Re: CRFP SWC2200000001 The Statewide Contract for Data Transport Services

Dear Ms Hovanec,

On behalf of Verizon, I am pleased to provide the enclosed document that outlines how our unique combination of local capabilities and depth of subject matter expertise will align with and address the State of West Virginia's stated requirements.

Our comprehensive solution will provide secure, flexible, reliable, and cost-effective services tailored to meet your needs. As your current technology vendor, Verizon will continue to leverage multiple technology solutions to achieve the State of West Virginia's goal of delivering the most secure, robust, reliable and comprehensive WAN and Dedicated Internet Access services for the State and its Agencies. We will meet the State's requirements by providing:

- **A Trusted Partner:** As a trusted partner with demonstrated experience in managing networks, Verizon will provide the expertise to manage your network and make sure it stays reliable, up to date, secure and operating at the speed of your organization.
- **Connectivity:** Integrated, hybrid connectivity. Verizon will provide a broad array of reliable, secure connectivity options, integrated as a hybrid network for optimal performance and security to support the State of West Virginia's experience needs and outcomes.
- **Security:** Verizon's end-to-end cyber detection and response delivers broad visibility, actionable intelligence and adaptive response against potential threats. Our portfolio of services of Professional Services, Monitoring and Analytics, Network and Gateway Security and Incident Response can help keep your agencies cyber resilient.
- **Visibility:** Proven network management services and digital platform. As operators of one of the world's largest, seamlessly connected global IP networks, we are able to provide the State and its Agencies automated and centrally controlled network functionality simplifying operations and management.

We are living in dynamic times. A strategic partner who combines both technology and possibility in new ways will help the State of West Virginia move forward. What serves your enterprise today is merely groundwork for what will propel it tomorrow.

With the right partner, you can do more than react to the future. You can lead into it.

**Sandra Hawkins**  
**Sr Client Executive**  
**4700 Maccorkle Ave SE**  
**Charleston, WV 25304**

Verizon's proposal presents a comprehensive, cost-efficient solution tailored to your needs and highlights the advantages of continuing our long-standing strategic partnership. We look forward to moving into the next discussion phase and building upon our partnership.

Sincerely,

*Sandy Hawkins*

Sr Client Executive

### Signature Delegations

**Electronic Signature**

The use of electronic signature bearing facsimile of my signature or other signing method available in subject systems within either the current Verizon Business Group electronic signature system or within a Customer electronic signature system, in compliance with the current Authority to Approve Transactions, Verizon Business Group, Customer Contracts and Binding Proposals, Delegation of Authority, for the authority to perform the following function: Execute and deliver Verizon Business Group Customer Contracts and Proposals, including any and all ancillary documents and amendments related thereto, that are duly approved in accordance with then-applicable Verizon corporate policies.

**Wet Signature**

The use of the above individual's own "wet signature" and title for those Customers that require a "wet signature," in compliance with the current Authority to Approve Transactions, Verizon Business Group, Customer Contracts and Binding Proposals, Delegation of Authority, for the authority to perform the following function: Execute and deliver Verizon Business Group Customer Contracts and Proposals, including any and all ancillary documents and amendments related thereto, that are duly approved in accordance with then-applicable Verizon corporate policies.

**Stamp Signature**

The use of stamp bearing facsimile of my signature, in compliance with the current Authority to Approve Transactions, Verizon Business Group, Customer Contracts and Binding Proposals, Delegation of Authority, for the authority to perform the following function: Execute and deliver Verizon Business Group Customer Contracts and Proposals, including any and all ancillary documents and amendments related thereto, that are duly approved in accordance with then-applicable Verizon corporate policies.

## Signature Security Procedures

### Security Procedure for Electronic Signature

1. Verizon implemented an electronic signature process, provided by outside vendor(s), for Verizon Business Group generated contracts for electronic signature of both Verizon and Customers' authorized signatories.
2. Access to the Verizon electronic signature system is managed by the Billing & Contract Assurance - Presale, Contract Distribution group.
3. Only users listed above are authorized in both Verizon electronic signature and Contract Viewer with Verizon Business Group signature rights. Copy of this is stored at the following url and other locations as required by CPS-103:  
[https://custom.vzbi.com/teams/pcm\\_ops/doadocs/Letters%20of%20DOA/Forms/Active%20Documents.aspx](https://custom.vzbi.com/teams/pcm_ops/doadocs/Letters%20of%20DOA/Forms/Active%20Documents.aspx)
4. Verizon's electronic signature system provides and retains audit trail details regarding who viewed and executed each document with a copy of the written audit trail stored with the fully executed PDF stored in Contract Viewer

### Other Electronic Signature Processes

1. Occasionally, a Customer presents a document to Verizon for electronic signature using a Customer's electronic signature system other than Verizon's.
2. Verizon Business Group signature for these contracts follows the established Contract Signature process as all other documents requiring Verizon signature.
3. Customer's own electronic signature vendors will be reviewed by Verizon Legal and Contract Distribution to ensure the Customer's electronic signature process is secure and provides adequate audit trail with an approved list of vendors updated every 6 months. (Current Approved Vendors: DocuSign, EchoSign, Adobe Sign)
4. Only users listed above are authorized Customer's approved electronic signature systems with Verizon Business Group signature rights. Copy of this is stored at the following url and other locations as required by CPS-103:  
[https://custom.vzbi.com/teams/pcm\\_ops/doadocs/Letters%20of%20DOA/Forms/Active%20Documents.aspx](https://custom.vzbi.com/teams/pcm_ops/doadocs/Letters%20of%20DOA/Forms/Active%20Documents.aspx)

### Security Procedure for Blue Ink Stamp

1. Anthony Recine original signature document in triplicate is retained in a locked drawer in a locked office.
2. Stamps are ordered from Corporate Express with purchase order through SRM.
3. Original signature document is sent with order and returned with completed stamps as per agreement with vendor.
4. One blue ink stamp is assigned to each designated contract analyst. When not in use the stamps are stored in a locked drawer at each analyst desk.
5. Two black ink stamps are available to meet specific customer's needs and remain in the controlled environment unless needed to meet customer's requirements.
6. Access to unused stamps is controlled and only the Assoc Dir and Sr Mgr can assign.
7. Unused stamps are retained in a locked drawer in a locked office.
8. Stamps are part of the Asset Recovery Checklist and recovered before an analyst is released from the company or department.
9. Monthly report of all stamp usage will be sent to Anthony Recine with copy to office of Controller and Revenue Operations.

The above can be delegated by Michael O'Connor and Brian Kennedy within their group when there are new hires

**Duration:**

This will be effective beginning on January 20, 2022 and ending on June 30, 2022 (June 30<sup>th</sup> or earlier) or before if rescinded by me, including the completion of an audit conducted by Verizon Audit of this signature delegation process.

**Approval System:**

Please indicate approval system (Check all that apply):

- nSAP (3)       SCM       PS9.1       Other (please indicate) Not Applicable

# SOLICITATION NUMBER: CRFP SWC2200000001

## Addendum Number: 1

---

The purpose of this addendum is to modify the solicitation identified as CRFP SWC2200000001 (“Solicitation”) to reflect the change(s) identified and described below.

### Applicable Addendum Category:

- [ X ] Modify bid opening date and time
- [ X ] Modify specifications of product or service being sought
- [ X ] Attachment of vendor questions and responses
- [ X ] Attachment of pre-bid sign-in sheet
- [ ] Correction of error
- [ ] Other

### Description of Modification to Solicitation:

- 1) To change the bid opening date from June 9, 2022 to June 16, 2022. Bid opening time of 1:30 PM ET remains the same.**
- 2) To attach a revised Exhibit A - Pricing Page**
- 3) To attach the Vendor Questions and Answers**
- 4) To attach the Mandatory Pre-Bid Sign-In Sheet**

**Additional Documentation:** Documentation related to this Addendum (if any) has been included herewith as Attachment A and is specifically incorporated herein by reference.

### Terms and Conditions:

1. All provisions of the Solicitation and other addenda not modified herein shall remain in full force and effect.
2. Vendor should acknowledge receipt of all addenda issued for this Solicitation by completing an Addendum Acknowledgment, a copy of which is included herewith. Failure to acknowledge addenda may result in bid disqualification. The addendum acknowledgement should be submitted with the bid to expedite document processing.

**ADDENDUM ACKNOWLEDGEMENT FORM**  
**SOLICITATION NO.: CRFP SWC220000001**

**Instructions:** Please acknowledge receipt of all addenda issued with this solicitation by completing this addendum acknowledgment form. Check the box next to each addendum received and sign below. Failure to acknowledge addenda may result in bid disqualification.

**Acknowledgment:** I hereby acknowledge receipt of the following addenda and have made the necessary revisions to my proposal, plans and/or specification, etc.

**Addendum Numbers Received:**

(Check the box next to each addendum received)

- |  |  |

## **Vendor Questions & Answers**

**Q1:** 4.1.1.1 - Qualification and Experience Information. How will the State reach out to obtain references? Via email or phone call?

**A1:** The State may contact a reference by either method.

**Q2:** 4.1.1.1 - Qualification and Experience Information. Can you provide the name, telephone number and email address of the State personnel reaching out to references to ensure that customer reference is informed?

**A 2:** We are not at liberty to disclose that information at this time.

**Q3:** 4.3.1.1.1.2. The State desires that the Vendor provide Ethernet WAN services that utilize SD-WAN overlay services as defined in the Metro Ethernet Forum (MEF) 3.0 standards. <https://www.mef.net/service-standards/overlay-services/sdwan/>. Please describe your company's ability to meet this goal. Can the State fully define their SD-WAN requirements?

**A3:** Please provide your company's proposed SD-WAN solution. The state is interested in obtaining the most robust, reliable, secure and cost effective SD-WAN solution available.

**Q4:** 4.3.1.1.1.2. The State desires that the Vendor provide Ethernet WAN services that utilize SD-WAN overlay services as defined in the Metro Ethernet Forum (MEF) 3.0 standards. <https://www.mef.net/service-standards/overlay-services/sdwan/>. Please describe your company's ability to meet this goal. Does the State of WV want costing information included for SD-WAN at this time, or does the State of WV just want to know how the vendor would implement SD-WAN as an overlay service?

**A4:** The State does want SD-WAN pricing at this time and to understand how the vendor would implement SD-WAN as an overlay service.

**Q5:** If the State does want pricing included, will SD WAN be included at every site?

**A5:** The State may or may not install SD-WAN service at every site

**Q6:** If not at every site, can an additional line item be added to Exhibit A Pricing Page for SD-WAN sites?

**A6:** The State has revised the pricing sheet.

- a. Vendors are now required to provide Ethernet WAN Service and SD-WAN enabled Ethernet WAN Service pricing as separate line items

**Q7:** Does the State of WV intend to install and manage the SD-WAN equipment, or is it to be installed and managed by the vendor?

**A7:** The SD-WAN equipment is to be installed and managed by the Vendor as part of their service

**Q8:** Also, does the State of WV have a preferred equipment vendor for SD-WAN hardware?

**A8:** The State does not have a preferred equipment vendor for SD-WAN hardware.

**Q9:** Is there a specific SD-WAN feature or capability that the state is interested in, for example: Application Aware Routing or Single pane-of-glass?

**A9:** The State does not have a specific SD-WAN feature or capability that it is interested in at this time.

**Q10:** 4.3.1.2.2. The State desires all sites listed in Appendix A be migrated to vendor Ethernet WAN service within 365 calendar days from contract effective date. The State reserves the right to reprioritize this list as necessary. Please describe your company's plan to accomplish these migrations. Please describe your company's ability to migrate all sites listed in Appendix A within 365 calendar days from contract effective date. Exhibit A is the Pricing Page. Is 4.3.1.2.2 intended to reference Exhibit B: Site List?

**A10:** No, Appendix A and Exhibit A are two different documents.

**Q11:** 4.3.1.4. Part 4: Security for WAN and DIA Services Is the State open to considering future security initiatives, such as Governance Risk and Compliance, Threat and Vulnerability, and SOC Services? If so, would the state provide details in the Q&A and provide line items in the Exhibit A pricing page?

**A11:** No

**Q12:** 4.3.1.4.1 The Vendor should support customer evaluation of security incidents and compliance verification evaluations, as deemed necessary by the customer. Can the State define the type of security incidents?

**A12:** Please refer to the following document for State definitions of security incidents.

a. Cyber Incident: <http://www.wvlegislature.gov/wvcode/code.cfm?chap=5A&art=6C>

**Q13:** Does the State want Endpoint Detection and Response (EDR) or Managed Detection and Response (MDR)? Is the State looking for a Secure Service Edge (SSE) platform to protect cloud data? Is the State looking for a deception solution to protect all company data? If the answer to any of these questions is yes, will the State provide details in the Q&A and provide a line item to Exhibit A pricing page?

**A13:** The State does not require EDR, MDR or SSE services as part of this contract except for Managed Internet Services found in section 4.3.2.3.22.2.

**Q14:** 4.3.1.4.1 The Vendor should support customer evaluations of security incident and compliance verification evaluation, as deemed necessary by the customer. What manner of support is the State looking for? Can you provide examples?

**A14:** Please refer to Section 30 of the General Terms and Conditions published with the RFP.

**Q15:** 4.3.2.1.1.1. The Vendor must provide Ethernet WAN services that will terminate into existing State network equipment. Can the State of WV provide a list of their existing network equipment that the vendor must connect to?

**A15:** The State will not provide a list. All WVOT managed network equipment is IEEE 802.3 standard routers and switches.

**Q16:** 4.3.2.1.1.6 The proposed WAN services must support the transport of existing applications and services currently being utilized by the State of West Virginia. The Vendor proposed solution must allow existing or future 3rd party applications and services (example: Google Cloud, AWS, Azure) to be accessed or to function in a robust, secure, and reliable manner from the vendors core network. Does the State of WV want costing information included for the secure connection to existing/future cloud service providers at this time, or does the State of WV just want to know how the vendor would provide these services?

**A16:** The State does not want costing information at this time, rather to ensure that secure connections to cloud hosted services can be provided if requested/required.

**Q17:** If the State does want pricing included, will this service be required at every site? If not at every site, can an additional line item be added to the Exhibit A Pricing Page?

**A17:** The State expects the vendor to detail their capabilities to securely connect to cloud hosted services.

**Q18:** Also, what is the expected total aggregate data usage expected for the secure data connections?

**A18:** The State does not know the expected total aggregate data usage.

**Q19:** 4.3.2.1.2.1. Vendor must provide dedicated DIA services purchased from the State demarcation point to the Internet backbone. Will the State be providing internet services for all State agencies?

**A19:** The State offers WAN and DIA as options for all agencies and at all locations.

**Q20:** 4.3.2.1.2.1. Vendor must provide dedicated DIA services purchased from the State demarcation point to the Internet backbone. Will the State be establishing a new Internet Hub separate from WVNET?

**A20:** The State does not plan to establish a new Internet Hub at this time. The State offers WAN and DIA as options for all agencies and at all locations.

**Q21:** 4.3.2.1.2.1. Vendor must provide dedicated DIA services purchased from the State demarcation point to the Internet backbone. Will the State have a main internet hub location for connectivity to the internet? If so, which site or sites will be designated as such?

**A21:** The State currently leverages WV-Net as their primary Internet provider. The State offers WAN and DIA as options for all agencies and at all locations, the DIA services will route traffic directly to the vendor provided Internet service without traversing the WAN.

**Q22:** 4.3.2.1.2.2. Denial of Service: Vendor must respond to Denial of Service attacks reported by State within 15 minutes of State opening a trouble ticket. Is the State requesting a DDOS security solution, and if so, will the State of WV add a line item to Exhibit A pricing page?

**A22:** No. However, the State expects that the service provider has an inherent DDOS response capabilities included as part of their Managed Internet Service offer.

**Q23:** 4.3.2.1.4.1. Vendor will be responsible for coordination of the installation and ongoing management of the 4G/5G wireless service. Is it the States desire to be able to install and manage the 4G/5G equipment similar to the Leased Router? Or, as a bundled service similar to Managed Internet? If not bundled, can the te provide a line item to Exhibit A pricing page?

**A23:** The State expects the vendor to install and maintain the 4G/5G equipment and service.

**Q24:** 4.3.2.3.3.8 Itemized Cost for Individual Billing Components and 4.3.2.3.3.10 Itemized Cost for Any Surcharges and Total Cost Exhibit A Pricing Page 'Description of Service' elements imply a bundled rate, which conflicts with the itemized requirements in sections 4.3.2.3.3.8 and 4.3.2.3.3.10. How does the State want to care for the individual billing components, including surcharges? Can the State clarify and revise Exhibit A Pricing Page if necessary.

**A24:** Rate on the Pricing Page will be a monthly rate. The invoice received from the Vendor must include the details requested.

**Q25:** 4.3.2.3.19.1.1. For each day beyond the forty-five (45) day installation intervals defined or agreed to above, where the new service is not installed within the installation timelines, liquidated damages of \$500 per day will be assessed at the State's discretion. Will the State consider including a "Force Majeure" standard prior to considering any Liquidated Damages provision in the contract?

**A25:** Liquidated Damages will be assessed at the discretion of the State. The State cannot prematurely commit to assessing or not assessing the Liquidated Damages.

**Q26:** 4.3.2.3.22.2. Managed Internet Service - Does the State of WV plan to install and manage the router for the Managed Internet Service the same as indicated on the Leased Router?

**A26:** The Vendor is responsible for installation and management of the router in the Managed Internet Service

**Q27:** 4.3.2.4.2. The Vendor will be responsible for resolving all security vulnerabilities that may affect equipment or transmission services provided to the customer. Can the State fully define or explain what is included in all security vulnerabilities?

**A27:** As defined by OWASP, a vulnerability is a hole or a weakness in the application, which can be a design flaw or an implementation bug, that allows an attacker to cause harm to the stakeholders of an application.

**Q28:** Are you asking for a vulnerability assessment? If so, can you add a line item to Exhibit A pricing page. And, what outcomes are you looking for?

**A28:** The state is not looking for a vulnerability assessment

**Q29:** And, is this pertaining to the vendor's network and equipment, not the leased router that the State plans to manage?

**A29:** This pertains to all vulnerabilities residing on vendor managed systems, infrastructure, or equipment. This does not include the state-managed/leased router.

**Q30:** EXHIBIT B - List of Sites For address at 469 AIKENS CTR, MARTINSBURG, WV 25404, should the speed be listed as 20Mbps?

**A30:** Yes

**Q31:** Instructions to Vendors: Bid Opening - Can the State provide a 30 day extension from when answers to questions are released to vendors?

**A31:** The State is extending the bid response deadline to June 16th, 2022. 1:30 PM EST

**Q32:** 4.3.2.1.2.3 Will the government accept non-contiguous IP blocks smaller than a /24?

**A32:** Yes

**Q33:** 4.3.2.1.2.4 In the event that more than one circuit is required at a site to achieve a bandwidth requirement, does the state of West Virginia require diversity for all circuits at that site? If so, what level of diversity is required?

**A33:** No

**Q34:** 4.3.2.3.19.1.1 For installation intervals that may exceed the forty-five day requirement, would a temporary 4G/5G solution be acceptable?

**A34:** Yes, if it meets the bandwidth requirement of the service ordered and approved by the State in advance of installation.

**Q35:** 4.3.2.3.19.1 The telecommunications industry standard for fiber/ethernet circuit installation is 90-120 days. A 45-day interval will inadvertently favor the incumbent provider. Will the State of West Virginia consider changing the installation timeline to 90-120 days?

**A35:** No

**Q36:** 4.3.2.3.19.1.1 Will the State of West Virginia consider revising "liquidated damages of \$500 per day will be assessed at the State's discretion" to "liquidated damages of \$500 per day, not to exceed the monthly recurring charge of the circuit will be assessed at the State's discretion"? Given the aggressive installation timeline, it is possible the penalty for missing the delivery would exceed the actual cost of the service being ordered.

**A36:** No

**Q37:** 4.1 and Exhibit B: Site List In 4.1 the State indicates that there are approximately 1000 WAN circuits and services installed statewide but in Exhibit B there is address information for only 467 locations. Can the State provide the location information for the remaining sites or address the discrepancy?

**A37:** The list provided in Exhibit B are the circuits managed by WVOT. Many additional agencies across the state leverage the legacy WAN contract. Other state agencies may choose to utilize the new contract in the future.

**Q38:** 4.3.2.3.19.1 Will the State clarify if the 45 day requirement is based on calendar days or business days?

**A38:** Calendar

**Q39:** Section 3 Given the current supply chain shortage caused by COVID-19 and other forces majeure, such as geo-political and economic influences, would the state consider adding the following Force Majeure Clause to the General Terms and Conditions:

FORCE MAJEURE. Neither party will be responsible to the other for any delay, failure in performance, loss or damage due to fire, explosion, power blackout, earthquake, volcanic action, cable cuts by third parties, flood, weather elements, strike, embargo, labor disputes, civil or military authority, war, acts of God, acts or omissions of carriers or suppliers, software bugs, viruses and the like, acts of regulatory or governmental agencies, or other causes beyond their reasonable control, except for the obligation to pay amounts due under this Agreement.

**A39:** Contract terms and conditions negotiations will commence when appropriate. Should any Vendor desire their terms to be incorporated, it must note so in its response.

**Q40:** Section 4.3.2.1.4 - Can unlimited data and no throttling be waived?

**A40:** No

**Q41:** What throughput is expected in 4G/5G

**A41:** The State recognizes that speed will vary based on location and whether it's 4/G or 5/G.

**Q42:** What is the current expenditure per site? is there a budget?

**A42:** No

**Q43:** Is the state requesting pricing options for Leased router and purchased router or just leased?

**A43:** Leased

**Q44:** Are all existing edge routers expected to be replaced?

**A44:** No

**Q45:** Pricing requested by the state appears to ask for a price per speed requirement. However, pricing per site varies per speed required. Because pricing varies per location can a tier pricing scheme be provided?

**A45:** No

**Q46:** Only paragraph 4.3.2.1.2.2.1 has availability SLA of 99.999% for DIA. Is this SLA expected on any other service such as Ethernet/4G/5G?

**A46:** The 99.999% SLA is applicable to DIA and Ethernet WAN services.

**Q47:** Only paragraph 4.3.2.1.2.2.4 has packet delivery SLA of 99.5% for DIA. Is this SLA expected on any other service such as Ethernet/4G/5G?

**A47:** The 99.5% packet delivery SLA is applicable to DIA and Ethernet WAN services.

**Q48:** Are other services such as Cable/Fiber/Microwave/Satellite acceptable considering that SDWAN solutions can help achieve high level SLA's with broadband services?

**A48:** The State has not defined nor required any specific WAN transport solution except for 4G/5G.

**Q49:** We would like to request an extension of the due date. We request that the due date be extended to 3 weeks after all questions have been answered.

**A49:** The State is extending the bid response deadline to June 16th 2022. 1:30 PM EST

**Q50:** Given transition takes up to 12 months from the date of award, can the base period be increased to 4 years instead of 3?

**A50:** No

**Q51:** Please provide an example for each of the provisions underlined in #2 below of what the state is intending with this clause?

36. INDEMNIFICATION: The Vendor agrees to indemnify, defend, and hold harmless the State and the Agency, their officers, and employees from and against: (1) Any claims or losses for services rendered by any subcontractor, person, or firm performing or supplying services, materials, or supplies in connection with the performance of the Contract; (2) Any claims or losses resulting to any person or entity injured or damaged by the Vendor, its officers, employees, or subcontractors by the publication, translation, reproduction, delivery, performance, use, or disposition of any data used under the Contract in a manner not authorized by the Contract, or by Federal or State statutes or regulations; and (3) Any failure of the Vendor, its officers, employees, or subcontractors to observe State and Federal laws including, but not limited to, labor and wage and hour laws.

**A51:** Term 36. INDEMNIFICATION, is withdrawn from this Solicitation.

**Q52:** Section 4.3, paragraph two states "Vendor should describe its approach and methodology to providing their services by addressing the mandatory requirements as well as the goals and objectives identified below." Can vendors write to the goals and objectives when responding to the mandatory requirements or is the State of West Virginia expecting vendors to provide point-by-point responses to 4.3.2 Mandatory Requirements and 4.3.1 Goals and Objectives?

**A52:** Please refer to Vendor Proposal, Section 5.

**Q53:** Would the State of WV entertain a 2 week extension to respond to this RFP?

**A53:** The State is extending the bid response deadline to June 16th 2022. 1:30 PM EST

**Q54:** What percentage of your network is served with broadband today?

**A54:** Unclear what the term "broadband" means in this question. The State OT manages approximately 250 locations with DIA services today, and approximately 476 locations with dedicated WAN circuits.

**Q55:** What percentage is served with 4G/5G today?

**A55:** The State OT currently manages two locations with 4G/5G service.

**Q56:** Since fiber services are usually symmetrical, same bandwidth upstream & downstream, and broadband services are typically asymmetrical, different bandwidth upstream and downstream, how do you want providers to reflect that difference on the pricing sheet for dedicated internet access?

**A56:** Bandwidth speeds for DIA service may be asymmetrical, however, download speed must match the required speeds as detailed in RFP and on the pricing sheet.

**Q57:** Do you foresee the vendor completing demarc extensions on the Capitol campus (1900 Kanawha Blvd., E), or will the Office of Technology be using their own fiber/copper for these connections?

**A57:** Vendor is responsible for Demarc extensions

**Q58:** In Exhibit B -- List of Sites, can you please confirm the current connection speed for the following location? It looks like it should be either 200M or 20M (202M appears to be a type-o). **269 Aikens Ctr, Martinsburg, WV 25404**

**A58:** The correct speed is 20M

**Q59:** In Section 3: General Terms and Conditions, Section 8 Insurance -- As it relates to Cyber Liability Insurance, the typical standard coverage is \$1,000,000 per occurrence. Is the State of WV willing to accept \$500,000 per occurrence in the area of Cyber Liability Insurance?

**A59:** No

**Q60:** In pricing Exhibit A: All the Description of Services or the fields are correct for Dedicated Internet Access (DIA); however, there are several fields (*pricing fields*) that are missing for the various components that make up the topology of WAN services. Specifically, the various components of SD-WAN as it relates to software revisions, throughput licenses, hardware prices, etc. Will the State consider adding these fields to the Exhibit A – Pricing Page?

**A60:** The proposed price should include all costs associated with providing the Ethernet WAN services.

**Q61:** Section 3, General Terms and Conditions, Paragraph 11. The section indicates “Vendor shall pay liquidated damages in the amount specified below or as described in the specifications”. The State has chosen to mark both boxes thus creating two potential events of liquidated damages. The first event being under Box 1 as specified and the second being under Box 2 as contained in the Specifications (section 4.3.2.3.19.1.1). Each individual event has a liquidated damages amount of \$500 per day. Both events can collectively result in total liquidated damages of \$1,000 per day. Is it the intent of the State to have two liquidated damages events subjecting the vendor to the potential that both events shall apply?

**A61:** No, Liquidated Damages will be assessed at \$500 per day. Circumstances that would warrant Liquidated Damages were outlined in the specifications.

**Q62:** With regard to Box 1, the first liquidated damages event, what is the definition of “Installation Deadlines” date?

**A62:** Installation deadline is the 45-day period the Vendor has to install services following five calendar days from the time the State submits an order.

**Q63:** Which party establishes the Installation Deadline date for a service?

**A63:** Installation deadline is the 45-day period the Vendor has to install services following five calendar days from the time the State submits an order.

**Q64:** Must the State and Vendor mutually agree upon the established Installation Deadline date?

**A64:** Installation deadline is the 45-day period the Vendor has to install services following five calendar days from the time the State submits an order.

**Q65:** Can the established Installation Deadline date be changed by the Vendor upon 2 days advanced notice to the State?

**A65:** No

**Q66:** Are there any events that the State would consider an acceptable reason for an Installation Deadline date being missed, such as, the result of an act of God (a flood), the result of workforce impacts from a pandemic, the result of supply chain shortages, the result of actions taken or failed to be taken by the State, the result of the Vendor not being granted timely access to the facility to complete the installation work?

**A62:** Circumstances will be evaluated on an individual basis

**Q67:** Will the State agree to provide notice to the Vendor advising when a liquidated damages event has been incurred as a result of a missed service Installation Deadline date and afford the vendor with a thirty (30) day period of time from such notice date to cure such event without incurring any liquidated damages charges for such event?

**A67:** No

**Q68:** In Section 4.3.2 Mandatory Requirements, 4.3.2.3 Part 3: Service and Support for WAN and DIA and 5G Services, Section 4.3.2.3.19.1 states the installation timeline is 45 days where no “special construction” required. “Special Construction” is a defined term in the agreement, however the State does not appear to utilize the defined term in this section (special construction, as opposed to Special Construction). Is it the State’s intent to apply the meaning of the defined term Special Construction in this section?

