member health care in effort to reduce disparities.** This report is used to address both individual member-level barriers to care and inform our policies, strategies, and system design. An example of the data available on our monthly report includes member name, ZIP code, dates screenings and assessments were completed, race, ethnicity, gender, sexual orientation, source of income, and employment. It also includes SDOH that can negatively impact each member's access to care such as food security, reliable transportation, exposure to violence, and housing stability. We include whether members have LEP, a history of incarceration or institutionalization, dependable supports systems, and religious preferences. We include their primary method for accessing care (e.g., ER or urgent care, travel distance to their PCP, medication adherence, their ability to understand health instructions, and need for dental services). Clinical care managers can use this report to aid in removing barriers identified in the treatment plan. An example of how we inform strategies includes the design of our integrated Care Connections approach. We analyze the data and use our learnings to design the West Virginia Care Connections program. This includes offering regional teams who are experts in issues that impact our members, such as maternal and pregnancy care and substance use disorders and offering teams that are co-located at provider offices.

Population health initiatives: West Virginia members suffer from health disparities such as food insecurity, high rates of obesity, chronic conditions, tobacco use, and substance and opioid

use. Aetna utilizes population health strategies in alignment with NCQA Population Health Management that support ongoing risk stratification and engaging all members in healthy behaviors and appropriate services in effort to reduce health care disparities. Additionally, Aetna has established an initial program to launch in the spring of 2020 with **Unite Us,** a program that offers technology to monitor and track closed-loop, community-based referrals. We have agreements with Unite Us and several CBOs that offer social services and support in local, West Virginia neighborhoods, addressing needs such as assistance with food, housing, and transportation. Staff who work at the CBOs will refer members using the Unite Us technology to identify the closest viable resources to meet each person's needs. Once the person in need of assistance has received it, the CBO staff will document the referral and that it was "closed," thus demonstrating a closed-loop tracking system that supports Aetna's ability to help our members achieve healthy outcomes.

Provider education and support: We offer education to a network of approximately 11,000 providers through provider notices, website articles, discussions during provider meetings, and our provider manual. Our Aetna website includes a dedicated page for provider education on cultural competency and health literacy. As part of our CCP, we encourage our providers to access "A Physician's Guide to Culturally Competent Care"

Aetna's innovative approach to creating an organizational trauma-informed care transformation including providing education and training to staff and providers leads the way across the nation on serving members who have experienced trauma. Through our collaboration with the National Council on BH, the West Virginia team was one of the first plans in the county trained in advanced coursework on trauma-informed care. Aetna is conducting a live training for over 100 providers on trauma-informed care and SDOH on February 12-13, 2020, which will be recorded and available via Aetna's website.

from the Office of Minority Health. This program is available via a link on our website and is endorsed by the American Medical

Association, the American Academy of Family Physicians, and the American College of Physicians, which provides up to nine hours of continuing education credits at no cost. We also offer a no-cost online course in health literacy called "Effective Communication Tools for Healthcare Professionals." This is an online, go-at-your-own pace training supported by the United States Department of Health and Human Resources that has helped more than 4000 health care professionals improve patient-provider communication. We develop and facilitate live training that targets the needs of our West Virginia members. We monitor provider performance using feedback from our members and satisfaction surveys. We subcontract for language interpreter services, available to all in-network providers for verbal interpretation and written translation, which provides 24/7/365 interpretation services for more than 240 languages, and we make certain there is access to TTY/TDD services for members who are deaf or hard of hearing.

Integrated, experienced, local Care Connections teams: Aetna's integrated, experienced locally based Care Connections care managers are integral to our efforts to reduce health disparities by addressing the whole person— medical, mental/behavioral, and social needs. If a member's health is impacted negatively by lack of stable housing or transportation, Care Connections staff address those as part of an integrated treatment plan. Clinical care managers connect new providers to Aetna's comprehensive network of providers. If a care manager learns of a new specialty provider who specializes in serving members with disabilities through use of a

single-case agreement, the provider information is forwarded to the Provider Relations team for outreach to become an in-network provider.

A comprehensive network of providers: Our comprehensive network of approximately 11,000 providers supporting the geographic, cultural, and linguistic needs of our members includes PCPs, specialists, pediatric providers and specialists, geriatric providers and specialists, family practice, children's mental/BH, addictions medicine, and many others. We make sure members have geographic access, services in prevalent language or use of 24/7/365 interpreter services, and access to significant traditional and specialty providers.

One of our challenges has been improving attendance to our quarterly MAC meetings. For our second-quarter meeting, held June 28, 2019, we designed the meeting to be a kid-friendly event since the children were out of school for the summer. We reserved a picnic area at a local water park and members and their children were invited to enjoy lunch. During our meeting with the parents, children were supervised and enjoyed the pool while the adult members attended the meeting. This format allowed Aetna to gather critical feedback and it provided a healthy outdoor activity that promoted wellness for our members and their children. We had seven members attend, which was the best attendance we have had since the inception of our MAC meetings.

MACs: We listen. We learn. We change. Aetna staff assesses members' level of health literacy and identify ways in which their culture may influence preferences or abilities. During our MAC meetings, we solicit feedback from members on ways to improve the delivery of our health care services. Feedback is utilized to design education materials, inform members, or train our internal Aetna staff. For example, we held a MAC at the **Family Resource Center in Marcum Terrace in fall of 2018** due to our long-standing relationship with members who use the Family Resource Center services. We routinely collect data about the impact of specific programs on West Virginia health care initiatives, which are shared with operational staff and are incorporated into our quality improvement program.

Health Education Programs

MS001	The Vendor should describe how they will collaborate with stakeholders to design materials that best meet the needs of the populations being served.
MS045	The Vendor should describe how they will administer a health education program for disease and injury prevention and identification.
MS046	The Vendor should describe its tobacco-cessation program.
MS047	The Vendor should describe how they will leverage community events/resources to help improve the health of its member population.

Aetna has demonstrated the breadth and depth of our experience and understanding of the needs of West Virginia managed care programs throughout our 23 years serving the Department, our collaborative relationships, and our health education materials. Our mission is to continuously deepen our presence in the communities we serve, with a special focus on understanding the unique needs of our members and potential new members and programs to improve quality of care and health outcomes. We achieve this through locally designed and targeted efforts that maximize investments, form long-term relationships, and leverage the power of employee giving and volunteerism. Our dedication to be a collaborative and innovative partner to the Department, members, providers, CBOs, and other stakeholders defines us as a loyal organization driving the statewide mission to create a healthier West Virginia.

Aetna invests in the communities we serve. Our longstanding presence across West Virginia heightens our awareness to factors such as poverty that impacts local communities. We learn about and utilize community strengths to address those factors. Being in and of this region affords our members the opportunity to rely on the trust we have built up with members and their families to enhance their well-being and overall health outcomes. We are committed to assisting all West Virginia families struggling with poverty, addiction, limited resources and access, and other SDOH barriers such as transportation access. Our work with West Virginia families through our school-based relationships, Head Start, and food banks are excellent examples of

how Aetna draws on our lived experience within our own communities to meet the needs we see our neighbors struggling with. These are our communities, and we are their neighbors and service providers **dedicated to focused, tailored, and data-driven evidence-based health education programs to best meet their needs**.

[MS045] Administration of Health Education and Disease and Injury Prevention Programs

West Virginia ranks higher than the national average for deaths due to an injury. From 2001 to 2015, there was an average of 103.29 deaths due to injury per 100,000 compared to 62 per 100,000 nationally.[5] West Virginia also ranks higher in adult smoking at 23.43 percent than the national average of 18 percent.[6] Aetna has proven experience and an ongoing commitment of community involvement in the administration of health education and disease and injury prevention programs. Aetna's approach to administering an effective health education program that promotes prevention, supports member engagement in wellness activities, and positively impacts the likelihood of each member achieving meaningful, quality-driven health outcomes includes the following:

An Aetna Care Connections team was trained on infant safe sleeping practices and utilizes this knowledge to educate pregnant members enrolled in our Care Connections program. Additionally, our Community Outreach team has provided 500 families with health education and almost 400 families with portable cribettes, making a positive impact toward member awareness and safety about Sudden Infant Death Syndrome.

- A strong commitment locally via a **dedicated, West Virginia-based Community Outreach** team who understands the unique needs of our members and who live, work, and play in the communities we serve; who acts as an extension of our MS department; and whose outreach is informed by successes serving members with similar issues from our national Aetna Medicaid population health strategy and CVS Health experience and expertise

[5] County Health Rankings and Roadmaps, "2017 County Health Rankings Key Findings Report," County Health Rankings and Roadmaps; accessed January 2020; www.counthealthrankings.org/reports/2017-county-health-rankings-key-findings-report, accessed January 2020.
[6] Ibid.

- Fully trained Care Connections and MS staff who promote health education and prevention in member-facing interactions
- Frequent locally targeted community outreach and involvement at events and health fairs in partnership with the Department and in collaboration with stakeholders, schools, and CBOs
- Promotion of preventive health screenings, education, and events such as our **wellness events and mobile prevention screening programs**
- Informative member newsletters, health assessments, and self-management tools on our Aetna website such as weight management and **MyActiveHealth,** a tool that promotes completing and tracking healthy activities
- CVS Health partnership, Aetna Medicaid National Advisory Council, and Medicaid population health program inform our member education strategy
- Quick access to community-based resources nearest our members by calling our MS line; MS representatives have access to local resource guides including online resources that offer search by need and ZIP code or neighborhood
- **24/7/365 Audio Health Library:** Members can access more than 300 health, wellness, disease, and medical test audio recordings about various preventive and health education topics by calling our 24/7/365 Health Information line and following the prompts in the integrated voice recording. Each topic begins with a general description of the condition and provides causes, symptoms, diagnosis, and treatment. Examples of topics available include asthma, high blood pressure, alcohol and drug issues, assistance on how to quit smoking, pregnancy, preventive care, and many others. Members are empowered to make the best decisions for their health-related matters. **[MS045]**
- VAS customized to meet the needs of our West Virginia members and that promote prevention and engagement in health-related activities. Our VAS that specifically promote prevention and engagement in health-related activities are illustrated in **Table 6.5.1-1.** Our MS and Care Connections staff are fully trained to provide health education around VAS.

In 2019, CVS Pharmacy stores raised money in support of prevention and education efforts for various diseases, many of which impact the populations we serve and intend to serve. Donations included the following:

- **$22,418** in support of the American Heart Association
- **$18,780** in support of the American Lung Association
- **$20,607** in support of the American Cancer Society
- **$26,745** in support of the Alzheimer's Association

Table 6.5.1-1: Aetna VAS that Promote Healthy Behaviors

Type of Service	Value-added Service	Brief Description
Oral Health/Dental	Children's Dental Services	Based on HEDIS measures, parents are incentivized to schedule and attend a dental appointment for children age 2 to 3.

Type of Service	Value-added Service	Brief Description
	Dental Incentive for Members with Diabetes	Designed in collaboration with the West Virginia University dental school, members diagnosed with type two diabetes receive no-cost, routine dental care, tools that support healthy behaviors such as attendance at diabetes education classes, a journal, and dental hygiene kit, and incentives for completing critical HbA1c testing.
	Pregnancy Dental Care	As part of our Healthy Pregnancies, Heathy Babies program, we offer two preventive dental visits to members who are pregnant.
Maternal and Infant/Child Health and Safety	Healthy Pregnancies, Healthy Babies	Members participate in our text messaging campaign, receive two preventive dental visits, and a gift card for baby supplies. Members who complete the program receive a portable crib after successfully attending six prenatal visits. **Since 2016, Aetna has distributed 1,321 cribettes to pregnant and new moms participating in our program.**
	Moms and Babies	Targeted to pregnant women who struggle with substance use during pregnancy, members receive health education, support locating treatment, and upon successful completion of the program, a cribette.
	Keep Kids Safe Opioid Lockbox	Members prescribed opioid medications and have children receive an opioid lockbox offering a safe way to store medications away from children.
Chronic Disease Prevention and Management	Congestive Heart Failure Toolkit	Our toolkit includes weight management health education, a digital weight scale, and weight management diary.
Healthy Lifestyles	Ted E. Bear, M.D.[SM] Cub Club	Children age 13 and under receive health education and encouragement to complete a healthy task such as teeth brushing or exercise, and once completed, a reward such as a teeth-brushing kit or a sports ball.
	Good Health Practices	Members receive a gift card for scheduling and attending well woman, well-child (ages 12 to 18), and immunization appointments.
	ATV Safety Class Reward	We encourage our members to get active and be safe by completing a qualified ATV safety course and subsequent gift card as a reward.
	Back-to-nature Flu Shot	Adults age 18 and older receive a gift card toward the cost of an annual combination of a hunting/fishing license for completing their annual flu shot.

Type of Service	Value-added Service	Brief Description
	Adult Walking Program	Offers members a pedometer and tools to track their total daily steps.

As an element of Aetna's approach to administering an effective health education program, member health education is driven by the trends and needs of our local West Virginia communities. We use the feedback from our MAC, utilization and CM trends, and the national expertise from our Medicaid program, etc., to inform the development of member education materials. As an example, **Figure 6.5.1-6** illustrates our educational material targeting pregnant members to engage in our health education programs.

[MS047] Leveraging Community Events to Improve Population Health

Aetna's Quality Management, MS, and Community Outreach teams frequently participate in and leverage community events and resources to improve the health of our member population. We participate in a variety of community events and health fairs including events that address prevention and wellness. The following narrative describes our wellness events with providers aid in scheduling and attending preventive health appointments, mobile medical and dental screening services in remote areas, health education and outreach for opioid use disorders, and our **HealthTag™** and **Unite Us** programs. **[MS047]**

Figure 6.5.1-6: Aetna's Healthy Pregnancies, Healthy Babies
Aetna's population health program, Healthy Pregnancies, Healthy Babies, offers health education that supports healthy delivery of babies for our pregnant members.

Aetna's QM, Care Connections, and MS departments collaborate with local providers to facilitate wellness events that promote health education and support scheduling critical preventive health care appointments for adult and child physical and dental health care services. Our goal is to provide health education that promotes scheduling of preventive health care appointments and increases the number of members attending those appointments. We determine when and where to schedule based on evaluation of our HEDIS scores. Our QM staff evaluate regional HEDIS measures and pull reports on members in that region who have not

attended a preventive health care appointment. We identify our local, in-network providers in that region and collaboratively plan and schedule a wellness event that includes health education, appointment assistance, and if necessary, enrollment into Care Connections services. Once a date and time are determined, our health plan representatives or other internal staff complete outbound calls to identified members, educating about our local, no-cost event and the benefits of completing preventive health care appointments. Representatives help with appointment scheduling over the telephone and help to ensure members have necessary contact information and directions to the event. An Aetna representative completes an outbound reminder call a few days before the event, encouraging participation. Quality Management, Care Connections, and MS staff volunteer to participate at events, offering in-person opportunities to engage and educate our members about their health care and the importance of prevention. Care Connections staff are available to answer questions about Care Connections programs and enroll members immediately into relevant programs.

We currently offer the following event types:

- **Well child:** Children up to age 18 can obtain a well child exam
- **Children's dental:** Children up to age 20 can obtain a dental exam with a licensed practitioner
- **Well woman:** Adult women ages 21 to 64 can obtain a well woman exam that includes a Pap test and/or mammogram
- **Diabetes:** Members with diabetes can obtain a diabetic well exam that includes an HbA1c blood test, urine screening for nephropathy, blood pressure check, and/or a diabetic eye exam to screen for retinopathy

In 2018 and 2019, our Aetna team facilitated wellness events in Kanawha, Boone, Cabell, Jackson, Clay, Wayne, Logan, and Upshur counties.

Aetna held 13 events in 2018—4 well woman, 4 well child, and 5 diabetes— and 25 events in 2019—10 well child, 6 children's dental, 5 well woman, 1 flu prevention, and 3 diabetes. **We have positively impacted our members attendance at critical wellness and preventive**

appointments in 2018 and with an increase in 2019. In 2018, 56 percent of members we scheduled attended their appointments, and in 2019, 68 percent of members we scheduled attended their appointments.

We understand that West Virginia's mountain culture and geography can present a distinct access to care barrier for our members who live in remote mountain regions. To best serve remote mountain members, especially members without access to telephone or internet, Aetna has collaborated with a provider who has locations across the southern part of the state including Boone and Kanawha, to provide **mobile medical and dental screening services.** This collaboration includes offering physical health and dental services via mobile van units that will offer services such as preventive well woman and well child visits as well as dental screenings. Offering these critical preventive services allows us to better serve members in need, especially members of well woman and well child preventive exams as well as dental screenings for all Medicaid and WVCHIP populations served in this RFP.

West Virginia is severely impacted by the negative effects of opioid use disorders. Numerous indicators underscore the severity of these issues in West Virginia. According to the National Institute on Drug Abuse West Virginia Opioid Summary,[7] West Virginia had the highest age-adjusted rate of drug overdose deaths involving opioids in 2017; it was double the rate in 2010 and threefold higher than the national rate of 14.6 deaths per 100,000 persons. Additionally, the sharpest increase in opioid-involved overdose deaths was seen in cases involving synthetic opioids other than methadone (mainly fentanyl): a rise from 122 deaths in 2014 to 618 deaths in

[7] National Institute on Drug Abuse (NIDA) West Virginia Opioid Summary; Last Updated March 2019: accessed Jan 2020; https://www.drugabuse.gov/opioid-summaries-by-state/west-virginia-opioid-summary.

2017. In addition, West Virginia providers wrote 81.3 opioid prescriptions for every 100 persons compared to the average U.S. rate of 58.7 prescriptions in 2017. The prevalence of opioid misuse is reflected in the needs of the members we serve including members and members' parents who struggle with addiction and struggle to maintain social needs (e.g., food security or stable housing) due to addiction. Our Community Outreach team, informed by our national expertise on opioid prevention, intervention, and treatment, participates frequently in community events that support health education on opioid misuse. Our health education materials are targeted to the needs of local West Virginians and offered as takeaways at community events and are available on our website. **Figure 6.5.1-7** illustrates Aetna's collaboration with our community stakeholders and providers on **appropriate, effective care for our pregnant members who struggle with opioid use.** It illustrates and highlights how we support success in recovery and offers important health education about opioid treatment.

Figure 6.5.1-7: Aetna's Educational Brochure for Pregnant Members In Need of Opioid Treatment
Aetna offers customized health education materials targeting critical needs for our valued West Virginia members.

In collaboration with our CVS Health retail pharmacies, Aetna creates **HealthTag campaigns** that support the Department's goal for enhancing access to quality-driven care. HealthTags are messages printed on a member's prescription bag that offer health education. For more complex communications, Aetna can flag the member prompting pharmacy staff to engage them in a focused conversation when they are picking up a prescription. HealthTag messages and pharmacy staff discussions are related to the member's medication or a gap in care such as getting preventive care or getting a flu shot. We will leverage this expertise in partnership with the Department, offering an enhanced capability to reach, engage, and education our valued West Virginia members.

Aetna has established an initial program launching in spring 2020 with **Unite Us,** a program that offers technology to monitor and track closed-loop, community-based referrals. We have agreements with several CBOs that offer social services and support in local West Virginia neighborhoods, addressing needs such as assistance with food, housing, and transportation. Staff who work at the CBOs will refer members using the Unite Us technology to identify the closest viable resources to meet each person's needs. Once the person receives assistance, the CBO staff will document the referral and that the referral was 'closed,' thus creating a closed-loop tracking system that supports Aetna's ability to help our members achieve healthy outcomes.

[MS001] Collaboration with Stakeholders to Design Materials

Our dedication to be a collaborative and innovative partner to the Department, providers, CBOs, and other stakeholders defines us as a loyal organization driving the mission to create a healthier West Virginia. Aetna's Community Outreach team is an extension of our exemplary MS. We collaboratively attend community events that promote health education and prevention

for our valued members. For example, Community Outreach and MS staff attend "Live on the Levy," local parades, and make hospital visitations to members over the holidays. Our West Virginia Community Outreach director, Jim Smallridge, who is a West Virginian native states, "We don't just service members when they call the health plan, **we live, work, and play in their communities and participate in events that support healthy behaviors whenever we can.**" This passion is promoted in our MS department as well. Kelley Mitchell, manager of the MS department, encourages her representatives to be there for our neighbors in times of need. For example, recently when West Virginia was plagued with severe floods, Ms. Mitchell made certain her MS team was informed and ready to provide the help needed and supportive resources when members called. Per Ms. Mitchell, "We are not just a voice on the phone."

Together, we listen, we support, we care.

Aetna's Community Outreach team, led by Mr. Smallridge who is a registered nurse, creates annual outreach plans designed to be hyperlocal, targets each of the state's regions, and adheres to our system of care process. As a trained nurse, Mr. Smallridge has a unique perspective and leadership skills with eight years' experience with Aetna to engage community resources to improve overall population health through community engagement. The plan informs how we develop member communication, materials, and engagement and its execution is carefully monitored by our Community Outreach and QM teams. Our member engagement is a grassroots effort and includes outreach to members in addition to our CBOs. Aetna utilizes CBO and member feedback from community events, our call centers, individual interactions, and our MAC when we develop member materials. We are honored to have close working

relationships with many CBOs, as we value our combined impact in the communities we serve, and we use information learned to inform our member communication and materials. **[MS001]**

Our Community Outreach team works collaboratively with the following West Virginia groups. The following collaborations inform the design of our health education program and educational materials:

- Behavioral Health Provider Association
- National Association of Social Workers-West Virginia Chapter
- Provider Response Organization for Addiction and Care Treatment
- West Virginia Primary Care Association
- West Virginia Hospital Association
- Healthy Kids Coalition
- School Based Health Assembly
- West Virginia Osteopathic Medical Association
- West Virginia Healthcare Association
- West Virginia Board of Medicine
- West Virginia State Medical Association
- West Virginia Partners in Health
- American Cancer Society
- Mountaineer and Facing Hunger Food Banks
- Mountains of Health
- United Way of West Virginia

The Community Outreach team has **longstanding collaborative relationships** with advocates and stakeholders across West Virginia including government agencies such as West Virginia's Department of Education and school systems across the state. Mr. Smallridge makes certain there is ongoing collaboration with local **West Virginia schools**, continually understanding the needs and barriers to care for West Virginia children. The Community Outreach team has participated in multiple school-based events offering health education on preventive dental care. Parents and children who participate receive no-cost dental hygiene kits including toothbrushes and health education on the benefits of proper dental care. We work with School-Based Health Centers to stress the importance of preventative measures such as wellness exams, immunizations, and flu shots. The Community Development team has made presentations to numerous Title I parent meetings and PTA meetings around the state. We specifically target

schools with higher populations of Medicaid beneficiaries, such as Title I schools. We educate students as well as their teachers and parents on various health care topics, such as healthy eating and the importance of wellness exams and flu shots. **Figure 6.5.1-8** illustrates our Aetna Ted E. Bear, M.D., coloring book health education topics that promote healthy behaviors and is customized to children's reading levels in English and Spanish.

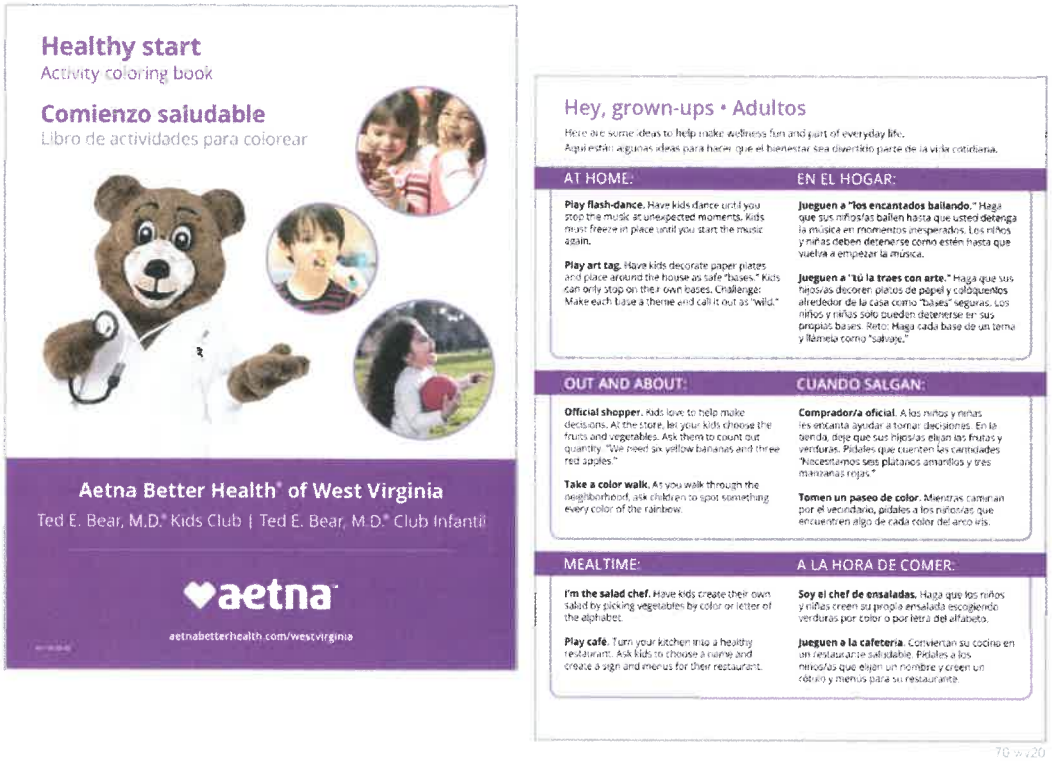

Figure 6.5.1-8: Aetna's Ted E. Bear, M.D. Coloring Activity Book
Aetna's Ted E. Bear, M.D., coloring activity book is designed especially for kids, at their level, and promotes healthy behaviors such as heathy eating, activity, and getting a flu shot.

Aetna works with school health clinics to provide screenings and wellness education during school-wide events. As a result, our established relationships support a seamless transition of care if the student should transfer to another school or school district. Additionally, we work

collaboratively with the following West Virginia organizations that serve members with special health care needs: schools, Family Resource Network, Adverse Childhood Experiences Coalition, Healthy Kids, libraries, after-school programs, Camp Appalachia, and the Affordable Healthcare "Medicaid Matters" group. We collaborate statewide with **West Virginia Head Start** to engage parents by connecting them with comprehensive and essential services that promote health, wellness, and education. Examples of topics addressed include the importance of wellness exams, healthy eating, and healthy activities.

Our health education, disease and injury prevention, and other member materials are designed in collaboration with our providers, professional organizations, and community organizations and address the unique needs of West Virginians in mind. The Community Outreach team offers health education on appropriate **utilization of the ER**, urgent care, and primary care services. Community events are designed using health care data from medical management services, targeting areas where education is needed about appropriate use of services. Our most recent collaboration, because of the impact of opioid misuse, is with **West Virginia Healthy Grand Families**. Based out of West Virginia University Institute, the Community Outreach team collaboratively designed a program to target grandparents raising children as a result of involvement in child welfare. Our health education materials will be customized to help grandparents understand how to care for children now in their custody and how to access needed care and support. As part of this program, Aetna will sponsor the Healthy Grand Families program, offering financial assistance for development of an eight-week training course.

Aetna complies with all marketing and member education requirements outlined in the Model Purchase of Service Provider Agreement for State Fiscal Year 2020 including strict compliance

to member materials requirements and 42 CRF 438.104 and Appendix D, BMS Marketing Policies. Our materials are prepared at no higher than a sixth-grade reading level, with easily readable typeface, frequent headings, and short, simple explanations of key concepts. We offer taglines advising members how to access member materials in other State-required prevalent languages. **[MS043]** We educate our members that member materials are available in paper form upon request within five business days. **[MS040]** Our website electronic information is prominent and readily accessible. We make auxiliary aids and services available as well as written translation in prevalent languages or as requested.

Aetna's strong commitment to addressing the opioid crisis in West Virginia is evident through our specialized Care Connections programs and services such as Lily's Place, serving pregnant and new mothers who need substance-use treatment, sponsorships, community outreach, and member health education materials. We collaborate with local providers, professional associations, and CBOs to make sure we stay on top of the latest trends, research, and needs to aid in developing our materials. **Figure 6.5.1-9** illustrates our brochure used at community events to engage and educate our members into appropriate programs and care.

As a second example more specific to our adult member needs, this member newsletter available on our website outlines diabetes education classes available to members at various locations throughout West Virginia including Mid-Ohio Valley Public Health, West Virginia University Medicine, Mon General Hospital, Potomac Valley Hospital, and United Hospital in Clarksburg. It also describes the benefits of wellness visits specifically for pregnant mothers and

Managing opioid medication

Meet Stephanie. Last month's car accident left her sore, so she's been steadily taking her opioid medicine to help manage the pain. As her prescription gets low, Stephanie is worrying about ongoing treatment. She wants to learn other ways to relieve her pain and safely manage opioids. Stephanie goes to see her doctor, who advises her on the following steps:

1. Find other solutions

Her primary care provider (PCP) talks about ways to help manage her pain without opioids, like exercise, over-the-counter drugs, and prescription anti-inflammatories.

2. Be ready with Narcan®

Stephanie's PCP also tells her about Narcan (naloxone) as a safety measure. Narcan is a drug used for people having an overdose. It can save lives.

3. Keep opioids away from others

Stephanie has two kids, ages 11 and 7. It's important to always keep medicine safe and away from others, especially young children.

4. Don't wait

Stephanie feels confident she can manage opioids. You can, too. We can help. Just call our Member Services number on the back of your ID card.

Diabetes help for you

Aetna Better Health of West Virginia is working with the following places to offer diabetes education classes for members at:

- Mid-Ohio Valley Public Health
- WVU Medicine
- Mon General Hospital
- Potomac Valley Hospital
- United Hospital in Clarksburg

Aetna Better Health of West Virginia members that have diabetes or pre-diabetes can attend a Diabetes Self-Management Program.

Our Case Management staff can help you sign up; if you need help with getting a ride we can provide you with help.

Once you complete the classes and obtain a follow-up A1C, you will be able to receive a $25 gift card.

Classes are available in the following counties:

- Calhoun
- Gilmer

A little prevention goes a long way to Live Healthy

At Aetna Better Health, we're here to help our members live healthier lives. Three of the best ways to stay healthy are:

- A yearly wellness checkup with your doctor
- Being physically active
- Watching what you eat

Wellness visits can help you stay healthy. Even if you aren't sick, you need to see your doctor regularly. Along with a physical exam, your doctor may check your BMI. Your doctor will also give you great advice about healthy eating and exercise.

So take control and jump-start a healthier you. Make doctor visits part of your healthy routine. Call your doctor today and make an appointment for a wellness checkup. Sounds pretty doable, doesn't it?

Need help finding a doctor?
Just call Member Services at **1-888-348-2922**, TTY: **711**. Or log on to **www.aetnabetterhealth.com/westvirginia** to find a provider near you.

Aetna Better Health of West Virginia
500 Virginia St. East, Suite 400
Charleston, WV 25301

Aetna Better Health of WV Health Information Line

24-Hour Nurse Helpline

Do you have a medical question and don't know what to do? Call our 24-hour Nurse Helpline. Our Nurse Helpline can help answer specific health questions. You can also get advice on what to do when you need health care. The toll-free number for the Nurse Helpline is **1-855-200-5975**. You can also find the Nurse Helpline number on the back of your Aetna Better Health ID card.

Are you seeing a behavioral health provider or another specialist? It is important to let your PCP know. They will work together to provide the best possible care for you.

Let us help you

Sometimes, managing a chronic condition or multiple conditions is hard to do. We have special programs to help you with your medical, mental and social health care needs.

Do you have any of the following chronic conditions?

- Diabetes
- Asthma
- Depression
- Coronary Artery Disease (CAD)
- Chronic Obstructive Pulmonary Disease (COPD)
- Heart Failure

We can help! You can participate in our Chronic Condition Management Program (Disease Management).

Our staff of trained Registered Nurses will call you. They can assist with teaching you how to help monitor and control your disease. We can also speak with your caregiver or support person with your permission.

We can help you get the tools you need to test your blood sugar. We can help you get tools to check your breathing and to weigh yourself daily if needed. We can also help you to access transportation to your medical appointments.

We can help you with healthy behaviors, such as eating better and quitting smoking. We can provide names of community resources and other resources available to you.

It is important that you communicate with your doctors and other healthcare staff. We can assist you in what questions to ask.

You will also be mailed information about your chronic conditions to help you understand your condition better.

To offer you support, your doctor, hospital discharge planner or caregiver may refer you to Care Management. However, don't wait for a referral if you need help. You can self-refer by calling us at **1-888-348-2922** and asking for Care Management.

Your Member Handbook will give you more information about our care management program. You can opt in or opt out of the program anytime. We're happy to help you if you have any questions. You can reach us at **1-888-348-2922**.

Is your child moving from child to adult care? We have trained professionals on staff to help you with this. We'll work with you to help get the right care for your child's special needs.

Living with asthma

Aetna Better Health of West Virginia wants to work with you to be healthy. We have nurse case managers who can assist you. We can help to improve your overall health. We will work with you to understand living with asthma. We will work with you to understand:

- An Asthma Action Plan to help you manage your asthma
- Your medications
- How to decrease your emergency room visits for asthma
- How to improve your overall wellness and better control of asthma
- How to decrease or stop the use of tobacco through smoking cessation programs

Call us at **1-888-348-2922** for more information on a healthier you.

An easy-to-use wellness tool for a healthier you

Our updated secure member website is your go-to resource to manage your plan—and your health. It will help you use your Aetna Better Health benefits and services so you can get and stay healthy. You can:

Access health plan details—change your doctor, find forms or request member ID cards.

Get personalized health information—answer questions about your health. Get the tips and tools you'll need to meet your health goals like quitting smoking and weight management.

Research prescription drugs—find a pharmacy, see how much a drug costs or ask for a drug not covered by your plan.

Get instant access to claims details—see the status of your claim from start to finish.

Find support—get in touch with a nurse. Or learn more about disease management and wellness programs that will help you stay on track with goals.

Visit **www.aetnabetterhealth.com/westvirginia** for the updated pharmacy formulary and latest Member Handbook.

Sign up today. It's easy. To set up your account or to learn more about these tools, you can visit **www.aetnabetterhealth.com/westvirginia**. Just click on the "Member Portal" quick link on the left side of the "For Members" page. And when you're ready to sign up, just select the "Register or Log In" link from the Portal page.

Keep in mind, you'll need your member ID and a current email address to create an account.

We're always here to help. For help getting started or to sign up over the phone, just call Member Services at **1-888-348-2922**, TTY: **711**.

The power of prevention: EPSDT visits help keep your kids healthy

What's the best way to fight diseases? Stop them from ever happening. Or start treating them early, before they become more serious. That's called preventive medicine. That's why your EPSDT visits are so important.

EPSDT stands for Early and Periodic Screening, Diagnosis, and Treatment. The visits are also called well-child visits. Your child sees the doctor when he or she is feeling well. All children under age 21 get a full exam. The doctor may give shots that help your child stay well.

Your EPSDT schedule depends on the age of the child. Children under age 2 go every few months. Older kids go every year. The visit is covered by your insurance. To find out if your child is due for an EPSDT visit, call your doctor.

A healthy start with the right shots

Getting your kids their shots is one of the most important things you can do as a parent. A record number of kids are getting the shots they need to stay healthy. That's great news!

The benefits of these shots last a lifetime. Your kids will never have to worry about the diseases that harm or kill many children in other countries. The shots your kids get are safe. They work very well. They almost never cause any reaction or have any serious side effects.

Your kids should have most of the shots they need by age 2. Older kids need booster shots now and then. Your doctor's office will know which shots your kids have had, and which they need.

Be sure you are up-to-date with your child's vaccination schedule. Call your doctor to make any appointments you need for these disease-fighting shots.

Figure 6.5.1-10: Aetna's Spring 2019 Member Newsletter
Aetna provides health education designed to meet the needs of our valued West Virginia members.

[MS046] Tobacco Cessation Programs

Aetna's Care Connections team includes a CM staff who has completed the Tobacco Treatment Training Program certified by the Council for Tobacco Treatment Training Programs and serves as a resource on this topic for the Care Connections department.

According to America's Health Ranking by the United Health Foundation, West Virginia ranks as one of the states with the highest percent of tobacco using behaviors,[8] which is linked to a higher prevalence of chronic disease such as cancer, low birth weights, and early death. In addition to promoting the West Virginia Tobacco Cessation program, Aetna offers a tobacco cessation program that is available to all members who use tobacco or vape, offers customized support and care, and is based on proven evidence-based approaches to quitting.

In 2019, CVS Health and Aetna supported educational programs to create and distribute educational materials for middle and high school students on the risks of e-cigarette use. A $100,000 grant was given to the Society of Health and Physical Educators to help distribute educational games from the Yale Center for Health and Learning to schools across the country. The CVS Health Foundation offered $600,000 to support the American Academy of Family Physicians Foundation to support its efforts to address the rising emergence of Electronic Nicotine Delivery Systems. Additionally, the Aetna Foundation worked to enhance education and training for children's health care professionals.

By calling the MS or Care Connections department, any member who identifies as a user of tobacco through our HRQ screening, is offered immediate enrollment into our Care Connections program and assigned a dedicated staff member who refers and connects to tobacco cessation services and supports. Our program offers one-on-one coaching by certified counselors, access to online tools, various educational media such as articles and videos, self-management tools that support quitting, and promotion and use of the West Virginia QuitLine. **In 2019, 1,686 unique Aetna members participated in our Tobacco Cessation program.** All member-facing staff

[8] United Health Foundation, "America's Health Rankings: West Virginia," United Health Foundation: accessed January 2020; https://www.americashealthrankings.org/explore/annual/measure/healthstatus_disparity/state/West Virginia.

such as MS, Care Connections, and Community Outreach are trained on health education programs such as tobacco cessation and have easily accessible referral information available when needed. Assigned CM staff will arrange for services and supports depending on the member's individual needs. Our program is designed using proven, evidence-based methods that facilitate engagement, participation, and the likelihood of effective program outcomes. Aetna clinical care managers and care coordinators are equipped to educate members about the negative effects of tobacco and vaping use for our West Virginia members. For example, we identify pregnant members at-risk for conditions that could potentially harm the member or their baby and offer support such as use of our Tobacco Cessation program. **[MS046]**

Aetna will leverage our CVS Health partnership to bring additional tobacco cessation programs and educational materials to West Virginia. CVS Health offers additional educational and preventive services, including tobacco and vaping cessation programs, and local pharmacists who speak at community events and schools to educate on the negative consequences of tobacco and vaping use. **[MS046]**

Member Services Call Center

MS018	The Vendor should describe its warm transfer protocols for its member services, other internal departments, other entities, and subcontractors, as applicable.
MS019	The Vendor should describe how they will train member services representatives.
MS020	The Vendor should describe how they will ensure they are meeting customer use and report to the Department on customer service performance standards including, but not limited to, the following:
MS021	Member-to-representative ratios
MS022	Call answering time, with a minimum of 83% of calls answered in thirty (30) seconds
MS023	Call abandonment rate not to exceed five percent (5%)
MS024	Single contact resolution
MS025	Turn-around time for member requests

MS026 Remediation strategies for performance issues

Our MS call center staff provides our first opportunity for **exemplary member service** by representing Aetna's core values of **inspiration and integrity** (doing the right thing for the right reason), **excellence** (highest quality and value through simple, relevant solutions), and **caring** (respect through insight, understanding, and compassion). We demonstrate these values through accountability in our existing West Virginia Medicaid call center by assuring excellence in our hiring and staffing practices, our hours of operation, our telephone protocols, our staff training, and our telephone performance. We describe the RFP's MS specifications in detail throughout this call center section, but as examples of our demonstrated values and accountability, our West Virginia MS call center achieves the following:

- Superior service excellence to our existing West Virginia members as demonstrated by exceeding Department performance standards in the last two calendar years in our existing West Virginia Medicaid call center:
  - **In 2018, we answered 36,285 calls with an 88.35 percent call answering time and a 1.4 percent abandonment rate** (the State performance standards are 83 percent call answering time and less than 5 percent call abandonment rate) with nearly 100 percent of calls resolved during the initial call to MS
  - **In 2019, we answered 44,591 calls with a 91.25 percent call answering time and a 1.56 percent abandonment rate** (the State performance standards are 83 percent call answering time and less than 5 percent call abandonment rate) with nearly 100 percent of calls resolved during the initial call to MS.

> One of our valued members shared this information about a call to the MS department in January 2020: "Maddie was fantastic. I had a very positive experience in a very stressful time since my husband is dealing with a chronic disease. Thank you very much. We made an incredibly good choice in going with Aetna."

- Supporting the State's objective for enhanced coordination of care and access to services through our concierge model of MS support, offering immediate, direct linkage to care coordinators, clinicians with nursing and BH expertise, providers, and other medical and clinical staff for urgent clinical and crisis support
- Supporting the Department's objective for reduced fragmentation and seamless continuity of care by making certain our MS representatives are fully trained in topics customized toward the unique needs of West Virginia members eligible and enrolled in MHT, WVHB, and WVCHIP Medicaid services including but not limited to the following:
  - **MHFA**

  - **Trauma-informed care and West Virginia's trauma transformation learning collaborative**
  - The unique needs of West Virginia members eligible for MHT, WVHB, and WVCHIP Medicaid services
  - Access to immediate crisis and clinical support
  - Person- and family-centered approaches
  - Support and linkage to community resources that address issues which typically impact access to care such as food banks, transportation, housing support, and social support
- Augmenting our West Virginia call center with the around-the-clock availability that supports the Department's objective for seamless continuity of care through after-hours access to our fully trained, MS representatives in our 24/7/365, national MS department

We are compliant with the Model Service Provider Agreement for State Fiscal Year 2020 for assuring our call center is open for at least eight hours a day. West Virginia's local MS hotline is in **Charleston, West Virginia.** We currently operate via one toll-free number from 8:30 a.m. to 5 p.m. Eastern Time, Monday through Friday and on select State holidays. Our toll-free phone number can be found on each member's ID card, in our member handbook, on our website, and in our member welcome materials. Our members have seamless, 24/7/365 access to Member Services—available, reliable resources to meet West Virginia member needs. After normal business hours, we route MS calls to our national call center, a centralized call center in Phoenix, Arizona. The national team assumes the role of the West Virginia-based MS representatives after hours. In a seamless redirection of call routing with no interruption, members speak with a well-trained, specialized team that, to the member, would be no different than service provided during normal business hours. Our national MS staff are trained in West Virginia MHT, WVHB, and will be on WVCHIP program-specific covered services, State-specific regulations and policies, Department requirements, and have access to the same electronic tools used by the West Virginia-based MS team. **Members receive the same exemplary service with consistent messaging and information.** For calls requiring clinical support, the national MS representatives have access to the Health Information line and BH Crisis Services

hotline; the MS representative completes a warm transfer of the member so we can address their clinical issues.

[MS018] Warm Transfer Protocols for Member-facing Departments and Subcontractors

Our MS hotline call routing provides timely, accurate responses to member inquiries. Members use one telephone number to access our support. When they call the toll-free MS hotline, our interactive voice response (IVR) system routes them appropriately by allowing members to choose the department that best meets their needs. Members initially hear an interactive voice prompt welcoming them to Aetna and advising calls are recorded and monitored for quality assurance purposes. The remaining prompts are as follows:

- Press number one if you have a mental health need or are experiencing a crisis
- Press number two for eligibility and benefits information
- Press number three for member ID card or welcome packet
- Press number four if you would like to speak to the CM department
- Press number five if you would like to speak to a health care professional on the Health Information line
- Press number six for transportation
- Press number seven for more options such as updating personal information, reporting fraud and abuse, or requesting interpretation services

If a member selects number two for member ID card or welcome packet, our prompts offer additional options, categorizing calls by need such as medical, vision, dental, pharmacy, and mental health or substance abuse needs. Whenever necessary, members have the option to return to the main menu. Members who identify the need for interpreter services via our interactive voice prompt or identify a need for a non-English prevalent language during the call receive appropriate assistance through MS representatives who immediately engage our oral interpretation services. Members who are deaf or hard of hearing receive appropriate assistance through MS representatives who immediately engage our TTY/TDD.

Our telephone management system supports seamless transfer of calls (three-way and other conference call capabilities) between our MS department and all other internal departments including Care Connections team, our Member Advocate, Member G&A staff; we also warm transfer members to providers, subcontractors, the Department and other entities, and our BH Crisis Services and Health Information hotlines. MS representatives also use three-way conference calling functions when assisting members to schedule appointments, connect with community resource agencies such as food banks, or coordinating with other payers. MS representatives are trained on how to use the telephone management system and practice making three-way calls during new-hire orientation. The system supports three-way conference calling across all departments such as when hotline staff needs to consult with a member's care coordinator or member advocate. MS representatives complete a warm transfer when making three-way calls. **[MS018]** For example, once a representative properly identifies the member and their concerns, the representative will call the third party and introduce themselves and the member and provide a brief explanation of the reason for the call. Representatives will stay on the line with the member or caller until the reason for the call is fully addressed, assuring single-call resolution and that the member's needs are fully met. Our MS representatives always request a callback number in case of technical difficulty.

Our MS representatives have resources available and strive for **single-call resolution,** supported by our P&Ps. Representatives use three-way calling, warm transfer protocol, and call escalation procedures to support resolving each member's concern during the initial call. When a member calls, the representative gathers HIPAA personally

One of our valued members shared this information about a call to the MS department in January 2020: "The representative, Bob, I just spoke to was quite helpful, and provided everything I needed in one phone call. I really appreciate his customer service."

identifiable information including the member's name, ID number, if known, date of birth, and the reason for the call. If the representative is not able to resolve the member's concern, they escalate the call to a senior MS representative or supervisor by notifying them via instant message and completing a warm transfer including explaining to the member that they are seeking assistance to immediately resolve the concern. MS representatives are trained on techniques such as de-escalation, active listening, and showing empathy to aid in single-call resolution. **[MS018]**

If single-call resolution is not possible, Aetna's electronic call documentation system allows for effectively tracking and resolving concerns when follow-up calls are indicated. If a caller is inquiring about a previously reported concern, the MS representative reviews the call documentation, determines if they can resolve the issue, or escalates to a senior or supervisory MS staff. MS representatives review call documentation daily, assuring all member and caller follow-up needs are met. We track and monitor turnaround time for member requests closely. **[MS025]** The MS director evaluates reports to monitor timely resolution and to reassign open records or allocate additional resources, assuring all follow-up calls are completed. Our Aetna internal goal is to complete all calls not resolved in the first or initial call within 24 hours of that same initial call. What we have learned through analysis of calls that are not resolved on the initial call, is that most are members who require transfer to other departments such as to the Care Connections team. This trend informed new procedures, assuring continuity of care. Our MS supervisors follow up with care managers on all calls not resolved during the initial call, coordinating efforts to make sure there is timely response and issue resolution. Our call records indicate if an outbound call is needed to inform the member of the final resolution. MS staff complete outbound calls and close the call record when all follow-up is completed.

At Aetna, our **Common Purpose** comes to life through our ability to seamlessly link members and callers to other Aetna departments, crisis support, and community resources, aspiring to single-call resolution—addressing each member's needs the first time they call. **Figure 6.5.1-11** illustrates our MS representative as a direct connection to the assistance and services our members need. Our MS representatives help members before connecting them to subcontractors, other departments such as the BH Crisis or Health Information lines,, or community resources .

Figure 6.5.1-11: Easy-to-Access Services for Members
Aetna's MS representatives can support members in a variety of ways, including connecting them to essential services.

We are equipped to handle the first steps of inquiries and questions on behalf of our Care Connections, G&A, and member advocate, allowing for immediate resolution for callers if needed. For example, if a legal guardian calls to request an internal appeal or State Fair Hearing, we can explain the procedures for both and advise of member rights before linking with the Department staff; or if a member calls with questions related to Care Connections program services, our representative determines whether there are any other questions they can answer, such as locating a specialty provider, prior to offering a warm transfer. MS representatives provide appointment assistance with providers at the member's request. If requested, the representative completes a warm transfer to the provider and assists the member in securing a

date and time/scheduled appointment based on the provider availability and member preferences.

MS staff are trained and have desktop procedures that guide on how to identify emergencies and medical and mental/BH triggers and complete a warm transfer to care managers or clinicians with nursing or mental/BH expertise. Representatives initially offer concierge support using skills learned in training on **Mental Health First Aid, Trauma-Informed Care, and the unique needs of West Virginia members.** If a member expresses or describes emergency needs, the representative completes a warm transfer to 911 emergency services and documents accordingly, including notifying the Care Connections team for members enrolled. If a member expresses or describes mental health needs or a crisis such as struggles with depressed mood, the representative responds compassionately while sending an instant message to the Care Connections distribution list indicated in the crisis call desktop procedure. If the member is enrolled in a Care Connections program and it is during business hours, the representative completes a warm transfer to an available Care Connections staff. The representative keeps the member engaged on the phone, explaining the steps being taken and initiating the warm transfer. If the member is not enrolled in the Care Connections program and the concern indicates a need for immediate mental/BH crisis support, the representative follows

One of our valued members shared this information about a call to the MS department in January 2020: "My representative was very, very helpful because I did not feel well. I felt like I was sick. I was very nervous, and she helped me. She took the time to call (the) Prior Authorizations (department) and she also called my pharmacy, got back to me, and made sure she had helped me properly. She gave me all the proper information and I felt a lot better. I felt comfortable because I suffer from depression every day and she just made me feel so comfortable. I just want to tell her I really, really appreciated her, because you just do not know what people are going through when they call. She really took the time to really help me not knowing me and I just want to tell her I appreciate her. Thank you."

the same desktop procedure and initiates a warm transfer to clinicians on the BH Crisis Services hotline.

Our Care Connections team offers a comprehensive, integrated program and staff—licensed social workers and counselors, clinicians with nursing expertise, peer support, expert clinicians in chronic disease, substance use disorders, and specialty areas, and medical directors—available during business hours to handle incoming transfers from our MS department. The Care Connections team is trained extensively in the unique needs of West Virginia members, and possesses the education, experience, and skill to resolve our members' clinical or crisis concerns.

On both the BH Crisis Services hotline and the Health Information line, clinicians can complete warm transfers of members to their assigned care manager during business hours when care coordination is needed, or when a change in the member's needs requires reassessment or a new referral. The health care professional documents in the same electronic CM system, creating an alert for the specific assigned care manager to follow up on a member's individual service plan—a critical resource that benefits members by providing **seamless continuity of care.**

Our BH Crisis Services and Health Information lines use the same telephone system and call technology as our MS department. The hotlines use an IVR system that routes members to the appropriate staff. Members whose preferred language is Spanish can choose the option to route to a Spanish-speaking clinician; if the call is routed to a clinician who speaks English only, the clinician can immediately engage our 24/7/365 interpretation services at the onset of the call. The clinician receives a whisper tone indicating the caller is Spanish-speaking and sees a

written readout on the face of their telephone notifying that support is needed for a Spanish-speaking caller. If all clinicians are currently assisting other callers, the system places the caller on a brief hold and connects the member to the next available clinician in the call queue.

[MS019] Member Services Training

Aetna's dedication to our **Common Purpose** means educating, empowering, and deploying a highly skilled workforce. This approach is part of Aetna's mission to recruit and retain a local, West Virginia workforce that operate with integrity and transparency. Our MS department's exemplary training program starts with hiring and staffing experienced, expert customer service professionals who handle a wide variety of functions and responsibilities, assuring an optimal member experience. We staff our call center based on the unique member needs of West Virginia including membership estimates, historical data on local and other market call volume trends, and Department-required performance standards. Our call center staffing includes comprehensive forecasting methods implemented collaboratively with our national Workforce Management department and includes per member per month (PMPM) call rates, average call handling time, time needed for training, meetings, and lunches/breaks, and other factors. To determine our staffing projections we forecast, on a monthly basis, for future months. We make staffing adjustments hourly, daily, and weekly, as call volume needs change. Since there is historically an increase in calls during new business implementation, we forecast at higher PMPM rates and longer call handling times to account for an increase in calls from new members. During that

> One of our valued members shared this information about a call to the MS department in January 2020: "The representative that I just talked to on the phone, she was very, very polite, she was courteous, and I definitely enjoyed her customer service skills. Overall, she was prompt to answer my questions, she made sure that everything I needed was addressed. Today has been kind of an annoying day and she helped me get through it, so I appreciate everything and the training she has received from Aetna."

timeframe, typically three months, we make certain additional staff are available to answer calls and meet our new members' needs. Our current member-to-representative ratio is less than 10,000:1. **[MS021]** This ratio would change with new membership such as WVCHIP.

We proactively hire and use fully trained overflow staff from other call centers and adjust call queue skills to make certain our call center performance is within Department requirements. We will train all existing West Virginia MS call center staff on the changes to the West Virginia MHT, WVHB, and on the WVCHIP contract, assuring an adequate number of representatives to handle incoming calls and concerns. **[MS019]** Our staffing approach is agile by design, as we analyze past call volume data and call center performance. For example, due to an influx in membership and calls, we can adjust swiftly to meet the needs of our members, as described in Call Center Tracking, Monitoring, and Performance section.

Aetna **leverages our national training expertise and local experience to incorporate the needs of West Virginia members into our comprehensive training processes** for the MS staff. MS staff complete three weeks of classroom, online, and interactive training during new-hire initial training, described in **Table 6.5.1-2**. **[MS019]** We accommodate diverse learning styles by using multiple training modalities and exceed industry standards with a student-to-trainer ratio of 15:1 or lower. The staff practice responding to scenarios that focus on concerns they are likely to receive from West Virginia members and existing supervisory staff role-play responding to the scenarios. Initial training includes direct oversight of their performance through job shadowing and observation with a preceptor before they have contact with members. Preceptors demonstrate how calls/emails are handled, how to operate the telephone, email, and documentation system, how to navigate resources, and best practices for resolving

members' concerns. After observing the preceptor, the representative takes calls with the preceptor observing and coaching on live calls and emails. Training is reinforced through monthly call/email audits that include review of topics such as greeting, ID, telephone etiquette, call servicing, documentation, and West Virginia program requirements. Supervisors complete audits, review scores, and identify areas for improvement with staff, monthly, or more frequently depending on need. Additionally, **our entire MS department received training in Lean Six Sigma**—an approach for efficient problem-solving that creates value for our members and the State. Staff members are trained to solve problems in ways that are efficient and effective, allowing for an exemplary member experience.

Aetna uses multiple, ongoing training approaches to reinforce content learned. Staff sign acknowledgement of understanding forms and participate in daily debriefs with their supervisors Training is provided by the senior representatives during bimonthly staff meetings and representatives have quarterly training on quality initiatives such as documentation and exemplary member experience practices and culturally competency. They receive on-the-spot, real-time support from senior representatives through chat and instant messaging and engage in annual classroom training and online webinars. We review and update the training curriculum annually or as programs change to follow Department requirements, state and federal laws, and West Virginia regulations.

One of our valued members shared this information about a call to the MS department in January 2020. This call was with a newly hired representative who recently completed his shadowing with a preceptor who has been employed with the Aetna MS department since the West Virginia call center went live: "John[9] was very nice, helpful, and professional. He was very good to me and talked to me about my situation which I was very upset about. Thank you, Aetna, for helping me."

[9] Not his real name

We update and provide additional trainings as needed when we have new systems that require navigation, when West Virginia programs are updated, and when trends indicate a need for additional training. For example, our Service Improvement Committee recently redefined how we capture provider dissatisfaction to make sure our complaint resolution is actionable. As part of this effort, MS representatives were trained on the new definitions and procedures for documenting and tracking complaints. We incorporate feedback gathered from automated surveys, quality satisfaction surveys, and the Member Advisory Committee into our training curriculum. Representatives receive training reminders and have access to e-learning tools (e.g., online, self-paced training modules, search engines, desktop references and guides, and written training materials). Aetna addresses training for MS during new-hire onboarding, monthly department trainings, and annual refresher trainings on items such as the code of conduct, Healthcare Insurance Portability and Accountability Act (HIPAA), protected health information, fraud, waste, and abuse, and record retention.

Training topics include **MHFA, trauma-informed care**, ongoing BH training via Relias Learning Management System, technology-based training via the Aetna Learning and Performance Center, and any other Department-specific training. Aetna designates time off the phone for representatives to complete scheduled training. **Table 6.5.1-2** outlines training topics, curriculum description, and the training timeline.

Table 6.5.1-2: Member Services Training Curriculum [MS019]

Training Topic	Training Curriculum Description	Training Timeline/Frequency
Covered and VAS	Overview of covered services including physical, mental/behavioral, and preventive services, role of the PCP and assignments, how to access services, how to provide appointment scheduling assistance, out-of-network services,	New-hire initial training and as program changes occur; monthly training on mental/BH services; current staff upon program implementation

Training Topic	Training Curriculum Description	Training Timeline/Frequency
	resources available to members (e.g. Aunt Bertha, Unite Us)	
Service Excellence	Overview of Aetna service excellence standards, call center conduct and expectations, soft skills, use of phone, instant messaging, website, and internal databases and systems, problem-solving, taking and responding to complaints	New-hire initial training
How to Manage Crisis and Clinical Calls	Overview of Health Information line and BH Crisis Services hotline; review of procedures for when and how to refer; instructions on how to access both; warm transfer and escalation protocols; how to inquire about life-threatening illnesses; how to access 911 and emergency services; triggers for medical or mental/BH crises; warm transfer and escalation protocols; using principles identified in Mental Health First Aid and trauma-informed care with callers	New-hire initial training
Members with Special Healthcare Needs	Overview of members with special healthcare needs, outreach and transition planning, members with chronic conditions, Mental Health First Aid, and trauma-informed care	New-hire initial training, as program changes occur
Privacy and HIPAA	Overview of HIPAA, privacy regulations, appropriate use of sharing information, State and federal laws, member rights and protection, Medicaid requirements, confidentiality, ethical code, HIPAA safeguards and compliance, and preventing fraud, waste, and abuse	New-hire initial training, annually
Abuse, Neglect, and Exploitation	Description of State mandated reporting requirements, policies, and required forms	New-hire initial training, annually
Member Advocacy	Overview of member advocate role and responsibilities, complaint and internal appeal process, and State Fair Hearing process	New-hire initial training, as program changes occur

[MS020 – MS026] Customer Service Performance

Aetna has superior call center monitoring practices that result in exceeding the Department call center performance standards. We use local and integrated telephone solutions to support members' needs quickly and efficiently. For example, during times where call volume may increase, MS supervisors and our Workforce Management department monitor telephone performance and call routing in real time and address calls waiting in the queue, making sure that every West Virginia member's call is handled efficiently. Call monitoring trends are used to project future staffing levels, assuring our MS department is sufficiently staffed to respond to member needs. All calls are recorded and available for quality monitoring and 1:1 coaching with our MS representatives. We review calls for service excellence informed by our **Common Purpose**, accuracy of information provided, and adherence to policies via our call analytics, quality audit processes, and satisfaction surveys

Our enterprise telephone system includes a suite of tools enabling MS supervisors, managers, and our national Workforce Management team to respond to daily, weekly, monthly, and seasonal trends in call volume. **[MS020]** We use these tools to track and trend performance including service levels such as call answering time, call abandonment rates, and single-call resolution. **[MS022, MS023, MS024]** We adjust staffing accordingly, anticipating future call volume (i.e., forecasting)—**a quality-driven process** that allows us to meet West Virginia MHT, WVHB, and WVCHIP members' needs and consistently exceed the performance standards established by the Department. Forecasting data from both our West Virginia and Arizona call centers is used to determine staffing and create schedules with enough staff to address member needs and not only satisfy but exceed the Department performance standards.

Aetna's dedicated Workforce Management staff uses tools that allow for immediate response to changes in telephone call volume. In the case of an emergency with increased call volume such as a natural disaster, our business continuity planning includes immediate connection to West Virginia trained MS representatives from other Medicaid plans. This occurs quickly and seamlessly, as cross-trained representatives are already skilled, and indicated in our call queues and enterprise telephone system as West Virginia-trained and ready to accept a call. When call volume increases, calls are automatically routed to additional trained representatives in the West Virginia call queue. Aetna also offers high-performing MS representatives the opportunity to work at home. Should localized situations affect the primary office (i.e., flooding, electrical outages, etc.), our work-at-home staff **support business continuity without service interruption.**

Aetna monitors the quality and accuracy of calls through our quality management processes including speech analytics and satisfaction surveys. All calls are recorded for quality assurance and stored in our electronic database. Aetna has designated quality analysts who review, at minimum, four calls per month per representative, which is documented in the electronic, phone recording system. MS representatives have access to their individual quality audits in the electronic phone recording system and can access the call and feedback from the quality analyst at any time. Senior MS and supervisory staff do a formal review of call audits and feedback, and provide coaching, constructive feedback, and kudos to representatives as needed, scheduling 1:1 direct supervision where required. In addition to post-call member surveys, we measure other areas through call analytics such as customer satisfaction and first-call resolution. We also use speech analytics to identify issues. Supervisors use this technology to determine opportunities to enhance our policies, procedures, and training, making our

Common Purpose come to life. For example, we often find opportunities to improve our processes and procedures through our quality management, call analytics, and satisfaction survey processes. By listening to audited calls, we have learned that when members call with questions about their PCP, we have an opportunity to educate them about locating PCP information using our secure member portal or mobile application on their smartphone. We have trained our representatives to provide this education at each available opportunity and added to our call audit checklist, enhancing our representative's ability to provide service excellence.

Aetna has written procedures that guide and support effective remediation of call center performance. **[MS026]** Our procedures inform our MS call center leadership who are responsible for remediation and who evaluate trends, monitor call queues, and implement remediation strategies to make sure we achieve service excellence. Our West Virginia MS leadership utilize and implement the following strategies depending on the circumstances impacting performance when remediation is required:

- Collaborating with Aetna Workforce Management department to evaluate trends, review staffing patterns, and adjust call center forecasting, determining the adequate number of representatives to handle the volume of calls at required performance thresholds
- Adjusting meetings, supervision, or trainings to lower, call volume timeframes
- Offering additional shifts and, when necessary and within policy, overtime to make sure we have proper coverage
- Closely monitoring adherence to breaks, lunches, and call documentation timeframes
- Training additional representatives on high volume calls and adding representatives to the applicable call queues when call volume dictates; add leads and supervisors to call queues during high volume timeframes
- Assuring paid time off P&Ps reflect the needs of the call center and high call volume days/times
- Consulting with department manager or plan leadership if temporary staff are needed
- Assuring timely and proper training, coaching, and skill level

Aetna demonstrates our commitment to West Virginia through superior performance in customer service standards identified by the Department. We have exceeded Department performance

standards in the last two calendar years, taking high volume of calls with nearly **100 percent resolution the caller's issue during the first, initial call (single-call resolution).** We adhere to the Department's requirements for customer service performance standards reporting in our Medicaid program and will continue to adhere to all reporting requirements identified for West Virginia MHT, WVHB, and WVCHIP program. **Table 6.5.1-3** outlines our most recent performance for 2019, year-to-date.

Table 6.5.1-3: Member Services Call Center Performance Standards [MS022 – MS023, MS024]

Calendar Month	Calls Answered	Service Level, or Calls Answered in 30 Seconds (State Requirement 83%)	Abandonment Rate (State Requirement <5%)	Single Call Resolution[10]
2018	36,285	**88.35%**	**1.40%**	**99.30%**
2019	44,591	**91.35%**	**1.56%**	**99.34%**

[10] Single, or first call resolution, is defined as properly addressing a member's need the first time they call, thus eliminating the need for a return or outbound call back.

6. Enrollment and Disenrollment

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Enrollment and Disenrollment (ED) as part of their bid. The Vendor's narrative response should not exceed 25 pages.

Aetna's national Medicaid organization has over 30 years of continuous, active participation in Medicaid managed care. Aetna's goal is to make member enrollment as seamless as possible by leveraging our extensive experience managing member enrollment and disenrollment in our health plans across the country. Our Enrollment Services department, and our enrollment and disenrollment information system and related application capabilities are structured to accommodate the requests and requirements of West Virginia Bureau for Medical Services' (Department) Medicaid Managed Care program, which maintains the sole authority in determining eligibility and enrollment membership.

Policies and Procedures Regarding Member Enrollment

ED001	The Vendor should describe its policies and procedures regarding enrollment of members, including the processing of 834 enrollment files.

Aetna has a successful ten-year history working with the Department using Health Insurance Portability and Accountability Act-compliant Benefit Enrollment and Maintenance (834) transactions to process and reconcile member enrollment data. We will follow our current, documented, and Department-approved policies, procedures, and processes for receiving and processing enrollment data to manage our Mountain Health Trust, West Virginia Health Bridge, and West Virginia Children's Health Insurance Program (WVCHIP) membership.

Member Enrollment and Enrollment File Processing Capabilities

Our member enrollment procedures and related technology applications are constructed to accept and process the eligibility data contained in the 834 transactions, which we load into our Enrollment Manager application. As illustrated in **Figure 6.6.1-1**, our Enrollment Services

department team identifies, researches, and validates exceptions, making the appropriate updates in our core information system and notifying the Department as required. We configured our Enrollment Manager application to extract all data elements in the Department's 834 file.

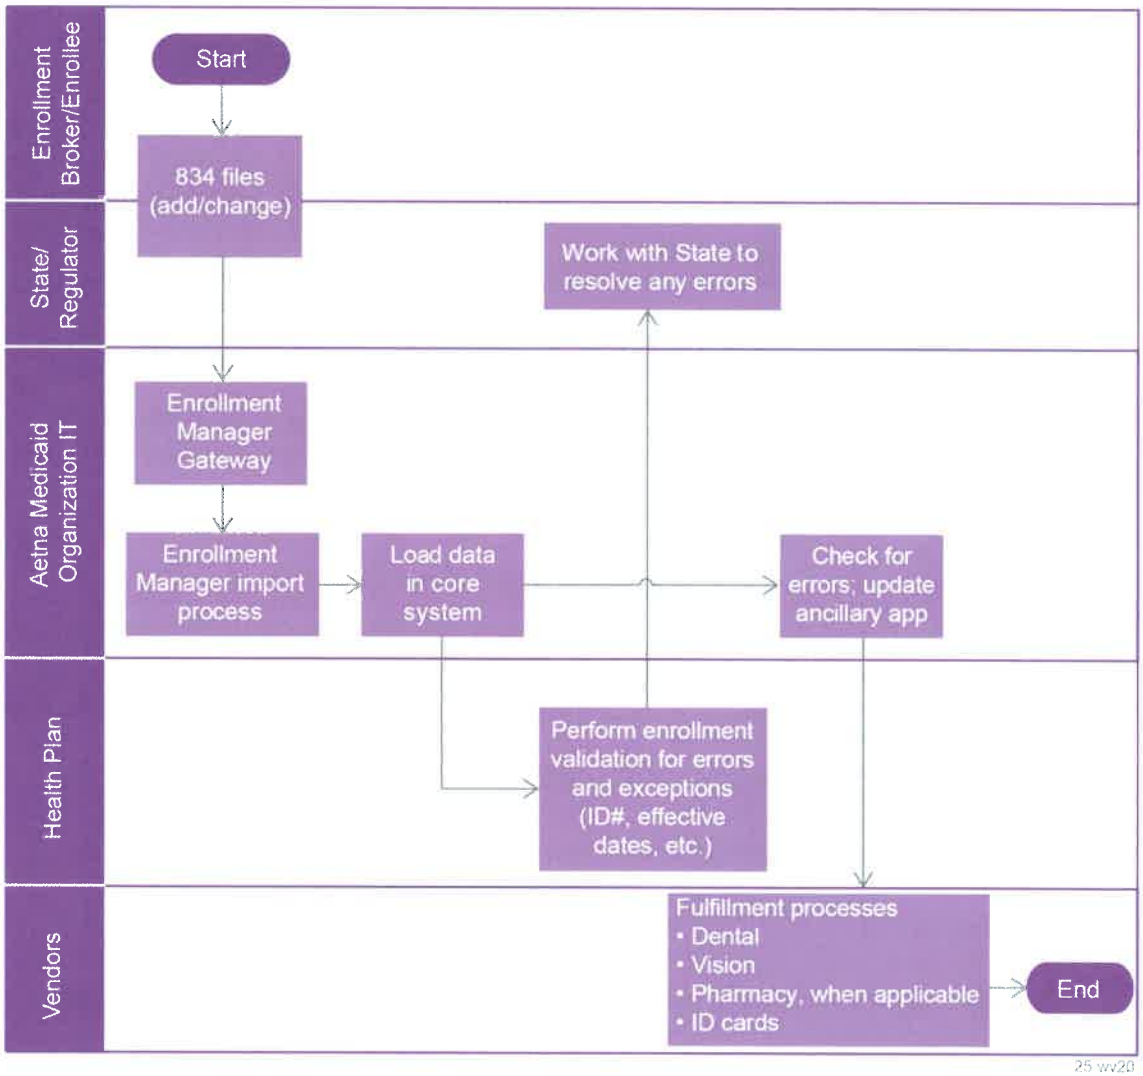

Figure 6.6.1-1: 834 Enrollment Process
This illustration shows our data quality controls and the flow of enrollment information from the member through to our vendors.

The following narrative describes our member enrollment policies, processes, and procedures.

Our Enrollment Services department team administers consistent processes for tracking

changes in enrollee eligibility and resolving related discrepancies. These processes include a review of monthly Health Insurance Portability and Accountability Act (HIPAA)-compliant benefit enrollment and maintenance (834) transactions to process and reconcile enrollment data as well as employing standard, documented, and approved processes and procedures for receiving and processing enrollment data.

Our Enrollment Manager technology application is designed to initially load and to subsequently update enrollment information that we receive from the Department. We will use the data contained in the Department's enrollment data files to manage Mountain Health Trust, West Virginia Health Bridge, and WVCHIP enrollee eligibility, and to authorize services and process claim transactions. We follow a set of enrollment policies and procedures to help us identify members from the 834 file who require immediate services and service coordination, and to identify opportunities to engage new members and maintain their continuity of care. Our enrollment policies also stipulate that covered benefits and medically necessary services are available immediately upon enrollment for every individual who is enrolled in our plan.

In July 2019, a West Virginian needing cancer care who required immunotherapy within 24 hours was accidentally excluded on the monthly 834 enrollment file we received from the Department, resulting in him not being enrolled in Aetna's systems. Upon notification from the Department, our Enrollment, Member Services, and Care Management teams all worked with the Department and the member to ensure the member was enrolled and that they received their scheduled treatment without interruption.

We follow these same enrollment policies and procedures to reconcile enrollee eligibility information between the 834 file and the enrollee files in our claims management system, including notifying the Department within five business days when we identify changes to the enrollee's circumstances that may affect the enrollee's eligibility status (including changes in the enrollee's residence, such as out-of-state claims, or the death of the enrollee).

We continually process 834 files and monitor the accuracy of our enrollment file contents against the Department's enrollment data. Our ability to maintain current and accurate enrollee data is critical to administering timely and accurate premium payment processing as well as accurate and appropriate eligibility verification and claims processing.

Our Enrollment Services department fully processes the 834 change files to our claims processing system within the required 24 hours. This effort includes both our automated and manual processing of 834 data to our claims processing system. Additionally, our Enrollment Services department fully processes 834 reconciliation files to our system within the required five business days.

When we complete our internal processing of 834 data, our Enrollment Services department team generates a set of 834 change and reconciliation extract files and distributes these files to our vendors within 48 hours from the time we complete our 834 change and reconciliation file processing efforts.

Please refer to **Table 6.6.1-1** for a summary of our West Virginia and national enrollment processing volume over the preceding 13-month period, which demonstrates our ability to load and manage 834 files for Medicaid programs ranging from a relatively few number of members to programs with large volumes of members (December 2018 and December 2019 are included to depict year-to-year results).

Table 6.6.1-1: 834 File Processing

Plan (Inclusive of December 2018 to December 2019)	File Type	Total 834 File Count	Total 834 Insured (INS) Count
All Medicaid Plans	Internal Change	11,515	13,851,976
All Medicaid Plans	Internal Reconciliation	684	35,691,185

Plan (Inclusive of December 2018 to December 2019)	File Type	Total 834 File Count	Total 834 Insured (INS) Count
Aetna West Virginia	Internal Change	13	5,889
Aetna West Virginia	Internal Reconciliation	13	1,738,313

Enrollment Electronic Data Interchange (EDI)

Aetna's data management policy requires we follow a secure and proven process for establishing and maintaining all EDI interfaces. We utilize a secure file transfer protocol server to handle inbound and outbound file exchanges. When establishing a new EDI interface, we collaborate with the Department and our trading partners to exchange key information required to establish the secure connection for exchanging files on both sides of the exchange.

To verify successful inbound and outbound file transmission, we employ an extensive combination of automated processes, which provide end-to-end validation to ensure successful exchange of inbound and outbound files and to alert our production services of any file transmission-related issues.

To augment these processes, our Production Support team uses a proprietary dashboard that provides an end-to-end view of a file's status through each intake step. This process identifies new member enrollments, disenrollments, discrepancies, and file fallout management, among other elements.

In addition, we configure our file monitoring software to automatically alert our Enrollment Services team in the event of a failure at any point in the file transmission process, which allows our production support to immediately research and resolve the file transmission failure.

Member 834 Enrollment File Import and Loading Procedure

We initiate our enrollment file import and loading procedure when we receive notification from the Department or its designated vendor for Mountain Health Trust, West Virginia Health Bridge, and WVCHIP enrollees via a secure File Transfer Protocol or electronic media. Our policy requires this notification occur as soon as possible following the Medicaid Management Information System (MMIS) cut-off date for the month, but no later than the last business day before the end of the month.