**A68:** Yes

**Q69:** Are the 45 days established in this liquidated damages section measured in business days or calendar days?

**A69:** Calendar

**Q70:** Industry standard timeframes extended to businesses across the country as well as those located within the State of WV to install an ethernet fiber internet connection and/or configure and establish SD WAN services is approximately 90-120 business days where no Special Construction is required. Can the State please advise why it requires an installation timeline which is well less than half of the timeframe delivered by the general industry to all other customers?

**A70:** The State requires installation in 45 calendar days to ensure timely transition and functionality.

**Q71:** Is the State aware of any unique telecommunication infrastructure, telecommunication facilities, technical resources or field personnel that exist within its offices and facilities that would afford the Vendor the ability to complete an installation timeline in such an expedited manner for these services?

**A71:** Each site is unique; however, the aggressive deadline is required to ensure a timely transition and functionality.

**Q72:** Is the State willing to consider changing the installation timeline to follow normal industry standards of 90-120 business days?

**A72:** No

**Q73:** With the measurement of a timeline interval, such as an installation timeline, a start date has to be established to allow for the measurement of the period of time. What is the start date for the installation timeline of a service for the purpose of measuring the related period of time interval? How is the start date established and determined for a specific service installation?

**A73:** The 45 day period will begin five calendar days after the vendor receives TCR from the State for service.

**Q74:** Given that the liquidated damages contained in Section 4.3.2.3.19.1.1 are at the State's discretion, will the State agree to provide notice to the Vendor advising when it intends to exercise its discretion to charge liquidated damages as a result of a failed installation timeline for a service and afford the vendor with a thirty (30) day period of time from such notice date to cure such event without incurring any liquidated damages charges for such event?

**A74:** No

**Q75:** Under Section 4.3.1.2 Part 2: Vendor Ethernet WAN Services Migration Plan, sub section 4.3.1.2.2, the State indicates it desires all sites be migrated over to the new services being provided by the Vendor within 365 days from the contract effective. If this migration plan interval is the intent and desire of the State, would the two liquidated damages events identified in Question 1 above only begin to apply and be incurred by the Vendor after 365 days from the contract effective date?

**A75:** No, Liquidated Damages could be applied for any installation within the contract period.

**Q76:** Can the State please provide clarity as to how the three different timelines and their related dates, (1) the Missed Installation Deadline date in Section 11, (2) the installation timeline interval established in Section 4.3.2.3.19.1.1 and (3) the 365 calendar days migration plan timeline in Section 4.3.1.2.2, are to be managed and viewed collectively?

**A76:** All services are to be migrated within 365 calendar days of contract award. A site is expected to be installed within 45 calendar days of the State's order. Each day after 45 calendar days, liquidated damages may be assessed.

**Q77:** If the 365 calendar days migration plan timeline is successfully achieved, will that effectively and completely relieve the Vendor of any liquidated damages that may otherwise be incurred as a result of an installation deadline date or installation timeline interval which occurs prior to the end of the 365 calendar days migration plan timeline?

**A77:** No - Liquidated Damages can be assessed for any site installation throughout the life of the contract.

**Q78:** Will the State agree to begin the 365 calendar days migration plan timeline upon the establishment and completion of the Operations Plan (section 4.3.1.2.1) agreed upon by the State and the Vendor, which is desired to occur within 60 calendar days of the contract effective date?

**A78:** No

**Q79:** In the RFP, its stated that refurbished equipment will not be accepted. With the current shortages of microchips in the marketplace we are seeing growing delays in procuring new equipment. Will the State of WV accept certified refurbished equipment as a bridge or replacement equipment?

**A79:** No

**Q80:** In the RFP, its stated that refurbished equipment will not be accepted. With the current shortages of microchips in the marketplace we are seeing growing delays in procuring new equipment. Will the State of WV accept refurbished equipment with quicker SLA terms of replacement equipment?

**A80:** The requirement will remain unchanged.

**Q81:** In the RFP, its stated that circuits must be delivered in 45 days. Per industry standards, Dedicated Ethernet and Fiber can take 60-90 days, however Broadband takes 30-45 days to deliver. Can the state explain this time frame and if there are instances where this time frame can be extended without penalty.

**A81:** The State seeks services to be installed within 45 days where no special construction is necessary.

**Q82:** Please explain the number of sites where service is to be delivered. In the RFP, its mentioned that there are 1000+ but in the spreadsheet at the end of the RFP there are less than 500. Will all sites require equipment? Will we utilize existing equipment?

**A82:** Please see previous response regarding the discrepancy. The State is unsure how the Vendor is defining 'equipment' to answer this question accurately.

**Q83:** Please explain the preferred access for the WAN service. MPLS, DIA, Broadband, Wireless 5G/4G or a combination?

**A83:** The State has no preference on access type as long as the service meets the requirements defined in the RFP.

**Q84:** How does the State expect to utilize SDWAN for these services?

**A84:** SDWAN may be used for redundancy purposes and to direct specific subsets of traffic directly to the cloud rather than backhauling to a central location.

**Q85:** From our understanding of the RFP it seems that SD-WAN is a desired option. For our design we would like to offer the State of West Virginia an option of either a Managed Router or SD-WAN device. Is it alright to append the price sheet to allow for the two options for each speed defined for the State to consider?

**A85:** The Vendor must not append the price sheet. Doing so shall result in disqualification. The Vendor should provide the State with a solution that meets the State's goals outlined in the RFP.

**Q86:** Will this contract be available to other governmental bodies such as county & municipal governments?

**A86:** Other governmental bodies may choose to utilize the contract.

**Q87:** How do we reflect special construction charges for sites included in the RFP list, or other sites not included, that choose to utilize this contract, since there is no special construction column on the pricing sheet?

**A87:** Special construction pricing shall be determined on an as-needed basis and procured in the appropriate manner. The State reserves the right to accept or reject proposed special construction for any site when deemed unnecessary.

**Q88:** Can you elaborate on specifically what the vendor will need to manage/maintain in the current WAN infrastructure?

**A88:** The winning Vendor will not manage current WAN infrastructure.

**Q89:** You reference approximately 1000 WAN circuits and services statewide under existing contracts. This does not match the circuit quantities in the price list. Can you elaborate on what makes up the difference?

**A89:** The listing provided shows those sites for which the WVOT is responsible. Other entities have chosen to use the contract; however, the WVOT has no visibility into those sites. The discrepancy is those who have utilized the contract outside of the purview of the WVOT (i.e., educational entities, local governments, etc.).

**EXHIBIT A - PRICING PAGE**

The quantities indicated below (Column B) are the best estimate of network inventory near the time of release. If the inventory changed after data capture or was missed during the data capture, it does not change the evaluation. The evaluation will be based on the quantities represented in this section. Vendors must provide costs for each Service, including \$0 if applicable. If there were not any current installations of a circuit type being requested under this RFP, it was represented with a quantity of 1 for evaluation purposes. If a current circuit type was not being requested under this RFP, it was not included in this evaluation, but was left in the inventory for vendor reference regarding a potential installation site. Column D is calculated by multiplying twelve (12) months by Column B and Column C. Column F is calculated by multiplying Column B and Column E to show the total cost for Non-Recurring. Column G is calculated by adding Column D and Column F to show the total cost for both Annual and Non-recurring costs.

A	B	C	D	E	F	G
Description of Service	Qty	Monthly Recurring Cost (MRC) - Vendor Response	Annual Cost -- Calculated (12 * B * C)	Non-Recurring Cost (NRC) - Vendor Response	Total NRC -- Calculated (B * E)	Total Cost ---- Calculated (D + F)

## EXECUTIVE SUMMARY

---

Verizon and the State of West Virginia have worked together to build a strong partnership over the last few decades. We remain committed to supporting you.

Based on our comprehensive knowledge of your network, we are confident that we have designed a solution that will provide a secure, robust, reliable, and comprehensive WAN and Dedicated Internet Access service that supports the next-generation Data Transport 2.0 Network for the State and its Agencies. Our approach offers you value that is relevant to your business and leverages the investments that Verizon has made in emerging technologies so that the benefits can be passed on to you.

We thank you for the opportunity.

### We've Listened

The State of West Virginia is under ever-increasing pressure to transform, which requires an understanding of the current business situations and the desired outcomes.

As your current strategic partner, Verizon has provided comprehensive solutions to help you at every stage of your business transformation. With demonstrated experience in managing networks, Verizon will provide the State the expertise to manage its network and ensure it stays reliable, up to date, secure and operating at the speed of your organization.

Investing in technology is critical to today's digital-driven eco-structure, and it is a vital element to your success. That success requires a strategic partner that is committed to delivering excellence and has considered every factor in solving your unique technology requirements. The flexibility of our solution will provide the State a hybrid-model of services with a mix of wired, wireless, and private/public internet to achieve agency missions and meet constituent needs with one vendor to manage it all.

As the State of West Virginia's strategic partner, Verizon will deliver an end-to-end sustainable model of investment, resources, and innovation to support the State's ongoing transformation.

### We've Understood

Being able to easily and reliably communicate with your customers is one of the most critical elements in today's digital economy.

Transforming to a new network is a complex journey, and a smooth migration is the key to success. As the State of West Virginia's strategic partner, Verizon successfully managed the State's network transformation to the current contract. We will continue to leverage the local account team, our partners and IT professionals to support the State's needs and ensure consistent and redundant service.

Verizon's approach to building customer networks starts off with continuous investment in our technology platforms that support our customers' digital journey.

We also ensure that we hire and retain highly skilled resources who have a passion for developing and managing the world's best communications systems.

### We've Designed

Based upon the critical success factors defined in your RFP and our knowledge of your current technology environment, our solution design accounts for the major attributes that you seek today, along with the technological elements necessary to ensure the success of your digital transformation. Verizon's recommended solution for the State of West Virginia includes the following elements:

- **Network:** Verizon has proposed a robust network to support your Ethernet WAN, DIA, and 5G Service Requirements that includes:
  - **Ethernet Access:** Verizon will continue to provide state-wide access to facilities through the use of agreements with multiple vendors throughout the state providing the ability for carrier diversity for agency locations
  - **PIP:** Verizon's world class Private IP network provides secure any-to-any network connectivity along with Quality of Services (QoS) and network resiliency to the State of WV network solution.
  - **SD-WAN:** Verizon SD-WAN provides an overlay network solution that gives the State the agility, flexibility, efficiency, and high-performance of a hybrid network solution.
  - **Internet:** Verizon Internet Dedicated Services provides highly reliable, high-bandwidth dedicated connections to our global IP network with stringent SLAs and 24x7x365 monitoring.
  - **5G:** Verizon's 5G Business Internet service can provide an alternative to broadband internet service for remote offices or as backup service for State agency locations.
- **CPE:** Verizon has designed a solution for you that incorporates Cisco routers. The Cisco hardware platform provides you with the quality, reliability, scalability, and flexibility that will meet all of your business requirements for a high performance network.

- **Comprehensive Support:** The Verizon's Enterprise Center on-line customer portal and MyVerizon Enterprise mobile app gives you access to 24x7x365 customer service and advanced reporting capabilities.
- **Service Level Agreements:** Verizon services include competitive service level agreements and objectives.
- **Managed Services:** With Verizon's Managed WAN Service, the State can leverage our technical expertise in design, planning, implementation, and network management.

### **Our Commitment to the State of West Virginia**

Verizon is the partner of choice and we will continue to demonstrate our commitment to the State of West Virginia. Our actions will be guided by what is right for the State and its Agencies, our long-term relationship and the achievement of mutual success. Each and every day, customers count on Verizon to be their long-standing, trusted partner and rely on us to remain flexible and innovative as technology changes and evolves. We are excited about the opportunity to continue as the trusted partner to the State of West Virginia and are honored to respond to this RFP. Verizon is committed to help the State of West Virginia in this effort to choose the right partner to build an integrated set of solutions that leverage technology to provide a secure, robust, reliable, and comprehensive WAN solution for the State.

We look forward to moving into the next discussion phase and refining our partnership together.

---

## **SECTION 1. GENERAL INFORMATION**

---

### **1.1. Introduction:**

*The West Virginia Department of Administration, Purchasing Division (hereinafter referred to as the "Purchasing Division") is issuing this solicitation as a request for proposal ("RFP"), as authorized by W. Va. Code §5A-3-10b, for the West Virginia Office of Technology (hereinafter referred to as the "Agency") to provide statewide Wide Area Network (WAN) services.*

*The RFP is a procurement method in which vendors submit proposals in response to the request for proposal published by the Purchasing Division. It requires an award to the highest scoring vendor, rather than the lowest cost vendor, based upon a technical evaluation of the vendor's technical proposal and a cost evaluation. This is referred to as a best value procurement. Through their proposals, vendors offer a solution to the objectives, problem, or need specified in the RFP, and define how they intend to meet (or exceed) the RFP requirements.*

### **Verizon's Response**

---

Verizon has read, understands, and will comply.

## SECTION 2. INSTRUCTIONS TO VENDORS SUBMITTING BIDS

---

Instructions begin on next page.

### INSTRUCTIONS TO VENDORS SUBMITTING BIDS

#### 1. REVIEW DOCUMENTS THOROUGHLY:

The attached documents contain a solicitation for bids. Please read these instructions and all documents attached in their entirety. These instructions provide critical information about requirements that if overlooked could lead to disqualification of a Vendor's bid. All bids must be submitted in accordance with the provisions contained in these instructions and the Solicitation. Failure to do so may result in disqualification of Vendor's bid.

#### Verizon's Response

---

Verizon has read, understands, and will comply.

#### 2. MANDATORY TERMS:

The Solicitation may contain mandatory provisions identified by the use of the words "must," "will", and "shall." Failure to comply with a mandatory term in the Solicitation will result in bid disqualification.

#### Verizon's Response

---

Verizon has read, understands, and will comply.

#### 3. PREBID MEETING:

The item identified below shall apply to this Solicitation.

A pre-bid meeting will not be held prior to bid opening

A **MANDATORY PRE-BID** meeting will be held at the following place and time:

When: Wednesday, May 18, 2022 at 1:30 PM EST

Location:

Executive Room, Bldg 7,

State Training Center 1900 Kanawha Blvd E

Charleston, WV 25305

All Vendors submitting a bid must attend the mandatory pre-bid meeting. Failure to attend the mandatory pre-bid meeting shall result in disqualification of the Vendor's bid. No one individual is permitted to represent more than one vendor at the pre-bid meeting. Any individual that does attempt to represent two or more vendors will be required to select one vendor to which the individual's attendance will be attributed. The vendors not selected will be deemed to have not attended the pre-bid meeting unless another individual attended on their behalf.

An attendance sheet provided at the pre-bid meeting shall serve as the official document verifying attendance. Any person attending the pre-bid meeting on behalf of a Vendor must list on the attendance sheet his or her name and the name of the Vendor he or she is representing.

Additionally, the person attending the pre-bid meeting should include the Vendor's E-Mail address, phone number, and Fax number on the attendance sheet. It is the Vendor's responsibility to locate the attendance sheet and provide the required information. Failure to complete the attendance sheet as required may result in disqualification of Vendor's bid.

*All Vendors should arrive prior to the starting time for the pre-bid. Vendors who arrive after the starting time but prior to the end of the pre-bid will be permitted to sign in but are charged with knowing all matters discussed at the pre-bid.*

*Questions submitted at least five business days prior to a scheduled pre-bid will be discussed at the pre-bid meeting if possible. Any discussions or answers to questions at the pre-bid meeting are preliminary in nature and are non-binding. Official and binding answers to questions will be published in a written addendum to the Solicitation prior to bid opening.*

---

**Verizon's Response**

Verizon has read, understands, and complied.

**4. VENDOR QUESTION DEADLINE:**

*Vendors may submit questions relating to this Solicitation to the Purchasing Division. Questions must be submitted in writing. All questions must be submitted on or before the date listed below and to the address listed below to be considered. A written response will be published in a Solicitation addendum if a response is possible and appropriate. Non-written discussions, conversations, or questions and answers regarding this Solicitation are preliminary in nature and are nonbinding.*

*Submitted emails should have the solicitation number in the subject line. Question Submission Deadline: May 25, 2022 at 10:00 AM EST*

*Submit Questions to: Jessica L. Hovanec, Senior Buyer*

*2019 Washington Street, East Charleston, WV 25305*

*Fax: (304) 558-3970*

*Email: Jessica.L.Hovanec@wv.gov*

---

**Verizon's Response**

Verizon has read, understands, and complied.

**5. VERBAL COMMUNICATION:**

*Any verbal communication between the Vendor and any State personnel is not binding, including verbal communication at the mandatory pre-bid conference. Only information issued in writing and added to the Solicitation by an official written addendum by the Purchasing Division is binding.*

---

**Verizon's Response**

Verizon has read and understands.

**6. BID SUBMISSION:**

*All bids must be submitted on or before the date and time of the bid opening listed in section 7 below. Vendors can submit bids electronically through wvOASIS, in paper form delivered to the Purchasing Division at the address listed below either in person or by courier, or in facsimile form by faxing to the Purchasing Division at the number listed below. Notwithstanding the foregoing, the Purchasing Division may prohibit the submission of bids electronically through wvOASIS at its sole discretion. Such a prohibition will be contained and communicated in the wvOASIS system resulting in the Vendor's inability to submit bids through wvOASIS. The Purchasing Division will not accept bids, modification of bids, or addendum acknowledgment forms via email. Bids submitted in paper or*

facsimile form must contain a signature. Bids submitted in wvOASIS are deemed to be electronically signed.

Any bid received by the Purchasing Division staff is considered to be in the possession of the Purchasing Division and will not be returned for any reason.

**For Request for Proposal ("RFP") Responses Only:** Submission of a response to a Request for Proposal is not permitted in wvOASIS. In the event that Vendor is responding to a request for proposal, the Vendor shall submit one original technical and one original cost proposal prior to the bid opening date and time identified in Section 7 below, plus FIVE (5) convenience copies of each to the Purchasing Division at the address shown below. Additionally, the Vendor should clearly identify and segregate the cost proposal from the technical proposal in a separately sealed envelope.

**Bid Delivery Address and Fax Number:**

Department of Administration, Purchasing Division 2019 Washington Street East  
Charleston, WV 25305-0130

Fax: 304-558-3970

A bid submitted in paper or facsimile form should contain the information listed below on the face of the submission envelope or fax cover sheet. Otherwise, the bid may be rejected by the Purchasing Division.

VENDOR NAME:

BUYER: Jessica L. Hovanec

SOLICITATION NO.: CRFQ SWC2200000001

BID OPENING DATE: June 9, 2022

BID OPENING TIME: 1:30 PM EDT

FAX NUMBER: 304-558-3970

**Verizon's Response**

Verizon has read, understands, and will comply. Bid opening changed to June 16, 2022 at 1:30 PM EDT per Addendum 1. . Response for CRFP SWC2200000001

**7. BID OPENING:** Bids submitted in response to this Solicitation will be opened at the location identified below on the date and time listed below. Delivery of a bid after the bid opening date and time will result in bid disqualification. For purposes of this Solicitation, a bid is considered delivered when confirmation of delivery is provided by wvOASIS (in the case of electronic submission) or when the bid is time stamped by the official Purchasing Division time clock (in the case of hand delivery).

Bid Opening Date and Time: June 9, 2022 at 1:30 PM EDT

Bid Opening Location: Department of Administration, Purchasing Division

2019 Washington Street East

Charleston, WV 25305-0130

**Verizon's Response**

Verizon has read, understands, and will comply. Bid opening changed to June 16, 2022 at 1:30 PM EDT per Addendum 1

**8. ADDENDUM ACKNOWLEDGEMENT:**

*Changes or revisions to this Solicitation will be made by an official written addendum issued by the Purchasing Division. Vendor should acknowledge receipt of all addenda issued with this Solicitation by completing an Addendum Acknowledgment Form, a copy of which is included herewith. Failure to acknowledge addenda may result in bid disqualification. The addendum acknowledgement should be submitted with the bid to expedite document processing.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**9. BID FORMATTING:**

*Vendor should type or electronically enter the information onto its bid to prevent errors in the evaluation. Failure to type or electronically enter the information may result in bid disqualification.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**10. ALTERNATE MODEL OR BRAND:**

*Unless the box below is checked, any model, brand, or specification listed in this Solicitation establishes the acceptable level of quality only and is not intended to reflect a preference for, or in any way favor, a particular brand or vendor. Vendors may bid alternates to a listed model or brand provided that the alternate is at least equal to the model or brand and complies with the required specifications. The equality of any alternate being bid shall be determined by the State at its sole discretion. Any Vendor bidding an alternate model or brand should clearly identify the alternate items in its bid and should include manufacturer's specifications, industry literature, and/or any other relevant documentation demonstrating the equality of the alternate items. Failure to provide information for alternate items may be grounds for rejection of a Vendor's bid.*

*This Solicitation is based upon a standardized commodity established under W. Va. Code § 5A-3-61. Vendors are expected to bid the standardized commodity identified. Failure to bid the standardized commodity will result in your firm's bid being rejected.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**11. EXCEPTIONS AND CLARIFICATIONS:**

*The Solicitation contains the specifications that shall form the basis of a contractual agreement. Vendor shall clearly mark any exceptions, clarifications, or other proposed modifications in its bid. Exceptions to, clarifications of, or modifications of a requirement or term and condition of the Solicitation may result in bid disqualification.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**12. COMMUNICATION LIMITATIONS:**

*In accordance with West Virginia Code of State Rules §148-1-6.6, communication with the State of West Virginia or any of its employees regarding this Solicitation during the solicitation, bid, evaluation*

or award periods, except through the Purchasing Division, is strictly prohibited without prior Purchasing Division approval. Purchasing Division approval for such communication is implied for all agency delegated and exempt purchases.

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**13. REGISTRATION:**

*Prior to Contract award, the apparent successful Vendor must be properly registered with the West Virginia Purchasing Division and must have paid the \$125 fee, if applicable.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**14. UNIT PRICE:**

*Unit prices shall prevail in cases of a discrepancy in the Vendor's bid.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**15. PREFERENCE:**

*Vendor Preference may be requested in purchases of motor vehicles or construction and maintenance equipment and machinery used in highway and other infrastructure projects. Any request for preference must be submitted in writing with the bid, must specifically identify the preference requested with reference to the applicable subsection of West Virginia Code § 5A-3-37, and must include with the bid any information necessary to evaluate and confirm the applicability of the requested preference. A request form to help facilitate the request can be found at: [www.state.wv.us/admin/purchase/vrc/Venpref.pdf](http://www.state.wv.us/admin/purchase/vrc/Venpref.pdf).*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**15A. RECIPROCAL PREFERENCE:**

*The State of West Virginia applies a reciprocal preference to all solicitations for commodities and printing in accordance with W. Va. Code § 5A-3-37(b). In effect, non-resident vendors receiving a preference in their home states, will see that same preference granted to West Virginia resident vendors bidding against them in West Virginia. Any request for reciprocal preference must include with the bid any information necessary to evaluate and confirm the applicability of the preference. A request form to help facilitate the request can be found at: [www.state.wv.us/admin/purchase/vrc/Venpref.pdf](http://www.state.wv.us/admin/purchase/vrc/Venpref.pdf).*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**16. SMALL, WOMEN-OWNED, OR MINORITY-OWNED BUSINESSES:**

*For any solicitations publicly advertised for bid, in accordance with West Virginia Code §5A-3-37(a)(7) and W. Va. CSR § 148-22-9, any non-resident vendor certified as a small, women-owned, or minority-owned business under W. Va. CSR § 148-22-9 shall be provided the same preference made available to any resident vendor. Any non-resident small, women-owned, or minority-owned business must identify itself as such in writing, must submit that writing to the Purchasing Division with its bid, and must be properly certified under W. Va. CSR § 148-22-9 prior to contract award to receive the preferences made available to resident vendors. Preference for a non-resident small, women-owned, or minority owned business shall be applied in accordance with W. Va. CSR § 148-22-9.*

**Verizon's Response**

---

Verizon has read and understands.

**17. WAIVER OF MINOR IRREGULARITIES:**

*The Director reserves the right to waive minor irregularities in bids or specifications in accordance with West Virginia Code of State Rules § 148-1-4.6.*

**Verizon's Response**

---

Verizon has read and understands.

**18. ELECTRONIC FILE ACCESS RESTRICTIONS:**

*Vendor must ensure that its submission in wvOASIS can be accessed and viewed by the Purchasing Division staff immediately upon bid opening. The Purchasing Division will consider any file that cannot be immediately accessed and viewed at the time of the bid opening (such as, encrypted files, password protected files, or incompatible files) to be blank or incomplete as context requires and are therefore unacceptable. A vendor will not be permitted to unencrypt files, remove password protections, or resubmit documents after bid opening to make a file viewable if those documents are required with the bid. A Vendor may be required to provide document passwords or remove access restrictions to allow the Purchasing Division to print or electronically save documents provided that those documents are viewable by the Purchasing Division prior to obtaining the password or removing the access restriction.*

**Verizon's Response**

---

Although this requirement is not applicable, Verizon has read, understands, and will comply.

**19. NON-RESPONSIBLE:**

*The Purchasing Division Director reserves the right to reject the bid of any vendor as Non-Responsible in accordance with W. Va. Code of State Rules § 148-1-5.3, when the Director determines that the vendor submitting the bid does not have the capability to fully perform or lacks the integrity and reliability to assure good-faith performance."*

**Verizon's Response**

---

Verizon has read and understands.

**20. ACCEPTANCE/REJECTION:**

*The State may accept or reject any bid in whole, or in part in accordance with W. Va. Code of State Rules § 148-1-4.5. and § 148-1-6.4.b."*

**Verizon's Response**

---

Verizon has read and understands.

**21. YOUR SUBMISSION IS A PUBLIC DOCUMENT:**

*Vendor's entire response to the Solicitation and the resulting Contract are public documents. As public documents, they will be disclosed to the public following the bid/proposal opening or award of the contract, as required by the competitive bidding laws of West Virginia Code §§ 5A-3-1 et seq., 5-22-1 et seq., and 5G-1-1 et seq. and the Freedom of Information Act West Virginia Code §§ 29B-1-1 et seq.*

**DO NOT SUBMIT MATERIAL YOU CONSIDER TO BE CONFIDENTIAL, A TRADE SECRET, OR OTHERWISE NOT SUBJECT TO PUBLIC DISCLOSURE.**

*Submission of any bid, proposal, or other document to the Purchasing Division constitutes your explicit consent to the subsequent public disclosure of the bid, proposal, or document. The Purchasing Division will disclose any document labeled "confidential," "proprietary," "trade secret," "private," or labeled with any other claim against public disclosure of the documents, to include any "trade secrets" as defined by West Virginia Code § 47-22-1 et seq. All submissions are subject to public disclosure without notice.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**22. WITH THE BID REQUIREMENTS:**

*In instances where these specifications require documentation or other information with the bid, and a vendor fails to provide it with the bid, the Director of the Purchasing Division reserves the right to request those items after bid opening and prior to contract award pursuant to the authority to waive minor irregularities in bids or specifications under W. Va. CSR § 148-1-4.6. This authority does not apply to instances where state law mandates receipt with the bid.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**23. EMAIL NOTIFICATION OF AWARD:**

*The Purchasing Division will attempt to provide bidders with e-mail notification of contract award when a solicitation that the bidder participated in has been awarded. For notification purposes, bidders must provide the Purchasing Division with a valid email address in the bid response. Bidders may also monitor wvOASIS or the Purchasing Division's website to determine when a contract has been awarded.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**24. ISRAEL BOYCOTT CERTIFICATION:**

*Vendor's act of submitting a bid in response to this solicitation shall be deemed a certification from bidder to the State that bidder is not currently engaged in, and will not for the duration of the contract, engage in a boycott of Israel. This certification is required by W. Va. Code § 5A-3-63.*

**Verizon's Response**

---

Verizon has read and understands.

## SECTION 3. GENERAL TERMS AND CONDITIONS

---

Terms and conditions begin on next page.

### GENERAL TERMS AND CONDITIONS:

#### 1. CONTRACTUAL AGREEMENT:

Issuance of an Award Document signed by the Purchasing Division Director, or his designee, and approved as to form by the Attorney General's office constitutes acceptance by the State of this Contract made by and between the State of West Virginia and the Vendor.

#### Verizon's Response

---

Verizon has read, understands, and will comply.

#### 2. DEFINITIONS:

As used in this Solicitation/Contract, the following terms shall have the meanings attributed to them below. Additional definitions may be found in the specifications included with this Solicitation/Contract.

**2.1. "Agency" or "Agencies"** means the agency, board, commission, or other entity of the State of West Virginia that is identified on the first page of the Solicitation or any other public entity seeking to procure goods or services under this Contract.

**2.2. "Bid" or "Proposal"** means the vendors submitted response to this solicitation.

**2.3. "Contract"** means the binding agreement that is entered into between the State and the Vendor to provide the goods or services requested in the Solicitation.