We configure the rules of our Enrollment Manager application to extract all data elements in the Department's 834 enrollment file, including waiver type of assistance, tiers type of assistance codes, rate code service groupings, and the member's effective and termination dates. Our workflow procedure also makes certain that we process any retro-enrollments or retro-termination dates in the system correctly. If an enrollee's benefit status changes, we create a new enrollment time span with correct effective and end dates. Our policy requires that these data elements trigger additional benefit changes, which we cascade to all our systems to ensure an enrollee's covered benefits match their eligibility type and benefit coverage categories across our applications, such as the pregnancy status of a female enrollee, beneficiaries eligibility for supplemental security income, WVCHIP enrollees, or individuals who are eligible for services covered by the Medicaid expansion population of adults, ages 19 to 64 category. We also send applicable member eligibility files to our dental and vision vendors, and in the past, our pharmacy benefit manager.

PCP Selection and Assignment Process

We provide freedom of choice for our members. If a member does not select a PCP with the enrollment broker during the choice selection period or at the time of initial enrollment, Aetna assigns a PCP using our comprehensive rules-based PCP assignment product, AssignADoc (AAD), as illustrated **in Figure 6.6.1-5**. AAD incorporates a number of key functions including geographical-based PCP assignments based on the member's location, language needs, and cultural needs, as well as any prior PCP relationship (if known). Members may contact our Member Services department to request a PCP change. Members may also submit PCP change requests on our secured Member Services website or mobile application.

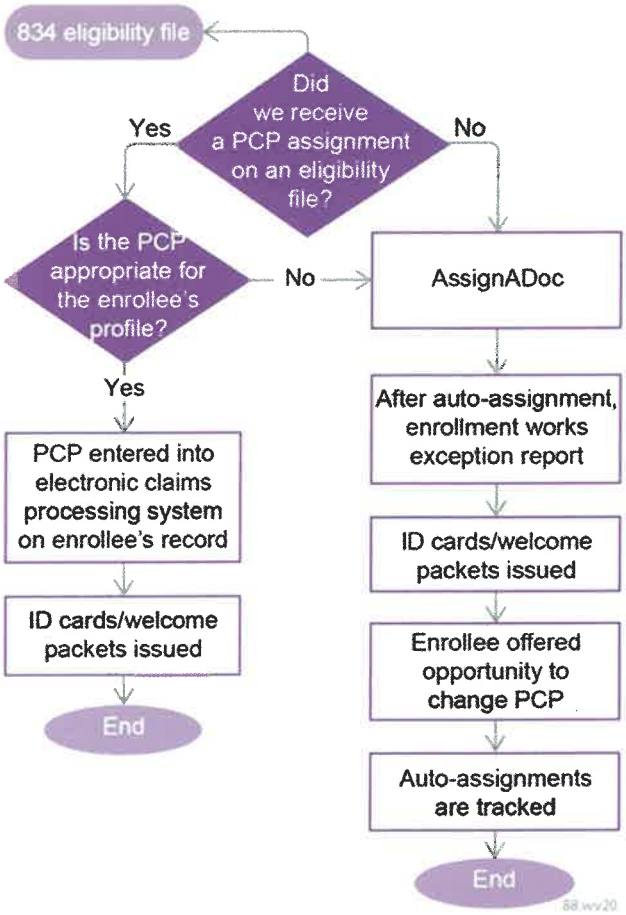

Figure 6.6.1-5: PCP Assignment Workflow
Aetna works closely with members to identify a PCP that matches their individual needs.

Member Enrollment File Validation and Reconciliation Process

Once Aetna receives the 834 files, we compare the member records to the existing data within our current enrollment records utilizing our Enrollment Manager Application. Each member record is reconciled through our highly configurable proprietary rules engine that considers **24 unique combinations of demographic data** that evaluates the following scenarios:

- Split, overlapping, duplicate, and consecutive enrollment segments
- Member matches
- Needed consolidation and transformation of the member information

- Proper updates to demographic, enrollment benefit plan assignments, PCP assignments, member classifications, and other critical information

Overall, this application is configured to administer our validation rules, balancing rules, and applicable PCP auto-assignment rules. We use the following hierarchy to determine member eligibility:

- Members who are continuously enrolled maintain the current PCP unless the managed care organization (MCO) is notified of a PCP change and a subsequent updated occurs in our system.
- If a member was previously disenrolled due to loss of eligibility but gains eligibility in less than two months, we can seamlessly bring the member back into our plan, assigning the member back to their same PCP and providing continuity of care.
- For newly enrolled members, the state's enrollment broker assists members by selecting currently credentialed Aetna PCPs and that information is sent on the 834.
- For those members who have not designated a PCP as indicated on our 834, our PCP auto-assignment algorithm applies a set of hierarchical business rules such as the member's physical ZIP code, family member PCP assignment, and prior PCP assignment using a look-back rule to support a member's continuity of care.

Please refer to **Table 6.6.1-2** for a summary list of the procedural actions we take to process and reconcile the monthly 834 enrollment and 820 capitation files we receive via the Department's eligibility contractor. Our enrollment processing and reconciliation rates consistently exceed the Department's accuracy and timeliness requirements.

Table 6.6.1-2: Enrollment and Capitation File Processing Procedures

Step Number	Procedural Action Taken	Description	Who Acts
834 Enrollment Change Files			
1	Receive from a secure file transfer protocol site and download 834 file from the Department's enrollment broker.	The files contain enrollee changes, including enrollee additions, terminations, and demographic changes.	Aetna Information Technology department
2	Process 834 change files.	All 834 member change files are processed within 24 hours of receipt (24/7/365). The Enrollment Services department is notified when the process is complete.	Aetna Information Technology department

Step Number	Procedural Action Taken	Description	Who Acts
3	Reconcile enrollee eligibility information between the 834 change file and the Aetna operating system.	Any data received that cannot be matched to the Aetna operating system or cannot be updated is worked manually by staff within 24 hours. Staff identifies, researches, and validates errors and exceptions, updating the system and notifying the Department as required.	Aetna Enrollment Services department
834 Enrollment Reconciliation Files			
1	Receive from a secure file transfer protocol site and download monthly 834 reconciliation file from the Department's enrollment broker.	The files contain the full enrollment information for the membership, including the Mountain Health Trust, West Virginia Health Bridge, and WVCHIP eligibility period, physical health MCO coverage, behavioral health MCO coverage, and other enrollee demographic information. There is only one record for each Mountain Health Trust, West Virginia Health Bridge, and WVCHIP enrollee (the most current) where the enrollee is eligible the first of the following month.	Aetna Information Technology department
2	Process the monthly 834 reconciliation file.	The monthly reconciliation file is processed within 24 hours of receipt. The Enrollment Services department is notified when the process is complete.	Aetna Information Technology department
3	Reconcile enrollee eligibility information between the 834 reconciliation file and the Aetna operating system.	Any data received that cannot be matched to the Aetna operating system or cannot be updated is worked manually by staff within 5 working days. Staff identifies, researches, and validates errors and exceptions, updating the system and notifying the Department as required.	Aetna Enrollment Services department

Step Number	Procedural Action Taken	Description	Who Acts
820 Capitation Reconciliation File			
1	Receive from a secure file transfer protocol site and download monthly 820 file from the Department's fiscal agent.	The monthly file contains payment detail for current and retro-membership as well as any manual adjustments issued by the Department's fiscal agent.	Aetna Information Technology department
2	Reconcile enrollee eligibility information between the 820 payment file and the Aetna operating system.	The monthly reconciliation file is created and identifies enrollment issues that result in financial discrepancies. Finance reviews the file and notifies the Enrollment Services department of eligibility discrepancies.	Aetna Finance department and Enrollment
3	Research enrollee eligibility discrepancies received from Finance against Aetna's operating system, the 834 file, and the Department website if needed.	Enrollment reviews the eligibility discrepancies, provides resolutions, and sends the resolutions back to Finance.	Aetna Enrollment Services department
4	Reconcile capitation between Aetna and the Department.	The Enrollment resolutions are reviewed by our Finance department and coordinates with the Department to resolve discrepancies in capitation.	Aetna Finance department

In situations where a member's enrollment information has not been sent to us on an 834 file or there is a discrepancy in the 834 data that prevents a member from accessing their care, we promptly contact and coordinate with the Department, so our systems reflect the most accurate member enrollment data. Aetna works with our providers to ensure 834 data-related enrollment discrepancies will not impact a Mountain Health Trust, West Virginia Health Bridge, or WVCHIP member's ability to access services.

Member Enrollment File Errors and Exceptions Resolution Process

After we complete the upload of the 834 data file to our system, our Enrollment Manager application produces an edit report of errors and exceptions we identified between the 834 data file and our enrollment file. Our Enrollment Services department uses this report to research and manually validate enrollment-related errors and exceptions against our enrollment business rules, such as processing of newborn accounts, validating the status of enrollees in nursing homes, or verifying enrollees who are now deceased (please refer to **Table 6.6.1-3** for sample of Aetna's error and exception business rules). We then apply our applicable enrollment policies to make the appropriate updates in our core information system and notify the Department as required. Our policy defines errors as 834 file records that do not process into our core information system and require manual review and reconciliation. In addition, we define exceptions as 834 file records that process in our core information system but require manual validation of the file processing changes.

Table 6.6.1-3: Sample Enrollment Error and Exception Business Rules and Resolution

Internal Reported Error or Exception	Error or Exception Reason	Aetna Action Taken
Newborn enrollee assigned multiple identifications (IDs)	Often the result of the enrollee being a twin	Verify each sibling in MMIS and update QNXT manually for each sibling.
Multiple open enrollments rejected	State MMIS or overlapping enrollment segments	Verify by reviewing MMIS for multiple enrollment segments and update QNXT manually.
Discrepancy in termination dates	Newborn termed within the 90 days of coverage	Verify by reviewing MMIS, resolving discrepancy and manually update QNXT.

Internal Reported Error or Exception	Error or Exception Reason	Aetna Action Taken
Unable to identify QNXT benefit	Often the result of a timing issue resulting from updates to records within QNXT	Often resolved through the subsequent 834 data load. However, if not resolved through the subsequent 834 data load, a manual review against MMIS will occur. QNXT is updated manually.
Discrepancy in enrollee name	Possibly enrollee had a name change and system updated	Verify by reviewing name in MMIS. QNXT updated manually.

If the 834 file contains insufficient member eligibility information, our Enrollment Services department uses the Department's online eligibility verification system to determine the correct member eligibility information. If any 834 file records cannot be reconciled in our core information system, using the 834 file and/or the Department's eligibility verification system, our Enrollment Services department generates a report of those file records and sends this report to the Department within 30 days. The Department then sends us clarifying information on the status of these 834 records.

We process the aggregated monthly reconciliation files using the same procedure and processes we use to manage the 834 enrollment files. We receive the monthly change file approximately the 25th day of each month and the full 834 enrollment file on approximately the last day of each month. Our Information Services department loads each of these files within 24 hours of receipt into our claims processing system. This process automatically updates our claims processing system with the most current member enrollment information. In addition, this process generates an error and exception report, which contains member file records we manually review and update as needed.

Resolving 834 Member File Discrepancies

Our goal is to make enrollment as seamless as possible for our West Virginia members by leveraging our extensive experience managing the enrollment process in all our markets. We perform a number of validated processes to resolve 834 member file discrepancies if an enrollee's enrollment file does not process correctly. Over the last few years supporting the Mountain Health Trust program, we have adopted the following activities to address these file discrepancies:

- We train our Aetna Member Services representatives to validate member enrollment-related terminations or gaps in coverage against the Department's enrollment system.
- If we identify an 834 member file discrepancy, such as through a vendor interaction, we send an expedited referral to our Enrollment team for resolution.
- Our Enrollment team utilizes their enrollment validation resources, as described above, to resolve discrepancies and to update our internal systems upon resolution of the discrepancy.

Member Enrollment Innovations

To provide greater efficiency and accuracy of enrollment record handling, we will be deploying artificial intelligence (AI) capability for our West Virginia plan to improve our eligibility file processing quality, to preserve data integrity, and to reduce manual intervention associated with analyzing and resolving these data issues. This AI-based solution will use anomaly detection, a technique used to identify unusual data patterns or enrollment data anomalies that do not conform to expected data patterns. When data anomalies are identified through this AI-based approach, the enrollment process is automatically paused, and we initiate a manual review to resolve the anomaly. The enrollment-related product capabilities include the following benefits from this AI solution:

- New enrollee with insufficient enrollment information
- Identify eligible benefit
- Enrollment termination
- Term/void by absence
- Enrollment benefit change: term/void and reinstate

Policies and Procedures Regarding Member Disenrollment

ED002	The Vendor should describe its policies and procedures regarding disenrollment of members, including processes for reconciliation of members against the monthly 820 capitation file.

Aetna has developed and follows a set of member disenrollment policies and procedures that have been approved by the Department. These policies and procedures, which are described below, include processes for reconciling members against the monthly 820 capitation file. Our disenrollment policy stipulates that we will not process a member disenrollment unless the Department, which has the sole authority to disenroll members, has directed or approved this action. Our process for reconciling members against the monthly 820 capitation file starts with downloading the monthly 820 file from the Department's fiscal agent using a secure file transfer protocol site. We then reconcile member eligibility information between the 820 payment file and our operating system. If we encounter any member enrollment issues that result in a financial discrepancy, our Finance department reviews the file and notifies our Enrollment Services department. Our Enrollment Services department then researches these discrepancies against our operating system, the 834 file, and the Department's website, if needed. Upon resolution of all discrepancies, our Finance department reviews the reconciled results and coordinates with the Department to resolve the capitation discrepancies.

Member Disenrollment Policy

Aetna complies with the Department's voluntary and involuntary disenrollment requirements. We instruct members, who wish to disenroll from our plan, to contact the Department to request the disenrollment. If a member contacts Aetna's Member Services staff to be disenrolled, we determine the reason for disenrollment and quickly facilitate a warm transfer, when possible, to the Department's enrollment broker to support any continuity of care issue(s).

Aetna advises members that disenrollment requests must be submitted orally or in writing to the West Virginia-designated enrollment broker. Aetna understands that a member disenrollment will become effective on the first day of the month following the member's disenrollment request and authorization by the Department.

Member Disenrollment Reasons

Members may elect to disenroll from Aetna with or without cause. For example, disenrolling without cause may occur when a member voluntarily chooses to change managed care organizations. Additionally, a member could disenroll without cause when the member seeks providers of services that occur concurrently and at least one of those providers is not enrolled or credentialed in the Aetna network, or when the member's PCP has left the Aetna network for another plan and the member has chosen to follow the provider to the alternate plan.

Conversely, a member may disenroll with cause based on one or more of the following reasons:

- Aetna does not cover the service based on the precedence of the covered services identified by the Department and does not refuse to cover the service based on moral or religious objections
- Member needs related services to be performed at the same time and:
  - Not all related services are available within the network, such as a service requiring complex case management with a particular center of excellence located in another state
  - The member's PCP determines that receiving the services separately would subject the enrollee to unnecessary risk
- Member cannot receive needed care in the Aetna network including for the following reasons:
  - Lack of access to services covered under the contract
  - Lack of providers experienced in dealing with health care needs

Aetna requests enrollee disenrollment due to the following reasons:

- Member is determined to reside out of the service area
- Member is determined to be an excluded population
- Member is determined to be deceased
- Member is determined to be incarcerated
- Continuous placement in a nursing facility, state institution, or intermediate care facility for individuals with intellectual disabilities for more than 30 calendar days
- Member is determined to have an excluded condition

Aetna does **not** request enrollee disenrollment due to the following reasons:

- Change of enrollee health status
- Enrollee's utilization of medical/behavioral health services
- Enrollee's diminished mental capacity resulting in difficulty to provide services with one exception: the enrollee's capacity results in serious impairment of Aetna 's ability to provide services to enrollees or other enrollees
- Enrollee exercises their right to file an appeal or grievance

Disruptive Member Transfer

Aetna will not initiate disenrollment of an eligible member.

Retro-disenrollment

Our Enrollment Services department runs a monthly report of retro-disenrolled members, capturing any claims paid data, and forwards that detail to the Claims department for possible recoupment.

Disenrollment Procedure

Under the direction of our chief operations officer, our Enrollment Services department is responsible, with the support of our Member Services and Information Technology departments, for maintaining current enrollee records, for confirming that enrollee disenrollment requests received on the 834 files are accurately processed and updated in our core information system, and for reconciling members against the monthly 820 capitation file, either manually or through electronic transmission.

Aetna's Enrollment Services department processes disenrollment requests confirmed with the Department, updating our core information system with the appropriate termination date. We remove members' eligibility from our core information system weekly or monthly via a secure electronic interface between the Department and Aetna. We complete reconciliation of enrollee disenrollment information as needed. All enrollee disenrollments become effective no later than the first day of the second month after the transfer/disenrollment was requested.

Policies and Procedures for Retroactively Enrolling Newborn Children

ED003	The Vendor should describe its written policies and procedures and protocols for enrolling newborn children of members retroactively to the time of birth and transferring newborn information to the Department for processing.

In addition to our extensive experience with standard enrollments, our enrollment procedure includes a robust enrollment process for identifying specialized populations, such as pregnant members from the rate code field in the enrollment file, and other populations such as newborn children. For example, when we receive a birth notification, we confirm the mother's eligibility and review related utilization management (UM) documents to verify the mother was pregnant. Upon the completion and validation of these steps, we enroll a newborn child retroactively to the time of birth into our claims management system with a temporary ID number consisting of the mother's ID number and a prefix of 'NB'. This step, in our procedure, ensures seamless processing of UM documents, ID cards, the member handbook, and claim payments. At this point, we notify the Department of the newborn child's birth to verify the newborn child's mom's income and to determine benefit coverage levels. When we receive the newborn child's records on the 834, our Enrollment Manager application is configured to match the newborn child member ID to their mother's member ID using their shared case number. Our application will store matching case numbers for family members so that they are all linked in our system, but each enrollee will keep their own unique identification number. Our Enrollment Services department uses an audit report to ensure all temporary newborn children IDs are reconciled and accounted for using the 834 file or working with the Department to validate eligibility. We report unmatched members to the Department monthly.

Our Enrollment Manager application utilizes a set of validated enrollee matching rules to ensure file records, including newborn children, are accurately matched to existing records in our system when processing 834 files (please refer to **Figure 6.6.1-7**).

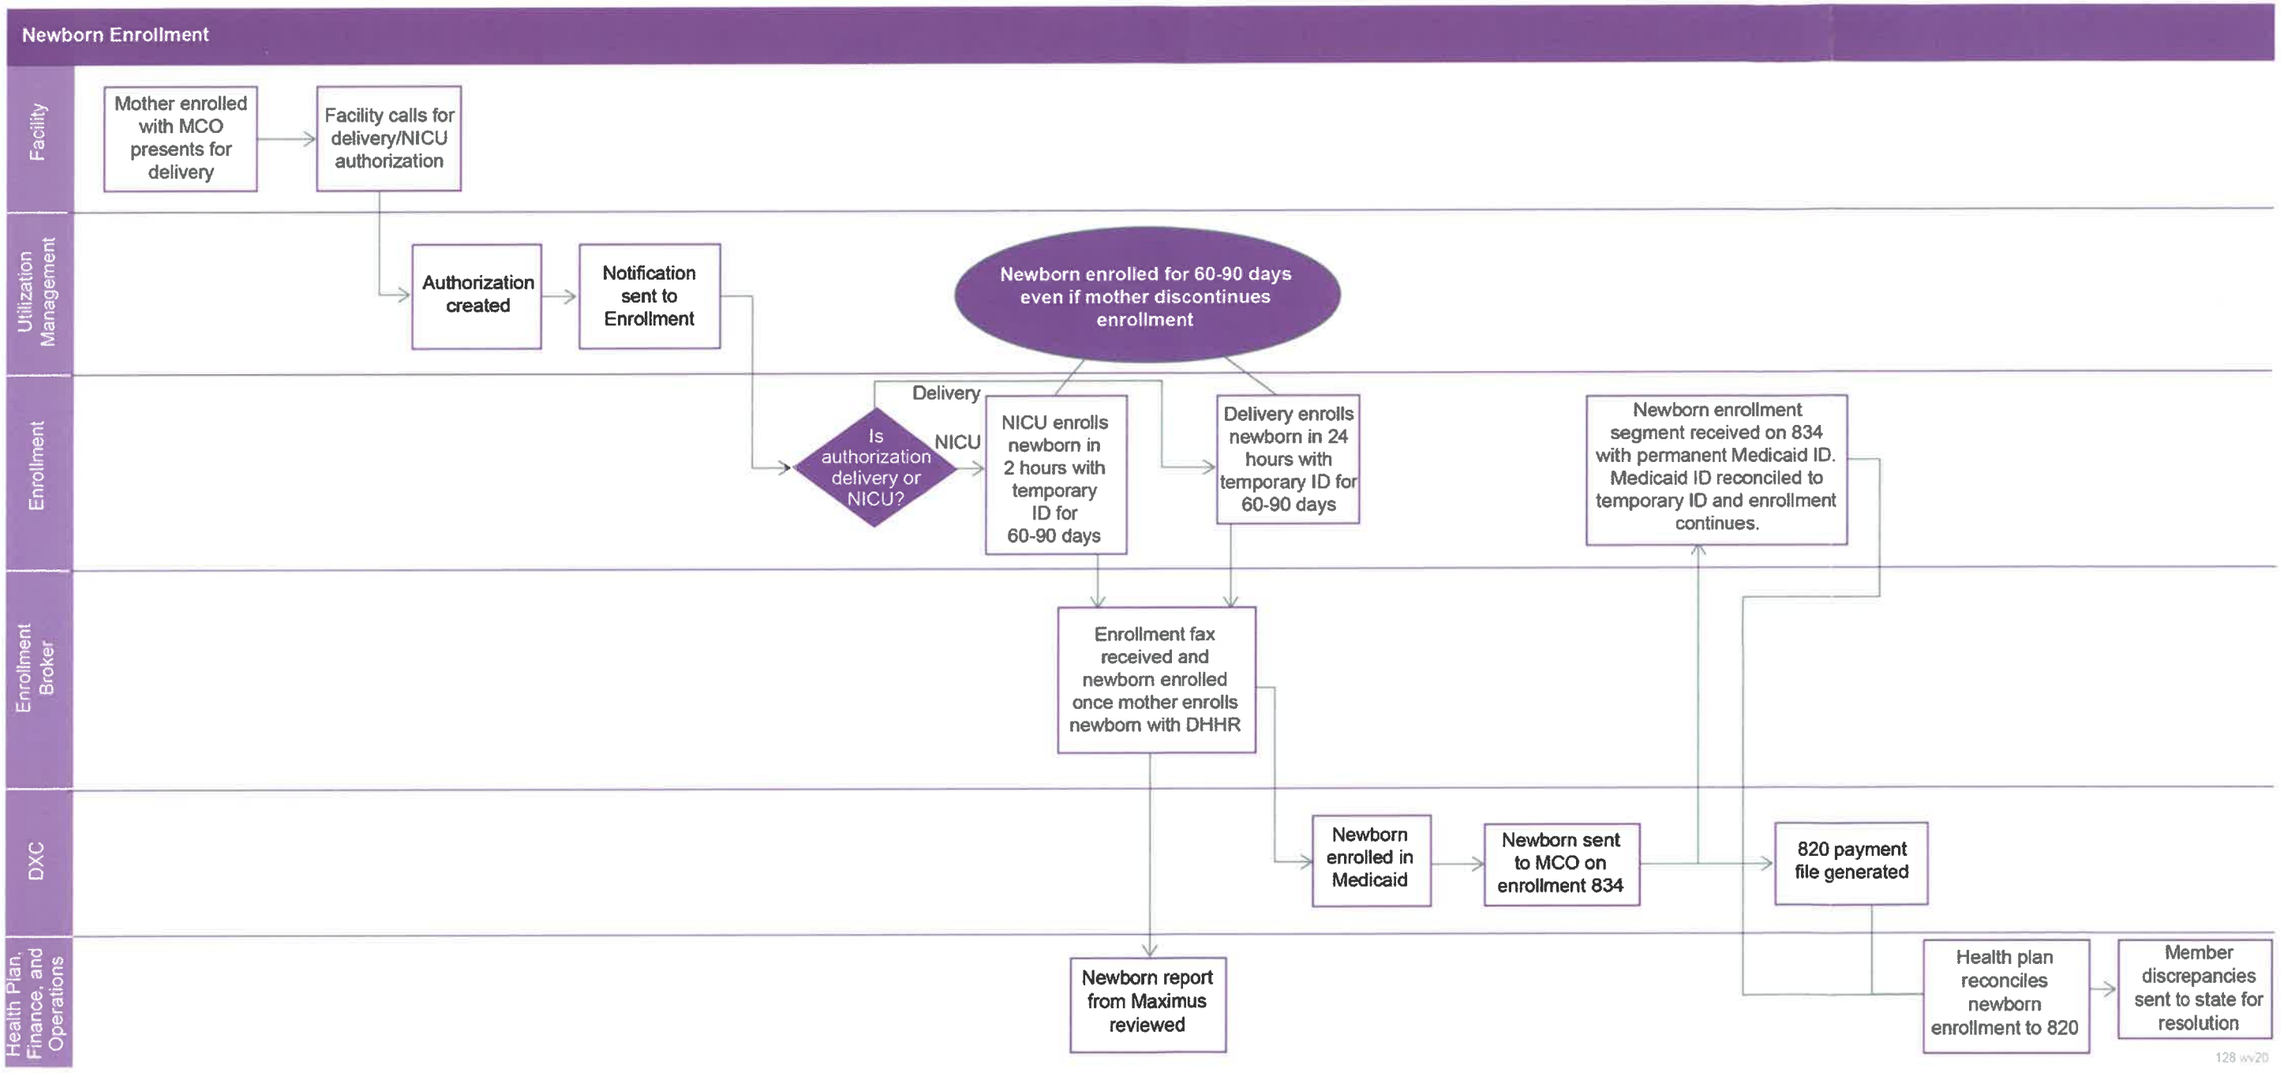

Figure 6.6.1-7: Newborn Enrollment Encounter Process

We use a comprehensive set of enrollee matching rules to ensure file records (including newborn children) are accurately matched to existing records in our system.

Newborn Coverage Protocol When Mother is no longer Enrolled

ED004	The Vendor should describe its protocols to cover newborns even if the mother does not remain enrolled after the newborn's date of birth.

Aetna has developed and manages to an enrollee transition policy, which has been approved by the West Virginia Department of Health and Human Resources BMS. When Aetna receives notification of a newborn child from the member or the hospital, for example, we enroll the newborn child immediately as a member and we are responsible for all of the baby's medically necessary services for the first sixty to ninety calendar days of life based on the cut-off date for MCO enrollment with the enrollment broker. The child's date of birth is counted as day one. We ensure all provider charges are appropriately reimbursed during the inpatient newborn child's hospital stay when the newborn child is born to a mother who is a current Aetna enrollee and until the newborn child is discharge, even if the mother does not stay enrolled. Our Enrollment Manager application utilizes a set of validated enrollee matching rules to ensure file records, including newborn children even if their mother is not enrolled with our MCO, are accurately matched to existing records in our system when processing 834 files (please refer to **Figure 6.6.1-7**). Aetna will submit newborn child enrollment forms to the Department's enrollment broker within 60 calendar days of the date of delivery or as soon thereafter as the MCO becomes aware of the delivery.

Transfer of Maternity Care

Pregnant members who transfer into Aetna in the second or third trimester of their pregnancy may elect to continue with their current maternity practitioner, including an out-of-network practitioner, through the postpartum period. A practitioner who is currently providing maternity care to an enrollee who is transferring into Aetna should contact the receiving health plan to

obtain authorization for continuing the member's services. Alternatively, an enrollee may contact her perinatal case manager for assistance in obtaining authorization for continuation of services.

Member Disenrollment and Transferring Member Information

ED005	The Vendor should describe its written policies and procedures for transferring relevant member information, including medical records and other pertinent materials, when a member is disenrolled from the Vendor and enrolled with another Vendor.

We follow our transition of care and member enrollment policies and corresponding procedures when a member is disenrolled from our plan and enrolls with another plan. When a member contacts Aetna Member Services or Care management directly to be disenrolled, we attempt to resolve the reason for disenrollment following the same system described previously. If the issue cannot be resolved, we quickly facilitate a member transfer to the Department for continuity of care. Our policy stipulates that our documented disenrollment resolution process focus on ensuring the member receives the care they need in a timely fashion (Please see **Figure 6.6.1-8**).

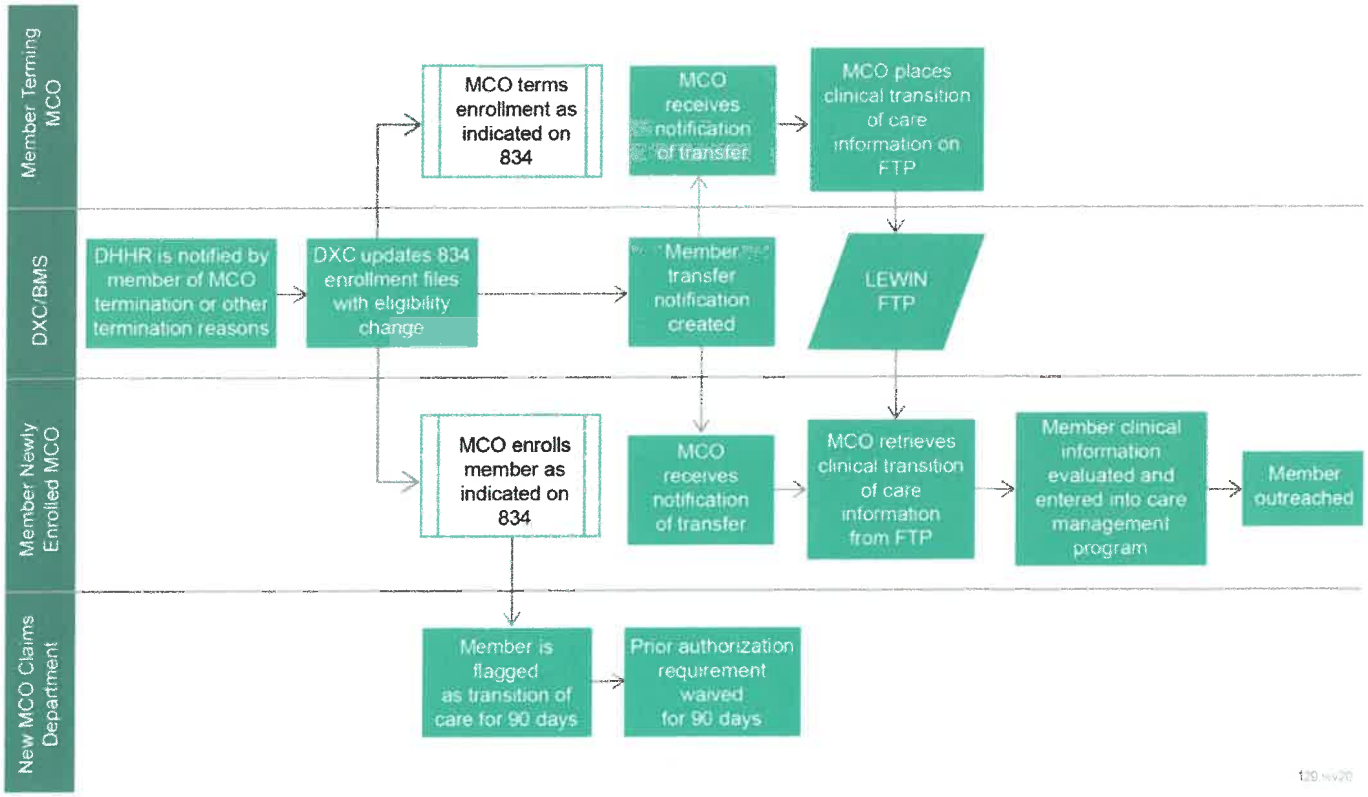

Figure 6.6.1-8: Member Transition of Care

We actively work with all enrollees who want to disenroll from our plan to maintain their continuity of care and to ensure their health and health care needs are met while they transition to a new plan.

Member Disenrollment Request Process

Aetna advises our members that disenrollment requests must be submitted orally to the Department. Our Member Services staff facilitates a warm transfer between the member and the Department. Additionally, we understand that the Department is solely responsible for disenrolling members, and a disenrollment request will become effective on the first day of the next month following the member's disenrollment request. Aetna's Enrollment Services department runs a monthly report of retro-disenrolled members, capturing any claims paid data, and we forward this detail to our Claims department for possible recoupment.

To further provide validity and accuracy of membership, we generate an out-of-area audit report, which uses data from our core information system. Our Enrollment staff follow a set of

documented procedures to review the report and identify members with an address that is located outside the defined service area. We also receive notifications from internal supporting departments when a member has been identified as deceased or incarcerated.

We track member nursing home stays through our electronic care management system. Our Care Management team notifies our Enrollment Services department of members who have resided in a nursing facility for more than 30 days. We also notify the Department about members who are projected to reside in a nursing facility for more than ninety days.

With each notification or identified member, our Enrollment staff investigates the enrollment scenario to ensure accuracy of the disenrollment information using our utilization management documentation, the Department eligibility website/portal, and previous 834 file data received from the Department. We also validate that the Department does not already have the disenrollment data on file to prevent duplicate notifications to the Department.

Exhaustion of Benefits

Whenever an Aetna enrollee who is eligible for certain programs, such as WVCHIP, exhausts the allotted services as defined in the state regulatory agency's benefit plan, Aetna is responsible for informing the applicable state regulatory agency or client in accordance with regulatory or contractual requirements. Aetna is responsible for providing information regarding alternative care and resources which are available to the member, if applicable.

Coordinating Member Care during a Membership Transition

We recognize that a change in a service model can be challenging and we focus our efforts on providing a seamless transition for Mountain Health Trust, West Virginia Health Bridge, and WVCHIP members as they transition to managed care and/or between MCOs. Transitioning between managed care organizations requires a well thought-out and prepared approach,

including pre-defined processes for data transfer between MCOs that include a data dictionary, file layout, and file transfer timing guidance from the Department. Our member transition policy supports the smooth transfer of information and continuation of the member's care. When transitioning members, our procedure requires our Member Services, Care Management, and Enrollment Services departments to collaborate and perform the following activities:

- Review and update the member's care plans to address the member's special health care needs.
- Determine the member's immediate needs by conducting condition-specific assessments and coordinating all necessary Medicaid and non-covered services.
- Identify and confirm the providers and organizations from which the enrollee is receiving services.
- Contact the health care and service providers to do the following:
  - Confirm the provider's awareness of the transition
  - Identify barriers to a successful transition
  - Advise the provider of transition requirements
  - Initiate and facilitate the transfer of applicable medical records
  - Identify new or urgent health care/service needs
  - Initiate service authorizations that may be required for a particular service. Send service authorization letters as appropriate to the provider.
  - Initiate letters of agreement that may be needed for non-participating providers. Refer non-participating providers to our Provider Relations team for loading into the business application system for payment, when applicable.
  - Reference applicable letters of agreement with waiver programs or out-of-plan services to ensure the member transition process is managed per the agreement(s).
- Monitor continuity and quality of care, transition activities, services, and reporting for each member.
- When transitioning a new member into our plan, we collaborate with our member services director and department to obtain prior authorization files and service plans from the previous health plan so that all services and supports, including access to prescriptions, can continue for up to six months after the transfer, or until the end of the current authorization period, or until a new assessment is completed (within 90 days of enrollment) and a new service plan is authorized.
- We contact the member to make sure they are aware of the transition and to verify the status of current care and prescription authorizations.

Transfer of Medical Records

Practitioners are responsible for making enrollee records available to health plans to which members are transferring and/or to other practitioners upon request, and in compliance with confidentiality requirements of Aetna and HIPAA, 42 CFR Part 2 and all federal and state

regulations. At a minimum, practitioners are requested to transmit medical records related to diagnostic tests and determinations in the past sixty days, current treatment services, all immunization and EPSDT records, hospital discharge summaries within the past year, current medications list, specialist referrals with in the past sixty days, behavioral health quarterly summaries, and emergency care summaries.

Aetna facilitates the transfer of pertinent medical records (as needed) and transfers other requested records that exceed the requirements of the policy if so directed or required by the Department.

7. Network Development

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Network Development (ND) as part of their bid. The Vendor's narrative response should not exceed 50 pages.

In support of our commitment to serving West Virginia, Aetna offers a robust and established statewide physical health, behavioral health, dental, vision, specialty care, and publicly supported provider network that serves all counties in the state to support the Department for Health and Human Resources (Department) goal to ensure access to Mountain Health Trust (MHT), West Virginia Health Bridge (WVHB), and West Virginia Child Health Insurance Program (WVCHIP) members.

Establishing and Maintaining a Provider Network

ND001	The Vendor should describe how they will establish and maintain a provider network that provides statewide access to geographically accessible hospitals, primary care, specialty care, dental providers, and all other required provider types.
ND002	The Vendor should describe how they will establish and maintain a network accessible, contracted, and credentialed provider for al covered services including supplemental services such as value-add services for, or on behalf of MHT members.

Aetna has contracts with approximately 11,000 providers, including more than 1,406 primary care providers (PCPs), 7,152 specialty physicians, 736 behavioral health specialists, and all 72 West Virginia federally qualified health centers (FQHCs) and rural health clinics (RHCs).

Aetna was recently awarded the West Virginia Mountain Health Promise contract and has been contracting with additional providers to serve these vulnerable children. Also, in anticipation of serving WVCHIP members, we have identified that the majority of our Medicaid network providers are also serving WVCHIP members. We identified the providers from the state provider list who are not contracted with us. We have contacted those providers serving WVCHIP members who are currently out-of-network and we have invited these providers to join

our network. Our team contacts the providers by telephone about their interest in contracting with us and then follows up the call with an email that contains the contract. Our Network Development and Provider Relations teams work together and continually strive to exceed network requirements in all regions. The key elements of our network strategy include the following: demonstrating compliance with network adequacy and provider accessibility requirements throughout the state; continuing to enhance our network of high-quality, member-focused providers; offering a comprehensive network to maximize member choice and accessibility; and integrating network development activities with clinical practice models.

Our West Virginia network currently serves approximately 138,000 West Virginia Medicaid members. To ensure all health care is available, our locally based Network Development and Provider Relations teams work collaboratively with providers, community stakeholders, and advocacy groups to ensure that covered services are accessible, person-centered, and evidence-based, and span the full spectrum of services needed.

[ND001] Statewide and Geographically Accessible Provider Network

Aetna's statewide, comprehensive network complies with state availability and access standards identified in Model Service Provider Agreement, Section 2.1.2 Access and Availability Standards and Appendix J.

Establishing and Maintaining a Network with Statewide Access

Aetna has an established and open network to service MHT and WVHB members. As most of the WVCHIP members are currently seeing providers within our network, we have already begun our outreach and contracting process for those WVCHIP providers not contracted with us. We continually work to make sure our network meets adequacy to fully serve member populations and it is scalable to meet the needs of the WVCHIP members upon implementation.

To maintain and grow our West Virginia statewide network, Aetna's network development director identifies network gaps and opportunities for improving member access to services. The network development director and provider relations director continuously review network adequacy data, both prior to an award and ongoing after award, to identify opportunities for network growth and maintenance and review the status of recruitment plans. Our recruitment efforts do not end when network adequacy is met; it is a continuous process to monitor and grow our network to enhance quality and meet the needs of our members. The network development director and provider relations director also review network adequacy data to identify opportunities for network enhancement and growth and review the status of the recruitment plan. They also monitor provider compliance with required time, distance, and appointment wait time standards under the MHT, WVHB, and WVCHIP programs.

We employ ongoing maintenance strategies to maintain our provider relationships and to ensure the special needs of our members are met. Upon notice of a potential issue or shortage from the integrated care team or other community organizations, they conduct research and outreach.

Recruitment efforts include utilizing the following sources of information to identify providers:

- Review of provider enrollment files (PROV 12 file) from the Department for new providers in the market
- Examine emergency room (ER) utilization and non-participating providers within proximity to highly utilized ERs to target for recruitment
- Review Member Services feedback that includes members calling in with provider requests and Provider Services call center feedback
- Review single-case agreements for opportunities to contract with non-participating providers
- Work with local West Virginia provider organizations, as well as national and regional health organizations, to identify providers, including the following:
  - Behavioral Health Provider Association
  - National Association of Social Workers—West Virginia Chapter
  - West Virginia Primary Care Association
  - West Virginia Hospital Association
  - Healthy Kids Coalition

  - School Based Health Assembly
  - West Virginia Osteopathic Medical Association
  - West Virginia Healthcare Association
  - West Virginia Board of Medicine
  - West Virginia State Medical Association
  - West Virginia Partners in Health
- Consider member and/or provider referrals of potential providers
- Utilize quarterly monitoring, which triggers recruitment action as we review geographical mapping reports
- Evaluate current and projected population demographic needs, as well as anticipating cultural and health disparities
- Review analysis of geographical mapping reports during our Quality Management/Utilization Management Committee meetings
- Invite provider participation and input on future network needs through our Member Advisory Committees, plus participation in provider association meetings including the Primary Care Association and Joint Operating Committee meetings
- Develop opportunities for participation and feedback through our Aetna Medicaid National Advisory Council, which includes West Virginia providers, stakeholder collaborations, and meetings comprised of health care professionals, advocates, and members to discuss issues, including network adequacy and recruitment priorities for growing the network
- Obtain stakeholder feedback on network composition, operations, and quality improvement initiatives to make sure we meet the cultural needs of the community and assess any areas of concern
- **Invite provider participation in a variety of educational forums and webinars to share ideas, questions, and concerns, as well as future network needs/projections**
- Seek feedback, suggestions, and innovative ideas from providers to offer better access and increase member convenience, including a review of Consumer Assessment of Healthcare Provider and Systems (CAHPS) and provider satisfaction survey results

Once we identify a provider gap, our Provider Relations team contacts potential providers by telephone about interest in contracting with us and then follows up with an email that contains the contract. Once the provider identifies that they want to join our network, our dedicated West Virginia Credentialing staff assists providers with the process to streamline the credentialing and contracting process, reducing burden on the provider. This dedicated West Virginia Credentialing staff understands that the credentialing process can be cumbersome and therefore helps West Virginia providers through the administrative processes to eliminate duplicative efforts. In addition, if a provider is completing the credentialing and contracting

process with Aetna and has members who need to be seen, we will work with the authorization teams to make sure the members get the care they need while the provider is being processed.

We are continuously expanding upon our existing, extensive, and experienced West Virginia provider network to deliver high-quality medical, behavioral, dental, and vision services to our members. Aetna's provider network offers statewide access as represented in **Table 6.7.1-1.**

Table 6.7.1-1: Aetna Provider Network Adequacy and Accessibility

Provider Type	Number of Available Practitioners based on Time and Distance Standards	Availability 2019
Primary Care Providers		
Internal Medicine	152	99.9%
Family Practice/General Practice	472	100%
Pediatrics	255	100%
Nurse Practitioners	352	100%
High-volume Specialists		
Obstetrics and Gynecology (OB/GYN)	315	99.8%
Otolaryngology/Ear, Nose, and Throat	126	87.7%
Ophthalmology/Optometry	394	99%
General Surgery	303	99.7%
High-impact Specialty		
Oncology	122	100%
Other Frequently Used Specialties		
Allergy	36	98.6%
Audiology	79	100%
Cardiology	278	100%
Chiropractic	175	100%
Dermatology	46	99.8%
Durable Medical Equipment	330	99.4%

Provider Type	Number of Available Practitioners based on Time and Distance Standards	Availability 2019
Endocrinology	57	99.3%
Gastroenterology	130	100%
Hematology	102	100%
Home IV Therapy	13	99.8%
Neurology	182	100%
Neurosurgery	61	94.5%
Nephrology	79	100%
Orthopedics	221	97.8%
Orthotics and Prosthetics	43	99.9%
Physical Therapy	191	100%
Plastic Surgery	39	90.6%
Podiatry	112	100%
Pulmonology	89	100%
Speech Therapy	22	99.6%
Thoracic Surgery	66	99.4%

SUD Residential Provider (Serious Emotional Disturbance Waiver Services)	19	100%
Dental Providers		
Adult Dentistry (open network—Aetna is billed for this service)	N/A	N/A
Pediatric Dentistry	534	100%
Vision Providers		
Vision Providers	221	96.7%

Publicly Supported Providers

Aetna has an established robust network of publicly supported providers as outlined in Model Service Provider Agreement, Article III Statement of Work, Section 2.4 (2.4.1-2.4.9) Publicly Supported Providers and the number of Aetna contracted providers. **FQHCs and RHCs:** Aetna contracts with 72 FQHCs and RHCs, and we have long-term relationships with West Virginia FQHCs and RHCs. We collaborate with them for wellness and dental events to improve member access and education. For example, we collaborated with FQHCs and RHCs in 2019 to conduct 24 wellness events that included well-child exams, children's dental exams, well-women exams, and diabetes testing and screening. **We also aided FQHCs to purchase two retinal cameras.**

Local Health Departments (LHDs): We are currently contracted with 44 LHDS, 86 percent of the LHDs in the state. We will continue our outreach to the remaining LHDs. We collaborate with LHDs to offer influenza vaccination campaigns, such as a recent influenza vaccination clinic event collaborating with **Kanawha-Charleston Health Department**. We will also continue to promote vaccines for childhood immunizations through the State Bureau for Public Health's

Immunization Program by encouraging providers to refer their patients to these programs. Aetna understands that environmental lead assessments for our enrolled Medicaid children with elevated blood levels will be reimbursed directly by the State Bureau for Public Health and that we are responsible for the blood lead screenings.

Critical Access Hospitals (CAHs): Aetna currently has contracts with all 25 CAHs throughout the state for inpatient and outpatient hospital services in very rural areas of the state.

State-designated Primary Care Centers: Through our contracts with 72 FQHCs and RHCs, we provide members access to state-designated primary centers, enabling members to receive services in the areas where they live.

School-based Health Clinics (SBHCs): Aetna contacts with more than 156 SBHCs. As West Virginia has the largest saturation of SBHCs in the nation, we understand the importance of these clinics to provide general, primary health care services to school-aged children. Aetna also recognizes these centers as increasingly important providers of primary health care, especially in rural communities which face shortages of PCPs.

Right from the Start Providers (RFTS): RFTS is a West Virginia State program aimed at improving early access to prenatal care, lowering infant mortality, and improving pregnancy outcomes. We currently have 26 RFTS providers in our network.

Bureau of Public Health (BPH) Laboratories: We are reaching out to the BPH laboratory to contract with us. We will comply with requirements related to the use of BPH laboratories for specified cases and requirements for BHP laboratories to perform tests, including those mentioned under core services, on members for public health purposes. We will also require contracted laboratories with positive findings of certain reportable diseases under the

Reportable Disease Rule in category I, II, and IV (the list of reportable diseases is available from the Department) to submit an isolated serum specimen or other designated material to the Office of Laboratory Services (OLS) for confirmation or other testing needed for epidemiological surveillance. However, whenever a service is not funded by other state or federal funds, Aetna will reimburse OLS for these services.

Children with Special Health Care Needs (CSHCN) Providers: Aetna currently has 633 CSHCN providers contracted in our network and we are in the process of contracting additional CSHCN providers for our membership. By contracting with CSHCN providers, we will enable children and youth with special health care needs to receive a patient/family-centered medical home approach to comprehensive, coordinated services and supports.

Indian Health Providers: Aetna will follow the requirements related to Indians, Indian Health Care Providers, and Indian Managed Care Entities according to 42 CFR 438.14.

We endeavor to contract with all publicly funded providers. We will comply with requirements to develop and implement a strategy to ensure members in the region have access to all covered services and to make payments to non-contracted, publicly supported providers as required and detailed in the Model Service Provider Agreement, Article III Statement of Work, Section 2.4.

Additional Provider Types Enhance our Network

Aetna continually evaluates the network to address the needs of our members. We have contracted with opioid treatment centers and will continue contracting efforts to address the opioid dependence epidemic in the state. We will also contract with Medical Home Providers who serve the WVCHIP population and have also contracted with all applied behavioral analysis providers in the state.

Opioid Treatment Centers

Aetna has contracted with opioid treatment centers in West Virginia and will continue contracting efforts to meet member needs and reduce the adverse impact of opioid use on members and families. **We are currently contracted with 100 percent of SUD residential providers in the West Virginia.** Aetna is committed to enhancing access to evidence-based treatment options for our members such as medication-assisted treatment (MAT). We are collaborating with providers to increase adoption of MAT by providing education, technical support, and promoting adoption through value-based contracting and the recognition of quality MAT providers.

In addition, Aetna provides financial support to the **Provider Response Organization for Addiction Care and Treatment** (PROACT), a large community-based organization in Huntington that offers MAT/SUD treatment, peer support, job placement, and referrals to other services. We also engage the services of Lily's Place. **Lily's Place**, located in Huntington (Cabell County), was the first neonatal abstinence syndrome (NAS) center in the nation.

We understand that, frequently, a history of trauma can be the root cause of a member's presentation with SUD or opioid use disorder. As a result, we have implemented a trauma-informed care (TIC) training program for our providers.

Medical Home Providers

Aetna will contract with all qualified WVCHIP designated medical home providers, and we will work with them to enable WVCHIP members to have choices for a medical home. Aetna will encourage WVCHIP members to select a medical home from a list of enrolled providers who have elected to participate in the Medical Home Program, and must be PCPs in the areas of pediatrics, general or family medicine, or internal medicine. By selecting a medical home

provider, WVCHIP members will reduce their costs by eliminating copays for sick visits (there are no copays for preventive visits).

Applied Behavioral Analysis (ABA) Providers
We have recently contracted with most applied behavioral analysis (ABA) providers in the state to serve children with autism or Asperger's syndrome. We are continuing our efforts to contract with all ABA providers. This evidence-based approach to treatment focuses on social skills, communication, reading, and academics as well as adaptive learning skills, fine motor dexterity, hygiene, grooming, domestic capabilities, punctuality, and job competence.

[ND002] Providers for all Covered Services
Aetna currently has a credentialed network capable of a full array of services as detailed in Model Service Provider Agreement, Section 2.1.1. and Appendix A. Our supplemental/value-added services include special dental services for members who are pregnant or have diabetes, for which we have an established dental network.

As identified earlier in this response, **our locally based Network Development and Provider Relations staff collaborate with providers, community stakeholders, and advocacy groups to ensure that covered services are accessible, person-centered, evidence-based, and span the full spectrum of services needed.** Additionally, our Network Development team establishes our provider network, negotiates contracts, and makes certain of our network adequacy and accessibility across West Virginia to meet the needs of MHT, WVHB, and WVCHIP members. The Network Development team also monitors counties, cities, and towns where a gap in our network might occur, or where a critical specialty could be underrepresented, and additional providers are needed. These monitoring efforts serve to prevent a gap in care delivery and ensure disruptions do not affect member access to care.

Aetna is continuing to expand our existing provider network to deepen and broaden access to primary and specialty care providers, hospitals, clinics, home health and hospice care providers, medical home and CSHCN providers, and other key providers from the behavioral health system. **We strongly agree and share in the state's vision for member access to high-quality health care across the continuum of services.**

To demonstrate our commitment of a robust system of providers that afford member choice, we develop and make available our Physical Health and Behavioral Provider Recruitment Plan that focuses on accountability and transparency in our network development policies and procedures, as well as strategies and communications that impact our provider network.

Network Development and Monitoring Processes to Ensure Adequacy

ND003	The Vendor should describe how they will establish network development and monitoring Processes that ensure adequacy of covered services and includes the following considerations, including, but not limited to, the following:
ND004	The anticipated MHT enrollment and the appropriate PCP provider-to-member ratios for adult and pediatric members
ND005	The expected utilization of services for the anticipated MHT populations assigned to the Vendor for care
ND006	The number of providers not accepting new patients
ND007	The geographic location of providers and members, considering time and distance, and transportation needs
ND008	The location of providers with physical access accommodations for members with disabilities and/or other requirements set forth under the Americans with Disabilities Act (ADA)

We continuously work on network development and monitoring to make sure providers are available at the right location within the appropriate timeframe to meet the needs of West Virginians with statewide access to services.

[ND003] Development and Monitoring to Ensure Adequacy of Covered Services

To maintain network adequacy and accessibility to care, as well as to identify gaps in network access or where gaps are prone to occur, Aetna conducts both member density and network

geographical mapping analysis to pinpoint areas within the state, within counties, and deeply into each city where network adequacy and provider accessibility can be enhanced. We carefully evaluate the numbers of providers and the related time and travel distance to reach a provider, appointment availability, after-hours access, open panel status, and cultural competency for key provider types.

Network Adequacy Efforts to Improve Member Access

Our analytics show that acute care and children's hospitals, behavioral health practitioners, and certain specialists are the most likely areas for network gaps. We understand the difficulties members may have accessing specialist providers and we have therefore built a Care Connections team model to assist members receive the care they need within their home communities. **Care Connections teams co-locate with providers in every region of the state and have relationships with provider and community service agencies to support identifying and resolving potential network gaps**.

Aetna uses assessment and measurement tools, such as geographical mapping, the Network Adequacy Report, and the State PROV12 report, as the primary means of demonstrating achievement of network adequacy compliance with West Virginia provider network access requirements and expectations. We apply the Department's provider network standards to assess travel time and distance for members to access essential and specialty providers. Through our contracts with all the FQHCs and RHCs in West Virginia, we comply with requirements to have as many FQHCs and RHCs as necessary to permit member access without having to travel a significantly greater distance.

Single-case Agreements for Non-participating Providers
If a qualified provider is available outside of the network (possibly in a bordering state) for a specialized covered service, we will either contract with that provider or allow the member to seek services from that non-participating provider using a single-case agreement (SCA). We coordinate payment to non-participating providers, making certain the cost to the member is not greater than it would be if the service were provided in-network. Our Provider Relations team engages and encourages non-participating providers to join our network.

Border State Providers
The Aetna Medicaid organization has health plans in all five of West Virginia's border states. We routinely leverage the established provider relationships of these health plans to establish agreements with border state providers. Access to border state providers improves access to specialty providers and reduces member travel time because some border state providers are located closer to our West Virginia members than in-state providers. We currently have letters of agreement or contracts with a variety of border-state providers including the following;

- Cincinnati Children's Hospital in Ohio
- University of Kentucky's facilities and physicians
- Winchester Medical Center in Virginia
- Pikeville Medical Center in Kentucky
- Big Sandy in Virginia
- Western Maryland Health Systems

Addressing Service Gaps in Rural Areas and for Specialty Providers
Based on our knowledge and experience working in West Virginia, there are two counties, Pendleton and Pocahontas, that have the most significant challenges with provider accessibility. Both counties present challenges related to specialty providers including otolaryngology, ophthalmology, general surgery, endocrinology, home intravenous therapy, neurosurgery, plastic surgery, and thoracic surgery.

We also understand that West Virginia's mountain culture and geography can present a distinct access to care barrier for our members who live in remote mountain regions. To best serve remote mountain members, especially members without access to telephone or internet, we are collaborating with an FQHC with locations across the southern part of the state, including Boone and Kanawha, to provide mobile medical and dental screening services. This collaboration includes offering physical health and dental services via mobile van units that will offer services such as preventive well woman and well child visits as well as dental screenings. We will continue to work closely with FQHCs and LHDs to sponsor member engagement events, such as dental services and flu vaccination events. We will work to coordinate events with the **West Virginia University Cancer Institute Bonnie Bus**, which provides mobile mammograms throughout the state. Additionally, our Care Connections team will work with members to connect with transportation vendors in rural areas using the West Virginia Department of Transportation website. The site has contact numbers for transportation vendors in each county. For example, in Pendleton County, **Potomac Valley Transit Authority** provides public transportation for individuals living in the county.

Telehealth Services Expand Access for Rural Areas

We are committed to the advancement of telehealth in the state. At this time, telehealth is an underutilized tool that could be used to mitigate limited access to services in rural areas of the state and transportation issues with having to travel to one of the three major medical centers. **Currently, our local behavioral health medical director and clinical liaison are participating on the state's telehealth policy panel.** We look forward to finding creative solutions to improve access to care, not just for our members but all residents of the State.

We currently collaborate with **West Virginia University** (WVU) through the WVU PALS program, a telepsychiatry program that enables PCPs to consult with a psychiatrist about the care and management of children and adolescents. We provided WVU a $50,000 grant to assist with start-up. This program is promising because West Virginia has a shortage of psychiatrists and often the PCP manages psychotropic medication, educates parents/guardians, and works with therapists and other outpatient providers. We also collaborate with Anytime Pediatrics and Nationwide to provide telehealth for pediatric oncology patients.

Telehealth to Supplement Traditional Service Delivery

We will use a range of telehealth services as an alternative to or to complement traditional service delivery. Consistent with State regulations, specific clinical services will be offered in authorized originating sites. Telehealth services will be delivered in real time, through interactive live audio video technology offered by allowable provider types. We will also support the use of telehealth by our in-network providers using their own approved technology or given the opportunity to utilize a plan-sponsored technology platform to enhance access to their members via telehealth. Alternatively, if indicated, we will use preferred West Virginia-licensed vendor telehealth practitioners, as per West Virginia State regulations, to meet both the physical and behavioral health needs of our members using evidence-based protocols. Telehealth has been proven to improve care treatment compliance, decrease both emergency room (ER) and inpatient hospitalization utilization, reduce disease burden in communities, and promote the concurrent use of advanced specialty capabilities in coordination with a member's local PCP. In addition, **available telehealth services promote the integration of physical and behavioral health care and enable provider-to-provider consultation between PCPs and specialists, enhancing coordination of care and access to services**.

Addressing Specialty Service Gaps

We are well-positioned to proactively identify and respond to likely gaps and solutions to make sure member needs are met. For example, in August 2019, we contracted with **River Park Hospital**, a behavioral health facility located in Cabell County, which offers inpatient and PRTF services. We also contracted with **Logan-Mingo Area Mental Health**, which is in the state's southern region and is the only provider of behavioral health/medically assisted treatment in the area. In addition, we contracted with **Neurological Associates**, a large neurosurgery and orthopedic surgery practice in Kanawha County.

We continue to collaborate with associations, community organizations, hospitals, and academic organizations for new providers entering the area, or to develop relationships to meet specific needs, such as providing telehealth or community solutions to maintain and increase network accessibility, especially in the identified geographic areas and scarce provider specialties.

These collaborations include the following organizations:

- Behavioral Health Provider Association
- National Association of Social Workers—West Virginia Chapter
- West Virginia Primary Care Association
- West Virginia Hospital Association
- Healthy Kids Coalition
- School Based Health Assembly
- West Virginia Osteopathic Medical Association
- West Virginia Healthcare Association
- West Virginia Board of Medicine
- West Virginia State Medical Association
- West Virginia Partners in Health

In addition, our Care Connections teams are co-located with providers in every region and assist us in identifying and resolving potential gaps in network accessibility.

Monitoring Process

We monitor our network to make certain that every member has access to services that support the need to achieve their health ambitions. Our goal is to exceed West Virginia's requirements by providing access and choice of providers, including essential and specialty providers, to 100 percent of members within the required time and distance standards. While the provider counts in this section reflect our current network, we continue to build network capacity to eliminate identified access challenges or deficiencies. We will leverage our current assessment tools, and will include methods detailed in **Table 6.7.1-2** below:

Table 6.7.1-2: Network Monitoring Data and Reports

Reporting and Monitoring Activity	Data or Report Description
Geographical Mapping Reports	We review geographical mapping to measure compliance with the Department's access standard requirement for each ZIP code
PCP-to-Member Ratios	We review ratios by provider type and region to confirm availability of an adequate number of PCPs **[ND004]**
Network Adequacy	We review utilization data including prevalent conditions, SCAs, provider referral issues (availability of specialties), providers-gained-and-lost report, and unplanned network exit report to confirm sufficiency of the type and number of providers **[ND005]**
Emergency Room Utilization Dashboards	Continuous monitoring is performed using operational dashboards that measure and trend member utilization, including ER care. These dashboards allow us to identify opportunities to enhance our network by location, disease state, and member type. **[ND005]**
Network Panel Studies	Network panel studies are performed, using the open/closed panel report, to assist in assessing network access and availability needs and identify providers who have reached their capacity **[ND006]**
Provider Directory Audits	These audits confirm the accuracy of provider listings and are used to make weekly updates to online directories, including changes in demographics and panel status **[ND006]**
Provider Appointment Availability Phone Surveys	To improve monitoring of access for the population served under this contract, we will query providers on appointment availability, open scheduling, and after-hours care **[ND006]**

Reporting and Monitoring Activity	Data or Report Description
Interdepartmental Reporting	Our formal interdepartmental process allows the Provider Relations department to collect, trend, and respond to network needs our staff may identify outside other data and reporting
Call Center Encounters Data	Our call center collects information regarding member calls about network provider availability and access, and shares the call information with the Provider Relations team to assess potential network gaps, barriers, and opportunities for network development
Member and Provider Appeal and Grievance Data	We review analysis and trending of appeal and grievance cases to identify availability or accessibility issues, perform root-cause analysis, and develop corrective action plans (CAPs), if necessary
Provider Satisfaction Surveys	We review and analyze provider satisfaction survey results and create action plans for improvement identified through the survey
CAHPS survey	We review and analyze CAHPS survey results and create action plans for improvement identified through the survey

Aetna evaluates projected adult and pediatric population needs statewide against the current contracted provider network to identify any opportunities to recruit services and providers.

[ND004] Appropriate PCP Provider to Member Ratios for Adult and Pediatric Members.

Aetna's current network meets the provider ratios as outlined in the Model Provider Services Agreement, Article III Statement of Work, Section 2.2.2 Ratio of PCPs to Enrollees, and the ratio of PCPs to members meets or exceeds the required ratio of 1 PCP for every 500 adult members who is accepting new patients and 1 age-appropriate PCP for every 250 pediatric members under 21 who is accepting new patients. We do not propose any modification to the existing provider ratios, even with the inclusion of the WVCHIP members. We will continue to monitor member access and will communicate any new revelations to the State.

[ND005] Expected Utilization of Services for the Anticipated MHT Populations

We review current and historical utilization data including prevalent conditions, SCAs, provider referral issues (availability of specialties), the providers-gained-and-lost report, and the

unplanned network exit report to confirm sufficiency and capacity of the type and number of providers. We also continuously monitor our operational dashboards that measure and trend member utilization including ER care, enabling us to identify opportunities to enhance our network by location, disease state, and member type.

[ND006] The Number of Providers not Accepting New Patients

We identify the number of providers not accepting new patients using various methods. We perform network panel studies, using the provider panel size report, to assist in assessing network access and availability needs and identify providers who have reached their capacity. We update our systems if a provider's panel is full, so we do not manually or automatically assign a new member. We also audit our provider directory for weekly updates including changes in panel status and update the directory. We also conduct annual provider appointment availability surveys using email and fax.

[ND007] The Geographic Location of Providers and Members, Considering Time and Distance, and Transportation Needs

We continually evaluate reports, including geographical mapping and network adequacy information, to determine where we need to increase the number and type of new providers to the network as well as appropriately prepare for anticipated network providers across the service area. Geographical mapping reports are generated at least annually, and more often as necessary (e.g., with added membership, such as the Mountain Health Promise membership), and the report is then reviewed by health plan and network leadership. We also use interdepartmental reporting that allows the Provider Relations department to collect, trend, and respond to network needs. Our staff may also identify network challenges from feedback from our care coordinators or informal discussions with community organizations, and information collected by our call center about network provider availability and access. We analyze and

trend member and provider appeal and grievance data to identify potential availability or accessibility issues, perform root-cause analysis, and develop CAPs, as necessary. CAHPS survey results also provide data indicating opportunities for improvement.

Transportation assistance can be provided to members by calling our Member Services call center to connect them with LogistiCare, the transportation vendor in the state. Our Member Services staff will warm transfer the call to LogistiCare while staying on the line with the member. Our care coordinators and community health workers also work closely with members to ensure they have transportation when needed to see a provider through ride share programs, the West Virginia Department of Transportation website resources, and LogistiCare. We recognize that lack of sufficient transportation is a potential barrier that keeps members from seeking care in some geographic locations.

[ND008] The Location of Providers with Physical Access Accommodations

Aetna employs several approaches to determine a provider's compliance with Americans with Disabilities Act (ADA) standards for physical accessibility and reasonable accommodations including parking, exam and waiting rooms, and accessible equipment for Medicaid members with physical or mental disabilities. We emphasize identification of providers with key accessibility to care opportunities such as providing oversize exam tables, specialized staff assistance for members with needed care requirements, or materials in braille to serve the varied member health care needs. We assess compliance with ADA standards during onsite visits, through credentialing and re-credentialing processes, monitoring member complaints, and while gathering information used in our provider directory, such as physical accessibility and accommodations. These indicators are available across all provider types, including behavioral health, home health, nursing care, and home- and community-based providers to help make

sure the member selects the right provider. We have a process in place where all potential findings related to member quality of care concern are reported and investigated.

Cultural Competency

ND009	The Vendor should describe how they ensure its provider network will provide culturally competent care to members.

Cultural competency and health literacy are at the core of our service delivery. Aetna's health care equity director prepares a detailed Cultural Competency Plan (CCP) annually to ensure engagement of all health plan leaders and alignment with Culturally and Linguistically Appropriate Services (CLAS) standards and to ensure compliance. The CCP outlines the processes used to develop and maintain a culturally competent staff and provider network. This plan includes strategies designed to integrating cultural and linguistic competence and health literacy into every aspect of our organization.

[ND009] Ensuring our Provider Network Provides Culturally Competent Care

We realize that a critical element to providing quality service involves developing and maintaining culturally appropriate services that address diverse cultural and ethnic backgrounds, disabilities—regardless of gender, sexual orientation, or gender identity—and provide for cultural competency and linguistic needs, including the member prevalent language(s) and sign language interpreters. Aetna utilizes the U.S. Department of Health and Human Services (DHHS) Office of Minority Health National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care and follows from DHHS, A Blueprint for Advancing and Sustaining CLAS Policy and Practice, to inform the annual revision of our policies.

Aetna provides inclusive care to a diverse population in West Virginia. Aetna policies and training requirements reflect the commitment of member-centered care that is responsive to the unique needs found in West Virginia. Our CCP focuses on effective and equitable care and

services by respecting and honoring each member's cultural health beliefs, practices, preferred language, special needs, and socioeconomic background. In addition to standard provider training and education regarding meeting member cultural needs, we will work with our providers to educate them on an expanded view of culture to include socioeconomic factors, local community variances, and family dynamics.

Cultural Competency Provider Training

Our approach to meeting the linguistic and cultural needs of our members includes the provision of cultural competency training to providers, continuous assessment of member demographics to best understand language and interpreter needs, and the development of innovative provider collaborations to serve members locally. Our providers should confirm all services, both clinical and non-clinical, are provided in a culturally and linguistically competent manner and are accessible to all members. They should verify that members receive understandable, respectful, and timely care that is compatible with their cultural health beliefs, practices, and preferred languages from all provider staff members. Providers receive education during orientation and on an ongoing basis about such important topics as the following:

- The reluctance of certain cultures to discuss mental health issues and the need to proactively encourage members from such backgrounds to seek needed services
- The impact that a member's religious and/or cultural beliefs can have on health outcomes
- The problem of health illiteracy and the need to provide patients with understandable health information (e.g., simple diagrams, communicating in the vernacular)
- The progression of civil rights for people with disabilities
- Physical and programmatic barriers that impact people with disabilities accessing care
- Provider obligations for delivering culturally competent care
- Resources such as Unite Us and Aunt Bertha, an online repository of community services
- Social determinants of health and trauma-informed care
- Training staff on the need to understand and respect cultural differences and developing services that better meet the needs of minority populations and remove barriers to care
- Assisting members with limited English proficiency
- Providing access to interpretive and American Sign Language services for members

- Assessing feedback from members about programs, quality initiatives, member materials, and other education and outreach tools to meet their cultural and linguistic needs

We continually monitor our member demographics to better understand the individuals we serve. For example, in Beckley and Bluefield, 20-25 percent of our members are African American. Because of our regional approach to services, our care coordinators become familiar with populations in their regions, and our System of Care staff and Provider Relations staff work with providers to ensure these members receive culturally competent care. We understand that religious and cultural beliefs in African American culture are important to consider, such as lack of trust in the health care providers and the system—there are also beliefs such as "we trust individuals most like us"; fear that surgery may cause cancer to spread; and apprehension in using opioids for pain management for fear of addiction. Older adults may seek treatment from home remedies, prayer, spiritual healers, and advice from family and friends; a lack of spiritual imbalance may be seen as any physical, mental, acute, or chronic disease.

Additionally, West Virginia ranks highest in the nation for children aged 13 to 17 who are transgender. To best address the needs of lesbian, gay, bisexual, transgender, and queer-identifying (LGBTQ) members, our care coordinators and providers receive training and experience working with this population to have a robust understanding of the cultural values and practices within the community to address discrimination at both an individual and system level and to ensure that providers understand proper language is essential, such as using correct identifying pronouns. Training also emphasizes the importance of strict confidentiality practices, which are critical to creating an inclusive and safe environment for LGBTQ members.

As part of our cultural competency training, we also encourage our providers to access information on the Office of Minority Health's "A Physician's Guide to Culturally Competent

Care." The American Medical Association, American Academy of Family Physicians, and the American College of Physicians endorse this program. Successful completion allows the provider to earn category one continuing medical education credits at no cost.

Monitoring Cultural Competency

We monitor the member experience using member complaint reports. Based on these results, if we identify an issue with culturally competent provider service delivery, our provider relations representatives contact the provider for additional cultural competency training. We also use CAHPS member satisfaction results that will show if a member feels their provider communicates well.

Provider Directory

ND010	The Vendor should describe how they will develop and maintain a directory of providers that includes provider names locations with street address, website URLs (as appropriate) and telephone numbers of current contracted providers in the member's service area.

Aetna has a current state-approved provider directory for the MHT and WVHB, and we will update as necessary for WVCHIP members. We meet all requirements as identified in Model Service Provider Agreement, Article III Statement of Work, Section 3.4.4 Provider Directory.

[ND010] Developing and Maintaining a Provider Directory

Aetna uses various provider demographic data to maintain our provider directory. We use provider lists provided by the Department, and we gather information from our own claims payment system for a remediation file and placement on our website. The steps we take to update the directory include **Online directory:** **We update our online directory daily from our electronic claims management system;** and **Print directory:** We pull information from our system and send the document to a printer for file creation and placement on the website.

Our provider data maintenance processes ensure that our publicly available directory always reflects the most recent and accurate information available including provider names, locations with street address, website URLs, and telephone number of our current contracted providers in the member's service area. Our provider directory also includes the non-English languages offered (including but not limited to American Sign Language) by the providers or their interpreters; whether the provider has completed cultural competence training; identification of providers that are not accepting new patients; any provider group affiliations; provider specialties; ADA accommodations (including offices, exam rooms, and equipment); and any restrictions on the member's ability to select from network providers.

Provider Directory Audits and Updates

We conduct monthly audits to confirm the accuracy of our provider listings, including review of Council for Affordable Quality Healthcare online provider information database. We audit the West Virginia provider directory to confirm the accuracy of provider listings and use this to make weekly updates to online directories, including changes in demographics and panel status. Aetna also assesses and collects information used in our provider directory such as physical accessibility and accommodations. These indicators are available across all provider types, including behavioral health, home health, and publicly supported and specialty care providers to help make sure the member selects the right provider. We update our online provider directory daily from our electronic claims management system. We also deliver an update of the provider directory on disk to the enrollment broker monthly, and we keep our current provider directory on our website. We provide affected members reasonable notice of any changes regarding providers, including any change in the names, locations, telephone numbers, non-English languages spoken by current contracted providers in the member's service area, and

identification of providers that are not accepting new patients. This notice will be provided at least 30 calendar days before the intended effective date of the change. We also notify beneficiaries annually of their right to request and obtain a provider directory and provide potential members a copy of the provider directory upon request within five business days.

Geographical Access Standards

ND011	The Vendor should its process to ensure its network adheres to geographic access standards for all adult and pediatric members.

Aetna ensures our network adheres to geographic access standards for all adult and pediatric members by generating geographical mapping reports for review by health plan and network leadership. Network staff will formulate a plan to close any identified gaps based on data or member feedback. The results of our monitoring efforts are reviewed by our Service Improvement Committee (SIC). The SIC develops and monitors action plans to ensure identified geographic access gaps are addressed. If barriers to appointment availability or accessibility are identified, our Network and Provider Relations teams work collaboratively with our providers to identify and implement meaningful solutions to address these issues. We use a variety of leading indicators to monitor access and accessibility that inform and supplement our core process for ensuring that our network meets the needs of our members. Please refer to **[ND001] and [ND002]** for further details about our network adherence and access standards.

Comprehensive Behavioral Health Provider Network

ND012	The Vendor should describe how they will establish provider contracts and include in its provider network all identified comprehensive behavioral health and Psychiatric Residential Treatment Facilities (PRTF), as defined within the Service Provider Agreement (SPA), for both pediatric and adult MHT members

Based on Department provider access to care requirements, Aetna will ensure access to the full range of specialty and facility services providers for members in applicable populations with behavioral health needs. **Our network currently meets 100 percent of the access**

requirements for psychologists and psychiatrists, and we have contracts with over 736 behavioral health specialists, including 29 inpatient and PRTFs in West Virginia. We also have contracts with 100 percent of SUD providers in the state.