**2.4. "Director"** means the Director of the West Virginia Department of Administration, Purchasing Division.

**2.5. "Purchasing Division"** means the West Virginia Department of Administration, Purchasing Division.

**2.6. "Award Document"** means the document signed by the Agency and the Purchasing Division, and approved as to form by the Attorney General, that identifies the Vendor as the contract holder.

**2.7. "Solicitation"** means the official notice of an opportunity to supply the State with goods or services that is published by the Purchasing Division.

**2.8. "State"** means the State of West Virginia and/or any of its agencies, commissions, boards, etc. as context requires.

**2.9. "Vendor" or "Vendors"** means any entity submitting a bid in response to the Solicitation, the entity that has been selected as the lowest responsible bidder, or the entity that has been awarded the Contract as context requires.

#### Verizon's Response

---

Verizon has read and understands.

#### 3. CONTRACT TERM; RENEWAL; EXTENSION:

The term of this Contract shall be determined in accordance with the category that has been identified as applicable to this Contract below:

**Term Contract**

**Initial Contract Term:** *The Initial Contract Term will be for a period of THREE (3) YEARS*

*. The Initial Contract Term becomes effective on the effective start date listed on the first page of this Contract and the Initial Contract Term ends on the effective end date also shown on the first page of this Contract.*

**Renewal Term:** *This Contract may be renewed upon the mutual written consent of the Agency, and the Vendor, with approval of the Purchasing Division and the Attorney General's office (Attorney General approval is as to form only). Any request for renewal should be delivered to the Agency and then submitted to the Purchasing Division thirty (30) days prior to the expiration date of the initial contract term or appropriate renewal term. A Contract renewal shall be in accordance with the terms and conditions of the original contract. Unless otherwise specified below, renewal of this Contract is limited to THREE (3) successive one (1) year periods or multiple renewal periods of less than one year, provided that the multiple renewal periods do not exceed the total number of months available in all renewal years combined. Automatic renewal of this Contract is prohibited. Renewals must be approved by the Vendor, Agency, Purchasing Division and Attorney General's office (Attorney General approval is as to form only)*

**Alternate Renewal Term** - *This contract may be renewed for successive \_\_\_\_\_ year periods or shorter periods provided that they do not exceed the total number of months contained in all available renewals. Automatic renewal of this Contract is prohibited. Renewals must be approved by the Vendor, Agency, Purchasing Division and Attorney General's office (Attorney General approval is as to form only)*

**Delivery Order Limitations:** *In the event that this contract permits delivery orders, a delivery order may only be issued during the time this Contract is in effect. Any delivery order issued within one year of the expiration of this Contract shall be effective for one year from the date the delivery order is issued. No delivery order may be extended beyond one year after this Contract has expired.*

**Fixed Period Contract:** *This Contract becomes effective upon Vendor's receipt of the notice to proceed and must be completed within \_\_\_\_\_ days.*

**Fixed Period Contract with Renewals:** *This Contract becomes effective upon Vendor's receipt of the notice to proceed and part of the Contract more fully described in the attached specifications must be completed within \_\_\_\_\_ days. Upon completion of the work covered by the preceding sentence, the vendor agrees that:*

*the contract will continue for \_\_\_\_\_ years;*

*the contract may be renewed for \_\_\_\_\_ successive \_\_\_\_\_ year periods or shorter periods provided that they do not exceed the total number of months contained in all available renewals. Automatic renewal of this Contract is prohibited.*

*Renewals must be approved by the Vendor, Agency, Purchasing Division and Attorney General's Office (Attorney General approval is as to form only).*

**One-Time Purchase:** *The term of this Contract shall run from the issuance of the Award Document until all of the goods contracted for have been delivered, but in no event will this Contract extend for more than one fiscal year.*

**Other:** *Contract Term specified in \_\_\_\_\_*

### **Verizon's Response**

Verizon has read and understands.

**4. AUTHORITY TO PROCEED:**

Vendor is authorized to begin performance of this contract on the date of encumbrance listed on the front page of the Award Document unless either the box for "Fixed Period Contract" or "Fixed Period Contract with Renewals" has been checked in Section 3 above. If either "Fixed Period Contract" or "Fixed Period Contract with Renewals" has been checked, Vendor must not begin work until it receives a separate notice to proceed from the State. The notice to proceed will then be incorporated into the Contract via change order to memorialize the official date that work commenced.

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**5. QUANTITIES:**

The quantities required under this Contract shall be determined in accordance with the category that has been identified as applicable to this Contract below.

**Open End Contract:** Quantities listed in this Solicitation/Award Document are approximations only, based on estimates supplied by the Agency. It is understood and agreed that the Contract shall cover the quantities actually ordered for delivery during the term of the Contract, whether more or less than the quantities shown.

**Service:** The scope of the service to be provided will be more clearly defined in the specifications included herewith.

**Combined Service and Goods:** The scope of the service and deliverable goods to be provided will be more clearly defined in the specifications included herewith.

**One-Time Purchase:** This Contract is for the purchase of a set quantity of goods that are identified in the specifications included herewith. Once those items have been delivered, no additional goods may be procured under this Contract without an appropriate change order approved by the Vendor, Agency, Purchasing Division, and Attorney General's office.

**Verizon's Response**

---

Verizon has read and understands.

**6. EMERGENCY PURCHASES:**

The Purchasing Division Director may authorize the Agency to purchase goods or services in the open market that Vendor would otherwise provide under this Contract if those goods or services are for immediate or expedited delivery in an emergency. Emergencies shall include, but are not limited to, delays in transportation or an unanticipated increase in the volume of work. An emergency purchase in the open market, approved by the Purchasing Division Director, shall not constitute of breach of this Contract and shall not entitle the Vendor to any form of compensation or damages. This provision does not excuse the State from fulfilling its obligations under a One-Time Purchase contract.

**Verizon's Response**

---

Verizon has read and understands.

**7. REQUIRED DOCUMENTS:**

All of the items checked in this section must be provided to the Purchasing Division by the Vendor as specified:

**BID BOND (Construction Only):** Pursuant to the requirements contained in W. Va. Code § 5-22-1(c), All Vendors submitting a bid on a construction project shall furnish a valid bid bond in the amount of five percent (5%) of the total amount of the bid protecting the State of West Virginia. The bid bond must be submitted with the bid.

**PERFORMANCE BOND:** The apparent successful Vendor shall provide a performance bond in the amount of 100% of the contract. The performance bond must be received by the Purchasing Division prior to Contract award.

**LABOR/MATERIAL PAYMENT BOND:** The apparent successful Vendor shall provide a labor/material payment bond in the amount of 100% of the Contract value. The labor/material payment bond must be delivered to the Purchasing Division prior to Contract award.

In lieu of the Bid Bond, Performance Bond, and Labor/Material Payment Bond, the Vendor may provide certified checks, cashier's checks, or irrevocable letters of credit. Any certified check, cashier's check, or irrevocable letter of credit provided in lieu of a bond must be of the same amount and delivered on the same schedule as the bond it replaces. A letter of credit submitted in lieu of a performance and labor/material payment bond will only be allowed for projects under

\$100,000. Personal or business checks are not acceptable. Notwithstanding the foregoing, West Virginia Code § 5-22-1 (d) mandates that a vendor provide a performance and labor/material payment bond for construction projects. Accordingly, substitutions for the performance and labor/material payment bonds for construction projects is not permitted.

**MAINTENANCE BOND:** The apparent successful Vendor shall provide a two (2) year maintenance bond covering the roofing system. The maintenance bond must be issued and delivered to the Purchasing Division prior to Contract award.

**LICENSE(S) / CERTIFICATIONS / PERMITS:** In addition to anything required under the Section of the General Terms and Conditions entitled Licensing, the apparent successful Vendor shall furnish proof of the following licenses, certifications, and/or permits upon request and in a form acceptable to the State. The request may be prior to or after contract award at the State's sole discretion.

The apparent successful Vendor shall also furnish proof of any additional licenses or certifications contained in the specifications regardless of whether or not that requirement is listed above.

### Verizon's Response

---

Verizon has read, understands, and will comply.

### 8. INSURANCE:

The apparent successful Vendor shall furnish proof of the insurance identified by a checkmark below and must include the State as an additional insured on each policy prior to Contract award. The insurance coverages identified below must be maintained throughout the life of this contract. Thirty (30) days prior to the expiration of the insurance policies, Vendor shall provide the Agency with proof that the insurance mandated herein has been continued. Vendor must also provide Agency with immediate notice of any changes in its insurance policies, including but not limited to, policy cancelation, policy reduction, or change in insurers. The apparent successful Vendor shall also furnish proof of any additional insurance requirements contained in the specifications prior to Contract award regardless of whether [that insurance requirement is listed in this section.

Vendor must maintain:

- Commercial General Liability Insurance in at least an amount of: \$1,000,000 per occurrence.
- Automobile Liability Insurance in at least an amount of: \$1,000,000 per occurrence.

Professional/Malpractice/Errors and Omission Insurance in at least an amount of: per occurrence. Notwithstanding the forgoing, Vendor's are not required to list the State as an additional insured for this type of policy.

Commercial Crime and Third Party Fidelity Insurance in an amount of: per occurrence.

Cyber Liability Insurance in an amount of: \_\$3,000,000 per occurrence.

Builders Risk Insurance in an amount equal to 100% of the amount of the Contract.

Pollution Insurance in an amount of: per occurrence.

Aircraft Liability in an amount of: per occurrence.

Notwithstanding anything contained in this section to the contrary, the Director of the Purchasing Division reserves the right to waive the requirement that the State be named as an additional insured on one or more of the Vendor's insurance policies if the Director finds that doing so is in the State's best interest.

**Verizon's Response**

---

Verizon has read, understands and will comply.

**9. WORKERS' COMPENSATION INSURANCE:**

Vendor shall comply with laws relating to workers compensation, shall maintain workers' compensation insurance when required, and shall furnish proof of workers' compensation insurance upon request.

**Verizon's Response**

---

Verizon has read, understands and will comply.

**10. [Reserved]**

**Verizon's Response**

---

N/A

**11. LIQUIDATED DAMAGES:**

This clause shall in no way be considered exclusive and shall not limit the State or Agency's right to pursue any other available remedy. Vendor shall pay liquidated damages in the amount specified below or as described in the specifications:

\$ 500 per day for Missed Installation Deadlines.

Liquidated Damages Contained in the Specifications.

Liquidated Damages Are Not Included in this Contract.

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**12. ACCEPTANCE:**

Vendor's signature on its bid, or on the certification and signature page, constitutes an offer to the State that cannot be unilaterally withdrawn, signifies that the product or service proposed by vendor

*meets the mandatory requirements contained in the Solicitation for that product or service, unless otherwise indicated, and signifies acceptance of the terms and conditions contained in the Solicitation unless otherwise indicated.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**13. PRICING:**

*The pricing set forth herein is firm for the life of the Contract, unless specified elsewhere within this Solicitation/Contract by the State. A Vendor's inclusion of price adjustment provisions in its bid, without an express authorization from the State in the Solicitation to do so, may result in bid disqualification. Notwithstanding the foregoing, Vendor must extend any publicly advertised sale price to the State and invoice at the lower of the contract price or the publicly advertised sale price.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**14. PAYMENT IN ARREARS:**

*Payments for goods/services will be made in arrears only upon receipt of a proper invoice, detailing the goods/services provided or receipt of the goods/services, whichever is later. Notwithstanding the foregoing, payments for software maintenance, licenses, or subscriptions may be paid annually in advance.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**15. PAYMENT METHODS:**

*Vendor must accept payment by electronic funds transfer and P-Card. (The State of West Virginia's Purchasing Card program, administered under contract by a banking institution, processes payment for goods and services through state designated credit cards.)*

**Verizon's Response**

---

Verizon will allow the use of a Purchasing Card and/or credit card as a payment option, only as an auto-recurring payment option. Verizon's preferred payment options are 1) electronic Automated Clearing House (ACH) payment; 2) electronic bank account Wire Transfer; or 3) paper check payment. Both electronic payment options can be set up through the Customer's account on Verizon's online billing portal, the Verizon Enterprise Center (VEC) online portal.

**16. TAXES:**

*The Vendor shall pay any applicable sales, use, personal property or any other taxes arising out of this Contract and the transactions contemplated thereby. The State of West Virginia is exempt from federal and state taxes and will not pay or reimburse such taxes.*

**Verizon's Response**

---

Verizon has read, understands, and will comply. Verizon acknowledges the customer's tax exemption status. Documentation may need to be submitted in order to process this benefit.

**17. ADDITIONAL FEES:**

*Vendor is not permitted to charge additional fees or assess additional charges that were not either expressly provided for in the solicitation published by the State of West Virginia, included in the Contract, or included in the unit price or lump sum bid amount that Vendor is required by the solicitation to provide. Including such fees or charges as notes to the solicitation may result in rejection of vendor's bid. Requesting such fees or charges be paid after the contract has been awarded may result in cancellation of the contract.*

**Verizon's Response**

---

Verizon agrees to not charge additional fees or charges outside of the pricing sheet but will include any applicable tax, governmental charge, surcharge or pass through charges. A report can be provided with invoices to break out individual surcharges.

**18. FUNDING:**

*This Contract shall continue for the term stated herein, contingent upon funds being appropriated by the Legislature or otherwise being made available. In the event funds are not appropriated or otherwise made available, this Contract becomes void and of no effect beginning on July 1 of the fiscal year for which funding has not been appropriated or otherwise made available. If that occurs, the State may notify the Vendor that an alternative source of funding has been obtained and thereby avoid the automatic termination. Non-appropriation or non-funding shall not be considered an event of default.*

**Verizon's Response**

---

Verizon has read and understands.

**19. CANCELLATION:**

*The Purchasing Division Director reserves the right to cancel this Contract immediately upon written notice to the vendor if the materials or workmanship supplied do not conform to the specifications contained in the Contract. The Purchasing Division Director may also cancel any purchase or Contract upon 30 days written notice to the Vendor in accordance with West Virginia Code of State Rules § 148-1-5.2.b.*

**Verizon's Response**

---

Verizon has read and understands.

**20. TIME:**

*Time is of the essence regarding all matters of time and performance in this Contract.*

**Verizon's Response**

---

Verizon has read and understands.

**21. APPLICABLE LAW:**

*This Contract is governed by and interpreted under West Virginia law without giving effect to its choice of law principles. Any information provided in specification manuals, or any other source, verbal or written, which contradicts or violates the West Virginia Constitution, West Virginia Code, or West Virginia Code of State Rules is void and of no effect.*

---

**Verizon's Response**

---

Verizon has read and understands.

**22. COMPLIANCE WITH LAWS:**

*Vendor shall comply with all applicable federal, state, and local laws, regulations and ordinances. By submitting a bid, Vendor acknowledges that it has reviewed, understands, and will comply with all applicable laws, regulations, and ordinances.*

**SUBCONTRACTOR COMPLIANCE:** *Vendor shall notify all subcontractors providing commodities or services related to this Contract that as subcontractors, they too are required to comply with all applicable laws, regulations, and ordinances. Notification under this provision must occur prior to the performance of any work under the contract by the subcontractor.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**23. ARBITRATION:**

*Any references made to arbitration contained in this Contract, Vendor's bid, or in any American Institute of Architects documents pertaining to this Contract are hereby deleted, void, and of no effect.*

---

**Verizon's Response**

---

Verizon has read and understands.

**24. MODIFICATIONS:**

*This writing is the parties' final expression of intent. Notwithstanding anything contained in this Contract to the contrary no modification of this Contract shall be binding without mutual written consent of the Agency, and the Vendor, with approval of the Purchasing Division and the Attorney General's office (Attorney General approval is as to form only). Any change to existing contracts that adds work or changes contract cost, and were not included in the original contract, must be approved by the Purchasing Division and the Attorney General's Office (as to form) prior to the implementation of the change or commencement of work affected by the change.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**25. WAIVER:**

*The failure of either party to insist upon a strict performance of any of the terms or provision of this Contract, or to exercise any option, right, or remedy herein contained, shall not be construed as a waiver or a relinquishment for the future of such term, provision, option, right, or remedy, but the same shall continue in full force and effect. Any waiver must be expressly stated in writing and signed by the waiving party.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**26. SUBSEQUENT FORMS:**

*The terms and conditions contained in this Contract shall supersede any and all subsequent terms and conditions which may appear on any form documents submitted by Vendor to the Agency or Purchasing Division such as price lists, order forms, invoices, sales agreements, or maintenance agreements, and includes internet websites or other electronic documents. Acceptance or use of Vendor's forms does not constitute acceptance of the terms and conditions contained thereon.*

**Verizon's Response**

---

Verizon has read and understands.

**27. ASSIGNMENT:**

*Neither this Contract nor any monies due, or to become due hereunder, may be assigned by the Vendor without the express written consent of the Agency, the Purchasing Division, the Attorney General's office (as to form only), and any other government agency or office that may be required to approve such assignments.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**28. WARRANTY:**

*The Vendor expressly warrants that the goods and/or services covered by this Contract will: (a) conform to the specifications, drawings, samples, or other description furnished or specified by the Agency; (b) be merchantable and fit for the purpose intended; and (c) be free from defect in material and workmanship.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**29. STATE EMPLOYEES:**

*State employees are not permitted to utilize this Contract for personal use and the Vendor is prohibited from permitting or facilitating the same.*

**Verizon's Response**

---

Verizon has read and understands.

**30. PRIVACY, SECURITY, AND CONFIDENTIALITY:**

*The Vendor agrees that it will not disclose to anyone, directly or indirectly, any such personally identifiable information or other confidential information gained from the Agency, unless the individual who is the subject of the information consents to the disclosure in writing or the disclosure is made pursuant to the Agency's policies, procedures, and rules. Vendor further agrees to comply with the Confidentiality Policies and Information Security Accountability Requirements, set forth in <http://www.state.wv.us/admin/purchase/privacy/default.html>.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**31. YOUR SUBMISSION IS A PUBLIC DOCUMENT:**

*Vendor's entire response to the Solicitation and the resulting Contract are public documents. As public documents, they will be disclosed to the public following the bid/proposal opening or award of the contract, as required by the competitive bidding laws of West Virginia Code §§ 5A-3-1 et seq., 5-22-1 et seq., and 5G-1-1 et seq. and the Freedom of Information Act West Virginia Code §§ 29B-1-1 et seq.*

**DO NOT SUBMIT MATERIAL YOU CONSIDER TO BE CONFIDENTIAL, A TRADE SECRET, OR OTHERWISE NOT SUBJECT TO PUBLIC DISCLOSURE.**

*Submission of any bid, proposal, or other document to the Purchasing Division constitutes your explicit consent to the subsequent public disclosure of the bid, proposal, or document. The Purchasing Division will disclose any document labeled "confidential," "proprietary," "trade secret," "private," or labeled with any other claim against public disclosure of the documents, to include any "trade secrets" as defined by West Virginia Code § 47-22-1 et seq. All submissions are subject to public disclosure without notice.*

**Verizon's Response**

---

Verizon has read and understands.

**32. LICENSING:**

*In accordance with West Virginia Code of State Rules § 148-1-6.1.e, Vendor must be licensed and in good standing in accordance with any and all state and local laws and requirements by any state or local agency of West Virginia, including, but not limited to, the West Virginia Secretary of State's Office, the West Virginia Tax Department, West Virginia Insurance Commission, or any other state agency or political subdivision. Obligations related to political subdivisions may include, but are not limited to, business licensing, business and occupation taxes, inspection compliance, permitting, etc. Upon request, the Vendor must provide all necessary releases to obtain information to enable the Purchasing Division Director or the Agency to verify that the Vendor is licensed and in good standing with the above entities.*

**SUBCONTRACTOR COMPLIANCE:** *Vendor shall notify all subcontractors providing commodities or services related to this Contract that as subcontractors, they too are required to be licensed, in good standing, and up-to-date on all state and local obligations as described in this section. Obligations related to political subdivisions may include, but are not limited to, business licensing, business and occupation taxes, inspection compliance, permitting, etc. Notification under this provision must occur prior to the performance of any work under the contract by the subcontractor.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**33. ANTITRUST:**

*In submitting a bid to, signing a contract with, or accepting a Award Document from any agency of the State of West Virginia, the Vendor agrees to convey, sell, assign, or transfer to the State of West Virginia all rights, title, and interest in and to all causes of action it may now or hereafter acquire under the antitrust laws of the United States and the State of West Virginia for price fixing and/or unreasonable restraints of trade relating to the particular commodities or services purchased or acquired by the State of West Virginia. Such assignment shall be made and become effective at the time the purchasing agency tenders the initial payment to Vendor.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**34. VENDOR CERTIFICATIONS:**

*By signing its bid or entering into this Contract, Vendor certifies (1) that its bid or offer was made without prior understanding, agreement, or connection with any corporation, firm, limited liability company, partnership, person or entity submitting a bid or offer for the same material, supplies, equipment or services; (2) that its bid or offer is in all respects fair and without collusion or fraud; (3) that this Contract is accepted or entered into without any prior understanding, agreement, or connection to any other entity that could be considered a violation of law; and (4) that it has reviewed this Solicitation in its entirety; understands the requirements, terms and conditions, and other information contained herein.*

*Vendor's signature on its bid or offer also affirms that neither it nor its representatives have any interest, nor shall acquire any interest, direct or indirect, which would compromise the performance of its services hereunder. Any such interests shall be promptly presented in detail to the Agency. The individual signing this bid or offer on behalf of Vendor certifies that he or she is authorized by the Vendor to execute this bid or offer or any documents related thereto on Vendor's behalf; that he or she is authorized to bind the Vendor in a contractual relationship; and that, to the best of his or her knowledge, the Vendor has properly registered with any State agency that may require registration.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**35. VENDOR RELATIONSHIP:**

*The relationship of the Vendor to the State shall be that of an independent contractor and no principal-agent relationship or employer-employee relationship is contemplated or created by this Contract. The Vendor as an independent contractor is solely liable for the acts and omissions of its employees and agents. Vendor shall be responsible for selecting, supervising, and compensating any and all individuals employed pursuant to the terms of this Solicitation and resulting contract. Neither the Vendor, nor any employees or subcontractors of the Vendor, shall be deemed to be employees of the State for any purpose whatsoever. Vendor shall be exclusively responsible for payment of employees and contractors for all wages and salaries, taxes, withholding payments, penalties, fees, fringe benefits, professional liability insurance premiums, contributions to insurance and pension, or other deferred compensation plans, including but not limited to, Workers' Compensation and Social Security obligations, licensing fees, etc. and the filing of all necessary documents, forms, and returns pertinent to all of the foregoing.*

*Vendor shall hold harmless the State, and shall provide the State and Agency with a defense against any and all claims including, but not limited to, the foregoing payments, withholdings, contributions, taxes, Social Security taxes, and employer income tax returns.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**36. INDEMNIFICATION:**

*The Vendor agrees to indemnify, defend, and hold harmless the State and the Agency, their officers, and employees from and against: (1) Any claims or losses for services rendered by any subcontractor, person, or firm performing or supplying services, materials, or supplies in connection with the*

performance of the Contract; (2) Any claims or losses resulting to any person or entity injured or damaged by the Vendor, its officers, employees, or subcontractors by the publication, translation, reproduction, delivery, performance, use, or disposition of any data used under the Contract in a manner not authorized by the Contract, or by Federal or State statutes or regulations; and (3) Any failure of the Vendor, its officers, employees, or subcontractors to observe State and Federal laws including, but not limited to, labor and wage and hour laws.

**Verizon's Response**

---

Per Answer 51 in SWC22-01 Addendum #1, Term 36. INDEMNIFICATION is withdrawn from this Solicitation.

**37. NO DEBT CERTIFICATION:**

*In accordance with West Virginia Code §§ 5A-3-10a and 5-22-1(i), the State is prohibited from awarding a contract to any bidder that owes a debt to the State or a political subdivision of the State. By submitting a bid, or entering into a contract with the State, Vendor is affirming that (1) for construction contracts, the Vendor is not in default on any monetary obligation owed to the state or a political subdivision of the state, and (2) for all other contracts, neither the Vendor nor any related party owe a debt as defined above, and neither the Vendor nor any related party are in employer default as defined in the statute cited above unless the debt or employer default is permitted under the statute.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**38. CONFLICT OF INTEREST:**

*Vendor, its officers or members or employees, shall not presently have or acquire an interest, direct or indirect, which would conflict with or compromise the performance of its obligations hereunder. Vendor shall periodically inquire of its officers, members and employees to ensure that a conflict of interest does not arise. Any conflict of interest discovered shall be promptly presented in detail to the Agency.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

Verizon represents to the best of its knowledge that no conflicts of interest exist. We publish our Code of Conduct for employees, and this document also lets our customers know that integrity and respect underscore how we do business. Within our Code of Conduct we have a chapter on "Avoiding Conflicts of Interest." Verizon's Code of Conduct can be found at:

<http://www.verizon.com/about/our-company/code-conduct>

**39. REPORTS:**

*Vendor shall provide the Agency and/or the Purchasing Division with the following reports identified by a checked box below:*

*Such reports as the Agency and/or the Purchasing Division may request. Requested reports may include, but are not limited to, quantities purchased, agencies utilizing the contract, total contract expenditures by agency, etc.*

Quarterly reports detailing the total quantity of purchases in units and dollars, along with a listing of purchases by agency. Quarterly reports should be delivered to the Purchasing Division via email at [purchasing.division@wv.gov](mailto:purchasing.division@wv.gov).

---

**Verizon's Response**

---

Verizon has read, understands, and will comply. The Verizon Enterprise Center (VEC) portal contains many different reporting options. If a report is not available to fit the State of West Virginia's needs, the Verizon Program Management Office will work with the State to provide the requested reports.

**40. BACKGROUND CHECK:**

*In accordance with W. Va. Code § 15-2D-3, the State reserves the right to prohibit a service provider's employees from accessing sensitive or critical information or to be present at the Capitol complex based upon results addressed from a criminal background check. Service providers should contact the West Virginia Division of Protective Services by phone at (304) 558-9911 for more information.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**41. PREFERENCE FOR USE OF DOMESTIC STEEL PRODUCTS:**

*Except when authorized by the Director of the Purchasing Division pursuant to W. Va. Code § 5A-3-56, no contractor may use or supply steel products for a State Contract Project other than those steel products made in the United States. A contractor who uses steel products in violation of this section may be subject to civil penalties pursuant to W. Va. Code § 5A-3-56. As used in this section:*

a. "State Contract Project" means any erection or construction of, or any addition to, alteration of or other improvement to any building or structure, including, but not limited to, roads or highways, or the installation of any heating or cooling or ventilating plants or other equipment, or the supply of and materials for such projects, pursuant to a contract with the State of West Virginia for which bids were solicited on or after June 6, 2001.

b. "Steel Products" means products rolled, formed, shaped, drawn, extruded, forged, cast, fabricated or otherwise similarly processed, or processed by a combination of two or more or such operations, from steel made by the open hearth, basic oxygen, electric furnace, Bessemer or other steel making process.

c. The Purchasing Division Director may, in writing, authorize the use of foreign steel products if:

1. The cost for each contract item used does not exceed one tenth of one percent (.1%) of the total contract cost or two thousand five hundred dollars (\$2,500.00), whichever is greater. For the purposes of this section, the cost is the value of the steel product as delivered to the project; or

2. The Director of the Purchasing Division determines that specified steel materials are not produced in the United States in sufficient quantity or otherwise are not reasonably available to meet contract requirements.

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**42. PREFERENCE FOR USE OF DOMESTIC ALUMINUM, GLASS, AND STEEL:**

*In Accordance with W. Va. Code § 5-19-1 et seq., and W. Va. CSR § 148-10-1 et seq., for every contract or subcontract, subject to the limitations contained herein, for the construction, reconstruction,*

alteration, repair, improvement or maintenance of public works or for the purchase of any item of machinery or equipment to be used at sites of public works, only domestic aluminum, glass or steel products shall be supplied unless the spending officer determines, in writing, after the receipt of offers or bids, (1) that the cost of domestic aluminum, glass or steel products is unreasonable or inconsistent with the public interest of the State of West Virginia, (2) that domestic aluminum, glass or steel products are not produced in sufficient quantities to meet the contract requirements, or (3) the available domestic aluminum, glass, or steel do not meet the contract specifications. This provision only applies to public works contracts awarded in an amount more than fifty thousand dollars (\$50,000) or public works contracts that require more than ten thousand pounds of steel products.

The cost of domestic aluminum, glass, or steel products may be unreasonable if the cost is more than twenty percent (20%) of the bid or offered price for foreign made aluminum, glass, or steel products. If the domestic aluminum, glass or steel products to be supplied or produced in a "substantial labor surplus area", as defined by the United States Department of Labor, the cost of domestic aluminum, glass, or steel products may be unreasonable if the cost is more than thirty percent (30%) of the bid or offered price for foreign made aluminum, glass, or steel products. This preference shall be applied to an item of machinery or equipment, as indicated above, when the item is a single unit of equipment or machinery manufactured primarily of aluminum, glass or steel, is part of a public works contract and has the sole purpose or of being a permanent part of a single public works project. This provision does not apply to equipment or machinery purchased by a spending unit for use by that spending unit and not as part of a single public works project.