We will focus on behavioral health issues and trauma caused by Adverse Childhood Experiences in children enrolled through TANF and CHIP eligibility. We are collaborating with **Cabin Creek Health Systems and the Marshall Health Center for Rural Health** in an evidence-based, integrated, intensive coordination of care approach that targets high-risk youth, including WVCHIP members, attending middle/high schools in Kanawha County to improve health outcomes. We are offering providers training on trauma-informed care in February 2020. This training will also include cultural sensitivity and health equity and was established in collaboration with the National Council for Behavioral Health.

Additionally, we collaborate with national and local behavioral health organizations, such as the Behavioral Health Provider Association, the National Association of Social Workers—West Virginia Chapter, and PROACT to continue to develop and support our behavioral health network in the state. Our established provider relationships and staff throughout our Aetna Medicaid organization are experienced in developing and maintaining similar networks in other states. We will leverage effective practices and modify them to fit the unique needs of West Virginia's providers and members.

Provider Hours of Operation, Member Convenience and Parity

ND013	The Vendor should describe how its network development and adequacy processes include and assess provider hour of operations, convenience to members, and parity to commercial or fee-for-Service (FFS) populations.

We use accessibility and availability standards based on requirements from National Committee for Quality Assurance (NCQA), state, and federal regulations. The access standards are

communicated to practitioners, providers, and members via the Aetna website and the member handbook and provider manual. Federal law requires that participating practitioners and providers offer hours of operation that are no less (in number or scope) than the hours of operation offered to non-Medicaid members. If the practitioner or provider serves only Medicaid recipients, hours offered to Medicaid managed care members must be comparable to those for Medicaid fee-for-service members. Providers that do not meet Aetna's access standards, including 24/7 PCP access, are provided recommendations for improvements. Our goal is to work collaboratively with the provider to make certain they fully understand and meet the requirements of access and accessibility.

Aetna also offers other methods that help members access services that are convenient to the areas where they live. Telehealth can be used as an alternative to or complement to traditional service delivery. It has also been proven to improve access to services in traditionally underserved remote or urban areas,

In addition, through our financial incentives program, we offer enhanced payment for those offering after-hours and weekend care. Standards for wait times and appointments, disability access, expertise, cultural sensitivity, and hours of operation are communicated through the provider manual, provider notices and alerts, during site visits, and in training documents.

Access to Care Guidelines and Monitoring

ND014	The Vendor should describe its guidelines and monitoring processes that ensure members have timely access to care per contractual requirements.

Aetna Network Development and Provider Relations staff monitor member access per contractual requirements. All participating providers in our network are contractually obligated by provider agreements to adhere to timely access and appointment standards, including specific

standards for PCP, specialty, urgent, and crisis services. We monitor our providers regularly to determine compliance with these requirements, including monitoring accessibility reports, member concern via calls, complaints, and grievances, and making onsite visits. If a contracted provider does not comply with these standards, we meet with the provider face-to-face and we will also take corrective action through our quality management program structure.

Selection, Credentialing, Retention, Maintenance

ND015	The Vendor should describe its process for the selection, credentialing, retention, and maintaining qualified providers.
ND017	The Vendor should describe how they will establish credentialing and re-credential that will comply with C.S.R Section 114-53.6.

Our experience serving MHT and WVHB members with our highly qualified and credentialed network enables us to offer services to WVCHIP members on day one.

[ND015] Process for Selection, credentialing, retention, and Maintaining Qualified Providers

Aetna has a proven process for selecting, credentialing, retaining, and maintaining qualified and quality providers in our West Virginia network. When we identify providers who wish to join our network, we send them a contracting packet that includes the following:

- Provider contract
- Appropriate credentialing forms
- Electronic fund transfer enrollment
- Provider portal enrollment form
- Instructions to sign up for electronic remittance advice
- Contact information for credentialing analyst

Provider Screening and Selection

Aetna requires that all network providers that order, refer, or render covered services are enrolled with the Department, through its fiscal agent, as a Medicaid provider, as required by 42 CFR 438.602(b). We understand that we are not required to contract with a provider that is enrolled with the Department if the provider does not meet our credentialing or other

requirements. When we identify a provider, who is interested in joining our network, but not currently enrolled with the West Virginia Medicaid program, we will work with the provider to submit an enrollment application with the Department's fiscal agent and verify the provider has been enrolled prior to contracting. Aetna requires providers who are seeking to join our network to submit their Internal Revenue Service Form W-9, provider information form, and application. The credentialing process includes but is not limited to verifying that the provider's required licenses and certifications are current and that the provider is eligible for participation through the National Practitioner Database. Aetna has processes in place to ensure compliance with federal requirements prohibiting employment or contracts with individuals excluded from participation under Medicaid, Medicare, or CHIP, as required by 42 CFR 438.610. We will collaborate with the Department's fiscal agent, including collaboration of conducting and responding to the results of monthly federal databases checks as required by 42 CFR 455.436 to ensure compliance of all entities per Article II, Section 8.6. As required, and to the extent that information is available, we will also coordinate with the State to verify the provider does not owe money to the Medicaid program and that the provider is not currently involved in an active Office of the Attorney General Fraud investigation. Aetna only contracts with the highest quality health care providers. We submit monthly reports to the Department with the names, National Provider Identifiers (NPIs), and Employer Identification Number or Medicaid identification number of any health care professional, institutional provider, or supplier that has been the subject of a program integrity action. Actions that will be reported may include denied credentialing, suspension, termination, CAPs, fines, or sanctions because of concerns about provider fraud, integrity, or quality deficiencies during the prior calendar quarter. The report will also identify action taken by Aetna. We will also report any health care-related criminal

convictions, when disclosed, to the Department and notify the appropriate licensing, disciplinary bodies, or other appropriate authorities.

Physician and other licensed health care professionals: Aetna's process for selecting physicians and other licensed health care professionals, including members of physician groups, includes our staff understanding of the following processes:

- Examine the PROV12 provider listing of newly enrolled providers to pre-select providers
- Review procedures for initial credentialing
- Evaluate procedures for re-credentialing at least every three years and recertifying and/or reappointing providers
- Review processes for receiving advice from contracting health care professionals with respect to criteria for credentialing and re-credentialing of individual health care professionals
- Assess written policies and procedures for denying, suspending, or terminating affiliation with a contracting health care professional, including an appeals process, and for reporting serious quality deficiencies to appropriate authorities

Institutional providers and suppliers: We have established processes that specify the intervals at which we determine and redetermine our providers and suppliers are appropriately licensed to operate in the state, are in compliance with other applicable state and federal requirements, and have been reviewed and approved by an appropriate accrediting body when applicable, or are reviewed and determined to meet the standards Aetna has established for such entity.

We do not discriminate against providers with respect to their participation, reimbursement, or indemnification as to any provider who is acting within the scope of the provider's license or certification under applicable state law, solely based on such license or certification. Additionally, our selection and retention criteria do not discriminate against health care professionals who serve high-risk populations or who specialize in the treatment of costly conditions. If a provider is not accepted into our network, we provide written notice that includes

reasons the provider was not accepted, including information on their appeal process if applicable. If a provider is accepted, we send a written network participation welcome letter that includes a contract effective date for which providers are approved to begin providing medical services to members, as well as the required orientation information.

Credentialing Requirements and Procedures

Aetna will credential and re-credential new physical health and behavioral health providers in accordance with federal and state requirements, as defined by the Department. Our approach to working with providers is to be there to help at every step in the process, and to stay in constant communication so providers know the status of their application and if additional information is needed. **We employ a dedicated credentialing staff to assist providers and streamline the credentialing process for West Virginia providers.**

As an **NCQA 'Commendable' health plan**, Aetna has written credentialing and re-credentialing policies and procedures that comply with NCQA requirements, W. Va. C.S.R. §114-53-6 and 42 CFR 455, Subpart B, and other applicable federal and state laws, regulations, and requirements. We will continue to meet all requirements, including those included in the Model Service Provider Agreement Section 2.1. Aetna's National Quality Management and Measurement department is responsible for the following credentialing functions:

- Committee minutes, policies, and procedures
- Confidentiality and disclosure of credentialing
- Re-credentialing peer review information
- Assessment and credentialing of organizational providers
- Credentialing allied health practitioners
- Practitioner credentialing and re-credentialing
- Non-traditional providers credentialing and re-credentialing
- Credentialing office assessments
- Practitioner applications
- Reporting sanctions
- Practitioner participation and peer review, including a West Virginia practitioner

- Medical director credentialing
- Peer review credentialing and re-credentialing
- Coordination with Medicaid state plans for local approval

Aetna does not require providers to complete more than one credentialing or re-credentialing application. We complete credentialing and re-credentialing of providers within 90 days of receipt of all relative information from the provider. Aetna has a Physician Advisory Subcommittee that meets monthly to review the provider's application after the review by the Aetna National Quality Management and Measurement department process and provides approval of all of Aetna's credentialed providers.

We conduct credentialing or re-credentialing for all of our West Virginia providers prior to allowing them to be listed in the provider directory and serve members.

Individual providers: Individual providers who are members of a contracting group, such as an independent association or medical group, are credentialed individually. They must complete the credentialing application, which includes a work history covering at least five years. When Aetna conducts primary source verification, we gather proof of licensure, education, and training, evidence of graduation and specialty training, and valid Drug Enforcement Administration (DEA) or Department of Public Safety Controlled Substances Registration Certificate. The provider's office is contacted, if applicable, to complete the application and acquire additional needed documentation. Prior to admitting a provider into our network and every three years thereafter, we verify selected criteria with primary sources.

PCPs and specialists: The following are minimum data elements required for applications for PCPs and specialists:

- Professional license number
- Any physical or mental health problems that may affect current ability to provide health care

- Any history of chemical dependency/substance abuse
- History of loss of license
- Felony convictions as required by W. Va. C.S.R. §114-53-6.3 and other criminal convictions as required by 42 CFR 455.106
- History of loss or limitation of privileges or disciplinary activity
- History of debarment, suspension, or exclusion from any federal or state health care programs
- An attestation to correctness/completeness of the application

During the initial credentialing process, we verify the following:

- The identity and the exclusion status of provider and any person with an ownership or control interest or who is an agent or managing employee of the provider through checks of federal databases as described in 42 CFR 455.436
- The provider holds a current valid license to practice
- Valid DEA or Controlled Dangerous Substance certificate, as applicable
- Graduation from medical school and completion of a residency, or other post-graduate training, as applicable
- Board certification or eligibility, or specialized training as appropriate
- Work history
- Professional liability claims history
- Good standing of clinical privileges at the hospital designated by the provider as the primary admitting facility (this requirement may be waived for practices which do not have or do not need access to hospitals)
- The provider holds current, adequate malpractice insurance with minimum coverage requirements of $1 million per individual episode and $1 million in the aggregate
- Any revocation or suspension of a state license or DEA/Bureau of Narcotics and Dangerous Drugs number
- Any curtailment or suspension of medical staff privileges (other than for incomplete records)
- Any censure by the state or county medical association
- Any member complaints

Additionally, we request and review information on the provider from the National Practitioner Data Bank and appropriate state licensing boards, including but not limited to the Board of Medicine, Chiropractic Board, Osteopathic Board, and/or Dental Board.

Facility providers: Aetna follows current NCQA guidelines in credentialing acute care facility providers including behavioral health treatment programs. As a prerequisite for participation or continued participation, organizational providers must be in good standing with State and federal regulatory bodies. They must have been reviewed and approved by an Aetna-approved

accrediting body, including but not limited to the Joint Commission and Community Health Accreditation Program, and participate in an onsite assessment if not accredited and a Centers for Medicare and Medicaid Services (CMS) or state survey is not obtainable. Minimum credentialing criteria includes verification of the following:

- Current unrestricted license or certificate of occupancy depending on state requirements
- Current accreditation or certification in all locations where services are provided by at least one of Aetna's recognized accrediting agencies or CMS or state survey
- Good standing with Medicaid or Medicare and not on the Officer of Inspector General sanctions or Office of Staff Management sanctions
- Professional liability insurance
- Advance directive policy for hospitals and long-term care acute care hospitals
- Internal Revenue Service Form W-9 required during initial credentialing

SUD providers: We understand that the Department Administrative Services Organization contractor will complete the SUD provider certification process and provide a report to the Department. Final certification letters will be sent out by the Department, and Aetna will be notified of the certified providers by the Department. Contingent on the SUD providers receiving certification from the State, Aetna will credential all SUD providers consistent with the key benchmarks from American Society of Addiction Medicine® criteria as set forth in the Medicaid Provider Manual, Chapter 504. Aetna will meet the SUD provider network standards as outlined in Model Service Provider Agreement, Article III Statement of Work, Section 10.11.5 SUD Provider Certification, Credentialing, and Network and Appendix J.

Re-credentialing Process and Cycle

Individual and facility acute care providers are re-credentialed using Aetna's standard re-credentialing process every three years. We reverify and update all the stated information, including confirming that these providers are in good standing with applicable accreditation and regulatory agencies; have a signed contract or participation agreement; meet our standards and requirements; and are qualified to provide services to our members. We make sure providers

are appropriately licensed by the State and have an NPI number and appropriate ongoing certification and training, as required, and agreed to in their contract. We make certain all network providers are screened against state and federal exclusion registries, and we comply with all contract requirements. In addition to the information obtained during initial credentialing, the re-credentialing process also includes review of the following provided in **Table 6.7.1-3**.

Table 6.7.1-3: Information Reviewed for Re-credentialing Acute Care Providers

Information	Method for Capturing this Information	How the Information is Assessed
Member Complaints and Appeals	Member complaint and appeals data is collected by our Member Services department and the Appeals and Grievances department.	Member complaints are reviewed, and if any are related to quality and safety, they are investigated. Complaint monitoring reports are used to identify practitioner quality issues between re-credentialing cycles.
Utilization Management Information	Utilization management data is collected by our Medical Management department.	This data is reviewed and evaluated as part of the re-credentialing process.
Results from Quality Review and Provider Quality Profiling	Quality information collected through our quality management structure is obtained through routine data submission requirements and record reviews.	This data is reviewed and evaluated as part of the re-credentialing process.
Information from State Licensing Boards and Accreditation Agencies	Licensing and accreditation information is collected through review of state licensing boards and accrediting agencies.	This information is evaluated through the ongoing monitoring process conducted by the Credentials Verification Organization.

Additional Provider Specific Credentialing and Re-credentialing Criteria

In addition to the stated credentialing and re-credentialing requirements, Aetna has policies and procedures to support compliance with criteria applicable to certain provider types, as required in the Model Service Provider Agreement, Article III Statement of Work, Section 2.1.

Criteria for PCPs, OB/GYNs, and other specialists: Aetna conducts an onsite visit of PCPs, OB/GYNs, durable medical equipment (DME), behavioral health providers, and other high-risk providers or highly utilized specialists' offices and documents a structured review of the site and medical recordkeeping practices to ensure conformance with applicable standards. Site visits are conducted as a part of initial credentialing and may be conducted during the re-credentialing process that occurs every three years.

Credentialing and re-credentialing criteria for dental providers: Aetna has delegated credentialing and re-credentialing of the dental network to SKYGEN USA, our dental benefit administrator. As a part of our oversight of SKYGEN USA, we confirm that they have appropriate policies and procedures that comply with all credentialing and re-credentialing requirements as described. Additionally, we verify that SKYGEN USA's credentialing and re-credentialing criteria for dental providers includes verification of a current anesthesia permit and/or certificate from the West Virginia Board of Dental Examiners for those dental providers who induce central nervous system anesthesia.

Credentialing and re-credentialing criteria for behavioral health care providers and agencies: Aetna's processes for credentialing and re-credentialing behavioral health care providers and agencies includes the following criteria:

- Verification that comprehensive behavioral health centers and licensed behavioral health centers hold a current, valid license through the West Virginia Office of Health Facility Licensure and Certification
- Verification that independent psychologists and independent practicing licensed social workers hold a current, valid license with their professional boards
- Verification physicians are approved to provide Suboxone® treatment by the Department, and that physicians who intend to provide Suboxone treatment meet the following requirements:
  - Physician must qualify for a waiver under the Drug Addiction Treatment Act

- Physician must have an assigned DEA (X) number and complete the training regarding Suboxone treatment guidelines
- Physician must notify the Center for Substance Abuse Treatment of the intention to treat addiction patients

[ND017] Credentialing/Re-Credentialing that Complies with C.S.R. Section 114.53.6

Aetna has established and implemented state approved policies and procedures that address the selection and retention of our contracted provider network that are compliant with all applicable federal regulations, including but not limited to W. Va. C.S.R. §114-53-6.

Provider Contracting and Oversight

Aetna continues to contract with high-quality and diverse groups of providers in both large and small systems as we offer time-tested best practice strategies. As described previously, when we identify a non-contracted provider through a member request or feedback, we contact the provider to provide information regarding enrollment in the West Virginia Medicaid program and determine their willingness to join our network.

Provider contracting practices: Our policies and practices are developed to make sure Medicaid providers meet and maintain compliance with all applicable standards. We do not discriminate against providers who service high-risk populations, specialized conditions that require costly treatment, or based on the providers licensure or certification. Aetna's provider contracts comply with the terms of the contract, state and federal laws and requirements, and include any required standard contracts provisions. Our West Virginia Medicaid provider contract templates are available for review and approval upon request and will be provided as required in the Request for Proposal upon notification of award. Aetna understands the importance of the state mainstreaming of Medicaid beneficiaries into the broader health delivery system and includes contract terms expressly prohibiting contracted providers from intentionally

segregating Medicaid members in any way from other persons receiving services. The prohibited practices include, but are not limited to, the following:

- Denying or not providing a Medicaid member with any covered service or availability of a facility
- Providing a Medicaid member with any covered service that is different, or is provided in a different manner or at a different time from that provided to other members, other public or private patients, or the public at large
- Subjecting a Medicaid member to segregation or separate treatment in any manner related to the receipt of any covered service
- Assigning times or places for the provision of services based on the race, color, creed, religion, age, sex, national origin, ancestry, marital status, sexual preference, income status, program membership, or physical or mental disability of the members to be served

Additionally, our contracts with PCPs prohibit such providers from closing their panels to Medicaid members without prior notification and consent by Aetna. If a PCP closes its panel, it must be closed to all individuals, and if reopened, must be required to admit patients on a first-come, first-served basis. If a PCP has the maximum of 2,000 Medicaid members, the PCP is permitted to admit additional, non-Medicaid patients. We require participating providers to sign an executed contract or letter of agreement between Aetna and themselves following negotiations. Once a contract is executed, we provide the Health Plan Reimbursement Administration (HPRA) department with a copy of the signed contract for review and operational analysis. HPRA submits a system change request form to the Configuration team to create a new contract in our claims system. The change request includes the signed executed contract or letter of agreement, the reimbursement schedule, codes, compensation schedules, and other requirements to pay services properly at correct rates as defined in the contract.

The new or modified contract will be configured in our claims system's applications development testing environment. This process streamlines the setup for new providers and increases quality and claims payment accuracy. The Medicaid Provider Services (MPS) team will run through a

series of claims to validate accurate configuration of the contract. Once MPS passes the contract, an Internal Quality Control team will also review. The contract is then promoted into the production environment ready for provider assignment/linkage. A provider change request is submitted to the Provider Data Services department to create or modify a new provider record. The provider is aligned to the designated contract on the provider change request, including additional provider information (i.e., language, provider type, specialties). We validate the provider load and complete the process.

Oversight and monitoring provider compliance

In addition to our formal credentialing, re-credentialing, and contracting processes, we have established a variety of mechanisms to assess provider contract compliance and identify potential noncompliance. These include conducting routine site visits and surveys; monitoring member and provider complaints and grievance and appeals, both at a case and trend level; reviewing data and reports submitted to our Special Investigations Unit, Compliance department, and compliance hotline; reviewing quality management data and reports; and reviewing notifications received from the Department. If a potential concern is identified, our Provider Relations staff coordinates with the appropriate Aetna departments to assess or investigate the matter and determine whether the provider is compliant with the applicable contract requirements. The assessment or investigation may occur in a variety of ways, based on the circumstances, including but not limited to conducting a record or documentation review, an ad hoc onsite survey, and interviews with the provider.

Retention Strategies

Our model of provider engagement is designed in support of the philosophy that developing long-term relationships built on mutual trust improves provider retention. Aetna continually looks

for innovative strategies to engage, satisfy, incentivize, and retain providers. We use performance improvement projects, educational initiatives, community forums, and regionally based projects to help providers improve their practices, create better health outcomes for members, and reduce administrative costs and burdens.

We use **high-touch, face-to-face, and personalized engagement** activities including one-on-one meetings with our Provider Relations staff to help them understand their managed care contract, Aetna's policies, and procedures, how to file claims, and receive electronic payments. Each Aetna West Virginia provider will have an assigned provider relations representative who is familiar with their local providers and will meet face-to-face regularly and as requested to provide training, build trust, foster open communication, and develop collaborative relationships. This approach enables each office to become familiar with its representative and form a solid working relationship. Provider relations representatives engage with providers through a variety of mechanisms designed to provide proactive, prompt, and collaborative communications.

Additionally, we work to **minimize provider administrative burden** and provide ease to access support through the following activities:

- A designated provider relations representative who is familiar with the provider
- No requirement to submit paper or electronic referrals for services
- A dedicated provider call center
- Utilization management process simplification; for example, we put a limit on the benefit in lieu of a prior authorization requirement for trigger point injections. A provider in the eastern West Virginia panhandle indicated this was a significant burden when a new patient required this service because the member would have to return for another appointment rather than receiving the injection the same day of the first appointment. We allowed six trigger point injections in a 12-month period.
- Technical assistance and training related to claims submissions and the technical interfaces providers have with Aetna. As a result, in 2019, 94 percent of claims are submitted by electronic data interchange (EDI) and more than 88 percent are auto-adjudicated. In addition, over the last 12 months in 2019, our average turnaround time for EDI claims is 8

days, our average turnaround time for paper claims is 13 days, and our 2019 payment and procedural financial accuracy rate was 99 percent.

- Self-service and online tools through the provider portal and interactive voice response that make it easier for providers to interface with Aetna

We use simplified contracting using streamlined agreements that are fully compliant with state and federal requirements. The ability to sign an electronic agreement using Adobe e-signature makes it convenient for a provider to return and sign their document within hours.

As part of our recruitment and retention strategy, Aetna offers providers a variety of **alternative payment arrangements** through our Aetna Better Value program. Our programs are customizable, allowing us to combine the most applicable components for a provider into a comprehensive and effective, innovative alternative payment model (APM). Through Aetna's value-based payment arrangements, we can incentivize cost, utilization, and quality improvement through a reduction in potentially preventable events (primary, specialty, and hospital-based) such as hospital readmissions, avoidable ER visits, avoidable inpatient visits, and preventable complications. Using quality and performance measures in the contracts with APMs helps us to determine the provider's success, and together we make continuous progress toward West Virginia's goals for member access to quality care.

Annually, Aetna issues four levels of Quality All Star awards—Gold, Silver, Bronze, and Partnership—to providers for increases and improvements in their Healthcare Effectiveness Data and Information Set (HEDIS) scores. The Quality team works in conjunction with Provider Relations to engage our providers to continually increase their quality of care.

Aetna's physician incentive plan approach includes primary care and specialty care (including behavioral health and hospital-based care) and expands into other treatment venues, such as community mental health centers, FQHCs, RHCs, and non-traditional providers. Aetna has an

established APM program in West Virginia affecting 21 percent of our membership. Our current APM options include pay-for-quality, shared risk, shared savings, and capitation. **Aetna has paid over $22,495,000 in value-based payments over the past two years, including a risk payout.**

Maintaining Qualified Providers

Aetna values and collaborates with our providers by forging strong relationships with them to maintain a robust provider network. Some of our **Provider Relations team members live in the regions where they work** and demonstrate extensive knowledge of the providers' and members' needs at the local level. Providers receive personalized attention and agile responsiveness from their assigned Provider Relations staff who meets with them in their offices and facilities for improved communication. We offer simplified and timely credentialing, contracting, and amendment **processes that ease the administrative burden for providers.** Through ongoing provider engagement and education, we keep providers informed and offer the necessary support to ensure **they can stay focused on our shared number one priority, delivering the highest quality of care to our members.** Additionally, as **we obtain feedback from providers via site visits, provider forums, Joint Operating Committee meetings, and other stakeholder meetings and committees where we receive valuable commentary that drives development of new provider incentives and tools to strengthen provider satisfaction and maintenance of the network.**

Provider Enrollment with Department

ND016	The Vendor should describe how they will ensure that its network providers have completed enrollment with the Department as required by CMS Medicaid and CHIP Medicaid Managed Care Final Rule.

Our experienced staff have worked with West Virginia Medicaid providers for more than 23 years, enabling us to make sure our credentialing and contracting processes, including provider

enrollment, are efficient and effective. Aetna verifies network providers have completed enrollment with the Department required by CMS Medicaid and CHIP Medicaid Managed Care Final Rule during our credentialing recredentialing processes. Practitioners or providers who provide services to our members must be enrolled as a Medicaid and/or WVCHIP practitioner or provider at each practice location with the State of West Virginia and credentialed by Aetna before they can provide health care to our members. To assist providers and support network development, Aetna has established a process to guide and support providers through the Medicaid and WVCHIP enrollment process. Through this process, providers can send Aetna their Medicaid and WVCHIP enrollment application in a variety of ways, including email or mailing a hard copy. Once we receive the application, we review to verify that all required fields have completed and that the information is legible. If we identify any deficiencies, we reach out to the provider to obtain the information or corrections needed to complete the application.

Site Visits

ND018	The Vendor should describe how they will establish site visit criteria and evaluation as part of its credentialing process for PCPs, OB/GYNS, DME providers, behavioral health providers, other high-risk providers, and other highly utilized specialists.

Aetna will expand on our current site visit criteria for PCPs and OB/GYNs to include DME providers, behavioral health and other high-risk and/or highly utilized providers, and specialists. Aetna has established site visit criteria and evaluation as part of our credentialing process. We use the site visit criteria using Department requirements and NCQA credentialing standards, such as access and hours of operation, ADA compliance, and medical record keeping practices. We document this structured review of the site and medical recordkeeping practices to ensure conformance with applicable standards. We conduct site visits as a part of initial credentialing and may be conducted during the re-credentialing process that occurs every three years.

Reimbursement of Services during Mid-transfer of Treatment

ND019	The Vendor should describe its process for reimbursement of services that occur during mid-transfer of a treatment, when a recoupment is not available through the original provider (for example, orthodontia)

Although an infrequent occurrence, we have an established process for reimbursement of services that occur during mid-transfer or treatment. Aetna allows a member to continue an ongoing course of treatment with the provider/practitioner for up to 90 calendar days from the date of our member Notification Provider Termination letter. Aetna's definition of 'ongoing course' is defined as a member receiving treatment from a practitioner during the previous six months for a condition that requires follow-up care or additional treatment, or the services have been prior authorized, such as in the case of a member who is pregnant and in her second or third trimester. Maternity services can continue with the provider/practitioner who is being terminated through the completion of the member's postpartum care. Member choice, including the ability to select a PCP, is our principal goal, especially when transitioning care. When a provider is terminated, members receive information and assistance to make a PCP change. Aetna's Member Services staff and Care Management team are available to assist members in selecting a new PCP.

Aetna complies with the Model Service Provider Agreement, Article III Statement of Work, Section 9.6 and 9.7 Orthodontic Services. We reimburse for children's orthodontic services and cover the entire duration of treatment. We confirm, in conjunction with the Department and SKYGEN USA, continuity of care for active orthodontia cases from January 1, 2014, until care is completed and providers are fully reimbursed. We will pay for orthodontic services not previously reimbursed under the fee-for-service as a part of the global payment fee. We allow a member to continue receiving orthodontic services with an existing out-of-network provider and

maintain written orthodontic continuity of care records. We make an initial payment which covers the entire treatment plan, and if the member disenrolls midway through the course of treatment, we do not retract any portion of the payment regardless of the member's tenure with the plan.

Notifications

ND020	The Vendor should describe how they will establish notification processes related to provider network terminations including but not limited to, the following:
ND021	Notification to the Department and the enrollment broker with advanced written notice of any Primary Care Provider (PCP) network deletions within fourteen calendar days
ND022	Written notification to members, at least thirty calendar days prior to the termination, to allow the opportunity to select a new Primary Care Provider (PCP) before being assigned one
ND023	Immediate notification of a hospital termination to the Department

Aetna currently has established processes related to network terminations and in compliance with Model Service Provider Agreement, Article III Statement of Work, Section 2.1.8. Network Changes.

[ND020] Establishing Notification Processes

Aetna makes every effort to ensure that our relationships are strong enough with our providers to resolve issues as they arise. We take every step to resolve deficiencies, complaints, grievances, and any other concerns to ensure that our members have a solid and comprehensive network to avoid disruptions in care, and to ensure provider continuity and consistency. Consistency in providers, however, must also be balanced with member safety and quality care. As such, it is our practice to terminate provider contracts for cause when we identify safety or significant quality concerns, or noncompliance with credentialing requirements. It is not our practice to terminate provider contracts arbitrarily for no cause.

Except in the case of death or illness, the provider agrees to notify us at least 90 days in advance of disenrollment and agrees to continue care for his or her panel members for up to 30

days after such notification until another PCP is chosen or assigned. We recommend the provider have an established policy for dismissing patients from the practice. Aetna members should be seen and treated in the same manner as other patients the provider sees. Services or appointments cannot be refused in emergency or urgent care situations unless the provider has given a member with at least 30 days' notice and requested that they select another practitioner. In the event of a member dismissal from the practice, the member should be notified in writing. We strongly encourage the provider send us a copy of the dismissal notification letter sent to the member. If requested, we can assist the member in selecting a new provider.

[ND021] Notification to the Department and the Enrollment Broker

In accordance with our current processes, we notify the Department and the enrollment broker of any changes to our network that materially affects our ability to deliver services within 14 calendar days of such change identified. In the event of an Aetna-prompted PCP network termination, we will notify the Department and enrollment broker with advanced written notice within 14 calendar days. Our process for notifying the Department of provider contract terminations meets the requirements of Model Service Provider Agreement, Article III Statement of Work, Section 2.1.8 Network Changes, and will contain the following:

- The reason and a brief description of the provider's actions and/or applicable information leading to termination
- The provider's NPI, Medicaid identification number, entity name, and provider type (two-digit)
- The provider's complete mailing address
- Assurances of how we will maintain network adequacy and access to care despite the provider termination
- Aetna's plan to make sure members are transitioned in a manner that ensures continuity of care

The written notice to the provider includes the reason for Aetna's decision; the effective date of termination; the provider's right to appeal the decision; and how to request an appeal. The focus

of our processes, monitoring, reporting, and communication is to make certain covered and medically imperative services are available to members. As required, we will obtain prior approval of the survey tool from the Department and will provide survey results upon request.

[ND022] Written Notification to Members

Aetna's processes and policies surrounding network provider termination make certain we notify members in a timely manner and the member has continued access to covered services. In compliance with Model Service Provider Agreement, Section 2.2.6 PCP Transfers, in cases of PCP withdrawals, Aetna provides members with at least a 30-calendar day notice whenever possible to enable them the opportunity to select a new PCP before being assigned one. Our Provider Relations team coordinates with Member Services staff to start the process of member notifications and maintain continual care for members impacted by the termination of a provider.

We understand that members with a disabling condition, chronic illness, or who are Supplemental Security Income-eligible, have a choice of specialist physician to serve as their PCP. If the member's PCP is a specialist, we will send the member information about how we will assist the member to transition care to another specialist.

Aetna Care Coordination staff will assist a member selecting a new PCP. Our member transition process includes the following:

- Identifying affected members through data and reports from Care Management and Utilization Management and claims data
- Identifying priority members, such as those in currently in an inpatient setting, scheduled to have surgery, in the middle of care, or with complex medical needs, to ensure individual care plans are developed or updated as appropriate
- Providing members with notice and assigning care managers to do targeted outreach to members and make sure we understand continuity of care needs
- Reviewing geographical mapping reports to determine geographic impact and implement targeted strategies to identify and contract with other providers, including the use of SCAs and telehealth, as necessary, to maintain compliance with network adequacy standards

- Initiating clear communication protocol between the Care Management and Provider Relations department regarding identified network needs through targeted member outreach and individual care plans and making certain network development activities occur in real time to respond to identified member needs.

For terminations involving specialists, members who have received a service from the terminating provider twice within the previous 6 months are notified in writing within 15 days from the date we send the termination notice to the specialist, or from the date we receive notice from the specialist of non-participation in the network. We will also send the member information about selecting a new specialist and how we will assist the member during transition.

[ND023] Immediate Notification of a Hospital Termination to the Department.
Aetna will report any disenrollment of hospitals from our network to the Department immediately in compliance with the Model Service Provider Agreement, Section 2.1.8. Network Changes.

For example, when St. Mary's Medical Center notified us of their intent to terminate their contract in 2013, we notified the Department via email on the next business day. We also sent out notification letters to providers with privileges at St. Mary's Medical Center, members who lived in Cabell County (where the facility was located), and members who had been seen at the facility in the last 12 months. These letters were sent within 14 days of the termination notice from the hospital with information about the change in their participation status and alternative facilities that were in network where members could be seen.

8. Provider Services

The Vendor should refer to the relevant specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Provider Services (PS) as part of their bid. The Vendor's narrative response should not exceed 50 pages.

Our provider services approach drives provider engagement, education, and collaboration that supports the Department for Health and Human Resources (Department)'s vision to improve communication and training among stakeholders. We work with West Virginia providers and the Department to reduce fragmentation and streamline administrative tasks to allow easier flows of information that help coordinate care for our members, especially for those with chronic conditions.

Our provider services solutions include dedicated locally based West Virginia Provider Relations teams, enabling our proactive provider engagement. In addition, we enrich the provider experience by providing significant training, self-service tools, and information technology (IT) supports to improve data sharing with providers, as well as innovative provider incentives aimed to enhance quality of care and strong local relationships to improve access and health outcomes.

Provider Services Operating Model

PS001	The Vendor should provide a description of its Provider Services operating model.

Through our more than 23 years of working in West Virginia, we have developed a deep understanding of West Virginia providers. Aetna's comprehensive provider services functions include services and tasks to ensure providers receive education and support to effectively service the Mountain Health Trust (MHT), West Virginia Health Bridge (WVHB), and West Virginia Children's Health Insurance Program (WVCHIP) members.

Our provider services operating model leverages knowledge of West Virginia and our experienced Provider Relations and Provider Call Center staff, relevant training opportunities, and self-service tools to enable providers to streamline processes for member care, as described throughout this response. Our provider services solutions support providers and requirements contained in the Model Service Provider Agreement, Article III Statement of Work, Section 2.6.1 and as shown in **Table 6.8.1-1**.

Table 6.8.1-1: Aetna Provider Services

Model Service Provider Agreement Requirements	Aetna Provider Services Solutions
Assisting providers with questions concerning enrollee eligibility status	• Provider relations representatives • Provider portal search 24/7 • Provider call center staff • Interactive voice response 24/7
Assisting providers with plan prior authorization and referral procedures	• Provider relations representatives • Provider manual • Provider call center staff • Provider training • Website • Provider portal • Prior authorization code specific look-up tool
Assisting providers with claims payment procedures	• Provider relations representatives • Claims Inquiry and Research staff • Provider manual • Provider training • Website
Handling provider complaints	• Provider relations representatives • Provider manual • Provider portal – link to policies • Provider call center staff
Providing and encouraging training to providers to promote sensitivity to the special needs of this population	• Initial provider orientation • Provider forums • Provider relations representatives • Cultural competency training • Trauma-informed care training

Model Service Provider Agreement Requirements	Aetna Provider Services Solutions
Educating providers about MHT, WVHB, and WVCHIP	• Provider relations representatives • Provider call center staff • Provider orientation toolkit • Initial and ongoing provider training • Provider forums
Educating providers on our written policies on the False Claims Act, including policies and procedures for detecting and preventing waste, fraud, and abuse; this requirement is pursuant to the deficit Reduction Act of 2005, section 6032	• Provider relations representatives • Initial and ongoing training • Provider manual via provider portal
Offering targeted supports to key providers, such as navigating managed care systems and coordination with physical and behavioral health providers	• Provider relations representatives • Premier Provider Relations representative • Care Management staff • Care Coordination team
Expanding our innovative contracting strategies through targeted incentives and compensation models more lucrative for providers who adopt evidence-based practices and time-tested clinical approaches to care management	• Value-based payment model • Network development director

We also incorporate effective practices from our shared service partners, such as provider specific issues relating to claims, encounters, and coding. This approach aids our ongoing identification and implementation of provider experience approaches to support and respond to our providers.

Experienced Provider Relations Staff

Aetna's highly trained and experienced Provider Relations staff have over 100 combined years of West Virginia Medicaid experience. Our staff is located in diverse communities across the state to ensure strong and collaborative provider relationships. These individuals support and train providers to easily navigate administrative processes and facilitate care for MHT, WVHB, and WVCHIP members, including those in rural regions, and provide support and refresher training as needed.

Under the direction of the chief executive officer (CEO), our provider relations director oversees our provider services operating model and is responsible for developing and issuing guidance, training, and technical assistance on emerging and urgent issues to support providers and make sure member needs are promptly met.

We also offer Premier Provider Relations services to the largest four providers in West Virginia to provide a more personalized and in-person communication approach for **West Virginia University, Marshall Health, Cabell Huntington Health, and Charleston Area Medical Center (CAMC) Health System**. We have created a rapport with each facility and an open working relationship in which to resolve issues and develop pilot programs to better serve our West Virginia members. This relationship has resulted in less provider abrasion and has also allowed the other provider relations representatives to offer equal focus to the smaller facilities and practitioners in our state.

Provider Relations Staff Training

The key to Aetna's Provider Relations staff success begins before we hire, as we select employees with appropriate experience, training, education, and direct provider relationships that demonstrate effective provider relationship management.

Provider Relations staff training provides new staff with foundational information including the following:

- Aetna's organization and internal operations
- An overview of West Virginia's MHT, WVHB, and WCHIP program requirements
- An overview of the Department and Bureau of Medical Services
- Covered services, including Aetna value-added services
- Centers for Medicare & Medicaid Services requirements
- Cultural competency and health literacy
- Trauma-informed care
- Strategies to support providers in meeting member needs
- Quality of care

- Value-based payment provider program
- Americans with Disabilities Act
- Fraud, waste, and abuse (FWA)
- Compliance
- Code of Conduct
- Privacy
- Lean Six Sigma
- Systems navigation
- National Committee for Quality Assurance (NCQA)
- Contractual, state, and federal requirements specific to individual job functions

Our Provider Relations team also receives ongoing training on policy and programs changes that occur. They receive training on community health events, trauma-informed care, cultural competency, and detailed compliance training. They also receive ad hoc training on topics that may include demographic changes and updated Healthcare Effectiveness Data and Information Set (HEDIS) and non-HEDIS results.

Locally Based and Regionally Assigned Provider Relations Strengthens the Provider Experience

Each Aetna West Virginia provider will have an assigned provider relations representative who will engage with them regularly and as requested to provide training, build trust, foster open communication, and develop collaborative relationships. This approach enables each provider office to become familiar with its representative and form a solid working relationship.

Provider relations representatives engage with providers through a variety of mechanisms, including in-person meetings and training, electronic communications, and phone communication designed to provide proactive, prompt, and collaborative communications.

Our provider relations representatives are champions of the delivery of West Virginia-specific training and education for providers, in alignment with Aetna's overall mission, core values, and strategic plan and in compliance with all relevant federal, state, and local regulations. Provider relations representatives serve as the primary point of contact between Aetna and our network

providers and provide education and assistance regarding a variety of topics. Provider relations representatives visit or phone provider offices periodically to ensure their experiences with us are seamless. They meet routinely with office staff, practitioners, or providers and are available to meet upon request. **Our West Virginia Provider Relations staff conducted 586 site visits in 2019.**

Our Provider Relations staff also send news, electronic messages, and specialized mailings to providers periodically that include updates to the manual, changes in policies or benefits, and general news or information of interest to our provider community. We send provider notices at least monthly, and more often as needed.

Provider Relations staff responsibilities include the following:

- Provide education to practitioner and provider offices
- Provide support on Medicaid and WVCHIP policies and procedures
- Clarify contract provisions
- Assist with demographic changes, terminations, and initiation of credentialing
- Coordinates the ongoing HEDIS and non-HEDIS education of network providers and provision of gap in care reports
- Monitor compliance with applicable state and federal agencies
- Conduct an annual Provider Satisfaction Survey
- Analyze and create action plan in alignment with NCQA requirements
- Conduct member-complaint investigation
- Maintain the provider directory
- Assist practices to obtain secure web portal or member care login information
- Serve as a point of contact for any provider concern

As depicted in **Figure 6.8.1-1**, our provider relations representatives are locally based and regionally assigned to serve providers in all regions of the state.

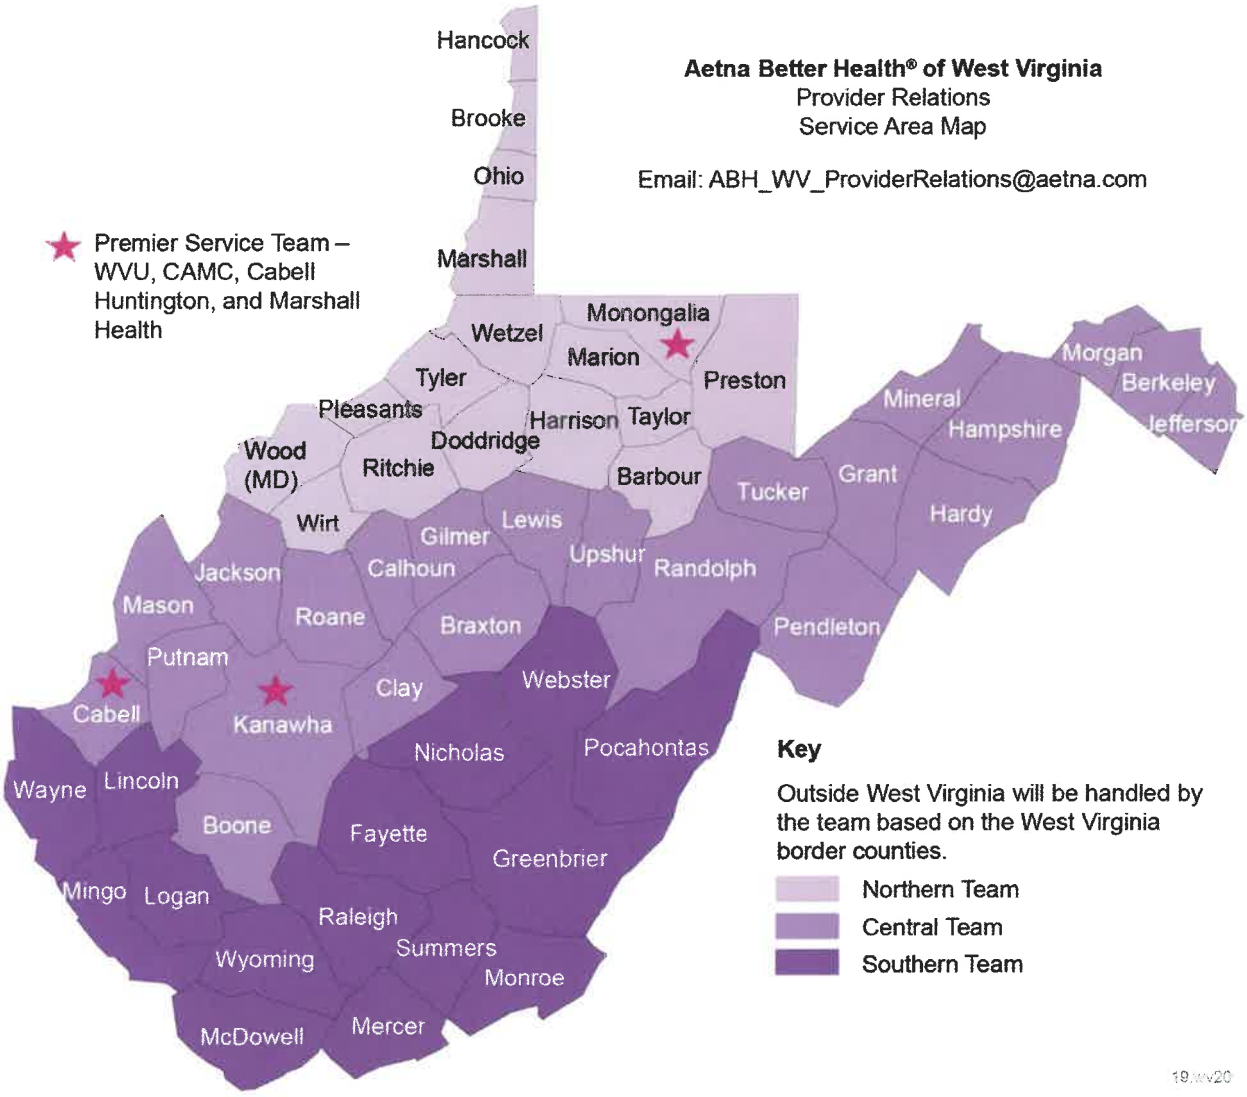

Figure 6.8.1-1: Provider Relations Service Area Map
Our high-touch provider relations representatives serve providers throughout the State.

Regionally Assigned Teams

As another part of our operating model, we employ teams to serve each region. These teams are comprised of a provider relations representative who meets with providers in their offices to provide education and support, a designated network relations specialist who works on directory updates, claims project research, and provider notices, and a credentialing analyst who works with onboarding new providers and assists with credentialing criteria.

Premier Provider Relations

Our Premier Provider Relations service was created to provide enhanced service to some of our largest network hospitals and physician groups, including **West Virginia University, Marshall Health, Cabell Huntington Health, and CAMC**. This dedicated regional provider relations representative conducts a regularly scheduled onsite visit, attends Joint Operating Committee meetings (CAMC), and conducts a bi-monthly or monthly conference call to review claims issues that have been identified. They also conduct monthly conference call touchpoints and visit CAMC bi-weekly. **Figure 6.8.1-2** shows a recent site visit at Roane General Hospital, a member of CAMC's clinically integrated network. The providers welcome this personalized approach and are comfortable in knowing that we are working to resolve their issues as quickly as possible. Since the program began in April of 2018, we have worked with these facilities to build professional relationships that ensure that these providers know that Aetna Better Health of West Virginia is willing to go the extra mile to ensure premier services are provided.

Figure 6.8.1-2: Site Visit at Roane General Hospital
Provider Relations and Quality staff meet with Roane General Hospital.

Our Provider Relations staff also participate in regularly scheduled provider association meetings, including the Rural Health Care Provider Association, West Virginia Chapter of the American Association of Pediatrics, Primary Care Association, West Virginia State Medical Association, Behavioral Health Provider Association, and the Medical Office Managers Association. We have found participation

in these established meetings allows us to reduce provider burden by decreasing their external meetings, while still offering needed information and education.

High Performing Provider Call Center

Aetna's Provider Call Center operations currently exceed and will continue to comply with all state requirements, including those outlined in the Model Service Provider Agreement, Article III, Statement of Work, Sections 2.6.1. Aetna's call performance results exceed these requirements as shown in **Table 6.8.1-2** below. Our Provider Call Center is managed and operated by highly trained staff members who receive training on the West Virginia medical, behavioral health, publicly supported, and specialty providers. Our experienced staff are fully equipped to respond to a variety of provider inquiries about topics including claims/invoice status and information, member eligibility, general program information, and how to provide guidance and education specific to individual provider types, including significant traditional and non-traditional providers.

2019 Post-call Survey Results

- Provider satisfaction: 96.7%
- First-call resolution: 96.3%

Our Provider Call Center live-answer hours of availability are from 8:30 a.m. to 5:00 p.m., Monday through Friday. After regular business hours, the line is answered by an automated system that advises callers of the operating hours and provides instructions on alternative methods to verify member enrollment. For example, while there is no requirement for providers to seek enrollment verification prior to providing emergency services, providers can check eligibility 24/7/365 through the Aetna secure website (https://www.aetnabetterhealth.com/westvirginia/login). Our interactive voice response (IVR) capabilities also enable providers to access claims information, auto-fax explanation of benefits/remits, check prior authorization status, check member enrollment, and access

frequently asked questions 24/7/365. Aetna has also established a direct line for contracted providers to call for a peer-to-peer discussion related to authorization denials.

Table 6.8.1-2: Provider Call Center Performance

Contract Performance Standards	2019 Aetna Performance Results
83% of calls are answered live within 30 seconds during operating hours.	83% of calls are answered live within **17 seconds** during operating hours.
The call abandonment rate does not exceed 5% of total calls for the reporting period.	The call abandonment rate is **.06%** of total calls for the reporting period.

We also offer the opportunity for providers to rate our service by completing a brief quality survey after the call has been completed.

Provider Initial Orientation, Training and Support

PS002	The Vendor should describe how its Provider Services Department will provide initial provider orientation, annual training, and support to its provider network.
PS005	The Vendor should describe its annual review process of its provider manual, including thirty business days prior notice of any material changes to impacted providers.

Aetna has a long-term relationship with the providers in West Virginia and we continue to engage, educate, communicate, and support our providers to enhance service delivery to MHT, WVHB, and now WVCHIP members. Aetna understands the importance of providing effective education and training programs that are accessible to providers. We have more than 23 years of experience in West Virginia provider training initiatives and have existing curricula that we can customize for WVCHIP processes. We will provide training sessions and host provider forums for ongoing training regarding the program and the services Aetna offers. Training sessions and updates on pertinent topics will be made available to the network providers annually and as needed. Our provider orientation and education meet or exceeds requirements detailed in the Model Service Provider Agreement, Article III Statement of Work, Section 2.6.1.1.

[PS002] Provider Orientation, Annual Training and Support

In addition to formal trainings, Aetna offers self-service tools and multiple interactive training platforms to enhance communication with the provider offices. This allows providers to select a modality (webinars, instructor-led, self-paced, onsite) that best fits their practice and assure all providers receive the same level of training.

Initial Orientation

Our approach to provider orientation and education is geared toward offering our providers the information they need in the most convenient and effective method available. Aetna's MHT, WVHB, and WVCHIP provider training program will build upon our current training program and will be designed to aid providers in meeting the needs of these populations, while minimizing provider burden.

Under our current West Virginia Medicaid contract, Aetna has established formal initial engagement and orientation practices, which will be continued for newly contracted providers, including WVCHIP providers. This initial engagement also includes sending our Provider Orientation Toolkit (please refer to **Figure 6.8.1-3**), initial provider training, and one-on-one support and education provided by our locally based Provider Relations staff.

Our Provider Orientation Toolkit is designed to convey important information quickly and in a functional, easy-to-follow format. It includes information about how to participate in our provider training orientations and information and instructions on how to access our provider manual and portal, as well as key contact information. The Provider Orientation Toolkit also includes a welcome letter, orientation schedule, and identification and contact information for their assigned provider relations representative. Our provider relations representatives email or mail

the Provider Orientation Toolkit to newly contracted providers. The Provider Orientation Toolkit is also accessible on our website.

We understand that providers are our most valuable service delivery assets. Our job is to empower them by providing education, assistance, and the resources needed to achieve quality member engagement.

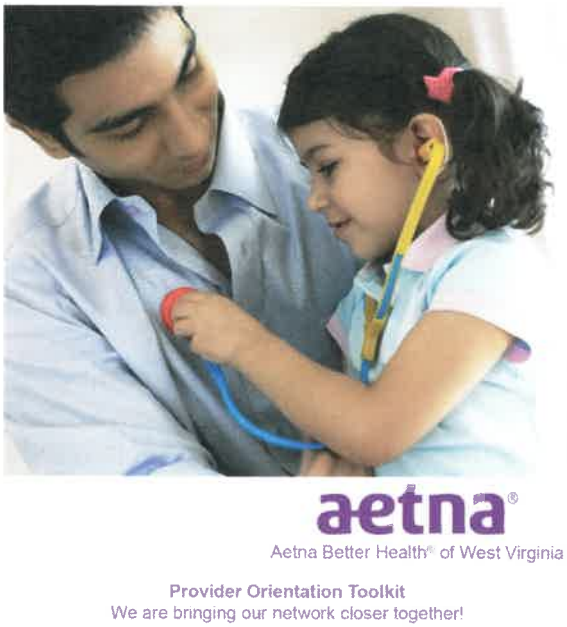

Figure 6.8.1-3:
Provider Orientation Toolkit
Our Provider Orientation Toolkit conveys important information quickly and in a functional, easy-to-follow format.

Our regionally assigned Provider Relations staff directly contact new providers either in person or by phone, based on the provider choice, to begin establishing a relationship, to review key information, and to respond to any provider questions or concerns. As a part of the implementation process, we will offer our current providers orientation training on MHT, WVHB, and WVCHIP, as well as training on requirements for providing health care services and behavioral health care services to West Virginia members.

We conduct new provider orientation within 30 days of the provider joining the network. Materials are sent directly to the provider and reviewed during either an onsite or webinar-based meeting. As part of orientation, we supply providers with an orientation toolkit and providers are given information on a variety of topics including the following:

- Provider relations representatives' contact information
- An overview of the website

- Provider portal overview/enrollment
- Review of access and availability standards
- Cultural sensitivity standards review
- Provider enrollment requirements
- Taxonomy/National Provider Identifier education
- Claims submission guidelines, including the claims resubmission/reconsideration process and remittance advice retrieval
- Information on the provider complaint process and appeals/grievance process
- Fraud, waste, and abuse reporting process
- HEDIS overview
- Population health programs and specific information to address the provider's needs

In addition to our orientation program, Aetna continues to engage our providers through the

following means:

- **Site visits (face-to-face):** Our provider relations representatives visit the individual primary care provider and specialist offices to offer ad hoc trainings on topics such as basic billing and address provider issues, and provider re-orientations via internal or external request. For example, providers indicated they wanted additional training on prior authorizations, and we include this topic in our ongoing and ad hoc training activities.
- **Pre-recorded training:** To improve provider access to the orientation information and training, Aetna is in the process of making pre-recorded trainings available to providers, so they and their staff can complete the training at times that are most convenient for them.
- **Provider Forums:** We conduct annual provider forums in six locations throughout the state. In 2019, forums were conducted in Martinsburg, Clarksburg, Wheeling, Charleston, Huntington, and Beckley. Topics included fraud, waste, and abuse, care management, utilization management, provider/member incentives, claim resubmission/dispute/appeal, and community outreach. **Aetna's regional provider forums have gained a reputation for being responsive and helpful to West Virginia providers, as evidenced by the 65 percent increase in participation from 2018 to 2019.**
- **Provider scorecards:** We will use provider scorecards to allow appropriate trending and provide proactive feedback to address areas of opportunity. These scorecards will be available for providers in 2021.
- **Training webinars:** We have a provider education plan that includes a new topic each quarter. Supplemental trainings are routinely offered and hosted via webinars. Recent topics include the West Virginia Foster Care rollout, HEDIS coding for 2020, and changes to West Virginia Medicaid Program (2nd quarter 2019).
- **HEDIS toolkits:** Includes tips on how to appropriately close gaps in care inclusive of proper coding and HEDIS guideline interpretation.
- **Email blasts:** We notify providers of policy and program changes through email blasts that are sent as frequently as needed.
- **Trauma-informed care toolkits:** These toolkits will be available for providers on our website in 2021. They will contain information on evidence best practices, addressing adverse childhood experiences, and types of trauma in primary care setting.

- **Feedback from our call center:** We use both member and provider call center data to track, trend, and identify opportunities for additional provider education topics.
- **E-consult and telephonic consultation services to primary care providers (PCPs):** The primary care setting has become the gateway to behavioral health services, such as mental health and substance use. PCPs need support and resources to screen and treat persons with low acuity conditions. E-consult provides PCPs access to United States-licensed, board-certified specialists from major academic centers across the country via an electronic health record-linked portal, which increases overall capacity.

Annual and Ongoing Training

In addition to new provider orientation, we conduct annual and ongoing training to address the needs of different provider audiences. Our annual and ongoing education efforts also address best practices to serve MHT, WVHB, and WCHIP members. As we continue our partnership with the Department and collaborate with our providers, we look to sharing new service approaches and promising evidence-based practices gathered from providers and our experiences. We welcome the opportunity to collaborate with West Virginia Children's Health Insurance Agency and WVCHIP providers to update and enhance our training topics and approaches.

Aetna's provider relations director develops and maintains the West Virginia Provider Training and Education Plan. The provider relations director participates in meetings to improve communication and support inclusion of stakeholder feedback and collaboration related to the provider training program. For example, our Provider Orientation Toolkit and monthly orientation webinars were developed based on provider feedback, which requested more information about working with the plan.

We will also develop or enhance trainings based on provider feedback and/or Aetna-identified trending provider issues or process pain points identified in feedback from providers. For example, we will be offering providers training on trauma-informed care on February 12 – 13,

2020. This training opportunity will also include training on cultural sensitivity and health equity and was established in relationship with the National Council for Behavioral Health.

All providers will be offered ongoing training through a variety of mechanisms, including but not limited to, quarterly provider webinars, provider forums, and one-on-one meetings. A description of new and ongoing training topics is also contained in **Table 6.8.1-3.**

Table 6.8.1-3: Initial, Annual, and Ongoing Provider Training

Training Topic	Provider Audience	Training Description/Topics Included
Provider Training		
New Provider Orientation	New providers (existing providers receive updated orientation information through the training updates listed in this table)	Aetna's new provider orientation training covers a broad range of topics, designed to make sure new providers understand program requirements and how to access resources. Topics include the following: • Overview of Aetna and contact information • Provider relations service area map • Accessing the provider portal instructions • Signing up for electronic funds transfer and electronic remittance advice • West Virginia MHT, WVHB, and WVCHIP overview • Provider Relations and Member Services functions and contact information • Provider website, secure provider portal, and provider manual • Covered services including physical health and behavioral health services, and dental and vision care • Medication coverage and prior authorization • Medical prior authorization, authorization timelines, and medical necessity guidelines • Claims processing including clearinghouse, clean claims, and claim submission • System of care • FWA • Provider communications • Member rights and responsibilities • Access and availability standards • Cultural sensitivity standards • Non-discrimination and reasonable accommodations for members with disabilities

Training Topic	Provider Audience	Training Description/Topics Included
		• Medical record standards • Dispute resubmission and appeals education • HEDIS
Annual and Ongoing Provider Training		
Training Updates	New and existing providers	Training update topics will vary dependent on identified needs, but will generally address refresher information related to topics covered during initial provider trainings, including ongoing required training on topics, such as the following: • Policy updates • FWA • Care management • Utilization management • Provider/member incentives • Claims resubmission • Dispute and appeals • Community outreach • The application of American Society of Addiction Medicine (ASAM) criteria in the assessment and level of care processes
Cultural Competency	New and existing providers	All our contracted providers, including behavioral health providers, receive cultural competency training at orientation and on an ongoing basis via our website, including the following: • Cultural competency and impacts on health care • Provider obligations for delivering culturally competent care • Tools and resources such as Aunt Bertha, an online repository of community services • Social determinants of health and trauma-informed care • Training staff on the need to understand and respect cultural differences and develop services that better meet the needs of minority populations and remove barriers to care • Assisting members with limited English proficiency • Providing access to interpretive and American Sign Language services for Aetna members • Assessing feedback from members about programs, quality initiatives, member materials, and other education and outreach tools to meet their cultural and linguistic needs

Training Topic	Provider Audience	Training Description/Topics Included
LGBTQ Cultural Competency	New and existing providers	This training will be designed to make sure providers are trained and demonstrate skills to serve the lesbian, gay, bisexual, transgender, and queer self-identifying (LGBTQ) population; to provide appropriate screening of members for behavioral health needs since they are at a higher risk; to provide education on addressing discrimination at both an individual and system level; and that providers understand language is essential, such as using correct identifying pronouns, and that forms and resources account for diverse perceptions of sexuality, sex, and gender; and to understand that strict confidentiality practices are critical to creating an inclusive and safe environment for LGBTQ members.
Trauma-informed Care Training		
Trauma-informed care	New and existing providers	**Level 1: Foundational Awareness**. Individual practitioners are well-informed about ubiquity of trauma and its likely impact on their patients/clients. They understand the critical role of social determinants of health (SDOH) as drivers of clinical, functional, and quality of life outcomes. Provider organizations are committed to becoming trauma informed.
		Level 2: Enhancing Routine Clinical Practice. Individual practitioners have integrated Level 1 knowledge into routine clinical practice using evidence-based tools. Provider organizations promote trauma-informed primary prevention as a routine practice for all members, analogous to childhood vaccinations, flu shots, and provide member education and assessment and SDOH as standard elements of a person's treatment/recovery plan.
		Level 3: Basic Trauma-informed Care: Individual practitioners expand routine clinical practice by integrating treatments, services, and supports that explicitly address trauma. Provider organizations perform trauma-informed secondary prevention for all people they serve, using universal screening for early adversity, historical, and ongoing trauma, and for SDOH risk factors.
		Level 4: Advanced Trauma-informed Care: Individual practitioners include considerations of complex trauma and SDOH within routine clinical practice, using a

Training Topic	Provider Audience	Training Description/Topics Included
		biopsychosocial model of care that integrates physical and behavioral health. Provider organizations include a trauma-informed center of excellence for at least one high-risk/rising-risk population, marginalized population, or for people with complex needs.
		Level 5: Close/Full Collaboration in a Merged Practice: Provider organizations include trauma-informed (Level 3-4) individual practitioners on interdisciplinary care teams, in addition to the usual treatment team members for that provider organization. There are high levels of collaboration and integration between behavioral and physical health providers, consistent with Substance Abuse and Mental Health Services Administration's Integrated Care Level 5 or 6.
		Level 6: Trauma-informed System of Care: Provider organizations collaborate across sectors to meet the complex needs of people they serve within a larger community context. They implement a broad, community-wide focus on the underlying social and economic conditions in which people live, in addition to supporting people to meet their immediate individual needs and bridging the dichotomy between individual-level social needs and community-level social determinants. While targeted, small-scale social interventions provide invaluable assistance for individuals, the provider organization remains focused on the social determinants that perpetuate poor health at the community level

Substance Use Disorder Provider Training and Education Requirements

Aetna will comply with Model Service Provider Agreement, Article III Statement of Work, Section 10.11.6 SUD Provider Training and Education Requirements. We understand that substance use disorder (SUD) providers are responsible for providing training and education to their staff on the ASAM Level of Care criteria and the application of the ASAM criteria in the assessment process. As part of the Department's quality-monitoring strategy, personnel and clinical records of a sample of the provider network will be reviewed to evaluate if there is appropriate application of and fidelity to the ASAM Levels of Care and the Medicaid provider manual. Aetna

will perform onsite review of providers' application of and fidelity to the model during credentialing and will perform onsite reviews of providers to ensure SUD program providers are consistently applying ASAM criteria throughout an individual's stay and that documentation and personnel records meet established Medicaid standards. Our behavioral health manager will also assist with ASAM criteria training for providers as needed.

Provider Support

Aetna offers a multifaceted approach to provider support. On the front lines, our Provider Relations staff offer education and help as needed. Our Aetna West Virginia provider manual offers a guideline and access to a wealth of information to support providers. Our communications tools and training enable providers enhanced knowledge of the program and continued education to best serve members' needs. We also offer self-service tools, such as our provider portal and IVR that offer providers information and tools at their fingertips.

> A rural West Virginia crisis stabilization provider began having financial difficulties, in part due to billing errors, which led to a temporary closure. Aetna's Provider Relations staff spent a day at the provider's office retraining their staff—and continued to provide technical assistance for several weeks to support the provider's resubmission of corrected claims. As a result, the provider was able to reopen the needed facility and continue serving the community and our members.

Provider Relations Representatives

Aetna's Provider Relations staff members are the cornerstone of our provider outreach and engagement activities. We have actively recruited Provider Relations staff that have familiarity with the Department. Our staff are in communities across the state to ensure strong and collaborative provider relationships.

Provider Manual

Our provider manual gives our network providers access to a broad range of information and guidance on Aetna's administrative processes and meets all requirements within the Model

Service Provider Agreement, Article III Statement of Work, Section 2.6.2. Aetna has, and will maintain, a West Virginia provider manual for MHT and WVHB members. We will include information for providers specific to serving the Children's Health Insurance Program population upon implementation.

We include information on how to access the provider manuals on our website and in our Provider Orientation Toolkit, to make sure providers have access within five days of inclusion in our network. We also deliver a hard copy of the provider manual to providers, upon request.

Aetna will continue to submit our provider manual annually, including any provided by a subcontractor for direct services, and any updates to the Department for approval. We document the approval of the provider manual by the Aetna administrator and medical director and maintain documentation confirming that the provider manual is reviewed at least annually. When there are Department policy or program changes or Aetna procedure or service site changes, we will send notification to the affected providers at least 30 calendar days before the intended effective date of the change.

Aetna maintains a provider manual policy to ensure production of a quality product meeting the Department' requirements. At a minimum, the Aetna Better Health of West Virginia provider manual includes the following information:

- Description of the program
- Covered services
- Emergency service responsibilities
- Policies and procedures that cover the practitioners/provider complaint system:
  - Aetna information includes, but is not limited to, specific instructions regarding how to contact Aetna's provider relations representative or manager to file a practitioner/provider complaint and which individual(s) has/have the authority to review a practitioners/provider complaint
  - The required procedural steps in the member grievance process, including information about the grievance system such as the address, telephone number, and office hours of

the grievance staff. Also included is information on the member's right to request continuation of benefits while utilizing the grievance system; timeframes and requirements; the availability of assistance in filing; the toll-free numbers within the caller's geographic area; and reasonable access to the health plan without undue delays. The health plan also provides specific phone numbers to call to present a complaint, grievance, or appeal.

- Medical necessity standards and practice protocols, including guidelines pertaining to the treatment of chronic and complex conditions
- PCP responsibilities
- Other practitioner/provider or subcontractor responsibilities
- Prior authorization and referral procedures, including required forms
- Medical records standards
- Claims submission protocols and standards, including instructions and all information required for a clean and/or complete claim
- Protocols for submitting encounter data
- Notice that practitioner/provider complaints regarding claims payment should be submitted to Aetna
- A summary of Aetna's cultural competency program and how to obtain a complete copy at no cost
- Information on Aetna's quality improvement programs
- Member rights and responsibilities in accordance with 42 CFR 438.100
- Information notifying providers that the health plan is authorized to implement any mandatory process necessary to verify that the practitioner/provider is recognized by the state Medicaid program, including its choice counseling/enrollment broker contractor(s) as a participating practitioner/provider of the health plan and that the practitioner/provider's submission of encounter data is accepted by the Department and/or the State's encounter data warehouse.

Aetna is responsible for verifying that all practitioner/provider, service, and product standards specified in the Department provider manual and the health plan's own provider manuals are incorporated into Aetna's standard participation agreements by reference.

PS005 Provider Manual Annual Review Process

Aetna will continue to submit our provider manuals, including any provided by a subcontractor for direct services and any updates to the Department for approval, within 30 business days' prior notice of any material changes to impacted providers. The CEO, in collaboration with the provider relations director, is responsible for the accurate, timely, and sufficient development and distribution of Aetna's provider manual. Additionally, these managers have the responsibility to establish and oversee the processes that will monitor practitioner/provider knowledge and

understanding of practitioner/provider requirements and assist in the development of any necessary corrective actions to confirm compliance with such requirements.

Our Network and Provider Relations teams participate in an annual review of the manual to ensure we include additional information about new population groups, any new Department or federal regulations, or Aetna operations updates. The Network and Provider Relations teams distribute the provider manual to directors/managers in all health plan areas to make updates to operations and or regulations, such as review of the following:

- Member Services: Contact numbers, member rights, and any updates
- Claims: Claims submission protocols and any updates
- Information Systems: Website, portal, and other systems procedures/updates
- Care Management: Medical necessity standards, practice guidelines, prior authorization guidelines and any revisions
- Quality Management: Quality program descriptions and any revisions
- Disputes and Appeals: Procedures for disputes and appeals processes and any updates
- Fraud, Waste, and Abuse: FWA procedures and any revisions
- Compliance: Aetna compliance guidelines, legal compliance, and Department compliance

We also include provider recommendations, such as clarifications of requirements. Recently a provider requested clarification on claims submission, and we revised the information in the manual to clarify claims submission requirements. Once we gather the Aetna departmental review and feedback, revisions are made to the manual and then Aetna sends it to the Department for approval.

Provider Notices and Alerts

We regularly publish provider notices and alerts, the main source of mass communication to participating practitioners and providers. Recent provider notice topics include the 2019 Consumer Assessment of Healthcare Provider and Systems (CAHPS) Member Satisfaction Results and 2019 Medical Record Documentation Results. This information is located on the website at https://www.aetnabetterhealth.com/westvirginia/providers/provider-news. These

notices and alerts may include provider manual amendments, which also become a part of the provider's contract. The notices explain amendments and keep participating providers abreast of issues including, but not limited to the following:

- Program changes
- Policy and procedure changes/updates
- Network changes
- Changes in the schedule of allowances
- Billing information
- General topics of interest

We also communicate regularly with our West Virginia participating providers by sending broadcast emails and faxes. We broadcast a text banner on our website to indicate any important changes as well. When there are program or service site changes, we provide the notification of changes at least 30 days before the intended effective date of the change.

Supporting Providers by Offering Self-Service Tools

Aetna supports our providers by offering self-service tools that providers can access at their convenience 24/7. Aetna offers a secure web-based provider portal, an IVR system, and our Aetna Better Health of West Virginia website. These tools especially benefit smaller practices or those located in rural areas that may not be able to travel or leave their offices to complete training. Rural providers receive information about these self-service tools during new onsite provider orientation, in webinars, or in the new provider orientation packet. We also promote them at workshops and our provider forums, and we create accounts for them onsite at the forums/workshops if they so choose. For example, one of our provider relations representatives recently helped **Essential Needs Home Care** in Whitehall set up their web portal account onsite and they also conducted web portal training with the office staff.

Web Based Provider Portal

Aetna's secure web-based provider portal offers providers access through secure single sign-on functionality that improves efficiencies for providers and offers complete accessibility to provider and member data and reports.

Our web-based platform allows us to communicate member health care information directly with providers in real time, including the following:

- Member eligibility, member identification (ID) cards, and panel rosters
- Status of a member's compliance with HEDIS measures
- Prior authorization lookup tool designed to perform ID-specific searches for authorizations by member, provider, authorization data, and submission/service dates
- Review prior authorization requirement by specific procedures or service groups and show details on codes and any noted prior authorization exception information
- Review current status of all prior authorizations
- Export Current Procedural Terminology/Healthcare Common Procedure Coding System code results and information to Excel
- Obtain information on specific providers' claims status and remittance advice by provider user account ID and submit appeals and disputes.
- Access provider training materials and the provider manual
- Inquiry capability to communicate directly and securely to Aetna Medicaid organization provider support staff

We are aware of the new requirements regarding electronic authorizations, under HB2351, and will comply with these changes. We continually review and identify opportunities to improve the functionality and ease of use of our provider portal and respond to changing program needs. As such, we have begun to pilot a provider-centric, web-based portal to significantly improve the provider experience with a more robust set of self-service tools and information to help decrease provider administrative burden and increase efficiency. This capability, delivered by Availity, is an MCO payor agnostic tool which deeply resonates with providers as it allows them to manage much of their payor administration functions without relying on separate and proprietary MCO specific applications.

Other planned improvements include simpler submission of attachments to support administrative and clinical process, such as appeals; ease in contacting Aetna directly through the portal; and improved access to provider demographic updates.

During new provider orientation, we review the provider website and functionality and assist providers in registering for the portal. Providers may also request ongoing or refresher guidance, as well as assistance with logging into the portal either by contacting their Provider Relations staff or our Provider Call Center. Providers can also register for the portal through our website.

We monitor the use of our portal and provide the 2019 results of portal use in **Table 6.8.1-4**.

Table 6.8.1-4: Provider Portal Use

Functionality Name	Number of Hits Since 1/1/19	Percentage Functionality Search
Authorization Search	82,191	13.68%
Claim Search	261,217	43.48%
Member Search	225,154	37.47%
Panel Roster Search	738	0.12%
Provider Search	2,767	0.46%
Remittance Search	28,752	4.79%

Our **prior authorization tool** is within the provider portal. Aetna's prior authorization code specific look-up tool within our provider portal enables providers to perform ID-specific searches for authorizations by code, or code set.

Interactive Voice Response Self Service
In order to support provider self-service capabilities, especially during off-business hours, Aetna has deployed an easy to use and efficient IVR system. Aetna offers providers 24/7 access to information and services including:

- Claim status inquiries
- Member eligibility
- Member benefit coverage
- Claims submission instructions
- Prior authorization submission information

Almost 10 percent of provider calls to the Aetna support service staff are successfully closed through IVR self-service menus, and another 87 percent are warm transferred live to those teams with enriched information which helps expedite providers' needs. The Provider IVR prompts are as follows:

- Press number one for claims
- Press number two for eligibility and benefits information
- Press number three for transportation
- Press number four for authorizations
- Press number five for interpretation services
- Press number six for more options

Aetna Better Health of West Virginia Website

Our publicly available website provides a wealth of information for our provider network and offers the following:

- Announcements and news, including policy updates and state notifications
- Electronic solutions, including electronic fund transfer and electronic remittance
- How to join the network, including applications and credentialing criteria
- Provider manual
- Provider portal
- Resources such as Health Insurance Portability and Accountability Act 5010/ICD10, claims information, and special programs
- Education resources for cultural competency and health literacy
- Practice guidelines
- Document library

We are committed to making sure our providers receive the best possible and latest information technology, and tools available. We continually strive to eliminate redundancy and streamline process for our providers.

Provider Information Systems Support

Aetna complies with Model Service Provider Agreement, Article III Statement of Work, Section 2.6.4 Provider Information Systems Support. These accommodations are not in violation any requirements promulgated pursuant to Health Insurance Portability and Accountability Act of 1996, P.L. 104-191 (August 21, 1996), as amended or modified, Health Information Technology for Economic and Clinical Health Act, and other applicable federal and state laws.

We continue to develop **and utilize meaningful and complete electronic health records (EHRs) for each member and other IT supports to improve data sharing.** Our digital platform has evolved to include a Personal Health Record (PHR) electronic application through which Aetna Medicaid organization members, providers, and authorized care group participants can maintain and manage health information in a private, secure, and confidential environment. We will deploy the PHR application in support of the new contract. Sharing integrated EHRs, West Virginia health information exchange (HIE), SDOH, and care plan and claim data with the users supports the expansion of interoperability, providing additional care management and care coordination for our members.

As part of our West Virginia HIE, EHR, and personal health record plan, we will continue to engage in a full statewide stakeholder assessment and listening tour to understand the opportunities to expand data obtainment and sharing. Successful negotiations with West Virginia Health Information Network and CMT-enabled Aetna Medicaid organization access to much of their data have been integrated into our systems as described above. Additionally, as our digital platforms continue to evolve, we will look to use these systems as integration points for HIE data, including services like push notifications to member and provider digital devices,

alerts and secure messaging for our web-based portals and mobile applications, and greater EHR interoperability to provide critical, actionable data where providers need it most.

Specialists Serving as PCPs

PS003	The Vendor should describe its process for specialists serving as Primary Care Providers (PCPs), and related monitoring activities.

Aetna establishes and implements guidelines regarding which specialists will be able to serve as a PCP for applicable populations as identified in Model Service Provider Agreement, Article III Statement of Work, Section 2.2.3. Our PCP Assignment policy 4500.03 incorporates the state requirements. Members with a disabling condition or chronic illness or who are Supplemental Security income (SSI)-eligible have a choice of specialist physician to serve as their PCP. The specialist physician must agree to perform all PCP duties required in the service provider agreement and the PCP duties must be within the scope of the specialist's license.

A nurse midwife in the eastern region has requested to serve as a PCP for one of their members.

The steps required for a member to request a specialist PCP is as follows:

- If a member, or their parent or legal guardian, contact the Member Services department regarding such a request, we will advise the member that Aetna will contact the provider and request that the provider submit confirmation of their agreement to serve as a PCP and to be responsible for assuming responsibility for all PCP-specific requirements. Our Member Services staff will also recommend that the member directly contact the specialty provider to aid in expediting the request.
- Aetna will send the identified specialist a notice informing the specialist of the member request that the specialist serves as their PCP, including information regarding applicable PCP requirements, such as the following:
  - Information regarding PCP requirements, including but not limited to, responsibility for coordination of care
  - Requirements related to Early and Periodic Screening, Diagnostic and Treatment services
  - Identification of any PCP provider training the specialist may be required to complete
- The PCP will be asked to affirm their capacity to timely render all PCP services.
- Upon receipt of written confirmation that the specialist agrees to serve as the PCP for the identified member, including all required PCP activities, the request will be reviewed by the medical director or their physician designee. Reviews will be conducted on a case-by-case

basis and will include verifying that required PCP services are within the scope of the specialist provider license.

- If a request for specialist to serve as a PCP is denied by Aetna, the member will be notified of the decision, the reason for the denial, and applicable grievance and appeals rights and how to file a grievance or appeal with our Member Services department.

When a specialist provider is approved to serve as a PCP, Aetna will monitor the specialist's provision of PCP services, as indicated in Model Service Provider Agreement, Article III, Statement of Work, Section 2.2.1 PCP Responsibilities, through monitoring of data through the West Virginia Health Information Network, claims data, and medical record reviews. Our Provider Relations staff also monitor specialists serving as PCPs to ensure that they are fulfilling PCP roles and responsibilities, including a survey to attest panel size and accessibility survey. We will conduct site visits and assign a Care Coordination staff member to review gaps in care and make sure they meet standards for site practicing, accessibility standards, and ability to perform PCP services within the scope of practice. If an issue is identified, our Provider Relations staff follow up within 60 days to make sure the issues have been resolved. We continue to monitor compliance and if issues are not remediated, reeducate on the criteria and develop a correction plan as needed.

Cultural Competency Training

PS004	The Vendor should describe how its Provider Services Department will provide training to its provider network regarding culturally competent care.

A culturally competent provider effectively communicates with members and understands their individual concerns. It is incumbent on providers to make sure members understand their care regimen. Each segment of our population requires special sensitivities and strategies to embrace cultural differences. Good communication between members and providers contributes **directly to member satisfaction and positive outcomes.**

Aetna training requirements reflect the commitment of person-centered care that is responsive to the unique needs found in West Virginia. Cultural competency and health literacy are key to our service delivery. Annually, Aetna's health care equity director creates a detailed Cultural Competency Plan (CCP) to ensure engagement and alignment with Culturally and Linguistically Appropriate Services (CLAS) standards. The CCP includes the processes to develop and maintain a culturally competent staff and provider network and includes strategies designed to assist our providers integrating cultural and linguistic competence and health literacy into every aspect of member care. Our CCP emphasizes effective care by respecting and honoring each member's cultural health beliefs, practices, preferred language, special needs, and socioeconomic background. Aetna utilizes the U.S. Department of Health and Human Services (DHHS) Office of Minority Health National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care and follows DHHS' A Blueprint for Advancing and Sustaining CLAS Policy and Practice to inform the annual revision of our policies.

We continuously assess member demographics to best understand language and interpreter needs and develop innovative provider collaborations to serve members within their home communities. Our providers should verify that members are effectively receiving understandable, respectful, and timely care compatible with their cultural health beliefs, practices, and preferred languages and honoring member's beliefs.

Providers receive orientation and ongoing cultural competency training via face-to-face instruction, forums, or webinars about such important topics as the following:

- The reluctance of certain cultures to discuss mental health issues
- The impact that a member's religious and/or cultural beliefs can have on health outcomes
- The problem of health illiteracy and the need to provide members with understandable health information (e.g., simple diagrams, communicating in the vernacular)

- The progression of civil rights for people with disabilities
- Physical and programmatic barriers that impact people with disabilities
- Provider obligations for delivering culturally competent care
- Resources and tools such as Unite Us and Aunt Bertha, an online repositories of community services
- SDOH and trauma-informed care
- The need to understand and respect cultural differences and to develop services that better meet the needs of minority populations to remove barriers to care
- How to assist members with limited English proficiency
- Access to interpretive and American Sign Language services for Aetna members
- Review feedback from members about programs, quality initiatives, member materials, and other education and outreach tools to meet their cultural and linguistic needs

We realize that it is critical to provide quality service that addresses diverse cultural and ethnic backgrounds, disabilities, and regardless of gender, sexual orientation, or gender identity and provide for cultural competency and linguistic needs, including the member prevalent language(s) and sign language interpreters.

Our continuous monitoring of member demographics enables us to understand the individuals we serve. For example, 2018 data shows that in Beckley and Bluefield, nearly 25 percent of our members are African American. Our regionally based Care Connections team and System of Care and Provider Relations staff work collaboratively with West Virginia providers to ensure these members receive care that addresses their cultural beliefs. Important considerations for member care include lack of trust in the health care providers and the system—the idea that "we trust individuals most like us"; fear that surgery may cause cancer to spread; and apprehension in using opioids for pain management for fear of addiction. Older adults may seek treatment from home remedies, prayer, spiritual healers, and advice from family and friends; a lack of spiritual imbalance may be seen as any physical, mental, acute, or chronic disease.

Additionally, West Virginia ranks highest in nation for children who are transgender aged 13 to 17 years. We will meet the needs of LGBTQ members by providing clinical staff and provider

training to understand the cultural values and practices within the community and to address discrimination at both an individual and system level. We will train providers to understand that appropriate language is essential, such as using correct identifying pronouns, and to understand that strict confidentiality practices are critical to creating an inclusive and safe environment for LGBTQ members.

In addition and as a part of our cultural competency training, we encourage West Virginia providers to access information on the Office of Minority Health's "*A Physician's Guide to Culturally Competent Care*." The American Medical Association (AMA), American Academy of Family Physicians, and the American College of Physicians endorse this program. This program provides up to nine hours of category one AMA credits at no cost.

Holding Members Harmless and Protected from Balanced Billing

PS006	The Vendor should describe how members are held harmless and protected from balance billing for covered services.

One of the most significant member complaints we receive is when a provider bills them for a balance of payment other than co-pays. Our highly trained member services representatives receive member complaints and 99 percent are resolved on the first call. Our Member Services staff monitor and trend member complaint data and reach out to Provider Relations to educate providers on balance billing and/or other member compliant issues.

We prohibit Aetna participating providers, by contract, from billing members for any balance of payment for covered services, or as otherwise permitted under applicable law. Our contracted providers should accept reimbursement from Aetna in full. Members are educated of this process through the member handbook and by speaking with any of our Member Services or Care Management team members.

If a member reports that a provider is balance billing for a covered service, our member services representatives contact the provider to research the complaint and provide education about the requirements. If the provider does not resolve the issue, our provider relations representative will contact the provider. If our provider relations representative determines that the member was confused with balanced billing upon additional research, the provider may then seek reimbursement from a member when a service is not a covered benefit and the member has given informed written consent before treatment that they agree to be held responsible for all charges associated with the service.

If, after Provider Relations intervention and education, the provider continues to balance bill members, Aetna will develop a corrective action plan or terminate the provider. Aetna will notify the Department when a provider continues the inappropriate practice of balance billing a member.

Value-Based Payment

PS007	The Vendor should describe how they will develop comprehensive Value-Based Payment (VBP) strategies that link provider payment levels to quality of care outcomes.

Aetna offers providers a variety of alternative payment (APM) arrangements through our Aetna Better Value program. Our programs are customizable, allowing us to combine the most applicable components for a provider into a comprehensive, effective, and innovative APM. Many high-quality providers find value-based arrangements an attractive means through which to join a network. **Aetna has paid over $22,495,000 in value-based payments over the past two years, including a risk payout.**

[PS007] Comprehensive Value-Based Payment Strategies

Through Aetna's value-based payment arrangements, we can incentivize cost, utilization, and quality improvement through a reduction in potentially preventable events (primary, specialty, and hospital based) such as hospital readmissions, avoidable emergency room (ER) visits, avoidable inpatient visits, and preventable complications. Using quality and performance measures in the contracts with APMs helps us to determine the provider's success, and together we make continuous progress toward West Virginia's goals for member access to quality care. Aetna's physician incentive plan approach includes primary care and specialty care (including behavioral health and hospital-based care) and expands into other treatment venues, such as community mental health centers, federally qualified health centers, rural health clinics, and non-traditional providers.

Provider Relations staff educate providers about our established APM program in West Virginia. Our current APM options affecting 21 percent of our membership include pay-for-quality, shared risk, shared savings, and capitation. Among the tools we use to achieve appropriate delivery of care and manage utilization of services, Aetna Better Value offers providers an array of Health Care Payment Learning and Action Network alternative payment models (HCP-LAN APM) designed to facilitate participation of providers—large and small, traditional and non-traditional. From physician incentive plans with patient-centered medical homes (PCMHs)/advanced medical homes to shared risk and then to full-risk capitation, we work toward having most of our network providers successfully moving across the value-based continuum within the HCP-LAN framework. We work individually with each practice on the framework and guidelines and customize them based on the provider's interest and readiness.

Provider Relations and Network Development collaborate with the Aetna national team to determine the type of contract to offer each provider—pay for performance, per member per month, shared savings, or capitation based on the number of members being served and current quality scores for the group. Provider Relations and Network Development coordinate a meeting with the provider group to present and discuss the proposal. Our national team participates as needed to provide detailed information about the types of reporting available.

We place emphasis on advancing providers through the APM continuum. For example, we review a monthly reconciliation of member rosters, care gap reports, HEDIS scores, chart review, and incentives. Annually, Aetna issues four levels of Quality All Star awards to providers for increases and improvements in their HEDIS scores. The Provider Relations and Quality teams work collaboratively to acknowledge and reward providers who excel in HEDIS performance and provide quality care to our members, as depicted in **Figure 6.8.1-4**. To engage our providers to continually increase their quality of care, the Provider Relations team provides education and resolves barriers and our Quality team provides HEDIS education, helps providers to close member gaps in care, and provides guidance to help improve documentation and coding.

Figure 6.8.1-4:
Aetna Awards Cabin Creek Health System
Aetna Provider Relations and Quality staff met with Cabin Creek Health System to celebrate their Quality All-Star Award and present them with a commemorative trophy on November 13, 2019.

As providers evolve along the APM value continuum, we link incentives to improved quality, reduced costs, and increased member satisfaction and engagement. For example, we have

added a shared savings agreement with **Marshall Health** and **Charleston Area Medical Center** clinically integrated network. For the first time ever, we are working with **West Virginia University** on a value-based payment agreement for 2020. **We have identified 1,603 key providers and have a significant membership—17,304 members driving higher quality health outcomes— helping to meet the state goal to enhance quality of care.**

Our unique approach with these providers improves the health of West Virginians through innovative, whole-person care, and well-coordinated systems of care addressing medical and non-medical drivers of health. Aetna plans to use the APM arrangements described in **Table 6.8.1-5**. These models were selected based on the current and future predicted capabilities of providers in West Virginia. Our goal is not to move providers too quickly; rather, we want to work with them, give them support, and help them gain confidence to move to the next level of model for success.

Table 6.8.1-5: Types of Arrangements Aetna Plans to Use in West Virginia

Type of Arrangement	Rationale for Selecting Model	HCP-LAN APM Framework Maturity Level
PCMH arrangements	Allows practices to get infrastructure funding to support transformation (such as health information technology and care delivery support) within their practices. NCQA certification is not required.	2A
PCMH with quality incentives	Allows rewarding for performance on specific quality measure targets and infrastructure payments to support transformation, as well as adoption of trauma-informed care.	2C
Shared savings arrangements	This all-upside arrangement allows practices to become familiar with the connection between cost and quality performance and allows for sharing of cost savings after quality targets are met.	3A
Bundled payments	This is an up- and downside arrangement related to bundled payments for services and allows	3B

Type of Arrangement	Rationale for Selecting Model	HCP-LAN APM Framework Maturity Level
	specialists to participate in value-based programming.	
Primary care PCMH with shared savings and losses (losses will be capped initially)	This up- and downside arrangement allows PCPs with more capabilities to share in the savings to a greater extent while they are at risk for some losses—after meeting quality targets.	3B
Partial population payments for primary care	This arrangement begins to introduce population-based capitated payments for PCPs for a specific population of members they are treating. This arrangement will be for selected providers who are willing to be partially paid for those specific primary care services.	4A

We recognize the importance of creating a glide path for the provider and health plan to advance to APM models that are more sophisticated. This is accomplished by doing the following:

- Systematically assessing provider readiness for APM models
- Providing on-the-ground provider support for practice transformation
- Providing tools and data to support provider success
- Moving providers along the APM continuum

Additionally, our Aetna leadership team in West Virginia guides the Aetna Better Value team in developing a list of initial providers to approach that have large Medicaid patient panels, the capability to analyze mature data, and sophisticated reporting systems. We then use a 20-question survey to help determine where on our APM continuum a provider's capabilities fall and to gauge the provider's interest in participating in Aetna Better Value. Survey questions include the following:

- How many Aetna members are assigned to this practice?
- Do you have any pay-for-quality, PCMH, or shared savings (upside only/partial risk, full risk, capitation, bundled payments) in place with other Medicaid health plans?
- Do you employ care coordinators?
- Do you have after-hours/open access?
- Do you have an EMR, and if so, what is the name of the EMR?

- Do you have a patient portal available?
- Do you have licensed practical nurse/registered nurse/mid-level/behavioral health providers on staff?
- Do you have a physician champion?
- Do you use a registry to follow patients?
- Do you regularly receive and track specialists/consult notes on patients?
- Are your physicians compensated based on quality performance parameters?
- Do you have a legal entity that can distribute incentive funds to participants?
- Are you PCMH-recognized or certified by any organization?
- Are you part of an accountable care organization or clinically integrated network?
- Do you have a listing of community-based services? Do you regularly refer patients into community-based services?
- Are you familiar with stop-loss insurance?
- Do you carry stop-loss insurance?
- Do you have hospital privileges or a service level agreement with a hospitalist group? Which hospitals?
- Does the practice administrator regularly look at provider performance across cost, quality, and outcomes?
- How do you use data within your practice? Do you use predictive modeling software?

Survey results enable us to determine the ability of the provider to bear risk and the level of sophistication the provider has in data analytics and reporting—important factors in our decision regarding which APM to offer. A commitment to sustaining improvements by aligning goals with improved efficiency and quality is crucial to success. We also review the provider's use of care management systems and technology to support population health management, such as whether providers have an electronic health record system, care managers, and care coordinators on staff, relationships with pharmacists, relationships with ancillary care providers (e.g., home health), or experience with provider incentive programming related to population management. As the Aetna Better Value program matures, we continuously refine our approach to determine the optimal way to assess provider readiness.

Focusing on Social Determinants of Health for West Virginia

In addition to continuing to collaborate with providers to receive incentive payments, we are planning to enable providers to progress toward incentive payments for reporting valuable

information regarding the member's SDOH status. Aetna is working to address our members' social needs and the broader social determinants of health in the communities we serve. This includes societal and environmental conditions such as food, housing, transportation, education, violence, social support, health behaviors, and employment. Robust data related to members' social needs is critical to our efforts to improve the health of our members and communities. Aetna employs a standardized approach to screening, documenting, and coding social needs to enable us to do the following:

- Track the social needs that impact our patients, allowing for personalized care that addresses patients medical and social needs
- Aggregate data across patients to determine how to focus a social determinants strategy
- Identify population health trends and guide community relationships

One tool available to capture data on the social needs of the member population is the ICD-10-CM codes included in categories Z55 – Z65 (Z-codes), which identify non-medical factors that may influence a member's health status. Existing Z-codes identify issues related to a member's socioeconomic situation, including education and literacy, employment, housing, lack of adequate food or water, or occupational exposure to risk factors like dust, radiation, or toxic agents. Aetna will work with the Department and Centers for Medicare & Medicaid Services to investigate the use of Z-codes and consider opportunities to both increase data collection and utilization by the provider community.

In addition, our Care Connection teams communicate with providers and members about Aunt Bertha and our community-based services database. These tools assist us to connect members to community-based services to address any SDOH needs, such as transportation, food, housing, or employment. For example, we include 12 additional questions on our Health Risk Questionnaire to gain a more comprehensive picture of a member's SDOH needs. In addition,

we are working with Unite Us, a closed loop referral system, to connect members to services which address SDOH needs. The use of Unite Us coupled with the Care Connection team's personal knowledge of regional needs enables us to provide appropriate referrals that reduce SDOH-related barriers in accessing care.

Provider Satisfaction

PS008	The Vendor should describe its process to conduct annual provider satisfaction surveys to evaluate the overall satisfaction of its network providers, including the evaluation of results of satisfaction surveys on an annual basis, and how the Vendor will utilize data to inform quality improvement activities to enhance network satisfaction and availability of services to members.

The provider satisfaction survey assesses provider satisfaction with services that are important to the Aetna network of providers and their overall satisfaction with the health plan.

[PS008] Conducting Annual Provider Satisfaction

SPH Analytics (SPH), an NCQA-certified survey vendor, was selected by Aetna Better Health of West Virginia to conduct its 2019 Provider Satisfaction Survey. SPH followed a two-wave of mail and Internet with phone follow-up survey methodology to administer the provider satisfaction survey from July to September of 2019. A total of 345 surveys were completed (91 mail, 43 Internet, and 211 phone), yielding a response rate of 11.1 percent for the mail/Internet data component and 23.4 percent for the phone data component. Results include Aetna Better Health of West Virginia's composites and key attributes. Data and significance testing for trend years (if applicable) and the 2018 SPH Medicaid Book of Business are also provided for comparison.

2019 Aetna Better Health of West Virginia Provider Satisfaction Results show that **more than 90.7% of providers would recommend Aetna to other physician's practices**. This satisfaction result tops the 2018 Book of Business rate of 83.2%.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

The survey was administered to all participating providers who have been contracted with us for at least six months, including PCPs, specialists, and behavioral health care practitioners. Information obtained from the survey allows us to measure how well the health plan is meeting provider's expectations and needs. Based on the data collected, this report summarizes the results and assists in identifying plan strengths and opportunities These surveys address satisfaction with Aetna's utilization management procedures (prior authorization, concurrent review) claims processing and our response to inquiries.

The Provider Services department, in collaboration with Quality Management, Member Services, and administration support staff, coordinates satisfaction surveys. Comparison and analysis of results to prior Aetna results and national benchmarks provide information to identify areas that changed or require additional improvement. Aetna reports the analysis of results and applicable follow-up actions developed to address unfavorable results or trends to the Service Improvement Committee (SIC) and Quality Management Oversight Committee (QMOC).

Evaluation of Results of Satisfaction Surveys and Informing Quality Improvement Activities to Enhance Network Satisfaction and Availability of Services

Our provider relations leaders review satisfaction results and share them with managers and directors to identify areas that may need corrective action. This group also determines plans of actions to initiate in order to improve the following year. Aetna uses a formal process to evaluate potential areas for improvement identified from member and provider surveys as well as other sources (such as member complaints, appeals, or physician incentive plans). Aetna prioritizes identified issues, addresses concerns, implements interventions, and reassesses issues to determine change in satisfaction. The formal process includes appropriate member and practitioner/provider communications and reporting to the Quality Management/Utilization

Management (QM/UM) Committee, QMOC, and the board of directors documented in committee minutes. For example, in 2017, survey results identified that providers were unsatisfied with our provider orientation process. Results showed that providers felt the process was not comprehensive and needed to include information about interacting with the health plan departments. Based on these findings, our quadruple aim action plan included developing a more comprehensive orientation process. In 2018, we created an enhanced Provider Orientation Toolkit that was sent to all new providers. We also began conducting monthly new provider webinars to enable providers to participate at their convenience. **We have experienced a 171.58 percent increase in provider orientation satisfaction scores from 2017 to 2019.**

Provider satisfaction is also incorporated into the CAHPS improvement plan. Aetna staff work to reduce provider burden and increase satisfaction through face-to-face visits, phone calls, webinars, web portal capabilities, gaps-in-care reports, and pay-for-quality programs. Care Management and Member Services staff assist providers in support of member access and satisfaction with care.

The latest CAHPS surveys indicate that members are satisfied with Aetna's provider network, including **Getting Needed Care, Getting Care Quickly,** and **How Well Doctors Communicate.** **Table 6.8.1-6** below shows Aetna West Virginia Medicaid child and adult members were satisfied with their ability to get needed care, tests, or treatment from our network of providers.

Table 6.8.1-6: Aetna 2018 and 2019 Child and Adult CAHPS Results Meeting the 75th and 90th Percentiles

CAHPS Measure	2018 Rate and Percentile	2019 Rate and Percentile
Child		
Getting Care Quickly Composite	94.83%/75th	95.92%/90th ▲
Getting Needed Care Composite	89.30%/75th	93.02%/90th ▲
How often did you get an appointment for your child to see a specialist as soon as you needed?	85.85%/75th	88.10%/90th ▲
How often was it easy to get the care, tests, or treatment your child needed?	92.75%/75th	97.95%/90th ▲
When you made an appointment for a check-up or routine care for your child at a doctor's office or clinic, how often did you get an appointment as soon as your child needed?	92.55%/75th	93.68%/90th ▲
When your child needed care right away, how often did your child get care as soon as he or she needed?	97.11%/90th	98.16%/90th ▲
Adult		
Getting Care Quickly Composite Measure	85.14%/75th	86.74%/75th ▲
Coordination of Care	86.47%/75th	86.49%/75th ▲

We incorporate the CAHPS survey results to measure member satisfaction with our providers. Both NCQA Quality Compass® national Medicaid averages and NCQA percentiles are used to gauge plan performance. The 2019 NCQA Medicaid national average was made up of Medicaid plans that submitted data to Quality Compass in 2019. Member satisfaction percentage results were used to evaluate Aetna member satisfaction trends over time.

Provider Disputes, Appeals, and Reconsideration Requests

Another way that Aetna supports providers and evaluates provider satisfaction is by evaluating our NCQA Medicaid national average. This is an aggregate view of Medicaid plans that

submitted data related to performance during provider disputes, appeals, and reconsideration requests.

Provider Disputes and Reconsiderations

We administer an equitable, timely, and balanced review of provider disputes and reconsiderations as detailed in our Provider Dispute policy (WV-6300.00). Providers can call our Claims Inquiry Claims Research team regarding claim-related disputes or send them in writing to our Provider Relations department. Providers may also use Aetna's optional claim reconsideration form, which is on our website. The Provider Relations team responds to these concerns by phone, fax, email, or via the remittance advice if the claim is eligible for reprocessing.

Aetna's provider dispute process offers resolution when there is dissatisfaction between Aetna and the provider. Aetna will ensure that no punitive action is taken against a provider who files a dispute. A dispute between a provider and Aetna will not disrupt or interfere with the provisions of services to the member. Providers can send claims reconsiderations with supporting documentation to our claims team via the provider portal or by mail to the post office box in Arizona. Requests for claim reconsideration or claim resubmission that are received with a supporting claim at the health plan will be returned to the provider for filing with the claim copy to the post office box in Arizona for processing.

It is Aetna's policy that the resolution of issues regarding the interpretation of the state agency approved Aetna contract(s) is a matter solely between Aetna and the provider. Aetna will inform providers about this policy through the provider manual and other mediums, to include notices and alerts, training, provider orientation, and the website and by the provider calling their provider relations representative. Both contracted and non-contracted health care providers may

file disputes related to claim adjudication, claim payments, including resubmitted claims, issues related to coding, fee schedules, or contracting and health plan policies as provided by state regulations.

Aetna's decision is final for non-contracted provider claim disputes unless state regulations provide additional recourse. Aetna's provider relations representatives are available to discuss all provider issues. Upon receipt, they are classified as an inquiry or a dispute. A provider's dissatisfaction with an issue covered by this policy is considered a complaint and may be followed by the provider complaint and grievance resolution process as applicable. Any complaints received about health plan staff, contracted vendors, or members of the plan are classified as a provider complaint/grievance and will be automatically forwarded to the Appeal and Grievance department for processing as a provider complaint/grievance.

Dispute Process

To promote a quicker resolution process, the provider relations director or their designee reviews the content of the request, regardless of terminology used by the provider, and completes the triage process to determine the appropriate classification for processing. The provider may be asked to complete and submit the dispute form with any appropriate supporting documentation to the designated department listed on the form. The dispute form is accessible on our website, via fax or by mail. The provider relations director or their designee assigns the dispute form to a provider relations representative to research, analyze, and resolve. Aetna will notify the provider of its decision by phone, email, or fax or by surface mail.

Dispute Delegation

Requests for claim reconsideration or claim resubmission that are received with a supporting claim at the health plan will be returned to the provider for filing with the claim copy to the post

office box in Arizona for processing. Upon request any updates and/or changes to currently approved provider dispute processes will be submitted to the state agency for approval prior to the implementation of the changes, unless otherwise regulated by law.

Appeals

Aetna's provider complaint system offers an impartial process for resolving provider requests to reconsider a decision. A provider may file an appeal with Aetna. Aetna will respond to provider appeals pursuant to the guidelines in this policy. In addition, contracting providers may file an appeal directly with Aetna verbally or in writing regarding Aetna's denial or payment of a claim. Verbal request may be required to be submitted in writing. Aetna will make sure that no punitive action is taken against a provider who files a claim appeal. A dispute between a provider and Aetna will not disrupt or interfere with the provisions of services to the member. Aetna will administer an equitable, timely, and balanced review of provider appeal.

Responsibilities

Aetna's provider relations representatives are available to discuss a provider's dissatisfaction of an issue covered by this policy, and if the provider remains unsatisfied with a dispute resolution related to claim payment, the provider appeal process will be offered.

Aetna will make sure the following requirements are met:

- A dedicated Provider Relations staff is available for providers to contact plan via telephone, electronic mail, surface mail, or in person, to ask questions, resolve disputes, and file a provider appeal.
- Aetna will operate a provider access component of the toll-free telephone line to respond to provider calls.
- The provider access component of the toll-free telephone line will be staffed by Aetna provider representatives between the hours 8:30 a.m.to 5:00 p.m. Eastern time daily, excluding state holidays. Staff will answer the help line and respond to provider questions in all areas, including but not limited to prior authorization, provider appeals, and provider responsibilities.
- Aetna call center system will have the capability to track provider call management metrics.

Appeal Committee

The Appeal Committee is responsible for reviewing the appeal request and all supporting documentation. The committee is comprised of two or more staff members, which may include but not limited to the following:

- Appeal and grievance manager – chairperson (1 voting member)
- Compliance officer (1 voting member)
- Chief medical officer or designated medical director (1 voting member)
- Representatives from Quality Management and Utilization Management departments
- If clinical issue – staff registered nurse
- If clinical issue – physician with same or similar specialty
- Department managers and supervisors

Three voting members of the committee are assigned prior to each meeting. The voting panel will include individuals who were not involved in the original decision and who are not a subordinate to any person involved in the original decision. The appeal case is presented to the committee and a decision is rendered.

Communication of Complaint System Rights

Aetna will make the provider complaint system processes available to the provider through the provider manual and other mediums, including notices and alerts, training, provider orientation, the remittance advice, the Aetna website, in hard copy upon request (at no charge to provider) or verbally when the provider calls the provider relations representative. Any updates and/or changes to currently approved provider claim appeal process will be submitted to the Department for approval prior to the implementation of the changes. Aetna's provider appeal processes will remain unchanged during the Department review of new policies unless otherwise regarded by law.

Appeal Process

All Aetna staff who engage in provider contacting must understand the procedures for receiving, documenting, and forwarding a provider appeal to the Complaint and Appeal department. A

trained and qualified complaint and appeal analyst assumes primary responsibility for coordinating and managing provider appeals and for disseminating information to the provider about the status of the appeals.

Regardless of the department in which the information originates, all appeals are documented within Aetna's call system and submitted on the date of receipt, with supporting documentation, to the Complaint and Appeal department. The complaint and appeal analyst documents the appeal in the appeal and grievance application for tracking, review, referral, resolution, and reporting. Providers may submit an appeal either verbally or in writing. Verbal submissions may be required to be submitted to writing. Aetna will acknowledge all verbal requests verbally at the time of receipt and if requested will acknowledge written requests either verbally or in writing within three business days.

The Complaint and Appeal department is designated to receive provider claim appeals, documenting the substance of individual appeals, coordinating resolutions, tracking data, and reviewing appeals for trends in quality of care or other service-related issues. If the appeal requires research or input by another department, the Complaint and Appeal department will forward the information to the affected department and coordinate with the affected department to thoroughly research each appeal using applicable statutory, regulatory, and contractual provisions, where as appropriate, collecting pertinent facts from all parties and applying the Aetna's written policies and procedures. The appeal with all research will be presented to the Appeal Committee for decision.

The Appeal Committee will include a provider with same or similar specialty if the appeal is related to a clinical issue as well as an officer of the plan who has the authority to require

corrective action. Aetna will confirm that the individual(s) who makes decisions on appeals either individually or through appeal committee are individual(s) who were not involved in any previous level of review or decision-making and if deciding an appeal of a denial, reduction, termination, or suspension that is based on lack of medical necessity or an appeal that involves other clinical issues are health care professionals who have the appropriate training and clinical expertise, as determined by NCQA and the state agency, in the field of medicine treating the member's condition or disease or who has experience treating the member's condition or disease or treating similar complications related to the member's condition or disease. Same or similar is required for member appeals only. The Appeal Committee will consider the additional information and will decide the appeal.

The Complaint and Appeal department staff reports to the chief operating officer. All data collected is reported to the Appeal Committee, SIC, and QMOC at least quarterly (more frequently if appropriate) summarizing the frequency and resolution of all appeals for identification of opportunities for improvement as well as follow up on identified actions to address those opportunities. Appeals will be reviewed and resolved within 30 calendar days of receipt. The decision on verbal requests for appeal will be communicated to the provider via telephone no later than three business days after the decision is made. For all written requests, or requests where the provider requested a written response, Aetna will generate a written decision notice to the provider via electronic mail, fax, or surface mail within 10 calendar days from the date of the decision as promptly as the member's health requires. The timeframe for resolution may not be extended. Aetna will retain all appeals files in a secure, designated area for a period of at least seven years following the final decision.

9. Quality

The Vendor should refer to the business specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Quality (QU) as part of their bid. The Vendor's narrative response should not exceed 75 pages.

Aetna brings the full complement of our local and national quality improvement infrastructure to West Virginia to provide a comprehensive quality approach across the entire continuum of care to support the Bureau of Medical Services' (BMS) goal to ensure access to Mountain Health Trust (MHT), West Virginia Health Bridge (WVHB), and West Virginia Child Health Insurance Program (WVCHIP) enrollees. **Aetna was the first West Virginia Medicaid plan to achieve a Commendable National Committee for Quality Assurance (NCQA) accreditation as a Medicaid managed care organization and is the only plan to maintain it without interruption since 2016.** Our quality approach includes continuous quality improvement (CQI) activities with a performance improvement focus to meet West Virginia enrollee needs and preferences. **We are West Virginians and care about our neighbors,** which empowers us to make a significant impact in communities across the state, addressing our most vulnerable populations. Aetna has strong connections and collaborations with local providers and communities; through our Care Connection team (CCT) care management model, and with staff throughout West Virginia.

Aetna's Quality Assessment and Performance Improvement Program

QU001	The Vendor should describe its Quality Assessment and Performance Improvement (QAPI) Program.
QU002	The Vendor should describe how they will coordinate Quality Assessment and Performance Improvement (QAPI) activities with other performance monitoring activities.

QU004	The Vendor should describe how they will establish procedures for formal and ongoing communication and collaboration among the Quality Assessment and Performance Improvement (QAPI) policymaking body and other functional areas of the Vendor (for example, health services management and enrollee services).

Aetna's Quality Assurance and Performance Improvement (QAPI) program helps to support the State's goals by monitoring and enhancing the quality of care, coordination of care, and access to needed services for our enrollees. **Our quality management director is a West Virginia native and a registered nurse (RN) with over 30 years of quality management (QM) experience; she has been directly accountable for the quality program since 2014.**

"Working to pilot innovative health care solutions with Aetna Better Health has improved health outcomes and increased resources available to patients. In addition to the strong support from the Aetna team, our clinic benefits from equipment donations and shared savings plans. It's a pleasure to grow our relationship, learn from one another, and work collaboratively to improve lives with Aetna."

—Dr. C. Donovan Beckett, CEO Williamson Health & Wellness Center, Inc

[QU001] Quality Assessment and Performance Improvement Program Description

Aetna has a well-established QAPI program to direct organization-wide initiatives for continuously improving the health status of covered populations in compliance with the State Fiscal Year 2020 Model Purchase of Service Provider Agreement Section 6, 42 C.F.R. 438.330, and NCQA accreditation standards. The QAPI program is a health plan-wide endeavor that uses an integrated and collaborative approach **involving each functional area.** Integration of our QM activities with other systems, processes, and programs throughout Aetna has contributed to **many of our quality scores exceeding those of other plans serving West Virginians**. Our quality program includes a robust structure of oversight committees supported by our local and national resources, which include participation from contracted primary care providers (PCPs), specialists, and behavioral health (BH) care providers from the provider network representing the communities we serve. **Table 6.9.1-1** describes our local and national resources, in addition

to the West Virginia QM team, committed to supporting performance measurement, reporting, and data-driven initiatives.

Table 6.9.1-1: Examples of Local and National Resources Dedicated to West Virginia CQI

Resource	Description
Local West Virginia CQI Support	
Utilization management	Monitors performance trends in outpatient, inpatient, and ER utilization patterns, and generates over/under-utilization provider reports
Care management	Engages enrollees for closure of healthcare gaps and coordinates high quality care for enrollees with complex medical needs
Provider services	Facilitates interactions with providers, supplies gap in care reports, and coordinates Healthcare Effectiveness Data and Information Set (HEDIS®)/non-HEDIS provider education
Value based payment	Incentivizes providers to engage fully with our enrollees, provide needed services, and prevent over/under-utilization of services
Population health management	Outreaches to provider groups, reviews HEDIS rates, and discusses closure of gaps. Community health workers and peer support specialists provide enrollee education and link them to needed services
National CQI Support	
Aetna's National Medicaid IT team	Over 200 individuals dedicated to data management; they identify, connect, manage, and verify all data sources used in quality
Shared Services Informatics team	Performs HEDIS system oversight, data management, and quality reporting, as well as provider and value-based reporting that includes both HEDIS and utilization measures
Aetna Medicaid Organization's National QM team	Supports West Virginia team by reviewing HEDIS trends, developing new approaches to provider/enrollee engagement, conducting surveys and supporting scalable new approaches using industry-leading technology, analytics, software, and service companies.

QAPI Program Purpose

The primary purpose of the QAPI program is to provide the structure and processes necessary to identify and improve clinical quality, maximize safe clinical practices, and enhance enrollee, family, and provider satisfaction across the various settings of care within our West Virginia delivery system. Through our QAPI program, we ensure the services provided to our enrollees

conform to the standards and requirements of regulatory and accrediting agencies, including the Centers for Medicare and Medicaid Services (CMS), BMS, and NCQA.

QAPI Program Goals and Objectives

Aetna strives to achieve the following primary goals to help improve the health and social outcomes for our West Virginia enrollees:

- Implementing a QM program that effectively promotes a culture and infrastructure focused on continuous quality improvement, improving clinical outcomes, and enrollee satisfaction
- Conducting continual monitoring and assessment of enrollee care and services, striving to provide health care and services to health plan enrollees to ensure appropriate medical practice standards and that the needs of our enrollees and health care professionals are met
- Identifying and analyzing opportunities for improvement with careful implementation of actions and follow-up
- Encouraging enrollee safety across the organization and network of providers
- Maintaining compliance with local, state, and federal regulatory requirements and accreditation standards

Program Structure and Operations

Quality management activities that support the goals and objectives of the QAPI program are continually occurring at Aetna. Year over year, we analyze our progress in meeting established goals and push on to higher standards. **Aetna reviews, refreshes, and coordinates the goals and objectives of our QAPI program on a daily, monthly, quarterly, and annual basis.** The quality management program cycle is based on the calendar year. Our QM director makes interim modifications to QAPI program documents as needed or as state contract requirements change. Aetna's QAPI program is dedicated to communication and collaboration and is comprised of the QAPI Program Description, QAPI Work Plan, QAPI Program Evaluation, as well as policies and procedures.

QAPI Program Description

The QAPI Program Description outlines Aetna's strategic plan and goals designed to meet or exceed the West Virginia quality strategy, quality plan and other requirements of the Aetna

contract. Departmental staff reviews the QAPI program description at a minimum annually, revise it as necessary, and submit it for review and approval to the Quality Management/Utilization Management (QM/UM) Committee and the Quality Management Oversight Committee (QMOC). The board of directors provides the final approval of the QAPI program. We communicate QAPI program information and performance to enrollees on an ongoing basis through the biannual newsletter, which is posted to the website, including an annual summary of Consumer Assessment of Healthcare Providers and Systems (CAHPS) and enrollee complaints and our performance on NCQA requirements. We provide a summary of CAHPS and enrollee satisfaction performance annually to providers through provider alerts that are sent via fax/email and mail, as well as posted on our website under the Provider News tab at https://www.aetnabetterhealth.com/westvirginia/providers/library.

Annual QAPI Work Plan

The QAPI work plan is an activity-tracking tool used to facilitate achievement of quality management goals for the year. The work plan provides a timeline, schedules and description of deliverables and includes quality management and performance improvement activities including the QAPI, HEDIS, and CAHPS workplans, performance improvement projects (PIPs), and all CQI initiatives, resources, designated staff and/or department responsibilities, follow-up of previously identified issues, and progress towards completion. **The QAPI workplan is a living document and is updated as needed throughout the year as issues are identified.** For example, in the early third quarter of 2018, although we were meeting State requirements, through collaboration and communication between the QM and Utilization Management (UM) departments, Aetna made the decision to increase the reporting of turnaround times for UM decision-making from quarterly to monthly to ensure compliance with state contract

requirements. The QM staff updated the QAPI Work Plan for both 2018 and 2019 to reflect this change and to ensure timely reporting of this important UM metric to the Service Improvement Committee (SIC).

Annual Quality Management Evaluation
QM department staff coordinate a **company-wide annual evaluation of the QAPI program** to assess the overall effectiveness of our quality improvement program and alignment across the continuum of care. The annual program evaluation reflects an assessment of completed and ongoing activities as outlined in the QAPI work plan and described in the QAPI program description and includes the roles and responsibilities for each department. It also addresses barriers from the previous year and identifies barriers encountered during the calendar year, includes data trends, and provides Aetna with the opportunity to make changes to the quality management program for the upcoming year. For example, during the process of evaluating our results at the end of 2018, one barrier identified with the CAHPS survey was that it is only conducted once per year and does not allow any opportunity for open-ended comments or feedback from our enrollees. To address this barrier, Aetna implemented a post-call survey prompt at the end of every member call to the Member Services department beginning in the first quarter of 2019. This prompt offers members the opportunity to rate their satisfaction with that particular call to ensure resolution of the issue and also provides the opportunity for the member to provide comments regarding any issues that they may need assistance with. These ad hoc surveys allow for a

Based on Member Services post-call survey results, we identified ways to improve our services and go the extra mile for our enrollees. For example, based on feedback, we created a soft skills training for our member services representatives to improve their interactions with enrollees. Our member services representatives proactively help our enrollees by making outbound calls on their behalf or completing warm transfers for concerns such as billing and pharmacy.

more real-time method of gauging emerging trends in issues that members may be experiencing. Post-call survey results are reported to the SIC.

The evaluation includes all aspects of the QAPI program to determine the extent and effectiveness of improvements in the quality of care and services. We collaborate and communicate ongoingly with West Virginia enrollees, providers, and stakeholders through our QM/UM Committee (which includes network providers), our Member Advisory Committee (MAC), and the QMOC. Aetna reviews the annual evaluation and uses the findings to establish quality management and performance improvement goals for the upcoming year.

[QU002] Coordination of QAPI Activities with Other Performance Monitoring

Aetna integrates quality management and performance improvement processes into all departments, with each department responsible for selected processes, functions, and monitoring activities. QAPI activities are coordinated with other performance monitoring activities, including utilization management, risk management, and resolution and monitoring of enrollee complaints and grievances. Staff members report results to the proper internal departments and committees, or to external agencies; QAPI activities are linked to other management functions such as network changes, benefit redesign, medical management systems, practice feedback to providers, enrollee education, and enrollee services. In order to ensure this coordination, Aetna has developed **nine Reaching for Excellent Accreditation for our Health Plan (REACH) teams** that are accountable for specific QAPI activities to identify areas of opportunity. The REACH teams include the following:

- **REACH Team 1, Quality:** QAPI Program Description, Work Plan and Evaluation; wellness and prevention, credentialing, interpreter services, and delegation oversight
- **REACH Team 2, Member Experience:** CAHPS and complaints and appeals (including appeal file review)
- **REACH Team 3, Care Management and Population Health Management:** Population health strategy, annual population assessment, and care management (including CM file review)
- **REACH Team 4, Coordination of Care:** Continuity and coordination of medical care, continuity and coordination between BH and medical care, and continued access to providers
- **REACH Team 5, Network:** Contracts, network adequacy, practitioner/provider supports, provider directory, and e-referrals
- **REACH Team 6, Utilization Management:** UM processes, timeliness reports, and UM file review (medical, BH), delegation of UM, and satisfaction with UM
- **REACH Team 7, Pharmacy:** Pharmacy NCQA Compliance workgroup including our QM leads, pharmacy director, and Aetna Medicaid organization pharmacy lead; responsible for pharmacy file review oversight, procedures for pharmaceutical management, and review of new technologies related to pharmacy
- **REACH Team 8, Communication Tools:** Member and provider tools, provider welcome letter, provider manual, Aetna member and provider websites, member newsletters, provider directories/DocFind, and new member welcome kit (materials only)
- **REACH Team 9, Member Connectivity Tools:** Member access to web-based technologies and Member Services email response monitoring and tracking

REACH Team Collaboration

REACH Teams 4 and 5 worked together closely to ensure that our process for member notification of provider terminations was implemented according to policy. Since the Provider Relations team is often first to learn of a provider termination, the REACH team collaboration allowed for direct communication between the Provider Relations team and the Member Services team to ensure that the steps in the process were followed. Our Provider Relations department receives the notification and advises the member services team to send letters out to members who are on the provider panels. Member Services is then available to assist members who may need assistance during this process. These teams work together to make sure this transition is completed accurately and timely within the 30-day window.

Each REACH team is responsible for ensuring compliance with all NCQA standards, including annual review of newly released standards; quarterly updates; and frequently asked questions. They hold regular and ad hoc meetings, as necessary, for barrier analysis, activity idea generation, and identifying system/reporting barriers, etc.

[QU004] Formal and Ongoing Communications and Collaboration among the QAPI and other Functional Areas

A formal committee structure allows for oversight of the QAPI program and for communication and collaboration between the policymaking body (QMOC) and other functional areas, as depicted in **Figure 6.9.1-1**. The committee members integrate Aetna medical functions, operations departments, network, and enrollees into the QM program through their participation on one or more committees, overlapping membership and leadership responsibilities, and integrated reporting requirements for QAPI and HEDIS. Our QMOC members, including Todd White, our chief executive officer (CEO), Greg Carpenter, our chief operating officer (COO), Tina Bailes, our chief financial officer (CFO), Donald Gibbon, DO, our CMO/medical director, and our director of quality management, director of medical management, compliance officer, and directors/managers from other functional areas within Aetna work together on a day-to-day basis on CQI efforts to ensure the QAPI program is integrated throughout the organization, among all departments, contractors, and stakeholders.

The QMOC reviews and evaluates company-wide performance monitoring activities, including care management, customer service, credentialing, claims, complaint and appeals, prevention and wellness, provider service, quality, population health management, and utilization management. As the chair of the QMOC and QM/UM committees, respectively, our CEO and CMO hold each functional area accountable for quality improvement activities.

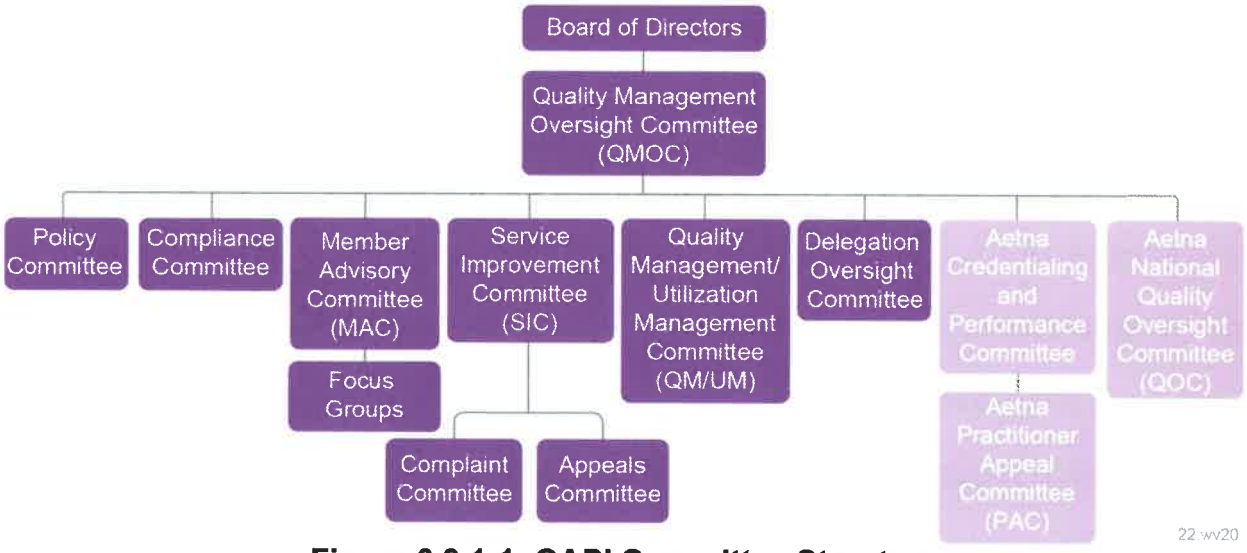

Figure 6.9.1-1: QAPI Committee Structure
Aetna's comprehensive quality committee structure directs organization-wide CQI initiatives.[1]

Board of Directors

Our board of directors is dedicated to the West Virginia plan and has ultimate accountability for the West Virginia QAPI program and related processes, activities, and systems. They review and approve the annual QAPI work plan and updates, program description, and evaluation.

Quality Management Oversight Bodies and Schedule of QM Activities

The keys to our QM strategy are communication and collaboration between Aetna departments and all key stakeholders. Our local West Virginia QM department provides the administrative support for coordination of committee meetings, meeting preparations, and follow-up activities. The QMOC provides executive oversight and proactive leadership of quality activities and their integration

At the April 2019 QM/UM meeting, a cardiologist on the committee recommended that Aetna consider the Prevention of Cardiovascular Disease Clinical Practice Guideline (CPG). Our CMO agreed and the provider presented the guideline at the May QM/UM meeting. The CPG was approved and posted to the Aetna website within a week.

[1] Aetna's local committees indicated in the dark purple color are supported by the Aetna national committees indicated in the light purple color

across the plan. **Table 6.9.1-2** provides a description of Aetna's local and national QM committees.

Table 6.9.1-2: QAPI Committees and Schedule of Activities

QAPI Committees	Description	Meeting Frequency
West Virginia-based Committees		
Quality Management Oversight Committee (QMOC)	Chaired by the CEO with cross-functional representation and oversight by the CMO; provides executive oversight of the QAPI program and makes recommendations to the board of directors about Aetna quality management and performance improvement activities.	Six times per year
Quality Management/Utilization Management Committee (QM/UM)	Chaired by the CMO/medical director with cross-functional representation (medical directors, behavioral health medical director, Quality Management director, Medical Management director) and West Virginia network providers representing all regions of the state, including PCPs, specialists, pediatrics, obstetrics/gynecology, and BH; advises and makes recommendations to the CMO/medical director on matters pertaining to the quality of care and service provided to enrollees.	10 times per year
Delegation Oversight Committee	Chaired by the director of quality management with cross-functional representation including the CMO, COO, Director of Medical Management, Compliance Officer, Member Services, Provider Services, and Complaint/Appeals departments); advises and makes recommendations to QMOC about delegated relationships.	Quarterly
Complaint Committee	Chaired by the appeals and grievances supervisor with cross-functional representation including the compliance officer, complaint and appeals analyst, member services, quality management, medical management, and provider services; reviews issues of expression of dissatisfaction by enrollees, practitioners, or providers.	Monthly
Service Improvement Committee (SIC)	Chaired by the COO with cross-functional representation; advises and makes recommendations to the QMOC and/or Aetna management using enrollee and provider feedback.	Monthly

QAPI Committees	Description	Meeting Frequency
Appeals Committee	Chaired by the appeals and grievances supervisor with cross-functional representation including the compliance officer, CMO, or designated medical director, utilization management, departmental supervisors and managers and staff RN; reviews appeal trends and may render decisions on administrative or benefit-related appeals.	Weekly
Member Advisory Committee (MAC)	Chaired by the manager of member services with cross-functional representation and member representatives; provides feedback to Aetna regarding strategies for improving member care and services. The MAC recommends strategies to improve clinical performance, cultural competency, member outreach and educational materials, prevention programs, satisfaction surveys, and other initiatives woven into the CQI process.	Quarterly
Compliance Committee	Chaired by the compliance officer with cross-functional representation including the CEO, COO, CMO, director of medical management, director of quality management, appeals and grievances supervisor, government liaison, quality management consultant(s), provider relations manager, and behavioral Health coordinator; reviews, monitors, and assesses the effectiveness of the Aetna compliance plan.	Quarterly
Policy Committee	Chaired by the compliance officer with cross-functional representation; development, implementation, approval, and communication of all Aetna policies including but not limited to clinical, non-clinical, and payment policies.	Monthly
Aetna National Committees		
Credentialing and Performance Committee (CPC)	Composed of participating providers of various specialties across the country, as facilitated by the Aetna regional medical director; responsible for credentialing and re-credentialing practitioners and conducting professional review activities involving practitioners whose professional competence or conduct adversely affect the health or welfare of enrollees. This committee reports to the QM/UM Committee at least quarterly.	At least every 45 days

QAPI Committees	Description	Meeting Frequency
Aetna Practitioner Appeals Committee (Subcommittee to the CPC)	Facilitated by an Aetna national medical director; conducts professional review hearings of providers who appeal decisions involving professional competence or conduct; consists of providers appointed by the CPC based on areas of expertise involved in specific professional competence or provider conduct appeals. The committee reports through CPC and to the QMOC.	As needed
Aetna National Quality Oversight Committee	Chaired by an Aetna national medical director or designee; conducts the credentialing/re-credentialing of facilities/organizational providers/vendors and the review of facilities/organizational providers/vendors issues and complaints.	10 times per year

Aetna takes part in all quality meetings as requested by the Department for Health and Human Resources (Department) to support the statewide quality goals, collaborate on initiatives, provide progress updates, and resolve barriers. We fully cooperate with the Department and External Quality Review Organization (EQRO) requests for all documentation.

Quality Management Department

Under the leadership of Aetna's Quality Management department in West Virginia, we have achieved a **Commendable rating from NCQA and an overall rating of 4.0 in 2019.** Under the direction of the West Virginia CMO, the QM department administers Aetna's QAPI and provides administrative support for health plan committees. The CMO reviews reports, data, and feedback from staff, providers, and members, identifies areas in need of attention, and submits recommendations to the appropriate committees and State agencies. The department is staffed with an **experienced local team that is knowledgeable of our State's communities** and includes our director of quality management, HEDIS manager and coordinators, accreditation project manager, Prevention and Wellness Outreach staff, and QM nurses.

Quality Management Department Responsibilities

The Quality Management department responsibilities include but are not limited to the following:

- Coordination and support of QM processes and monitoring activities to promote enhanced coordination of care, access to services, and seamless care for enrollees
- Coordination with Care Management, UM, Compliance, Medical Management, Behavioral Health including the behavioral health medical director, Customer Service, Member Services, Provider Services, and Complaint and Appeals departments to carry out quality and performance improvement activities
- Collaboration with the Aetna Medicaid organization's national QM team; including review of potential quality of care (PQOC) issues and best practices to improve HEDIS and CAHPS measures
- Design and implementation of performance improvement projects
- Monitoring performance rates for all performance measures across all departments through a CQI/ Plan-Do-Study-Act (PDSA) process
- Regular reporting of quality of care/service issues, trends, and issue resolutions
- Annual review and revision of the QAPI program; development and maintenance of the work plan
- Coordination of member satisfaction surveys including the annual CAHPS survey and the annual BH member satisfaction survey to promote tailoring flexible programs to meet member needs
- EQRO coordination

Quality management and performance improvement activities are part of a fundamental Aetna focus on ensuring enrollees' needs are met and systemic issues are modified to improve health and social outcomes. It is the central area for receiving and responding to potential quality and/or risk management and compliance issues. The department's role in initiating and coordinating communications is critical in linking the parties involved (enrollees, family/caregivers, practitioners/providers, state and regulatory agencies, and other staff members) and in keeping information about QM requirements and the status of activities current.

Wellness Events

Aetna's wellness events are designed to help our enrollees and their families achieve better health while forging stronger relationships with their health care providers. We collaborate with providers to hold these events for our members who are overdue for a specific service or exam they need. Aetna staff conducts member outreach by scheduling appointments, sending

reminder letters, making reminder calls, and meeting with the members directly after their exam to provide them with a $25 Walmart gift card. Aetna staff who attend the events address any questions or issues the member may have with their benefits and discuss their healthcare needs and goals with one of our CMs. As an added benefit, while talking with our members at these events, we ask who they consider as their PCP. We use this information to update our PCP member rosters. As illustrated by **Figure 6.9.1-2,** Aetna currently offers several event types.

Figure 6.9.1-2: Aetna Wellness Events
During 2019, the QM team hosted 25 different wellness events at 20 different provider locations across the state. Member and provider satisfaction with these well-visit member engagement events is exceedingly high and the events will continue into 2020 and beyond.

Behavioral Health

Ongoing communications and collaboration among our functional areas also allows integration of quality management BH activities into the QAPI program. As one example of our proactive

approach to BH, we developed and outlined in our QAPI program our Care Management initiative to outreach all new moms after delivery to screen for postpartum depression. Any new mom who screens positively for possible signs/symptoms of postpartum depression is referred for an appointment with a BH provider. The Care Management staff member assists the new mother in obtaining the appointment and offers other assistance across the spectrum of health, and also assists with transportation. This type of program is partly due to our **QM/UM Committee, of which one third of the network providers are BH practitioners.** This real-time collaboration between PH health and BH clinicians on a monthly basis provides valuable feedback regarding current and planned QM activities and promotes the collaboration between all Aetna departments to facilitate seamless continuity of care between PH and BH practitioners. Another example of this collaboration includes working closely with network hospitals and providers to confirm that enrollees hospitalized with a BH diagnosis receive a timely follow-up appointment at discharge. Our program conducts an outreach call as soon as we see a member has been discharged from a mental health admission, and we continue calling using any member contact information on file with the facility if needed. If unreachable by phone, we will send a letter. **As a result, our HEDIS rate for 7-day follow-up visits went from the 10th percentile in HEDIS 2017, to the 33.33rd percentile in HEDIS 2019.**

Quality Strategies and Approach

QU011	The Vendor should describe how they will develop standards of performance when providing healthcare and related services to members to meet all goals for performance improvement on specific measures, as established by the Department.
QU012	The Vendor should describe its approach to developing performance improvement projects that are designed to achieve, through ongoing measurement and intervention, significant improvement sustained over time in aspects of clinical care and non-clinical services that can be expected to have a beneficial effect on health outcomes and enrollee satisfaction. Projects must measure performance using

	objective quality indicators, implement system interventions to achieve quality improvements, evaluate the effectiveness of the interventions, and plan and initiate activities for increasing or sustaining improvements.
QU013	The Vendor should describe how they will establish and utilize one or more quality indicators that are objective, clearly, and unambiguously defined, and based on current knowledge or health services research, to assess its performance.

As required in State Fiscal Year 2020 Model Purchase of Service Provider Agreement Section 6, our quality strategies and approach include the following:

- Annual measurement of performance in specified areas (e.g., immunization rates) and achievement of performance targets
- Multi-year PIPs addressing clinical and non-clinical areas
- An approach for addressing systematic problems and critical incidents
- The development and usage of a sufficient health information system
- Proper administration of quality assessment and performance improvement activities

[QU011] Developing Standards of Performance to Meet Goals

Aetna develops standards of performance when providing health care and related services to members to meet all goals for performance improvement on specific measures, as established by the Department through our ongoing CQI approach. In addition to meeting the goals and minimum performance standards established by the Department, we enhance the scope, goals, objectives, structure, staffing, and responsibilities of the QAPI program based on our analyses, historical performance, benchmarks, and best practices, as well as changes to the contract and accreditation standards to address specific regional needs of our enrollees. **Even when we meet State HEDIS goals, we set a new higher goal as part of our CQI process, using a statistically sound algorithm to calculate the next goal to achieve.**

Aetna leadership, providers, members, and member agency representatives, community agencies, and multiple departments work together as a team to set our organization's performance goals. We evaluate performance improvement on specific measures monthly, quarterly, and annually through our quality committees. Our CQI approach to goal-setting

encompasses an extensive array of activities, involving providers, members, their families/caregivers, and operations teams. PDSA guides our approach to developing, testing, implementing changes, and ultimately, setting the goals used in our QAPI program and PIPs. This is shown in our workplans where areas for potential improvement and corresponding actions are documented as guided by our QM/UM Committee.

[QU012] Performance Improvement Projects

Our Quality Management department responsibilities include development of PIPs in collaboration with the Department in compliance with requirements outlined in the State Fiscal Year 2020 Model Purchase of Service Provider Agreement.

Aetna scored 100 percent on every PIP audit conducted by the EQRO for measurement year 2018 (reported August 2019).

We design projects to achieve significant improvement in the quality or appropriateness of clinical and non-clinical service provision to improve health outcomes and enrollee satisfaction. We identify PIP topics from areas of importance or weakness identified by regulators or through our internal monitoring processes and committee recommendation.

To design a PIP, we examine relevant regional and state-focused clinical and non-clinical information, including enrollee/provider satisfaction, financial, demographic, utilization of services, or other factors that impact enrollees, providers, or the larger community. When not specified by a regulator, selection of PIP activities can take into account the prevalence of conditions among

Improving Care for Adolescents

In 2020, Aetna will be implementing a new PIP focusing on care for adolescents. This is typically a difficult population to engage in health care. The two indicators for this project will measure immunization rates in adolescents and the percentage of adolescents who are receiving timely well-care visits. Current performance indicates an opportunity for improvement, as the current Aetna rate for adolescent immunization is below the 25th percentile. Additional staff are being added to focus on outreach to our child and adolescent population to encourage them to attend well-visit appointments. Our targeted actions for improvement will include members in the new WVCHIP population.

enrollees, the need for specific services, identified barriers to service, demographic characteristics, identified racial disparities, and health risks among enrollees or the community served by Aetna in West Virginia.

The goal of each PIP selected is to achieve statistically significant improvement and to sustain the improvement over time. Each PIP includes performance objectives that are objective, measurable and outcome oriented. Evaluation and analysis of the data, including the data's source, ensures it is appropriate to answer the study questions. Data sources are evaluated to assure they reflect the most currently available data and the data reflects national and/or community standards of care. We initiate and maintain at least three simultaneous projects selected by the Department or through our internal selection processes. All of our PIP proposals are approved by BMS and the EQRO prior to implementation. As examples, our dental services for children and adolescents and postpartum visits PIPs are highlighted below.

Improvement in Dental Services for Children and Adolescents

A key preventive care initiative for Aetna has been our focus on improving dental care for children and adolescents throughout West Virginia. We identified our objective quality indicator of annual dental visits for children age 2 to 20 years in 2017 (61.04 percent) as an area for potential improvement. Our collaborative approach included review and input from multiple departments to create an intervention with efforts across each team's scope of activity. For example, our Care Management team focused upon addressing gaps in care as they work with children and adolescents in various levels of care management. Similarly, our QM department's Data Analytics team pinpointed geographical regions within the state where the dental visit rates were lower than the overall average. With the assistance of our Provider Relations team, we collaborated with provider offices in these lower-performing areas to host dental clinics, where

parents and guardians who agreed to bring their children were given a $25 gift card for completing the visit. The dental well-clinic days were well-received, as depicted in **Figure 6.9.1-3**. Our Community Development team focused attention on the importance of dental visits during their back-to-school events in various communities across the state. We collaborated with Head Start programs in Raleigh, Mercer, McDowell, Monroe, and Wyoming counties to highlight the importance of dental screening visits. **As a result, our dental visit rate showed a statistically significant increase from 61 percent in 2017 to 64 percent in 2019, and this improvement was sustained across both years.**

Figure 6.9.1-3: Dental Visit
Ariel (not her real name) is happy with her Aetna backpack full of goodies provided during the children's dental event at Williamson Health and Wellness Center.

Improvement in Postpartum Care

Regularly scheduled postpartum visits are essential to the well-being of our new mothers and infants. Postpartum visits offer the new mother and her provider time to assess her physical condition, screen for postpartum depression, and discuss infant care and family planning. Aetna's West Virginia QM team evaluated various cultural and disparity factors that may be affecting this postpartum visit rate. We identified that 222 (28.5 percent) out of 780 women who had not kept their postpartum appointment had an opioid use disorder. These new mothers tend to keep their appointment with their BH provider for the substance use disorder (SUD), but not the appointment for the postpartum checkup. Identification of this association presented an opportunity to engage the Care Management team for enrollee outreach and assessment. Aetna embedded obstetrics care managers at hospitals, high-risk clinics, and provider offices across the state to work with

our pregnant mothers during the pregnancy to educate them on the importance of postpartum care. The CCTs in each region of the State are uniquely positioned to work face-to-face with enrollees in their communities to assist with postpartum care planning. The SUD nurse team member of each of the CCTs is vital to addressing those issues of SUD in our pregnant mothers. Member incentives, including a $50 gift card for attending the postpartum visit, are offered to encourage compliance. We measured performance of this initiative through three objective quality indicators:

- **Prenatal and Postpartum Care – Postpartum Care:** The percentage of deliveries that had a postpartum visit on or between 21 and 56 days after delivery
- **Behavioral Health Risk Assessment – Modified:** The percentage of women, regardless of age, who gave birth during a 12-month period seen at least once for prenatal care who received a BH screening risk assessment at one of their prenatal care visits
- **HEDIS Like – Postpartum Care:** The percentage of deliveries that had a postpartum visit at any time prior to 21 days after delivery or after 56 days.

Using Lessons Learned, Challenges, and Successes

Our QM team has several long-standing staff that worked for Aetna in collaboration with the Department and EQRO since the first PIP proposals. We gain most of our understanding of lessons learned, challenges, and successes through PIP planning sessions, from provider and enrollee feedback, as well as open discussions through collaborative meetings between Care Management and Quality Management staff. For example, in conducting our barrier analysis for the dental PIP, we learned that there was opportunity for improved collaboration between Aetna and the dental vendor, SKYGEN USA, in order to identify additional dental providers who would see children as young as age two. Through ad hoc discussions with SKYGEN USA as well as during our quarterly Joint Operating Committee (JOC) meetings with them, we identified participating dentists available to see our younger members. Additionally, it was discovered in conversations with pediatricians, as well as with SKYGEN USA, that there seemed to be an

issue when PCPs were attempting to assist the enrollee in finding a dentist for care. Dental providers seemed to have questions about scheduling an appointment for a member with Aetna Medicaid organization coverage, and instead seemed to recognize SKYGEN USA as the benefit administrator. The Aetna Provider Relations team has begun working with provider groups to offer suggestions for mentioning SKYGEN USA in the request for a dental appointment to decrease confusion.

[QU013] Establishing and Utilizing Objective Quality Indicators

Continuous quality improvement is core to the success of Aetna's quality programs. We select specific quality indicators to measure changes in West Virginia enrollee health status, functional status, and/or satisfaction based on the most current information available, including national and/or community standards of care. We are constantly improving our services and processes with a focus on West Virginia enrollee outcomes and satisfaction. We design targeted initiatives to achieve demonstrable improvement and to sustain the improvement over time; each improvement activity includes performance objectives that are measurable and outcome oriented. We require the quality indicators to be objective and clearly and unambiguously defined as outlined in **Table 6.9.1-3**.

Table 6.9.1-3: Examples of Aetna's Quality Indicators

Description of Initiative	Quality Indicator	Rationale for Selection of Quality Indicator
Annual Dental Visit for Members Age Two to Three Year	• Percentage of Eligibles that Received Preventative Dental Services (PDENT) • Annual Dental Visits Ages 2-3 (ADV)	National research from the Centers for Disease Control and local West Virginia statistics
Prenatal Behavioral Health Risk Assessment	• **Prenatal and Postpartum Care – Postpartum Care:** The percentage of deliveries that had a postpartum visit	National research on America's Health Rankings and local

Description of Initiative	Quality Indicator	Rationale for Selection of Quality Indicator
and Postpartum Care Visit	on or between 21 and 56 days after delivery • **Behavioral Health Risk Assessment – (modified):** The percentage of women, regardless of age, who gave birth during a 12-month period seen at least once for prenatal care who received a BH screening risk assessment at one of their prenatal care visits • **HEDIS Like – Postpartum Care:** The percentage of deliveries that had a postpartum visit at any time prior to 21 days after delivery or after 56 days	West Virginia performance on metrics
Annual Monitoring for Patients on Persistent Medications	Annual Monitoring for Patients on Persistent Medications – Total Rate	National literature review, national research from the Food and Drug Administration (FDA) and local West Virginia statistics and performance
Follow-up After Emergency Department Visit for Alcohol and Other Drug Abuse or Dependence	The percentage of ER visits for enrollees 13 years of age and older with a principal diagnosis of alcohol or other drug abuse (AOD) or dependence, who had a follow-up visit for AOD within 30 days of the ER visit	National research from the Centers for Disease Control and local West Virginia statistics

We use proven statistical methodologies in designing and evaluating performance improvement activities, taking significant effort to provide accurate and reliable data. Evaluation and analysis of the data source ensures it is appropriate to answer the study questions and is the most current available. Aetna's assessment of data and potential for improvement is supported by sophisticated technology, databases, and tools to collect and analyze all available information and ensure its reliability. This includes our claims management system, HEDIS NCQA-certified

software, hotspot analytics platform, medical record audit repository, grievances and appeals system, pharmacy data system, and member-specific information from our health risk questionnaire surveys and case management assessments.

Data Gathering and Oversight

QU009	The Vendor should describe how they will gather, report, and utilize audited Healthcare Effectiveness Data and Information Set (HEDIS) measures.
QU010	The Vendor should describe how they will gather and use results for all identified core adult and child quality measures relevant to covered services to identify opportunities to improve member health outcomes, following the technical specifications provided by the Centers for Medicare & Medicaid Services (CMS) (https://www.medicaid.gov/medicaid/quality-of-care/performance-measurement/adult-core-set/index.html), (https://www.medicaid.gov/medicaid/quality-of-care/performance-measurement/child-core-set/index.html).
QU015	The Vendor should describe its policies and procedures to correct and remediate significant systemic problems that come to its attention through internal surveillance, complaints, or other mechanisms.

Aetna uses HEDIS, core adult and child quality measures, and other performance indicators to assess our program and policy impact on our enrollees. We closely monitor and immediately address all system problems that come to our attention.

[QU009] Gathering, Reporting, and Utilizing Audited HEDIS Measures

Improving HEDIS or other performance-indicator rates is a company-wide endeavor, with operating responsibilities shared by departments designated by the CEO. The Quality Management department HEDIS responsibilities include the following:

- Leading initiatives for improving the performance of each HEDIS metric using a CQI/PDSA approach
- Incorporating the gathering, reporting, and utilization of HEDIS measures into the QAPI workplan
- Review and oversight of data collection, document review, inter-rater reliability assessments, and measurement reporting

Aetna has steadily increased our HEDIS Well Child Visits in the First 15 Months of Life (W15) score in West Virginia from HEDIS 2017-HEDIS 2019 from the 50th to the 75th to the 90th percentile. In HEDIS 2019, our rate was 73.24% compared to West Virginia Medicaid competitors scores of 68.25% and 65.94%.

- Participating on the EQRO oversight team, as applicable, to coordinate review and attestation of data integrity and preliminary and final results by the Aetna CEO, CMO, and HEDIS coordinator

Aetna has a proven capacity to participate in the annual HEDIS and non-HEDIS performance measurement and reporting initiative as evidenced by our timely submission in West Virginia to NCQA and state regulatory agencies for HEDIS 2016, 2017, 2018, and 2019. At the close of each review cycle, our contracted NCQA auditor validates our HEDIS data files. Aetna has demonstrated superior HEDIS scoring, as depicted in **Table 6.9.1-4**, with examples of our HEDIS scores above the national average.

Table 6.9.1-4: Examples of Aetna West Virginia 2019 HEDIS Scores above National Average

Measure	National Average	HEDIS 2019
Child Measures		
Adolescent Well Care	53.20%	61.31%
Annual Dental Visit – Total	55.88%	64.18%
Asthma Medication Ratio 12 to 18 years	65.44%	73.91%
Follow-Up Care for Children Prescribed Attention Deficit Hyperactivity Disorder (ADHD) Medication – Continuation and Maintenance Phase	54.63%	63.43%
Immunizations for Adolescents—Combo 1	79.19%	85.16%
Medication Management for People with Asthma 5 to 11 Years	31.76%	44.07%
Metabolic Monitoring for Children and Adolescents on Antipsychotics—Total	35.25%	63.06%
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—Nutrition Total	67.32%	79.81%
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—Physical Activity Total	62.39%	73.97%

Measure	National Average	HEDIS 2019
Adult Measures		
Controlling High Blood Pressure (CBP)	58.86%	66.91%
Comprehensive Diabetes Care (CDC)		
HbA1c Poor Control (>9.0%) (inverse measure)	41.15%	36.01%
HbA1c Control (<8%)	48.74%	52.07%
Blood Pressure Control (<140/90 mm Hg)	62.15%	71.05%
Follow-Up After Hospitalization for Mental Illness (FUH): Total – 30-Day Follow-Up	56.79%	56.92%
Use of Opioids from Multiple Providers (UOP): Multiple Prescribers and Multiple Pharmacies (inverse measure)	4.82%	3.02%
Prenatal and Postpartum Care (PPC): Timeliness of Prenatal Care	81.54%	87.10%

Aetna has steadily increased our WCC Nutrition score in West Virginia from HEDIS 2017 to 2019 from the 50th to the 66.67th to the 75th percentiles. In HEDIS 2019, our rate was 79.81% compared to competitors scores of 72.99% and 67.88%.

Aetna closely tracks HEDIS performance in our HEDIS workplan, and we incorporate HEDIS activities and performance measurement goals into the annual QAPI work plan. Analysis and comparison of performance results to national benchmarks provides the basis for the design and implementation of appropriate interventions. If Aetna does not meet targeted goals, the QM department develops a corrective action plan (CAP) and submits to the CMO/medical director and leadership for review, and to track and trend measures. We recognize the positive effect of aligning provider and member incentives to drive performance improvement results.