All bids and offers including domestic aluminum, glass or steel products that exceed bid or offer prices including foreign aluminum, glass or steel products after application of the preferences provided in this provision may be reduced to a price equal to or lower than the lowest bid or offer price for foreign aluminum, glass or steel products plus the applicable preference. If the reduced bid or offer prices are made in writing and supersede the prior bid or offer prices, all bids or offers, including the reduced bid or offer prices, will be reevaluated in accordance with this rule.

#### **Verizon's Response**

---

Verizon has read, understands, and will comply.

#### **43. INTERESTED PARTY SUPPLEMENTAL DISCLOSURE:**

W. Va. Code § 6D-1-2 requires that for contracts with an actual or estimated value of at least \$1 million, the Vendor must submit to the Agency a disclosure of interested parties prior to beginning work under this Contract. Additionally, the Vendor must submit a supplemental disclosure of interested parties reflecting any new or differing interested parties to the contract, which were not included in the original pre-work interested party disclosure, within 30 days following the completion or termination of the contract. A copy of that form is included with this solicitation or can be obtained from the WV Ethics Commission. This requirement does not apply to publicly traded companies listed on a national or international stock exchange. A more detailed definition of interested parties can be obtained from the form referenced above.

#### **Verizon's Response**

---

Verizon is a publicly traded company.

#### **44. PROHIBITION AGAINST USED OR REFURBISHED:**

Unless expressly permitted in the solicitation published by the State, Vendor must provide new, unused commodities, and is prohibited from supplying used or refurbished commodities, in fulfilling its responsibilities under this Contract.

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**45. VOID CONTRACT CLAUSES:**

*This Contract is subject to the provisions of West Virginia Code § 5A-3-62, which automatically voids certain contract clauses that violate State law.*

---

**Verizon's Response**

---

Verizon has read, understands and will comply.

**46. ISRAEL BOYCOTT:**

*Bidder understands and agrees that, pursuant to W. Va. Code § 5A-3-63, it is prohibited from engaging in a boycott of Israel during the term of this contract.*

---

**Verizon's Response**

---

Verizon has read, understands and will comply.

**DESIGNATED CONTACT:** Vendor appoints the individual identified in this Section as the Contract Administrator and the initial point of contact for matters relating to this Contract.

(Name, Title) Sandra Hawkins, Sr Client Executive  
(Printed Name and Title) Sandra Hawkins, Sr Client Executive  
(Address) 4700 MacCorkle Av SE., Charleston, WV 25304

## **SECTION 4: PROJECT SPECIFICATIONS**

### **4.1. Background and Current Operating Environment:**

*The State of West Virginia operates and maintains statewide networks for data, video and voice transmission that are shared between government and education entities including state agencies, higher education, K-12 schools, libraries, and county/municipal units of government.*

*The next-generation statewide Wide Area Network (WAN) known as Data Transport 2.0, has been designed to enable a single vendor to provide secure, flexible, reliable, and cost-effective services including Ethernet WAN services and dedicated Internet access, and to enable value-added support services from the Vendor. The current WAN services contract is set to expire on June 30, 2022.*

*The services will be brokered and/or managed by the West Virginia Office of Technology (WVOT), where applicable. It is the State's intent that Data Transport 2.0 leverage the cost efficiencies of shared services (centralized billing, ordering, technology support, network services, and cybersecurity services).*

*There are approximately 1000 WAN circuits and services installed statewide under existing telecommunications contracts. The winning Vendor will be expected to provide services to existing sites and at new sites, if requested, during the contract term. (see Exhibit B) There is no guarantee that existing sites detailed in this RFP will require services under the new Vendor contract, since the State is continually opening and closing sites.*

*The Vendor will be required to work with other technology service provider(s), where necessary, for both the transition from legacy WAN services and for the installation of new WAN services defined in this RFP at various locations across the state. The State's goal is to award a contract to a single Vendor, who will leverage a variety of technology solutions and partner with other technology companies to provide the most secure, robust, reliable, and comprehensive WAN solution for the State. Other technology companies may include (but are not limited to) cellular/wireless carriers, Internet Service Providers (ISPs), Wireless Internet Service Providers (WISPs), and Cable TV companies.*

*The contract resulting from this RFP is intended to provide a comprehensive procurement vehicle for all listed services and value-added solutions defined in this RFP. The Vendor awarded the contract will be the single responsible party for coordination and installation as well as ongoing maintenance and billing for all of their services and will include all service from the Vendor's technology subcontracting partners.*

### **Verizon's Response**

Verizon has read and understands.

### **4.2. DEFINITIONS and ACRONYMS:**

*The terms and abbreviations listed below shall have the meanings assigned to them below.*

- **"AS"** means Autonomous System
- **"ASN"** means Autonomous System Number
- **"BGP"** means Border Gateway Protocol
- **"Contract Item"** or **"Contract Items"** means the services defined in Section Four.
- **"DDOS"** means Distributed Denial of Service Attack
- **"Dedicated Internet Access"** (DIA) means a private connection to the Internet that is exclusively dedicated to a business or government for their use.
- **"DHCP"** means Dynamic Host Configuration Protocol

- **"DIA"** means Dedicated Internet Access
- **"Distributed Denial of Service Attack"** (DDOS) means a malicious attempt to disrupt the normal traffic of a targeted server, service or network by overwhelming the target or its surrounding infrastructure with a flood of Internet traffic.
- **"DNS"** means Domain Name Services
- **"Edge Router"** means a specialized router located at a network boundary that enables an internal network (LAN) to connect to external networks (WAN).
- **"ESL"** means Eligible Services List
- **"Ethernet WAN Service"** means a service delivered by network and telecom vendors that provides a high-speed connection between sites utilizing a standardized Ethernet connection.
- **"ETP"** means Eligible Telecommunications Provider
- **"FCC"** means Federal Communications Commission
- **"FCDL"** means Funding Commitment Decision Letter
- **"Force Majeure"** means an extraordinary event or circumstance beyond the control of the parties involved.
- **"FRN"** means Funding Request Number
- **"Gbps"** means Gigabits, or one billion bits per second.
- **"GETS"** means Government Emergency Telecommunications Service
- **"IEEE"** means Institute of Electrical and Electronic Engineers
- **"ILEC"** means Incumbent Local Exchange Carrier
- **"IPv4"** means Internet Protocol Version 4
- **"IPv6"** means Internet Protocol Version 6
- **"LAN"** means a Local Area Network (LAN) that connects network devices over a relatively short distance. A networked office building, school, or home usually contains a single LAN, though sometimes one building will contain a few small LANs.
- **"LCP"** means Lowest Corresponding Price
- **"Mbps"** means Megabits, or one million bits per second.
- **"MTTR"** means Mean Time To Repair
- **"Non-Recurring"** means one-time or installation costs for service, requested in the Exhibit A (Pricing Page).
- **"PIA"** means Program Integrity Assurance
- **"Point of Presence (PoP)"** means a point of presence that is an access point to a carrier's network at a building or facility. It may be housed either in the facilities of a telecommunications provider (building entrance or closet) or a location separate from the telecommunications provider (extended PoP).
- **"Postalized"** means rates or prices that are structured so that they are not distance or location sensitive but are dependent on other factors such as type of service, speed of service, etc.
- **"Pricing Section"** means the pricing evaluation sheets where the types and quantities of services are identified. The Vendor should provide pricing per type of transport. Exhibit A is the Pricing Page to be completed for each type of transport that the Vendor is proposing.

- **“Quality of Service” (QoS)** means a set of technologies that work on a network to guarantee its ability to dependably run high-priority applications and traffic under limited network capacity. QoS technologies accomplish this by providing differentiated handling and capacity allocation to specific flows in network traffic.
- **“Recurring”** means monthly recurring costs for solicited services, requested per Exhibit A (Pricing Page).
- **“SD-WAN”** means Software Defined Wide Area Network
- **“SLD”** means Schools and Libraries Division
- **“SLA”** means Service Level Agreement
- **“Solicitation”** means the official notice of an opportunity to supply the State with goods or services that is published by the Purchasing Division.
- **“Special Construction”** means when there are no existing telecommunications facilities to fulfill the need for a new service installation to a physical location and new physical network facilities will need to be built to accommodate the new services requested or to accommodate new service requirements.
- **“SPIN”** means Service Provider Identification Number
- **“TCR”** means Telecommunications Request Form
- **“TSP”** means Telecommunications Service Priority
- **“USAC”** means Universal Service Administrative Company
- **“USF”** means Universal Service Fund
- **“Vendor Response Sheet”** means the information sheet where the Vendor provides details about its company and provides references that match the services being proposed within this solicitation.
- **“VLAN”** means Virtual Local Area Network
- **“VOIP”** means Voice Over Internet Protocol
- **“VPN”** means Virtual Private Network
- **“WAN”** means Wide Area Network, a computer network that covers a large geographical area. WAN includes the technologies to transmit data, image, audio and video information over long distances and among different LANs.
- **“Wireless 4G/5G service”** means a cellular wireless broadband communication service leveraging 4G (4<sup>th</sup> generation) or 5G (5<sup>th</sup> Generation) protocols and equipment.
- **“Wireless Bandwidth Throttling”** means that a cellular wireless carrier artificially limits the bandwidth availability for their service
- **“WVOT”** means West Virginia Office of Technology
- **“WVDA”** means West Virginia Department of Administration
- **“WVDE”** means West Virginia Department of Education
- **“WVLC”** means West Virginia Library Commission

### **Verizon’s Response**

Verizon has read and understands.

### **4.3. Project Desirables and Goals, and Mandatory Requirements:**

*The State of West Virginia's goal is to award a contract to a single Vendor, who will leverage a variety of technology solutions and partner with other technology companies when required to provide the most secure, robust, reliable, and comprehensive WAN and Dedicated Internet Access services for the State.*

*Vendor should describe its approach and methodology to providing their services by addressing the mandatory requirements as well as the goals and objectives identified below. Mandatory requirements relate to the goals and objectives and must be met by the Vendor as a part of its submitted proposal. Vendor should describe how it will comply with the mandatory requirements and include any areas where its proposed solution exceeds the mandatory requirement. Failure to comply with mandatory requirements will lead to disqualification, but the approach/methodology that the vendor uses to comply, and areas where the mandatory requirements are exceeded, will be included in technical scores where appropriate.*

*Vendor's response should include any information about how the proposed approach is superior to other possible approaches as well as identify areas where the proposed solution exceeds the project expectations.*

*The State has divided this RFP into four major parts, each with their own mandatory requirements and goals and objectives.*

- *Part 1: Technology Service and Solution for Ethernet WAN, DIA and 4G/5G Services*
- *Part 2: Ethernet WAN Service Migration Approach*
- *Part 3: Service and Support for WAN and DIA and 4G/5G Services*
- *Part 4: Security for WAN and DIA Services*

#### **Verizon's Response**

---

Verizon has read and understands.

### **4.3.1. Goals and Objectives**

*4.3.1.1. Part 1: Technology Service and Solution for Ethernet WAN, DIA and 4G/5G Services*

*4.3.1.1.1. Ethernet WAN Service*

*4.3.1.1.1. The State desires that the Vendor have an online performance management and support portal that, at a minimum, the State can use to enter and track new trouble tickets, review pending trouble tickets and the performance statistics of installed services. The State desires that the Vendor have an online performance management and support portal that at minimum the State can use to enter and track new trouble tickets, review pending trouble tickets and the performance statistics of installed services. Please describe your solution's ability to provide an online portal for Ethernet WAN services that meets or exceeds this goal.*

#### **Verizon's Response**

---

The Verizon Enterprise Center (VEC) is a one-stop portal for accessing critical information and resources on-demand. The State of WV can access both Verizon and Verizon Wireless details, providing a single location for key data, voice, and wireless information. This enables you to manage your Verizon services, streamline business processes, and control critical business functions. Supported by a host of powerful, comprehensive electronic self-service capabilities, the portal is available 24 hours a day, seven days a week. The Verizon Enterprise Center can provide you with the ability to track and customize your Verizon products to make them work for your business. The State of WV can also control costs and simplify business management by leveraging these self-service tools. Refer to Appendix C for a presentation of VEC capabilities.

Managed Network Services (MNS) customers can also access MNS-specific information. From the Verizon Enterprise Center, users can simply click on the link on the Network Tools tab titled "Access Managed Services." (The State of WV may also pull information from the "Account Explorer" tab.)

The State of WV can see both a macro and micro view of your network by reviewing inventory, circuits, and contacts across the network. You can do this either from the customer level or manage each location's hardware, and change management at a site level. This functionality helps you manage your network more effectively, identify cross-location trouble spots, and leverage information from one location to the other.

The Verizon Enterprise Center and its Managed Services area can provide customer with:

- An easy to navigate, web-based tool;
- Secure views into your managed network services;
- Methods to track circuit and CPE inventory;
- A way to track the status of an install or upgrade in progress;
- A tool that is available to you at no additional cost.

### Features

Through the use of the VEC and Managed Services information, customer can:

- View your managed network (WAN, LAN, IP PBX) by:
  - Location;
  - Projects (Active install and/or upgrade);
  - Customer level.
- Review alarms on an account or site-level basis;
- Submit Change Management (Standard and/or Optional) requests;
- Review managed services alarms across the network and identify appropriate ticket numbers;
- View Device/CPE Feature capabilities. This functionality can enable customers to see features available on each device under management. The Feature Details page includes a "managed" indicator as well as a new management and product section;
- Access your trouble tickets from the "Repairs" tab:
  - As part of the standard Verizon Enterprise Center applications, "Desktop Alerts" can be set up for automatic notification of ticket status. If this feature is enabled, you will receive two notifications of a ticket. You can "opt" out of one notification in order not to receive duplicate notifications.
- View Verizon and customer contacts available by function, name, and location;
- View Network Analysis (NA) reports from the "Reports" tab if included in your contract.

The VEC online portal provides line of sight into the following services:

- Ethernet WAN Services
- Dedicated Internet Access Service (DIA)
- 5G Wireless Service

In addition, the Private IP Dynamic Network Manager is an enhanced feature that exceeds the goal and allows the State to take ownership of managing their traffic in the wide area network space as needed. Dynamic Network Manager provides the ability to review circuit utilization, schedule port changes (if desired), receive threshold utilization alerts, and access management reports for private wide area network traffic through the VEC.

**4.3.1.1.2.** *The State desires that the Vendor provide Ethernet WAN services that utilize SD-WAN overlay services as defined in the Metro Ethernet Forum (MEF) 3.0 standards. <https://www.mef.net/service-standards/overlay-services/sd-wan/>. Please describe your company's ability to meet this goal.*

---

## Verizon's Response

---

Verizon has read, understands, and meets this goal.

In response to Q3/A3: *Please provide your company's proposed SD-WAN solution*, the state is interested in obtaining the most robust, reliable, secure and cost effective SD-WAN solution available.

Verizon is proposing a fully Managed SD-WAN overlay solution that can utilize both private and public Ethernet WAN connections. This solution takes advantage of Verizon's long-standing strategic partnership with Cisco enabling virtualized functionality, centralized management and integration through application programming interfaces (APIs).

The State of West Virginia can leverage our technical expertise in design, planning, implementation, and network management. The State of West Virginia can utilize the flexible reporting and policy portal capabilities available from Verizon, along with specific vendor partner technology, to select the best solution that meets the business and technology requirements. Verizon Managed SD WAN offers a fully managed network service.

Verizon has achieved MEF 3.0 SD-WAN and MEF 3.0 Carrier Ethernet certification of their services by the Metro-Ethernet Forum (MEF) Services Certification Registry. MEF certification validates that Verizon demonstrated that our solution conforms to rigorous specifications established by the industry's defining authority for standardized network-based services. MEF 3.0 SD\_WAN Certification requires compliance with "MEF 70 SD-WAN Service Attributes and Services, July 2019" specification and passing mandatory test cases in "MEF 90 SD-WAN Certification Test Requirements, July 2020" specification. Verizon's SD-WAN Service passed all required and optional test cases: 57 test cases were passed.

Verizon has extensive experience for managed network services, backed by a full suite of Professional Services, and a Network Operations Center (NOC) and Security Operations Center (SOC) that provides global customer support services.

Verizon provides standard global availability of fully managed SD WAN services in 75 countries and optional custom delivery options in 150+ countries. SD WAN is offered with an "As a Service" pricing model with bundled deployment platform options.

Verizon provides end-to-end provisioning including network design, implementation, testing, and project management. This service is generally provided using low-touch provisioning to automate the remote configuration of SD WAN profiles to instances, either on purpose-built or uCPE devices in the field, from Verizon hosted controllers.

Verizon's solution includes Managed SD WAN with performance and application SLAs with an integrated service assurance model for repair and reporting.

### 4.3.1.1.2. *Dedicated Internet Access Service (DIA)*

4.3.1.1.2.1. *The State desires that the Vendor have an online performance management and support portal that, at a minimum, the State can use to enter and track new trouble tickets, review pending trouble tickets and the performance statistics of installed services. Please describe your solution's ability to provide an online portal for DIA services that meets or exceeds this goal.*

---

## Verizon's Response

---

The VEC online portal, described in section 4.3.1.1.1, is your one-stop shop for tracking trouble tickets, reviewing trouble tickets and performance statistics of installed services.

In addition, Internet Reporting Statistics (IPR) is a reporting application that provides traffic statistics, usage trends and analyses for Internet Dedicated services via the VEC. This application will enable the State to interactively view statistics and trends for each site using graphical and tabular formats.

4.3.1.1.3. 4G/5G Wireless Service

4.3.1.1.3.1. State desires a single bill from Vendor that includes wireless service as well as Ethernet WAN and DIA services. Please describe your solution's ability to provide an integrated services bill that meets or exceeds this goal.

**Verizon's Response**

---

Verizon will be providing multiple bills until IT development can be completed to accommodate a single bill.

4.3.1.2. Part 2: Vendor Ethernet WAN Services Migration Plan

4.3.1.2.1. The State desires a finalized and agreed upon an Operations Plan within sixty (60) calendar days of contract effective date for the management, support, and maintenance of the State's current WAN infrastructure. Please describe your company's ability to deliver the finalized Operations Plan to the State within sixty (60) calendar days of contract effective date with scheduling the appropriate meetings, making changes after State input, and meeting deadlines.

**Verizon's Response**

---

Verizon will work with the State's contacts to document an Operations Plan within sixty (60) calendar days for the continued management of the Verizon WAN services. As the incumbent provider of the State's WAN services, Verizon will continue to provide management, support and maintenance for the existing network services without anticipated interruptions.

4.3.1.2.2. The State desires all sites listed in Appendix A be migrated to vendor Ethernet WAN service within 365 calendar days from contract effective date. The State reserves the right to reprioritize this list as necessary. Please describe your company's plan to accomplish these migrations. Please describe your company's ability to migrate all sites listed in Appendix A within 365 calendar days from contract effective date.

**Verizon's Response**

---

As Verizon provides the existing WAN services to the State of West Virginia, the majority of the WAN circuits will not require migration. Verizon will work with the State's contacts to plan for the migration of 20 Mbps sites listed in Exhibit B: to an upgraded speed (change order) or to a different solution, i.e. Dedicated Internet. Verizon will continue to meet weekly, more if required, to identify and once a TCR is received will migrate these sites to the new requested service.

4.3.1.3. Part 3: Service and Support for WAN and DIA and 4G/5G Services

4.3.1.3.1. If the Vendor's work requires them to be at a State site, the Vendor should provide Agency at least 72 hours' notice before arriving at the site and comply with State law and all Agency policies, including but not limited to background checks for contractors, vendors, and visitors. Please describe your approach and methodology in your solution/response.

**Verizon's Response**

---

Verizon has read, understood and will comply. A successful implementation of your new service requires your active involvement. Verizon will provide the agency contact 72 hours' notice before arriving at the site. We've provided the below steps to help you understand what to expect and how to prepare your facility in ample time for a smooth installation.

We will need access for service installation and help coordinating and addressing necessary preparations including power, space, and cabling paths.

Verizon's approach/methodology and what you can expect for each installation:

1. A phone call from a Verizon representative shortly after submitting your order request to verify the following:
  - a. The Verizon services ordered.
  - b. Information for a knowledgeable local contact including name, address, phone number, and email. This person will need to provide access to the premises, telecommunications closets, and other network facilities at the location.
2. We will then perform a remote or a physical site survey of your premises.
  - a. If a physical site survey is NOT required, a Verizon order manager will contact you to discuss installation and service activation.
  - b. If a physical site survey IS required, a Verizon technical representative will schedule one with the local contact.
3. We will provide the local contact with your site responsibilities, including space, power, and cabling path requirements.
  - a. The local contact must verify receipt of these "room ready" requirements and provide Verizon a date on which they will be completed.
  - b. Verizon will respond with a committed delivery date based on the site readiness date.
4. The local contact will prepare the site for service installation. This responsibility includes:
  - a. Providing adequate, secure space for service equipment.
  - b. Providing power levels for the circuit and equipment as communicated by Verizon.
  - c. Providing a conduit and cabling path within the building to the designated installation space.
5. The local contact must notify Verizon when the site is ready, or if there are any delays in room preparation.
  - a. If the site is deemed not ready by Verizon, service installation and activation will be delayed.
6. Verizon will dispatch the installation team(s).
  - a. The local contact must ensure that technicians have access to all on-premises wiring and space locations.
7. Following the physical installation, please notify your Verizon order manager to complete service activation.

Verizon will comply with the background check as stated in the Instruction to Vendors Submitting Bids. Once the request from the State is received Verizon will arrange for electronic fingerprinting at a Live Scan Fingerprinting facility.

4.3.1.3.2. *Vendor should describe their company's ability to hold regular meetings on each of these topics, as well as their company's implementation plans for starting these discussions:*

#### **Verizon's Response**

---

Verizon has read, understands, and complies.

The Account Manager is the single point of contact for all matters with the State. Regardless of the nature, the Account Manager will be prepared to respond or to bring together the correct resources to meet the requirements of the State. For billing, service, and provisioning issues, the dedicated Billing/Service Manager will provide support to the State.

The dedicated Billing/Service Manager will continue to meet monthly or ad hoc meetings for billing and service issues. The Project Manager will continue to meet weekly with the State to discuss order status, issues, pending orders, expected orders and ordering process. Verizon will continue to meet weekly with the engineering team for architecture and design initiatives.

**Figure 4.3.1-1. Meetings with State of WV.**

Topics	Ongoing Regular Meetings and Discussions with the State of West Virginia
Architecture and Design [4.3.1.3.2.1]	Our Technical lead has weekly calls with the WV engineering team about architecture and design. They review and prioritize existing requests and plan roadmap items to be responsive to future needs.
Implementation [4.3.1.3.2.2]	Our Project Manager holds weekly calls to review implementation schedule and work breakdown structure, project requests, coordinate logistics, and prioritize open action items.
Ordering and Billing [4.3.1.3.2.3]	The dedicated Service Manager conducts monthly as well as ad-hoc meetings to review billing and service issues. This includes a First Invoice Review to validate rates and ordered products and services.
Service and Support [4.3.1.3.2.4]	The dedicated Service Manager conducts monthly services reviews with the West Virginia Operations Team to review trouble ticket activity, correlate trends, and identify root causes to include a service improvement plan as needed.
Project Management [4.3.1.3.2.5]	Project Manager conducts weekly meetings with the State to discuss order status, issues, pending orders, expected orders and ordering process.

Verizon will continue to partner with the State of West Virginia and utilize industry standards, recognized management frameworks and best practices.

4.3.1.3.3. *The State desires a service order tracking web portal, including real-time updates for new and pending service orders. The State desires details including the following data elements:*

- 4.3.1.3.3.1. *Telecommunications Change Request (TCR) Form Number*
- 4.3.1.3.3.2. *Date order was received*
- 4.3.1.3.3.3. *Department/Agency Name where service is being installed*
- 4.3.1.3.3.4. *Department/Agency where service is being installed address*
- 4.3.1.3.3.5. *Projected due date*
- 4.3.1.3.3.6. *Rate element identifier (circuit ID or other)*
- 4.3.1.3.3.7. *Additional order details*

*The State will place orders, disconnects, and changes through its established TCR process; however, the State desires this portal to provide more transparency and faster updates without the need to contact the Vendor. Please describe your company's ability to provide this portal, as well as any requirements from the State needed to implement such a program.*

**Verizon's Response**

Verizon has read, understands and will comply. The following elements are or can be included in our VEC portal:

- Telecommunications Change Request (TCR) Form Number [4.3.1.3.3.1.]
- Date order was received [4.3.1.3.3.2.]
- Department/Agency Name where service is being installed [4.3.1.3.3.3.]
- Department/Agency where service is being installed address [4.3.1.3.3.4.]
- Projected due date [4.3.1.3.3.5.]
- Rate element identifier (circuit ID or other) [4.3.1.3.3.6.]
- Additional order details [4.3.1.3.3.7.]

The Verizon Enterprise Center located at <https://verizonenterprise.com> will be available once you have registered and set up entitlements (entitlements help safeguard your account information). The dedicated Service Manager will assist the State's contacts in registering in the VEC, determining roles and product tools needed along with providing Customer Training information. Refer to 4.3.1.1.1. and Appendix C for more information on the VEC portal.

4.3.1.3.4. *Vendor should contact the State's engineering points of contact by phone within thirty (30) minutes of a Vendor network outage that affects multiple sites on the State's network. This verbal notification should be followed with a written report that provides an explanation of the problem, the cause of the problem, the solution to the problem, the estimated time for recovery, and the steps taken or to be taken to prevent a reoccurrence. The Vendor should provide onsite staff to the location, as necessary, within twelve (12) hours of the outage. To that end, please describe your company's notification procedures in the case of an outage.*

---

**Verizon's Response**

With Verizon's Monitor and Notify service, the State will be notified by email within 15-20 minutes of outages affecting individual sites in the network. This individual email notification would be a basis for outages affecting multiple sites. Verizon will coordinate with the State's contacts to provide verbal notification within 30 minutes of the awareness of an outage affecting multiple sites. A written report including an explanation of the problem, the cause of the problem, the solution to the problem, the estimated time to resolve the issue and the steps taken to prevent a reoccurrence will be provided. If necessary to resolve the issue, Verizon will dispatch staff to the site within 12 hours or as soon as possible.

4.3.1.3.5. *Vendor should provide written notification of ten (10) business days or more in advance of any planned upgrades, modifications, etc. that may affect the State's customers to the State's engineering points of contact. Please describe your company's notification process for planned maintenance.*

---

**Verizon's Response**

Verizon's Change Management program governs planned and emergency changes including maintenance changes (e.g., software upgrades, hardware introduction etc.) which have varying levels of customer impact or no impact at all.

In cases where a customer impact will be experienced, by policy, customers are to be notified via their account teams or directly via email that the maintenance event will occur a minimum of ten (10) calendar days in advance. Approvals for all maintenance are conducted by the management of the requesting organization.

For standard maintenance requests that may or may not affect customers, the standard email notification process includes either 10 calendar days or 48 hour customer notification depending on the potential impact to the network or a specific customer(s). Except under certain emergency situations, all maintenance is conducted during our standard maintenance window periods.

In all cases, the execution of the maintenance requires the following:

- Maintenance notifications are published and receive appropriate approvals;
- Maintenance is restricted under most scenarios during the standard maintenance window period from 12AM to 6AM;
- The technician or engineer conducting the maintenance must have a Verizon engineering approved method of procedure with a back out plan.

4.3.1.3.6. *Vendor should provide notification of three (3) business days or more in advance of emergency maintenance. While the State understands emergency outages and/or unplanned maintenance windows occur, it is expected that these situations are kept to a minimum. Please describe your company's notification process for emergency maintenance and outages.*

**Verizon's Response**

---

Verizon makes every effort to minimize service interruptions to its customers and provide notice of emergency planned outages as quickly as possible via email notification. When service impact is imminent and remediation cannot wait until the appropriate maintenance window, the situation will be resolved as quickly as possible.