As one example, **we increased the diabetic eye exam rate by 12 percentage points from 2017 to 2019** through the following:

- Making outreach calls to members by our QM staff to remind them of the importance of the diabetic eye exam; many times, the member was not aware that the diabetic eye exam was a covered benefit since there is no adult vision benefit; during 2017, we completed 445 successful member outreach calls to encourage diabetic eye exams with 947 outreach contacts completed in 2018
- Making gaps in care calls from the Care Management staff to their members enrolled in care management to remind them of the importance of the diabetic eye exam
- Offering community diabetic eye exam wellness events hosted at various provider locations including federally qualified health centers (FQHCs) across the state, where QM staff are in attendance to hand-deliver the incentive gift card that the member earns by having the diabetic eye exam
- Implementing a provider incentive for diabetic eye exams in early 2018
- Purchasing retinal cameras for two FQHCs (Williamson Wellness Center and Partners in Health)

Aetna shares results across departments to maximize member benefit; one example of this is the sharing of the HbA1c Poor Control (>9.0 percent) member level data with Care Management staff. Care Management staff outreach to all of the identified members to support them in engaging in services. As a result, HbA1c Poor Control (>9.0 percent) improved by three percentage points.

Of the 25 wellness events Aetna held in 2019, 10 were well-visit drives and 6 were dental events. We saw an improvement in our W34 HEDIS score from 66.8% in November 2018 to 69.1% in November 2019 (preliminary); our HEDIS AWC score improved from 45.1% to 47.9%.

A key element of our strategy to impact outcome measures in children is our focus on increasing engagement with the PCP. The QM team collaborates with PCPs across the state to host well-visit drives at the provider office. Prior to the event, QM conducts telephone outreach to members to invite them to the office for the well-visit, at which time the member will receive their well-care incentive gift card for attending the event. During 2019, the QM team hosted 25 different wellness events at 20 different provider locations across the state. Member and provider satisfaction with these well-visit member engagement events is exceedingly high and the events will continue into 2020 and beyond. The Aetna HEDIS team keeps all departments

and staff notified of the progress on HEDIS measures through posting and distribution of a thermometer-style graphic for key measures as depicted in **Figure 6.9.1-4**.

[QU010] Gathering and Using Results for Core Adult and Child Quality Measures

To best measure performance improvement and member outcomes, Aetna gathers and utilizes a variety of measures from both NCQA (HEDIS) and the core adult and child quality measures following the technical specifications provided by CMS. We have been providing all applicable information to our software vendor to produce the CMS core adult and child rates for the State of West Virginia. We incorporate these rates into our QAPI and CQI processes for targeted improvement initiatives. Examples of core only measures we gather and use results from include but are not limited to the following:

- Asthma in Younger Adults Admission Rate
- Contraceptive Care Postpartum Women Ages 21 to 44
- Screening for Depression and Follow-up Plan
- Congestive Heart Failure Admission Rate
- COPD or Asthma in Older Adults Admission Rate
- Diabetes Short-Term Complications Admission Rate

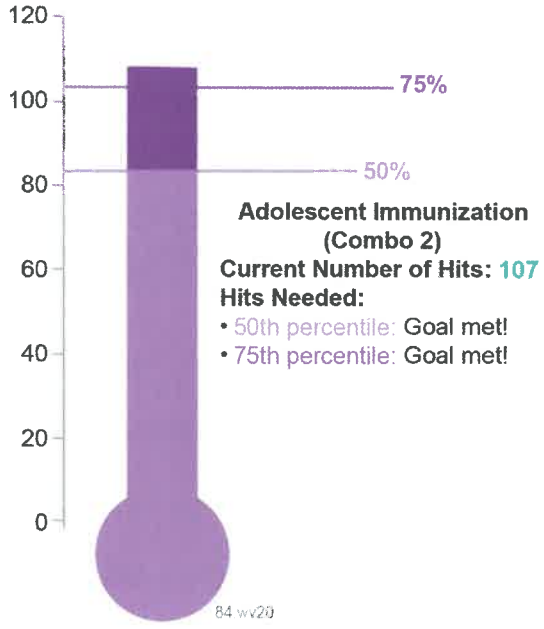

Figure 6.9.1-4: HEDIS Metric Progress
Our HEDIS team translates current rates into a thermometer concept, an easily recognizable way to indicate performance relative to the goal, to allow staff to visually track progress.

As one example of how we gather and use results from adult and child core measures, we closely monitor, track, and trend the child core measure Percentage of Eligibles Who Received Preventive Dental Services (PDENT-CH) Administrative (Form CMS-416). We recognized

opportunities for improvement in this measure and used this information for our PIP and

implemented interventions to improve the rate, including the following:

- Provider:
  - Collaboration with dental vendor to recruit additional dentists who will see Medicaid members
  - PCP annual dental visit (ADV/PDENT) provider education
  - High-volume practitioner ADV incentive: Provider incentives offered to our high-volume practices. to earn higher-dollar rewards for reaching 'stretch goals' for this measure
  - Provider well-child $25 incentive: We send all PCPs a list of their members who are at least 12 months since their last well-child visit. Providers are encouraged to reach out to the members to encourage them to schedule appointment. QM staff then monitor claims and send the incentives out on a quarterly basis.
- Member:
  - Promotion of free transportation
  - Ted E. Bear, M.D.[SM] Cub Club: Being a member of this club means each child will get special offers to complete healthy activities to win fun prizes. These healthy activities include well visits, dental visits, immunizations, and healthy behavior activities and challenges. Dental is new for the Cub Club in 2018: Seasonal Dental Challenge. Members participate in toothbrushing two times a day, two minutes each time for three months. At completion, members receive a dental kit which includes toothbrush, toothpaste, and floss.
  - Member well-child visit $25 incentive for ages 12 to 18
  - Dental wellness community events/clinics
  - Community Development Program: Hosts and/or attends many community events where Aetna provides dental education and toothbrushes; enrollee data is incorporated when possible to target areas to hold community outreach events
  - Gaps in care outreach (ADV)
  - Pregnancy dental benefit: The dental benefit for pregnant women provides additional benefits for dental services for pregnant enrollees to include two cleanings and one exam per pregnancy
  - Diabetes Dental Program: The Diabetes Dental Pilot Program is for Type II diabetic members age over 21 years in approximately 20 counties (Calhoun, Gilmer, Grant, Hampshire, Harrison, Jackson, Marion, Mason, Mineral, Mingo, Monongalia, Pleasants, Preston, Randolph, Ritchie, Roane, Taylor, Upshur, Wetzel, Wirt, and Wood). This intervention targets the barrier of caregiver/parent poor oral health and the potential considerable impact that poor caregiver(s) oral health and dental care may have on their children receiving needed dental services. We recognize that the benefit of one member of a family learning about the importance of good dental care can impact each member of their family's care, including their children. CMs contact enrollees and refer to a dentist for oral health assessment, dental visit, periodontal cleanings, scaling, and debridement. CM contact is on a quarterly basis, or more as needed or if identified as intensive CM. Members also receive an electric toothbrush as part of the program.
  - Member geographical data analysis

- Member complex health condition/special health care needs data analysis
- Neonatal Abstinence Syndrome (NAS) Program: There were 150 new members enrolled in the NAS program in 2018. This targets the potential barrier that the presence of NAS and/or history or NAS and continuing substance use environment could affect oral health and access to dental care, and this does appear to be a risk factor. The NAS CM program follows the mother through prenatal and postpartum periods, as well as the baby and mother one year after delivery. This could considerably impact the ADV two- to three-year indicator, providing intervention to the member and mother/family within the first year after birth, and then potentially carrying positive behaviors through to the PDENT ages as well.

[QU015] Correcting and Remediating Significant Systemic Problems

Aetna has established policies and procedures to correct and remediate system problems identified through internal surveillance, complaints, and other mechanisms including but not limited to the following:

- Quality of care review
- Peer review process
- Enrollee complaints and appeals
- Continuity and coordination of care monitoring
- Medical records review
- External quality review

Quality of Care Review

Aetna's integrated quality review process ensures that issues involving quality of care or service, safety, complaints, or other areas of dissatisfaction are promptly and systematically evaluated. We require any employee who perceives a potential quality, risk management, or safety issue to refer the issue to the Quality Management Department.

Proactive Monitoring for Enrollee Safety

Our pharmacy director monitors for any Class I drug recalls for the drugs that we manage. If we have members or providers who were impacted by the recall, we send them written notification. A quarterly report of this activity is presented to the QM/UM Committee. At the January 22, 2020 QM/UM Committee meeting, the pharmacy director presented the year-end summary for 2019. We had six Class I recalls in 2019 and four of them had members and providers that were impacted. Aetna notified these members and providers within 30 days of the recall issued by the FDA.

Quality management nurses review and assign a different functional area within the organization to review and address the needs as indicated. All PQOCs are reviewed by a medical director and may be referred to the QM/UM Committee for review and recommendation. To help

address systematic issues, the centralized PQOC team document and track and trend PQOC issues in our PQOC business application system. The West Virginia HEDIS manager and QM nurse consultant meet with the nurse assigned to PQOCs every two weeks with a quarterly high-level summary shared with the SIC, where identified trends are presented. The inclusion of a nurse from the national Medicaid team in the PQOC process allows us to better identify and coordinate PQOCs involving our providers who may be caring for Aetna enrollees in bordering states like Kentucky, Ohio, Pennsylvania, and Virginia. When a significant trend is identified, it is referred to the National Quality of Care (NQOC) committee

Peer Review Process

Aetna utilizes a well-documented peer review process to monitor and evaluate potential quality, risk, or service issues that occur during the provision of care or services to a health plan enrollee. Aetna policies and procedures describe the peer review/appeal process and the actions Aetna may take upon identification of a quality issue. Such actions may include, but are not limited to, development of a CAP with a description of the timeframe for improvement; evidence of education, counseling, development of policies and procedures; monitoring and trending of data; and limitation or discontinuation of the provider's contract with the plan.

The peer review process focuses on the issue identified, but if necessary, could extend to a review of utilization, medical necessity, cost, and/or health provider credentials as well as other quality issues. The Quality Management department coordinates peer review activities although they often require the participation of Medical Management, Provider Services, or other departments. Aetna requests external consultants with relevant clinical expertise and experience (e.g., in oral surgery, cardiology, oncology) to participate in peer review activities, if

applicable. The CMO or designated medical director oversees the peer review investigation of issues referred in accordance with the quality review process that includes:

- Concurrent or retrospective evaluation of medical records to determine the quality of the care and services provided
- Referral of potential issues to the QM/UM Committee and/or Aetna Credentialing and Performance Committee for review and recommendation
- Analysis of identified issues for tracking and trending
- Reporting of findings to designated committees at least annually
- Notification by Aetna to the appropriate regulatory board or agency if a provider's contract is terminated, suspended, or limited due to quality of care issues
- Development and implementation of CAPs as necessary
- Fair Hearing rights for providers

Member Complaints and Appeals

Aetna is committed to improving member experience and satisfaction with health care, providers, and services. To assess member satisfaction, Aetna utilizes member complaint and appeal data maintained through a complaint and appeals system that enables members, or providers acting on their behalf, to express dissatisfaction with services provided. Regardless of the department from which the information originates, all complaints and appeals are documented within Aetna's operating systems and submitted on the date of receipt, with supporting documentation to the Complaint and Appeals department for review, referral, resolution, and reporting. This allows critical analysis to identify systemic issues and the source of those issues.

Of the 164 member appeals received in 2018, 100% of non-urgent pre-service appeals were resolved within the 30-calendar day turnaround time. Ninety-nine percent of urgent/expedited appeals were resolved within the 72-hour turnaround time. This percentage increased from 96% in 2017, allowing the plan to meet Aetna internal turnaround time goals.

The appeals process addresses denied claims or other services relative to a member's benefits. Complaints and appeals are categorized, analyzed, and presented during regularly scheduled committee meetings where Aetna identifies opportunities for improvement, monitors trends, and

develops action plans for our West Virginia enrollees. This comprehensive analysis of member complaints and appeals is performed and reviewed by multidisciplinary committees that includes the Member Services, Provider Services, Complaint and Appeals, Quality Management, and Network Management departments. An annual analysis is performed in order to determine systemic root causes, identify potential barriers, and improve plan performance and reported to the SIC and QMOC.

Continuity and Coordination of Care Monitoring

We are West Virginians; our local experience augments our ability to assure continuity and coordination of care for West Virginians. Aetna recognizes the importance of maintaining continuity of care and service whenever an enrollee's care setting or provider changes. Aetna integrates processes to guard against interruptions in our West Virginian enrollees receiving needed care into Aetna systems and departmental processes. Integrated systems and interdepartmental processes include, but are not limited to, the integrated business application system, which is accessible by all departments involved in coordinating services for an enrollee. The system allows departments to share enrollee, practitioner, and provider information, to coordinate procedures such as discharge planning, transitioning an enrollee from an institutional setting back into the community, authorization of post-hospital services, and follow-up on complex cases or emergency room care.

Aetna maintains policies and procedures for monitoring the services West Virginia enrollees receive during transitions, between health plans and during transitions within Aetna from one practitioner or ancillary provider to another. During such transitions, enrollees identified with high-risk conditions or special needs are monitored to ensure maintenance of the previous level of care and/or service. Aetna identifies enrollees for assignment to care management through the HRQ, Consolidated Outreach and Risk Evaluation (CORE™) member stratification tool, or

surveillance. Additionally, Aetna may receive referrals from community partners or internal sources who, through their day-to-day work with current Aetna members, identify individuals that could benefit from a higher or different level care management services than the level they are enrolled in. The Member Services department is available to assist members in selecting or changing their PCP assignment and identifying participating specialists in their area. Aetna's Care Management staff assist members in coordinating needed services during a change in the member's level of care (i.e., integrated care management model).

Using the PH and BH integrated model, Aetna collaborates with participating BH specialists in West Virginia to monitor and improve coordination between PH and BH care for individuals with complex care needs. Aetna has built a sense of collaboration between the health plan and the BH providers as well as the promotion of coordination of care between BH and PH providers and providers. Aetna facilitates various collaborative committees and workgroups which include health plan staff members as well as PCP and BH providers. These groups review and analyze data on the continuity and coordination of care between BH and PH. Where opportunities exist, these are prioritized, and collaborative actions are implemented. Aetna acts to improve continuity and coordination of care across the health care network.

Based on our efforts to integrate BH and PH, our Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications (SSD) measure improved from 81.53% in HEDIS 2018 to 83.03% in 2019.

Continuity and coordination of care activities between PH and BH include the following:

- Monitoring data trends for opportunities to improve the exchange of information
- Assessment of the appropriate diagnosis, treatment, and referral of BH disorders commonly seen in primary care
- Assessment of the appropriate uses of psychopharmacological medications
- Assessment of the management of treatment access and follow-up for enrollees with coexisting PH and BH disorders
- Implementation of primary or secondary preventive BH programs

- Assessment of needs of enrollees with severe and persistent mental illness

Table 6.9.1-5 describes examples of our activities to monitor continuity and coordination of care between physical and behavioral health care.

Table 6.9.1-5: Continuity and Coordination Between Physical and Behavioral Healthcare in West Virginia

Continuity and Coordination Between Medical and Behavioral Health Care Activities	Aetna Activity
Exchange of Information between BH and PH providers	Surveys of BH and PH providers regarding satisfaction with information exchanged
Appropriate diagnosis, treatment and referral of behavioral disorders commonly seen in primary care	HEDIS Antidepressant Medication Management Effective Acute Phase Treatment Effective Continuation Phase Treatment
Appropriate use of psychotropic medications	HEDIS Follow-Up for Children Prescribed ADHD Medication Initiation Phase Continuation and Maintenance Phase
Management of treatment access and follow-up for members with coexisting physical and behavioral disorders	Aetna NAS Program
Primary or secondary preventive behavioral health care program implementation	Postpartum Depression Screening Program
Special needs of members with severe and persistent mental illness	HEDIS: Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications

Medical Records Review

Aetna requires network providers to maintain an organized, confidential system for documenting and storing our enrollees' medical information. At any time, the CMO, QM/UM Committee, or Aetna Credentialing Committee may request a review of a practitioner or provider's medical records. The Quality Management department is responsible for coordinating the review

process; on an annual basis, we complete a medical record review sample of 70 to 80 charts from 18 sampled providers across West Virginia. If the results of the review indicate the practitioner/provider records do not meet State contract standards, Aetna may require the practitioner/provider to develop and implement a CAP approved by Aetna. Should ongoing delinquencies occur with failure to meet CAP goals, provider repercussions can be up to and including termination from the provider network. Additionally, the Quality Management department is responsible for monitoring trends identified and developing systemic corrective action plans to address or apply applicable follow-up activities. The Aetna CMO and the QM/UM Committee review these reports and submits summary reports to the QMOC and to the board of directors, outlining any systemic issues and remediation efforts.

External Quality Review

Aetna actively participates in an external independent review performed by BMS. Aetna provides BMS with access to site, information, documentation, and data. Aetna and our subcontractor(s) makes available to BMS as contractually required and upon request all data, clinical and other records/reports for review of quality of care, access, and utilization issues including but not limited to activities related to EQRO, HEDIS, encounter data validation, and other related activities. Aetna submits a CAP, as determined by BMS, and within the timeframes established by the agency to resolve any performance or quality of care deficiencies identified by BMS' ongoing monitoring activities and any independent assessments or evaluations requested by the agency. Aetna obtains advance

As a result of our inter-departmental quality management culture, led and supported by our top leadership, our EQRO scores in West Virginia have excelled over the past 4 years:
- 2015: 100%
- 2016: 100%
- 2017: 99%
- 2018: 100%

written approval from BMS before releasing or sharing data, correspondence and or/ improvements related to the internal QM program with any other external entity.

Correction and Remediation of Significant System Problems

Aetna has written policies and procedures to take remedial action based on our internal surveillance, complaints, or other mechanisms such as notice from BMS, including requiring CAPs within 30 calendar days of the identification of the problem. CAPs are well-defined and include the following:

- Specification of the types of problems requiring remedial/corrective action
- Specification of the person(s) or body responsible for making the final determinations regarding quality problems
- Specific actions to be taken
- Provision of feedback to appropriate health professionals, providers, and staff
- The schedule and accountability for implementing corrective actions
- The approach to modify the corrective action if improvements do not occur
- Procedures for terminating the affiliation with the physician, or other health professional or provider

CAPs are closely monitored by our quality management committees to ensure appropriate changes have been made, including the QMOC, the QM/UM Committee, Delegation Committee, and Compliance Committee. Further follow-up actions are identified and tracked by these committees until the issue is satisfactorily resolved. This information is used in recredentialing, re-contracting, and/or annual performance evaluation. Failure to successfully improve through a CAP could in additional oversight and monitoring, peer-to-peer discussion, financial penalties, suspension of privileges, termination of contract, and other follow-up determined necessary.

Ensuring Appropriate Oversight of Subcontractors

QU006	The Vendor should describe its policies and procedures regarding utilization of reports and data from subcontractors to ensure appropriate oversight and member access, satisfaction, and continuity of care.

Aetna undertakes subcontracts only when doing so adds value for our enrollees. We use well-qualified, experienced subcontractors only when necessary because of our high level of

confidence in the professional team we have assembled and our ability to hire locally to provide services in support of our current West Virginia Medicaid program. When we do need subcontractors with unique expertise and a proven record of accomplishments, we engage them for specific deliverables and services relative to improving outcomes for our enrollees by providing appropriate, coordinated care and services in a financially responsible manner. We require their submission of detailed reports and data to ensure appropriate oversight of member access, satisfaction, and continuity of care. Our current subcontractors (VSP Vision Care, eviCore, and SKYGEN USA) have an established relationship with our health plan and our internal network relations manager, and currently demonstrate sustained quality performance serving our Medicaid enrollees, fulfilling all required quality metrics.

Subcontractor Monitoring and Oversight Activities

Monitoring is performed as follows:

- Monitoring and evaluating delegated functions through at least semiannual reports
- Conducting pre-assessments prior to delegation, with annual desk audits or web conference reviews conducted with a random sampling of files thereafter
- Confirming (no less than annually) that delegated functions/services are carried out consistently and in compliance with both Aetna's and other applicable accredited standards (i.e., NCQA and others as indicated) and the mutually agreed upon delegation agreement
- Performing, at minimum, an annual file review audit, if applicable, to confirm compliance with Aetna and applicable standards
- Monitoring ongoing corrective actions to address identified deficiencies, promote progress, and take necessary action, if improvements do not occur
- Reviewing the delegated organization's program that oversees the delegated functions and its quality program to verify it is in alignment with Aetna's quality improvement processes
- Monitoring the subcontractor downstream provider agreements to ensure they comply with the regulatory requirements of the State contract

Our established policies and procedures for compliance monitoring including oversight of subcontractors as a health plan-wide endeavor; Aetna's management team uses an integrated and collaborative approach that involves each operations area to ensure compliance with the

contract. Every department monitors performance as part of its daily operational routine. Our compliance program includes oversight committees with representation from team members throughout the plan and our participating providers. These committees perform day-to-day oversight activities for internal monitoring of operations, including oversight of subcontractors to assure appropriate member access, satisfaction, and continuity of care.

Aetna performs ongoing monitoring of subcontractor performance, including meeting with subcontractors on a weekly, monthly, or quarterly basis, depending on the subcontractor and the task for which they are responsible. We also perform a comprehensive review at least annually in which we review ongoing performance as well as measure performance efforts that address past concerns identified by the Department. If any deficiencies or areas for improvement are identified, we require the subcontractor to take corrective action. If requested, Aetna provides the Department with a copy of the annual review and any CAPs developed as a result.

National oversight: At the national level, we have a centralized team of delegation oversight experts that manages the oversight process across the Aetna Medicaid organization to make certain that all of our multi-state delegated agreements are represented and that all requirements, such as state- and contract-required elements for each plan and delegate, are in compliance.

Local West Virginia oversight: The Quality Management Oversight Committee (QMOC) has the ultimate authority and responsibility to validate that monitoring requirements are met. The committee meets six times per year and reports to senior leadership. In order to ensure ongoing communication and coordination between the national and local Delegated Vendor Oversight Committees, our West Virginia quality management director participates on the national team monthly and chairs the local committee quarterly, where she shares meeting minutes and

identified issues. The local committee can proactively research issues learned at the national committee via other states that use the same vendors.

In accordance with Aetna's culture of compliance, all team members understand they play a role in subcontractor oversight. Team members from the Network Management, Provider Services, Operations, and Quality Management departments are trained to report subcontractor-related concerns to management. For example, our care coordinators are often the front line in identifying potential problems or issues related to vendors and subcontractors. If an interaction with a member related to a subcontractor raises a red flag or suggests there is a problem, the care coordinator will escalate the issue to management. Issues can often be resolved without further escalation once they are referred to the appropriate department for remediation. Audit reports of delegated activities and corrective action plans, if applicable, are submitted to the appropriate oversight committee (e.g., Quality Management/Utilization Management [QM/UM] and Delegation Oversight Committees) for review and approval and then to the QMOC.

The Medical Management, QM, Provider Services, and if applicable, Care Management and UM departments and their appropriate committees are responsible for implementing the oversight process and maintaining monitoring activities, including monitoring the delegate's provisions to safeguard members' protected health information, as applicable. Should deficiencies be identified, Aetna works with the delegated organization to set priorities and develop a CAP. We retain the right to revoke the delegation agreement for noncompliance or if CAPs are not sustained.

Taking Action Against Providers Demonstrating Unacceptable Performance

QM and Provider Services staff work together to monitor network provider performance. QM staff assists Provider Services staff in developing measurable objectives to evaluate provider performance; analyze data collected in the monitoring process; and prepare information for the

QMOC. If the reported data indicates the need for an action plan or additional studies, QM will assist in developing tools and reporting results and outcomes to the QMOC and to the Department, as appropriate. The Aetna QM/UM Committee conducts peer review and investigates quality of care or service and enrollee safety issues, makes recommendations to the chief medical officer (CMO)/medical director, and requests follow-up by the Aetna Credentialing and Performance Committee (CPC), if appropriate. The Aetna CPC is responsible for conducting professional review activities involving the practitioners whose professional competence or conduct adversely affects or could adversely affect the health or welfare of enrollees. The range of actions available to the QM/UM Committee and/or the CPC includes practitioner education, requirement of a corrective action plan, or termination of the practitioner contract, if indicated. Actions taken by the QM/UM Committee or the CPC are reported to QMOC and the Department, as appropriate.

The local West Virginia QM team actively works with network practitioners across the state when unacceptable performance patterns are identified. For example, during the annual medical record documentation audit, individual practitioner performance is compared to the established goals. Any providers who score below the goal receive individualized feedback on areas not meeting the goal. The QM team shares these results with the Provider Services team, who will meet directly with the provider to review the results and offer suggestions for improvement. Those providers who do not adequately meet the medical record documentation goals are automatically included in the next year's audit in order to review a sample of medical records again and assess for improvement.

[QU006] Utilization of Reports and Data from Subcontractors to Ensure Appropriate Oversight and Member Access, Satisfaction, and Continuity of Care

Although we may delegate the authority to perform functions in support of the West Virginia Medicaid managed care program, **we do not delegate accountability for the quality of care or services the subcontractor provides**. Our QAPI program follows established policies and procedures to manage the delegation of responsibility for any delegated program function.

Aetna's local Delegation Oversight Committee requires all subcontractors to report various measures and trends to the committee to ensure comprehensive oversight of its subcontractors, including member access, satisfaction, and continuity of care including the following:

- **Customer service call data:** Tracked monthly to ensure that members have access for customer service needs
- **Claims data:** Monthly data on claims payment timeliness and accuracy is reported to the Delegated Oversight Committee on a quarterly basis
- **Network adequacy:** Reporting on requests for out-of-network services, which is a key indicator of the subcontractor's ability to adequately provide needed services.
- **UM reviews, including clinical reviews, prior authorization, and retroactive authorization reviews:** Monthly data is reported on a quarterly basis to the local Delegation Oversight Committee by each subcontractor in order to monitor utilization practice patterns. In addition to the monthly/quarterly monitoring noted above, our national Delegation Management team conducts an annual oversight audit of each subcontractor to evaluate subcontractors' compliance with standards and criteria. We build on our company-wide subcontractor monitoring processes to hold ourselves accountable for the performance of all our subcontractors, and we understand that no subcontract relieves us from any obligation or liability arising from our contract with the State.

Using Subcontractor Data to Monitor Outcomes Related to Member Access

Aetna monitors subcontractors' accessibility and availability on an ongoing basis to help ensure established standards for reasonable geographical location, ratio of subcontractors to members, hours of operation, appointment availability, and coverage for emergency care and after-hours services, as applicable. In order to monitor subcontractor outcomes related to access to care, we use encounter data submitted by our vendors on a weekly and monthly basis. In addition, we

use data received through our provider appointment survey to monitor appointment availability and subcontractor compliance.

Subcontractors identified as not meeting the standards are discussed, and we work with the identified subcontractor to get the necessary actions required implemented to meet access to care requirements. If access to care issues arise, it would result in contract remediation up to contract termination. We hold quarterly oversight JOC meetings with our major subcontractors to ensure effective, ongoing communication. The West Virginia Aetna leadership team (chief executive officer [CEO], CMO, and department directors) attends all JOC meetings where the subcontractor is expected to present on their current issues and successes, including membership, customer service, claims processing, provider credentialing, appeals and complaints, utilization review, reporting, provider relations, and trends.

Using Subcontractor Data to Monitor Outcomes Related to Member Satisfaction

All subcontractors are required to monitor member satisfaction as well as dissatisfaction and to send member complaints to Aetna for resolution. Each case is discussed individually in JOC meetings. Increases and trends in complaints are brought to the Service Improvement Committee (SIC) for discussion and possible corrective action. Our subcontractors are open to collaborative projects to better the health outcomes of our members. For example, SKYGEN USA helped to identify dental providers in certain geographic locations who might be willing to collaborate with Aetna to host a dental well-visit clinic. VSP collaborates with Aetna by sending reminders to members with diabetes to encourage a diabetic eye exam. These efforts contribute to increased member satisfaction with accessibility of services.

Using Subcontractor Data to Monitor Outcomes Related to Continuity of Care

Aetna recognizes the importance of maintaining continuity of care and service whenever a member's care setting or practitioner/provider changes. Aetna integrates processes to guard against interruptions in care. We track issues related to continuity of care with our subcontractors through out-of-network referrals in weekly reports to ensure our members have access to the services they need; we create single case agreements as needed. In addition, we receive approved and denied authorizations, which are then reviewed by Prior Authorization staff for appropriateness. On a quarterly basis, the Delegated Oversight Committee will review out-of-network referrals for continuity of care and transitions of care and related concerns, and if issues are identified, the subcontractor may be put on a CAP. For our dental subcontractors, we receive a quarterly report on terminated providers and dates of member outreach. This data is reviewed during the JOC meetings. Issues identified affecting the continuity of care for our dental subcontractors are addressed through an action plan implemented at that time. Our provider relations representatives meet with subcontractors on a monthly basis to proactively identify and resolve issues to avoid necessitating a CAP.

Member Satisfaction

QU007	The Vendor should describe how they will administer the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey.
QU008	The Vendor should describe its process to administer and utilize the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey results to identify and investigate areas of member dissatisfaction, outline action steps to follow up on survey findings, and disseminate findings with providers.

Aetna listens to our members and takes their satisfaction very seriously. We believe that every contact with our members is an opportunity for a positive interaction and to reinforce our commitment to their health outcomes and satisfaction with our services. We are committed to continually improving our Consumer Assessment of Healthcare Providers and Systems

(CAHPS) scores on an ongoing basis. We incorporate the results of the CAHPS survey and member satisfaction information into **our member-devoted quality management program** to identify and prioritize opportunities for improvement in the care provided to our members. **Table 6.9.1-6** illustrates the different settings and processes facilitated by our quality program to collect actionable member satisfaction feedback.

Aetna gathers member satisfaction survey results at all wellness events. In 2019, 100% of members reported they strongly agree/agree with the metrics of "I am satisfied with today's wellness event" and "I would attend another Aetna Better Health of West Virginia wellness event."

Table 6.9.1-6: Data Collection Methodologies for West Virginia Member Satisfaction

Data Collection Methodology	Description
Member Satisfaction Surveys	We complete the NCQA Adult and Child CAHPS surveys annually, as well as a Behavioral Health Member Satisfaction Survey, both adult and child versions, to evaluate member experiences for BH care services. We will also be utilizing the CAHPS survey for children with chronic conditions for our enrollees in the foster care system. Additionally, we provide a satisfaction survey to participants of the wellness events, including items such as convenience of the time and place and if the individual would attend another event in the future.
Focus Groups	We will conduct four focus groups throughout the year with members across the state as an opportunity to gather feedback on barriers to care and where services are being most impactful, so programmatic changes can be made to improve the overall health of the program.
Member Advisory Committee (MAC)	The MAC provides feedback to Aetna regarding strategies for improving member care and services including health education and other member materials. Chaired by the manager of Member Services, the membership includes Aetna staff and a maximum of 15 member representatives from across all West Virginia regions. We hold MAC meetings quarterly in various locations across the State and provide support, as necessary.
Automated Satisfaction Survey	Aetna offers a short, automated post-call satisfaction survey at the completion of every member call with our Member Services department. Aetna uses the data obtained for training and coaching purposes.

Data Collection Methodology	Description
Member Inquiries, Complaints, and Appeals	Our member services representatives make every effort to resolve the member's complaint at the point of first contact and document the status and final disposition of the issue. Members can call the member services hotline anytime, and a representative can assist in documenting a member's concern, assuring Quality Management and Grievance and Appeals department involvement and resolution. Aetna uses information from complaint and appeals data for trending and analysis that may be correlated with member survey data in the assessment of opportunities for improvement and for the development of action plans for both physical health (PH) and behavioral health (BH).
Potential Quality-of-Care (PQOC) Concerns	Aetna documents, addresses, and resolves PQOC (and service) concerns and uses them to determine provider-specific or systems issues that need to be addressed.

[QU007] Administration of the CAHPS Survey

Aetna uses the Center for the Study of Services (CSS), an NCQA-certified survey vendor to conduct our CAHPS surveys. In 2019, the CAHPS 5.0H Adult Medicaid and Child Medicaid Member Satisfaction Surveys were administered in accordance with the NCQA sampling and data collection protocols between February 16th and May 15th, 2019 to reflect January to December 2018 member satisfaction. Following the NCQA sampling protocol, CSS selected a random sample from the complete list of eligible members provided by Aetna. Following NCQA sampling protocol, CSS employed a systematic sampling process from the complete list of eligible members provided by Aetna.

The two Adult and Child CAHPS surveys included questions related to eleven key measures which include global ratings, composites, and additional content areas. The global measures reflect overall satisfaction with the West Virginia health plan, health care, personal doctors, and

specialists. The composite measures and additional content areas are sets of questions grouped together to address different aspects of care (e.g., Getting Needed Care or Getting Care Quickly).

CAHPS Children with Chronic Conditions Survey

Aetna is in the process of implementing the CAHPS survey item set for children with chronic conditions to identify barriers to care for individuals with special health care needs for our children and youth in the foster care system and individuals receiving adoption assistance. This version of the CAHPS survey expands beyond the standard CAHPS child survey to assess areas related to health providers contacting school or daycare center about the child's health, special medical equipment, special therapy such as physical/occupational/speech therapy, and offerings of counseling for emotional, developmental, or behavioral problems. Understanding issues from this survey may bring to light opportunities to support children who are moving between the Medicaid/WVCHIP and the foster care programs.

CAHPS surveys include questions related to a range of health care services at multiple levels of the delivery system as depicted in **Table 6.9.1-7.** The survey includes the member's rating of their personal doctor, specialist seen most often, all health care received, and health plan overall. The qualitative analysis performed of Aetna's West Virginia Child and Adult enrollees showed members were satisfied with their ability to get needed care, tests, or treatment.

Table 6.9.1-7: Aetna 2018 and 2019 Child and Adult CAHPS Results Meeting the 75th and 90th Percentiles

CAHPS Measure	2018 Rate and Percentile	2019 Rate and Percentile
Child		
Getting Care Quickly Composite	94.83%/75th	95.92%/90th
Getting Needed Care Composite	89.30%/75th	93.02%/90th
How often did you get an appointment for your child to see a specialist as soon as you needed?	85.85%/75th	88.10%/90th
How often was it easy to get the care, tests, or treatment your child needed?	92.75%/75th	97.95%/90th

CAHPS Measure	2018 Rate and Percentile	2019 Rate and Percentile
When you made an appointment for a check-up or routine care for your child at a doctor's office or clinic, how often did you get an appointment as soon as your child needed?	92.55%/75th	93.68%/90th
When your child needed care right away, how often did your child get care as soon as he or she needed?	97.11%/90th	98.16%/90th
Adult		
Getting Care Quickly Composite Measure	85.14%/75th	86.74%/75th
Coordination of Care	86.47%/75th	86.49%/75th

[QU008] Utilizing the CAHPS Survey Results

The CAHPS survey measures how well Aetna is meeting members' expectations, which we use to identify and investigate areas of member dissatisfaction in order to outline action steps to follow-up on findings. Both NCQA Quality Compass National Medicaid Averages and NCQA percentiles are used to gauge plan performance. Member satisfaction percentage results are used to evaluate Aetna member satisfaction trends over time with improvement goals set based on our scores. We drill down on summary rates to identify specific barriers and develop an action plan to improve the member experience. The action plan includes implementation steps and a timeline for completion. Based on this analysis, the CAHPS review team reviews the key measures, drivers, and data to identify barriers, discuss opportunities for improvement, and prioritize actions.

Identifying and Investigating Areas of Member Dissatisfaction

NCQA Quality Compass National Medicaid percentiles were used to show Aetna West Virginia performance (ranking) relative to other national Medicaid plans that reported to NCQA Quality Compass and to set goals for the following year. Key survey measures are evaluated in order to

gauge Aetna's performance and set goals for the subsequent year. This process includes evaluation of the following:

- Aetna's current-year results consisting of global ratings and composite scores
- Changes in scores from the previous years
- Comparisons to relevant national benchmarks
- Measures identified by CSS to be key drivers to member satisfaction that contribute to the overall rating of the plan

Results of members' ratings of and experiences with the care they receive are used to identify potential improvement opportunities and develop action plans that address these areas. A comprehensive analysis of CAHPs survey results is performed by multidisciplinary workgroups that include representation from the following:

- Member Services
- Provider Services
- Grievance and Appeals
- Quality Management
- Network Management
- Senior Management team, including the CEO, CMO, and department directors

The workgroups assess member satisfaction with health care and discuss key measures and drivers of the member experience. Through our CQI/Plan-Do-Study-Act (PDSA) process, the workgroups identify opportunities for improvement and recommend action plans to be presented during regularly scheduled committee meetings. The initial analysis of CAHPS results and corrective action plans are developed in an ad hoc CAHPS workgroup, then presented to the QM/UM Committee and QMOC in the fall of each year. In the spring, we do an overall member satisfaction analysis including complaint data that goes to SIC and QMOC. The purpose of this analysis is the following:

- Assess member satisfaction with services and quality of care provided by Aetna
- Document health plan performance
- Develop actions to improve the member experience and quality of care with the health plan
- Compare performance against other West Virginia Medicaid plans and with other states' Medicaid plans for ongoing process improvements

Provider Satisfaction

We recognize the direct correlation between provider satisfaction and member satisfaction and leverage this linkage to identify barriers and improve member experience. The Practitioner Satisfaction Survey assesses practitioner satisfaction with services that are important to Aetna network of practitioners and overall satisfaction with the health plan. Annually, Aetna administers the survey to a sampling of PCPs, specialists, and BH providers. Information obtained from the survey allows Aetna to measure how well the health plan is meeting providers' expectations and needs. Provider surveys address satisfaction with Aetna's utilization management procedures (prior authorization, concurrent review) claims processing, and Aetna's response to inquiries. Aetna reports the analysis of results and applicable follow-up actions developed to address unfavorable results to the Service Improvement Committee and QMOC.

From 2018 to 2019, Aetna significantly improved the Overall Satisfaction with Aetna Better Health of West Virginia score from 69.7% to 73.5%—6.9 percentage points above the Medicaid average of 66.6%

We work closely with our subcontractors and providers to assist them in their performance improvement initiatives; we go beyond simply providing them actionable reports on a regular basis by meeting with them onsite to discuss their rates, trends, gaps in care, and any other barriers they may be experiencing. Every provider has an assigned provider relations representative who meets with them regularly to provide education and resolve barriers. We provide HEDIS education, help them to close enrollee gaps in care, and assist them with improved documentation and coding. As depicted in **Figure 6.9.1-5,** the Quality Management department works closely with the Provider Relations department to acknowledge and reward providers who excel in HEDIS performance, actively collaborating with us and providing quality care to our members.

Aetna uses the results of the Provider Satisfaction Survey as part of our CQI process. As one example, we used comments and scores from the survey as the catalyst for improving our provider orientation process. In 2017, the West Virginia provider satisfaction score was 9.5 percent at above average or well above average. We created a provider orientation tool kit, rolled out new provider webinars, and improved the quality of our provider bulletins and announcements. In 2018, the score was 19 percent at above average or well above average. We continued to improve the hand off between contracting/credentialing to the Provider Relations staff, established existing provider update webinars, and reformatted the annual provider workshops. In 2019, the score went up to 25.8 percent above average or well above average.

69 wv20

Figure 6.9.1-5: Aetna Provider Award
On November 13, 2019, Aetna Quality Management and Provider Relations staff met with Cabin Creek Health System to celebrate their Quality All-Star Award and present them with a commemorative trophy.

Outlining Action Steps to Follow Up on Survey Findings

Aetna follows the CQI PDSA process to prioritize identified issues, address concerns, implement interventions, and reassess issues to determine change in satisfaction. The formal process includes member and practitioner/provider communications and reporting to QMUM, QMOC, and the board of directors documented in committee minutes.

As depicted in **Figure 6.9.1-6,** Aetna staff work to reduce provider burden and increase satisfaction through face-to-face visits, phone calls, webinars, web portal capabilities, gaps-in-care reports, and pay-for-quality programs.

Incorporating CAHPS Survey Results into Quality Management Program and Disseminating Findings

We provide the survey results to both West Virginia members and providers to improve the quality of care and service provided to members. We analyze member feedback to gain insight into the relationship of the health plan with members and to identify opportunities for improvement. In addition to individualized and formalized annual CAHPS improvement plans, we incorporate member satisfaction data from the adult and child CAHPS into the full QAPI program, weaving member satisfaction efforts throughout every department.

105 wv20

Figure 6.9.1-6 Aetna Staff Meet with Roane General Hospital
Aetna Quality Management staff met with Roane General Hospital staff to provide support in coding, gaps in care, collaborative opportunities, provider and member rosters, chart review, and incentives.

We gather indicators of member and provider satisfaction through on-the-spot surveys following Member Services and Care Management calls, text messaging member surveys, and provider face-to-face conversations. For example, CAHPS results are used to evaluate key staff performance and to identify gaps in service that are causing dissatisfaction so that action can be taken to improve member experiences throughout the year.

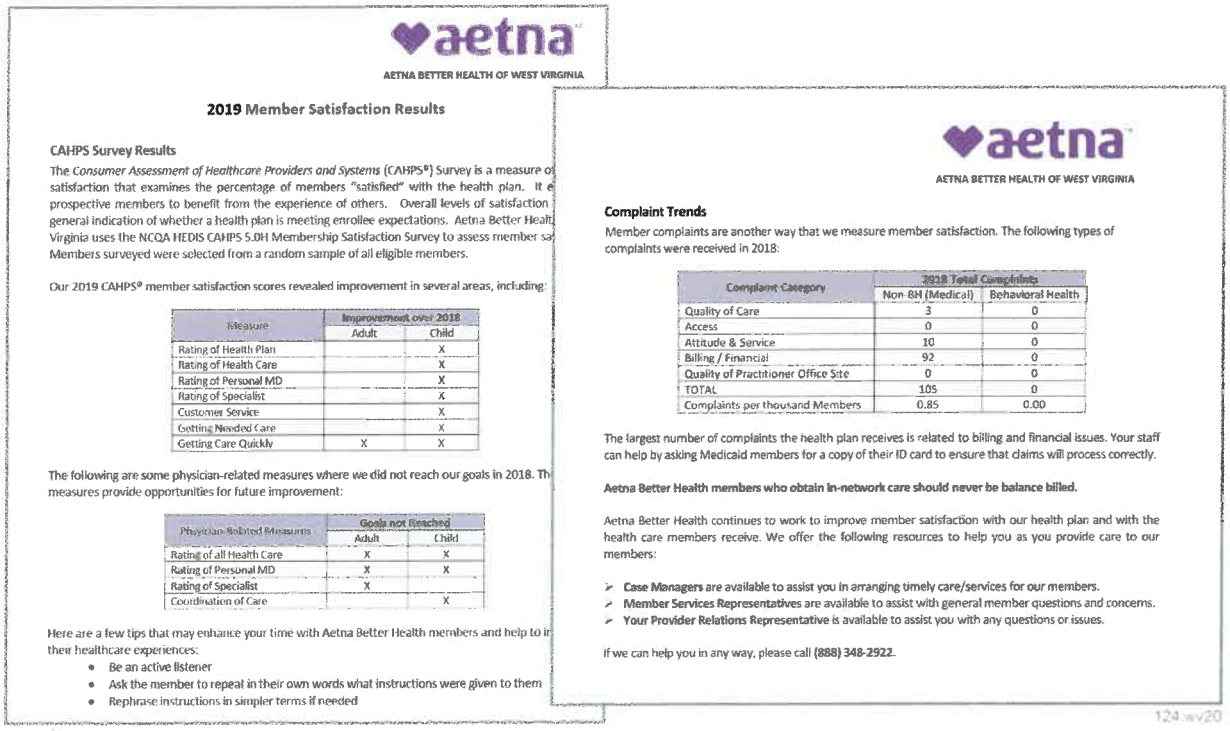
Aetna has a cross-departmental workgroup that develops and implements a CAHPS improvement plan monitored by the Service Improvement Committee. All departments play a role in member satisfaction including but not limited to Member Services, Appeals, Grievances, and Utilization Management. Our current action plan includes strategies to improve rates prioritized by key measures that affect the member's health care and engagement with

Aetna. Examples of actions include the following, which we expect to improve member satisfaction with both Aetna West Virginia's providers and Aetna West Virginia health plan:

- Member Services team directly outreaching to members
- Soft skills training to improve satisfaction with customer service
- Enhancements to interactive voice recognition to allow for scheduling of appointment assistance and easier navigation for contacting care management
- Network adequacy meetings
- Provider recruitment

Based on the findings of our CAHPS barriers analysis, we compile a CAHPS Action Plan for improvement as depicted in **Table 6.9.1-8.**

Table 6.9.1-8: West Virginia CAHPS Action Plan



Measure	Interventions	Intervention Details
Rating of All Health Care	• Assist members in getting needed care and maintaining health and wellness • Explore possibility of giving member service representatives direct access to gaps in care reports • Promote telehealth services • Establish process for Member Services to assist members in getting documentation for guardianship • Work to clarify and simplify urine drug screening coverage limitations • Trauma-informed care (TIC) health plan project • Implement contract with new gift card vendor	• Implement peer support specialist program; use community health workers; increase number of embedded care managers (CMs); hold wellness clinics; promote Cub Club Program • Explore the possibility of having smart user view interface with our care management system to give Member Services access to gaps in care reports • Educate providers about telehealth in portal; collaborate with State on telehealth; work with West Virginia University (WVU) to offer telehealth to children with cancer; collaborate with Anytime Pediatrics to expand telehealth services in the state; CM team to educate members; Aetna provided grant to WVU to offer BH telehealth services from psychiatrists to PCPs • Establish process/desktop and education for Member Services to assist members in getting proper documentation for guardianship • Educate providers on how to apportion substance use disorder (SUD) service limits • Provide TIC training and Mental Health First Aid training to all member-facing staff; provide TIC training to provider offices; hold monthly TIC core implementation team meetings

Measure	Interventions	Intervention Details
Rating of Personal Doctor	• Make improvements to claims payment process • Multi-department effort to educate members about importance of seeing PCP and getting needed care • Educate PCPs on use of member panel information, including gaps in care reports • Implement process to reduce inaccuracies on gaps in care reports • Work with PCP practices to maximize reimbursement for providing member care • TIC health plan project	• Work to resolve issues on weekly calls; specially trained unit within Provider Services call center that can address Provider Relations (PR) issues in real-time. • Member Services to verify PCP and educate members on importance of seeing PCP and use gaps in care information to encourage preventive health visits; Care Management will verify PCP and focus on gaps in care • Provider education on importance of accessing and using member roster; target high-volume PCP offices for in-office education by PR representative • HEDIS team to compile database when provider reports errors and send report to PR; PR to review reports from HEDIS team and follow up to make corrections • Work to increase value-based arrangements with PCP practices and help them be successful by operationalizing value-based arrangements
Rating of Health Plan	• Promote the MAC and recruit members • Evaluate welcome call and health risk questionnaire (HRQ) content and reports to identify areas for improvement • Focus on member satisfaction on an ongoing basis • TIC health plan project • Adjust member newsletter schedules to coincide with CAHPS results and annual contract release	• Promote MAC at Ted E. Bear, M.D[SM]. fair and food drives; include CM; have CM invite members; invite parents who attend appeals in person; increase incentive; promote MAC in newsletter and web • Explore welcome call and HRQ call content and reports; consider using auto-dialer for non-interactive member calls; explore use of welcome texts • Member services net promoter score initiative; start reporting a summary of post-call survey results quarterly to SIC; implement Member Services Quality Stars Program

As depicted in **Figure 6.9.1-7** we disseminate a summary of CAHPS and member satisfaction performance annually to providers through provider alerts that are sent via fax/email and mail,

as well as posted on our website under the Provider News tab at

https://www.aetnabetterhealth.com/westvirginia/providers/library.

aetna
AETNA BETTER HEALTH OF WEST VIRGINIA

2019 Member Satisfaction Results

CAHPS Survey Results

The *Consumer Assessment of Healthcare Providers and Systems* (CAHPS®) Survey is a measure of satisfaction that examines the percentage of members "satisfied" with the health plan. It e prospective members to benefit from the experience of others. Overall levels of satisfaction general indication of whether a health plan is meeting enrollee expectations. Aetna Better Healt Virginia uses the NCQA HEDIS CAHPS 5.0H Membership Satisfaction Survey to assess member sa Members surveyed were selected from a random sample of all eligible members.

Our 2019 CAHPS® member satisfaction scores revealed improvement in several areas, including:

Measure	Improvement over 2018	
	Adult	Child
Rating of Health Plan		X
Rating of Health Care		X
Rating of Personal MD		X
Rating of Specialist		X
Customer Service		X
Getting Needed Care		X
Getting Care Quickly	X	X

The following are some physician-related measures where we did not reach our goals in 2018. Th measures provide opportunities for future improvement:

Physician-Related Measures	Goals not Reached	
	Adult	Child
Rating of all Health Care	X	X
Rating of Personal MD	X	X
Rating of Specialist	X	
Coordination of Care		X

Here are a few tips that may enhance your time with Aetna Better Health members and help to ir their healthcare experiences:

- Be an active listener
- Ask the member to repeat in their own words what instructions were given to them
- Rephrase instructions in simpler terms if needed

aetna
AETNA BETTER HEALTH OF WEST VIRGINIA

Complaint Trends

Member complaints are another way that we measure member satisfaction. The following types of complaints were received in 2018:

Complaint Category	2018 Total Complaints	
	Non-BH (Medical)	Behavioral Health
Quality of Care	3	0
Access	0	0
Attitude & Service	10	0
Billing / Financial	92	0
Quality of Practitioner Office Site	0	0
TOTAL	105	0
Complaints per thousand Members	0.85	0.00

The largest number of complaints the health plan receives is related to billing and financial issues. Your staff can help by asking Medicaid members for a copy of their ID card to ensure that claims will process correctly.

Aetna Better Health members who obtain in-network care should never be balance billed.

Aetna Better Health continues to work to improve member satisfaction with our health plan and with the health care members receive. We offer the following resources to help you as you provide care to our members:

- **Case Managers** are available to assist you in arranging timely care/services for our members.
- **Member Services Representatives** are available to assist with general member questions and concerns.
- **Your Provider Relations Representative** is available to assist you with any questions or issues.

If we can help you in any way, please call **(888) 348-2922**.

124.wv20

Figure 6.9.1-7: Dissemination of CAHPS and Member Satisfaction Information
Aetna keeps providers notified of CAHPs, member satisfaction performance, and other important information through actionable summaries

Innovative Strategies for Improving Engagement and Member Satisfaction

In addition to the ongoing work described in **Table 6.9.1-8**, a key strategy for Aetna to improve rates for member satisfaction will be a **mid-year member experience assessment outreach attempt** to **100 percent of our membership** beginning in 2020 to 2021. This assessment will ask members or their parents/guardians about their experiences and satisfaction with their health care and accessibility, specialists, and PCPs, as well as tobacco use and other factors affecting their health. Responses will be examined based upon ZIP code and provider/group level; Quality Management staff will prioritize contacting providers with below average ratings to review findings and supply technical assistance such as scheduling, front-office staff interaction

with members, and health literacy. Responses will be utilized as part of the PDSA process for member initiatives.

Health Equity and Social Determinants of Health Training

QU005	The Vendor should describe its approach to having staff and providers receive initial and ongoing training on health equity and Social Determinants of Health (SDOH).

Aetna ensures that all enrollees, providers, and staff are treated with respect concerning their culture, values, race, age, sexual orientation, ethnic background religion, and disability status, including individuals with BH and substance use challenges. **We are West Virginians,** which empowers us to make a significant impact in communities across our State to address social determinants of health (SDOH) barriers for our enrollees. Because of our focus on SDOH and their impact on health care access and quality of life, Aetna includes attention to socioeconomic status and access to housing, nutrition, education, and employment. With our CCT model and focus on SDOH, we believe we can help improve health and social outcomes for all the populations we serve.

Initial and Ongoing Training on Health Equity and Social Determinants of Health

West Virginians enrolled in Medicaid and West Virginia Child Health Insurance Program (WVCHIP) may face vulnerabilities in their physical, social, and mental health requiring seamless access to services. Our local, regionally based CCTs understand the health disparities, risk to health equity, and SDOH barriers for West Virginians, especially in the communities where they live and work. Aetna also recognizes the potential overlap with our children in the foster care population and will support them to resolve rising risk indicators; we add immediate supports to child and families upon early identification of SDOH and other factors.

Aetna's regionalized approach is driven by our recognition of local disparities, gaps in resources, and our commitment to promoting health equity for all enrollees. We coordinate a comprehensive array of services across life domains that address physical, social, and BH needs, guided by an individualized, integrated service plan.

In order to meet plan objectives, it is necessary to understand the needs of Aetna enrollees in each region of West Virginia. Aetna maintains cultural competency initiatives to address specific cultural/language needs that might challenge an enrollee's ability to access care or understand healthy practices that lead to optimum health outcomes. Clinical and nonclinical internal staff are subject to Aetna's cultural competency measures and training. Specific activities include the following:

- Training staff members about the need for understanding of and respect for cultural differences when interacting with enrollees and developing services that better meet the needs of minority populations
- Educating providers and practitioners about cultural competency and health care equity
- Providing enrollees and network practitioners with access to interpretive and sign language services for Aetna enrollees
- Promoting development of qualified, diverse, and culturally competent employees
- Assessing applicable feedback from enrollees about programs, quality initiatives, enrollee materials, and other education and outreach tools

Staff Training

Staff training begins upon hire and continues regularly throughout employment. In West Virginia, ongoing trainings include but are not limited to health equity, cultural competency, SDOH, trauma-informed care, motivational interviewing, Mental Health First Aid, gaps in care, assessment and treatment of SUD behavioral health services, addressing obesity in individuals with mental illness, national

The West Virginia Aetna team was one of the first plans in the country trained in advanced coursework on trauma-informed care, Mental Health First Aid, motivational interviewing, and the fundamentals of development, including age-appropriate and stress-related behaviors, adolescent substance use, and permanency training.

diabetes prevention program, enrollee rights, utilization management clinical guidelines and medical necessity, confidentiality, service excellence, and information systems training as it relates to the documentation, storage, and sharing of screenings, assessments, and treatment plans with members of the care team and in electronic platforms. Staff receive ongoing monthly and quarterly training through online modules and are encouraged to attend external conferences as required for licensure. Specifically, health equity and SDOH topics are covered in our Cultural Competency 101, trauma-informed care training, system of care training, care management training, as well as within our quarterly cultural conversation forum.

As a trauma-informed care organization, our Care Coordination, Member Services, and Community Outreach staff receive comprehensive and ongoing training established in partnership with the National Council for Behavioral Health. We had a kickoff event with the National Council specific to West Virginia in January 2019, including a day-long training event for all staff. In total, we have trained approximately 2,500 Medicaid staff in foundational trauma training since 2018. In West Virginia specifically, 93 percent of staff in have completed the National Council's on-site TIC training, and our goal is to have 100 percent trained by the fourth quarter of 2020 (including our new foster care staff). We have future trainings scheduled for staff and providers with the National Council for Behavioral Health onsite in February 2020. We will be providing advanced training for the staff and then two days of provider training at two sites.

Provider Training

Health equity and SDOH topics are covered in the new provider orientation within 30 days of the provider joining the network as well as annually. We supplement these formal trainings with educational information dissemination throughout the year on topics critical to our populations; as one example, in 2018, Aetna created a white paper for our providers describing

our initiatives to combat the opioid crisis, including prevention, intervention, and support activities:

- **Prevention:** Outreach to high-volume prescribers, Prescriber Drug Monitoring Program, safe storage of opioids and quantity limitations, member outreach and education, reduction in opioid use via alternative therapies, collaboration with leaders in opioid reduction, and predictive analytics and evidenced-based practices
- **Intervention:** Medication-assisted treatment (MAT), Screening, Brief, Intervention and Referral to Treatment, naloxone administration without prior authorization, pharmacy reports inclusive of risk, and pharmacy restrictions for high-risk individuals
- **Support:** Member outreach and education on MAT, employee training and education on opioids, neonatal abstinence syndrome prevention program, opioid-specific care management, care management outreach and education to members, provider directory inclusive of substance abuse providers, and promotion of opioid interventions in health plans

Our white paper also included our next steps to keep providers apprised of ongoing efforts to fight the opioid crisis, including supporting the development of standardized solutions and interventions for opioid interventions, increasing network adequacy of MAT providers, and coordinating and increasing access to peer-to-peer supports. We have also created a provider toolkit available through the provider portal. Some of the training topics include the following:

- Defining trauma
- Prevalence and impact of trauma and adverse childhood experiences
- Building resiliency and hope for recovery in the face of trauma and self-care
- Introducing trauma-informed care
- The importance of trauma-informed care for the populations served by the Aetna Medicaid organization
- Four assumptions of trauma-informed care
- Six principles of trauma-informed care

As we continue our partnership with the Department and our providers, we will look to share new service approaches and promising evidence-based practices for the MHT, WVHB, and WVCHIP program gathered from other providers and our experiences. We will also develop or enhance trainings based on

Aetna's regional provider forums have gained a reputation for being responsive and helpful to West Virginia providers, as evidenced by the 65% increase in participation from 2018 to 2019.

provider feedback and/or Aetna-identified trending provider issues or process pain points identified in feedback from meetings and satisfaction surveys.

Aetna is the only West Virginia managed care organization that conducts provider forums throughout the State. We understand that providers are our most valuable service delivery assets. Our job is to empower our providers through education, assistance, and the resources needed to achieve quality enrollee engagement and health outcomes as the key to connecting members with services to address social determinants of health. Our Provider Relations staff directly contact new providers either in person or by phone to begin establishing a relationship, to review key information, and to respond to any provider questions or concerns. As a part of the implementation process, we will offer our current providers orientation training on West Virginia MHP, MHT, WVHB, and WVCHIP, as well as training on requirements for providing health care services including addressing SDOHs and behavioral health care services to West Virginia enrollees.

Meeting the Needs of Individuals with Special Health Care Need and All Populations

QU003	The Vendor should describe how they will utilize data to identify barriers to care for individuals with special health care needs, and develop policies and procedures for methodologies for collecting and analyzing quality measures for different populations.

Aetna's integrated system of care includes all health care and related services and supports necessary for individuals with special health care needs and all populations to achieve improved health outcomes.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

[QU003] Using Data to Identify Barriers to Care for Individuals with Special Health Care Needs

Aetna identifies individuals with special health care needs/individuals with complex or serious medical conditions at enrollment and throughout their course of treatment. Upon receipt of a referral or enrollee self-referral for care management, or notification of enrollment of any new enrollee, Aetna begins the initial care management screening process for all West Virginia enrollees. Aetna's automated outbound screening process is our first attempt to complete the health risk assessment (HRA) and health care equity contact event (HCE), which contains 11 SDOH questions with all enrollees and their family/guardian, if applicable. The HRA and HCE screening process allows for initial and immediate stratification to either Tier 1 population health care coordination or to an additional assessment which determines if Tier 2 (supportive) or Tier 3 (intensive) care coordination is appropriate to meet our enrollee's needs. Enrollees that are assigned to population health care coordination (Tier 1) receive educational mailings. All enrollees providing positive responses to any screening question on the HRA and HCE, who may have multiple chronic conditions, SDOH barriers, or other special health care needs will receive further assessment and stratification into the appropriate care coordination level (2 or 3). Immediately following completion of the HRA and HCE, these enrollees will be warm transferred to a care management associate for immediate assessment for enrollment into either Tier 3 or Tier 2 care management.

Aetna outreaches to all new members to complete a health risk assessment, which contains 11 social determinant of health questions, including the domains of transportation, food, utilities, housing, childcare, safety, loneliness, stress, and employment.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Children with special health care needs (CSHCN) are identified one of three ways: through the enrollment file sent by the State, internally through claims data/medical management identification, or via our health risk assessment conducted upon initial enrollment. Through our claims data, we identify enrollees that may fall into this category through high utilization and other applicable factors. For children identified with special health care needs, a care coordinator is assigned to assist and support the individual and their family in addressing potential barriers to care.

Aetna has experience in West Virginia managing complex care management programs that proactively identifies enrollees for whom intensive management goals would include improving quality of care and assisting CSHCN to reach their optimum level of wellness.

Membership data for the past three-year period shows a year-over-year increase in the number of children identified with special health care needs. Drill-down of this population revealed the highest number reside in Kanawha, Cabell, and Wood counties. CCTs covering those counties can pinpoint resources available to meet various health and wellness needs. CCT enrollees are also able to conduct face-to-face visits with these children to facilitate care management and address barriers in a timely manner.

Aetna uses Quest Analytics geographical map reporting to identify specific areas or regions that may lack an adequate network of providers trained to work with the special health care needs population. These reports assist in targeted outreach to potential providers and help to develop a network of providers for this specialized population. In addition, we use information gleaned from enrollee input (such as member surveys, focus groups, and our MAC) to assist in identifying any potential barriers that individuals with special health care needs may experience.

Aetna engages in an accessibility analysis for both PH and BH providers. This activity is used to monitor, evaluate, and manage the appointment accessibility of participating practitioners and

enrollees' access to care utilizing the established Aetna standards. The tools used to monitor accessibility include the **CAHPS member satisfaction survey, the annual BH survey, the practitioner appointment accessibility fax survey, member complaints** related to accessibility of practitioners/providers, and **office site visits** conducted during the credentialing process. Aetna will expand the use of these surveys to collect data to identify access to care barriers for individuals with special health care needs.

Aetna's network manager is responsible for identifying network gaps and opportunities for improving and monitoring to make sure identified needs are promptly acted upon. In instances where enrollees are not able to make appointments with the appropriate provider, CCTs and member services representatives will step in, facilitate the request, and even make the appointment if necessary. If a provider is attempting to assist an enrollee with getting an appointment with another provider, Provider Services staff will assist in obtaining the appointment so that the enrollee can receive the care they need in a timely manner. If Aetna is unable to provide necessary medical services covered under the contract within the network of contracted practitioners and providers, we will coordinate these services adequately and in a timely manner with out-of-network practitioners/providers, for as long as we are unable to provide the services in network.

Aetna will work with out-of-network providers to bring them into the network when possible. We establish single case agreements for the current services provided to our members to facilitate continuity of care. The single case agreement requires the provider to treat our members with the same degree of care and skill they provide to patients who are not Medicaid members. If the provider declines to contract with Aetna, the Provider Relations team will identify opportunities to

fill the possible service gap via recruitment, telemedicine options, or identifying a vendor. Aetna supports the family with transportation and room and board for out-of-network services that are out-of-state or that a member cannot access without additional support.

Methodologies for Collecting and Analyzing Quality Measures for Different Populations

Aetna's established policies and procedures include methodologies for collecting and analyzing quality measures for different populations; our Medical Management staff performs an annual population assessment to monitor West Virginia population changes, geographic distribution, language preferences, cultural diversity trends, and changes in rate-group and age distribution within our membership. Data is used to ensure that West Virginia enrollee needs such as practitioner and provider accessibility and availability, translation services, ability to provide services for enrollees with multiple chronic conditions or severe injuries, and continuity and coordination of care continue to be met at the highest levels. Assessment of social determinants of health is a key component of this assessment of our enrollee characteristics and needs.

In addition to collection of HEDIS measures and Aetna staff input, additional methodologies for collecting and analyzing quality measures for different populations includes the following:

- Opioid dashboard
- Member Advisory Committee and focus groups
- Member satisfaction survey
- Review of utilization data
- Appeals and grievances
- Requested PCP changes
- Emergency room use

Opioid Dashboard

Aetna has developed an enterprise-wide opioid strategy to impact every aspect of awareness, delivery, and use of opioids. We focus on treatment options including MAT as well as reducing the supply of opioids and decrease the rates of overdose. Our strategic solutions include prevention, intervention, and support components for enrollees and providers, thus addressing

the continuum of needs in an enrollee-centered manner. Aetna's national Medicaid organization recently introduced our opioid dashboard that provides national and state-specific progress towards our project goals.

Aetna's experience with our Medicaid plans nationally is that we have increased MAT access from 2017 to 2020 by on average 35%.

The West Virginia-specific opioid dashboard metrics based on pharmacy claims provided by the State of West Virginia and Aetna West Virginia Medicaid medical claims is summarized below and demonstrates our West Virginia plan's progression towards meeting the Aetna five-year plan 2022 goals based on the Center for Disease Control guidelines[2]. **Table 6.9.1-9** provides examples of content on our opioid dashboard including metrics, target goals, and West Virginia's performance metrics including the following:

- Increasing our rate of treatment with non-opioid procedures for chronic pain; the goal is a 50 percent increase over baseline and Aetna in West Virginia exceeds the goal with a 51.5 percent increase
- Decreasing our rate of opioid prescriptions in enrollees with opioid use disorder; the goal is a 50 percent decrease over baseline and Aetna in West Virginia is approaching the goal with a 44.9 percent decrease
- Decreasing our rate of concomitant opioid and benzodiazepine use; our goal is a 50 percent decrease from baseline and Aetna in West Virginia is approaching the goal with a 36.1 percent decrease from baseline

Table 6.9.1-9: Opioid Dashboard Metrics for West Virginia

Metric	Goal	West Virginia Metrics as of August 2019
Increasing our rate of treatment with non-opioid procedures for chronic pain	50%	51.5%
Decreasing our rate of opioid prescriptions in enrollees with opioid use disorder	50%	44.9%

[2] Dowell, Deborah, Haegerich, Tamera M, Chou, Roger, "CDC Guideline for Prescribing Opioids for Chronic Pain — United States, 2016," Morbidity and Mortality Weekly Report, 65 (No. RR-1):1–49 (2016): https://www.cdc.gov/mmwr/volumes/65/rr/rr6501e1.htm; accessed January 20, 2020.

Metric	Goal	West Virginia Metrics as of August 2019
Decreasing our rate of concomitant opioid and benzodiazepine use	50%	36.1%

Member Advisory Committee and Focus Groups

Our MAC is designed to solicit member feedback and opinions regarding issues related to access and the quality of care and services provided to different populations within our membership as well as potential programs, activities, and educational materials representing the vast majority of enrollee needs, including individuals with special health care needs. We pull member records for all populations by ZIP code and mail 200 to 300 invitations to members in the area surrounding the meeting location. In order to encourage state-wide participation, we host MAC meetings in a different region of the state each quarter and offer incentives for participation.

Our 2020 MAC calendar is depicted in **Table 6.9.1-10** covering all West Virginia regions. Additionally, we will be conducting 4 focus groups for the MHT, WVHB, and WVCHIP populations and 12 topical focus groups throughout the West Virginia for our parents/guardians involved in foster care. Our Care Management staff identify and engage members; we supplement that list of members by pulling member records by ZIP code and sending 100 to 300 invitations to members. Our focus group design will ensure all segments are represented at these meetings to receive their valuable input and feedback.

Table 6.9.1-10: Aetna's 2020 Member Advisory Committee

Region	Location	Date
Southeastern	Shoneys, 460 Oakvale Road, Princeton, West Virginia	March 26, 2020

Region	Location	Date
Northeastern	Golden Corral, 625 Foxcroft Road, Martinsburg, West Virginia	June 25, 2020
North Central	Shoneys, 131 Woodward Drive, Sutton (Flatwoods), West Virginia	September 24, 2020
South Central	Lincoln Primary Care, 7400 Lynn Avenue, Hamlin, West Virginia	December 17, 2020

Member Satisfaction Surveys

Aetna regularly tracks and monitors accessibility of services, including for our special health care needs populations. The CAHPS survey captures data related to appointment availability, which will be used to identify and address barriers to care for children with special needs. Aetna is in the process of implementing the CAHPS survey item set for children with chronic conditions to identify barriers to care for individuals with special health care needs for our children and youth in the foster care system and individuals receiving adoption assistance. This version of the CAHPS survey expands beyond the standard CAHPS child survey to assess areas related to health providers contacting school or daycare center about the child's health, special medical equipment, special therapy such as physical/occupational/speech therapy, and offerings of counseling for emotional, developmental, or behavioral problems. Understanding issues from this survey may bring to light opportunities to support children who are moving between the Medicaid/WVCHIP and the foster care programs. In addition, we capture member satisfaction through the BH member satisfaction survey, which evaluates member experiences for BH care services, including questions related to member experience with accessibility, communication, practitioner satisfaction, member services, and overall satisfaction with BH and SUD care services. Aetna also uses information from complaint and appeals data for trending and analysis

that may be correlated with member survey data in the assessment of opportunities for improvement and for the development of action plans for both PH and BH.

Aggregate Utilization Data

Aetna uses multiple data sources to monitor appropriate health care utilization for different populations. We use UM reports and dashboards to monitor utilization data to identify trends that fall outside defined parameters and take action to address the trend. When we see these trends, we collaborate with the provider to identify the root cause and develop an intervention to address the trend and then monitor to assess the effect. Specifically, we use this aggregate utilization data to identify opportunities to identify and address barriers to care for different populations including individuals with special needs. Aetna's network director is responsible for identifying network gaps and opportunities for improving and monitoring to make sure identified needs are promptly acted upon. Aetna has an extensive suite of UM dashboards and reports with near real-time data to monitor appropriate utilization of services and cost-efficiencies including the following:

- **Demographic distribution for ER utilization dashboard:** This dashboard allows users to review ER utilization data through a demographic and health equity lens. The dashboard sorts and filters enrollees' ER utilization data to identify possible demographic-related disparities related to race, ethnicity, language, geography, or adverse incidents. We map where high ER utilizers reside, which allows us to assess local hospitals, urgent care centers, and providers with after-hours care to provide services to meet Aetna enrollee urgent health care needs. This provides for a region-specific, targeted approach to approach to provide access to care for enrollees needing immediate access to health care services.
- **UM performance dashboards:** We developed and use a suite of UM dashboards to monitor data reports including the following:
  - Readmissions
  - Time after discharge to follow-up appointment
  - Observations versus one- to two-day stays
  - ER utilization by facility, level billed, and primary system chief complaint
  - Neonatal intensive care unit admission patterns
  - Medical claims trends
  - Authorization trends
  - Inpatient performance to target trends
  - Length of stay

- **Pharmacy data analysis:** We conduct retrospective drug utilization reviews (RetroDUR) to detect pharmacy over-utilization. Aetna applies RetroDUR to assess drug over- and under-utilization patterns to drive the development of interventions and/or educational activities. Aetna also utilizes our pharmacy data received daily from the State for metrics including opioids and utilization; this information is shared between the PH and BH staff and providers.
- **Gaps-in-care reporting** as both an internal staff and external provider tool to address under-utilized services. As a health plan, we are evaluating gaps in care daily every time we interact with an enrollee. This allows us the opportunity to not only encourage needed care such as screening, well visits, or follow-up care, but also to assist in getting the enrollees to the visit. Based on the gaps in care report and indication of underutilization, we look at PCP assignment, high ER utilization, and readmission rates to determine if an enrollee needs specific outreach or resources in completing their care.

Tracking and Trending Complaints and Appeals

Aetna maintains records of all appeals, grievances, and State Fair Hearings within our internal, proprietary application. Our reporting suite enables us to monitor aging of cases in real time to make certain of timely resolution and to identify and report trends for potential opportunities for improvement. In addition, we will be able to identify complaints and grievance information directly pertaining to different populations including individuals with special health care needs and the WVCHIP population to help ensure timely response to issues.

Member Complaints

Aetna utilizes the NCQA complaint categories for tracking and analysis of complaint and appeal data for individuals with special health care needs and different populations. Examples of complaints that may be filed in each category are described in **Table 6.9.1-11.**

Table 6.9.1-11: NCQA Complaint Category and Examples

NCQA Category	Examples
Quality of Care	Treatment issues or the quality of the care the member received
Access	The member's access to care, such as lack of availability to a practitioner
Attitude and Service	The attitude of someone that rendered care to the member or the quality of the service the member received
Billing and Financial	Member receiving a bill/billing or financial issues (how services were paid or denied)

NCQA Category	Examples
Quality of Practitioner Office Site	The physical condition of a practitioner's office

Complaint and appeals data are evaluated at the population level, as well as that of plan, practitioner, facility, and provider levels. Documentation and analysis are presented during biweekly Complaint Committee and weekly Appeal Committee meetings as well as on a quarterly basis to the SIC.

In 2018, Aetna continuously identified opportunities for improvement after identifying root causes of dissatisfaction and barriers to improvement, including the following:

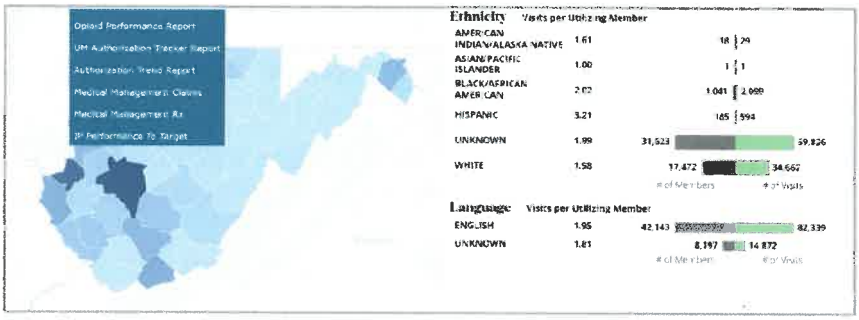
- Establishing a goal for provider relations staff to respond within seven days to each individual provider inquiry
- Ensuring proper tracking of complaints in 2019 through staff training and education on all aspects of their job and the expectations for their role
- Educating member services representatives on the difference between a complaint or an inquiry
- Having the Appeals and Grievance department work cohesively with the other departments throughout the year supplying them with the complaint information related to their department so it can be addressed real time; the expected outcome is to prevent errors in reporting and proactively prepare for the quarterly report as well as the annual analysis

Through feedback from the SIC and the Complaint Committee, Aetna developed an action plan and monitored activities to drive service improvements. The SIC and the Complaint Committee attempted to identify prospective barriers and potential issues when assessing complaint and appeal data. This data is used to develop the action plan for the upcoming year for improved performance.