4.3.1.3.7. *The Vendor's solution should include a documented support and escalation structure to address outages. The State prefers the severity of the issue/support problem to determine the average problem resolution response time, as outlined below:*

**Verizon's Response**

---

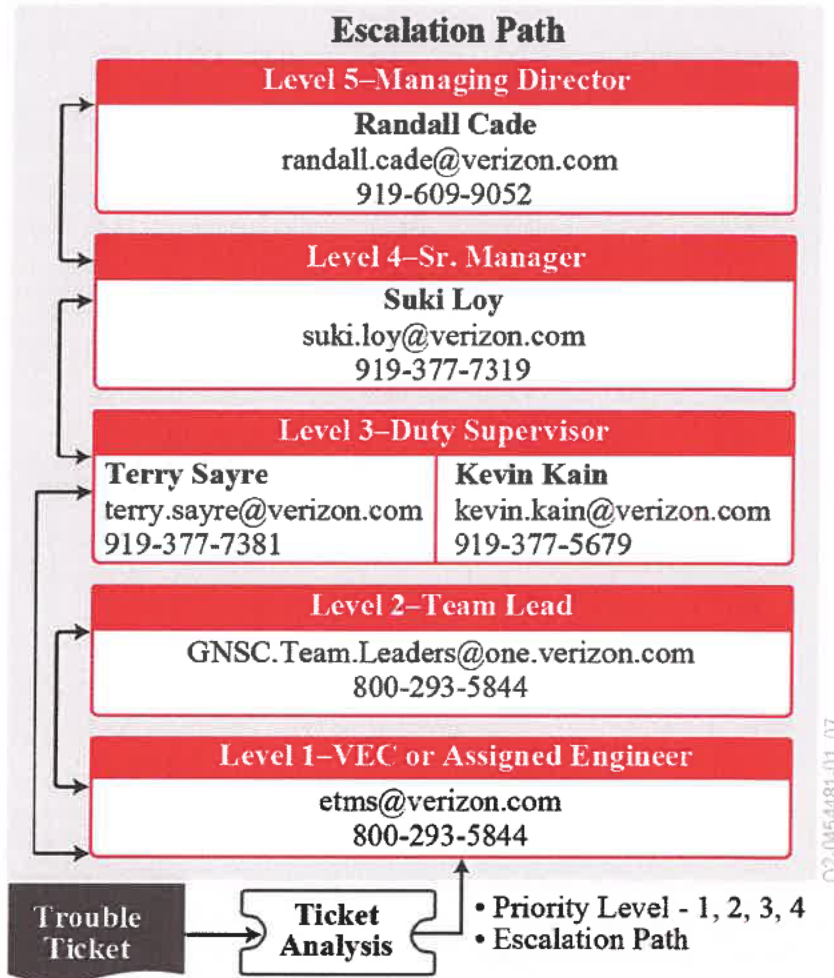

Our escalation procedures are backed by our annually audited ISO 9001:2015 processes, which provide issue identification and resolution. The State of West Virginia has continual insight into service assurance and potential changes via the ticket status. We resolve identified service assurance concerns, enhancing the State of West Virginia's network uptime.

Issue Escalation Procedures. Verizon understands the criticality of the services provided under this contract and the need for clear escalation procedures to facilitate resolution. Verizon's well-defined and established approach to escalations helps ensure that issues through transition and into ongoing operations are resolved quickly and without ambiguity.

Verizon's incident management support process provides options for escalating tickets. Tickets may be escalated at the State's request or internally by Verizon when the incident warrants escalation to the next level to bring additional or different resources to assist in resolution. The State is entitled to escalate a Verizon Priority 1 ticket (Down hard) hourly. Other priorities are less frequent and generally based on the needs of the individual ticket.

Verizon defines critical services and has outlined the escalation structure as shown in **Figure 4.3.1-2:**

**Figure 4.3.1-2. Verizon's Escalation Structure.**

With the proposed Monitor and Notify and Full Management services, Verizon will provide the following 24x7x365 support to address outages:

- Poll the State's devices under management every three minutes to ensure they are functioning properly
- Respond to alarms generated by failed polls (indicates that a fault condition has occurred)
- Open a trouble ticket on the customer's behalf
- Begin initial testing and triage to isolate the fault condition to either access or CPE
- Engage local partners as necessary to continue triage and/or resolution
- Work with the State's contacts for necessary research, joint testing, access
- Provide email updates to the State's contacts throughout the outage time period.

Because not all outages and services register with the same degree of importance, tickets are assigned a severity/priority level upon creation. This severity/priority level indicates the extent of the event and the effect it has on the customer's service and is used to determine the resources allocated for resolving the ticket, time frames for resolution and escalation matrix. Please see **Figure 4.3.1-3** comparing the alignment of the State's categorization to Verizon's Priority Level descriptions.

**Figure 4.3.1-3. State of WV Categories and Verizon Priority Levels**

State of WV Severity Levels	Associated Verizon Priority Level and Impact
<p>Severity Level 1 is defined as an urgent situation, where the customer's services are unavailable, and the customer is unable to use/access the network. The Vendor should resolve Severity Level 1 problems as quickly as possible, which on average should not exceed two (2) business hours. If repair inside the 2-hour window is not feasible, then regular 1-hour updates are desired. [4.3.1.3.7.1.]</p>	<p><b>Priority 1</b>            (Service Outage) has a 4-hour repair objective</p> <ul style="list-style-type: none"> <li>▪ Complete loss of service;</li> <li>▪ Customer is unable to use the circuit;</li> <li>▪ The service is degraded to the extent where the customer is unable to use it and is prepared to release it for immediate and continuous testing.</li> </ul>
<p>Severity Level 2 is defined as significant outages and/or repeated failures resulting in limited effective use by the customer. The service may operate but is severely restricted (i.e., slow response, intermittent but repeated inaccessibility, etc.). The Vendor should resolve Severity Level 2 problems as quickly as possible, which on average should not exceed four (4) business hours. If repair inside the 4-hour window is not feasible, then regular 2-hour updates are desired. [4.3.1.3.7.2.]</p>	<p><b>Priority 2</b>            (Degraded Service) has an 8-hour repair objective</p> <ul style="list-style-type: none"> <li>▪ The customer is able/still wants to use the circuit and is not prepared to release it for immediate testing;</li> <li>▪ All quality type issues like error rate, package/cell loss, and slow response times;</li> <li>▪ Calls to a specific area/and or number range fail (Indirect/Direct Voice);</li> <li>▪ Indirect Switched Voice – more than 50% of calls failing;</li> <li>▪ Destination faults.</li> </ul>
<p>Severity Level 3 is defined as a minor problem that exists with the service, but most of the functions are still usable, and some circumvention may be required to provide service. The Vendor should resolve Severity Level 3 problems as quickly as possible, which on average should not exceed ten (10) business hours. If repair inside the 10-hour window is not feasible, then updates are desired at the start of the next business day and every day thereafter until repairs are complete. [4.3.1.3.7.3.]</p>	<p><b>Priority 3</b>            (Minor Service)</p> <p>Quality issues that threaten the performance of the service including Scheduled Maintenance. Voice services – Single number destination problem, all quality type issues such as 'one-way audio', noise or call cut-off.</p>
<p>State of West Virginia does not have a Severity Level 4.</p>	<p><b>Priority 4</b>            (Assistance Request)</p> <ul style="list-style-type: none"> <li>▪ Assistance request, customer requests – Access arrangements for Co-locate services, technical assistance when it is not directly incident related, tests on equipment or verification of connectivity;</li> <li>▪ Non-service affecting customer request for an 'Incident Report' on a Priority 1 incident that has been handled by the Customer Service Center;</li> <li>▪ Wholesale Standard Routing (WSR) ASR Issues.</li> </ul>

4.3.1.3.8. *The Vendor's network operation support center should provide: all tiers of support, advanced technical expertise, be staffed with resources that are proficient in spoken and written English, maintain and take responsibility for trouble tickets reported by the State until resolved, and provide a tiered support escalation process. Please describe your network operation support center's*

*structure, processes, and procedures for handling trouble tickets, resolving those tickets, and reporting back to the State's point of contacts.*

### **Verizon's Response**

Verizon's Network Operations Center (NOC provides operational (Tier 1) and advanced support (Tier 2 and Tier 3) for public sector customers via regionally aligned locations (Cary, NC or Ashburn, Virginia) employing US-based staff with options for online ticketing support or by calling 1-800-293-5844.

Verizon's solution includes Managed WAN - Monitor & Notify service which includes polling the State's devices every three minutes and creating proactive tickets when alarms are generated from detected faults. Triage of these proactive tickets begins with automated testing. If the outage continues, the ticket is assigned to an Engineer for further research and fault isolation working with local exchange partners, internal Verizon teams and the customer contacts until the issue is resolved and closed. Verizon's tiered escalation process is included in response to 4.3.1.3.7.

For all Managed WAN Services levels, Verizon will proactively monitor your network, isolate faults, and notify you in the event of an alarm. Rapid Fault Isolation enables Verizon to test network elements in parallel, automatically. Verizon can proactively detect a customer outage, perform fault isolation, and initiate repair action, in many cases without human intervention.

Verizon will dispatch support in the event of router hardware trouble for customers subscribing to the Full Management service level. Support for the Full Management service level includes all physical and logical router configuration management support.

### **24x7x365 Shift**

The 24x7x365 shifts are made up of teams providing coverage; each team consists of a Duty Manager, Senior Engineer and Engineers. The shift is responsible for the pro-active fault monitoring via IMPACT, the pro-active notification to the customer in the event of an outage and the technical repair of any issues including hardware, software, configuration, circuit and/or routing.

### **Tier2**

The Tier2 team acts as the next level of technical support for the shift as well as managing the repair of any repeat or chronic faults.

### **Tier3**

The Tier3 support team is the next level of technical support, dealing with the most complex issues and highly escalated tickets. In addition to this role, Tier3 engineers also deal with the vendor relations, special bids, engineering liaison and internal training.

The NOC is fully and professionally staffed 24 hours a day, 7 days a week which provides you proactive monitoring of the network around the clock. In the event of a problem, you will be promptly notified by a mutually agreed upon method. If you identify a problem on its own, the Network Operations Center is available 24x7x365 to troubleshoot issues. The NOC performs automatic alarm detection, fault isolation, trouble-ticket generation, event and maintenance correlation, customer notification and regular updates, in many cases without the manual intervention of network support staff. The NOC also provides deep visibility into the circuits and equipment that make up your network to help more effectively manage your services.

In addition to the 24x7x365 support center services, The Verizon Account Team includes a dedicated Service Manager as an escalation point of contact to assist with incident management as needed.

#### *4.3.1.4. Part 4: Security for WAN and DIA Services*

4.3.1.4.1. *The Vendor should support customer evaluation of security incidents and compliance verification evaluations, as deemed necessary by the customer.*

**Verizon's Response**

---

Q12/A12: Please refer to the following document for State definitions of security incidents. a. Cyber Incident: <http://www.wvlegislature.gov/wvcode/code.cfm?chap=5A&art=6C>.

Verizon is providing commercial commodity services for WAN and DIA that are managed out of our MNS service organization. The customer will be responsible for the security of their data running across the proposed services. Verizon MNS service organization will support customer inquiries pertaining to their services under management. Verizon Corporation has a corporate security incident management program detailed 4.3.1.4.3.

4.3.1.4.2. *The Vendor should have an established and documented policy governing personnel security to include the validation of employee trustworthiness.*

**Verizon's Response**

---

Verizon is committed to hiring employees who meet the requirements and qualifications of the position for which they are applying. In support of this commitment, Verizon has established an employment background investigations process to verify information provided by applicants who are extended a conditional offer of employment. The results of these employment background investigations are utilized in the hiring and employment decisions made by Verizon.

Background investigations (BI) will be conducted for all new hires and/or when required for employees who work on U.S. Federal or State government contracts as well as specific customer contracts. For those applicants or employees who must receive a security clearance to perform their job duties, the receipt of such security clearance designation shall satisfy the requirements of this background investigation policy for such applicants or employees, except as otherwise required by Verizon or government contract. Verizon will conduct background investigations in compliance with applicable law and regulation, including, but not limited to, the Fair Credit Reporting Act.

Background investigation results are valid for one year from the date of the report's completion. Former Verizon employees who passed a background investigation during their employment and who are rehired more than one year following their termination date are required to undergo a new background investigation. Former Verizon employees who did not undergo a background investigation during their employment and who are rehired at any time following their termination date are required to undergo a background investigation.

The background investigation will consist of the following components, unless prohibited by law: criminal history, employment history, educational verification, and social security number verification (US only). Driver's license status and driving record are checked when candidates are required to drive a Company or personal vehicle in the regular performance of their duties.

Verizon considers the results of background investigations in making its hiring or rehiring decisions. Additionally, in those instances when an employee undergoes a background investigation pursuant to a government or customer contract requirement, Verizon may use the results to evaluate an employee's suitability for continued employment. To the extent that Verizon uses background investigation results as a basis for making an adverse employment decision (e.g., a no-hire or a termination decision), the Company shall provide any required legal notices to applicants or employees in connection with such decisions. See Figure xxx for a summary of the procedures.

**Figure 4.3.1-4. Background Investigational Procedures**

BI Components	BI Parameter	When Required
Criminal History	Felony and misdemeanor convictions within the country, state or county of residency, education and employment (including military service) for the previous seven (7) years. Current status of pending criminal charges and outstanding warrants. Status of current participation in a pretrial probation or alternative rehabilitative program.	Always
Driver's License Status and Driving Record	Validity and current status of driver's license. Driving offenses and moving traffic violations for the previous three (3) years.	When the job position requires driving a Company or personal vehicle in the regular performance of duties. Talent Management will request record search when required.
Employment History	Previous five (5) years of employment and military service are verified.	Always
Educational Verification	Verification made of the highest diploma or degree earned. When necessary, licenses and certifications are verified.	Always
Social Security Number (US) and Other National Identification Number Verification	Determine names to which Social Security Number (US) and Other National Identification Number is attributed.	Always (US and some International)
International Search	Applicants relocating directly from one country to another country will be subject to background search in their country of residency.	When the applicant has resided in the country for less than one year

4.3.1.4.3. *The Vendor should describe its company's cyber security and privacy management program including an overview of the governance structure, cyber security strategy, and the experience of personnel in key security and privacy roles.*

**Verizon's Response**

Verizon invests in people, processes, and technology to protect our company and our customers. A successful security program requires a partnership between skilled security leadership and teams involved in day to day business decision making. Verizon employs hundreds of security professionals, some of whom work directly for the Chief Information Security Officer (CISO) on establishing and governing the Company's information security strategy, policy, standards, architecture and risk

management. Other security professionals support lines of business directly, partnering with Corporate Information Security (CIS) to facilitate information security and protect customer data.

Verizon's Corporate Information Security Program has implemented administrative, technical and physical safeguards that help to protect the confidentiality, integrity and availability of systems, networks, and information. Verizon's written information security policies and practices correlate to the National Institute of Standards and Technology Cybersecurity Framework (NIST-CSF). The following describes Verizon's Corporate Information Security Program:

## **IDENTIFY**

### **Asset Management (NIST – CSF ID.AM)**

Verizon maintains an asset management program which utilizes discovery tools and core physical asset information to facilitate the full lifecycle of its information technology and data center assets. Verizon classifies data according to four major classes (i.e. Public, Private, Confidential, and Highly Confidential Information). Verizon's risk-based strategy has increasing levels of security safeguard requirements for each type of data asset maintained.

Assets, such as physical servers, virtual servers, business applications, network devices, mobile devices, printers etc., are required to be tracked and inventoried in one of Verizon's approved central repositories. Documentation in this system must include information such as the person or group responsible for the asset and additional details such as its business purpose, criticality, and the Verizon classification of the data it stores, processes or transports.

Corporate issued devices, such as standard issue Company laptop and mobile phones, are owned and maintained by identifiable individuals who are responsible and accountable for their protection as well as the security of the data they process. Verizon assets must be physically locked or comparably secured whenever traveling with, transporting or utilizing equipment in non-Verizon physical environments.

### **Security Governance (NIST – CSF ID.GV)**

Verizon's Business Unit (BU) Information Security Officers (ISOs) are responsible for implementing appropriate security processes within their BU of responsibility. These ISOs work with the complexities of their specific BU to determine the best means of implementing Verizon security policy. ISOs serve as the key interface between the business and security governance executive committees, who coordinate, supervise and assist in the cross-functional prioritization of security program components.

In collaboration with the CISO, the security governance executive committee also provides direction to protect the confidentiality, integrity and availability of Verizon's information resources. The actions of the executive committee, CISO and ISOs within the company, in combination with Corporate Policy, comprise the core of Verizon's Information Security Program. This integrated security framework allows Verizon's Corporate Information Security Office to drive the information security program, strategy, policies and threat management throughout the Company.

Additionally, Verizon has established processes to identify, track and determine applicable legal and regulatory information security and privacy regulations as defined and implemented by external governing bodies (e.g. international, Federal, state and local governments).

Defined policies are documented to establish governance over risk management which establishes the ownership of risk acceptance and/or mitigation decisions. Risk management strategy is championed at the executive level to facilitate consistent, organization-wide application. Accepted risk must be visible and affirmed at the both the BU and CIS executive levels.

### **Risk Assessment (NIST – CSF ID.RA)**

Verizon has created corporate information security policies to address risk management strategy that specifies risk tolerances, threat sources and the process for identifying, assessing and evaluating risks. This framework allows Verizon to care for and reduce identified threats to the Company and its customers. Security risk assessments are conducted to identify potential internal and external threats to Verizon assets, business processes and customers to analyze the capability of the safeguards to withstand these threats. Business Unit management, ISOs, Internal Audit and risk analysts work cross-functionally to participate in the overall risk management process.

Risks associated with known and identified vulnerabilities affecting Verizon assets are tracked and documented. Additionally, Verizon uses external threat information feeds to monitor and stay well-informed of threats and vulnerabilities. Once a material risk is identified, Verizon develops an operational plan to respond to, assign responsibility for and manage risks identified in the risk assessment.

## **PROTECT**

### **Access Control (NIST – CSF PR.AC)**

At Verizon, logical access control policies are defined, documented and managed to ensure that only authorized personnel have access to critical business applications and systems based on position and job requirements.

Verizon utilizes the Principle of Least Privilege in which a user is granted the minimum level of access to perform actions necessary for the job function. Privileged access for production network, system or application functions is controlled and restricted to as few personnel as operationally feasible and is authorized on a “by need to know” or “event by event” basis. Verizon’s policy is to assign each user a unique user ID for accountability of actions. Authorization reviews and role change processes alert administrators to modify and/or revoke access rights when an employee no longer requires access or is no longer employed by Verizon.

Verizon’s Access Control Policy requires that user access credentials must uniquely identify an individual person, system or service and that user access credentials are to be safeguarded. Access must be reviewed on a periodic basis to validate that it is still required. Access must be de-provisioned or removed when no longer required (e.g. job role change) or in the event of a termination.

Remote login access to internal systems requires the use of multi-factor authentication. Where appropriate and based on risk, network integrity is further protected by incorporating network segregation between production systems.

Verizon implements controls to restrict physical access to facilities housing Verizon systems to authorized personnel. Depending on the type of facility, access may be permitted by electronic card access readers, keys, security guards, or local company personnel.

CCTV cameras are deployed to strategic locations to protect personnel, operations and property. Verizon’s policy outlines that visitors are required to have and display Verizon issued Visitor badges and are to be escorted at all times. Each visitor is required to sign-in to a Visitor’s Log prior to receiving a visitor badge. Personnel at Verizon facilities are required to wear a company issued ID badge at all times.

### **Awareness and Training (NIST – CSF PR.AT)**

Verizon has a formal Cyber Security Awareness Program to ensure Verizon personnel are provided with cybersecurity awareness education and are adequately trained to perform their information

security-related duties and responsibilities consistent with policy and the underlying control framework.

Verizon employees receive security awareness training for both physical and logical information security as part of the on-boarding process. Training is reinforced by security awareness articles posted on the corporate intranet and by on location in-person awareness events. Security awareness bulletin boards and posters are also deployed in strategic locations throughout Verizon facilities.

Supplemental, role-based training is also provided to Verizon personnel who have additional information security responsibilities and accountability specific to their role (e.g. Developers, system administrators, etc.).

### **Data Security (NIST – CSF PR.DS)**

Verizon manages data protection in a systematic and structured manner to enforce confidentiality requirements throughout the data's lifecycle of creation, transmission, storage, modification, retention and destruction. Based on risk, industry standard encryption is used to protect data-in-transit and data-at-rest.

Verizon has processes in place to destroy or dispose of data once the specified data retention period has passed. Data is purged or securely overwritten on assets storing media prior to disposal or reuse of the asset. Magnetic, solid state and optical media containing Verizon information (i.e. CDs/DVDs, hard drives, tapes or other portable or removable storage media) is purged by overwriting, degaussing or destroying in a manner that prevents information from being reassembled into a useable form. Additionally, the use of removable storage devices (e.g. CDs/DVDs, USB drives and magnetic media) are controlled and are subject to physical and logical protections. Confidential paper documents are required to be physically secured and destroyed by using a shredding device.

Verizon assets enable the timely and reliable access to and use of data and information systems by maintaining redundancy and backup arrangements in line with business needs and appropriate capacity to accommodate peak traffic volume.

Administrators are required to make regular backups of critical files and take appropriate precautions to protect information from compromise, loss or damage. In addition, administrators are required to perform periodic testing of backup/disaster recovery restoration procedures.

### **Information Protection Processes and Procedures (NIST – CSF PR.IP)**

Verizon maintains security baselines for systems and infrastructure that protect sensitive information. Verizon development teams are required to implement secure design and testing controls throughout the system development lifecycle and require the use of secure coding practices.

Formal change control procedures are implemented and maintained. Changes to Verizon's networks, devices and software configurations are required to be reviewed and approved according to authorized change control processes.

Data backup policies and procedures are formally maintained.

Procedures and processes to manage new and existing vulnerabilities (e.g. scanning, patching and/or deploying compensating safeguards) are documented and implemented. Internal and external vulnerability scans are performed on a periodic basis and system owners may also schedule real-time vulnerability system scans as needed. Penetration testing is performed on Verizon internal and external environments based on risk. Identified vulnerabilities are assessed based on the risk of each individual platform and security maintenance is performed accordingly.

In order to maintain a high level of functionality and security of its networks and hosted systems, Verizon has an established patch management processes for production hardware and software installed on the Verizon network. Vendor security patches are initially assessed to determine risk and their deployment priority. Once a patch has passed the proper testing procedures, it is then released for scheduling to be deployed into production.

Antivirus software is also installed on Verizon workstations and laptops to protect applications and data from infection by malicious code, malware and viruses. Virus definition updates are centrally controlled and scheduled for automatic deployment.

### **Maintenance (NIST – CSF PR.MA)**

At Verizon, asset maintenance and repair services are approved and recorded prior to being performed. Service Level Agreements (SLAs) are established for maintenance of critical assets. Remote asset maintenance is performed using secure, authenticated network connections and communication channels. Access is restricted to assets subject to the maintenance request and is individually approved prior to implementation. Verizon policy restricts equipment servicing to authorized personnel only and requires that records be maintained of all repairs and maintenance. Two-factor authentication is used to secure remote access to Verizon’s internal network resources.

## **DETECT**

### **Security Continuous Monitoring (NIST – CSF DE.CM)**

Critical Verizon assets and systems are configured to generate event logs that may indicate a system compromise, denial-of-service or other security violation and are subject to security monitoring controls via the Threat Management Center. Hardware and software-based tools have been deployed throughout the Verizon network to provide real-time alerting from devices such as firewalls, intrusion detection systems, routers and switches.

Security event logs have controls in place to protect them from tampering and access to logging data is limited to authorized users only. Event logs are stored in a central location and retained in accordance with data retention and regulatory requirements. Security event data is reviewed and analyzed on a scheduled basis. Detected security events are required to be promptly escalated when pre-determined event thresholds are exceeded and responded to in accordance with a defined incident management process.

## **RESPOND**

### **Response Planning (NIST – CSF RS.RP)**

Verizon’s dedicated Incident Response team has the responsibility for the response to and management of security incidents. The primary objectives of the Incident Response Plan are to ensure timely reaction to suspected or verified security incidents, to minimize losses during an incident and to securely recover IT systems and related business processes impacted. Additionally, the Incident Response Plan is designed to allow Verizon to comply with the laws of the countries in which it conducts business and the contractual obligations to which it has agreed.

Verizon’s Incident Response Plan reflects the following processes:

- Preparation – defined roles and responsibilities with collaborative procedures
- Monitoring – continuously observe systems and networks for suspicious activity
- Detection - identify impacted systems and scope of the incident
- Containment – limit the damage and prevent any further damage from occurring

- Eradication – removal and sanitization of impacted systems
- Recovery - restoring the availability of systems and services impacted
- Lessons Learned – the technical and operational improvements that can be made to reduce the impact of a similar incident
- *Forensics and Threat Intelligence* – evidence collection, preservation and management

Verizon leverages and, as applicable, shares incident-related intelligence with law enforcement, industry peers and information-sharing organizations (i.e. Information Sharing and Analysis Centers (ISACs)) to maintain appropriate security response strategies and an understanding of emerging threats. Verizon's Incident Response team receives appropriate and regular training in relevant domains. Newly hired team members learn the policies, procedures and guidelines of threat management, while advanced training is provided to existing personnel to enable them to stay current on the latest defense and mitigation strategies for cyber threats and attack vectors. Periodic tabletop exercises are also conducted at a department and at a Company level to ensure coordination across business units to both socialize and practice the documented procedures. Verizon's Legal and Regulatory teams are integrated with the Incident Response process, to help ensure that these areas are properly addressed as part of the incident response function.

## **RECOVER**

### **Recovery Planning (NIST – CSF RC.RP)**

Verizon has an established recovery plan to restore information systems and business operations by rebuilding systems, restoring data backups, closing of the information security incident, and restoring security controls after an incident has taken place. Internal stakeholders, including executives and management teams, are kept informed as to the progress of incident recovery activities.

### **Verizon Security Operations Centers (SOC) Experience and Qualifications**

Verizon has Managed Security Services and regional Security Operations Centers (USA: Ashburn, VA and Cary, NC) where our Security Analysts deliver monitoring and management services on a 24x7x365 in region for customers who subscribe to Managed Security Services.

Verizon has approximately 80 people working for the Managed Security Service (MSS) department at the US locations. These include Security Analysts, Product Management, billing, etc., with approximately 230 people working in the Security Operation Centers (SOCs) operations worldwide.

Typically:

- Each SOC has approximately 21 security experts.
- Each SOC has 1 SOC manager on duty during operating hours, as well as a Shift Supervisor and 2 team leaders.
- Verizon strives to hire seasoned professionals with a minimum of 3 years of experience in security services. We estimate that the ratio of senior associates to associates is 2:1.
- Verizon Managed Security Services SOCs adhere to the following Information Security Standards and Practices and Certifications include ITIL Foundations training / certification, Security Certification CCNA, CCSA, CCSP, CCSE, CISSP, SIEM Certifications (e.g. Splunk), SANS GIAC certifications, ISO/IEC 27001, ISO 9001, and ISAE3402 and SSAE18.
- Verizon's security personnel are available 24x7x365 basis, through rotating SOCs and SOC shifts. At any given point in time, approximately 25% of support personnel are on-duty.

### **Summary**

Verizon's substantial investment in the people, processes and tools necessary to secure the products and services that our customers trust and depend on, demonstrates our commitment to security excellence every day. Our continuous improvement strategy strives to stay ahead of the curve by implementing forward thinking security controls and techniques to protect customer data

and the Verizon Network. We are honored to have you as a customer and our continued goal is to provide you with the best security assurance possible to strengthen our business relationship.

#### **4.3.2. Mandatory Requirements**

##### *4.3.2.1. Part 1: Technology Service and Solution for Ethernet WAN, DIA and 4G/5G Services*

##### *4.3.2.1.1. Ethernet WAN Service*

*4.3.2.1.1.1. The Vendor must provide Ethernet WAN services that will terminate into existing State network equipment.*

#### **Verizon's Response**

---

Verizon has read, understands, and will comply.

Verizon currently provides Ethernet WAN services to the State of West Virginia. This service can terminate into existing state equipment as well as Verizon managed equipment. A description of our Ethernet Service is as follows:

#### **Ethernet Access**

##### **Scalable Access to Public IP, Private IP, and Ethernet Services**

Ethernet Access bypasses the need for dedicated ports, modules, and termination devices at the State of West Virginia's premises (CSUs/DSUs). It is available for E-Line, E-LAN, and IP Services and offers a number of benefits:

- Meets increasing data bandwidth demands and provides TCO (total cost of ownership) benefits – Ethernet Access delivers higher and more flexible bandwidth
- Supports a wide range of applications, such as Cloud computing, video and imaging transmissions, and data applications that drive demand for the dynamic bandwidth capacity of Ethernet networks
- Converged architecture provides common platform for access, simplifying operations and facilitating continued market migrations from TDM to Ethernet based services
- Simplified CPE using standard Ethernet handoffs of 10/100BaseT, 100BaseFX, and GigE (electrical and optical) and 10GigE with multiple connector/jack types
- Scalable bandwidth from 1 Mbps to 10 Gbps\*, on 10 M, 100 M, GigE and 10GigE user network interfaces (UNIs). Access speed and WAN interface combinations may vary by off-net location.
- Flexibility to terminate one or more Ethernet, Internet Dedicated and/or Private IP (MPLS) services over the same User Network Interface (UNI) across a common platform
- Verizon's Ethernet Access Services are available in over 100 countries to managed and unmanaged Networking Services

\* Where available.