Member Appeals

In support of member quality of care and satisfaction for individuals with special health care needs and different populations, all Aetna members have the right to appeal both coverage and non-coverage decisions. These rights are outlined in the Aetna member handbook and provided

to members upon enrollment and/or as requested/required. Appeals initiated by practitioners on behalf of members are included in member appeal data.



Tracking Members Requesting Changes in Primary Care Providers

Aetna currently tracks members selecting different providers through our call tracking process and PCP change reports and will be tracking this movement between PCPs for individuals with special health care needs and the WVCHIP population. When members or their caregivers and guardians request to change their PCP, the Member Services team completes a real-time change of PCP assignment while the member and/or guardian is on the line. We collect the volume of PCP request changes and will generate reports specific to individuals with special health care needs and different populations to assist in identifying request trends. These reports are reviewed by the SIC and compared to the general population over time. We track and trend requests for PCP changes by population to identify and correct any network adequacy concerns. If we identify a PQOC concern or complaint through a member's request to change PCPs, we immediately address the issue and refer it to the PQOC team to take action.

Tracking Access to Emergency Department Use

Most people, including those with Medicaid coverage, go to the ER for care when they feel they have no other option. Medicaid members often face more challenges accessing the health care system than non-Medicaid enrollees. As such, Medicaid enrollees tend to visit the ER more often than non-Medicaid enrollees. They may have SDOH issues which affect their ability to access care through traditional primary care office settings. Medicaid members often are living with higher rates of chronic diseases and co-occurring BH disorders. We help different populations access the primary and preventive care they need to avoid medical or BH crises that result in avoidable ER usage. Aetna's current UM dashboards allow drilldown monitoring of

ER usage by various parameters including age, gender, geographic region, and other membership characteristics as depicted in **Figure 6.9.1-8.** This data will be used to track access to ER use for individuals with special needs. The Care Management team will monitor this information on a monthly basis in order to rapidly identify potential access to care issues for individuals with special needs.

127.wv20

Figure 6.9.1-8: Demographic Distribution of ER Utilization
This dashboard allows users to review ER utilization data through demographic and health equity lens where the user can sort and filter to identify and address possible demographic related disparities in ER utilization.

Individuals with special health care needs who seek non-emergent care in an ER may not be receiving the benefit of a medical home and the continuity and familiarity that a PCP or the appropriate specialist provider can offer. Our goal is to assist these enrollees with identifying and removing barriers. Our innovative solutions and flexible approach to integrated care management provide unique opportunities for improved health outcomes that meet and exceed State expectations. We use our integrated care management program to address inappropriate ER utilization with enrollees through the following process:

- Care coordinators access informatics reports that identify enrollees with special health care needs who have utilized ER services
- Our care coordinators outreach to individuals with special health care needs who have used the ER to evaluate the individual's needs and how they can be assisted.
- Care coordinators identify barriers that prevent our enrollees from receiving care in their medical home or outpatient specialist office, such as transportation, work schedules, or social support.
- Care coordinators discuss the enrollee benefits of maintaining regular care with a PCP to avoid seeking non-emergency services in the ER

10. Claims and Encounters

The Vendor should refer to the business specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Claims and Encounters (CE) as part of their bid. The Vendor's narrative response should not exceed 50 pages.

Aetna is committed to continuing to meet and exceed the West Virginia Bureau for Medical Services' (Department) goals for claims submission and adjudication to payment timeliness.

Claims Processing Guidelines and Systems Requirements

CE001	The Vendor should describe its claims processing guidelines and systems requirements that ensure timely payment of all clean electronic and paper claims for covered services from both in-network and out-of-network providers, within thirty calendar days of receipt for Mountain Health Trust (MHT) members.

Aetna's claims adjudication system ensures timely payment of clean claims for both in-network and out-of-network providers through a hierarchical rules-based system containing all West Virginia claims rules, payment rates, and claim adjudication edits. The claims system is a Health Insurance Portability and Accountability Act (HIPAA)-compliant system we use to maintain and process health care administration data, which enables us to increase administrative efficiency and improve the quality of care.

Description of Claims Processing Guidelines

Our claims processing guidelines consist of procedures and policies to meet all regulatory and contractual requirements: strategies to address provider payment issues; monitoring of claims receipts to enhance claims resolution; underpayment and overpayment review and resolution to ensure that we and our subcontractors follow established benchmarks; pre-and post-claims editing policies to support the detection of coding irregularities, conflicts, or errors and make correction suggestions; and provider billing education to provide targeted training to our provider community and improve the provider experience. We support our claims processing

commitment through our focused claims inventory and workflow management practices, data monitoring and analysis, and management oversight efforts as illustrated in **Figure 6.10.1-1**.

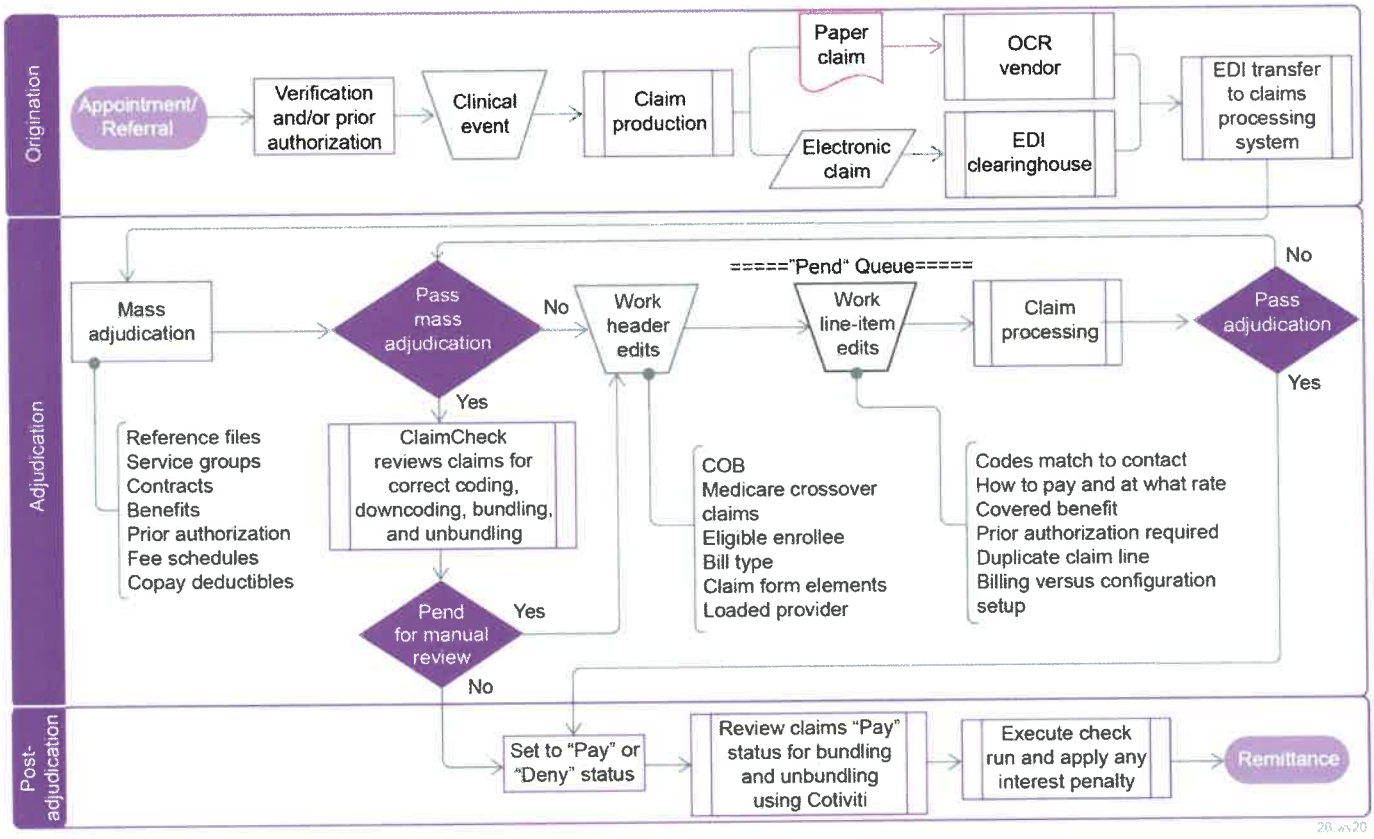


Figure 6.10.1-1: Life of a Claim

Our end-to-end claims processing workflow ensures timely and accurate claims payment.

We offer our providers multiple clearinghouses for electronic claim submission, which provides a broad range of submission options. Provider education and training on general claims submission and requirements (e.g., encounter submission requirements, electronic data interface claims, Medicaid identification registration, etc.) are accessed easily through the provider portal on our website and through our local Provider Relations team.

Over the last 12 months, our average **turnaround time** for electronic data interface claims **is 8 days**. Our average turnaround time for paper claims is 13 days.

Aetna understands and will implement processes to comply with the Department's requirement to process clean claims within 30 calendar days for both in and out-of-network providers.

In support of these requirements, we generate weekly payment cycles for medical claim payments. **Table 6.10.1-1** summarizes our consistently high rate of claims processing performance and our compliance with timely processing of the Department's 30-day claims payment requirements from January 2019 through December 2019.

Table 6.10.1-1: West Virginia Claims Processing Performance

	Days to Pay		30 Days		90 Days	
Month	Electronic Data Interface Claims: Average Days to Pay	Paper Claims: Average Days to Pay	Total Claims Processed in 30 Days	Percent of Claims Processed in 30 Days	Total Claims Processed in 90 Days	Percent of Claims Processed in 90 Days
Dec-19	9	13	207,597	97.86%	212,084	99.97%
Nov-19	9	11	225,769	98.23%	229,835	100.00%
Oct-19	8	9	272,070	99.39%	273,730	100.00%
Sep-19	8	10	212,729	99.63%	213,507	100.00%
Aug-19	8	10	193,855	99.83%	194,186	100.00%
Jul-19	8	11	217,999	99.76%	218,527	100.00%
Jun-19	8	13	167,619	99.53%	168,386	100.00%
May-19	8	12	181,594	99.39%	182,613	99.95%
Apr-19	8	13	217,735	99.25%	219,360	99.99%
Mar-19	8	13	183,758	99.35%	184,926	99.98%
Feb-19	8	14	184,795	99.06%	185,536	99.99%
Jan-19	9	14	186,181	99.01%	188,037	100.00%

Policies and Procedures to Meet Standards and Requirements

Our claims administration policies and procedures (P&Ps) are crucial to meeting or exceeding our accuracy, timeliness, and completeness to fulfill the Department's requirements and

changing needs. These P&Ps include claims submissions, data entry, claims manual adjudication, processing of non-contracted provider claims, and claims inventory management (please refer to **Figure 6.10.1-2**). We adhere to all state and federal prompt pay guidelines and we review all Aetna policies at least annually (within 12 calendar months of last reviewed/revised date). We may update our policies more frequently if there are changes to the contract, federal, state, or other regulatory requirements, or Aetna business processes. The Aetna Medicaid organization policy committee reviews all policy updates and requires approval from Aetna Medicaid Administrators, chief operating officer (COO), and chief medical officer (CMO) prior to publication of the documents. The following list summarizes policies and procedures applicable for this program:

- **2000.05 Data Entry:** Documents processes used by the data entry team to facilitate timely and accurate data entry of paper claims and non-standard claim forms by verifying claim data, manually entering claims that cannot be imported electronically, sending claims that need additional review to the appropriate unit, and returning claims that lack sufficient billing information to the provider. The data entry process optimizes the timely and accurate entry of paper claims and non-standard claim forms.
- **2000.10 Claims Adjudication:** Documents claims processes to facilitate claim adjudication in a timely and accurate manner, according to Department and health plan standards and federal requirements. Through the auto-adjudication process, pre-determined edits systematically pend to designated categories for manual processing. Claims that require manual processing are typically more complex claims, where our team of experienced claims processors works to quickly resolve and eliminate claim-related errors to avoid any detrimental impact on the provider.
- **2000.20 Claims Submission:** The purpose of the claims submission policy is to ensure paper and electronic claims are submitted and accepted into the claims processing system in a timely and accurate manner, according to Department and health plan standards and federal requirements. Our Claims team manages the submission process, identifies how paper and electronic claims are received and prepared electronically for manual or auto-adjudication, and maximizes our compliance with Department and federal regulations.

Our Claims Processing team's performance is exceptional:

- We auto-adjudicate 88% of claims
- Our 2019 payment and procedural financial accuracy rate was 99%
- Our team averages 11 years of claims processing experience (per hire date)

- **2000.30 Non-contracted (Out-of-Network) Provider Claims:** Defines the adjudication process for claims from non-contracted providers, either manually or through mass auto-adjudication in a timely and accurate manner according to the Centers for Medicare & Medicaid Services (CMS) regulations, Department, and health plan standards. Our Claims department is the primary coordinator of all claim adjudication activities for out-of-network providers. Our out-of-network provider process complies with federal laws and regulations by issuing appropriate claim determinations, which includes developing claims for additional information whenever needed, including for services received from out-of-network providers that were authorized by a contracted provider or Aetna for services.
- **2100.15 Claims Inventory Management:** The claim inventory management policy confirms proper inventory control for timely claims payment. This process maintains accountability for the control of the claim inventory to arrange timely claims payment. Our claims management personnel are responsible for managing the claims inventory using various reporting tools and conducting weekly meetings with the health plan to discuss resolution of aging claim inventory.
- **3900.30 Reporting and Return of Overpayments:** This policy implements processes to confirm and document compliance with Department and federal regulations regarding the timely identification, reporting, and refund of overpayments. This process ensures that the health plan receipts are reviewed monthly and consists of reconciliation of member enrollment information to received capitation payments, identification, and resolution of overpayments. Health plan representatives are required to certify receipts have been reviewed and overpayments have been identified on a quarterly basis.
- **6200.10 Provider Claim Payment and Data Completeness:** This policy documents requirements and standards for claims payment, data completeness, and clarifies the network provider requirements for the submission of claim and encounter data. Providers and subcontractors are contractually required to submit clean claims to Aetna within 365 calendar days from the date of service. Providers are also required to supply additional information reasonably requested by Aetna to verify that the provider-rendered covered services, that the charges are usual and customary charges for such services, and that the services rendered were appropriate. Hospitals must submit claims for reimbursement and encounter forms on a UB-40 Form and must submit bills to Aetna within 365 days of the date of discharge.

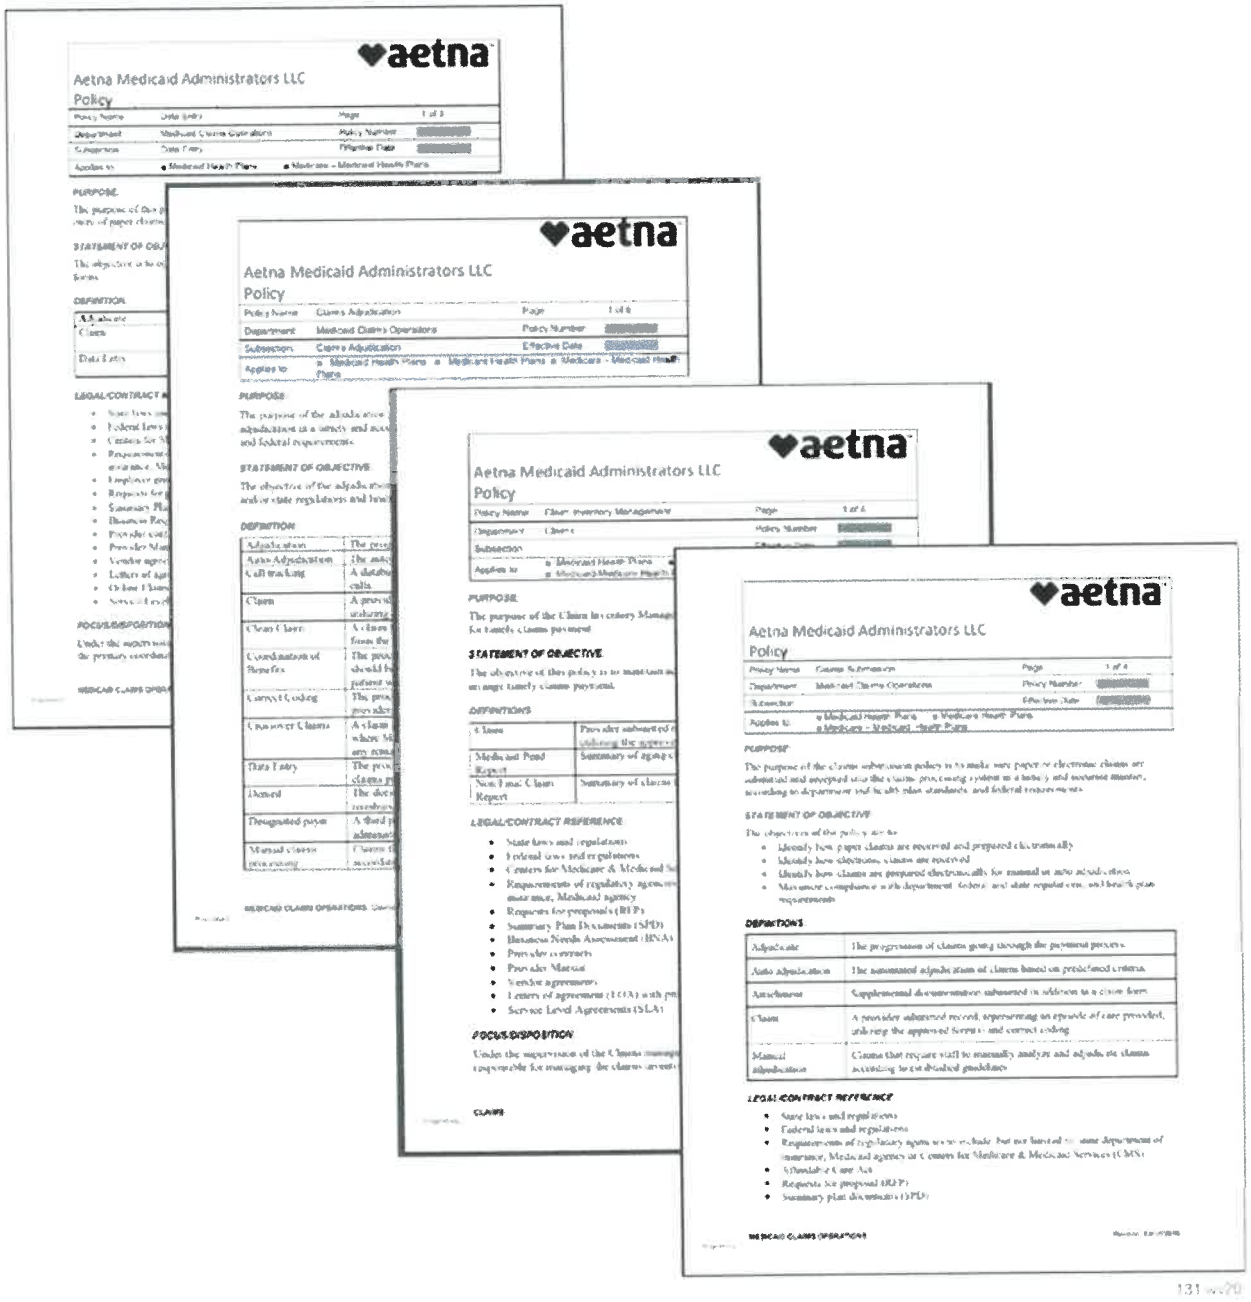

Figure 6.10.1-2: Aetna Claims Processing Policies

Aetna maintains a comprehensive set of claims processing policies that we use to meet our accuracy, timeliness, and completeness to our members and providers and our contractual commitments to the Department.

Claims Processing Guidelines

Our Provider Relations team implements innovative approaches using technology and reporting to provide targeted training to our provider community and improve the provider experience.

This team uses on-demand reporting and analytics to identify trends specific to claims denials, coding errors, and gaps-in-care reporting by a member panel. Often this analysis results in the identification of opportunities to educate providers and the need for technical assistance to address and remedy claims denials/errors. In some cases, we initiate provider-specific claims projects to remediate claims errors quickly, which facilitates timely claims payment for the provider. Our risk adjustment training includes defining risk adjustment, its goals, risk scores, the calculation methodology, their impact on revenue, and how coding and encounter reporting are critical components of risk adjustment.

We also use this information as source data for newsletters, news bulletins (provider website/portals), and educational opportunities during our quarterly existing provider training webinar. For ongoing provider training and technical assistance, we use webinars for our monthly provider meetings. We also host regional provider forums where we invite guest speakers to present on best practices, system initiatives, and other topics relevant to serving West Virginia members. We share information on claims edits with providers.

Upon review of our 837 state encounter denial report, our Encounter department researched and identified a group of providers that were billing with an expired bill type. Our provider relations manager ensured that the groups of providers were contacted and received education on the CMS' changes to the bill type. We also initiated a claims retractions project, which allowed these providers to rebill the corrected claims using the valid service code. We then worked with our Claims Management department to insert a system check that would auto-correct the expired billing code on future claims.

We furnish providers with toll-free numbers to contact our provider or claims inquiry and research call centers. Providers also have a direct number to reach their designated provider relations representative and they may also use email, secured web portal, fax, or mail to contact us.

Underpayment and overpayment

Our established policies and procedures help ensure that we and our subcontractors follow established benchmarks. We review and validate monthly health plan receipts against contractual requirements, and we account for these same receipts within health plan financial statements. We submit our financial statements to applicable regulatory agencies in accordance with payor requirements. We also report all identified overpayments to applicable state or federal agencies within 45 days of identification. Annually, our plan leadership certify compliance with the requirements outlined in this policy.

This approach helps us proactively manage and analyze prompt reporting of all overpayments identified or recovered, including overpayments due to potential fraud, to the Department as required by 42 C.F.R. 447.46 and 42 C.F.R. 447.45. Additionally, we administer all recovery of overpayments and underpayments in accordance with the Department's requirements. We coordinate over- or under-payment reimbursement with the Department to ensure payment recovery is reflected accurately in medical loss ratio calculations and capitation rate setting. Our specific encounter processes help ensure compliance with West Virginia requirements and include claims submissions, data entry, claims manual adjudication, processing of non-contracted provider claims, and claims inventory management.

Pre- and post-claim editing

We collaborate with industry leaders, Change Healthcare and Cotiviti Healthcare, for front-end automation of correct-coding and medical-policy decisions. This approach supports the detection of coding irregularities, conflicts, or errors while making recommendations for correction. Our claims platform and these vendors perform the following claim edits:

- Enrollee data (e.g., age, gender) and provider data

- Current coding protocol, including national correct coding initiative code-to-code pairs, validation of diagnosis (International Classification of Diseases 9/10), the American Medical Association's Current Procedural Terminology Manual® (CPT), health care common procedure coding system I/II, revenue codes, modifiers, procedure code definition and guidelines, multiple-procedure reductions, add-on logic based on CPT guidelines, procedure unbundling, mutually exclusive procedures, assistant surgeon, place of service, type of bill, medical visit logic, medical unlikeliness, durable medical equipment, new-visit frequency, professional, technical, and global services.

These edits use historical claims information to detect and correct questionable billing practices and to assist in identifying patterns of fraud, waste, and abuse concerns such as duplicate billing. Cotiviti also performs a clinical chart review if improper billing or potential fraud, waste, or abuse is identified and contacts the provider for adjustment or recoupment as needed.

Strategies to Address Provider Payment Issues

We continuously analyze our claims payment system to determine what additional editing needs to be configured in support of the state-specific requirements of this program. Aetna's Claims department maintains a Claims Inquiry Claims Research (CICR) Line, a toll-free number that network providers are free to call between the hours of 8:00 a.m. and 5:00 p.m. to speak with Claims Research Line personnel. CICR representatives are specifically designated to answer provider phone inquiries regarding claims status, track those inquiries within QNXT's call tracking functionality, and provide status and/or process adjustments to previously processed claims accordingly. If the inquiry results in the identification of a system issue, this is reported and managed through our issue identification process. Providers are notified when final resolution is achieved. This effort enables us to address any potential provider payment issues and provide billing education.

CICR uses an all-inclusive call tracking report that tracks the details for every call we receive. This report enables us to sort and monitor our call performance by department, call description,

reason code, provider, and other fields. Additional tracking reports we generate include our call tracking rework inventory, which organizes our rework inventory and age, as well as our providers with 10+ calls made to us. We use this report to monitor and identify providers who may have billing or other issues and might benefit from one-on-one billing education and training.

We also use a suite of automated tools and the following scheduled and ad hoc reports to monitor claim receipts:

- Pended claims tool and reports: These include all claims that fail auto-adjudication or are suspended for manual review; the claims manager reviews hourly to balance workload. For example, if a claim is with another department, once the claim is pended back to our claims team; if the claim is aging, the manager can assign the claim out as soon as the claim status refreshes on the report to ensure the claim is paid timely.
- Inventory aging report: A daily inventory report is created for the health plan to help with prioritization. An example is if a claim for a specific provider needs to be addressed, the health plan can review this report and reach out to the claim manager to have a claim pulled and processed.
- Non-final claims tool and reports: Identifies claims in any status other than those finalized. An example is the claims manager or a member of the health plan team can review a claim prior to it being finalized and make changes if necessary.
- Claims performance reporting: Monitors turnaround time for clean claims and provides a history of performance; for example, the Claim Management team as well as the health plan will use this report to ensure all Department requirements are being met.

We use these reports to distribute and manage claims through resolution. If any of the inventory management reports indicate a less than favorable trend, we take corrective action steps immediately. For example, aged claims remediation steps include the use of overtime hours, temporary labor, and workload balancing of trained operational staff across all Claims Operations departments, and if necessary, all Operations departments. Additionally, we investigate and implement any systematic intervention opportunities by Information Technology department to enhance claim processing in collaboration with our claim payment director.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Description of System Requirements

Aetna's claims processing system handles claims, eligibility, member enrollment, service authorization, provider enrollment, and data management functions—as well as edits that align with claim processing and payment data, encounter data reporting requirements, member and provider service tracking, contract configuration, and reference file management. These system components allow for timely and accurate claim payments to meet regulatory and contractual requirements.

Claims Processing System Capabilities

Our claims processing system includes 28 integrated modules that maintain and process health care administration data. This system contains every data element required for claims data adjudication. It is a claims hierarchical rules engine that was built with a feature-flagging design (rules for claims processing with a minimum disruption of services) that enables us to rapidly adjust the configuration to provide flexibility while minimizing down time and providing greater platform responsiveness. We have programmed West Virginia claims import rules into the application, and the application is built to ease turning rules and configuration characteristics on and off, as needed, without affecting the entire system, further ensuring service continuity. Additionally, we configure our claim adjudication edits within the claims processing system to validate the accuracy and completeness of data allowing for the seamless encounter submission. Our system includes over 400 business rules in addition to standard configuration payment rules that our Configuration Standards Reimbursement Administration (CSRA) department configures to enforce policies and procedures.

Our claims processing guidelines and system requirements ensure timely and accurate payment of all clean electronic and paper claims for our in-network and out-of-network providers.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Processing Contractually Obligated Services at Prevailing Rates

CE002	The Vendor should describe its claims processing guidelines for contractually obligated services to ensure that claims are paid at no less than 100% of the prevailing rate for Mountain Health Trust (MHT) Medicaid or West Virginia Children's Health Insurance Program (WVCHIP) Fee-for-Service (FFS) rate(s), as applicable.

Aetna maintains an approved process for processing contractually obligated services at prevailing rates (please refer to **Table 6.10.1-2**). We initiate a fee schedule update process when we receive a covered services fee schedule from the Department. We review any updates to the fee schedule and then forward the list to our CSRA department, which will load the rates into our system. We update any new codes and process any claims via claims projects for any retroactive fee schedule changes. We maintain the rates by system update requests for each subsequent change generated by the Department.

Weekly, as health plan payments are processed, the health plan's chief financial officer (CFO) oversees the review of provider payments. Our Medicaid Claims Audit department staff will randomly select paid claims on a monthly basis, validating the appropriateness of payment.

Table 6.10.1-2: Fee Schedule Adjustment Process

Step	Action
1.	Aetna receives an email notification of rate change and/or fee schedule update is received from West Virginia Medicaid/Bureau of Medical Services.
2.	Upon receipt of this email, Aetna's operations manager reviews the update for accuracy/intent and log receipt of the notification on Aetna's internal status reporting site.
3.	Per Aetna's contract with the Department, rate updates must be in the system and reflected in claim payments within 30 days of receipt.
4.	After review, the project manager will submit a health plan assistance request form to the Health Plan Reimbursement Administration department to have the rate or fee schedule update completed in QNXT.

Processing Preventable Provider Conditions and/or Hospital Acquired Conditions Claims

CE003	The Vendor should describe its claims processing guidelines that ensure the denial of claims payment for preventable provider and/or hospital acquired conditions as defined under Section 2702(a) of the Affordable Care Act (ACA) (https://www.govinfo.gov/content/pkg/BILLS-111hr3590enr/pdf/BILLS-111hr3590enr.pdf).

Our claims processing system contains rules and edits to identify and pend payment for claims arising from preventable provider or hospital acquired conditions, which we have successfully applied to applicable claims during our current contract with West Virginia. This particular claims process stops automatic processing of claims that we identify for clinical review per Aetna business standards. We use this process to pend claims received with provider preventable conditions (PPC) related diagnosis codes. We refer pended claims to a concurrent review nurse, who then initiates an investigation process. In addition, associates involved with the concurrent review process may identify potential PPCs during utilization management evaluation.

An Aetna concurrent review clinician identifies possible PPC claims when the following conditions are present in any health care setting:

- Wrong surgical or other invasive procedure performed on a patient
- Surgical or other invasive procedure performed on the wrong body part
- Surgical or other invasive procedure performed on the wrong patient
- Other provider preventable conditions identified in the State's plan and according to the requirements of the final regulation

Based on PPC findings from the CMO or designated medical director the claims analyst proceeds with processing of the claim in accordance with claims processing standards for PPC and denies the claim if applicable.

Our Quality Management department and Utilization Management department teams are responsible for monitoring, tracking, and trending all PPC referrals. These teams analyze PPC referral trend data, including recommendations for intervention strategies for areas of noted

concern, and report these results on a quarterly basis to our Quality Management/Utilization Management (QM/UM) Committee.

Rate Change Implementation Process

CE004	The Vendor should describe how they will implement rate changes adopted by the Department within thirty calendar days of notification of the rate change.

Our established policies and procedures for rate change implementations ensure that rates within our claims processing system are accurate and completed in a timely manner (please see **Table 6.10.1-3**). Our CSRA department reviews the rate change received from the Department via a request from the Department's system change request. This process includes logging all submitted rate changes into our workflow tracking system upon receipt, where we perform an analysis of current set-up and needed changes, document the findings and solution, route the request for appropriate approvals, and complete the updates in the appropriate development environment.

Once we complete this system change request process, our Medicaid program solutions team starts a claims-testing process against the systems change request form requirements. If, after we complete this analysis, the CSRA department's testing recommendation differs from the local health plan's request, the CSRA department's staff will contact the local health plan for further discussion regarding the requirements. After our Solutions team completes and the development build is approved, the CSRA department staff initiates the promotion request for the Information Technology department to promote changes to the production environment. When appropriate, our CSRA department staff run a post-production query to identify impacted claims. The final step of this process is to notify the original requestor that the requested changes have been completed.

Table 6.10.1-3. Rate and Fee Schedule Update Procedure

Role	Input Source	Process	Output	Hand-off to:	Metric
COO / CEO / Operations Manager	Email notification of rate / fee schedule update	Email notification of rate change and/or fee schedule update is received from the Department.	Email	Operations department	As received
Operations Manager	Receipt of email outlining rate or fee schedule change	• Upon receipt, the operations manager will review the update for accuracy / intent and log receipt of the notification on the hub. • Per the contract with the Department, rate updates must be in the system and reflected in claim payments within 30 days of receipt. • Clear subject, receipt date, effective dates, etc.	Tracking log / linked notification into the log	Project Manager	Within 2 business days
Project Manager	Email with intent of update / request	After review, the project manager will submit a health	Health plan assistance request form	Health Plan Reimbursement Administration department	30 days

Role	Input Source	Process	Output	Hand-off to:	Metric
		plan assistance request form to our Health Plan Reimbursement Administration department to have the rate or fee schedule update completed in QNXT.			

NCCI and Related Claims Processing Systems and Guidelines

CE005	The Vendor should describe how its claims processing systems and guidelines uphold payment policies that comport with the National Correct Coding Initiatives (NCCI) edits and/or other claims payment guidance defined by the Centers for Medicare & Medicaid Services (CMS) (https://www.cms.gov/medicare/coding/nationalcorrectcodinited/index.html).

Aetna adheres to the payment policies of the Centers for Medicare & Medicaid Services (CMS) National Correct Coding Initiative (NCCI) as well as the CMS claims payment guidance by incorporating ClaimCheck® edits in our claim adjudication process. These claims processing edits and tools are designed to maximize accuracy throughout the adjudication process. ClaimCheck is a comprehensive code auditing solution based on guidelines such as CPT, the CMS Healthcare Common Procedure Coding System Level I/II (HCPCS), American Medical Association (AMA), NCCI, CMS National Correct Coding Initiative Program Medically Unlikely Edits (MUE), and International Statistical Classification of Diseases and Related Health Problems, v10-CM (ICD v10-CM). These guidelines support the claims processing system by applying expert industry edits from a provider-recognized knowledgebase to analyze claims for accuracy and consistency with relevant policies and procedures.

The CMS developed the NCCI to promote national correct coding methodologies and to eliminate improper coding. The development of NCCI edits by the CMS is based on CPT coding conventions, current standards of medical surgical coding practice, input from specialty societies, and analysis of current coding practices.

Our claims payment process incorporates NCCI incidental and NCCI mutually exclusive auditing processes. NCCI mutually exclusive edits consist of those edits located in the NCCI Column 1/Column 2 edits that include a policy statement defined as mutually exclusive procedures. NCCI incidental edits consist of those edits located in the CCI Column 1/Column 2 edits with policy statements other than those defined as mutually exclusive procedures. In ClaimCheck, an updated NCCI knowledgebase is available on a quarterly basis.

Our ClaimCheck clinical editing software identifies coding errors in the categories, including procedure unbundling, mutually exclusive procedures, incidental procedures, medical visits/same date of service, bilateral and duplicate procedures, pre- and post-operative care, assistant surgeon, modifier auditing, and medically unlikely services. Aetna also uses integrated claims management services, powered by Cotiviti, to enhance the claim processing system's edit functionality for professional claims that reach an adjudicated status of 'Pay.' Cotiviti has robust coding rule sets that support Medicare NCCI/MUE, Medicaid NCCI/MUE, ICD v10-CM, NCCI Institute of Medicine manuals (internet-only), AMA, HCPCS, and national and local coverage determinations as well as health plan policies. Our system uses algorithms to detect potential claims up-coding with follow-up procedures for chart audits as appropriate. **Table 6.10.1-4** includes examples.

Table 6.10.1-4: Cotiviti's Claim Processing System's Edit Functionality

System Capabilities	Description
Coding accuracy	If services are upcoded or unbundled, Cotiviti alerts the Claims department to deny the claim line along with the specific clinical editing policy justification. The claim line denies with the appropriate HIPAA remittance remark on the recipient of medical benefit. An example of the denial remittance remarks we use are 97. The benefit for this service is included in the payment/allowance for another service/procedure that has already been adjudicated; N19 – procedure code incidental to primary procedure; and M80 – not covered when performed during the same session/date as a previously processed service for the patient.
Durable medical equipment (DME) editing	Cotiviti performs edits related to select DME payment policies that align with Medicaid-covered service policies. These edits include DME rentals, oxygen and oxygen systems, hospital beds and accessories, external infusion pumps, and anatomic/functional modifiers required for DME services—for example: DME editing inconsistency between accessories and wheelchair type. Manual wheelchair and power wheelchair accessories are not appropriate for use with each other and will be denied when billed together by any provider for the same date of service.
Procedure code guidelines	Aetna follows the CPT and HCPCS for instructions on code usage. Cotiviti has developed these guidelines into edits. For example, if a vaccine administration code is billed without the correct vaccine/toxoid codes, we deny the code as inappropriate based on industry standards. According to the CPT, this vaccination must be reported in addition to the vaccine and toxoid code(s). Cotiviti has developed these guidelines into specific policies. For example: Per CPT guidelines (CPT codes 98966-98969), non-face-to-face nonphysician services should only be allowed once per seven-day period. We will deny additional billing submitted for the same billing period.

Cotiviti supports correct coding based on the definition or nature of a procedure code/combination of procedure codes. The ability to code in this manner supports prior authorization requirements during claim adjudication. Furthermore, these editing policies either bundle or recode procedures based on the appropriateness of the code selection. For example, if a provider attempts to unbundle procedures, Cotiviti applies editing logic that bundles all the

procedures billed into the most appropriate code. If a provider bills an office visit and bills separately for heart monitoring with a stethoscope at the same visit, Cotiviti re-bundles the service into the appropriate evaluation and management or office code.

Using the edits and tools described in this section, we deny, completely or in part, claims with missing or invalid information. Providers and subcontractors are required to resubmit the claim with valid information to receive payment. We configure our claim system to align with the Department's services coverage and payment policies. When we deny claims at submission, configuration is added to align with their guidelines as well. In such instances, we require providers or subcontractors to resubmit the claim with valid information to receive payment. Aetna-contracted providers that have a claim denied in whole or in part are also notified of applicable appeal and grievance rights, which we address and resolve through our established provider grievance and appeals process.

Guidelines for Waiving Member Copayment or Cost-Sharing

CE006	The Vendor should describe its claims processing guidelines and systems requirements that waive member co-payment or cost-sharing obligations for all applicable populations and covered services.

Our claims processing system is built to apply co-payments or cost-sharing obligations at the individual member and family member level by utilizing the member's benefit level (please refer to **Figure 6.10.1-3**). The benefit setup procedure for our claims processing system ensures the member's correct co-payment/coinsurance amount is applied to claims based upon the claim payment amount. The claims processing system also tracks the member's out-of-pocket history at an individual and family level based upon the head of household indicated on the Department enrollment file.

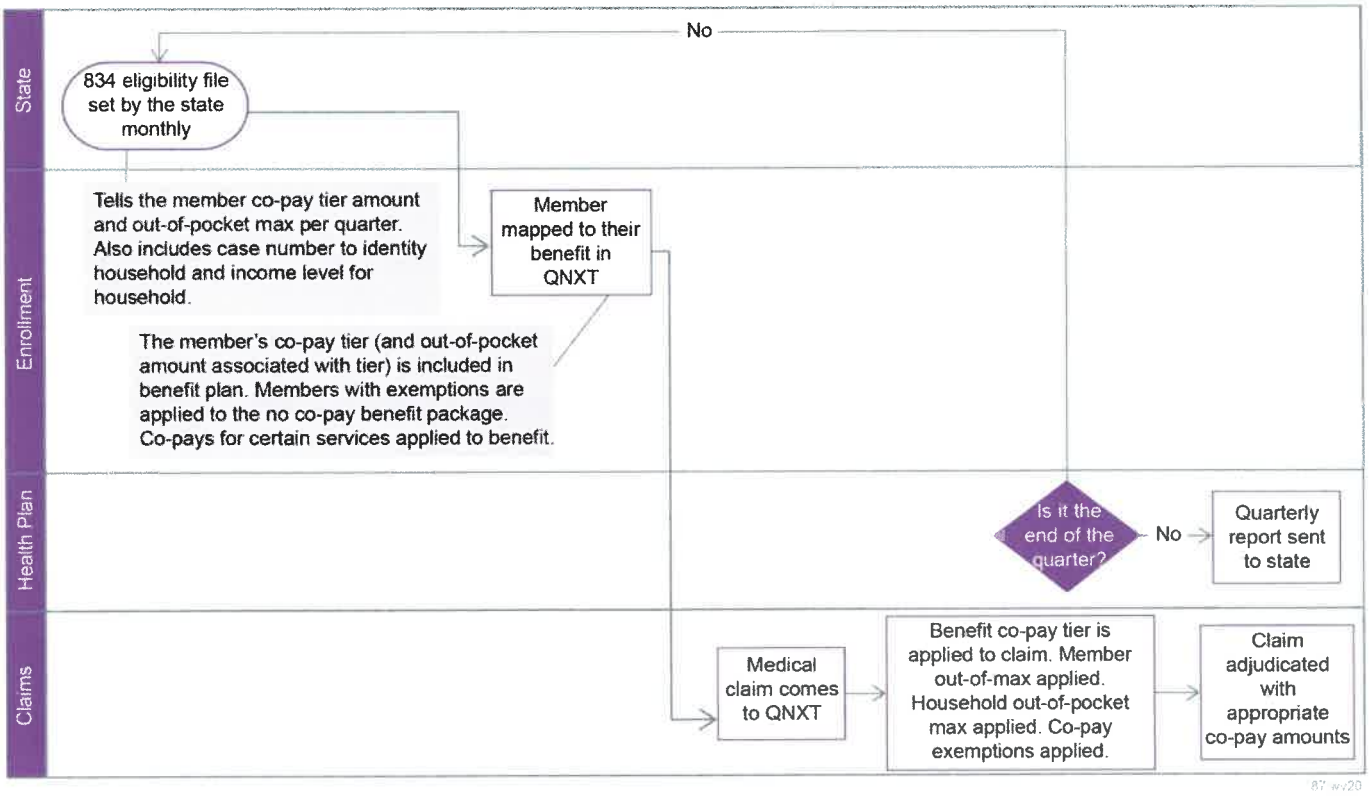

Figure 6.10.1-3: Claims Copayment Process
Our end-to-end claims processing workflow ensures members' copayments and cost sharing rules are applied appropriately so members pay the contracted amount.

Aetna does not waive members copayments; however, our contract includes a list of members and covered services that are exempt from this practice. The following list shows exempt members and covered services:

- Family planning services
- Emergency services
- Behavioral health services
- Members under age twenty-one
- Pregnant women (including the 60-day postpartum period following the end of pregnancy)
- American Indians and Alaska Natives
- Members receiving hospice care
- Members in nursing homes
- Any additional members or services excluded under the Department
- Members who have met their household maximum limit for the cost-sharing obligations per calendar quarter

In addition, Aetna and Aetna providers must charge copays for the following covered services or members:

- Inpatient and outpatient services
- Physician office visits, including but not limited to office visits to a nurse practitioner
- Non-emergency use of an emergency room
- Caretaker relatives age twenty-one and up
- Transitional Medicaid members age twenty-one and up
- Any other members identified by the managed care organizations that are not specifically exempt

Process to evaluate data quality of Claims/Encounter Data

CE007	The Vendor should describe its process to evaluate the data quality of its claims/encounters submissions to the Department including, but not limited to, the formatting and all data elements required to complete compliant 837 electronic transactions for medical and dental claims.

Aetna ensures our claim and encounter data quality through provider contracting and education; applying comprehensive claims editing; and through our robust encounter management system and experienced staff.

Provider contracting and education

Our encounter validation process begins with the delivery of services, where we require participating providers to submit encounter data with a clearly defined set of provider- and service-based information. We educate providers about our claims system upon contract agreement during provider orientation and Provider Relations training sessions and through our regular communication channels. These efforts address claim submission issues and clean claim submission requirements to support timely payments to providers and encounter accuracy.

Comprehensive Claim Editing

Our claims adjudication system validates and requires key data fields be provided at the claim level in order to adjudicate. These data field requirements include but are not limited to the following:

- Recipient Medicaid identification number
- Provider Medicaid identifier and national provider identifier
- Claim type
- Place of service/bill type
- Revenue codes
- Procedure codes (CPT)
- Diagnosis code(s) (ICD v10-CM)
- HCPCS
- Modifiers
- Dates
- Charges

Our claim adjudication system validates the accuracy and completeness of encounter data, which supports our seamless submission of encounter data to the Department. This system contains over 400 business rules, which are in addition to standard configuration payment rules that our CSRA department configures to enforce policies and procedures. Examples include the following payment rules:

- **Benefits package variations:** Our claims processing system automatically analyzes CPT, revenue, and HCPCS to determine whether specific services are covered under the contract or under benefit rules. If a service is not covered by HealthChoices, our system automatically denies the respective claim line with the appropriate HIPAA remittance remark on the recipient explanation of medical benefits.
- **Data accuracy:** We continuously update our claims processing system based on current code sets (e.g., HCPCS, revenue, CPT, National Drug Code, ICD v10-CM codes), so our system is always in compliance with HIPAA standards. If a provider bills a terminated code, we deny the claim line and advise the provider the code is invalid via remittance advice.
- **Eligibility and enrollment:** Our claims processing system validates the date of service against the member's enrollment segment to verify member eligibility on the date of service. If the member is not eligible, the system denies the claim using the appropriate HIPAA remittance comment.
- **Coding validation edits:** We use Cotiviti and ClaimCheck claims processing edits and tools to maximize adjudication accuracy. Cotiviti supports our front-end automation to support correct coding and medical-policy decisions. ClaimCheck is a code auditing solution that applies expert industry edits from a provider-recognized knowledgebase to analyze claim accuracy and consistency with relevant policies and procedures.
- **Adherence to state-specific requirements:** Our system is configured to enforce the rules and requirements set forth by the State, such as timely filing and procedure code validity.
- **Adherence to prior authorization requirements:** Our claims processing system enforces the supporting documentation requirements of certain designated services. In addition, this system will, when appropriate, configure a prior authorization by code, by provider type, and

by place of service. Our claim edit rules validate the claim against the network provider, member, date(s) of service, service(s) rendered, and service unit(s) authorized.

- **Provider qualifications:** We configure provider files by specialty and service category. This configuration allows for enforcement of service categories and provider type during claim validation. Certain procedures can only be performed by select network provider types. For example, our system will not permit the processing of a claim for in-office heart surgery by a podiatrist. This system also checks other providers' specific items, verifying, for example, that each provider has obtained the requisite National Provider Identifier or its equivalent, has included the identifier on all claims submissions, is registered with the State of West Virginia with a valid Medicaid identification, and is an active provider for the date(s) of service.
- **Duplicate billing logic:** Our claims processing system logic and edits determine duplication of services (e.g., same member, same date, same network provider, same service, or any combination of these criteria), and protect against payment of duplicate services.

Encounter Management System

Our encounter management system, Edifecs, is an integrated, HIPAA X12-compliant, single system for encounter management that consolidates submission and reconciliation processes to support CMS, federal, and state all-payer claims database, as well as custom encounter submissions. This system performs comprehensive encounter validation through a coordinated set of edits and validation rules that comply with state-specific business rules, enabling us to proactively identify potential data issues and correct them at the earliest stage of the reporting process. A dedicated team monitors regulatory changes in the market and performs any needed product updates to meet Department requirements and timelines. This helps to ensure accurate, consistent tracking, trending, process improvement, data collection, monitoring, validation, reporting, and error correction.

We conduct a coordinated set of edits and data checks, enabling us to proactively identify potential data issues and correct them at the earliest possible stage of the reporting process, correcting as necessary to help secure the integrity of the encounter. In addition to our internal checks, we also replicate all Department-defined encounter-editing logic to our list of data checks. This added due diligence helps us to identify encounter errors proactively. To monitor

and maintain timeliness of encounter submission, we track timeliness for both initial encounter submission and error corrections to make sure all medical encounters are submitted no later than 30 calendar days after the end of the period in which the service was paid.

Aetna transmits validated encounter data using HIPAA-compliant 837 institutional, professional, and dental formats. Edifecs provides HIPAA strategic national implementation process levels 1 through 5 edits out of the box to ensure proper formatting and all appropriate data elements are present. Validation happens at both the encounter and file level and mimics Department validation requirements even before we submit the file to the Department. Overall, these steps help us ensure that formatting and all data elements within the files are as error-free and complete as possible prior to submission, which increases the acceptance and overall completeness of the encounter data submission.

As described above, Aetna's encounter process includes steps to receive, validate, correct, monitor, and transmit encounter submissions, and is presented in **Figure 6.10.1-4.**

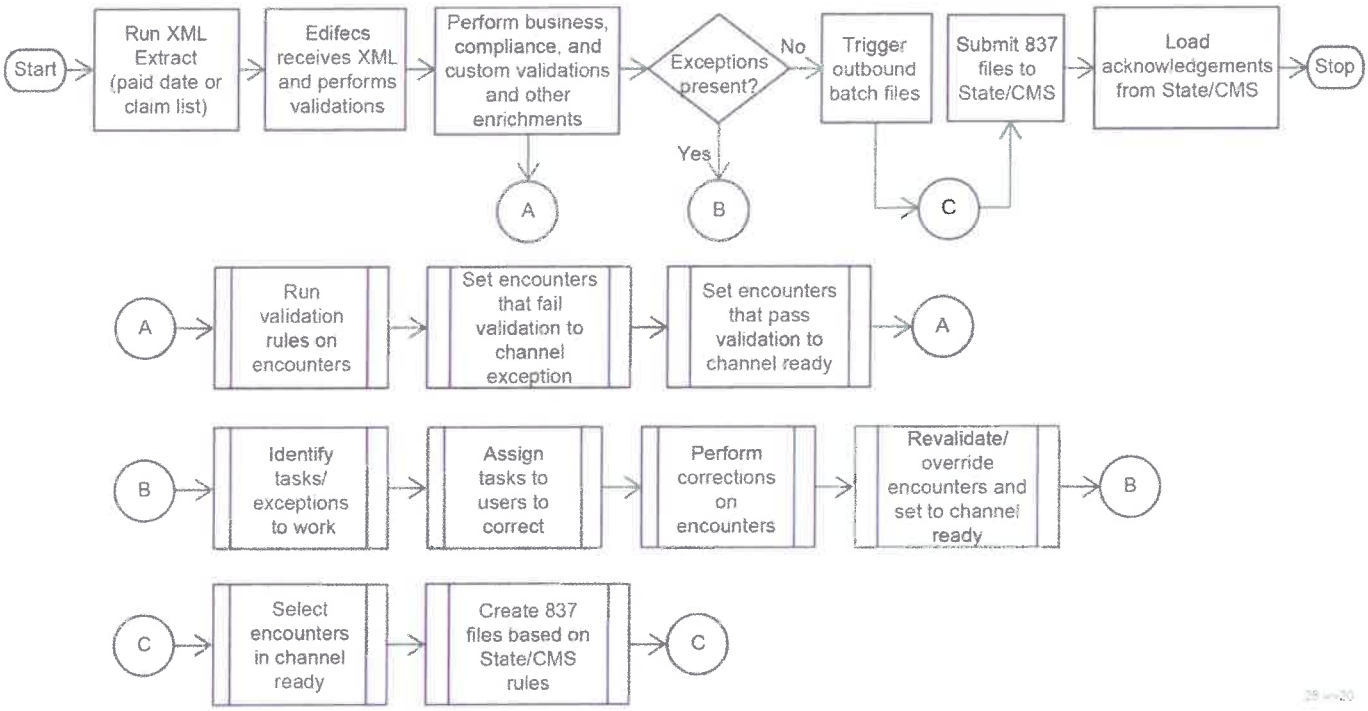

Figure 6.10.1-4: Life of an Encounter

This graphic depicts our encounter management process, which we use to proactively identify potential data issues and correct them at the earliest stage of the reporting process.

Our encounter management system also validates encounter files received from all subcontracted vendors (such as vision and dental) for compliance using standard HIPAA guidelines and strategic national implementation process levels 1 through 5. It performs multiple levels of validations including duplicate checks on the encounter information and provides comprehensive validation steps that ensure files are accurate and complete prior to submission.

The process we use to correct the claims errors depends on the errors received from the Department. Our Encounters Management Unit (EMU) prepares weekly reports of the denied inventory and assigns the work to the responsible Aetna department for review and correction. Our EMU uses two processes to manage correction activities, depending upon whether re-adjudication is necessary. If claim re-adjudication is not necessary, the EMU executes corrections to allow the resubmission of encounter errors per the Department's encounter

correction protocol. If re-adjudication is necessary, the EMU reprocesses the encounters in the appropriate claim system following the encounter correction protocol and provider recovery process if needed. These encounters are then imported back into Edifecs for resubmission if necessary. Edifecs generates, as required, the appropriate void, replacement, and/or adjustment records. To help ensure accuracy, our data correction procedures enable the team to identify and correct encounters that failed the acceptance process. We apply lessons learned to improve the accuracy of encounter submissions and to minimize rejections as part of our continuous process improvement protocol.

Experienced Encounter Staff

Under the oversight of our local Encounter Data Integrity department manager, our centralized operational EMU is responsible for data collecting, submission, and correction processing. They are subject matter experts on claims/encounter processing systems and have detailed knowledge of HIPAA files including X12 (837P, 837I, 837D); Medicaid compliance requirements; business intelligence tools; and knowledge of analytic programming tools and methods (Statistical Analysis System, Structured Query Language, Business Objects, Microsoft Office Power Business Intelligence platform, etc.). In addition, our local dedicated EMU has over 10 years of West Virginia-specific experience. Our current team, listed below, includes one manager and dedicated staff who perform the following roles:

- Project manager acts as the health plan/state encounter liaison; manages metrics/compliance and end-to-end processing from core claim system through submission to state/federal regulator; and monitors system updates, conversions, and migrations.
- Encounter technical analyst (ETA) controls data management and reconciliation of large data sets, technical business requirements, mapping documents, and state and system testing; displays intimate knowledge of electronic data interchange transaction sets; and interacts with the state's technical intermediaries and state Information Technology departments on an ongoing basis.

- Encounter validation analyst (EVA) manages data exports for submission to state/federal regulator, regulator response file imports, reconciliation of submissions, testing of support systems and workflows, and analysis for submissions accuracy and timeliness.
- Encounter correction analyst manages claims and encounter error corrections and claim/encounter data issue identification and resolution.
- Encounter report analyst supports, develops, and maintains standard reports; creates on-demand ad hoc reports; and works with EVA/ETA to monitor data, inventories, and anomalies.

Our West Virginia-dedicated team meets regularly to review encounter exceptions, rejections, denials, file tracking, and trend reports with our Encounter Data Integrity department manager. During the review process, if our Encounters department identifies any system-related issues, we work directly with our Information Technology department and other business teams to identify the root cause for quick resolution. This joint team analysis determines if adjustments need to be made to the claims which results in resubmissions, claim adjudication system, encounter editing, or encounter processing. The feedback we receive from the Department also prompts us to review our system rules and updates, as necessary. Our dedicated plan-centric team enables us to streamline decision-making, increase accountability, and reduce risk of compliance issues.

As an incumbent managed care organization, EMU and health plan contacts work directly with the Department to address encounter-related issues, questions, and review Department bulletins to address conflicts to further ensure the quality of submissions when needed.

In 2019, our Encounters team achieved a 98.9% accuracy rate and a 99.9% timeliness rate.

Aetna understands the critical role that timely, accurate, and complete encounter data plays in the Department's ability to continuously review the health care utilization of its Medicaid enrollees, to analyze expenditures associated with that utilization, and to monitor service delivery performance with its partners. Aetna has been submitting Medicaid encounter data in

West Virginia for 10 years and our national Medicaid organization has over 30 years of experience transmitting accurate, complete, and timely encounter data to Medicaid agencies. We are dedicated to our collaborative and innovative relationship with the State, enrollees, providers, and community-based organizations, to continue to create a healthier West Virginia. We support this goal through our expertise in providing accurate and timely encounter data through technology that increases service efficiency and effectiveness, which enables us to offer our enrollees additional benefit programs and/or services.

Our expertise with West Virginia encounters, paired with our superior rate of accuracy and timeliness, has helped mitigate provider administrative burden, support our enrollees, and serve the Department as a dedicated and loyal managed care organization. We are compliant with HIPAA and all other federal and state regulatory requirements.

Encounter Certification and Reporting Process

CE008	The Vendor should describe its encounter certification process that requires its Chief Executive Officer (CEO), Chief Financial Officer (CFO) or other designee to certify the accuracy and completeness of its claims/encounter data information submitted to the Department.

Our encounter certification policy requires we comply with the West Virginia requirement that our CEO/CFO or designee attest to the accuracy, completeness, and truthfulness of encounter data. Procedurally, we validate the accuracy and integrity of our encounter data for 100 percent compliance. Our Encounter department liaison, who reports to our CEO, completes the monthly file certification process by the 15th day of each month and includes data for the previous month. Our Encounter department liaison then populates the attestation template data according to Department requirements. Our approved health plan CEO/CFO or designee then reviews this form for accuracy, and then approves and signs the form. Our Encounter

department liaison then uploads the signed form to the Department file transfer protocol for submission and a copy is also sent back to our Encounter department for tracking purposes.

Achieving Accurate and Timely Submission of Complete Encounter Data

CE009	The Vendor should describe its process that ensure complete and accurate encounter data is submitted to the Department on a monthly basis and no later than thirty calendar days after the end of the period in which the service was paid.

Our EMU monitors our submissions and the data correction process closely through Edifecs, using a series of reporting tools for both initial encounter submissions and error corrections to make sure all medical encounters are submitted no later than the 30 calendar days after the end of the period in which the service was paid.

We monitor the accuracy, timeliness, and completeness of our encounter data to make sure that we meet Department submission requirements by using a series of reports that track the following metrics:

- End-to-end financial reconciliation report tracks completeness at the encounter and financial level throughout the encounter continuum
- Weekly error reports provide detail level information by error code and aging and is used by the health plan, enrollment, vendor, and encounter staff to correct internal or external exceptions related to claim, member and provider data
- Monthly compliance reports monitor encounter timeliness and accuracy results by month of submission to ensure compliance

Additionally, all encounters that have passed through the systems internal editing, which includes HIPPA and Department-specific editing, are batched and submitted to the Department via secure file transfer protocol in the required format at least weekly, on our required submission date in order to ensure they do not exceed Department requirements.

We perform detailed encounter file reconciliation activities at both a file and encounter level throughout the submission process. These are performed for both inbound and outbound files. This validation is completed using the following series of reports:

- The status of the outbound file submission for batched encounters, the number of encounters, the status of the outbound file, and the status of the encounter with respect to different levels of acknowledgments
- The count of encounters that are accepted, rejected, or pending at different levels or tiers (999, 824, and others)
- Information regarding the percentage of accepted encounters with respect to the total number of submitted encounters

Our proactive monitoring practices ensure our data is complete and timely upon submission.

Once the files are submitted, our encounter validation analyst retrieves, analyzes, loads, and tracks State 999, the Business Rejection Report (BRR), and 824 response files, via a file tracker, to ensure all records were processed successfully. This analyst also oversees the tracking, review, and correction of rejected encounters on a first-in/first-out basis within 30 days of receipt.

We use a six sigma-based quality improvement methodology to further improve and reduce rejects, which ultimately supports timeliness. Edifecs allows management and error tracking across denial reasons, claim type, recipients, providers, claim adjudication date, and the BRR file received date.

Aetna understands the importance of submitting accurate, timely encounter data to the Department for programs, which we have demonstrated through our consistent results year-over- year for superior accuracy and timeliness. The accuracy and timeliness results summarized in **Table 6.10.1-5** below include medical, vision, and dental services.

Table 6.10.1-5: Encounter Accuracy and Timeliness

Encounter Submission Metrics	Aetna West Virginia Encounter Accuracy (%)	Aetna West Virginia Encounter Timeliness (%)
Target	95%	95%
July 2019	99.87%	99.73%
August 2019	99.83%	99.99%
September 2019	99.73%	99.92%
October 2019	99.79%	100.00%
November 2019	99.72%	99.61%
December 2019	99.80%	99.99%
12-month rolling average	99.86%	99.90%

Encounter Accuracy and Completeness Monitoring Program

CE010	The Vendor should describe its process and how they will implement a data accuracy and completeness monitoring program for its encounters that includes delegation oversight of subcontractors, as applicable.

We designed our encounter management technology solution to validate encounter files received from all subcontracted vendors (such as vision and dental) for compliance using standard HIPAA guidelines and strategic national implementation process levels 1 through 5. This system automatically performs multiple levels of validations including duplicate checks on the encounter information and provides comprehensive validation steps that ensure files are accurate and complete prior to submission. Please refer to **Figure 6.10.1-5**, which illustrates the vendor encounter submission process.

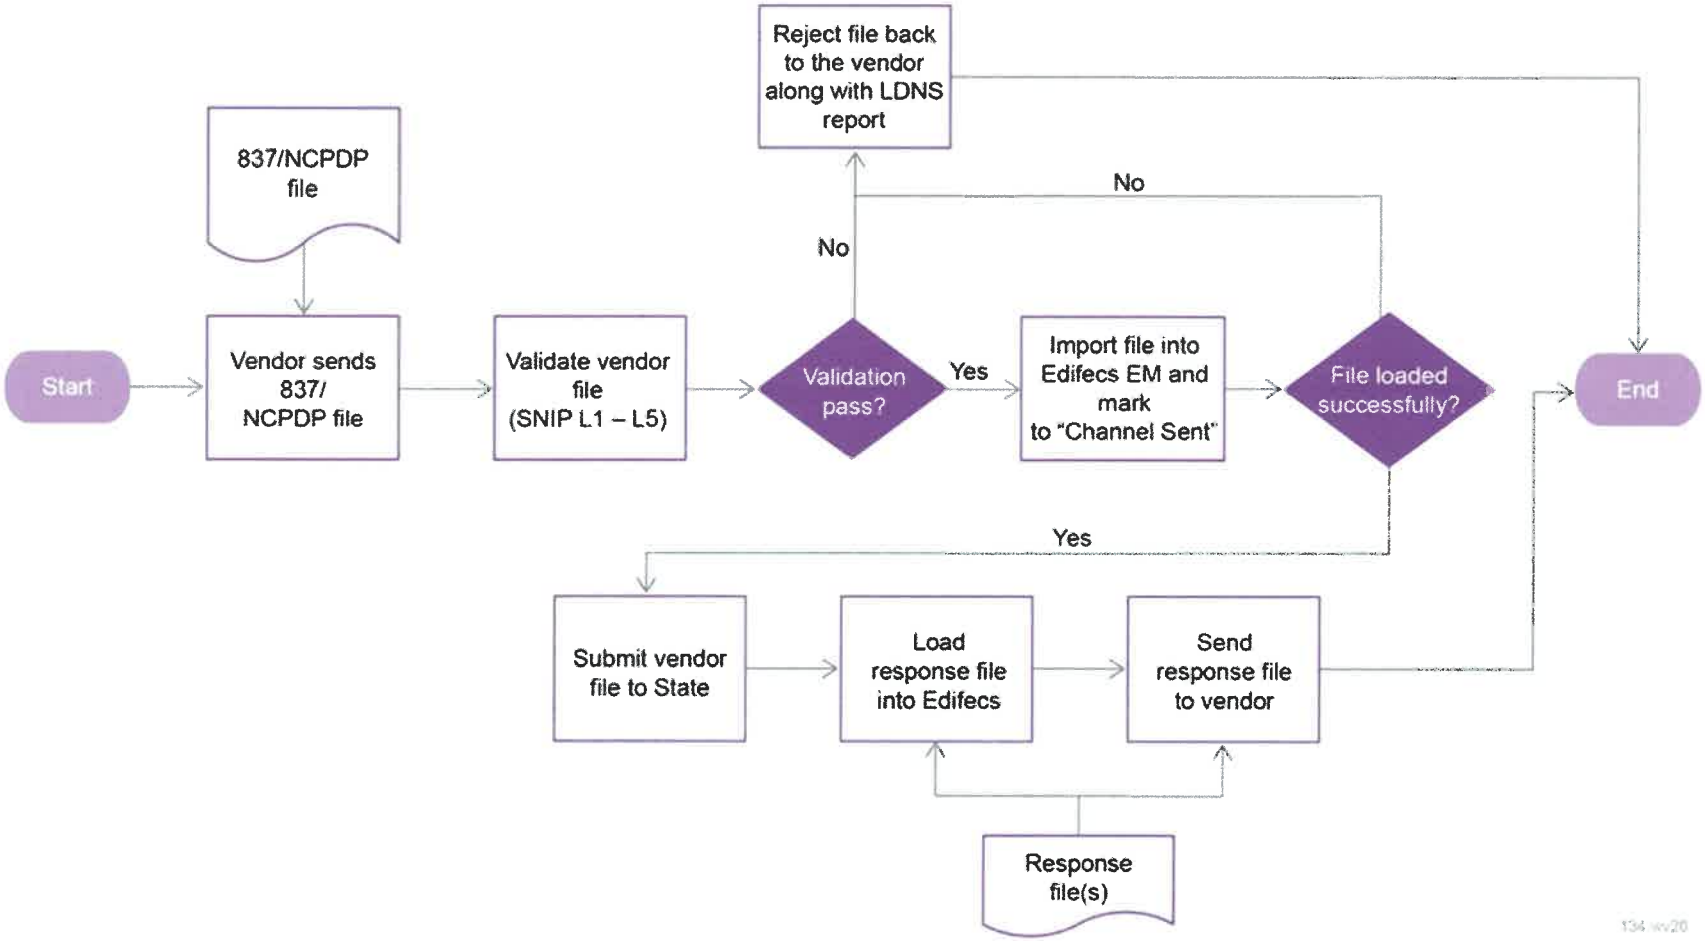

Figure 6.10.1-5: Vendor Encounter Submission Process

This figure depicts the specific encounter and validation steps we follow to ensure our files are accurate and complete prior to submission to the Department.

We administer a set of validated processes weekly to correct encounter errors we receive from the Department. Our centralized, operational EMU is responsible for data collection, submission, and correction processing. This team of claims and encounter processing system subject matter experts is knowledgeable of HIPAA requirements, State, and Medicaid compliance requirements, business intelligence tools, analytic programming tools, and our validation methods. Our EMU constantly tracks encounter errors, validates the resolution of these errors, and prepares weekly reports of the denied inventory to make sure we resolve the errors timely. The EMU meets with all subcontracted vendors regularly to review denial trends, accuracy results, and provide feedback and assistance in resolution of errors.

Subcontractor and Provider Encounter Data Submission

Timely and accurate encounter data is essential in obtaining meaningful information on members and promoting better health outcomes. Aetna actively works with and supports subcontractors and providers to address any challenges they have submitting complete, accurate, and timely data.

We initiate subcontractor training upon contract completion regarding Department billing and submission requirements. At a minimum, subcontractors meet weekly with the EMU and the health plan through the development and implementation phase. Full testing is conducted prior to production submissions to make sure all encounter requirements are being met. Post-implementation, the EMU meets regularly with the subcontractor to review denial trends, accuracy results, and provide feedback and assistance in resolution of errors.

We work with and communicate continuously with our subcontractors to promote compliance with Department requirements. To support the correction of errors, we discuss encounter and claim denials during the Joint Operating Committee meetings we conduct with subcontractors,

as well as provider groups. If subcontractors fail to submit complete, timely, and accurate encounter data, we use training, oversight, corrective action, and contractually appropriate sanctions, to address the deficiency. Our subcontractors and network providers must attest to the completeness, truthfulness, and accuracy of all claims and encounter data they submit to Aetna.

We train our subcontractors on proper encounter data submission methods, including submission frequency, acceptable data formats, accuracy, and completeness. We provide support on proper coding and present an overview of how the encounter management system enforces accuracy. We meet regularly with our vendors to ensure we address any questions and issues and to discuss error resolution. Aetna uses contractual requirements and service performance agreements to monitor provider and subcontractor compliance with all contractual responsibilities. Additionally, we train our providers during the orientation process and our local West Virginia provider services representatives provide support with the claims submission process.

Subcontractor Delegation Oversight

The EMU meets with all subcontracted vendors regularly to review denial trends, accuracy results, and provide feedback and assistance in the resolution of errors. In addition, Aetna created a delegation oversight policy that outlines how we actively monitor subcontractor performance, including non-submission of encounter data. Specifically, Aetna monitors subcontractors and providers by approving subcontractors' or providers' program operations as outlined in our quality and utilization management programs and plans. Our medical management director monitors the reports from subcontractors or providers (delegated-use

organizations) according to the delegation agreement (or contract). This medical management director then shares findings and results with our CMO.

We proactively report subcontractor or provider non-submission of encounter data to our encounter data manager, who reviews the report with the vendor oversight and relationship manager and provider services manager. Additionally, our encounter data manager prepares and delivers quarterly encounter data reports to our program manager/COO. Our vendor oversight and relationship manager and provider services manager assess the reported deficiencies and determine the best course of action. This effort includes meeting with the subcontractor or provider to determine whether the performance issue can be resolved or if escalation to the program manager/COO is necessary. If these deficiencies persist, the program manager/COO refers the matter to the appropriate committees to create a corrective action plan that includes all actions necessary to correct deficiencies. If the provider or subcontractor does not correct the problem, Aetna may impose a financial penalty or terminate the relationship in accordance with the contract.

Annual Encounter Data Accuracy and Completeness Plan

CE011	The Vendor should provide its annual encounter data accuracy and completeness plan with its bid.

Aetna's has developed and administers the following encounter data accuracy and completeness plan that includes ongoing monitoring efforts to review accuracy or integrity of the weekly encounter files and to notify the State of all identified encounter data discrepancies.

Claims/Encounters Data Policies and Procedures

Aetna contractually requires providers and subcontractors to submit clean claims to us within 365 calendar days from the date of service. This encounter data accuracy and completeness plan also includes requirements for providers to supply additional information to verify the

provider rendered covered services, the charges are usual and customary charges for such services, and the services rendered were appropriate. Our provider contracts include language referencing if the provider fails to submit claims in accordance with timely filing requirements; this failure may result in disallowance of payment and the provider must hold the member harmless. Providers must also agree to submit encounter information regarding services rendered to covered individuals when and as we request this information.

Our encounter data accuracy and completeness plan requires physicians to submit completed claims and encounter information on a CMS 1500 Form. The information to be provided includes at least the following: the covered individual's name, sex , date of birth, and Medicaid ID number; the date or dates services were rendered; CPT codes describing those services; primary and secondary ICD v10-CM diagnosis codes to the highest level of specificity; approval number for services requiring prior authorization physician's usual and customary fee for services rendered; physician's federal tax identification number; and physician's national provider identifier.

Our encounter data accuracy and completeness plan requires hospitals to submit claims for reimbursement and encounter forms on a UB-04 Form in accordance with the current Medicaid guidelines. Hospital must submit bills to us within 365 days of the date of discharge. A hospital may not bill us for inpatient covered services prior to the date of discharge and cannot separate bills for covered services for purposes of additional payments.

Weekly Submission and Review

Weekly HIPAA-compliant encounter files are submitted to Department's claims fiscal agent and its applicable subcontractors. In order to achieve the accurate and timely submission of complete encounter data, consistent with the Department's required formats, Aetna transmits all

encounter data utilizing HIPAA-compliant 837 Institutional (I), Professional (P), or Dental (D) electronic formats. Our validation begins with the delivery of services; we require all participating providers to submit all encounter services with the appropriate codes. Our QNXT system validates member data, provider data, and current coding protocol, including validation of ICD v10-CM diagnosis, CPT codes, HCPCS codes, revenue codes, modifiers, place of service, and type of bill. Secondary to our QNXT system, our encounter data management system offers further validation as well as accurately and consistently tracking encounters throughout the submission continuum, including the collection, validation, reporting, and correction of encounter data.

Monthly Submission and Review

We submit encounters to the Department on a monthly basis on or before the 15th of the month in accordance with the proprietary format requested. We deliver two text files to the State's fiscal intermediary using a secure file transfer protocol. Our business reporting team verifies data accuracy by comparing monthly claims data.

Monthly Provider/Subcontractor Review

Our Business Reporting team completes a monthly review of all encounter files, which includes a comparison of date of service to encounter submission date to ensure provider/subcontractor compliance with deadlines. We also provide a detailed report of non-compliant providers/subcontractors to Network Management and/or a vendor manager for applicable follow-up.

We resolve all identified differences with the state's contractor and the MCO through either email or phone conferences. We also notify the Department of any discrepancies or changes as a result and corrections we make to this encounter file.

Our Network Management department or our vendor manager contacts providers/subcontractors either by mail or personal visit to review issues and develop appropriate action plans to correct any deficiencies.

Encounter Activity Reporting process

CE012	The Vendor should describe its process to submit reports to the Department that summarize the encounter activity including, but not limited to, the following:
CE013	A detailed summary of the file submission that includes total claims and dollars by service category
CE014	A detailed change log that includes specifications for any change in the claims processing system that has an impact on the representation of the data in monthly encounter files

Aetna compiles and maintains, in a centralized database, encounter-level data on the services rendered by individual providers to enrollees and submits this information to the Department through a weekly HIPAA-compliant electronic data interface encounter file and a monthly Blue Box encounter file. We submit with the proprietary Blue Box encounter file a summary of providers, services, and other pertinent data to support this file. Additionally, we submit a supporting provider to assist with the analysis of said file. All relevant Blue Box encounter file items are sourced from our management information systems and reported to the Department by the 15th day of the month for claims that were adjudicated the prior month.

We not only analyze this file on a monthly basis for internal quality control but on a quarterly basis utilize the state-defined service categorization in the state-provided templates. We compare our encounter data to similar financial quarterly data, which is sourced from the Aetna Medicaid Warehouse. We report any difference between the financial data (also reported in Department-defined templates) of 5 percent to the State. We then perform a subsequent root-cause investigation of the discrepancy and initiate a resolution process to address the identified discrepancy.