#### **Multiple Ethernet Services Over a Single Connection**

The Multi-Service feature of Ethernet enables the State of West Virginia to terminate multiple services or EVCs from the same and/or different networking services over a single user network interface. It simplifies IT support and brings you the flexibility to take advantage of Private IP, Public IP, E-Line and E-LAN services over the same access connection.

#### **Architecture and Availability**

Verizon has a wide variety of Ethernet access options available. We can provide the right access method for the State of West Virginia based on your bandwidth, Operational and Application performance, and budgetary needs. Examples of access designs used by Verizon are:

- On-net Access services, which we have available across the US,

- Off Net Access services based on native Ethernet services from a third-party via Ethernet User to Network Interface (UNI), Dense Wavelength Division Multiplexing (DWDM), and/or Network Node Interface (NNIs), using technologies such as Switched Ethernet, which can be delivered via Ethernet Hybrid Fiber Coax, Ethernet over Gigabit Passive Optical Network (GPON), Ethernet over Copper, and Ethernet over Fiber.

Every third-party carrier we use to deliver off-network Ethernet Access is put through a rigorous analysis and certification process. Carrier technology offerings must meet Verizon engineering qualifications based on operational and application performance. It enables us to deliver a consistent customer experience using Verizon Ethernet Access. We have certified over 400 third-party native Ethernet Access providers, including multiple certified third-party carrier options in each country. New providers and certified services are added regularly.

We believe the ability to offer our own On-Net Ethernet services outside the U.S., as well as the extensive use of local carriers to extend the options we have for the State of West Virginia makes us an Ethernet leader among the global carriers.

Regardless of the access method used, we provide quality and reach that will help meet the State of West Virginia's expectations.

**Our Proposed Solution**

In order to run your business and drive outcomes, first and foremost your network must be reliable and secure. You expect your network to be effective and private. MPLS technology provides traffic separation to help protect corporate data and resources, which maintains enterprise-grade network traffic performance.

Private IP delivers the scalability and connectivity of IP with the security and reliability of proven network technologies. Tailored to organizations of all sizes in both the public and private sectors, Private IP helps you capitalize on data growth without a sky-high annual IT budget.

A key benefit of the Verizon Private IP solution is the ability to quickly and virtually manage your bandwidth online, right from your desktop, to enable your network needs to quickly adapt with your business requirements.

**Additional Features and Offerings**

We are constantly making updates and changes to our Private IP solution in order to enhance the offering. Private IP enables you to take advantage of:

- Inherent service benefits of layer 2 and 3 protocols. Specifically, privacy and security.
- Flexibility and scalability of IP

This combination enables you to connect sites in any-to-any configuration with eased network configuration and management. Additional features are shown in **Figure 4.3.2-1**.

**Figure 4.3.2-1. Additional Features**

Feature	Description
Scalability	Ease of expanding the network.
Security	Full layer 2 security for an IP network.
Any-to-any connectivity	Any location on the Private IP network can connect to any other location on the Private IP network.
Extensive Ethernet Access	Connectivity to our global Ethernet footprint to our Private IP network.

Feature	Description
Class of Service (CoS)	The ability to prioritize traffic and offer better than best effort service.
Access to the Public Internet	You can gain access to the Public Internet either via the Secure Gateway - Firewall solution, enabled by Secure Gateway.
Platform to enable e-business applications	The Private IP network is able to support many e-business applications. Verizon can partner with you in developing your overall communication solutions.
Private IP Extranet Feature	The ability to create secure extranet connections for business to business (B2B) e-commerce trading partners, and vendors.
Diversity	Service edge or geographic diversity
Dynamic Network Manager	Enables you to manage your Private IP Port and Gold CAR speeds.
WAN Analysis Reporting	Offers a one-stop solution for proactive performance management, capacity analysis and reporting on Verizon-provided network infrastructure. Offering different reporting tiers of service at the Provider Edge, Customer Edge, and Application level details. At an additional cost.
Burstable Billing	Offers the ability to pay an MRC for a commitment level but allows bursting to the full available port bandwidth on Private IP Ethernet Ports.
Converged IP	Designed to address the need for private and public IP connectivity using two Private IP ports.

### Verizon Private IP

Organizational needs are evolving at a record-pace. New business demands and working models require innovative technologies and dynamic applications to compete and thrive in the modern business environment. But unreliable networks and slow connections can bog down productivity and sales, costing valuable time and money.

Whether your apps are in the cloud or at your data center, you need cloud-ready, high-performance network connectivity, like Private IP, that is flexible, reliable and secure to power business growth.

Verizon's Private IP delivers superior performance for dynamic applications and is a critical foundation for high-performing hybrid networks using SD WAN.

As part of an SD WAN solution or as a stand-alone connection, Private IP helps ensure your mission-critical workloads get the performance and reliability they need.

#### Secure and reliable

Traffic runs over a network-based VPN that is separate from the public Internet to help mitigate the risk of cyberattacks.

- Reliable, high-performing connectivity backed by 24-hour customer service
- Advanced reporting capabilities and competitive Service Level Agreements (SLAs)

#### Varying classes of service

Multiple routing protocols guide network traffic along the best routes with six classes of service.

- Prioritize low latency, low jitter and high availability, depending on need
- Consolidate data, voice and video services through a single connection to help control costs

### **Cloud-ready and scalable**

Quickly connect multiple locations and configurations within your local or global VPN to new or existing cloud ecosystems.

- Available with private, pre-provisioned bandwidth on-demand
- Consumption-based and fixed-cost access to Cloud Service Providers (CSPs) globally
- Same-day activation with over 200 CSPs

### **Flexible**

Multiple levels of control are available to meet your needs, from simple monitoring and notification, to professional services and fully outsourced network management.

- Automated dynamic bandwidth allows for near real-time and scheduled changes
- Support multiple services and oversubscription on select Ethernet access circuits

If the State of West Virginia wants to pair with Verizon Wireless 5G service for private connectivity to deliver enhanced solutions including mobile applications, remote workers, IOT, and temporary location services, Verizon can provide Private Wireless Gateway service at an additional cost.

- Power your business with high speed, low latency wireless connectivity to grow business opportunities
- Provide diverse wireless access for inaccessible locations and innovative solutions

### **Powering your growth**

Whether you manage your own network or join the more than 4,000 customer networks under the care of our managed services team, you'll get the experience necessary to build a solution that can help power the growth of your enterprise.

Private IP is available in 185+ countries and territories around the world.

### **Why Verizon**

Verizon's Private IP MPLS service is a foundation that can enable more effective business operations and innovation. Private IP supports our commitment to continue to implement new technologies and network enhancements that can deliver a broad range of new value-added business solutions. In addition to providing secure, global connectivity, you can transform your business model to stay ahead of the competition. Verizon has the unique ability to bring together a variety of access, network, and cloud resources to customize a solution to help you achieve your business objectives.

4.3.2.1.1.2. *The State requires the Vendor to provide standard Ethernet interface options to include 10/100/1000 and 4G/5G.*

### **Verizon's Response**

Verizon has read, understands, and will comply.

Verizon's Ethernet/Private IP service connects customer locations together at native LAN speeds and Ethernet interfaces of 10, 100, 1000 Mbps and/or 10 Gbps or 100 Gbps Ethernet.

All 10 Mbps and many 100 Mbps Ethernet interfaces use standard electrical connectors (aka 100BaseT) with unshielded twisted pair (copper) + RJ45. Therefore, Verizon-owned and maintained equipment at the customer premises performs an electrical to single-mode fiber optical conversion on the network side. 1GigE, 10GigE, and 100GigE is typically an optical handoff with Multimode Fiber (MMF) at the customer premises and Single mode Fiber (SMF) on the network side. SMF can be

requested as the customer hand-off at the time of service ordering. The optical connector is a LC type connector.

5G uses standard Ethernet interface.

4.3.2.1.1.3. *Vendor must propose service options that range between 5Mbps through 40Gbps.*

**Verizon's Response**

---

Verizon has read, understands, and will comply. Pricing for service options have been included in the Exhibit A; Pricing Page in the Cost Proposal.

4.3.2.1.1.4. *The Vendor will be responsible for all service continuity associated with their WAN service, whether issues are within the Vendor's networks, alternative local-loop vendors, 4G/5G vendors, WISPS, Cable TV vendors or other technology vendors engaged to provide WAN services to the State. The Vendor must be able to coordinate, test and troubleshoot the service continuity and integrity end-to-end.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

Verizon is responsible for service continuity end to end and Verizon backs this up with competitive SLAs to support the proposed WAN solution.

Verizon added in-state PIP nodes and 100G Ultra Long-Haul (ULH) Fiber Links to reduce latency and increase survivability for the State of West Virginia network. The Private IP backbone diversity with dynamic rerouting of traffic with no loss of service if one uplink fails. In addition, Verizon has Access carrier NNIs with 4 major access providers in WV with 11 interconnects with the 4 Vendors.

Every third-party carrier we use to deliver off-network Ethernet Access is put through a rigorous analysis and certification process. Carrier technology offerings must meet our engineering qualifications based on operational and application performance. It enables us to deliver a consistent customer experience using our Ethernet Access. Verizon has certified hundreds of third-party native Ethernet Access providers, including multiple certified third-party carrier options in each country. New providers and certified services are added regularly.

We believe the ability to offer our own On-net Ethernet services outside the U.S., as well as the extensive use of local carriers to extend the options we have for you makes us an Ethernet leader among the global carriers.

Regardless of the access method used, we provide quality and reach that will help meet your expectations.

4.3.2.1.1.5. *The Vendor must provide services capable of supporting dynamic routing and sharing routes between autonomous systems (AS) on provider networks as well as other public and private networks.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

Section 4.3.2.1.1.5 may apply to both Verizon's Private IP (MPLS) network as well as our Dedicated Internet Services. Dynamic routing and route sharing between autonomous systems is supported on both. Verizon's Response will address each separately to be clear.

**Private IP:**

Verizon supports static and dynamic routing between the PE and the CE. Dynamic routing protocols include BGP, RIPv2, and OSPF (OSPF requires engineering approval).

BGP always-compare-MED is enabled on all Private IP PE routers. The BGP always-compare-MED command ensures the comparison of the MED for paths from neighbors in different autonomous systems. This will enable Private IP customers to utilize unique autonomous system numbers at each of their locations, but still be able to influence routing based on MED or AS Path or other BGP attributes associated with the BGP routing algorithm.

Private IP customers can change MED or AS Path, or other Standard BGP attributes associated with the routes that are injected into Private IP and these attributes will be propagated along with the routes across their Private IP VPN and be utilized in the BGP algorithm decision process to determine the optimal route across the Private IP network.

Another feature that can be enabled for Private IP customers is the Send Community feature which will preserve and propagate the CE assigned BGP Standard Communities across the Private IP network. Private IP Customers can use these BGP Standard Communities coupled with the appropriated inbound/outbound BGP route-maps to influence routing behavior within their CE routers.

**Dedicated Internet Service:**

In order to ensure stable and scalable global network routing, Verizon Enterprise has defined route policies between the various Verizon Enterprise continental or national networks as well as with customers and Peers.

Verizon Enterprise will accept IPv4 route prefixes all the way to /32 in length, however, prefixes between /25 and /32 will only be supported locally within the immediate network and not advertised to the other Verizon Enterprise (or Verizon Wireless) networks, customers, or Peers.

Routes larger or equal to /24 will be distributed to all dynamically connected parties unless the customer specifies restrictions using BGP community tags (as described later in this document).

The Verizon Enterprise global network is divided into four primary continental regions, each with a unique Autonomous System Number (ASN):

- AS701: North America (including Canada, Mexico, and the United States)
- AS702: EMEA (Europe, Middle East, Africa)
- AS703: Asia Pacific
- AS14551: Latin and South America

**BGP Route Change Management**

Verizon Enterprise Customer Network Support (CNS) provides customers with direct technical support for addressing BGP route change requests (from authorized customer representatives) from a single network route change up to larger bulk route changes.

Verizon Enterprise supports “prefix-list” route filtering in order to ensure accurate routing between the CE and PE. Autonomous System Number route filtering is not supported in order to protect the network and the customers from any erroneous or accidental route advertisements.

## **Customer BGP Peer Group (Route Table) Options**

Verizon Enterprise customers using Border Gateway Protocol (version 4, or aka BGP4) have a variety of options in what type (or size) route table to receive.

Each table provides a different size view of the Internet as received through the connection to Verizon. Customers may want to determine the memory capacity of their CPE before choosing a route table to receive. Keep in mind that since BGP is intended to be used when there are two or more unique peers, there may be two or more route tables to receive.

### **Peer Groups:**

#### **full-routes**

Customers will receive a full version of the Internet routing table.

#### **full-routes-med**

Customers will receive a full version of the Internet routing table. Each route will have a BGP med assigned to it which corresponds to the Interior Gateway Protocol (IGP) metric. Verizon Public IP networks uses Intermediate System to Intermediate System (IS-IS), as its IGP.

#### **full-med-default**

Customers will receive a full version of the Internet routing table. Each route will have a BGP med assigned to it which corresponds to the Interior Gateway Protocol (IGP) metric. Verizon Public IP networks uses Intermediate System to Intermediate System (IS-IS), as its IGP. Customers will also receive a default route. The default route is also called the gateway of last resort and is shown in the routing table as the 0.0.0.0 route.

#### **full-and-default**

Customers will receive a full version of the Internet routing table. Customers will also receive a default route. The default route is also called the gateway of last resort and is shown in the routing table as the 0.0.0.0 route.

#### **uunet-and-customer-routes**

Customers will receive Verizon internal prefixes and Verizon customer prefixes.

#### **uunet-and-customer-and-default**

Customers will receive Verizon internal prefixes and Verizon customer prefixes. Customers will also receive a default route. The default route is also called the gateway of last resort and is shown in the routing table as the 0.0.0.0 route.

#### **uunet-global**

Customers will receive Verizon internal prefixes from all Verizon global networks (AS701, AS702, AS703, AS14551).

#### **uunet-global-and-default**

Customers will receive Verizon internal prefixes from all Verizon global networks (AS701, AS702, AS703, AS14551). Customers will also receive a default route. The default route is also called the gateway of last resort and is shown in the routing table as the 0.0.0.0 route.

#### **uunet-only-routes**

Customers will receive only those Verizon internal prefixes local to the specific ASN (AS701, AS702, AS703, AS14551) of which the customer is directly connected.

#### **uunet-only-and-default**

Customers will receive only those Verizon internal prefixes local to the specific ASN (AS701, AS702, AS703, AS14551) of which the customer is directly connected. Customers will also receive a default route. The default route is also called the gateway of last resort and is shown in the routing table as the 0.0.0.0 route.

**default-only**

Verizon will only send a default route (default-originate) to the customer.

**no-routes (not really a peer group, but it's an option)**

Verizon will send no routes to the customer.

**verizon-voip-only**

Customers will receive just the routes associated with Verizon's VoIP infrastructure elements.

Prefixes announced by AS701 to a customer receiving "full-routes" and "uunet-and-customer-routes":

**Customer BGP Community Tag Options**

Customer BGP communities provide customers with additional control in how they advertise routes to Verizon.

The identifier on the left side of the colon is the Verizon ASN that the customer wishes to impact. If the customer is in North America and connected to AS701 and wants to influence how their routes are seen by and handled by AS701, then they would use "701:x". However, a customer could in fact exist in AS701 and still use a BGP community tag that begins with a different continental ASN (such as 702/EMEA, 703/Asia-Pacific, or 14551/Latin America). The use of "0" (in place of 701, 702, 703, or 14551) sets a tag as global. See **Figure 4.3.2-2**

**Figure 4.3.2-2. Community Tag Functions**

Community	Function
<b>701:1</b>	701 will appear one additional time in the AS path as seen by Peers for the associated route.
<b>701:2</b>	701 will appear two additional times in the AS path as seen by Peers for the associated route.
<b>701:3</b>	701 will appear three additional times in the AS path as seen by Peers for the associated route.
<b>701:4</b>	701 will appear four additional times in the AS path as seen by Peers for the associated route.
<b>701:20</b>	Propagate route to customers, but not Peers.
<b>701:30</b>	Propagate route to customers and Peers, but not to other Verizon regions (702, 703, 14551).
<b>701:70</b>	Prevents advertisement to customers or Peers.
<b>701:80</b>	Sets local_pref to "80" on the associated route.
<b>701:90</b>	Sets local_pref to "90" on the associated route.
<b>701:110</b>	Sets local_pref to "110" on the associated route.
<b>701:120</b>	Sets local_pref to "120" on the associated route.
<b>701:9881</b>	DDoS mitigation, redirects traffic to security center for cleaning (extra, must be ordered).
<b>701:9999</b>	Blackholes the route at our edge. Requires customer to run eBGP-multihop.
<b>no-export</b>	Prevents advertisement of the route beyond the directly connected AS.

4.3.2.1.1.6. *The proposed WAN services must support the transport of existing applications and services currently being utilized by the State of West Virginia. The Vendor proposed solution must allow existing or future 3rd party applications and services (example: Google Cloud, AWS, Azure) to*

be accessed or to function in a robust, secure, and reliable manner from the vendors core network. Some existing applications and services include, but are not limited to:

*4.3.2.1.1.6.1. Unified Communication services including VOIP and Video*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.1.6.2. Commodity Internet access*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.1.6.3. Internet 2 access*

**Verizon's Response**

---

Verizon has read, understands, and will comply. Verizon can provide the connection to the Internet 2 Peering location and the customer network.

*4.3.2.1.1.6.4. High Volume Database transmissions*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.1.6.5. Desktop Virtualization*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.1.6.6. Server Synchronization*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.1.6.7. Network Monitoring (not an application)*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.1.6.8. Security Monitoring (not an application)*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.1.6.9. *Content Filtering (not an application)*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.1.6.10. *Virtual Private Networking*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.1.6.11. *Cloud hosted platforms like the Google Workspace for Business*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

Additional information related to this section based on Questions and Answers:

Q16/A16: The State does not want costing information at this time, rather to ensure that secure connections to cloud hosted services can be provided if requested/required.

Verizon has proposed the following related products that can benefit Verizon Private IP customers.

- **Managed SD WAN:** Our Managed SD WAN solutions use application-aware routing to make sure all your data travels the right path to its destination. So you can keep your private networks clear for demanding apps while sending less critical data over public networks. All without taking your IT team away from core projects.
- **Managed WAN:** Our managed and professional services provide a cost-effective alternative to in-house network monitoring and management. With comprehensive tools and industry-leading SLAs, we can help free up your IT staff to focus on revenue-generating projects instead.

Optional Related Services can be purchased at an additional cost include:

- **Converged IP:** Converged IP is a networking solution that has been specifically designed and crafted to address the need for cost-effective private and public IP connectivity by leveraging MPLS transport over a single Ethernet access circuit as well as virtual cloud-based security to the internet.
- **Secure Cloud Interconnect:** You can quickly and easily connect to a growing ecosystem of public CSPs and applications around the globe. Today, we have Secure Cloud Interconnect connections with many different leading cloud service providers and continue to on-board more over time.
- **Software Defined Secure Network:** Software Defined (SD) Secure Branch services can help you extend your business reach and streamline IT across your WAN.
- **Secure Gateway:** Secure Gateway provides secure, cost-effective reliable connectivity for small offices, home offices and retail locations to the Private IP WAN.
- **Private Wireless Gateway:** Private IP Wireless Access provides primary and backup private access to the Verizon Private IP network, without utilizing the public Internet. This solution helps eliminate the risk of a wire line network outage by providing a diverse broadband access method and enabling the ability to continue revenue-generating operations. It may also decrease costs associated with wire line network outages by enabling consistent productivity levels. Wireless access leverages mobile broadband access together with tunneling across the Verizon Wireless backbone to deliver virtually private mobile connectivity.

**Managed WAN**

Verizon Managed WAN Services provides comprehensive network monitoring and management functions for wide area and IP networks that include MPLS, Internet and LTE services. Leveraging our extensive global network and technical expertise, Our Managed WAN Services enable you to

focus on your core business, while controlling investment risk and providing support for challenges such as upgrades, changes, globalization, and other complex network issues.

Managed WAN Services' comprehensive service capabilities include design and implementation, proactive monitoring, fault isolation and restoration, proactive notification, change management, and performance reporting. And, Managed WAN Services are backed by comprehensive service level agreements (SLAs).

Customers have three Managed WAN service levels to choose from to meet their business and technology requirements:

- Monitor & Notify
- Physical Management
- Full Management

Each level builds upon the previous, providing monitoring services, physical fault management, and up through logical connectivity control.

This enables you to choose the level of service you are comfortable with today, and you can expand the scope as your network grows in complexity.

#### Monitor & Notify

Monitor & Notify, the first level of service, takes the task of monitoring the network on a 24x7x365 basis.

Monitoring and rapid notification of issues:

- Verizon provides 24x7x365 monitoring of the equipment and circuit.
- Verizon notifies authorized contact of a fault.
- You are responsible for all logical and physical configurations.
- You initiate and are responsible for fault resolution. \*

\*Managed Services Operations will open a trouble ticket for Verizon-provided transport.

Select this level of service if you have the internal expertise to manage the fault resolution, once identified.

Verizon takes responsibility for identifying a fault within the network and advises you to take actions for resolution.

#### Physical Management

Physical Management, the second level of service, provides physical management of circuits and equipment.

With the Physical Management service level, we will provide physical fault isolation and resolution. You are still responsible for the logical configuration of the CPE.

Physical Management service provides:

- Monitoring and rapid notification of issues plus
- Physical fault remediation
  - Circuit issues
  - Physical hardware failures on premises equipment
- Fault Isolation - Open a trouble ticket with the circuit provider and ensure restoration:
  - Isolation of Physical vs. Logical faults
    - If a hardware problem, Verizon coordinates restoration of failed CPE
    - Our customers control the logical configuration of the network and remediate logical issues

Select this level of service to out-task all the elements of physical fault management of the circuits and the equipment. We build upon the Monitor & Notify service and are responsible for opening trouble tickets with the appropriate transport and maintenance providers.

Our customers retain the responsibility of the logical configuration of the network.

### Full Management

Full Management, the highest level of service, is a full service providing physical management of and logical connectivity management of equipment and circuits.

In the third level of service, we provide full management of the devices. This includes physical fault isolation and resolutions as well as logical configuration of the devices. Internal resources can be redirected to meet business objectives and planning.

Full Management service provides all aspects of network management:

- Fault
- Configuration
- Accounting
- Performance

Security management of the network based on your business objectives

Select this level of service to out-task all the elements of physical and logical management of the circuits and the equipment. We build upon the Physical Management service, and are responsible for the logical connectivity of the network as well.

### **Secure Cloud Interconnect**

Secure Cloud Interconnect addresses the challenges of connecting to your Cloud Service Providers (CSPs). This offering, which is part of our Software Defined Networking Strategy, provides a secure, seamless and flexible solution by extending the Verizon Private IP network directly to an ecosystem of leading CSPs. Secure Cloud Interconnect offers on-demand bandwidth which instantly scales as business needs dictate, along with consumption-based pricing for bandwidth.

### **Customer Challenges**

Meeting network demands is more challenging with the proliferation of data, mobility and devices as well as fluctuating bandwidth requirements. As a result, enterprises are looking to the cloud to meet their business needs with:

- Flexible bandwidth connectivity to multiple CSPs around the globe that can be easily spun up and down so that you can get the full benefit of cloud resources.
- The ability to keep sensitive corporate data protected and secure.
- The capability to take full advantage of on-demand cloud resources and secure network connectivity to those clouds that can be spun up in minutes or hours rather than days or weeks.
- A consistent, reliable user experience and improved performance with quality of service (QoS) allowing the support of real-time applications.
- End-to-end visibility from wireless devices all the way through the WAN infrastructure and into the cloud.

### **Verizon's Networking Strategy**

Verizon's integrated portfolio helps address your business challenges. By combining our network platform and application platform with the management of the entire integrated portfolio, Verizon connects people, places and things around the globe allowing our customers to focus on their core imperatives.

We provide an integrated portfolio, of which Secure Cloud Interconnect is an important component, that helps deliver better business outcomes to our customers. At the center of the portfolio is our network platform that allows us to connect our customer's users and supply chain to any business applications, whether they exist in their data center, with an external partner, or even with a CSP.

Solving the challenge of connecting an exploding array of people, places and things with fast moving opportunities can add considerable cost and complexity. That's why Verizon developed our

Application Enablement Solutions to help our customers get the most from their network resources and simply, securely and reliably access and optimize leading cloud resources.

Our Application Enablement Solutions help you:

- Capitalize on a data driven world by seamlessly extending your WAN to an ecosystem of key CSPs around the globe and helping you to optimize those workloads.
- Deliver the adaptive enterprise with agile services, tools, and pricing that provide scalable solutions that easily adjust to the needs of the business.
- Mitigate risk and maintain continuity by leveraging private connectivity to cloud resources that keeps traffic completely separate from the public Internet.
- Personalize the customer experience with reliable, high-performing services to optimize end user experience for critical applications.

## **Secure Cloud Interconnect Solution**

### **Three Connectivity Scenarios**

There are three ways for a customer to connect to the CSPs:

#### **Cloud via public internet**

This model might seem cost-effective; however, it comes with potential security and performance issues. Also, it can lack end-to-end visibility.

#### **Cloud via point-to-point**

Building direct connections to cloud providers might work if you were building out to one CSP. However, you would still typically be using traditional dedicated connections that can limit your ability to get true dynamic capabilities to the cloud. And these connections can be expensive, especially building out connections to more than one CSP. Additionally, as this picture depicts, this can quickly get complex to build and manage.

#### **Closed ecosystem via Secure Cloud Interconnect**

Secure Cloud Interconnect ties the performance and security of MPLS networking to the flexibility and cost benefits of the cloud. It provides secure, on-demand, scalable connections to multiple CSP partners. Secure Cloud Interconnect is not a cloud service. It extends your MPLS access to an ecosystem of CSPs. The solution keeps sensitive corporate data protected and secure while maintaining a consistent and reliable user experience.

### **Secure Cloud Interconnect Hub Technology**

Secure Cloud Interconnect hub topology enables workload movement and interactions between CSPs. The ability for the customer to connect all of their cloud resources provides a number of business benefits:

- Interconnect multiple providers with one partner.
- Use a secure entry point into the cloud ecosystem.
- Leverage cost-effective geographic redundancy for cloud resources.
- Simply assign corporate cloud resources, as needed.

For example, a customer could interconnect virtual machines, which are configured on different CSP platforms (e.g., Microsoft® Azure™ and Amazon Web Services) and/or between different regions of the same CSP.

### **Secure Cloud Interconnect Availability**

The Secure Cloud Interconnect ecosystem of key CSPs enables you to take advantage of their applications across the globe, and our list of providers and locations continues to expand.

## Secure Cloud Interconnect Value Proposition

Secure Cloud Interconnect lets you easily connect to a global ecosystem of public CSPs and applications that we continue to expand.

- Secure Cloud Interconnect uses private connections to leading CSPs that are completely separated from public internet traffic – offering secure, consistent performance.
- Secure Cloud Interconnect provides pre-provisioned access to cloud resources, which enables you to get up and running with a new CSP in a matter of days rather than weeks. Once you are connected, bandwidth is available to adapt to your changing business needs.
- Using Private IP, the solution provides built-in security and visibility.
- By providing virtual rather than dedicated connections, you have true scalable bandwidth. Secure Cloud Interconnect leverages high-speed connections into CSP resources to provide you with bandwidth when you need it. Because Secure Cloud Interconnect is built on virtual connections, there are no port-speed commitments or dedicated connections required. This also means that you can more easily connect your WAN with the CSPs without the complexity or cost of dedicated equipment and circuits.
- Consumption-based pricing enables you to pay for the service needed to access CSPs with either flat-rate pricing per GB based strictly on usage or with predictable data plan rates that include built-in volume discounts for higher usage commitments. With the ability to aggregate bandwidth usage across all of your CSPs by region to attain a larger volume discount, you can benefit from additional savings and simplified budget planning.
- Secure Cloud Interconnect ties the performance and security of MPLS networking to the flexibility and cost-efficiencies of the cloud. Backed by Verizon's Network Service Level Agreements (SLAs), business applications maintain performance and can specify the applications and QoS they need.

Within the Verizon Enterprise Center portal, you can view and manage your Secure Cloud Interconnect connections. With self-service tools, the portal enables you to set threshold alerts, monitor usage and traffic patterns, and add, delete, and modify your Secure Cloud Interconnect connections.

### How It Works

The Secure Cloud Interconnect architecture consists of deploying two redundant provider edge (PE) routers at a meet-point with a CSP. The CSP will deploy its own pair of PEs. The two pairs of PEs are connected by separate 10 Gigabit NNIs to provide full redundancy for the connection between Verizon and the CSP. When a Secure Cloud Interconnect port is ordered, Verizon will configure the port on these two Verizon PEs and add that port to your Private IP VRF/VPN.

Verizon, together with the CSP, will also complete the connection to the CSP PEs. You are then able to communicate with your CSP services through that Secure Cloud Interconnect port. Traffic will route along the most optimal and lowest-latency path to the CSP's network.

As Secure Cloud Interconnect uses automation to establish connections with the CSPs, no local loops or additional build-out is required.

You also have the ability to access the Secure Cloud Interconnect port from Verizon Wireless. The following diagram highlights the high level architecture.

### Complementary Solutions

Verizon offers access to a suite of solutions that work in tandem with Secure Cloud Interconnect and help your enterprise achieve high levels of control, performance, security and efficiency.

- Virtual Network Services - Security: This optional single-tenant service is part of a comprehensive suite of network services that supports virtual network functions built on Verizon's Hosted Network Services platform rather than on legacy, appliance-based network equipment. This service is available in conjunction with Palo Alto and Check Point to help secure cloud traffic

without expensive, dedicated hardware. Three different levels of service for security incident monitoring are provided as well as optional Managed Security Services (MSS) Analytics for heuristics and correlation analysis. [Note: Only available for Virtual Private Cloud (VPC) Secure Cloud Interconnect customers.]

- Intelligent Cloud Control: Powered by Turbonomic, this service automates hybrid cloud resource management and orchestration to help you control costs, maintain workload performance, and improve efficiencies.

Verizon Intelligent Cloud Control is the brain for the hybrid cloud infrastructure. This software solution unlocks the value of complex cloud resources for the customer who is currently utilizing or contemplating moving to the Amazon Web Services, Microsoft Azure, or IBM Cloud public clouds.

Intelligent Cloud Control is a cloud “intelligence as-a-service” solution which evaluates, in near real-time and continuously, how apps hosted in the public clouds are performing and recommends actions to take, if needed. This solution utilizes prescriptive intelligence to balance workload performance and cost efficiency.

Intelligent Cloud Control:

- Prescriptively maintains workload performance using the actual demands of the apps.
- Controls complex cloud costs across one or multiple CSPs.
- Avoids IT break/fix fire drills by managing cloud resources in near real-time and continuously.
- Bridges IT skill gap and drives IT staff efficiency.
- Orchestrates multi-cloud ecosystems from a single, actionable interface.

Intelligent Cloud Control is the perfect complement to Verizon’s Secure Cloud Interconnect. Secure Cloud Interconnect connects the customer to their apps - simply, securely and reliably. Intelligent Cloud Control automatically maintains performance of apps hosted in the public clouds.

#### 4.3.2.1.2. *Dedicated Internet Access*

4.3.2.1.2.1. *Vendor must provide dedicated DIA services purchased from the State demarcation point to the Internet backbone.*

### **Verizon’s Response**

Q21/A21: The State currently leverages WV-Net as their primary Internet provider. The State offers WAN and DIA as options for all agencies and at all locations, the DIA services will route traffic directly to the vendor provided Internet service without traversing the WAN.

Verizon has read, understands, and will comply.

### **Internet Dedicated Services**

Designed for critical data transport in support of comprehensive solutions for businesses that demand high performance, our suite of Internet Dedicated Services provides enterprise grade, reliable Internet access over Verizon’s Tier 1 Public IP network. Our services deliver the performance and bandwidth required when the urgency of the data transmitted is paramount to business operations.

With Verizon Internet Dedicated Services you can combine multiple services to help keep the State of West Virginia up and running flexibly and securely.

Verizon Internet Dedicated Services are available in approximately 40 countries globally and support IPv4 and IPv6 addressing.

#### Features of Internet Dedicated Services

- Business-quality Internet connectivity available in locations around the world.
- Reliable high-bandwidth – Ethernet access services from 5 Mbps to 100,000 Mbps (100 GigE).

- 24x7x365 proactive monitoring.
- Supports Dual Stack (IPv4 plus IPv6), native IPv6, and tunneled IPv6 in North America.
- Quality of Service options to assign priority levels to business-critical traffic.
- Manage Verizon services via online service portal.
- Certified premises equipment.
- Border Gateway Protocol (BGP) routing.
- IP address space & domain name services.
- Gartner industry recognized stringent service level agreements.

Other features include:

- DNS Hosting – Primary and Secondary.
- DNS Caching Name Services.
- IP Address Allocation.

Take advantage of the ultrafast, full-duplex connections offered by Internet Dedicated Services that help keep your agency connected. Our single-provider dedicated internet access is supported by an extensive global IP network for all your public IP activity.

When you choose Internet Dedicated Services for your organization, you'll get:

- Reliability
- Meet your mission with bandwidth that boosts continuity of operations
- Depend on reliable internet connectivity running on our global IP network
- Choose from self-service options and trusted managed service
- Flexibility
- Easily upgrade your network with new technologies that help streamline your business
- Adjust bandwidth on demand as your organization's demands change
- Control
- Keep critical data on a dedicated network
- Enjoy access speeds from 5 Mbps to 100 Gbps
- Use Verizon Enterprise Center to monitor and control your network

Our Internet Dedicated Services can be combined with equipment purchase options, voice over IP (VoIP), Managed Network Services (MNS), Security Services and other networking solutions.

Why you can rely on Verizon

We offer exceptional service and network performance with our Internet Dedicated Services. And we make it easy on you by providing comprehensive solutions backed by competitive service level agreements (SLAs).

With our broad portfolio of technology solutions, Verizon is the best partner to help you meet your mission goals through your network than ever before. Look to a partner you can trust to ease the complexity associated with dedicated internet implementation and support.

4.3.2.1.2.2. *Vendor must provide DIA Service Level Agreements (SLAs) that meet or exceed the following service categories and associated benchmarks:*

**Verizon's Response**

Verizon has read, understands, and will comply.

Verizon has included our SLA for Internet Dedicated Service in Appendix B.

4.3.2.1.2.2.1. *Service Availability: Vendor DIA Service will be available 99.999% of the time.*

---

### Verizon's Response

Verizon has read, understands, and will comply.

**Availability Scope.** Verizon's Availability Service Level Standard provides that the Network (as defined in the applicable Agreement) will be available 100% of the time. For Services ordered with a backup connection, the Service at the Customer Site will be available 100% of the time.

Refer to IDS SLA in Appendix B for full details.

*4.3.2.1.2.2.2. Denial of Service: Vendor must respond to Denial of Service attacks reported by State within 15 minutes of State opening a trouble ticket.*

---

### Verizon's Response

Verizon has read, understands, and will comply.

**DOS Attack Response Scope.** Verizon will respond to DOS attacks reported by Customer within 15 minutes of Customer opening a complete trouble ticket with the Verizon Customer Support.

Verizon defines a DOS attack as more than 95% bandwidth utilization.

- **DOS Attack Response Process.** To open a Trouble Ticket for DOS, Customer must call the Verizon Customer Support and state: "I am under a Denial of Service Attack". A complete Trouble Ticket consists of Customer's Name, Account Number, Caller Name, Caller Phone Number, Caller Email Address and Possible Destination IP address / Type of Attack. Once engaged, Verizon Customer Support within the Security Operations Centre (SOC) will investigate the problem. They will provide confirmation that the Customer is targeted by a DOS attack (rather than experiencing an internal or external routing issue). If the SOC concludes that the Customer is under active attack, they will take measures commercially appropriate for the type and level of attack. These measures may include placing filters on the routers in our network, black holing connections from the attack source network or active co-operation with the Internet Provider that provides service to the source of the attack when it can be clearly defined. Any remedies offered will be subject to the full cooperation of Customer. Verizon cannot guarantee that they will be able to mitigate or find a resolution that provides continued service to Customer.
- **DOS Attack Response Remedy.** If Verizon fails to meet the DOS Attack Response Service Level Standard in a month, Customer shall be entitled to receive a Service Credit equivalent to the prorated Charges for 1 day of the Verizon MRC for the Service with respect to which this DOS Attack Response Service Level Standard has not been met, provided that Customer may obtain no more than 1 Service Credit per day, irrespective of how often in that day Verizon failed to meet the DOS Attack Response Service Level Standard.

Refer to IDS SLA in Appendix B for full details.

*4.3.2.1.2.2.3. Latency: Vendor service must provide for average round-trip transmissions of 45 milliseconds or less between their regional core backbone routers and the State designated core routers.*

---

### Verizon's Response

Verizon has read, understands, and will comply.

**Network Latency Scope.** Verizon's Network Latency Service Level Standard provides average round-trip transmissions times in milliseconds (ms) for the following network areas: North America: 45 ms or less between Hub Routers in North America. .

Refer to IDS SLA in Appendix B for full details.

4.3.2.1.2.2.4. *Network Packet Delivery: Vendor service must provide for a monthly packet delivery of 99.5% or greater between Vendor designated regional core backbone routers and the State designated core routers.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

Network Packet Delivery Scope. Verizon's Network Packet Delivery Service Level Standard provides average packet delivery percentages for the following network areas: North America: 99.5% between Hub Routers in North America.

Refer to IDS SLA in Appendix B for full details.

4.3.2.1.2.3. *Vendor must supply IP address blocks up to and including a full Class-C block.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

Customers can specify the size of IP Block they need and Verizon will allocate the requested IP Block. If the requested size is a full Class C (/24) or smaller, then no IP Justification (IPJ) form is required to be submitted to ARIN.

If no size is specified Verizon will assign a /30 block by default. If more IP space is required after install, then an IP Justification (IPJ) form may need to be submitted for any other blocks of /29 or larger. This form must be filled out and submitted to the [help4u@verizon.com](mailto:help4u@verizon.com) alias by the customer.

4.3.2.1.2.4. *Vendor must provide bandwidth pricing for the following levels of Service:*

- 4.3.2.1.2.4.1. 50mbps
- 4.3.2.1.2.4.2. 100mbps
- 4.3.2.1.2.4.3. 500mbps
- 4.3.2.1.2.4.4. 1Gbps
- 4.3.2.1.2.4.5. 2Gbps
- 4.3.2.1.2.4.6. 5Gbps
- 4.3.2.1.2.4.7. 10Gbps
- 4.3.2.1.2.4.8. 25Gbps
- 4.3.2.1.2.4.9. 40Gbps

**Verizon's Response**

---

Verizon has read, understands, and will comply. See Exhibit A; Pricing Page.

4.3.2.1.3. *E-Rate*

*The Universal Service Fund (USF) was established as the result of the Telecommunications Act of 1996, when Congress directed the Federal Communications Commission (FCC) to "establish competitively neutral rules to enhance, to the extent technically feasible and economically reasonable,*

access to advanced telecommunication and information services for all public and non-profit elementary and secondary school classrooms and libraries.” The FCC then empowered the Universal Service Administrative Company (USAC) to administer the program. A division within USAC, later to become known as the Schools and Libraries Division (SLD), now administers the approximate \$4.9 billion (annual) program known as E-Rate. Schools and libraries must apply for eligible services from eligible service providers every year. The eligible services fall into the following categories:

---

**Verizon's Response**

Verizon has read, understands, and will comply.

4.3.2.1.3.1. *Category 1: Telecommunications, Telecommunications Services & Internet Access*

---

**Verizon's Response**

Verizon has read, understands, and will comply.

4.3.2.1.3.2. *Category 2: LAN and WLAN Internal Connections & Basic Maintenance of Internal Connections*

---

**Verizon's Response**

Verizon has read, understands, and will comply.

4.3.2.1.3.3. *General E-Rate Requirements*

4.3.2.1.3.3.1. *The Vendor must comply with the requirements of the Universal Service Fund (USF) program. E-Rate eligible entities utilizing the contract(s) resulting from this solicitation reserve the right to proceed with orders prior to receiving any funding commitments from the USF. They also reserve the right to proceed or not to proceed regardless of the outcome of USF funding commitments.*

---

**Verizon's Response**

Verizon has read, understands, and will comply.

4.3.2.1.3.3.2. *All services and products requested within this solicitation will be made available to schools, RESAs, consortia, and libraries statewide and therefore must meet all E-Rate guidelines for eligible services and products, service providers, and contracts.*

---

**Verizon's Response**

Verizon has read, understands, and will comply.

4.3.2.1.3.3.3. *The Vendor must prove eligibility for E-Rate by providing its Service Provider Identification Number (SPIN) in the RFP Response.*

---

**Verizon's Response**

The SPIN number is 143001197.

4.3.2.1.3.3.4. *The Vendor must meet all required participation guidelines.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.5. *The Vendor must provide eligible entities the "Lowest Corresponding Price" (LCP) for services (refer to FCC 47 CFR § 54.500(f) and 47 CFR § 54.511(b)).*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.6. *Service providers shall offer schools and libraries services at the lowest corresponding prices throughout its geographic service areas that include all non-residential customer offerings that are similarly situated to a school or library. The "geographic service area" shall be the area in which a service provider Vendor is seeking to serve customers with any of its E- Rate services.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.7. *The FCC will only permit service providers to offer schools and libraries prices above prices charged to other similarly situated customers when those Vendors can show that they face demonstrably and significantly higher costs to serve the school or library seeking service. Factors that could affect the cost of service include volume, mileage from facility, and length of contract.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.8. *Vendor must operate within Rule 47 CFR § 54.511(b) which states that the provider of eligible services shall not charge schools, school districts, libraries, library consortia, or consortia including any of these entities a price above the Lowest Corresponding Price (LCP) for supported services, unless the FCC, with respect to interstate services or the state commission with respect to intrastate services, finds that the Lowest Corresponding Price is not compensatory.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.9. *The Vendor, regardless of the size of the company, must provide LCP for a school or library. A service provider's obligation to provide the LCP shall not be tied to a response to an FCC Form 470 or this solicitation and should carry over throughout the billing life of the contract, as well.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply with 47 CFR Section 54.511(b).

4.3.2.1.3.3.10. *The Vendor must agree to abide by all E-Rate rules, regulations, and limitations as described by FCC, USAC, and SLD. For a complete program overview, the Vendor can visit the following link: <http://www.universalservice.org/SL/default.aspx>.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.11. Successful Vendor of telecommunication services must meet certain qualifications to be eligible to provide the services and receive USAC reimbursement.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.12. Must contribute to the Universal Service Fund*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.13. Must provide telecommunications services on a common carrier basis*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.14. Must file an FCC Form 498, Service Provider Information Form and obtain a Service Provider Identification Number (SPIN), providing that number as part of this bid response, and an FCC Registration number tied to their FIEN tax ID number*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.15. Must file an FCC Form 473, Service Provider Annual Certification Form, on an annual basis*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.16. Must file an FCC Form 499-A, Annual Telecommunications Reporting Worksheet, on an annual basis.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.17. Must complete the FCC Forms 949- A<sub>1</sub>/Q (Annual and Quarterly Telecommunications Reporting Worksheets) and receive a Filer ID. The FCC Forms 499-A/Q Filer ID will be tied to your SPIN. Certain service providers are not required to file or complete all items on an FCC Forms 499-A/Q, either because the company has a de minimis status or meets one of the exceptions noted in the "Filing Requirements and General Instructions" section of the instructions on the Contributors Forms page.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.18. You can refer to the Service Providers section or the Contributors section of the USAC website for more detailed information on these forms and instructions.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.19. The Vendor must work with the applicant to ensure that all services for which E-Rate discounts are being requested under the contracts resulting from this solicitation, are indeed eligible services as described in the Eligible Services List (ESL) which can be found at the link provided below: <http://www.universalservice.org/sl/applicants/beforeyoubegin/eligible-services-list.aspx>*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.20. Prior to the contract award, the Vendor must specify the name, phone number, fax number, and e-mail address of the person responsible for E-Rate within the Vendor's company. The Vendor must provide updated information should that contact information change, and must do so within 7 days of the change.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.21. The Red Light Rule states that the FCC shall withhold action on any request for benefits made by any applicant or service provider that is delinquent in its non-tax debts owed to the FCC. USAC shall dismiss any outstanding requests for funding if a service provider (or applicant) has not paid the outstanding debt, or made otherwise satisfactory arrangements, within 30 days of being notified*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.22. The result of a Red Light could be that all payments are stopped on all Funding Request Numbers (FRN) for that service provider (or applicant) and no invoices will be paid.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.3.3.23. The Vendor must agree to notify the State of West Virginia, WVDE and WVLC within 24 hours in the event the Vendor/Service Provider has been subjected to the "Red Light Rule".*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.24. *In the event of an E-Rate audit or Program Integrity Assurance (PIA) review, the Vendor must respond within 3 calendar days for 7 day deadline reviews and 7 calendar days for 15 day deadline reviews to any and all questions associated with its contracts, proposals, or processes.*

**Verizon's Response**

---

Verizon has read, understands, and will comply with USAC requirements.

4.3.2.1.3.3.25. *The Vendor must maintain all bids, quotes, records, correspondence, receipts, vouchers, delivery information, and other data relating to the Vendor's services to the eligible entities in the State of West Virginia. All such records must be retained for ten (10) years after last date of service or whatever retention period is required by the rules in effect at the time that services are delivered and shall be subject to inspection and audit by the customer.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.1.3.3.26. *The Vendor must have an internal audit process in place to ensure compliance with E-Rate program rules and regulations.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.3.3.27. *If requested by an applicant, service providers must use the Service Provider Invoice (SPI) method for invoicing the applicant. It is understood that should a provider extend this service to an applicant, that the applicant will be responsible for the discounted portion of those invoices should E-Rate funding be denied; however, applicants will not be responsible for any discounted portion that is the direct result of negligence or error in the SPI invoicing process on the part of the service provider.*

**Verizon's Response**

---

Verizon has read, understands, and will comply with E-rate program rules.

4.3.2.1.3.3.28. *The Vendor must commit to work with the E-rate eligible entities using the resulting contract regarding E-rate discounts and billing.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.1.4. **4G/5G Wireless Service**

*As part of its WAN solution, Vendor must provide 4G or 5G wireless service. Upon request from the State, 4G or 5G service will be installed at locations where wireless service is available and satisfies the location bandwidth requirements.*

*The state plans to utilize 4G/5G service as a full time or interim WAN service, or to provide back-up/redundant service for a sites Ethernet WAN service.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply. Verizon's proposal is based on 5G plans when and where available.

*4.3.2.1.4.1. Vendor will be responsible for coordination of the installation and ongoing management of the 4G/5G wireless service.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.1.4.2. State requires that both 4G/5G wireless service options include unlimited data.*

---

**Verizon's Response**

---

Verizon has read and understands. Verizon's 5G wireless option includes unlimited data.

*4.3.2.1.4.3. Throttling of 4G/5G wireless data is strictly and wholly prohibited.*

---

**Verizon's Response**

---

Verizon has read and understands. . Verizon's 5G wireless option includes unthrottled data.

*4.3.2.2. Part 2: Vendor Ethernet WAN Services Migration Plan*

**4.3.2.2.1.** *The Vendor must provide a detailed project plan and Project Manager for transitioning the legacy installed WAN services to its Ethernet WAN services.*

---

**Verizon's Response**

---

Verizon has read, understands, and complies. As the incumbent, all Ethernet WAN services are currently implemented – please see 4.3.1.2.2.

A Project Manager (PM) will be assigned when the contract is awarded and for the life of the contract. The PM will act as the primary point of escalation for any customer implementation issues. In addition, the PM will secure appropriate Verizon resources to support implementation of new services, coordinate kick off calls with the account team and the customer, coordinate the acceptance plan and test criteria with the customer, establish customer service dates, and confirm project milestones are met. The State of West Virginia will have a single point of contact for timely, consistent, and smooth implementation of services.

Verizon will use our proven Back Office Transition (BOT) process to migrate the State of West Virginia's existing Verizon "like-for-like" services to the new contract. This low-risk, less administrative transition process is a back-office billing process that systematically moves services from one contract vehicle to another and requires no service downtime. The process will support everything from complex customer services and inventory to simple structured global products. Verizon's transition platform, called Migration Factory, has been designed specifically for moving legacy inventory and invoicing of select products from one contract vehicle to another. Verizon provisioning systems are not changed, and the involvement of local exchange carriers is not necessary.

Verizon's BOT approach will also help greatly reduce agency administrative tasks, such as submitting orders. We will create transition orders as defined by the State of West Virginia-approved transition plan. BOT allows for:

- Use of the latest technology for inventory analysis, such as artificial intelligence and machine learning (AI/ML).
- Fewer administrative tasks, since no orders are necessary from the State of West Virginia.
- No limit to the number of services that can transition in any given month (dependent upon clean inventory).
- Rate validations to agency task order rates during the transition process.
- Pre-migration test runs for comprehensive validation prior to production.
- No provisioning impact or service downtime.
- Rollback procedures that serve as transition safeguards.

4.3.2.2.2. *Vendor project plan must include details on how it will coordinate service migrations with WVOT and include details for their plan to mitigate any gaps in service (interruption of service).*

**Verizon's Response**

---

As Verizon provides the existing WAN services to the State of West Virginia, the majority of the WAN circuits will not require migration. Verizon will work with the State's contacts to plan for the migration of 20 Mbps sites listed in Exhibit B: to an upgraded speed (change order) or to a different solution, i.e. Dedicated Internet. Verizon will continue to meet weekly, more if required, to identify and once a TCR is received will migrate these sites to the new requested service.

State agencies may choose to move to another Verizon offering which would require an in-out order via the TCR process. Verizon will ensure that all services are completed, tested and accepted for the new product offering prior to disconnecting the existing service. See 4.3.2.2.1.

4.3.2.2.3. *Vendor must coordinate new services acceptance and billing for new services with WVOT in a manner that eliminates any duplicate billing between legacy services and new Vendor services.*

**Verizon's Response**

---

Verizon has read, understands and will comply. Verizon will provide a Project Manager for the coordination of new services. Verizon will place disconnect orders once the Telecommunications Change Request (TCR) from the State of West Virginia is received to stop the billing. All new services will be billed on the service installation and acceptance date. See 4.3.2.3.5.

4.3.2.2.4. *Vendor must assign an experienced and skilled Project Manager who will provide a high-level project management plan including key components such as a project charter, issue tracking, statements of work (SOW), work breakdown structures (WBS), implementation schedules, etc. in accordance with the Project Management Body of Knowledge (PMBOK) or other industry standard project management methodology stated in West Virginia State Code (§5A-6-4b). The link can be found at: <http://www.legis.state.wv.us/WVCODE/Code.cfm?chap=05a&art=6#06>*

**Verizon's Response**

---

Verizon has read, understands and will comply.

Verizon's Project Management organization provides a comprehensive methodology for use by the Project Management team, who are experienced in the technical aspects of our service areas. Verizon's methodology provides best practice processes and documentation, deliverables, and milestones to meet your implementation needs.

In partnering with Verizon, you will benefit from the experience of Verizon's Global Project Management Organization which comprises over 700 project managers worldwide with significant experience in managing large, complex programs and projects. In order to ensure the successful

delivery of all projects and meet the standards required by our Clients, Verizon's Project Managers hold industry and globally recognized certifications across the Project/Program Management field.

Verizon will mobilize a team utilizing best practice Project Management methodologies based on the Project Management Institute's (PMI's) Project Management Body of Knowledge (PMBOK®) and PRINCE2®, in addition to the Infrastructure Technology Information Library (ITIL v3).

You will receive a predictable, consistent, and high quality experience by following industry-standard Project Management processes:

**Integration Management:** Project plan development, project plan execution, and integrated change control;

**Scope Management:** Initiation, scope planning, scope verification, and scope change control;

**Time Management:** Activity definition, sequencing, duration estimating, schedule development, and schedule control;

**Cost Management:** Resource planning, cost control

**Quality Management:** Quality planning, quality assurance, and quality control;

**Communications Management:** Information distribution, performance reporting, and administrative closure;

**Risk Management:** Risk identification, qualitative and quantitative risk analysis, remediation and mitigation planning, and risk monitoring and control;

**Project Management Office:** Comprehensive management of a collection of projects as a single portfolio consisting of reports that capture project objectives, costs, timelines, accomplishments, resources, risks, and other critical factors;

**Stakeholder Management:** Processes required identifying the people, groups, or organizations that could impact or be impacted by the project, to analyze their expectations and their impact on the project, and to develop appropriate management strategies for effectively engaging stakeholders in project decisions and execution.

Your Transition & Transformation (T&T) project will be governed by Verizon's repeatable Plan, Design, Implement, Operate and Manage methodology. Using a proven project delivery method based on industry best practices and standards created by the PMI and years of experience delivering numerous consulting and integration results for our clients across Security, IT, Communications and Network solutions, Verizon's Project Management organization will bring transparency and control to your transitional/transformational activities throughout the life of the contract.

Designed to take you through the entire solution lifecycle, our processes ensure a smooth continuum from strategy development and initial assessments all the way through to managing and continued improvement of the end solution.

Verizon Project Management is provided to plan the schedule, manage Verizon resources, report on progress, mitigate issues and assess changes.

The Project Manager (PM) is a remote resource working normal business hours Monday-Friday and hosts meetings via Verizon provided online conferencing tools. Project Management includes the processes and deliverables defined in this Service Description.

**Project Management Process**

Project Management utilizes practices based on Project Management Institute (PMI) methodology (as well as Prince2 for Europe and Asia Pacific countries where applicable) and is organized around 5 process phases.

1. Initiation

Customer and Verizon stakeholders will meet to define and finalize the scope of the Project. The Verizon PM will document the products, quantities and overall timeline in a Scope Statement which will be presented to the Customer at a project kick-off meeting for input and concurrence. It is recommended that the Initiation Phase is completed within 2 weeks of project kick-off. Once the Scope Statement is agreed, the Initiation Phase is complete and the Planning Phase begins.

After Initiation, the Project Scope Statement will only be altered as the result of formal project change to include impact assessment and concurrence by both Customer and Verizon. If products, quantities or timeline requirements change, additional assessment will be required and custom Project Management fees will apply.

## 2. Planning

The Project Planning Phase involves the creation of a plan to guide the work and resources through the Executing and Closing Phases of the project. The plan created during this phase will manage communications, changes and produce the project schedule. The Planning Phase will be progressed during weekly stakeholder meetings to prepare the following project artifacts:

### **Project Communication Plan**

- Weekly Project Meeting cadence will be set during the Planning Phase.
- An Open Action Item Register will be introduced during project planning and updated during weekly meetings. Open Action Items will be assigned an owner and a critical resolution date.
- A Risk and Issue Register will be created during project planning and will consist of known or assumed risks against delivering the project scope. During planning, mitigation strategies will be identified and documented. The Risk Register will be reviewed, updated, and published weekly.
- A Project Status Report will be introduced during project planning. Verizon will provide an industry best-in-class automated report on a weekly basis to document key project accomplishments, project % complete, upcoming activities and issue updates.

### **Project Schedule**

The Project Schedule will include project milestones and deliverables sequenced by planned delivery date. The Verizon PM leverages a templated project schedule that is reviewed and adjusted with input from key stakeholders during weekly meetings.

### **Project Change Register**

- If a change is required that alters the scope of the project, a formal change will be managed.
- The project Change Management process will be defined to include logging a requested change, duration to perform a change, impact assessment and change approval process.

## 3. Executing

The Executing Phase is a set of recurring processes and activities to deliver the products in scope and on time against the Project Schedule. This is the longest phase of the project and the duration varies based on the project timeline and the scope. The Verizon PM will ensure the following tasks are carried out:

- Manage implementation according to the Project Schedule
- Ensure timely receipt of orders from Customer
- Manage the Verizon resources that deliver orders and provide status of inquiries
- Actively coordinate scheduling of resources, tools, services and equipment
- Coordinate resources to perform activations
- Deploy mitigation strategies for risks that occur and impact the Project Schedule
- Request Service Acceptance

## 4. Monitor and Control

The Monitor and Control Phase is where the PM is collecting, measuring, and disseminating progress/status information, and assessing measures to effect process improvements. This phase occurs simultaneously with Execution. During Monitor & Control, the Verizon PM will:

- Manage the communication plan
- Evaluate the impact of Project Change Requests with the stakeholder team
- Drive resolution of Open Action Items as defined in the Open Action Item Register
- Evaluate project performance against the Project Schedule and identify areas for improvement
- Assess risk level and secure plans for issue resolution

#### 5. Closing

Closing is the post-implementation activity to formally complete the Project. At Project Closing, the products in scope have been delivered to the Customer. The Verizon PM will perform the following Closing activities:

- Ensure all project action items are completed
- Host the final project meeting to review all accepted deliverables and transition implemented services to the service and operations support teams
- Provide a final project report
- Request that Customer participate in a customer satisfaction survey

4.3.2.2.5. *The project management plan must be submitted and approved by the WVOT Project Management Office (PMO) prior to engaging the first agency for Ethernet WAN services implementation.*

#### **Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.2.6. *The successful Vendor's Project Manager must track and report (via written status reports) the following: schedule, scope, budget, issues, risks, specified performance indicators, and other metrics determined appropriate throughout the project and each site implementation.*

#### **Verizon's Response**

---

Verizon has read, understands, and will comply. Verizon will meet weekly and continue to provide a TCR log that tracks TCR, date received, customer requested date, order type, office move, customer, department/agency, address, status, next steps, comments, service order/TIN, customer accepted date or cancel date, NSPE Number, Circuit ID, Special Construction, Order ID, Circuit ID, Verizon committed due date, expedite flag, product, access speed, telco circuit ID, telco FOC date, PIP configlet, managed, MSOF number, managed status, DMARC, activation date, cancel date, and Telco build required. Verizon and the State will work together to edit the log to accommodate the new services on the contract and any additional metric items the state would like to track.