[CE013] Encounter Report Summarizing Total Claims and Dollars

By the 15th of the month, we send a proprietary monthly encounter file that contains all claims adjudicated in the prior month. Additional supplemental files and data is provided with the report including a summary of total claims and dollars, a summary of providers, a newborn crosswalk, and other pertinent information that the Department can utilize in the rate setting process. These files are then sent via secure file transfer protocol to DXC along with notification that the file is ready for transmission. The CEO certifies the data and the certification form is submitted to the Department for review. At the end of the quarter, it is the responsibility of our encounter integrity manager to compare financial claims data to encounters passed to the Department during the quarter, and in doing so, report these numbers on the quarterly monitoring reports defined by the State (please refer to **Figure 6.10.1-6** for sample CEO certification letter).

STATE OF WEST VIRGINIA
MOUNTAIN HEALTH TRUST

DATA CERTIFICATION FOR MONTHLY ENCOUNTER DATA REPORT SUBMISSION

Date of Data Submission: 01/13/2020

Data Submitted By:

FOR:

Method Of Data Transmission: X Electronic Hard Copy

I hereby certify that, to my belief and to the best of my knowledge (based on all information available to me at the time such data was submitted), the data contained in the [illegible] report submission by Aetna Better Health of West Virginia was accurate, complete and truthful, and that it had no known or suspected material limitations or imperfections unless described in detail in a statement with that submission.

I further certify that I have authority to sign this certification on behalf of Aetna Better Health of West Virginia.

Aetna Better Health® of West Virginia - *Important Information*

Pages: 2 Including Cover

We have added important information to our provider website. Visit the website at www.aetnabetterhealth.com/westvirginia/providers, click on *Document Library* on the left hand side then click on *Provider News*. The following information has been added

- 2019 Member Satisfaction Results
- 2019 Medical Record Review Results
- 2020 Important Information for Practitioners and Providers, which includes information on
  - Appointment Access Requirements
  - Utilization Management – how to contact UM, how decisions are made, and how to obtain criteria
  - Population Health and Integrated Care Management Programs
  - Who to contact for pharmacy questions
  - Member Rights & Responsibilities
  - Family Planning and Direct Access to Women's Health
  - Advanced Directives
  - Importance of Continuity and Coordination of Care
  - Clinical Practice Guidelines
  - Second Opinions, Out of Network Care, and Hours of Operation Parity
  - How to report suspected Fraud and Abuse

Your updated Provider Manual is also available on our provider website

If you do not have internet access, please contact your Provider Relations Representative for a printed copy of anything on our website

Thank you,

Provider Relations Department

Figure 6.10.1-6: Sample CEO Encounter Report Certification Letter

Aetna is committed to meeting and exceeding our contractual obligations to the Department, and we back up this commitment with validated and transparent business processes.

[CE014] Claims Processing Change Log

Our claims processing system specification changes are logged and tracked to ensure every change is completed accurately and efficiently by following our established procedures and

policies. We use a system change request to complete these system updates when new requirements and/or modifications to existing setup are made due to an amendment or modification of requirements. This includes any changes to an existing benefit, contract, or fee schedule that has not been already communicated through a previously submitted system change request. This process is managed through our change control tool and follows our change management process, which provides a structured, flexible, and fully recoverable framework in which to implement and manage system change releases on schedule and per federal, state, and contract-specific requirements. Our change management process includes the following steps in the application development process:

- Analysis
- Development
- Peer review and testing
- Approval prior to implementation into production
- Post-implementation validation to ensure all impacted production systems are functioned as designed by the change requirements

Our CSRA department is responsible for all aspects of system configuration from receipt to promotion to production. This process includes logging all submitted system change requests and issue identification form into our workflow tracking system upon receipt, as well as performing analysis of current setup and needed changes, documenting the findings and solution, routing for appropriate approvals, and completing the updates in the appropriate development environment.

Our Medicaid Program Solutions team performs validation tests to confirm the requested changes have been configured correctly. After the development build is approved, the CSRA department initiates the promotion request for the Information Technology department to promote changes to the production environment. When appropriate, CSRA department staff

runs a post-production query to identify impacted claims. The requestor is then notified that the requested changes have been completed.

When we identify impacted claims, we open a project and the claims are adjusted accordingly. We track these claim adjustments within the audit trail of our claims processing system and our monthly encounter file data will reflect the impacted claim adjustment changes.

Encounter Data Reconciliation Process

CE015	The Vendor should describe its process to reconcile encounter data submitted to the Department with the financial data that it reports on a quarterly basis, including a narrative explaining any difference of five percent (5%) or higher.

As defined in the contract reporting requirements, Aetna currently submits the encounter and financial data reconciliation report to the Department on a quarterly basis within 45 days within the end of the quarter. Data for this report is pulled 30 days after the end of the quarter from the Aetna Medicaid organization data warehouse in combination with the encounter database by our encounter liaison. We update our prior quarter data with runout transactions to the date of run report. We then research, report, and rectify any difference in the report that exceeds 5 percent within 30 days.

Since implementation of the electronic data interface encounter file process, there was only one instance in February 2017 where our encounter reconciliation outcome resulted in a difference greater than 5 percent. This issue was quickly resolved, and since that time, we have met our timeliness and accuracy performance requirements every month.

From a performance improvement perspective, our Encounters team continues to identify methods to quickly identify National Provider Identifier holds and other internal holds and report them to our encounter integrity manager for quick resolution. By performing this and other

monthly reviews of our inventory, we are able to discuss solutions and determine action items for resolving outstanding encounter errors.

11. Program Integrity

The Vendor should refer to the business specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Program Integrity (PI) as part of their bid. The Vendor's narrative response should not exceed 50 pages.

Aetna understands, acknowledges, and complies with all applicable federal and West Virginia laws and regulations including, but not limited to, state and federal fraud, waste, and abuse (FWA) regulations including West Virginia Code §9-7-1 *et seq.*, 42 C.F.R. part 455, 42 C.F.R. § 438.608, and Section 6032 of the Federal Deficit Reduction Act of 2005 and those detailed within business specifications located in Appendix 1: Detailed Specifications and pertinent narrative in Section 4: Project Specifications in this RFP. We take our role as a steward of finite Medicaid Mountain Health Trust taxpayer-funded appropriations very seriously with a commitment to identifying and preventing FWA.

Aetna has taken the stewardship role seriously as a state partner for over 23 years. We continue to elevate the awareness through staff and provider education on prevention, detection, and reporting FWA. Overall, Aetna has demonstrated successful collaboration with 16 state and federal FWA oversight agencies. In West Virginia, we routinely collaborate with other Medicaid managed care organizations (MCOs), Department of Health and Human Resources (Department) Office of Program Integrity (OPI) within the Bureau for Medical Services (BMS), the Medicaid Fraud Control Unit (MFCU) that just recently moved under the West Virginia Attorney General's office, and the U.S. Attorney's Office to detect, deter, and eradicate FWA.

At Aetna, enrollees are at the center of everything we do. Our **local, enrollee-centered approach** focuses on individuals' holistic health needs by providing access to and delivery of cost-effective health care services. We focus on practices that are inconsistent with sound fiscal

business or medical practices that result in unnecessary cost to the State's Medicaid program. **Our program integrity (PI) initiative is supported by our unique local leadership and Aetna Medicaid organization that offers 30 years of national, robust experience in 16 states.** This translates into a robust PI program that consists of written policies, procedures, practices, and standards of conduct that proactively prevent FWA.

Detailed Summary of Program Integrity Plan

PI006	The Vendor should provide its compliance plan with clear goals, timelines, assignments, and measurements as outlined by the Department.

Aetna's compliance plan is the foundation of our PI effort in accordance with state and federal requirements. Our compliance program is derived from the U.S. Department of Health and Human Services (HHS) Office of the Inspector General (OIG)'s Seven Elements of an Effective Compliance Program as they appear in 42 CFR § 438.608(a)(1).

Annually, Aetna, both nationally and in West Virginia, prospectively evaluates our compliance program through a risk assessment containing:

- All Medicaid-related business operational areas by types and levels of risk to Medicaid and Aetna
- External factors including information provided in OIG Annual Work Plan, external audits/reports, etc.
- Functional level risk assessment with Medicaid business partners: providers, vendors, internal audit, and subcontractors
- consideration both external and internal factors utilizing a combination of objective and normative measures

Once applied, Aetna's Medicaid Compliance Risk Assessment Tool results in high-, medium-, and low-risk priorities. Risks can include regulatory or contractual requirements and associated implementation of new programs or new technologies. The risk areas drive the prioritization, including monitoring and audit activities, of the Medicaid Compliance Work Plan. Aetna's risk assessment results are shared with Medicaid senior leadership by Compliance Lead, Alva

"Fuzzy" Page, III through the Medicaid Compliance Committee as well as business teams to ensure key areas of concern are appropriately considered and addressed.

Aetna's annual compliance plan including our FWA plan is submitted by October 1 to BMS. The FWA plan comprises all required contract elements including the following:

- Reviewing and auditing operations to guard against FWA
- Verifying services provided to enrollees
- Reviewing claims payment internal controls to ensure proper claim processing and payment
- Educating employees, network providers, and beneficiaries to identify and report FWA
- Effectively organizing resources and procedure to investigate and report FWA schemes and allegations
- Developing procedures to monitor service patterns of providers, subcontractors, and enrollees

Program Integrity Goals

Our core values of excellence and integrity promote responsibility and accountability in the delivery of high-quality, cost-effective health care. Across all of Aetna's national Medicaid managed care health plans, we collectively discuss collaborative learning and planning for the next year's activities to inform our West Virginia-specific compliance and FWA goals. Our goals include **a zero-tolerance policy toward FWA,** uncovering through the use of every available method all instance of FWA, giving close attention to evolving trends and current procedural terminology (CPT) codes or other emerging schemes and using what we have learned to emphasize prevention and reduction of FWA risks in concert with BMS and MFCU; ensuring all instances of possible FWA are referred to the BMS and MFCU promptly as prescribed by the Department. The core PI values and commitments are consistently communicated to employees beginning at their onboarding/new-hire training through a variety of means, including email communications, our website, and during town hall and departmental meetings.

Aetna's Program Integrity Mission

To protect the health and financial wellness of the people we serve by leading the fight against health care FWA as we help to build a healthier world.

Aetna ensures applicable subcontractors implement and maintain a compliance program and our processes and those of any subcontractors include internal controls, policies, and procedures to detect and prevent FWA. In accord with the OIGs seven elements of an effective compliance plan, our efforts focus on the following:

- Written policies, procedures, and standards of conduct that articulate the organization's commitment to comply with all applicable requirements including state and federal regulations
- The designation of a compliance officer who is responsible for developing and implementing policies, procedures, and practices designed to ensure compliance with contract requirements
- The establishment of a Regulatory Compliance Committee on the board of directors and at the senior management level charged with overseeing the organization's compliance program
- A system for training and education for the compliance officer, the organization's senior management, and the organization's employees for the federal and state standards and requirements under the contract
- Effective lines of communication between the compliance officer and all employees
- Enforcement of standards through well-publicized disciplinary guidelines
- Establishment and implementation of procedures and a system with dedicated staff for routine internal monitoring and auditing of compliance risks

Our Special Investigations unit (SIU) protocols include the routine internal monitoring and auditing of compliance risks. These protocols enable prompt response to compliance concerns, investigation of potential compliance issues as identified in the course of self-evaluation and audits, correction of such matters promptly and thoroughly (or coordination with law enforcement in instances of criminal acts) to reduce the potential for recurrence, and ongoing compliance with the requirements under the contract.

Compliance with Required Timelines

Throughout our collaboration as a Mountain Health Trust MCO we have demonstrated compliance and continue to promptly comply with BMS and MFCU timeline requirements in providing all required reports and information requests. We understand that extensions may be necessary to respond to an RFI. When that is the case, Aetna promptly requests an extension and responds to the request within the adjusted timeframe granted by MFCU and/or BMS OPI. Aetna submits to

BMS program integrity activities by the 15th of each month the Suspension and Adverse Enrollment Action during the prior calendar month, as noted in the contract for all in-network providers:

- Suspensions, terminations for cause, and provider credentialing denials and non-renewals for cause.
- Notification from the Department or learning that a network provider has been suspended based under § 1128(b)(8), as amended, of the Social Security Act or terminated from participation in a Medicaid program
- All providers on Federal List of Excluded Individuals or Entities (LEIE) Database

Aetna continually monitors its provider network and confirms the Department's standards are met, notifying Department of any additions or changes to the network. These required timelines are built into our FWA reports, policies, and procedures and strictly follow our compliance plan. We also understand and comply with requirements to notify BMS of program integrity staff vacancies or absences of longer than 30 calendar days.

Aetna notifies BMS of all incidents of suspected FWA including those referred to an entity other than BMS, such as licensing, prescribing authorities, and/or other disciplinary bodies. In 2019, **Aetna met the response timeline requirements of all 253 BMS/MFCU requests with only four extension requests** necessary to receive data/information outside the scope of SIU operations. Aetna has complied with the timeline for BMS suspension of a provider:

- One business day of notice by BMS, confirm receipt
- Payments suspended within 3 business days

Compliance Staff Assignments

As our compliance program describes, our compliance officer, **West Virginia native Alva "Fuzzy" Page III, Esq.,** reports to CEO Todd White and the board of directors. In her role as **program integrity lead for Aetna, Shannon White-Metz** is responsible for serving as the primary contact person for all BMS program integrity (PI) inquiries and concerns as well as

leading all PI efforts for the health plan. The responsibilities of the compliance officer include maintaining effective lines of communication with our staff by way of meetings and brown bag sessions. In addition, Mr. Page engages in open door sessions whereby West Virginia plan staff from across the organization can discuss PI and FWA concerns or any compliance-related questions. Located in Charleston, Mr. Page is the point of contact for the Department as well as internal Aetna staff regarding compliance and program integrity. Aetna currently has three full-time SIU staff dedicated to West Virginia. The PI staff identified in **Figure 6.11.1-1**, located in West Virginia, works directly with the SIU and Compliance teams regarding FWA activities and Aetna's local prevention and detection efforts. In collaboration with Compliance, this team also works with the SIU West Virginia team on timely responses to Department requests for compliance information. Our three West Virginia-based SIU investigators, with one per 60,000 or fewer enrollees, including native West Virginian Shannon White-Metz, **are 100 percent dedicated to our West Virginia enrollees,** Medicaid health plan and report directly to the health plan CEO. All company issues, suggestions, and communications are submitted to a compliance inbox and addressed accordingly.

Program Integrity staff, at a minimum, perform the following duties:

- Initiate investigations and develop FWA cases for future action
- Follow up appropriately on program integrity leads from BMS
- Execute and respond to RFIs, including the following:
  - MFCU data and documents requests
  - Execute and respond to RFIs from BMS or other state actors
- Act as the point of contact for program integrity deconfliction
- Participate in West Virginia-based training, task forces, and other relevant meetings

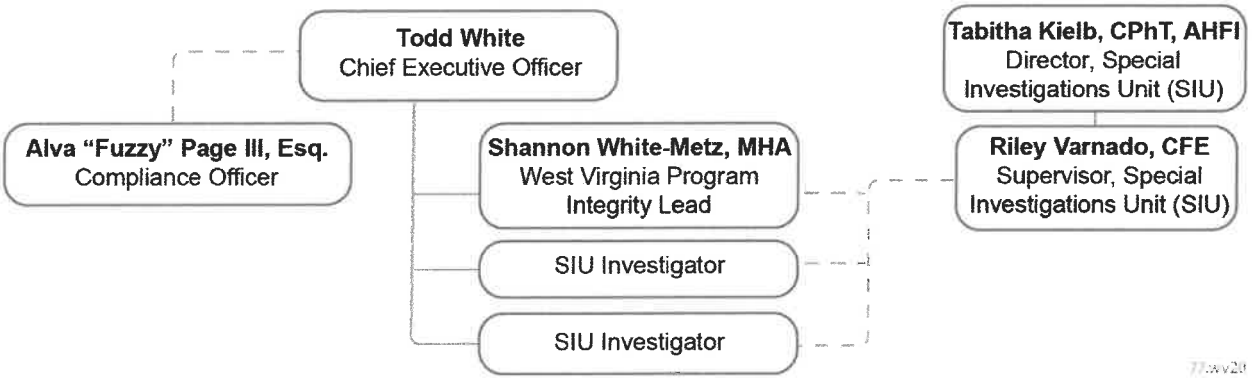

Figure 6.11.1-1: Program Integrity Organizational Chart
Our FWA reporting structure ensures responsible oversight and executive input.

The Aetna Enterprise's Board of Directors Regulatory Compliance Committee oversees plan compliance activities to ensure adherence to contractual requirements, as well as state and federal regulations. They review audit findings and other compliance efforts and report to the board. This committee is comprised of the health plan chief executive officer, chief financial officer, and two appointed board enrollees.

At the senior management level, Mr. Page chairs the Regulatory Compliance Committee, which meets at least quarterly to review trends, data mining, allegations of FWA as well as risk and risk mitigation, training (compliance and FWA), and contract compliance issues. In addition, Aetna has monthly FWA meetings to address schemes and trends, ongoing investigations, implementation of FWA prevention policies and provider education, restitution/overpayment, or contractual action. The committee is comprised of leadership from Medical Management, Quality Management, Health, Provider and Member Services, Grievance and Appeal, Pharmacy, Operations, and the SIU. The PI/SIU staff make presentations to the committee to create awareness of potential risk and further identify trends and/or prevention opportunities.

The committee may discuss potential compliance gaps and reports any instances of quality noncompliance to the Quality Management Oversight Committee.

Our PI team receives support from the Aetna Medicaid organization's national SIU team. We have **144 national full-time staff dedicated to FWA with hundreds of years of experience, including the three investigators dedicated specifically to West Virginia**. The SIU staff collaborate and share their expertise and best practices gained as FWA industry experts and across Aetna lines of business. In addition to supporting the health plan, the SIU team also identifies schemes occurring in other Medicaid plans, then can data mine for those schemes within Aetna. Working collaboratively creates synergy with our corporate investigators w improving Aetna's ability to detect and remedy incidents of FWA. For example, if a provider improperly bills Medicare, investigators check all lines of business for the same allegation, including Medicaid. Similarly, Aetna's national Medical Economics committee advises the local health plan regarding current trends and schemes occurring around the country such as identification of overbilling of urine drug screens (UDS) related to the opioid crisis.

Aetna's West Virginia UDS Industry-leading Initiative Results in Significant Cost Savings

Aetna was at the forefront of uncovering a national fraud scheme related to unnecessary urine drug screens (UDS) as part of the opioid crisis. Aetna identified large utilization spikes of both definitive and presumptive screening. Aetna's PI lead, Shannon White-Metz, after conducting a detailed analysis, presented data to the FWA committee and our chief medical officer/medical director, Dr. Donald Gibbon.

As conscientious stewards of finite state resources, we were the first to uncover this national issue. As part of the analysis we saw prior year treatment had dropped off significantly and providers focused on testing rather than treatment. Through policy development, we helped redirect providers to change their focus to treating enrollees versus testing.

Our West Virginia SIU worked in concert with Medical Management and proposed the state develop a policy to addresses UDS overutilization within the Suboxone® programs. Cost savings for one CPT code (G0483) out of the 7 codes identified in the UDS policy was over $4 million:

- **2017**: 20,675 (claims) $4,503,357.00 (paid)
- **2018**: 2,956 (claims) $587,847.00 (paid)
- **2019**: 302 (claims) $53,399.00 (paid)

After other Mountain Health Trust MCOs asked BMS for Aetna's UDS policy, they enacted a new policy based largely on Aetna's policy in July 2018, requiring all Medicaid MCOs to follow.

Measuring Program Integrity Success

We use auditing and monitoring tools such as sophisticated, market-savvy technology to measure compliance with program requirements and achieve success while we meet program goals and timelines. Aetna collaborates with RFIs that have led to provider prosecutions and recovered dollars. We typically are at the top of dollars brought back and shared with the state, partially because Aetna has more substantial enrollment of more complex care enrollees and experience higher claim volume than other MCOs.

A recent success involved our SIU investigation of a provider billing unlisted molecular pathology (CPT code 81479) often used in testing for cancer and cystic fibrosis. Through this investigation we uncovered a national fraud scheme that extended to reviews by the OIG and other national carriers. Medical records reviews by the West Virginia Chief Medical Officer/Medical Director, Donald Gibbon, DO confirmed the tests were not medically necessary. Aetna Medicaid's National Code team addressed the management of the CPT code and the SIU collected the provider overpayments.

Administrative and Management Arrangements and Procedures to Detect, Prevent, Investigate, and Report Potential FWA

PI001	The Vendor should describe its administrative and management arrangements or procedures that are designed to detect, prevent, investigate, and report potential fraud, waste, and abuse (FWA).

Our robust PI procedures are designed to reduce or neutralize the deliberate misrepresentation of need or eligibility for services; providing false information concerning costs or conditions to obtain reimbursement or certification of services that are not medical necessary; or claiming payment for a service that was never delivered or received. Our major FWA activities include the following:

- **Detection:** using proactive data analysis to identify providers, members, and staff of interest based on behaviors within their peer groups
- **Prevention:** of FWA actions from occurring in the first place and includes prepayment claim review to avoid payments and deter service payment from occurring in the first place
- **Investigation:** thoroughly exploring historical/current provider billing/practice behavior including identification of new risks and schemes, as well as potential patterns or isolated instances of FWA based on historical knowledge
- **Reporting:** operational and financial results reporting, and mandated State and federal fraud reporting related to internal and external stakeholders

Aetna uses a variety of techniques, analysis, and technologies to detect, prevent, investigate, and report questionable billing practices and avoid fraudulent claims payments, including business intelligence software to identify providers whose billing, treatment, or enrollee demographic profiles differ significantly from those of their peers.

Active Collaborative Engagement in Program Integrity

Aetna is an active and major contributor in monthly collaboration calls and quarterly meetings with other Medicaid MCOs' SIU staff to share information about fraud schemes and other relevant issues.

Aetna SIU fosters a comprehensive approach to addressing both enrollee and provider fraud by leveraging all available data sources to detect emerging fraudulent patterns. When we receive an enrollee or provider allegation and/or referral, we validate the allegation and determine if further action is required.

Detecting and Preventing Provider FWA

Aetna incorporates numerous procedures, methods, and tools to proactively detect incidents of FWA using algorithms, fraud detection software, investigations, and record reviews. Our

oversight and monitoring programs verify adherence to Aetna, state, and federal policies. We use proactive data analysis to identify providers based on behaviors and questionable billing practices and to avoid fraudulent claims payments. Aetna runs weekly reports and manually review 100 percent of all claims submitted with dollar amounts of $50,000 or more and paid amounts of $30,000 or more. Investigators review data mining reports and take appropriate action.

Aetna Prepayment Policy

Any provider identified as a possible prepayment case is reviewed with health plan senior leadership. If approved the information is sent to the Department PI, not for approval, but as information and a letter is sent to the provider. Aetna has processes in place to ensure that providers are put on prepayment review only for claims relevant to identified concerns so that other claims are not delayed unnecessarily or punitively. We monitor the providers on prepay to safeguard they do not stay on prepay for long periods of time (i.e., no 'payment purgatory').

Aetna Medical Directors, PA and UM staff review claims to determine if the provided documentation supports the billing, if billed charges are necessary and reasonable, and to identify non-covered services and supplies and inappropriate and undocumented charges. Our claim system and editing process edits for the following: member data (e.g., age, gender), provider data, current coding protocol, assistant surgeon, place of service, type of bill, medical visit logic, medical unlikeliness, DME, new-visit frequency, and professional, technical, and global services. Examples of red flags that may trigger further investigation include the following:

- Discrepancy between the submitted diagnosis and the treatment
- Claims that are resubmitted with coding changes to gain benefits
- Alterations on claim submissions
- Questions about the medical necessity of services rendered
- High volume or high percentage of dollars paid in one or two procedures
- Providers using a post office box as their service address

We incorporate our policies and procedures for credentialing including related to disciplinary action for members, providers, and staff as a deterrent to FWA. Claims system edits are designed to prevent, reduce, and detect potential FWA. These edits can include checks for the following:

- Covered services
- Duplicate claims
- Duplication of services
- Enrollee eligibility
- Invalid procedure codes
- Medically unlikely services for age or gender
- PA
- Upcoding or inappropriate bundling

Detecting and Preventing Enrollee FWA

Aetna helps our members with numerous means to protect them against identify theft, including but not limited to verification of services received. This includes our identification and flagging popular durable medical equipment (DME) back braces that were part of a telemarketing scheme that was driven by identity theft. Aetna's approach to preventing enrollee FWA is multifaceted and promotes enrollee safety and quality outcomes.

Examples of Member Fraud

- Loaning or using another person's identification card to get medical services
- Changing or forging an order or prescription, medical record, or referral form
- Selling prescription drugs or supplies obtained under health care benefits
- Providing false information when applying for benefits or services
- Using transportation services to do something other than medical services
- 'Doctor shopping' for prescriptions
- Overuse of emergency room (ER) for treatment of non-emergency conditions
- Residing in one state while using benefits for another state

Investigating FWA

Once FWA is detected, our SIU staff is responsible for the investigative process, depicted in **Figure 6.11.1-2**, and reporting to the Department. After the investigation is complete, a final report is presented to the compliance officer and the FWA Committee. The committee reviews the case and develops a CAP. If we find a credible allegation of fraud (CAF) at any point in the

process, the case is reported to the Department. For each allegation that warrants full investigation, the investigation is conducted in accordance with 42 C.F.R. §455.15 and §455.16.

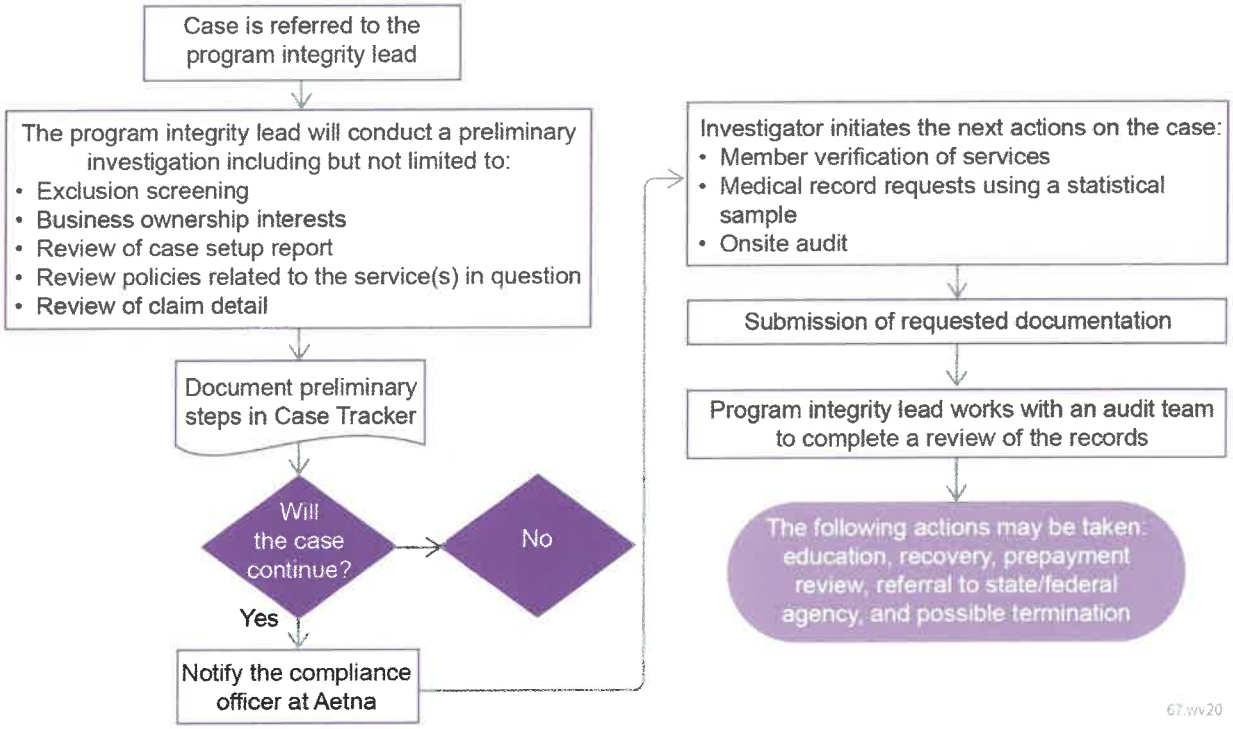

Figure 6.11.1-2: Program Integrity Process Flow
Aetna's program integrity lead plays a key role in investigating health care FWA.

Reporting FWA

All new employees receive initial CVS Health FWA training within their onboarding experience, which also includes extensive coverage of FWA prevention, detection, monitoring, and investigation details. The new employee and subsequent annual FWA training highlight Stark Law and anti-kickback requirements.

Aetna has a variety of tools designed to identify and prevent and FWA, including the following:

- A dedicated toll-free 24-hour telephone hotline, CVS Health Ethics Line, accessible to any stakeholder (including staff, enrollees, and providers) for making confidential, anonymous, and non-retaliatory verbal reports of actual or suspected FWA
- An email address and web form for enrollees and providers to report FWA
- Easy internal online access for staff to report FWA concerns confidentially to the SIU

- Information on the intranet for staff about how to report concerns to the U.S. Department of Health and Human Services, OIG, MFCUs, or other regulatory agencies

Special Investigations Unit Policies and Procedures

PI002	The Vendor should describe its Special Investigations Unit (SIU) policies and procedures for identifying and investigating potentially or suspected fraudulent behavior, and its criteria for referring such behavior to the Department.

Aetna staff provides reports of, suspected FWA by enrollees, staff, subcontractors, providers, and others business entities through monthly reporting:

- FWA report, including overpayments recovery
- Provider suspension and adverse enrollment actions
- Quarterly data mining report for detection

2019 West Virginia Program Integrity Results
QNXT cost avoidance savings: **$27,691,462**

Fraud Referral Criteria

Aetna SIU investigators refer to the West Virginia BMS-PI Department credible allegations of fraud with substantial supporting evidence validating the provider fraud. If the investigator has an allegation they cannot validate, yet details of the allegation are substantial, they refer the allegation to the Department. Referral processes are set forth within our FWA training for all new Aetna staff as well as within policy and procedure 3000.40: Deficit Reduction Act and False Claims Act Compliance Requirements.

SIU Processes

All SIU referrals are put into the case tracking system as depicted in our SIU process flow **Figure 6.11.1-2**. Our SIU processes are defined in 37 desktop procedures and 24 SIU policies and procedure documents. These begin with the SIU Overview and Case Set Up documents and conclude with our Case Referral and Collection of Overpayments procedures.

SIU Investigative Tools

Our rules-based claims adjudication system QNXT maintains and processes health care administration data, providing increased efficiency. The provider module contains a unique

provider identification number generated by the system, plus all billing and tax reporting information. The claims module shows the date of receipt, the history of actions taken on the claim, and the date of payment, including the check number. QNXT scrubs/edits data for accuracy during claims processing and payment. The Aetna national Medicaid organization's Claim Quality Control department independently assesses the effectiveness of the Medicaid claims system configuration and claim procedures against the resulting adjudication process.

Aetna's 2019 program integrity efforts included the following:

- Timely filing based on state and provider contractual rules
- Eligibility denials
- ClaimCheck: a coding audit and editing system that is fully integrated with QNXT
- Authorization requirements
- Front-end claim line denials: specific lines of service that were denied during claim processing due to health plan coverage and or claims processing rules
- Front-end claim denials: whole claim denials during claims processing due to health plan coverage and/or claims processing rules
- Cotiviti claim denials: claims sent to Cotiviti for coding audit and editing pre-payment

Our claims system has edits that deny claims for duplicate claims, unknown services, unknown members, members ineligible to receive services, improper coding, and providers not eligible to provide services. During post-processing review of claims, we produce reports that show overlapping dates of service to determine if any claims have been submitted and were adjudicated for services that did not fail the claim edit logic. To prevent improper payments, we implemented the National Correct Coding Initiative (NCCI) edits as part of claim pre-payment reviews. The provider contract helps determine which of the claim edits to apply. During the pre-payment claims review, we use NCCI edits to evaluate billing of CPT codes and Healthcare Common Procedure Coding System (HCPCS) codes listed on claims submitted by Medicaid providers. Use of NCCI edits decreases the number of overpayments as well as FWA.

The QNXT data (and legacy claims payment data) used by Aetna's SIU through the Universal Web Information Directory (UWID) system. UWID is a decision support and reporting system that authorized Aetna SIU staff uses. There are 45 unique static reports across enrollee, provider, pharmacy, and dental data. In 2019, we ran more than 4,500 reports in the UWID system.

Data Analytics to Identify FWA

The data analytics of all Aetna plans are shared between the plans (commercial, federal, Medicare, Medicaid, et al) to leverage the information on common providers and provider types.

This information sharing leads to cost reductions for analytics and in the process of 'pay-and-chase' methods of recoveries. Aetna's SIU analytics group runs case- and scheme-specific reports using Structured Query Language, Statistical Analysis System software, and Crystal reporting technology to support current investigations and identify new cases. The SIU performs ongoing reviews of the plan to identify high-dollar specialties, high utilization providers, and procedures codes. These ongoing reviews suggest to the SIU investigators which specialties/providers/codes to review for outlier behavior, which is indicative of FWA.

In addition, quarterly, the SIU analytics group runs a minimum of 25 outlier reports of known categories of fraudulent schemes, such as up-coding, double billing, and billing for services that were not provided, based on specialty and CPT codes to identify the top providers of certain services. For example, services related to ER usage by high utilizers, home health, and DME are at high risk for fraudulent behavior and are included in the quarterly report presented to the plan investigators. At data mining meetings, SIU staff, the SIU medical director, and certified procedural coders discuss and prioritize data mining studies to better analyze trends and schemes identified through various sources. These sources provide information which factors

into future updates of the compliance plan and operational procedures, as well as updated and new algorithms. SIU investigators review the data mining report and take appropriate action.

Aetna's SIU also receives and uses leads provided by the Aetna Enterprise Analytics Fraud team. Our data analytics system provides efficient and proactive discovery of new fraudulent schemes, allowing for near real-time prepayment review capabilities to flag suspicious claims prior to adjudication.

Aetna enhances our SIU data mining efforts with Health Care Fraud Shield (HCFS), a customizable (at the health plan level) platform, applicable for both pre- and post-pay, that comes equipped with approximately 600 health care business rules and algorithms maintained and updated quarterly. HCFS identifies providers with potential FWA behaviors and assigns risk scores. Aetna's SIU use the HCFS screens to visualize all FWA leads and provider billing activity as well as download the past 24 months' worth of claims. Aetna's SIU can further avoid inappropriate billing, identifies, and mitigates potential provider abrasion, and deters criminal activities by utilizing key FWA concepts. Current HCFS customers report returns from $3 to $10 for every dollar invested. Aetna completed a proof-of-concept analysis of the system in 2018, and based on those results, anticipates even greater increased FWA savings, recoveries, and prevented losses.

Collaborate with Government Agencies to Administer Effective FWA Detection and Prevention Practices

PI003	The Vendor should describe its process to work with the Department, the Medicaid Fraud Control Unit (MFCU), the Centers for Medicare & Medicaid Services (CMS), and the Department of Health and Human Services (DHHS), to administer effective fraud, waste, and abuse (FWA) detection and prevention practices.

Aetna regularly collaborates with state and federal entities to support effective prevention, detection, monitoring, investigation, and reporting of suspected FWA. We have found routine

and effective collaboration and robust relationships with state and federal regulatory entities is key to proactively curb FWA. These collaborations are a tremendous asset in effectively limiting FWA in our role as guardian of finite Medicaid dollars.

Aetna has longstanding collaborative relationships with the five bureaus within the Department gained over our more than 23-year tenure as a West Virginia-contracted MCO. We cooperate fully with the Department when requested and engage as directed, including with sister agencies of BMS, to effectively investigate and collaborate on Department issues. Aetna has established unique collaborations and solutions to improve the health and well-being of enrollees throughout the state through relationships with the following organizations:

- Bureau for Behavioral Health
- Bureau for Child Support Enforcement
- Bureau of Children and Families
- Bureau for Medical Services
- Bureau of Public Health
- West Virginia Children's Health Insurance Agency (WVCHIP)

SIU and BMS Investigative Collaboration

Aetna cooperates and assists BMS or any state or federal agency charged with identifying, investigating, sanctioning, or prosecuting suspected FWA. We investigate possible acts of FWA for all services, including those that we subcontract to outside entities. If we identify that FWA has occurred in the Medicaid program, based on information, data, or facts, we immediately notify the BMS OPI following the completion of ordinary due diligence regarding a suspected fraud or abuse case. If BMS OPI accepts the case for state investigation, we engage in investigation efforts other than coordination efforts with BMS. We understand BMS OPI must supply a notice to us of the case acceptance status no later than the tenth business day after we notify the BMS OPI of the suspected fraud or abuse. We understand we may proceed with the investigation or payment recovery efforts if we receive a notice from the BMS OPI and/or the

MFCU indicating that we are authorized to proceed with a case. Notification that MFCU does not accept the referral signifies authorization for Aetna to proceed with the case. If we have not received a response from OPI after 3 requests by us or within 45 calendar days of submission of referral, we may proceed with its investigation up to and including recoveries. As a collaborative partner for over 23 years, We have routinely assisted the Department in complying with federal audits when requested.

Collaboration with the Department and Medicaid Fraud Control Unit

In accordance with 42 CFR § 438.608(a)(7), Aetna's Program Integrity Lead, Shannon White-Metz, reports to the Department and any appropriate legal authorities any evidence indicating possible FWA by a participating or non-participating provider by referral to MFCU from BMS. Aetna assists BMS and MFCU with identifying, investigating, sanctioning, or prosecuting suspected FWA. We investigate possible acts of FWA for all services, including those that we subcontract to outside entities. If we identify that FWA has occurred in the Medicaid program, based on information, data, or facts, we immediately notify the BMS OPI following the completion of ordinary due diligence regarding a suspected fraud or abuse case. If BMS OPI accepts the case for state investigation, we engage in investigation efforts other than coordination efforts with BMS. We understand BMS OPI must supply a notice to us of the case acceptance status no later than the tenth business day after we notify the BMS OPI of the suspected fraud or abuse. We understand we may proceed with the investigation or payment recovery efforts if we receive a notice from the BMS OPI and/or the MFCU indicating that we are authorized to proceed with a case. Notification that MFCU does not accept the referral signifies authorization for Aetna to proceed with the case. If we have not received a response from OPI

after 3 requests by us or within 45 calendar days of submission of referral, we may proceed with its investigation up to and including recoveries.

If we establish a credible allegation of fraud and or scheme exists, we refer it for review by MFCU and the Department's PI unit. The MFCU chief auditor and chief investigator evaluate the allegation for possible referral to local law enforcement. We use the prescribed reporting form with an evidence package, which complies with CMS required elements for fraud reporting. A credible allegation of fraud (CAF) is established through the SIU investigation and allegation analysis. Before acting, we send the CAF to BMS for evaluation of sanctions and to MFCU to determine if a criminal investigation is warranted.

Aetna routinely assisted the Department in complying with federal audits when requested.

As required, we provide documentation or information upon request to BMS, MFCU, CMS, and its contractors, or HHS OIG, related to any aspect of the contract, including but not limited to policies, procedures, subcontracts, provider agreements, claims data, encounter data, and reports on recoupment actions and receivables.

Our compliance officer, program integrity lead, and other Aetna staff and SIU leadership as needed, meet monthly with the Office of Program Integrity and the West Virginia's Attorney General MFCU whenever requested, to discuss the monthly PI-related reports, FWA, or overpayments in accord with state requirements. After an FWA investigation is complete, a final report including an executive summary, case notes, and recommendations, including any recovery figure, is presented to the compliance officer and the FWA Committee, when appropriate. This committee reviews the case and develops a CAP.

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

Collaboration with BMS Results in Newborn Hearing Screenings Initiative

Newborn hearing screens are required and if not performed in the hospital, pediatricians will routinely perform the screen as part of the baby's first office visit.

SIU has investigated several cases regarding providers unbundling the newborn hearing screening for separate reimbursement. The providers were all identified by billing CPT code 92586 within 1 to 5 days of the infant's date of birth during an inpatient stay billed with place of service 21. SIU found the claims were being submitted for a professional service under a licensed physician's name, when in fact, a technician performed the service.

All screenings were performed during routine newborn service (which is covered under the hospital per diem, annual percentage rate, diagnosis-related group). No professional component is required; it is limited when billed with CPT 92586.

West Virginia's SIU recommended a system enhancement to identify this unbundled coding, **resulting in savings for all Aetna Medicaid health plans of ($848,477) and $41,438 for West Virginia Medicaid.**

Collaboration with WVCHIP

As we currently interact with other bureaus within the Department and other state agencies, we will also work with Children's Health Insurance Program to address any concerns within our role as protective stewards of finite Medicaid funds related to potential FWA.

Collaboration with the Centers for Medicare & Medicaid Services and other National and Federal Entities

We stay current on FWA trends, schemes and regulatory changes through CMS fraud alerts and related articles/presentations, trainings, and forums and by participating with the CMS Healthcare Fraud Prevention Partnership and the NHCAA, for which Aetna is a founding member. Regular review of the OIG TIPs report. We also participate in the National Association for Medicaid Program Integrity and multiple health care anti-fraud task forces at state and federal levels.

Aetna is a founding member of the National Health Care Anti-Fraud Association. Senior Director of Special Investigations Richard Statchen has served on the board since January 2019.

In support of FWA monitoring, our Provider Services department verifies provider eligibility by checking providers against sources such as the West Virginia licensing board, Drug

Enforcement Administration (DEA) Clinical Laboratory Improvement Amendments, Death Master File from Social Security, and CMS National Plan and Provider Enumeration System, as well as the National Practitioners Data Bank, OIG LEIE, and the System of Award Management, on a monthly basis. The Compliance department sends these lists to the SIU and plan-level Credentialing department. If a provider appears on one of these lists, the Provider Services and Member Services departments collaborate to remove the provider and reassign the enrollee.

Maximizing Aetna FWA Resources

PI004	The Vendor should describe how they will maximize resources for fraud, waste and abuse (FWA) issues.

Each Aetna employee has a role to play in preventing and detecting FWA, as we take our role as stewards of finite West Virginia Medicaid resources seriously. Our program integrity program design and infrastructure leverage national resources and expertise within Aetna, including our 15 other affiliate Medicaid health plans as well as internal departments such as Utilization Management and Quality Management, to maximize efforts to locate FWA wherever it exists. Our PI team, including Program Integrity Lead Shannon White Metz and Compliance Officer Alva "Fuzzy" Page III, Esq., exhaustively review internal processes, maximizing our expert staff and resources as we collaborate with BMS, to develop protocols for our internal staff to best participate in FWA prevention and detection processes. In this spirit, each employee—including CEO Todd White and Chief Medical Officer/Medical Director Dr. Donald Gibbon, to clinicians, SIU investigators, and Member Services representatives—has a vital role in detecting possible FWA by fellow employees, subcontractors, and enrollees alike. Behavioral Health Medical Director Frank Angotti III, MD and Dr. Gibbon are working with BMS to develop a system of quality medication-assisted treatment (MAT) providers, addressing waste and abuse, and developing innovative approaches to the management of the complications from substance use

disorder. Dr. Gibbon also leads the Aetna Medicaid organization's national opioid task force where the Suboxone initiative was spearheaded in the development of the West Virginia policy.

Collaboration across departments maximizes FWA processes: Our Prepaid Claims and Medical Management teams also play important FWA prevention roles. Our Medical Management team prevents unnecessary waste through comprehensive reviews of PA requests, reviewing requests to make certain services occur in the right amount, time, and setting and by the most appropriate practitioner. With these processes, we make certain we elevate the strengths and skills of each employee to serve our enrollees in the most efficient and effective way possible supporting the best possible quality outcomes. We maximize all West Virginia employees, including PA reviews for overutilization and waste to create greater efficiency in services to enrollees. Our Utilization Management team assists in reducing abuse and waste through consistently reviewing claims via a prepay analysis with PA and admissions reviews. We make certain every employee is aware of the importance of detecting and preventing FWA and thus integrate PI into the design of operational (including staffing responsibilities) and system functions. The Provider Services department verifies provider eligibility by checking providers against numerous databases including but not limited to the West Virginia licensing board, DEA Clinical Laboratory Improvement Amendments, CMS National Plan and Provider Enumeration System OIG LEIE, and the System of Award Management, on a monthly basis. The Compliance department sends these lists to the SIU and plan-level Credentialing department.

Iterative testing: Aetna works to make certain the reliability and consistency of processes in the detection, investigation, and prevention of FWA assure validity within our program/payment

integrity and compliance activities. Detection, investigation, and prevention methods are checked against CMS, DEA, Federal Bureau of Investigation, OIG, National MFCU, Medicaid MCOs, and other insurance industry standards to assure methodology progresses clearly and consistently ahead of our peer group while remaining valid, defensible, and reliable. Our iterative testing process allows for identification and investigation of new schemes that can turn detection processes proactively into prevention efforts. Our relationships with national vendors and subtractors including QNXT, Cotiviti, and Equian (credit balance audit vendor) assure consistency to our strict iterative process in our allegation and scheme review protocols.

Working Together to Prevent and Detect FWA

Each of our departments plays a vital role in our compliance efforts, including promoting program integrity and monitoring for FWA. Armed with the knowledge they gain through compliance training, Aetna team members in every department have a role in promoting program integrity and monitoring for FWA. Their expertise within their disciplines, along with provider and enrollee referrals, complement the automated pre- and post-payment edits, audits, and analytics. For example, reports by our Medical Management team sometimes highlight unusual patterns that indicate potential FWA. The director of pharmacy and the director of clinical health services play roles in detecting polypharmacy and overprescribing issues. Our Provider Services and Quality Management teams are trained to identify FWA indicators during routine office visits. The Enrollee Services department tracks and documents enrollee complaints and survey results that may suggest FWA schemes or emerging trends.

Additionally, our Credentialing department validates provider credentials and evaluates provider information from a variety of sources, including federal and state licensing, quality, and exclusions databases. Aetna's West Virginia staff is highly aware of who our investigators who are here at the health plan. They reach out when concerns of FWA occur to discuss if a case needs to be referred to the Department. There is a daily Department compliance call at which representatives from each department attend and discuss any issues.

Responding to all Program Integrity and MFCU Requests

PI005	The Vendor should describe its process for responding to all program integrity and Medicaid Fraud Control Unit (MFCU) requests within the timeframes established by the Department.

Aetna routinely collaborates with MFCU through RFIs to the compliance officer and PI lead to meet established timelines and data reporting and is also copied to BMS by Aetna Compliance Officer Alva "Fuzzy" Page III, Esq., and Program Integrity Lead Shannon White-Metz. Aetna collaborates with MFCU regarding FWA investigations and CAPs, as necessary. If an Aetna investigation finds credible fraud, we report the case to BMS and MFCU.

When we receive a request for information, we process the request immediately and provide appropriate claims data; if claims data points toward validating the allegation, we submit a fraud referral to the requester. If action is required, it is sent to BMS immediately for evaluation of sanctions and to MFCU to determine whether to pursue a criminal investigation. Once workflows are established, reviewed, and approved, our program integrity lead sends the provider fraud referral information to the Department's PI and MFCU chief auditor and chief investigator for evaluation and local law enforcement review.

We designate one primary and one secondary contact person for all BMS program integrity and MFCU requests for data, records, or other information. BMS or MFCU records requests are sent to our designated contact person(s) in writing via email, fax, or regular mail and provide the specifics of the information being requested. Aetna continues to respond to the appropriate BMS or MFCU staff member within 14 calendar days or within the timeframe designated in the request. If we are unable to provide all of the requested information within the designated timeframe, we understand we are required to request an extension in writing no less than two business days prior to the due date and we make certain the data, records, or information is provided in the order and format requested. **Our collaboration with MFCU has resulted in the largest amount of recoveries in 2018 and 2019 of any West Virginia MCO. In 2018,**

resulting from a prosecuted dental provider, Aetna directly recovered over $270,000.

Aetna received a settlement of $870,000 recovery with a Suboxone clinic driven by Aetna data delivered to MFCU in 2019, resulting directly from our MFCU. Aetna was approximately 30 percent of the recoveries between four Medicaid MCOs and fee-for-service providers.

Collaboration with MFCU Results in Provider Prosecution

Dr. Antoine Skaff, a Charleston dentist, fraudulently billed[1] West Virginia Medicaid and Medicaid MCOs for dental procedures that he did not actually perform on Medicaid recipients and is now serving a five-year federal prison term.

Dr. Skaff admitted he falsely inflated his billings, a practice commonly known as upcoding, often by falsely claiming reimbursement for procedures involving impacted teeth. Typically, only wisdom teeth are impacted. Dr. Skaff up-coded billings for tooth extractions by falsely informing Medicaid and its MCOs that he performed more complex procedures, such as extractions of impacted teeth, when he had actually performed simple extractions. Dr. Skaff also up-coded at least 7,490 tooth extractions, billing more than $600,000 than necessary.

FWA Training on State and Federal Standards and Contract Requirements

PI007	The Vendor should describe its training and education of the compliance officer and the organization's employees, including senior management, on State and federal standards and contract requirements.

We encourage collaboration, cross-training, and the exchange of best practices among all our staff. Our staff training supports our internal fraud prevention. Training is a key component to our prevention and detection. We deliver effective training programs and awareness initiatives to staff, subcontractors, enrollees, caregivers, and providers through a variety of forums. Our compliance officer and all employees are trained on state and federal standards and contract requirements. The annual required training of each Aetna and CVS employee includes FWA training as well as anti-kickback requirements.

[1] "Charleston Dentist Sentenced to Five Years in Federal Prison for Health Care Fraud," Press Release of the U.S. Department of Justice: accessed January 21, 2020; https://www.justice.gov/usao-sdwv/pr/charleston-dentist-sentenced-five-years-federal-prison-health-care-fraud

Specifically, our compliance officer receives training beginning at orientation, which is conducted with the guidance of Aetna's senior director of compliance. Compliance officer orientation generally begins with reviewing the contract, as well as studying state-specific laws, regulations, and policies. The senior director is a coach and mentor, instructing the plan compliance officer about the importance of building relationships with state regulators and how law and policy changes affect the health plan, etc. The compliance officer develops a comprehensive must-shall document outlining all state contract requirements as a tool for staff members.

Senior management program integrity training focuses on results, management, and monitoring, in addition to state-specific laws, regulations, and policies. Managers and supervisors are in a unique position to influence staff members' behavior and raise awareness about compliance and ethics. Executive-level leaders facilitate quarterly compliance and ethics discussions with employees to reinforce annual compliance training. Aetna's Compliance and Regulatory Affairs website provides an extensive video and resource library for facilitating these discussions. The materials and the discussions they prompt are highly effective learning tools that promote Aetna's values and strengthen the culture of compliance.

Aetna FWA Staff Training

Training begins on the first day of employment and continues with Aetna's yearly education and training. This annual education includes all our FWA and PI policies, our Code of Conduct, and ethics via a combination of in-person and online training modules. New employee trainings include the following:

- Credentialing of providers
- FWA mission and purpose; definitions and explanations of FWA
- High-level overview of applicable federal and state regulations (such as the False Claims Act and anti-kickback regulations)
- Identification of potential fraud cases

- How staff can report FWA to Compliance and FWA investigators
- Methods of identifying enrollee, employee, provider, or subcontractor FWA
- Actions of investigations (such as data mining, claims analysis, and medical record reviews)
- Examples of successful FWA investigations
- Overview of FWA partners (such as state MFCUs, the NHCAA, and CMS)
- Specific program integrity procedures and policies tailored to individuals' department and function in their day to day duties

It is mandatory that Aetna personnel attend annual training and education sessions on Aetna's compliance program and federal and state laws and regulations (including the Health Insurance Portability and Accountability Act and FWA prevention and identification). Aetna personnel may address questions, seek interpretation and clarification, or obtain additional compliance related material from the Aetna Compliance department.

Our West Virginia compliance annual training and policies help ensure that all staff conduct business in a legal and ethical manner and to prevent, detect, and investigate embezzlement, internal theft, and other forms of staff fraud in addition to provider and enrollee FWA. All new Aetna West Virginia staff must complete this training within 30 days of hire. Upon completion of initial and ongoing compliance training, our team members acknowledge that they participated and understood the information we provided and continue adhering to compliance program requirements. **Our compliance officer, Program Integrity/SIU investigators, and other essential personnel receive specialized and mandatory trainings** on the investigative process; key West Virginia and federal regulations, processes, and procedures for addressing suspicious claims; and the procedure for facilitating communication among the health plan, appropriate authorities, and the Department. Our in-person and web-based NHCAA- and industry-specific training includes coding clinics, fraud schemes in the behavioral health arena, medical record review strategies, prescription drug fraud schemes, and intensive outpatient therapy, among others. Our compliance officer and PI team conduct ongoing FWA training at

staff town halls, departmental meetings, monthly newsletters, and upon request. We also participate in all state trainings and meetings.

Aetna publishes our **Code of Conduct training** on the intranet and on the Compliance and Regulatory Affairs homepage. All staff are required to complete an attestation acknowledging that they understand and comply with PI and compliance standards upon hire and annually as a component of their required compliance training. As set forth in our Code of Conduct, all business lines are conducted based on the highest ethical standards and in strict compliance with applicable federal and state laws and regulations. Our Code of Conduct explains to all staff that disciplinary action will be taken, up to and including but not limited to termination.

We also reinforce that each staff member must report any suspected violations of the Code of Conduct to their immediate supervisor, an Aetna compliance officer, or the CVS Health Ethics Line, which supports anonymous reporting via toll-free phone call, email, or written letter.

Aetna's extensive FWA training program begins with our senior leadership team and includes all senior management, employees, and subcontractors. Our subcontractor compliance program includes a system for training and education of the CEO, chief financial officer, the organization's senior management, and its employees.

Provider FWA Training

Because FWA detection and prevention methods often uncover patterns of provider error and confusion, we conduct annual provider training. Our Provider Services department disseminates information about FWA training to providers via fax blasts and emails each year and collects the providers' signed attestations for themselves and their staff. We provide this information to BMS during the annual compliance program review process and in the board report. The Provider

Services department also conducts provider forums every year and the SIU team participates in these forums to give providers information about trends, FWA training, and other information to increase their knowledge and reduce abuse across West Virginia.

Initial provider training takes place during orientation, with ongoing/supplemental training occurring through provider forums, our secure online provider portal (where content is available 24/7/365), the provider handbook, and through individual communications with the Provider Services team. We encourage providers to request individual supplemental training via our Provider Services staff any time they need additional information. Provider training includes definitions of FWA, provider PI and compliance responsibilities, methods for preventing FWA, and methods to report potential issues. Training also includes applicable laws such as the False Claims Act, Anti-Kick Back Statute, Stark Law, OIG LEIEs, and those enforced by the General Services Administration. If providers have audit findings of potential FWA, we also provide FWA training to prevent further occurrences.

Self-audit Training Results in Substantial Cost Savings

Interim HealthCare of Pittsburgh appeared on our third-quarter data mining quarterly report as an outlier for billing HCPCS code S9122, S9123, and S9124 with over $700,000 in applicable claims for West Virginia enrollees. Our SIU investigator had built a good relationship with the provider's management and recommended a self-audit. The self-audit performed by Interim HealthCare of Pittsburgh resulted in 108 lines (error rate of 5%) denied with overpayment identified of $38,432. Provider education resulted in appropriate billing moving forward.

Provider Self-auditing Training and Assistance

Within Aetna's participation in Mountain Health Trust, there is a provision for provider self-audit. As part of the provider self-audits The PI/SIU staff directs appropriate timeframes and specific HCPCS codes for review, follows appropriate clinical guidelines identified by Aetna's clinical policy bulletin(s), and reviews any plan of care documents and guidelines or other supportive

documentation. The HHS-OIG self-audit compliance criteria further suggests voluntarily conducting an initial, or baseline, audit examining three months of claims services followed by at least annual monitoring.

Disciplinary Guidelines and Procedures for Enforcement of Compliance Standards

PI008	The Vendor should describe its disciplinary guidelines and procedures for enforcement of compliance standards.

Our West Virginia-based SIU team members diligently safeguard against the potential for suspected FWA by staff, subcontractors, providers, and others with whom we do business and promptly investigate any allegation. Aetna provides annual training and written materials on the compliance program to all staff, providers, and subcontractors. Our web-based training details Aetna's compliance policies, programs, disciplinary standards, and operational guidelines, as well as state-specific rules and regulations including reporting suspected or known fraud and abuse, and disciplinary guidelines for compliance violations and failure to report.

Internal Disciplinary Guidelines and Procedures

In cases of employee fraud, SIU staff alerts the appropriate department and investigations occur under the direction of the Investigative Services within Aetna's Legal department. Aetna publishes disciplinary guidelines and standards and our Code of Conduct on the intranet and on the Compliance and Regulatory Affairs homepage to make certain we comply with contractual and regulatory standards. We rely on these as standards and major deterrents for FWA as they outline FWA consequences. As set forth in our Code of Conduct, all business lines are conducted based on the highest ethical standards and in strict compliance with applicable federal and state laws and regulations. Our Code of Conduct explains to all staff disciplinary action will be taken, up to and including but not limited to termination, for the following:

- Failing to follow the Code of Conduct, other policies, or breaking any laws or regulations
- Telling staff to violate the code of conduct, an Aetna policy, a law, or a regulation
- Failing to share information, or providing false information in connection with an investigation, about a violation of the Code of Conduct, a law, or a regulation
- Retaliating against a staff member who, in good faith, reports a suspected violation or who cooperates or helps with an investigation
- Neglecting to address or report a violation of the Code of Conduct, or a law or regulation, committed by someone an Aetna staff member manages and can lead to CAPs by a department or staff member

We require all employees to sign an attestation acknowledging that they understand and comply with program integrity and compliance standards upon hire and annually as a component of their required compliance training. We apply fair and consistent discipline for compliance violations. Aetna annually provides written materials about the compliance program to our providers and subcontractors, such as ways to report suspected or known fraud and abuse and disciplinary guidelines for compliance violations and failure to report.

Aetna employs disciplinary guidelines for corrective actions to improve internal procedures for program-related activities when they become non-compliant with contractual or regulatory requirements. When this occurs, it is the responsibility of the assigned director, manager, or supervisor of the department, functional area, or affiliate to act and implement the CAP. Resolution of deficiencies are not to complete until the director, manager, or supervisor of the department, functional area, or affiliate and Aetna compliance officer determines that the corrective actions implemented resulted in a correction of the deficiencies. The director, manager, or supervisor must conduct a close-out review to document that compliance deficiencies were corrected and report the results to the Aetna Compliance department.

Provider Disciplinary Guidelines and Procedures

After potential fraud is identified, we place providers on prepayment review leading to withholding of claims payment. Once potential FWA is detected, our SIU staff is responsible for the investigative

process and reporting to the Department. The FWA Committee reviews the case and develops a CAP. If it is determined there is a credible allegation of fraud, we report the case to the Department by way of referral. In many cases, the state forwards a recommendation to MFCU, which then provides direction to Aetna on how to proceed regarding overpayments or other provider action. When allegations of FWA arise during credentialing processes or other instances where we enforce compliance standards, we take a comprehensive, fact-finding approach collaborating with other departments to gain a full picture of the allegation and how to proceed. Our Credentialing department works closely with our PI team and collaborates when concerns of FWA occur to discuss if a case needs referral to the Department. The Aetna Credentialing team validates provider credentials and evaluates provider information from a variety of sources, including federal and state licensing, quality, and exclusions databases; if FWA concerns arise within their review, staff can reach out directly to SIU investigators and/or the compliance officer.

Routine Internal Monitoring, Auditing, and Remediation of Compliance Risks

PI009	The Vendor should describe its procedures for routine internal monitoring, auditing, and remediation of compliance risks and identified issues.

Aetna routinely monitors and audits enrollee, provider, and compliance risks using a variety of technologies and methods to prevent and detect questionable billing practices and to avoid fraudulent claims payments such as business intelligence software to identify providers whose billing, treatment, or patient demographic profiles differ significantly from those of their peers.

Claims Auditing and Monitoring

In addition to reviewing high dollar claims, we also review the OIG work plan continuously and follow CMS recommendations on high-risk provider types. Investigators review the data mining report and take appropriate action. These actions include analyzing data and reviewing high-risk claims manually or referring them to SIU for more in-depth review and study of the specific

provider's patterns versus their peers. Depending on findings, we may develop new business rules to better detect future FWA; we are constantly improving processes by studying claims trends and patterns. These processes not only improve our detection of FWA but provide means to inform our prevention processes to proactively mitigate and eliminate FWA through provider education and improved prepay processes. Through these processes, we have developed an iterative testing and rapid-cycle improvement process to use what we learn and put it in practice in preventing and detecting FWA. Other analyses and methods include the following:

- **Internal applications** such as HCFS run enrollee analytics, including the following: eligibility to determine if the home address is a P.O. Box; checking for multiple enrollees living at the same address/using the same phone number; verifying enrollee address and phone number during provider visits; pulling any enrollees with high ER use; and sorting through obituary files or investigatory news articles that may include enrollees or providers, among others.
- **PA** enables Aetna to monitor the use of defined outpatient services and procedures as well as non-emergency or elective hospitalizations before the enrollee receives the service. PAs confirm requested services are for eligible enrollees and are included in the defined benefits; provided at an appropriate level of care and place of service; appropriate, timely, and cost-effective; coordinated with medical management; communicated to applicable operations areas (e.g., Finance, Enrollee Services, Provider Services) or per contractual requirement with external vendors; and documented accurately to facilitate timely reimbursement and reporting.

Aetna's West Virginia's PI staff communicates with the health plan clinical pharmacy manager, Mark Demary, on any matter of suspected pharmacy FWA. Mr. Demary can make referrals to the FWA team as needed regarding prescribers or pharmacies that may need some type of outreach/investigation and interacts with the state's pharmacy benefit manager.

We evaluate identified enrollees' utilization to determine that Aetna performs **targeted audits** (e.g., contract, benefit, provider, diagnosis, procedure, specific service, and place of service) on 2 percent of manually adjudicated claims and 15 percent of auto-adjudicated claims; and high dollar claims. Additionally, claims with billed amounts of $30,000 or greater are subject to 100 percent high-dollar audit review daily. Random statistically valid audits are conducted routinely

to identify and detect inappropriate claims and potential provider fraudulent billing. Audit findings are provided to the program integrity manager for review and action. At a minimum, the audits examine the following:

- The provider was contractually allowed to provide the service being billed
- The service provided is covered for the enrollee
- The appropriate level of care was used for the presenting condition
- The provider billed correctly for the services rendered
- The charges for services are reasonable
- There was evidence of excessive testing or referrals

Each audit includes key departmental concerns identified in addition to a summary of financial and procedural accuracy to begin remediation of risks based on audit findings. Aetna finalizes, publishes, and distributes monthly and quarterly audit results to track trends and system findings to the business units. The reports include trends by error type, claim identification, and analyst identification, enabling the Claim Operations department to conduct continuous quality improvement. Based on audit findings, management staff provide or track additional training and/or inclusion of additional claims edits or processing flags as needed. Aetna also performs **credit balance audits**, which include identifying, tracking, and pursuing recovery of overpaid funds to make certain Aetna has a comprehensive payment accuracy program. Our program integrity lead has trained providers since 2017 as part of our statewide provider forums. The key shared concepts help providers to do as follows:

- Strengthen internal compliance programs
- Self-audit (projected CMS requirement)
- Improve their claims integrity
- Identify FWA and inappropriate billing
- Recognize overpayments due to Aetna

Using Data Analytic Algorithms to Detect and Prevent Fraud

Aetna innovates in the use of data analytics and auto-identification of potentially fraudulent claims to facilitate detection and mitigation of enrollee, provider, subcontractor, and vendor FWA

throughout the claim's lifecycle from prepayment to recovery. Our data analytics system provides efficient and proactive discovery of new fraudulent schemes such as the overbilling of UDS in a national scheme related to the opioid crisis and related items specific to West Virginia. This included the following:

- Aetna placed all claims for breath alcohol testing on a prepayment review due to excessive billing by medication-assisted treatment providers
- Overperformance of not medically necessary urine pregnancy tests
- Coding overutilization of tobacco cessation codes

We allow for near real-time prepayment review capabilities to flag suspicious claims prior to adjudication. The data analytics of all Aetna plans are shared among the plans to leverage the information on commonly used providers and provider types. This creates efficiencies by reducing the need for pay-and-chase methods of recovery, fostering a comprehensive approach to addressing both enrollee and provider fraud by leveraging all available data sources to detect emerging fraudulent patterns. Our rules-based claims adjudication system maintains and processes health care administration data, providing increased efficiency. The provider module contains a unique provider identification number generated by the system, plus all billing and tax reporting information. The claims module shows the date of receipt, the history of actions taken on the claim, and the date of payment, including the check number. The system stores claim by specific benefit limits/lifetime benefit rules. It scrubs/edits this data for accuracy during claims processing and payment. Aetna's Medicaid Claim Quality Control department independently assesses the effectiveness of the Medicaid claims system configuration and claim procedures against the resulting adjudication process.

We conduct an annual review of the plan to identify high-dollar specialties, providers, and procedures codes. This can show which specialties to review for outlier behavior. In addition, **on a quarterly basis, we run a minimum of 25 tailored outlier reports of known fraudulent schemes** based on specialty and CPT codes to identify the top providers of certain services. The reports are referred to investigators for further review and appropriate action. At data mining meetings, FWA staff members, the medical director, clinicians, and certified coders discuss and prioritize data mining studies to analyze trends and schemes identified through various sources. **Table 6.11.1-1** provide the categorical overview of the billing outlier reports.

Table 6.11.1-1: Outlier Billing Reports to Identify Known Fraudulent Schemes

Scheme/Allegation	Unique Report(s)
Upcoding	8 reports
Modifier Misuse or Abuse Report	1 report
Misrepresentation of Services	5 reports
Excessive Charges/Billing	3 reports
Over-utilization report	1 report
Doctor Shopping	2 reports
Non-covered Service report	1 report
Not Medical Necessity	2 reports
Experimental and Investigational/Pass-through Billing	2 reports

HCFSs business rules are customizable at the health plan level to account for benefit variations and can be applied pre- and post-payment. This platform identifies providers with potential FWA behaviors and assigns them a risk score. We use the HCFS application screens to visualize all leads and billing activity as well as download the past 24 months' worth of claims for each lead. This helps us further avoid inappropriate billing, identifies, and mitigates provider confusion, and deters criminal activities, among others.

Subcontractor Oversight and Monitoring Processes

PI010	The Vendor should describe its oversight and monitoring process for any delegated functions and services, as provided by a subcontractor, in accordance with guidelines defined under the contract.

Aetna integrates subcontractor monitoring and oversight within our overall process monitoring and oversight as we do for all health plan functions. To assure we begin relationships with subcontractors effectively, we use a subcontractor pre-assessment questionnaire in the decision-making process. We require that each of the following subcontractors have in place internal controls, policies, and procedures to prevent and detect FWA and must have a formal Medicaid compliance plan with clear goals, assignments, measurements, and milestones:

- Cotiviti: Retrospective claims processing review
- eviCore: High-end radiology and pain management
- SKYGEN USA: Dental services
- VSP Vision Care: Vision care

When the subcontractor is a provider that also renders administrative services, Aetna's process includes a review of the prospective subcontractor's program for adherence to health plan and National Committee for Quality Assurance standards, and federal and state laws and regulations. We review relevant documentation before conducting an onsite assessment. The completed assessment report includes review of FWA processes and provides documentation of the prospective subcontractor's strengths and improvement opportunities and is used by the Quality Management/Utilization Management Committee to review and approve subcontracted relationships. Aetna staff conduct monthly meetings with SKYGEN USA, the West Virginia dental subcontractor, and provide FWA resources to our Pharmacy team that interacts with the West Virginia pharmacy benefit manager. The state recently requested assistance from us in analyzing a dental provider's billing practice of verifying services of another provider who was not enrolled with BMS.

Per contract requirements, Aetna policies require a written, signed agreement for all subcontracting arrangements. The agreement outlines the responsibilities of the parties; defines

their relationship, rights, and obligations; specifies how we monitor their performance including ; required state contract provisions and other terms.

All our subcontractors and their employees must participate in compliance and FWA training. We train our subcontractors in all areas of accountability and oversight for all functions and responsibilities delegated to them. In turn, we review their employee FWA program and verify that they provide employees FWA training. We monitor FWA activity through subcontractor meetings, including whether the subcontractor is delivering the required reports and training.

For our subcontractors, we provide information and training pursuant to Section 6032 of the Deficit Reduction Act of 2005. Under this regulation, any entity who receives or makes Title XIX (Medicaid) payments of at least $5,000,000 annually must establish written or electronic policies and procedures for the education of employees of affected entities regarding the False Claims Act and other laws described in section 1902(a)(68) of the Act, including information about rights of employees to be protected as whistleblowers.

Monitoring Provider Fraud Related to Under-utilization and Member Fraud for Over-utilization of Services

PI011	The Vendor should describe its process for monitoring provider fraud for underutilization of services and member/provider fraud for overutilization of services.

Under-utilization and over-utilization of services are key aspects of FWA that concern Aetna. We review claims and member utilization profiles to make certain members receive the appropriate access to care to avoid both over and under-utilization of services. Member profiles play a pivotal role in the management of member care both by our integrated Care Management team, as well as by the member's medical home/PCP. Member profiles:

- Identify members who under- or-over utilized health services, including ER, hospital admissions, and prescribed medications, and could benefit from integrated care management

- Identify members who may lack appropriate access to needed services or could benefit from education about how to best use the health care system (e.g., persons with high ER usage)
- Identify medical homes/primary care providers that do not appear to be following recommended clinical practice guidelines or need to reach out to their assigned members more effectively and facilitate better management of the member's care
- Assist in supporting other internal health plan operations, such as concurrent review decisions, member appeals, and fraud and abuse detection

Under-utilization and FWA

Aetna encourages members to contact us when they suspect FWA is occurring related to their benefits. Because FWA detection and prevention methods often uncover patterns such as upcoding, we conduct annual provider training about program integrity and compliance electronically by way of online provider training modules and webinars. Our Provider Services department disseminates information about FWA training to providers via fax blasts and emails each year and collects the providers' signed attestations for themselves and their staff. This information is provided to the Department during the annual compliance program review process and in the board report. The Provider Services department also conducts annual provider forums and the SIU team participates to give providers information about trends, FWA training, and more to increase their knowledge and reduce abuse across the state.

Our investigator researches all relevant Aetna and Department policies and provider contracts, relationships, and the type and location of the members they serve. Considerations for investigation include, but are not limited to, high volume of services, dramatic change in frequency of use, and high-risk, problem-prone areas.

Examples of providers over-prescribing health care services include physical therapy treatments. Effective PA processes can mitigate errors or fraud in provider overprescribing for such services. Our Medical Management staff use PA, concurrent review, discharge planning,

retrospective review, and provider profiling processes, which serve as the first line of defense for preventing and detecting member FWA. Other examples of this work include the following:

- Verifying member eligibility
- Reviewing service medical necessity
- Determining the appropriateness of the service being authorized
- Verifying the service is covered
- Referring members to appropriate providers

Medical management reports allow the Program Integrity and Compliance teams to have multiple points of data to review to verify unusual patterns that may indicate potential fraud or abuse. Unusual or suspicious incidents are documented and reported. If the PA process indicates fraud or abuse, the PA will be denied, a notice of action is sent to the provider and the member, and a report is sent to the compliance officer. PA staff may have access to additional information and may be able to flag concerns when leading diagnostic services or requested procedures seemed to be misaligned or out of scope of best practices. The program integrity lead reviews trend and report findings for the Department through prescribed channels. In addition, we review state-provided pharmacy data within investigations to identify trends and patterns in provider prescribing and pharmacy shopping by members.

Mitigating Opioid Overprescribing by Dental Providers

From 2016 to the present, our dental subcontractor Avēsis identified 128 potential cases of dental provider FWA related to opioid super prescribers. These 128 cases were initially valued at $216,144. Through the appeals and claims correction processes, this amount was reduced to $141,944; thus far, Avēsis has recouped $45,370. Providers received education on appropriate prescribing and continue to be monitored.

Over-utilization and FWA

Aetna's person-centered approach encourages members to assume responsibility for their health, wellness, and care. We use the member handbook and newsletters, website, and Member Advisory Committee meetings as well as our verification of services process as ways to communicate with members and their caregivers (if applicable) about their responsibilities in

preventing and reporting instances of FWA. The member handbook and website provide information on various types of fraud and abuse, such as identification card fraud, inappropriate use of ER services, and prescription drug use and benefits. Each of these tools informs members on the definition of fraud and abuse, their responsibilities and those of others, and how and where to report suspected or known fraud and abuse. Members are encouraged to report all suspected FWA through Aetna's fraud hotline, the Department's fraud and abuse hotline, or by submitting an online fraud and abuse form via our web portal.

Member verification: Aetna is serious about tracking services and services billed to verify that the proper claims are tracked to the members receiving care and that no additional service claims are being billed for a member who did not receive the service. We also monitor for member utilization trends from a system standpoint—such as intervals between visits seem to be out of trend—when no new diagnosis appears.

We use real-time electronic health record data to identify members and confirm the accuracy of their contact information as part of our ongoing efforts to ensure that services are provided to the correct member. This process engages our integrated care management model to promote member safety and quality health care. For example, Aetna subscribes to a health information exchange's event notification service to receive timely notice when one of our members has an encounter with a hospital. The service securely transmits information about the member's visit, the facility, and the primary complaint helping us to improve care management, service coordination, and utilization management, as well as verifying service delivery. Aetna's additional member fraud prevention activities include PA, drug utilization review, and use of targeted audits, claim and data analytics, member accountability tools (i.e. explanations of

benefits and member portal), hotlines, mailers, and other strategies. The SIU team works proactively to identify fraud when a member is suspected of committing such acts. Additionally, this involves understanding that members may not be aware when their identification is stolen or being used in a fraudulent scheme.

Denying, Suspending, Nonrenewal, or Terminating Providers

PI012	The Vendor should describe its policies and procedures for denying, suspending, nonrenewal, or terminating affiliation with a contracting healthcare professional, including an appeals process, and for reporting serious quality deficiencies to appropriate authorities.

Aetna complies with 42 CFR 455.23 which requires the State Medicaid Agency to suspend all Medicaid payments to a provider after the Agency determines there is a credible allegation of fraud for which an investigation is pending under the Medicaid program against an individual or entity, unless the agency has good cause not to suspend payments or suspend payment only in part. The rules governing payment suspensions based upon pending investigations of credible allegations of fraud apply to Medicaid managed care entities.

Aetna Policies and Procedures for Denying, Suspending, Nonrenewing, or Terminating Providers

Aetna ensures that all participating providers are enrolled with BMS as Medicaid providers consistent with the provider disclosure, screening, and enrollment requirements of 42 CFR § Part 455, Subparts B and E as incorporated in 42 CFR § 438.608(b), prior to executing a provider agreement. Prior to paying claims to a non-participating provider that is not enrolled with West Virginia Medicaid, Aetna, at a minimum, verifies licensure and performs all federal database checks as specified at 42 CFR § 455.436 on all owners and managing employees. The Provider Relations department verifies ongoing provider eligibility by checking providers against the exclusion lists monthly. If a provider, owner, managing employee, board member, or

person with 5 percent or more controlling interest is found to be on one of these lists, Aetna's Provider Experience and Member Services departments work together to remove the provider and reassign the enrollee. Aetna maintains processes to disclose to the Department, within 30 calendar days of identification, any disciplinary actions that have been imposed on any licensed physician, physician assistant, nurse practitioner, or psychologist, or their governing body related to FWA as defined within the contract.

Aetna confirms that it is not controlled by a sanctioned individual. In the event that Aetna were to identify that a person, agent, managing employee, network provider, delegated entities or subcontractor appears on one or more of the exclusion lists (each an excluded person), appropriate action would be promptly implemented, which may include termination of the relationship with the excluded person and ceasing payments owed to the excluded person. Aetna maintains policies and procedures to support reporting of excluded parties, as required by the State, within two business days of identification.

As part of our recovery, reporting, and compliance processes, it may become necessary to provide education, suspend, or terminate a provider from contracting with Aetna. We follow our internal processes and procedures as well as state and federal regulations closely to make certain we address FWA appropriately and with the correct protocols to maintain the integrity of the provision of services to our enrollees. The following details our processes for making certain our provider education, suspension, and termination policies are followed consistently.

Provider education after investigation identifies waste: Once an investigation is complete after a thorough review of the allegation against relevant data and/or records, the case investigation findings are presented to the FWA Committee. The committee can decide to educate the provider

on the wasteful behavior, including but not limited to: upcoding, provider choosing an unidentified or general code when a more specific code would be appropriate, unbundling, etc.

Provider suspension or termination: As the investigator works the case, information might be identified, whether it be a medical records review, member verification of services, law enforcement activities, etc. that supports consideration of termination by the health plan. Our Aetna investigator(s) prepares a summary of the findings for the FWA Committee including, but not limited to the allegation, paid amounts, findings from the audit to date, etc. If the FWA Committee agrees to suspend and/or terminate the provider contract, Aetna's Provider Relations Department **carries out the direction and notifies the Department** through the monthly FWA report and provider termination, suspension report. The investigator requests a copy of the termination letter for the SIU file. At times Aetna network providers are terminated or suspended via requests from the Department and/or other state agencies. When we receive provider termination or suspension notice from the Department or other state agency, we follow the provider termination policy and notify the state through the monthly FWA report and provider termination/suspension report.

If a provider is disenrolled, de-credentialed, terminated, or removed from the active provider list, we provide the BMS the basis, reasons, or causes for such action and any and all documentation. Aetna cooperates with BMS when payment suspensions are imposed on the Medicaid provider. When we receive notice that payments to a provider have been suspended, we suspend payments within one business day if such provider is in our network and receives payments. When such notice is received, we respond to the notice within three business days and inform BMS of whether we have implemented the suspension. Aetna reports all of the

following information to BMS monthly: name of the suspended Aetna provider, date the suspension was imposed, date the suspension was discontinued, reason for discontinuing the suspension, amount of payments held, and if applicable, the good cause rationale for not suspending payment (for example, the provider is not enrolled in our network) or imposing a partial payment suspension. We understand that failure to suspend payments to the provider may result in BMS imposing contractual remedies. BMS is responsible for evaluating allegations of fraud and imposing payment suspensions, when appropriate, for those of our providers who are a part of the state fee-for-service network. Aetna continues to be responsible for initiating payment suspensions based on the credible allegation of fraud for its in-network providers who are not a part the state fee-for-service network. For payment suspensions initiated by Aetna, we must comply with all contractual requirements and 42 CFR 455.23.

Provider Appeals Process

Upon completion of either a prepayment or post-payment review in which an allegation is substantiated by evidence, the investigator is responsible for pursuing recovery of overpaid benefits resulting from the submission of improper claims containing FWA. Providers may appeal as detailed in our policy and procedures document related to Provider Appeals.

The provider has 30 days to submit additional documentation or rebut the determination or extrapolation. The provider may request and receive a copy of the findings of the medical review and if the provider disagrees with a claim determination by Aetna, they may go through our standard appeals process. The provider may also request a peer-to-peer discussion with the chief medical officer who conducted the review. Providers are given specific information regarding the findings and education where appropriate.

Overpayment Processes and Determinations

PI013	The Vendor should describe its policies regarding identification and recoupment of provider overpayments, and processes to coordinate with the Department.

Aetna understands that we will continue to be entitled to retain overpayment recoveries, including overpayments due to FWA that were first identified by us. We understand and comply with all BMS requirements related to overpayment processes and determinations. When directed by BMS we will recover established overpayments made to a provider by the State for performance or non-performance of activities not governed by this contract. When funds are recovered, we promptly notify BMS of any amount recovered. As directed, Aetna immediately provides the amount recovered to BMS, and understand that BMS may withhold the amount recovered from a payment otherwise owed to us. If the overpayment is not recoverable, Aetna promptly notifies BMS and provides an explanation stating why the overpayment is not collectible. Aetna understands that we are not entitled to any recovery under this section when BMS and any agent, including the State's fiscal agent or other agent, identifies and pursues overpayments, false claims, or fraudulent claims paid by us to a provider.

West Virginia's Innovative Breath Alcohol Testing Initiative

Effective January 2019, Aetna placed all claims for breath alcohol testing on a prepayment review. All claims required the symptomatology and narrative description of the suspected condition to justify testing for submission. If urine drug testing occurs on the same date of service, all urine drug test results need to be submitted with the breath alcohol testing claim. Results are as follows:

- **2018**: $402,513 paid on 15,937 claims
- **2019**: $84,330 paid on 3,209 claims
- **Policy cost savings:** $318,183

Aetna requires participating providers and non-participating providers to report overpayments and specify the reason for the overpayment in writing. The overpayment shall be returned to us within 60 calendar days after the date on which the payment was identified. Aetna complies with 42 CFR § 438.608(a)(2) by promptly reporting all overpayments identified or recovered.

Aetna understands the retention of overpayments is dependent upon the circumstances under which such overpayments are identified and investigated. We are proactive in identifying and taking action to recover provider overpayments timely as we have done in initiating our **Breath Alcohol Testing program.** The monthly FWA report submitted by Aetna pursuant to contract requirements and BMS' Notice of Program Integrity Activities will be a part of our deconfliction process. Deconfliction will occur regardless of the length of BMS' grace period.

Overpayment Determination and Collaboration with BMS

We understand and comply with BMS' right to recover provider overpayments, including those overpayments due to FWA, from Aetna if any of the following occurs: BMS or its contractor identifies an overpayment made by Aetna to the provider; the payment occurred outside the grace period, as defined by BMS; Aetna has not previously identified the overpayment via the deconfliction process, or the MFCU or other law enforcement entity is not pursuing the provider

BMS sends notice to Aetna with all information upon which the overpayment determination was based, along with a demand for payment. Aetna enters into a payment agreement within 30 calendar days of receiving notice and effectuate payment within 90 calendar days of notification. Failure to adhere to this process will result in liquidated damages as described in Appendix G. If Aetna is invoiced for the overpayment by BMS, and Aetna recovers the overpayment from the provider, the provider's sole remedy is under the provisions of the provider's contract with us. For provider appeals, as defined in *Aetna Policy: Practitioner Participation and Peer Review*, that arise from actions taken pursuant to this section, Aetna communicates the result of those appeals to BMS within 60 calendar days of the final decision. If the investigator finds suspected or confirmed FWA, we take appropriate action such as recoupment of payment, contract termination, or other disciplinary action. The case is also referred to the appropriate state and

federal regulatory agencies. We further understand and comply with BMS' right to recover provider overpayments, including those overpayments due to FWA, from the provider.

We understand we will continue to receive notices of its intent to collect from the provider and initiate recovery actions with the provider. If BMS chooses to collect the overpayment directly from a provider, we assign any rights it has to collect overpayments from the provider and that such payments recovered will be retained by BMS. Aetna advises our providers, via contract provision, addendum, notice or other suitable method, of the State's right to collect overpayments Aetna diligently engages in identifying and recovering overpayments that do not require a referral to the State and identifies overpayments on the monthly FWA report.

We understand that unless otherwise specified in this contract, when we or one of our subcontractors identify overpayments, we may recover and retain those overpayments directly from the providers, if the following occurs:

- Aetna was not required to abstain from collections from the provider
- BMS has not duplicated this recovery, consistent with this section
- Aetna followed proper procedures regarding fraud and/or abuse referrals to BMS
- Aetna properly and timely disclosed the required information on its monthly FWA report
- The encounter data is properly adjusted to reflect the recovery, and such recovery is not prohibited by federal or state law

Overpayment Recovery Process

Our investigator calculates the overpayment after confirming fee schedule amounts using the published fee schedules for the investigative period and determining whether to apply extrapolation to the overpayment. An extrapolated overpayment is calculated using the distribution of errors in the sample along with the proper error ratios. An overpayment letter to the provider is drafted, outlining the findings of the investigation and, overpayment amount.

As noted previously our appeals process allows the provider 30 days to submit additional documentation or rebut the determination or extrapolation. The provider may request and receive a copy of the medical review findings that we conducted and may request a peer-to-peer discussion with the CMO who conducted the review. Providers are given specific information regarding the findings and education where appropriate and can remit the overpayment in a single payment or enter a payment plan if necessary. The provider may be placed on a negative balance to recoup the funds from future payments if they fail to repay the health plan. Aetna engages in legal remedies if all other efforts fail. If an overpayment has been referred by us to BMS, due to suspected fraud or abuse, and the dollars are subsequently returned to Aetna, we may retain these overpayments directly from the provider. We follow all state required procedures for collection of overpayments including investigations and/or audits and their resulting recoveries begun by BMS or by an entity contracted with BMS.

Aetna Participation in Fraud Recoveries

Aetna submits fraud and abuse referrals to BMS using the prescribed form. Referral information submitted to BMS by Aetna is distributed to all potentially impacted MCOs, along with an RFI. Upon receipt of the referral information and RFI, we respond by the due date included in the RFI. We understand that failure to respond timely, completely, and accurately may result in Aetna not participating in any related fraud recoveries and may also result in liquidated damages as described in **Appendix G** of our contract with the Department.

Impact on Medicaid Medical Loss Ratio and Rate Setting

Aetna complies with 42 CFR 438 regarding deducting overpayment recoveries from incurred claims when calculating the medical loss ratio, and encounter data must be adjusted appropriately for rate setting purposes.

12. Information Management Systems

The Vendor should refer to the business specifications located in ***Appendix 1: Detailed Specifications*** (based on the categorization within Column D: Subject Matter Area) and pertinent narrative in ***Section 4: Project Specifications*** in this RFP, and then describe its approach to Information Management Systems (IM) as part of their bid. The Vendor's narrative response should not exceed 50 pages.

As an incumbent managed care plan, we will continue to leverage our local experience and expertise to provide the West Virginia Bureau for Medical Services' (Department) Medicaid Managed Care program with an integrated suite of innovative technologies and tools that drive our advanced care coordination and service delivery transformation efforts. Our management information system (MIS) not only meets the Department's requirements, it is positioned to address the upcoming changes confronting Medicaid programs. Our MIS supports the State's strategic initiatives by meeting the following goals:

- Tailoring services and improving individual linkages to the right services at the right time
- Supporting social determinants of health automation initiatives, including online information and referral resources that streamline the administrative processes, reduce the need for members to repeat their stories, and complete multiple redundant forms
- Facilitating accurate data transfer with providers to improve Healthcare Effectiveness Data and Information Set (HEDIS) reporting

Our proprietary system delivers advanced capabilities and performance using the highest industry standards, controls, business continuity, security, and redundancy features to assure the maximum level of data protection. Our local health plan team, in collaboration with our national Information Technology (IT) team, ensures our technology platform continues to deliver performance, innovation, and value to Mountain Health Trust, West Virginia Health Bridge, and West Virginia Children's Health Insurance Program (WVCHIP) stakeholders.

Given our 23-year history collaborating with the Department and supporting Mountain Health Trust and Mountain Health Bridge members and providers, we are confident our management information system provides the strongest solution for the State and successfully meets the

Department's contractual and operational requirements. Aetna continuously evaluates and examines opportunities to improve the quality, access to, and efficiency of our system capabilities by collaborating with the West Virginia Program Integrity Office as seen in the Blue Box Initiative, rebate improvement process, and implementation of our Special Investigations Unit data sharing. Our digital strategy to improving clinical engagement and simplifying administrative processes, along with our introduction of personalized health solutions, will materially improve the member and provider experience with us. Our digital strategy, in this context, refers to three key areas: operations, products and services, and finally our constituent experience. Through digitalization, we have transformed manual, back-office processes leveraging new, automated solutions and enhanced products and services with emerging technology and personalized services and experiences custom-tailored for each member.

Aetna's Data Security Approach

IM001	The Vendor should describe its written policies and procedures for safeguarding and maintaining the confidentiality of data, including differences for adult and children populations.
IM002	The Vendor should provide its plan for how it will maintain full Health Insurance Portability and Accountability Act (HIPAA) compliance, and maintain this compliance, throughout the life of the contract at no additional cost to the Department.
IM003	The Vendor should describe its policies to ensure that its staff, contracted providers, and all subcontractors that provide cost, quality, or medical appropriateness reviews or coordination of benefits or subrogation maintain the confidentiality of Personally Identifiable Information (PII) and Protected Health Information (PHI).

[IM001] At Aetna, protecting member data—keeping all information safe and secure—is of utmost importance. We continue to push our global cybersecurity program beyond what is standard for our industry and we continually work to improve security while making digital navigation more convenient for each individual. We also invest in documented best practices, processes, and controls to stay a step ahead of ever-evolving data security issues. We commit

to continue providing access to best practice health care for West Virginia Medicaid program members while diligently protecting each enrollee's privacy. We comply with both the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health Act, and we comply with all Department requirements, as demonstrated by formal results from external audits.

Safeguarding and Maintaining the Confidentiality of Data

We maintain the confidentiality of all enrollee data across our membership, regardless of enrollee age. Our enterprise-wide and West Virginia-specific policies and procedures for safeguarding and maintaining the confidentiality of data cover members of any age. Our reporting team monitors the appropriate use and distribution of age-sensitive data, such as our child population. More broadly, our privacy policies and procedures include the following data and physical security controls we use to safeguard and maintain the confidentiality of all enrollee data:

- Layered encryption, including encryption of data in motion that is internal to our WAN and across the Internet, and encryption of production data at rest as well as backup media encryption
- Secure hardware disposal and destruction of all physical media types removed from all user equipment and datacenters
- Data loss prevention controls, including Symantec's data loss prevention solutions for perimeter web, email, and network traffic, as well as internal data at rest scanning
- Secure access management practices, including preregistration, identity, authorization, business need validation for access, and legally binding agreements (employee, contractor)
- Physical security monitoring, including the use of a centralized, monitored access management system for monitoring and tracking access, anomalous access activity monitoring and reporting of privileged access, and integrated video surveillance systems
- Physical access controls (e.g., card access readers, anti-pass-back entrance/exit, tailgate detection)

[IM002] Complying with Health Insurance Portability and Accountability Act Standards

The key to HIPAA compliancy is the system security of our members' privacy information. Our core system is fully compliant with HIPAA, Health Information Technology for Economic and Clinical Health in 42 USC 17931, Section 6504(a) of the Affordable Care Act, and other

applicable federal and state laws and regulations. Our compliance efforts are supported by the Aetna Medicaid organization's IT Team and our Aetna Enterprise Compliance teams, who implement and maintain our HIPAA system security plan.

HIPAA Technology Compliance Team

The Aetna Medicaid organization's IT department maintains a separate and independent Compliance and Governance team, which continuously reviews our information management system practices and HIPAA compliance policy updates. This team acts to create an information management system-focused layer to assist all information management system employees with ongoing HIPAA education and implementation. This team works with Aetna Better Health of West Virginia staff, including local legal and compliance officers, to address any rules and regulations that arise from federal and state laws and directly impact our plan.

Our Medicaid IT Compliance and Governance team takes on the role of first responders when questions arise within our information management system team regarding HIPAA policy interpretation, audits, and data management compliance. For example, this team interprets and documents new Aetna-wide rules to ensure all Medicaid IT leaders and staff understand and comply with updated requirements around system and database access.

This team's activities supplement the already comprehensive activities and responsibilities assigned to our at-large enterprise compliance teams, who implement and maintain the plan for full HIPAA compliancy via the information security program.

Prevention of Security Incidents

Our information security program involves creating, administering, and overseeing policies to help ensure the prevention, detection, containment, and correction of security breaches. We maintain a comprehensive solution for handling incidents 24/7/365. Our Global Security team

discusses incidents that come in from a variety of methods during daily threat calls. There are response time requirements based on the levels of potential risk for each incident. Splunk is the security information and event management solution in place to provide monitoring of incidents.

Aetna has documented procedures in place for response to or reporting of security incidents.

Breach of Unsecured Protected Health Information (PHI)

In 2019, Aetna became aware of a privacy breach that stemmed from an incident suffered by a third-party vendor. This vendor's security team discovered that an employee electronic mailbox had been leveraged to distributed large quantities of spam email; some of the spam email was found on Aetna-employee email accounts.

We immediately notified the State of the incident and described the action steps we initiated in response to the incident.

Action Steps:

- Our vendor's Information Security team immediately took steps to lock down this employee's account and make sure no others could access it. Both the vendor and Aetna immediately undertook an investigation to find out if any other email accounts were hacked.
- None of our other systems or networks were accessed. Our Information Security team put extra protections on all our email accounts, and we notified all employees of the incident. We updated our required yearly employee training and other educational programs to help employees keep their computers more secure. We notified law enforcement about this hacking event as well. We also set up a dedicated toll-free helpline with identification (ID) experts to assist employees.

Risk Management

Aetna has a mission to safeguard confidential information and protect employees in the workplace. We continuously explore innovative solutions in an effort to keep up with new security challenges. Cybersecurity threats continue to increase, and the diversity of threat actors and tactics in health care has evolved significantly in recent years. With new technologies introduced constantly, technology and process adaptability and resiliency are critical. As such, information security has become a cornerstone of Aetna's operating model, influencing how Aetna chooses to do business.

As part of our plan, we take a risk-based approach to information security management. The company determines the appropriate level of protection by assessing the relative importance and classification of data and, based on the assessment, manages risk by reviewing threats and vulnerabilities on a daily and quarterly basis. Risk management activities help keep Aetna abreast of industry and environmental events and promote adaptability to a rapidly changing environment. The security risk management process in place is shared with employees, plan sponsors, auditors, and regulators, which helps promote transparency.

Adhering to HIPAA Security Regulations

We have maintained strict compliance with HIPAA security regulations since the day they became effective. We fully document and adopt security standards as soon as they become effective to ensure that the integrity and confidentiality of electronic records and transmissions are continuously preserved. We systematically reassess and update our policies and procedures to address member-specific data and any relevant modifications to federal and state law.

Through these actions, we have established the following procedures, in our compliancy plan, to maintain adherence to HIPAA security regulations:

- Formalized a security incident policy and procedure
- Created security and awareness training and other activities for all staff, including posters in our facilities and town hall meetings, and distribution of compliance fun facts to keep awareness high
- Implemented mass mailing printing controls to avoid any unintended PHI disclosure; staff requesting a mass mailing complete a request form and submit the document to be mailed to our privacy officer. The officer reviews the form and document, makes recommendations where PHI can be omitted, and formally approves the mailing.
- Implemented common facility access controls and security management procedures
- Added the appropriate security language to subcontractor and provider agreements

[IM003] Maintaining Confidentiality of PII and PHI

Our privacy practices regarding individually identifiable health information follow federal and state laws and regulations and apply to all contracted providers and subcontractors. We have

established a corporate Privacy Office, which has overall responsibility for developing policies and procedures to safeguard personally identifiable information (PII)/PHI against uses and disclosures that are inconsistent with applicable law.

To ensure immediate attention and responsiveness to PII- and PHI-related issues Our onsite compliance officer, who is supported by the Aetna organization's Privacy Office, manages a compliance program that includes comprehensive training, ongoing education, and continuous policy and procedure review designed to maintain our members' privacy and confidentiality. Our compliance officer, who has extensive health care law experience and 15 years of health care and Medicaid industry experience, is responsible for conducting mandatory privacy policies and procedures training and education for our staff, contracted providers, and subcontractors, and for overseeing the implementation and enforcement of these PII and PHI policies and procedures.

Before sharing any member-related information, we obtain written permission from members and their families/guardians (when applicable) that specifies the type of information we can share and with whom. We store completed release forms in our database for easy access by care managers. Call center staff verify telephone callers' identity by asking for a member's date of birth, identification number, and/or address, and review our database to ensure there is a documented release of information before providing member PHI. We do not share third-party information and redirect practitioners to contact other providers directly to obtain the records. When we receive an authorized request for information, we electronically send it in PDF format via secure email or establish a secure data exchange.

For example, if we receive a request for member health information, the following conditions must be met before we would release member health information:

- Members must be able to provide member identity information before their own health information, or that of minor dependents, will be provided to them.
- Other requestors may need to provide Aetna with additional documentation or evidence of their entitlement to the member health information in question.
- If a requestor calls with someone else on the line, we can disclose member-specific health information (Level I Information and/or Level II Information) to both individuals if (i) the requestor qualifies for such disclosure and (ii) the requestor explicitly authorizes us to share the information with the other person.
- For any subsequent disclosures when that particular requestor is not on the line, the requestor must either complete and submit Aetna's "Authorization for Release of Protected Health Information" ("Third Party Authorization"), provide us with a health care power-of-attorney, or call and give us another explicit authorization with the other person on the line.

Protected Health Information

We have developed policies and procedures that address the proper handling, use, and disclosure of members' PHI while administering their health care benefits and providing high-quality customer service, and we maintain them. We update policies and procedures annually and as needed to stay current with changes in legislation and to verify that they are current and complete. Any time we update our policies and procedures, we also update training materials or other related communications and notify our staff. We have adopted the following policies and procedures to safeguard the use of PHI:

- Implementing, enforcing, and providing training and education for our staff on policies and procedures regarding the appropriate uses and disclosures of PHI, including monthly distribution of compliance fact sheets
- Establishing the proper handling, use, and disclosure of members' PHI while administering their health care benefits and providing an appropriate level of customer service
- Recognizing each member's right to privacy and treating all their health information with the strictest confidentiality and obtaining their permission to release it

Sharing health information with others only when it is appropriate for aiding delivery of health care services, administering health care benefits or health care payments, or as otherwise required by law as previously described.

Protecting Data in Motion and At-Rest

To protect data in motion and at rest, Aetna has implemented NextGen server architecture for all Medicaid production environments. Our databases reside in an environment with full disk encryption, ensuring encryption of data at-rest. Additionally, data in motion is encrypted internally to encompass our wide network area as well as across the Internet. Our database servers are protected by physical and logical access controls within a highly secured data center. We encrypt all backup media, and we destroy retired hardware following strict disposal protocols further protecting data. Our internal database activity is monitored by Guardium software to capture all activity including reading and accessing our databases. Additionally, we have a 100 percent compliance training rate concerning data protection and protecting member health information for our staff, contracted providers, and subcontractors.

Security Awareness and Education

A key component of Aetna's security program is employee education and awareness of the critical role each of us plays in protecting member health information, provider and subcontractor data, the Department's data, and our interfaces and platforms. Our front-line personnel stay well informed about current threats via internal communication channels, and they receive training on how to validate inquiries for personal data. To ensure all staff and contingent workers are aware and understand the importance of their role in protecting Aetna's information and resources, all workers are required to complete, upon commencement of employment and then annually, an online Information Security Awareness course.

Security Audits

As part of our ongoing commitment toward protecting the confidentiality, integrity, and availability of our members' PHI, Aetna contracts with IBM Security Services to perform an annual HIPAA Security Health Check audit of existing controls as one of the key assessments

performed along with other continuous audit activities throughout the year. The most recent completed assessment, conducted between April 10 and May 10, 2019, was facilitated through a series of onsite interviews, as well as a review of all documented policies, processes, procedures and guidelines, and a comparison of Aetna's security practices against HIPAA security standards as it relates to the Omnibus Final Rule.

Internally, we audit a series of technical controls designed to either eliminate security defects altogether or to facilitate the identification of potential vulnerabilities as early within the lifecycle as possible. These controls can be classified into the following categories:

- Application obfuscation technologies, which help provide Aetna's applications with protection against reverse engineering and other forms of compromise
- Implementation of static code review technologies on the developer's workstation in a manner that not only supports the identification and remediation of defects, but also provides developers with feedback that helps avoid creating such defects in the future

Commendation from IBM
For Maintaining Strong Security Controls for PHI

We received the following commendation regarding the finalized assessment:

"Aetna has done a tremendous job within the enterprise of addressing and minimizing security concerns by taking a risk-based approach and putting an emphasis on strong security controls where electronic PHI (ePHI) is processed transmitted and stored. The daily risk and threat monitoring of Aetna assets is leading-edge and ensures a high awareness of threat vectors into the environment. In addition, a very robust security awareness campaign is also in place with multiple methods of distribution to ensure that staff fully understand and take part of securing sensitive information. There are continuous audits and assessments occurring throughout the year and Aetna has shown due diligence in being proactive in its approach to security and providing all the necessary documentation/evidence to the various assessors in a timely and organized manner."

IBM Security Services concluded:

"Aetna takes information security seriously within the organization and strives to focus on various technical controls for the protection of ePHI. Aetna has numerous audits performed throughout the year, and as such, remains in good standing with the various compliance requirement. …Aetna is performing well in all areas, thus meeting all the HIPAA Security Rule requirements."

The following list represents a sample of our internal audit controls:

- Detective application security controls facilitate the identification and remediation of defects identified after development activity has ceased.
- Policies pertaining to the implementation of open source code components, defined by a cross-functional team and enforced through a series of technical controls integrated at several layers.
- Threat modeling practices, which enable us to outline threats to an application and design appropriate countermeasures.
- Next-generation authentication platform based on a comprehensive analytical model that leverages a variety of behavioral and biometric attributes which, when analyzed in correlation with one another, allows for instantaneous authentication decisions to be made at assurance levels that far exceed traditional binary forms of authentication.

Using Information to Implement and Maintain our Quality Program

IM004	The Vendor should describe how its health information system collects, integrates, analyzes, and reports data necessary to implement and maintain its Quality Assessment and Performance Improvement (QAPI) Program.

Our health information systems use data collection methods that allow for reporting of data analytics specific to health outcomes and metrics. These methods include trending of measures and performance to show both positive and negative trends. We monitor these trends via heat maps, regional performance, and population demographics. Our population assessment provides details on data that enable us to develop predictive analytics on enrollee behavior, as well as stratification of enrollee conditions. We use our technology infrastructure and databases as tools described in **Table 6.12.1-1** to help us identify, track, analyze, and report data to support implementation and maintenance of our Quality Assessment and Performance Improvement (QAPI) program.

Table 6.12.1-1: Internal Tools and Technology Infrastructure

Technology Tool	Description
Claims management system	Collection of medical claims for inpatient, outpatient, and professional services
HEDIS National Committee for Quality Assurance-	For generation of annual HEDIS and non-standard HEDIS rates, creation of monthly trend reports, and provider gap in care lists

Technology Tool	Description
certified data platform	
Hotspot analytics	Identification of enrollee presence by gender, race, ethnicity, culture, HEDIS, and non-standard performance indicators by regional and statewide levels
Electronic population health management platform	Identifies enrollee health risk factors and social determinant of health indicators, and alerts care manager of gaps in services, emergency department disparity dashboard, and health equity dashboard at the regional and statewide levels
Medical record audits	Provider adherence to medical record, HEDIS standards, and clinical practice guidelines
Grievances and appeals data platform	Collection and tracking of enrollee and provider satisfaction with the plan and services rendered
Quality data platform	Tracking of provider preventable conditions, health care-acquired conditions, and potential quality of care concerns

Our utilization/quality improvement technology subsystem maintains and integrates data from many sources, both internal and external, to provide a comprehensive repository which staff use for monitoring and developing action items that can be enrollee- and provider-specific.

Our West Virginia QAPI is designed to continuously improve and monitor the medical care, enrollee safety, and delivery of services to enrollees that include a focus on the enrollee's biological, psychological, and social well-being. Our local Medicaid Quality Management team performs the following coordination efforts with our plan leadership and multiple departments, such as Care Management, Utilization Management, Member Services, and Provider Services, to ensure HEDIS reporting needs are met:

- Creating outbound eligibility file information to support receipt of vendor data
- Receiving and storing all inbound supplemental data utilized in HEDIS
- Compiling/maintaining all needed data to support HEDIS reporting within the HEDIS data mart
- Preparing all data files utilized to operate the HEDIS software
- Receiving data files from the data warehouse and runs monthly/annual HEDIS rates

- Supporting HEDIS intervention evaluation and reporting efforts
- Supporting pay for performance

These supporting data sources include claims/encounters including behavioral health from our claims processing system. Our standard supplemental data includes lab results, vision, dental, pharmacy, immunization registries, and Department historical claim data. Our non-standard supplemental data includes year-round medical record review results. Please refer to **Figure 6.12.1-1**, which details the flow of quality data through our various technology applications. Our goal is to collect, aggregate, and integrate applicable data into a common system to support accurate analysis and reporting. These results can be used by our Population Health Management team, for example, to improve their understanding of members' care needs and to develop programs to address these needs.

Figure 6.12.1-2 depicts the broader reach of our data sources. Our goal is to build high quality analytical models, using multiple data sources, to improve how we organize and support the delivery of care. We achieve this goal by centralizing all Aetna Medicaid organization operation and analytical data content, based on a common data governance structure, to develop a stable, scalable, and centralized environment to analyze, interpret, report, and improve member outcomes.

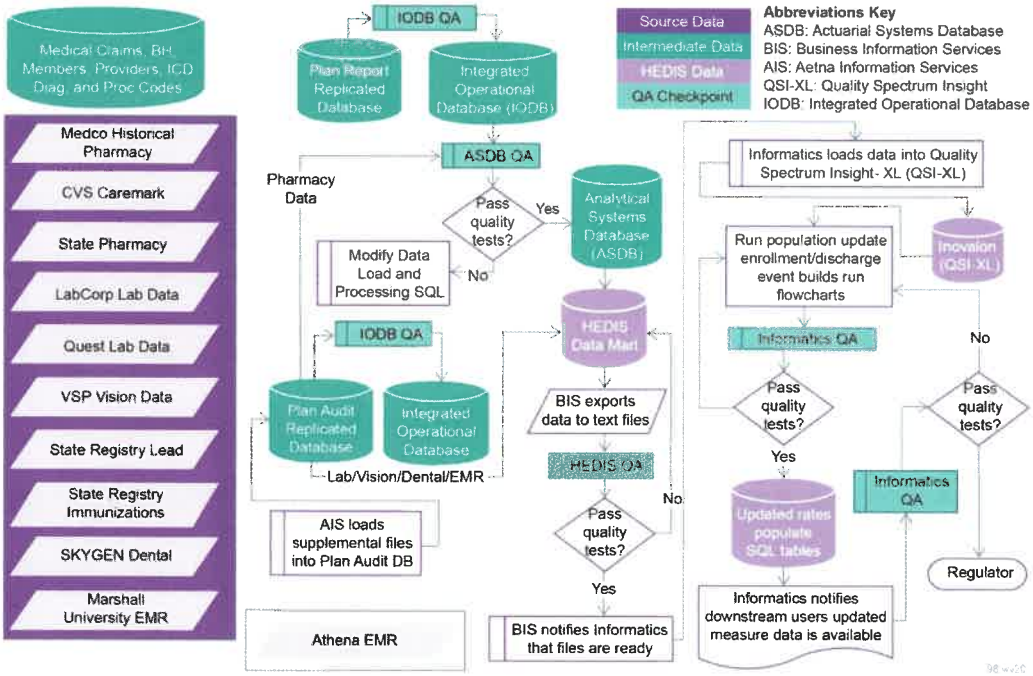

Figure 6.12.1-1: HEDIS and Quality Data Integration Process Flow

The quality data integration process depicts the highly structured relationship between our claims management system, QNXT™, our vendor information, our different data flows, and our quality assurance checkpoints.

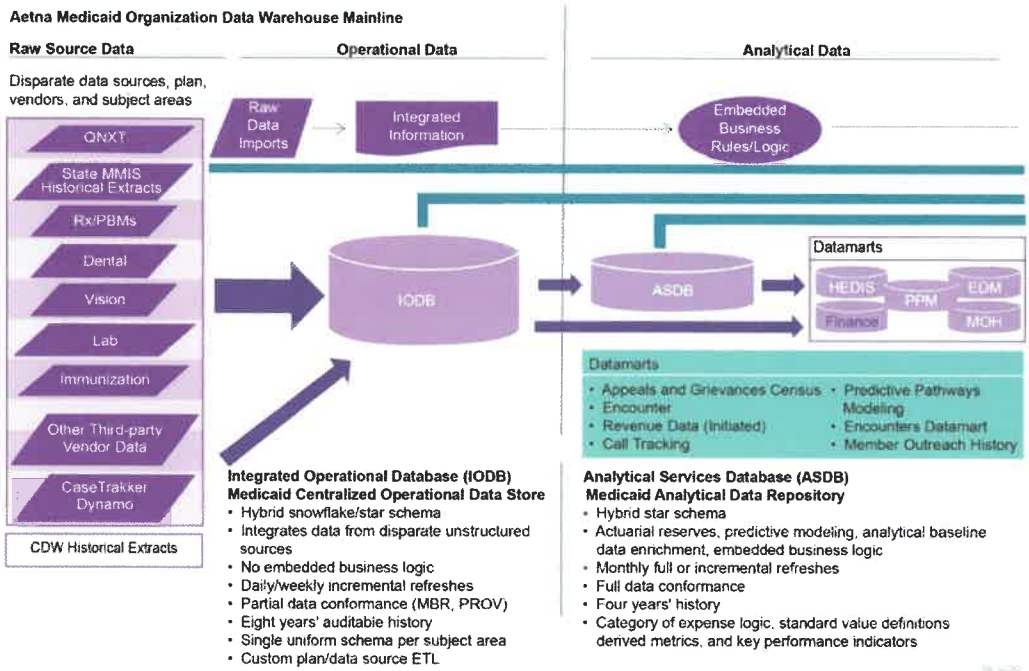

Figure 6.12.1-2: Aetna Medicaid Organization Data Warehouse Mainline Flow Chart

We integrate our raw data sources into a centralized repository to support our analytics and the impact of our Medicaid program.

Quality Assessment and Performance Improvement Program and Related Data analysis

Our Informatics team creates a primary comprehensive data source in our Medicaid data warehouse comprised of data from our operational systems. We also maintain external vendor data through data files, data system transfers, and extensible markup language files. Our multilayered data collection, analytics, and reporting/interface structure is robust and designed to handle and protect large amounts of data. Aetna maintains (and requires each subcontractor to maintain) records, books, documents, and information adequate to verify that services are provided and payments made in accordance with this contract and other relevant federal requirements. We retain such records for a period of 10 years after the applicable contract expiration date or until the resolution of any associated litigation, claim, financial management review, or audit, whichever is longer.

We use structured query language reporting tables or data building blocks that serve as a foundation for all our reporting needs. Our Informatics teams combines key data elements across the organization from the following sources:

- Operational, analytical, and transactional databases
- Other data marts, like HEDIS, finance, encounters, and appeal and grievances
- New sources being developed for clinical events and social determinants

Our Informatics team then consolidates the data set to facilitate consistent analysis. Analysts across the enterprise are then able to develop reports from one server, one database, and only a few tables, rather than using disparate sources. This approach simplifies the way we access data and ensures consistent analysis of our data.

The Aetna Medicaid organization encourages collaboration between our affiliate health plans and national Shared Services departments. One example of our shared engagement is our reporting collaboration group. This reporting collaboration group serves as a forum for groups to

share information and experiences with a broad group of individuals. The function of the reporting collaboration group is a cross-functional group of Aetna plan level reporting managers and subject area experts, led by Medicaid Informatics, to execute collaborative reporting governance by doing the following:

- Maintaining an intranet site and Microsoft Teams site for communication and collaboration
- Maintaining reporting catalog for managing content, discontinuing obsolete reports, and identifying best practices across the Aetna Medicaid organization
- Provide central repository that plans can access to find report examples
- Identifying opportunities to create and utilize standard logic and reports across plans
- Cultivating a center of excellence around reporting for better education and training for standard and Department reports
- Serving as an escalation forum to identify gaps, reconcile conflicting needs, address questions, and set priorities
- Acting as primary contact and expert for designated reports and help identify contacts and business area owners for reports
- Optimizing resources across the Medicaid segment to meet reporting needs

Quality Assessment and Performance Improvement Program and Related Reporting

Our approach to reporting provides timely, consolidated, relevant, and accessible information. This is essential to informed decision-making and critical ongoing program monitoring. Aetna has a long and successful history in West Virginia, and we have used this history and experience to develop a comprehensive QAPI reporting package. While we comply with the State's requirement to compile and submit accurate reports, our QAPI reporting efforts also support detailed analysis and support decision-making efforts by the Department and within Aetna. Through a combination of comprehensive data sources, we generate data analysis reports, and in turn, encourage deep thought analysis and data-driven decision-making. Aetna complies with all current federal and state laws and regulations that govern reporting, disclosure, and certification requirements. This includes the development, maintenance, and oversight of member data that is member-age sensitive (e.g., adults and children). We catalog every statutory, regulatory, and compliance-based report across the organization. These reports

are centralized and standardized with associated metrics to improve data integrity and consistency. The report catalog can identify existing reports that meet (or meet with minor modification) the requirements of any new requests, minimizing the need to develop any reports from scratch. Centralizing reporting in this manner improves data integrity while providing complete, accurate, and timely submission of reports. Moreover, we have used the results and feedback from the states to develop more enhanced, informational, and actionable models and reporting. The lessons learned have also led us to develop additional coordinated population health capabilities to help providers support the care and management of enrollees.

We provide timely, accurate, and compliant reports to help the Department make informed decisions and promote our mutual goals of providing high-quality, cost-effective, and integrated care to enrollees. Our Informatics team works with the plan to generate all required operational reports, adhere to required report formats (including using prescribed templates), and meet the required reporting schedule. Our Informatics team builds the reports and the plan assumes responsibility for reviewing, cross-checking, and certifying the data, information, and documents (e.g., web content accessibility guidelines-compliant for outward-facing reports). Required reports are submitted to the Department on or before the date required in an agreed-upon format and in accordance with its submission procedures; we acknowledge the Department may alter the reporting formats, content, and reporting frequencies at any time.

Our Medicaid Compliance team uses Archer, a tracking system that ensures that all required reports and contractual deliverables are tracked and submitted to regulators accurately and timely. Archer operates in the following two phases:

- Our Informatics team builds reports for each contract deliverable.

- Our Compliance team tracks and documents contract deliverables, as well as reports on the timeliness and accuracy of our reporting; plan compliance officers retain copies of signed attestations and final reports in Archer for archival and auditing.

Aetna uses the following tools to bring information from multiple components to provide the Department with an accessible combined view of project and performance information:

- SQL Server Management Studio
- SQL Server Reporting Services
- Crystal Reports
- Tableau
- SAS
- Cognos
- Microsoft SharePoint
- Microsoft Excel
- Power BI

These standardized tools and repeatable processes give us a clearly defined roadmap for consistent and predictable high-quality reporting and work products. In addition to these conventional reporting tools, we also leverage the advanced data visualization capability of Tableau to provide a more interactive, user-driven, self-serve experience in accessing and analyzing data. The following figure in this narrative shows how our Medicaid data warehouse interacts with all of our systems as well as our external entities' systems. Please refer to **Figure 6.12.1-3**. Aetna's Warehousing Capabilities, which depict our data warehousing capabilities.

Supporting Data Analysis

Through our capability, collection, and storage of such vast amounts of data, our Informatics team supports data analysis needs for departments and teams companywide. This ultimately supports our decision-making and ability to recommend improvements/enhancements to programs in support of the Department's goal of creating a healthier West Virginia. We have created 28 dashboards and 20 demonstrations and training videos for more than 400 active users and have received approximately 21,500 server hits to enhance staff knowledge of our data goals. A following list summarizes the dashboards we offer access to by department:

- Trend and utilization management dashboard includes utilization management, readmissions, observations vs. one/two-day stays, emergency department, neonatal intensive care unit, outpatient urine drug testing, medical claims trends, authorization trends, and inpatient performance-to-target.
- Population health dashboard details eligibility trends, demographics, enrollee conditions, consolidated outreach and risk evaluation predictive analytics for risk stratification, risk adjustment, and month-over-month risk adjustment.
- Operations dashboard includes utilization management, claims key indicators, case management executive, care management, HEDIS trends in case management, and call tracking.
- Pharmacy dashboard (when applicable) summarizes prescription claims, pharmacy summary, weekly prescription lite, pharmacy high-utilizer, and pharmacy market share.
- Quality and value-based services dashboard includes gaps in care and value-based services quality.

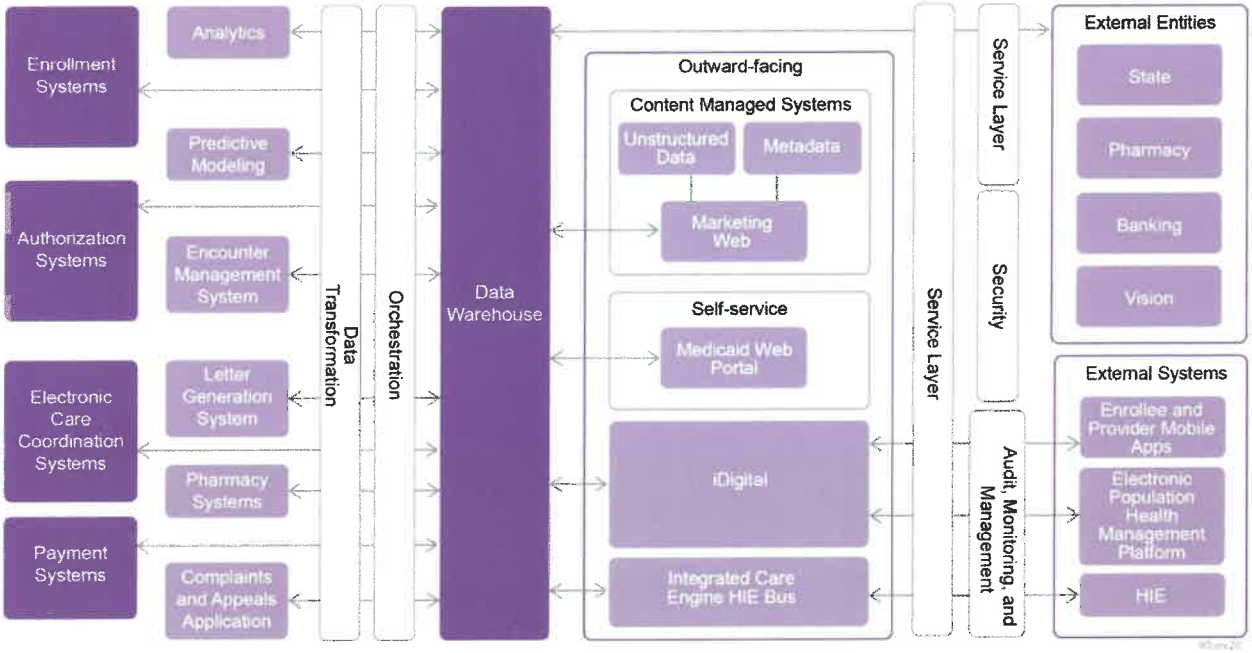

Figure 6.12.1-3: Aetna's Warehousing Capabilities

This graphic displays our warehousing capabilities and the structured data interaction between our enrollment, authorization, electronic care coordination, and payment systems, as well as our data warehouse and our security and monitoring technology platforms.

Health information system and processes utilized

IM005	The Vendor should describe the flexibility of its health information system and processes utilized to develop requirements, configure, and test system changes as per new or modified contract requirements.

Our systems have been integrated with the Department since 2011 and are currently fully operational. Any additions included in the new contract will follow our change management process which provides a structured, flexible, and fully recoverable framework in which to

implement and manage system change releases on schedule and per federal, state, and contract-specific requirements. This change management process includes the following steps in the application development process:

- Analysis
- Development
- Peer review and testing
- Approval prior to implementation into production
- Post-implementation validation to ensure all impacted production systems are functioned as designed by the change requirements

Risk Mitigation Strategies for System Changes

We have significant experience navigating and managing risk throughout the deployment of new technologies. One detailed example of our risk management capability is our adoption of our DevSecOps methodology for system implementations. This methodology transforms change management into a fully automated continuous integration and delivery process tailored to focus on speed and quality. The emphasis is on the collaboration and communication of software developers, code/configuration management, and testing teams, while automating the process of software delivery and infrastructure changes. This methodology supports the establishment of a culture and environment where building, testing, and releasing software can happen rapidly, frequently, and of higher quality. The resulting transformation includes the following components:

- **Continuous integration:** Merging code into a common source code repository and executing automated build, quality check and unit testing.
- **Using of state-of-the-art code management technology:** Aetna's one source code repository allow development teams to share source code for all applications amongst all the teams. This repository tool enables developers to store, exchange, trade, and evaluate code collectively, exponentially increasing the power any one team.
- **Continuous delivery:** Rapidly deploying the development version of the software into higher environments, including production. In addition to peer reviews and functional code libraries, Aetna source delivery tools support 100 percent automated application deployments through all pre-production and production environments, eliminating application failures due to incomplete code solutions.

- **Continuous testing:** Testing of code at every stage of project lifecycle in an automated manner and providing feedback on quality. Repetitive automated testing leaves the business stakeholder with the only manual handling for end-user validation. Using industry-leading security software, CheckMarx, delivery teams employ gated security scans for every deployment in the pre-production environments. This provides static and interactive application security testing at every phase of delivery. The integrated process scans uncompiled code and searches for hundreds of known security vulnerabilities, reducing and remediating risk before changes ever make it to production. Additional testing is described below.
- **Continuous monitoring:** Process and tools to intelligently monitor, analyze, and manage solutions and IT infrastructure in the production environment of the application.

Within our modernized, agile-based, DevSecOps software delivery model (please refer to **Figure 6.12.1-4**), we continuously monitor the utilization of our servers in real time, using tools such as Tivoli, AppDynamics, and Splunk. If our server utilization is deemed excessive, we add servers to the cluster to increase central processing units, random access memory, and disk capacity. This advanced technology delivery cycle enables our systems to quickly build, test, and release new capability to match any escalation in demand from Mountain Health Trust, West Virginia Health Bridge, and WVCHIP while maintaining system operational uptime and performance.

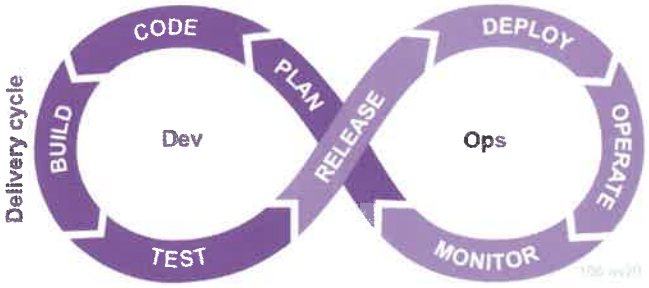

Figure 6.12.1-4: DevSecOps Delivery Cycle
We employ a DevSecOps software delivery process, which combines software development with infrastructure monitoring and operations to shorten our development lifecycle, provide enhanced platform stability, and deliver timely solutions to the State.

As an example, our West Virginia Medicaid plan enrolled approximately 15,000 new members in the second quarter of 2019 after an existing managed care organization exited the market. Moreover, we experienced a 17 percent increase in our West Virginia Mountain Health Trust membership during the last two quarters of 2015, with the majority of this increase occurring

between the months of June and September (we experienced 11 percent growth during this period). During each of these time periods, we met 100 percent of our monthly claim timeliness metrics.

Testing Methodology Which Supports DevSecOps Delivery Methodology

The Aetna Medicaid organization's testing methodology and MIS provides an objective, independent view of our software implementation to allow the business to validate that our systems are functioning as mandated by contract requirements, including Department systems such as the Medicaid Management Information System, and integrated eligibility solution. Testing is a critical component of all implementation projects and is performed throughout all the phases of the project lifecycle by our subject matter experts and end users. We have adopted DevSecOps principles, which include fully automated continuous integration and continuous delivery for our implementations, including a detailed test plan that ensures all requirements are successfully built, tested, and deployed per the deployment schedule. Our testing protocol utilizes waterfall and agile methodologies to plan, assign, execute, and report on the status of all testing across functional areas. Functional areas and vendors involved include claims, eligibility, member services, medical management, encounters, and compliance. The following types of testing are used during the project lifecycle (note that each type of testing is accompanied by robust testing artifacts, including, but not limited to, strategies, scripts/test cases, and test results summary that can be traced back to Department requirements):

- **Unit testing:** Tests functionality and is executed by developer who builds the code or code module. Developers are all trained on in-sprint automation techniques which allows our scrum teams to create automated acceptance tests at the time of application development, which verifies that piece of code has a built-in test(s) for accuracy.
- **System testing (positive and negative):** Performed to assess the proper behavior of an application based on business requirements and application, which includes the desired action based on specific input. In the absence of action when incorrect information is supplied, changes to application functionality are validated against preceding and post-workflow steps.

- **Department testing:** We exchange data file(s) with the Department to validate that system changes and logic are compatible with requirements and is certified by the Department if needed. In addition, we have a dedicated team to facilitate testing between the State, vendors, and Aetna utilizing any state-specific testing tools required.

The following types of testing in different phases of the software development lifecycle workflows allow for all components of implementation to be tested thoroughly and exhaustively, including subcontractor changes. Each type of testing is accompanied by robust deliverables, including, but not limited to, test strategy, test scripts, and test results summary:

- **Specialty/performance testing:** Performed to assess the proper behavior of an application based on documented requirements, this testing occurs to validate how the application behaves under various conditions (i.e., browser testing performed on web applications to assess compatibility on different browsers such as Internet Explorer and Google Chrome, performance testing on proper screen response time, or file processing time).
- **Automated regression testing:** Examines the application to see whether it is operating in a business-as-usual mode and that it has not been affected negatively by changes; automated test scripts are executed where possible to validate that there are no additional impacts on upstream and downstream applications.
- **End-to-end testing:** Performed to see if data flows from one application to the other and works as expected (e.g., claims end-to-end testing includes data capture, file load/import, adjudication, payment check run, encounter process, and reporting).
- **User acceptance and functional demonstrations:** Validates the business requirements using defined user acceptance test strategies, plans, and script/test cases and verifies that the application/file(s) functions as expected and no defects are encountered. Additionally, process demonstrations are completed at the end of each sprint to ensure end user decisionmakers verify in real time the accuracy of the delivered functions.
- **Production checkout testing:** Confirms that all application changes have been migrated successfully to the production environment and all functionality is working properly.

Our testing team leverages industry standards tools and best practices in accordance with our testing methodology. We can deliver changes within days which are fully built and tested, all with minimal manual intervention. The process provides visibility to status, defects, feature progress, and other software delivery metrics, while automatically moving software code through the delivery platform. Our software testing provides an objective, independent view of the software to allow the business to understand the risks of its implementation. Aetna's testing platform is designed to discover impacts to new code or new configurations in minutes of

delivery to the testing environment. Please refer to **Figure 6.12.1-5** for an expression of the different phases of all our testing components.

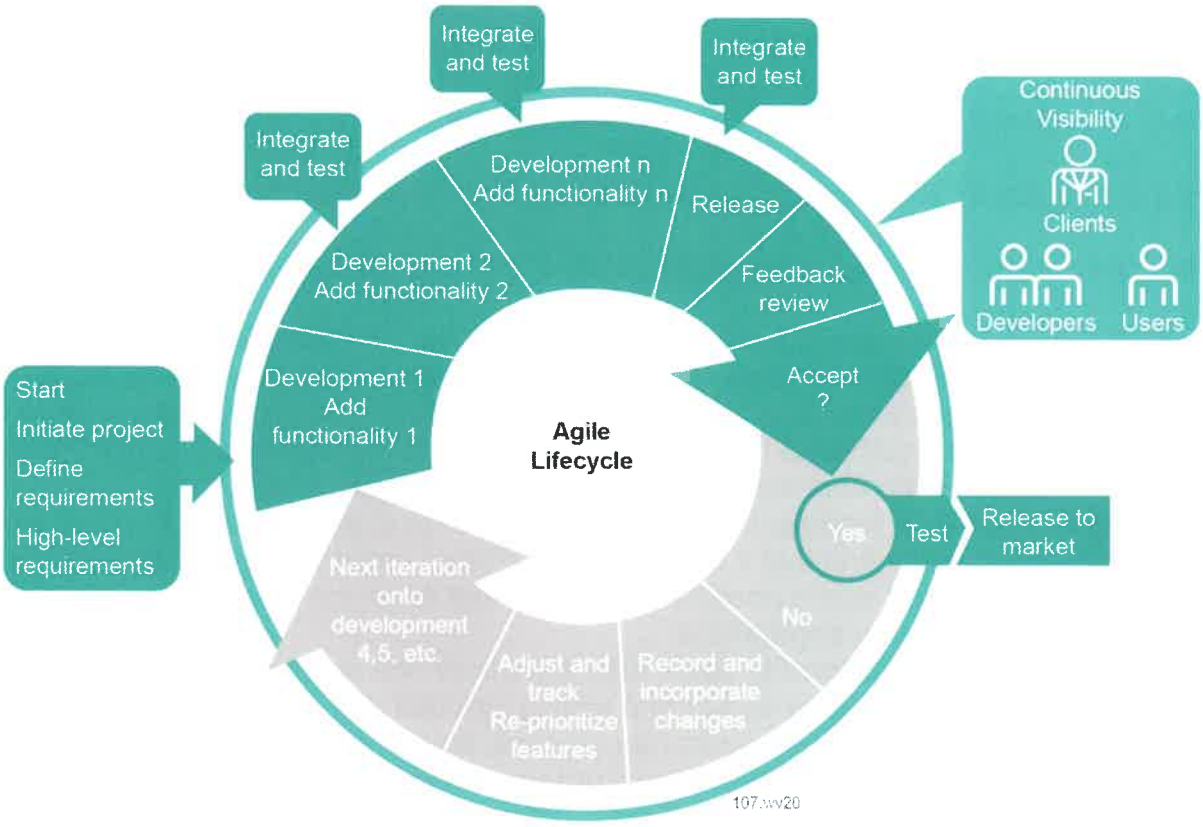

Figure 6.12.1-5: Aetna's Agile Lifecycle Flow
Our software delivery methodology enables continual workflow and feedback on product attributes, features, and corresponding test data, ensuring all implementation requirements are tested exhaustively at each step.

Scalability Assessment Process

Our scalability assessment process (please refer to **Figure 6.12.1-6**) continuously explores, tests, and evaluates methods for expanding on the flexibility of our system to meet Mountain Health Trust, West Virginia Health Bridge, and WVCHIP member and provider needs. This continuous assessment process gives our MIS team the capability to scale our systems to meet the State's changing needs.

Annually we perform an extensive scalability assessment to ensure our systems are well positioned to support projected growth across membership, transaction volume, and user capacity. This assessment evaluates all applications, including all interfaces and dependencies across our subsystems. We review each application and identify any constraints that may inhibit application performance in the event of a significant (e.g., 100 percent+) growth in demand. This scalability assessment is comprehensive and emphasizes the following capabilities:

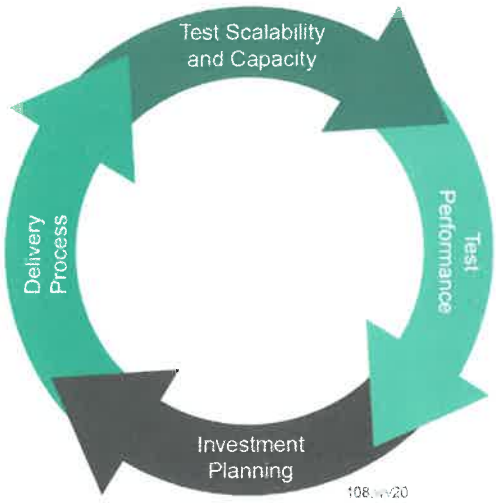

Figure 6.12.1-6: Scalability Assessment Process
This figure summarizes the integrated annual scalability process from assessment through planning and delivery, which enables us to scale our systems to meet the State's changing needs.

- **MIS scalability:** Ability of the application and its infrastructure to accommodate an increase in volume (e.g., users, transactions, members) by adding proportional infrastructure capacity (e.g., central processing units, memory, storage)
- **Capacity:** Growth that can be supported by existing hardware allocations (e.g., central processing units, memory, direct access storage devices), assuming no application constraints are encountered as a result of that growth
- **Performance:** Ability of the application and its infrastructure to provide a consistent response which meets or exceeds defined Service Level Agreements

Upon conclusion of the assessment, we initiate an investment planning and delivery process to resolve any constraints. This annual process ensures our applications are continuously assessed, positioned to ensure maximum performance under exceedingly high-volume situations, and able to scale to support planned or unplanned growth within Mountain Health Trust, West Virginia Health Bridge, and WVCHIP.

System Diagram

Our Mountain Health Trust, West Virginia Health Bridge, and WVCHIP MIS architectural diagram (please refer to **Figure 6.12.1-7**) depicts the major subsystems and corresponding components we use to interface with or support our overall management information system.

Management Information System Functionality

Our system interfaces are integrated to provide optimal functionality for the Mountain Health Trust program and for WVCHIP. These systems are designed and well-positioned to be flexible and to scale to benefit the health care provider needs for all Mountain Health Trust and WVCHIP enrollees. **Table 6.12.1-2** lists our MIS system components, includes a brief description of each component and how the component is used to support Mountain Health Trust and WVCHIP programs. All systems are supported and managed using the innovative software delivery and support processes as described above.

Business Continuity and Disaster Recovery

IM006	The Vendor should provide its business continuity and disaster recovery plan for the technology and infrastructure components of business operations with its bid.

We pride ourselves on being a reliable partner to the Department for the past 23 years, including during times of natural disasters, emergencies, cybersecurity, and other threats. In keeping with Aetna's commitment to provide the highest quality service to its customers, our local leadership works with our national Shared Services team to review best practices and enhance the comprehensive Business Continuity Management program we developed to manage business disruptions. For this response, we are submitting the technology and infrastructure components of our Business Continuity Plan. We will be submitting our Disaster Recovery Plan, Business Continuity Plan, Information Security Plan, and Systems Quality Assurance Plan when requested.

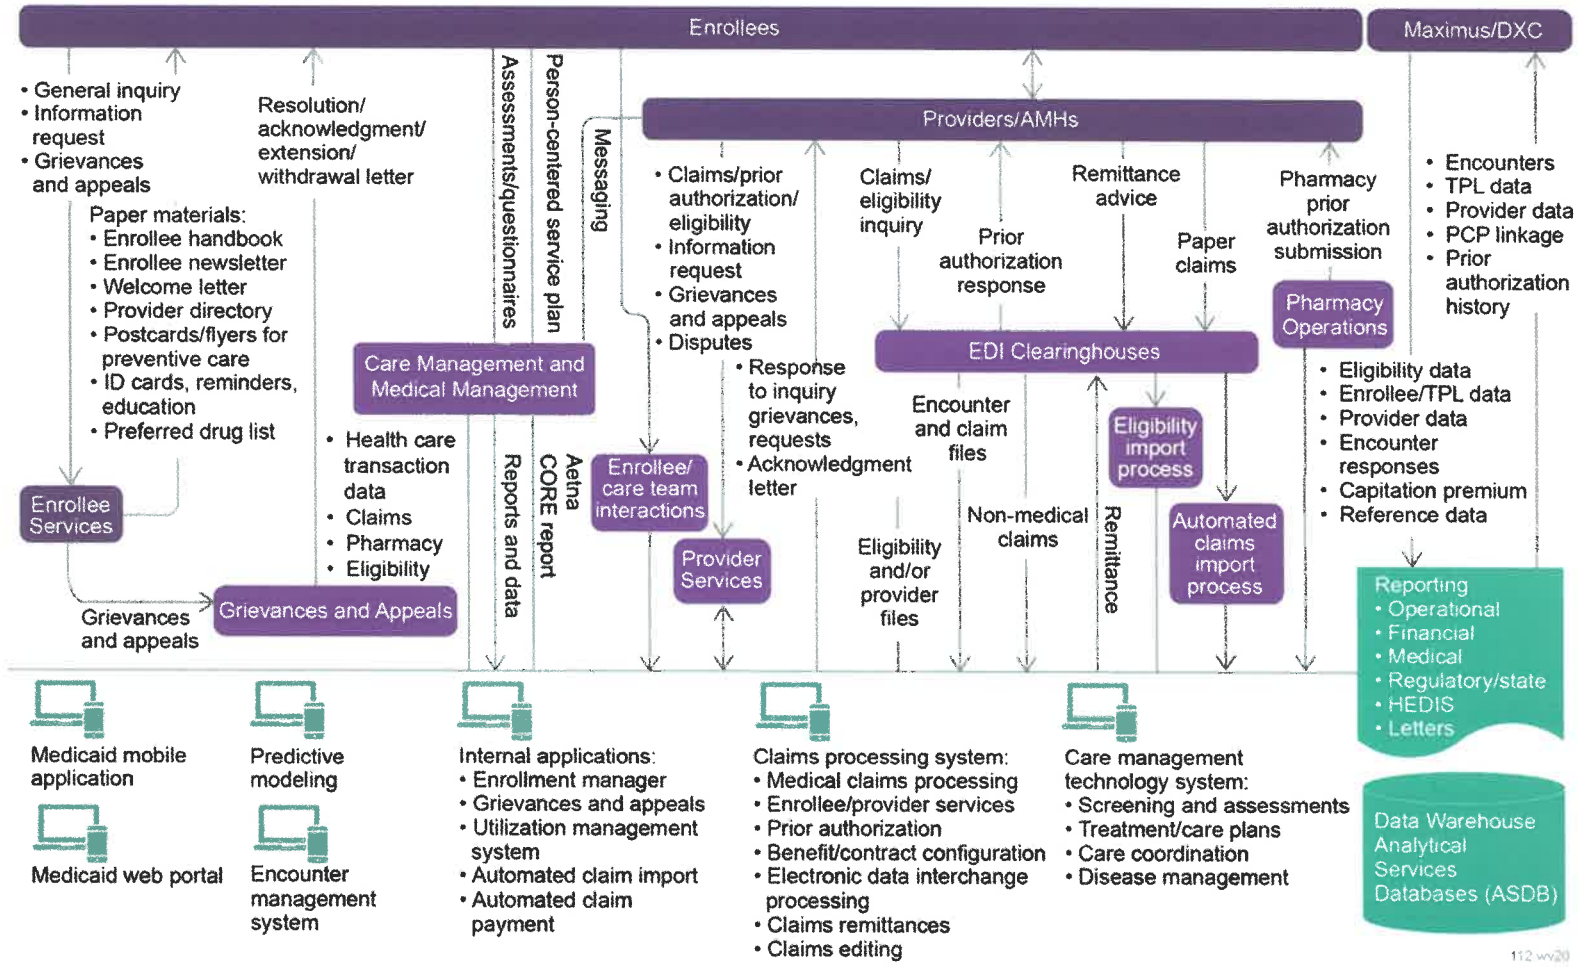

Figure 6.12.1-7: Aetna's Management Information System Architecture

This diagram illustrates the relationship between Aetna's MIS systems, applications, and related components, all in support of the Mountain Health Trust, West Virginia Health Bridge, and WVCHIP.

Table 6.12.1-2: Aetna Information System Capabilities

System Component (alphabetical order)	Description	Purpose
Aetna Better Health Member Portal	Secure portal is available to all members and optimized for use with smartphones and tablets; provides on-demand services; and is compatible with Section 508 of the Americans with Disabilities Act.	• Claim search • Authorization search • View identification card and member benefits • View prescriptions • Secure messaging to request a new primary care provider (PCP), contact Member Services, and get information about a health condition • Access case management records
Aetna Better Health Member Website	Publicly available website is available in English or Spanish with one click; provides on-demand provider search; includes access to the member handbook, includes Mountain Health Trust, covered services, and benefits information; includes instructions on how to file complaints and appeals; includes links to community resources, service management, and health plan contact information; is optimized for use with smartphones and tablets; and is compatible with Section 508 of the Americans with Disabilities Act.	• Assist members to Identify available Mountain Health Trust network providers, facilities, urgent care centers, and walk-in clinics; verify information in the member and provider manuals; and identify the appropriate behavioral health managed care organization for an individual member • Provide access to the formulary drug list to determine if a drug is covered by the plan • Provide member education • Provide members with information on our quality program • Allow members to submit inquiries • Educate members and providers on the tools available to them (e.g., West Virginia form)
Aetna Better Health Mobile App	Mobile app is free for iOS and Android smartphones; simplifies how members find and locate a provider; includes access to our member	• Search for providers, facilities, urgent care centers, and walk-in clinics • Electronic member ID card (online or offline)

System Component (alphabetical order)	Description	Purpose
	handbook, details about member's profile, current medications, medication claim history, claim search, and ID card; supports secure communication requests to Member Services and care managers and includes designated caregivers who help members with their health care needs.	• View claims, coverage, and personal health records • Complete health assessments – target completion date of Q4 2020 • Enroll in online health coaching • Communicate securely with health plan resources
Aetna Grievance and Appeals System	System logs and tracks complaints, grievances, and Fair Hearing requests for complete, accurate, and prompt resolution.	• Track, trend, and document complaints, grievances, and appeals received by the health plan • Enable accurate and complete documentation and adherence to turnaround timeliness
Aetna Inpatient Census Tool	Tool monitors and is used to manage members receiving inpatient care; documents the member's readmission risk scores, assigned care managers, and discharge planning details.	Provide a daily census of inpatient cases for metrics reporting, staff assignment, and referencing concurrent review and case management
Aetna Provider Portal	Portal provides public and protected-access sections; includes access to the provider manual, lists program updates, supports prior authorization (PA) requests and PA status, supports member eligibility and claim status inquiries, lists provider panel members, and includes search function for other health plan participating providers.	• Provide information to the provider community • Post provider profiles/utilization reports • Post provider gaps in care reports • Educate providers on practice guidelines, HEDIS billing and documentation, quality improvement activities and outcomes, and Early and Periodic Screening, Diagnostic and Treatment requirements • Submit authorization requests by the provider • Validate eligibility information; check claim status; check payment and remit status • Access members' care management records

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

System Component (alphabetical order)	Description	Purpose
Aetna Quality Management Issues Application	Enterprise application tracks and trends quality of care investigation results at the health plan and service level.	Document investigation and outcomes related to potential quality of care issues
Analytical Application Web	Interactive, point-and-click query tool accesses reports, drills down into data, and exports information from the Aetna Medicaid Organization Data Warehouse; provides a centralized security and administration framework to applications, tools, or reports requiring high-security, reliability, and availability; sits on a web farm and supports any information type, including .NET-based applications, Tableau reports, structured query language server reporting services, and Crystal reports.	Create following reports: • Provider profile • Provider utilization data • Plan standard
Apttus	Online provider contract management system	• Automated contract management • Create unified and simplified experience for providers
Availity Provider Portal	Single provider portal that providers can use for multiple payers, meaning one provider login and one tool for providers to learn.	• Rollout of parallel functions in 2020 (target complete Q4 2020) • Request and respond to eligibility and benefits Inquiries • View member identification cards • View panel roster (PCP assignments) • View remittance • View claim attachments (health plan solicited) • Add/inquire about precertification and referrals • Amend or add attachments to precertification

System Component (alphabetical order)	Description	Purpose
		• Submit specialty pharmacy prior authorizations • eviCore • Contact Aetna • Electric funds transfer email notification • Pharmacy authorizations • Support portal access • Compliance reporting; Medicare attestation • Access to education and training
Axway Secure Transport	Enterprise-grade platform services as the file transfer book of record; manages secure file transfers between the Department and Aetna, between Aetna and providers, as well as between Aetna and outside vendors and the Department.	• Manage file transfers both externally and internally • Provide both push and pull capabilities • Perform high-volume automated file transfers between systems, sites, lines of business, and external partners, and implement user-driven communications between folder and portal-based file sharing.
Business Intelligence Information Gateway	Standard reporting and dashboard suite sourced from the Medicaid data warehouse. Provides information users can quickly and reliably access, including key performance indicators and actionable or operational information in trend management, utilization management, risk adjustment, service management, pharmacy reporting, value-based solutions, HEDIS, and operational reporting; includes a web-based reporting tool built using the Tableau software application.	Provide reports such as the following: • Utilization (over- and under-utilization) • Category of expense • Paid claim utilization

Department for Health and Human Resources
CRFP 0511 BMS2000000002

System Component (alphabetical order)	Description	Purpose
Electronic Population Health Management Platform	Captures information in one place to create a 360-degree, unified view of members' data for providers at the point of care; enables the member-centered care team to manage care in real time regardless of care setting; facilitates community-based collaboration among traditional and non-traditional providers on behalf of members in a manner that aligns with Department goals.	• Communicate dashboard-level data to providers related to their member panels • Provide reports related to gaps in care and HEDIS measures
ClaimCheck and Cotiviti	Code auditing solution that supports our claim adjudication module; applies guidelines from industry-standard coding sources to analyze claims for accuracy and consistency with Aetna policies and procedures and national correct coding standards.	Provide correct coding claim editing
Clinical Authorization System	Processes pharmacy PAs; enables providers to check PA status (system capable, but not currently utilized under current contract)	Process pharmacy PA requests
Consolidated Outreach and Risk Evaluation (CORE™)	Predictive modeling that identifies high-risk members; used to identify the highest risk members based on health status, disease burden, hospitalizations, and emergency department utilization and costs, enabling Aetna to focus on high-risk members for our integrated case management program.	Stratify members for case management
Dynamo Care Management System	Fully integrated, web-based information system for physical and behavioral health case management; includes a complete suite of functional, physical,	• Document case management (primary system) • Determine member's risk level

REQUEST FOR PROPOSAL

System Component (alphabetical order)	Description	Purpose
	and behavioral health assessments and service planning tools; offers monitoring functions, including access to members and providers through our secure portal.	• Determine gaps in care and document HEDIS outreach • Assist in quality of care investigations • Collect information from submitted obstetrical needs assessment forms
Edifecs	Stores encounter data from vendors; formats data to meet BMS' requirements; screens data for accuracy, timeliness, and completeness before submission to BMS; processes the most current coding protocols.	Extract and validate claim information for encounter submission to BMS in alignment with all BMS' encounter requirements
Enrollment Manager	Automated rules-based application that loads and processes enrollment data.	• Load membership data received via an 834-member file into QNXT member module • Process coordination of benefits and third-party liability records respective to member enrollment • Generate enrollment load reports
GMC iNotify	Correspondent management system that generates and stores member and provider Notice of Action letter; facilitates and tracks key dates in the authorization process.	Communicate with providers and members regarding the status of authorizations
Informatics Clinical Event System	Enterprise data aggregation and warehousing system that holds population health-specific data on a single platform; accessible to external systems; and aggregates data from internal provider sources and our claim and service management systems.	• Create population health reports, including gaps in care • Provide physician profile reports • Help providers manage member care

REQUEST FOR PROPOSAL

Department for Health and Human Resources
CRFP 0511 BMS2000000002

System Component (alphabetical order)	Description	Purpose
Management Oversight Tracking Tool	Tracks oversight activities that meet and exceed the Department's and Aetna's requirements for delegates and vendors; identifies contacts and audit dates.	Document delegated credentialing information and oversight activities