#### 4.3.2.3. Part 3: Service and Support for WAN and DIA and 4G/5G Services

4.3.2.3.1. *Vendor must provide a network operation support center(s) for all tiers of support that is available 24x7x365 and is accessible via a toll-free number.*

#### **Verizon's Response**

---

Verizon has read, understands, and will comply.

Verizon has five major global Network Operations Centers in the United States, Europe and Asia-Pacific. They are located in Ashburn, Virginia; Cary, North Carolina; Manila, Philippines; Amsterdam,

The Netherlands; and Dortmund, Germany. The State of West Virginia will be supported either through our Cary, North Carolina NOC as they are today or our Ashburn, Virginia NOC.

The Verizon Network Operations Center (NOC) is fully and professionally staffed 24 hours a day, 7 days a week which provides you proactive monitoring of the network around the clock. In the event of a problem, you will be promptly notified by a mutually agreed upon method. If you identify a problem on your own, the NOC is available 24x7x365 to troubleshoot the issues with you. The Regional Number for the United States is 1 (800) 293-5844.

Also see response 4.3.1.3.8 for more information on the NOC.

4.3.2.3.2. *Vendor must work with the WVOT using the established Telecommunications Change Request (TCR) procedures for ordering and implementing these telecommunications services.*

---

**Verizon's Response**

Verizon has read, understands and will comply. Verizon will only accept orders from WVOT authorized users accompanied by a TCR that has been approved by the WVOT.

4.3.2.3.3. *For auditing, billing, and support purposes, the State requires any service with an associated rate to be identified on its monthly bill. As such, the State must be provided, at a minimum, the following:*

4.3.2.3.3.1. *Billing Month*

4.3.2.3.3.2. *Billed Entity Name*

4.3.2.3.3.3. *Customer Name/Account (if different from billed entity)*

4.3.2.3.3.4. *Service Location*

4.3.2.3.3.5. *Service Period*

4.3.2.3.3.6. *Circuit or Service ID*

4.3.2.3.3.7. *Price Sheet Billing Component (Ex. Ethernet WAN 10MB)*

4.3.2.3.3.8. *Itemized Cost for Individual Billing Components*

4.3.2.3.3.9. *Itemized Cost for Any One-Time or Non-Recurring Charges*

4.3.2.3.3.10. *Itemized Cost for Any Surcharges and Total Cost*

4.3.2.3.3.11. *The cost identified in the bill must match the contract rates for the specified services.*

---

**Verizon's Response**

Verizon has read, understands and will comply. Per clarification in Addendum #1, the Exhibit A Pricing Page will include the bundled rate and the bill will include the required details and itemization costs as listed above upon migration completion of the contract.

4.3.2.3.4. *The Vendor must provide the State's monthly bill in an editable format such as Excel and/or csv, and the State must be able to open the file in Google Sheets without the need for modifications. The Vendor's bill must be received within ten (10) business days from the end of the billing cycle. The Vendor should provide a copy of their bill as part of their response.*

---

**Verizon's Response**

Verizon has read, understood and will comply.

4.3.2.3.5. *The Vendor must invoice on a consistent monthly billing cycle across all services. Services installed or disconnected for a partial month must be prorated based on the date the service is accepted by the State or by the disconnect due date on the TCR. For new services, the Vendor must not bill the State until the State has accepted the services as functional. The Vendor shall not bill the State for services after the disconnect due date listed on the submitted TCR.*

**Verizon's Response**

---

For new services, Verizon will begin billing when acceptance of the new service has been received from West Virginia Office of Technology (WVOT). This acceptance can take the form of an email or phone call from the WVOT authorized representative identifying the TCR that has been accepted by WVOT. Should no acceptance be received from the WVOT authorized representative within 30 days of the installation and network acceptance date, billing of services will commence.

When requesting disconnection of a circuit, Verizon requires thirty-day written notice for disconnects. Verizon will make reasonable efforts to meet the customer's requested due date. Any charges billed after the requested disconnect date will be credited in full.

4.3.2.3.6. *If a billing error is discovered by the State, the State shall notify the Vendor, in writing, of the errors and the errors must be corrected prior to the next billing cycle. Vendor billing errors must be credited back to the State from the effective date of the error. The State reserves the right to withhold payment, in part or in full, until credit is received.*

**Verizon's Response**

---

The State of WV may dispute charges and may withhold the disputed amount until such time as the parties agree on a course of action. In the event that the State reasonably determines that there is a material discrepancy between Verizon's invoiced charges and the State's calculation of charges owed, the State may withhold only the disputed amount of the invoice.

A "Disputed" amount is one for which the State has given Verizon written notice, adequately supported by bona fide explanation and documentation. Any invoiced amount not disputed within 6 months of the invoice date is deemed correct and binding on the State. Verizon will make every commercially reasonable effort to resolve disputed amounts as promptly as possible. All corrective actions, when necessary, will be mutually agreed upon between both parties. In some cases a corrective order may be required and it would take one or two bill cycles to be reflected on the invoice.

4.3.2.3.7. *If the Vendor has multiple contracts with the State of West Virginia, the Vendor must provide separate billing for each contract.*

**Verizon's Response**

---

Verizon has read, understands, and will comply.

4.3.2.3.8. *The Vendor must provide and update a weekly status report using the provided TCR log and agree to meetings to discuss as needed.*

**Verizon's Response**

---

Verizon has read, understands, and will comply. Verizon currently meets and will continue to meet weekly with the State of West Virginia Office of Technology to discuss TCR log status.

4.3.2.3.9. *All unplanned service outages at the individual circuit level must be fully resolved within 24 hours. For each day beyond the initial 24-hour outage that an individual service is not fully functional, one day of credit will be applied to the State's bill. Credit shall be received starting at Hour 25 and no partial-day credits will be accepted. Service credit will be defined as monthly service cost divided by the number of days in that month. Service outage credits must not be averaged across all State installed services. Service outage credits must be applied against the individual site/service where the outage occurred.*

---

**Verizon's Response**

Verizon has read, understands and will comply. See SLA documents in Appendix B.

4.3.2.3.10. *The State requires an Account team (including Account Support Representative, Technical Support Representative, Solution Implementation Support Representative, Contract Manager, Billing Support Representative, Security/Compliance Specialist, and Project Manager) for the winning solution and life of the contract. Vendor must describe in detail the responsibilities of key roles and staff's experience in working in these roles. The State reserves the right to request, and the Vendor must provide a new employee for any reason.*

---

**Verizon's Response**

As the Verizon Account Team for the State of West Virginia we have a highly experienced workforce of consultants, engineers, and specialists focused on helping you recognize technology's opportunities—empowering you to perform, execute, and grow in new and better ways.

Your Verizon Account Team is available to answer any service or industry related questions and investigate the right mix of new and converging technologies. We want to understand your business and operation objectives to help fully satisfy your expectations.

The following information includes an account relationship plan to provide timely and effective reporting as well as an outline of account team roles and responsibilities, trouble reporting, and escalation procedures.

**Account Management Plan**

Verizon is a service company, and we believe all organizations within the company, whether they interface directly with customers or simply provide support to those organizations that do, should be dedicated to providing the best customer experience.

We are continually focused on simplifying key areas of our business to serve you even better, including:

- Customer satisfaction;
- Sales effectiveness;
- Operating efficiency.

We will engage with you strategically in order to understand your business and build a mutually beneficial, long-term relationship.

To achieve this goal, we continue to refine operations so they run efficiently and at high performance levels to deliver excellent service. Because company resources are aligned with our sales and customer support organizations, we're better able to serve you.

We also understand that the way to deliver an exceptional support experience to the State of West Virginia is to empower our sales and service personnel with the resources and tools they need to help you make the best decisions for your business. Today's emerging solutions require unique skills, capabilities, and support structures that we've built into our support organizations.

We are focused on developing stronger solutions and sales capabilities. Our sights are set on being the world's leading platform-based solutions provider, and your ultimate partner to navigate the technology landscape and drive your business.

**Roles and Responsibilities (See Appendix B Resumes for experience)**

**Account Manager (AM) (Account Support Representative/Contract Management) (See Appendix A.1 Resumes for experience)**

- Provides solutions from the Verizon product range to help enable the achievement of your business outcomes;
- Serves as the primary sales team interface working in partnership with the entire account team and internal resources to grow the partnership and overall relationship between you & Verizon.
- Proactively develops and maintains relationships with executives as well as building new relationships within State of West Virginia;
- Provides recommendations during contract negotiations for supportable and executable terms included in this agreement, amendments and SOW's;
- Facilitates communication between State of West Virginia and Verizon executives including escalation and resolution of Verizon or performance issues as required;

**Solution Architect (Technical Support Representative) (See Appendix A.2 Resume for experience)**

- The Solution Architect will be your technical expert/architect and provides on-going solution development to solve complex business challenges.
- Will own technical relationship with the State of West Virginia, including managing product and solution briefings, proof-of-concept work, coordination of additional technical resources, and obtaining client requirements and translating these into a client-specific Solution Design.
- Leads prioritization of client solution /technical requirements and championing the resolution of solution.
- Recommends the network requirements, network design topology architecture and technology upgrades aligning with Verizon product offerings.

**Client Service Manager/Technical Service Manager/Financial Service Manager (Billing Support Representative and Service Manager) (See Appendix A.3 Resume for experience)**

- Monitors Verizon contractual key performance indicators ("KPIs"), service levels, and operating level agreements ("OLAs") as determined with State of West Virginia at engagement planning and kick off;
- Manages the Verizon portfolio of services for change management processes, planning future services demands, and oversight of contract financial compliance between Verizon and State of West Virginia;
- Oversees the initiation and resolution of performance issues requiring escalation and works with State of West Virginia and Verizon technical teams to define overall remediation plans;
- Facilitates beneficial enablement by identifying and executing strategies to increase self-service utilization and expand self-service. Drives online and electronic media tool enablement and adoption;
- Understands your service requirements to facilitate Verizon's integrated solutions ability to meet such requirements;
- Accelerates billing and accounts payable issue resolution by engagement of appropriate State of West Virginia and Verizon resources;
- Financial Management – oversees the identification and resolution of issues negatively affecting State of West Virginia and Verizon financial relationship, such as revenue trends, contractual commitments, accounts payable, etc.;
- Reviews SLAs not being met and works with involved departments to execute corrective action. Identification and corrective trends would be represented in a Service Improvement Plan;

- Identifies opportunities for service improvement and risk mitigation and engages appropriate State of West Virginia and Verizon resources to execute associated plans;
- Supports your billing operations to provide efficient and timely communication;
- Monitors and supports the resolution of all billing related inquiries and the communication with you on progress and conclusion;
- Proactive review of your invoices to pre-empt any billing issues.
- Handles escalated service issues when you are dissatisfied with business as usual processes including updates/escalations;
- Manages conference bridges (as applicable) and manages an Action Plan to restore service;
- Escalates and manages repair teams, carriers/third parties for remedial solutions;
- Provides Incident (RFO) Reports if required.

**Project Manager (PM) (Solution Implementation Manager) (See Appendix A.4 Resume for experience)**

- Responsible for delivering the services agreed at the outset using resources and budget as defined in the Project Initiation Document (PID) and Statement of Works (SOW), aligned with your contracted deliverables;
- Tracks and reports status of schedule, scope, issues, risks, specified performance indicators, and other metrics determined appropriate throughout the project and each site implementation.
- Seeks your approval if any changes are identified in contractual/agreed approaches;
- Acts as your primary contact for all project activities;
- Delivers regular project dashboards and written status reports to stakeholders as defined in the communications plan;
- The Project Manager leads all Verizon activities in support of the project and maintains the lifecycle support thereafter.

**Security Domain Specialist (Security/Compliance Specialist) (See Appendix A.5 Resume for experience)**

- Works together with the Technical Support Representative and Account Manager and acts as the primary customer interfacing points of contact for security.
- Provides solutions from Verizon's full range of security services to help enable the achievement of your business outcomes.
- Proactively develops and maintains relationships with executives as well as building new relationships within the State of West Virginia.

4.3.2.3.11. *The Vendor's bill must show E-rate discounts per Funding Request Number (FRN) on the bill for E-rate eligible entities.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.12. *The State expects full, complete, and timely cooperation in disentangling the relationship in the event that the Agreement expires or terminates for any reason. In the event of expiration or termination, the State expects that the Vendor shall, among other things: return all State data and documentation to the State, including but not limited to configuration information; transfer ownership of all leased equipment at no cost to the State (other than the payments already received by the Vendor under the Agreement); and, allow the State or the replacement provider(s) continued access to all billing, ordering, and trouble ticketing systems, and processes that have been employed in servicing the State, in accordance with methods and procedures to be agreed upon and established in the Agreement. Please acknowledge your acceptance of this in your RFP response.*

---

**Verizon's Response**

---

Verizon will work with the State of West Virginia in the event that the Agreement expires or terminates for any reason. In the event that the Term of the contract or any portion of the Services is terminated by either Party, the phase-out process shall begin on the date that any Termination Notice is delivered, or, if no Termination Notice has yet been delivered, the phase-out process shall begin on the date that is nine (9) months prior to the expiration of the Term (as applicable, the "Phase-out Commencement Date") and, unless the Parties subsequently agree in writing to renew the term, Verizon shall continue to provide service, contingent upon appropriate compensation. Should the phase-out not be completed by the contract termination date, and negotiated extension or rates have not been agreed to in writing by Verizon and the State, then service rates will revert to tariff/guide rates or then current published rates. Verizon will work with the State on the details of any phase-out process. Upon 60 day advance notice from the customer, Verizon will process a buyout change order to transfer ownership of all equipment that has reached the end of the original service commitment at no cost to the State for any equipment that has reached 54 months of age or older. Any newer equipment can be transferred at fair market value for which the amount will be documented in the form of a quote.

4.3.2.3.13. *If, as part of its proposal, the Vendor submits appendices or other supplemental materials, the Vendor must denote specifically in those materials where the relevant information is located.*

---

**Verizon's Response**

---

Verizon has read, understands and will comply.

The Appendixes in this proposal are as follows:

Appendix A: Verizon Account Team Resumes

Appendix B: Verizon Standard Service Level Agreements

Appendix C: Verizon Enterprise Center (VEC) Capabilities Presentation

Appendix D: Acronym List

4.3.2.3.14. *The Vendor's installation services must include all required products and services needed to install a functional service. This includes planning/engineering, termination, cross-connects, splices, terminating hardware setup, programming, mounting, and related documentation.*

---

**Verizon's Response**

---

Verizon has read, understands and will comply.

Verizon will provide all the fiber cabling, patching and cross connects needed to provide the customers purchased services under this contract. Cables, patching and cross connects for the equipment owned and operated by the customer are not part of the service. The customer will be provided with an Ethernet handoff to connect to their equipment.

4.3.2.3.15. *The Vendor must be capable of extending the service to the required termination location beyond the minimum point of entry. The additional cost for the extension of service must be provided in the Pricing Page (Exhibit A - line 54).*

---

**Verizon's Response**

---

Verizon has read, understands and will comply. A DMARC extension is the transmission path originating from the interface of the access provider's side of a telecommunications circuit Demarcation Point within a premise and ending at the termination point prior to the interface of the

edge Customer Premises Equipment. Verizon will provide Category 5E/6 copper. If fiber optic cable is required, project specific pricing will be provided on ICB basis prior to installation. Installation of conduit or large concrete cores will be considered an additional cost on ICB basis and will be placed after approval of additional charges. All installations will follow industry standards. DMARC extension hourly rate added to Exhibit A - line 92 was changed in Addendum 1.

4.3.2.3.16. *The Vendor must clearly label demarcation points with the site-specific service identification information, including demarcation extensions to the location of customer equipment where applicable, along with the identification of whether the Vendor or subcontractor will be providing the extension.*

**Verizon's Response**

---

Verizon has read, understands and will comply. See 4.3.2.3.15. Verizon will label demarcation points as requested.

4.3.2.3.17. *The Vendor must comply with all applicable codes, licenses, certifications, and standards in the State of West Virginia as it relates to the proposed installation services.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.18. *The Vendor must perform adequate testing after installation services are performed to ensure services are operating properly when turned up for the customer. The Vendor may be required to provide documentation of test results if so requested.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.19. *The Vendor must agree to the following installation timelines:*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.19.1. *Forty-five days (45) where no special construction is required.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.19.1.1. *For each day beyond the forty-five (45) day installation intervals defined or agreed to above, where the new service is not installed within the installation timelines, liquidated damages of \$500 per day will be assessed at the State's discretion.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.19.1.2. *Where special construction is required, Vendor must provide installation timeline which must be approved by the state.*

**Verizon's Response**

---

Read, understand and will comply. Special Construction is handled on an individual case basis (ICB). Verizon utilizes the various Local Exchange Carriers throughout the State taking the best advantage of the strengths in each area. By not relying on one carrier's presence, Verizon can leverage the maximum coverage with minimal capital payout from the State. When Special Construction is required Verizon will provide the State of West Virginia the charge and approximate timeline. It is mutually agreeable that both parties would need to agree on final costs and timelines before proceeding. The TCR will require amending to approve the Special Construction cost.

4.3.2.3.20. *The Vendor must provide a cost associated with expediting a service installation request on the Pricing Page (Exhibit A).*

**Verizon's Response**

---

Verizon has read, understands and will comply. Verizon has provided costs associated with expediting a service installation request in Exhibit A: Pricing Page.

4.3.2.3.20.1. *The vendor will refund in full service expedite fee should agree upon expedite date not being met.*

**Verizon's Response**

---

Verizon has read, understands and will comply. See Verizon provided expedite fee costs in Exhibit A: Pricing Page.

4.3.2.3.21. *The State will only pay special construction costs for new or legacy sites if other options (e.g.: 4G/5G wireless or other service provider facilities) are not available or if increased State bandwidth requirements cannot be met by existing telecommunication carrier facilities at the location. Special construction shall be approved at the State's discretion.*

**Verizon's Response**

---

Verizon has read, understands and will comply. See 4.3.2.3.19.1.2.

4.3.2.3.22. *The Vendor must provide the following two value-added installation and managed service options.*

4.3.2.3.22.1. *Leased Router:*

4.3.2.3.22.1.1. *Vendor provided edge router (Cisco or equal) will be leased by the state and must support access speed of service.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.22.1.2. *Vendor retains ownership of the Router and is responsible for all licensing fees and maintenance costs.*

**Verizon's Response**

---

Verizon has read, understands and will comply.

4.3.2.3.22.1.3. *Vendor must replace/upgrade the Router within 24-months following the Cisco End of Support notification in order to maintain support and software update eligibility.*

---

**Verizon's Response**

Verizon has read, understands, and will comply. Verizon will replace / upgrade routers by their support expiration date.

4.3.2.3.22.1.4. *Vendor is required to provide replacement router upon failure within 8x5xNext Business Day.*

---

**Verizon's Response**

Verizon has read, understands, and will comply. Covid-19 supply chain delays could temporarily impact this requirement.

4.3.2.3.22.1.5. *Vendor must replace/upgrade Router as requested by the State to support increased bandwidth demands and provide adequate throughput.*

---

**Verizon's Response**

Verizon has read, understands and will comply.

4.3.2.3.22.1.6. *WVOT retains management responsibility of the Router including configuration, installation, and monitoring.*

---

**Verizon's Response**

Verizon has read, understands and will comply. Unless WVOT selects a full management option, they will retain management responsibility of the Router

4.3.2.3.22.2. *Managed Internet Service*

4.3.2.3.22.2.1. *Vendor provides a bundled rate for managed services inclusive of the following:*

4.3.2.3.22.2.1.1. *Circuit, Edge router and Internet access*

4.3.2.3.22.2.1.2. *Installation and ongoing support for bundled service*

---

**Verizon's Response**

Verizon has provided this in Exhibit A: Pricing Page.

4.3.2.3.22.2.2. *Vendor retains ownership of the Router and is responsible for all licensing fees and maintenance costs.*

---

**Verizon's Response**

Verizon has read, understands and will comply.

4.3.2.3.22.2.3. *Vendor must replace/upgrade the Router within 24-months following the Cisco End of Support notification in order to maintain support and software update eligibility.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply. Verizon will replace / upgrade routers by the expiration support date.

*4.3.2.3.22.2.4. Vendor is required to provide replacement router upon failure within 8x5xNext Business Day.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply. Covid-19 supply chain delays could temporarily impact this requirement.

*4.3.2.3.22.2.5. Vendor must replace/upgrade Router as requested by the State to support increased bandwidth demands and provide adequate throughput.*

---

**Verizon's Response**

---

Verizon has read, understands, and will comply.

*4.3.2.4. Part 4: Security for WAN and DIA Services*

*4.3.2.4.1. The Vendor will be responsible for the physical and cyber security of the network infrastructure that provides services to the State.*

---

**Verizon's Response**

---

Verizon has read, understands and will comply. Verizon invests in people, processes, and technology to protect our company and our customers. A successful security program requires a partnership between skilled security leadership and teams involved in day to day business decision making. Verizon employs hundreds of security professionals, some of whom work directly for the Chief Information Security Officer (CISO) on establishing and governing the Company's information security strategy, policy, standards, architecture and risk management. Other security professionals support lines of business directly, partnering with Corporate Information Security (CIS) to facilitate information security and protect customer data.

Verizon's Corporate Information Security Program has implemented administrative, technical and physical safeguards that help to protect the confidentiality, integrity and availability of systems, networks, and information. The following is a summary of Verizon's written information security policies and practices which correlate to the National Institute of Standards and Technology Cybersecurity Framework (NIST-CSF).

The Verizon Private IP and network components comply with best practice security that correlates to applicable security requirements. These security measures apply to the network environment and components within Verizon's management. Verizon cannot protect network elements (customer-owned and operated) outside of our management control.

Physical access controls include but are not limited to the following:

- Personnel access controls including: need-to-know verification, access lists, and badging.
- Physical protection of processing areas, including access limitation devices such as guard services, electronic card readers, surveillance cameras, and limited markings on sensitive locations.
- Use of automated physical control systems at major sites that interfaces with Verizon Human Resources files so that active employees can be identified and authenticated.

- Protection against denial of service attacks by physically limiting access to network terminals and resources.
- Physical protection of hardware, software, or documentation, if such access to components or information may be utilized to eliminate, circumvent, or otherwise render ineffective the security safeguards of the system.

The Verizon physical security philosophy is based upon four levels of security. The first level is the outer layer of security, the site perimeter. The second level is the public area or lobby. The third level is the interior workspace, and the fourth is highly sensitive areas within the interior of the facility.

Every effort is made in the development of the overall security system to match a site's security strategies to the required level of protection. Perimeter protection may involve fences and gates, lighting, cameras, monitoring, and patrolling. Protection of the public area is maintained by minimizing the number of entrances to ensure that only authorized personnel pass beyond the public space into the interior workspace. The workspace security objective is to allow only authorized personnel to enter the working environment of our network equipment inside a Verizon facility.

Verizon co-locates its hub equipment in telephone company facilities and data centers, which are subject to physical access restrictions. Verizon also uses LAN switching equipment, rather than LAN hubs, to reduce the risk that in the case of a server breach, traffic not destined for the breached server could be captured.

We have taken several steps within our own facility to limit the amount of key knowledge that is readily available. The passwords for "root" login to the management platforms are not given out to the operational floor. The distribution of the passwords is limited to the group leaders of the first level engineers and the second level support engineers who perform the advanced troubleshooting and change management. We use building security as a means for MSO to prevent non-Verizon personnel access to any floors in the building. Also any new personnel hired into the MSO are not given the router passwords or access to them until their identity and access rights are verified.

The security of Verizon's network is critical to both Verizon and its customers, and Verizon Information Security Group is focused on maintaining that security. Verizon' security staff includes engineers with extensive backgrounds in computer security policy and implementation.

### **Private IP Security**

Commercially available as a service option since 2000, Private IP is Verizon's Multiprotocol Label Switching (MPLS) based, Layer 3 VPN service. The solution connects customers to their disparate locations around the globe, providing flexible and robust design options while also offering the ability to interconnect with complementary Verizon services.

Private IP service is based upon RFC 4364 and provides Layer 3 VPN services over an MPLS architecture. MPLS can be a powerful tool and is used for three main reasons:

- Engineering the network core more efficiently (manages capacity and congestion, provides traffic routing control and prioritization)
- Providing VPN services (e.g., MPLS VPNs)
- Enhancing network resiliency through the use of MPLS Fast Reroute

While Private IP (and MPLS itself) is widely accepted within the industry, many businesses are still unfamiliar with the protocol, specifically when it comes to security. Because of this, questions concerning Private IP's security regularly arise in our everyday discussions with clients. Verizon will provide an overview of Private IP security by looking at general MPLS security components, as well as the Verizon Private IP service architecture itself.

## High-level Verizon private IP architecture

The Verizon Private IP service is based on RFC 4364, which describes a method for providing VPN services over an MPLS and IP backbone. The key physical and logical components are described below.

### Customer edge (CE) router

The customer edge router is the IP router at the customer premises. This is the device that connects to and peers with the provider edge (PE) router. CEs do not peer with each other. CEs are considered part of the customer's VPN and do not participate in any core routing. The CE is not MPLS-aware and is only configured for standard IP routing.

### Provider edge (PE) router

The PE router resides in the service provider's (Verizon's) core. The PE learns IP routes from the CE, usually via a dynamic routing protocol, and stores them in a separate Virtual Routing and Forwarding (VRF) instance for each connected CE interface. An 8-byte route distinguisher (RD) is prepended to every IP address to create globally unique VPN-IPv4/v6 addresses. The PE uses Multiprotocol BGP (MP-BGP) to distribute VPN-IPv4/v6 routes to other PEs in the customer's VPN.

### Virtual routing and forwarding (VRF) instance

The VRF is effectively a separate routing table per customer VPN – many VRFs exist in every PE. VRF membership is determined based upon the ingress interface on the PE.

A customer's VPN is then the collection of the participating VRFs.

### Provider (P-core) router

P-core routers are those routers in Verizon's backbone that do not connect to CE routers and, in most cases, form the core of the network. P-core routers are not VPN-aware (do not contain any customer routes) and only forward MPLS-labeled packets between PEs.

A high-level, simplified description of customer data flow is described: Customer traffic enters the network at the CE and flows toward the PE, with which it peers across an access network. The PE router maintains a VRF, which is associated with the ingress interface and will contain advertised customer networks. MP-BGP is used to distribute routing information between PEs. The MPLS protocol then encapsulates the IP data, adding labels and switching traffic along pre-sigaled label switched paths. The MPLS encapsulated traffic arrives at the far-end PE, where the labels are removed and the customer's IP traffic is sent across the access network to the destination CE.

## Security requirements of MPLS networks

The following will describe the inherent security mechanisms built into the VPN service provided by Private IP-characteristics that are traditionally associated with Layer 2 VPNs (e.g., frame relay).

MPLS security is based upon three basic principles:

- Necessity for address and routing separation
- Keeping the internal structure of the core network hidden from the outside
- Providing resistance to attacks

### Address space and routing separation

MPLS-based VPN services must provide customers the flexibility of maintaining their own unique addressing plans and freedom to use either public or private address space. This means that between any two non-intersecting VPNs, the address space between these different VPNs is independent. For example, two separate, non-intersecting customer VPNs would be able to use the same 10.0.0.0/16 network without fear of conflict. From a routing perspective, this means that each

end system in a VPN has a unique address and all routes to this address point to the same end system.

Specifically:

- A VPN must be able to use the same address space as any other VPN or the MPLS core.
- Routing between any two VPNs must be independent.
- Routing between any VPN and the core must be independent.

### Address space

Private IP service allows distinct VPNs to use the same address space, which can be publicly registered or private IPv4 address spaces (RFC 1918). Customers also have the option of using IPv6 addressing obtained either directly from ARIN or their ISP with the Private IP service. This address uniqueness is made possible by adding a 64-bit RD to each IPv4 or IPv6 route, making these addresses not only VPN unique but also unique across the MPLS core. This address is also sometimes called a "VPN-IPv4 address" or "VPN-IPv6" when IPv6 addressing is present.

### Routing separation

Routing separation between Private IP customers is provided by each PE router maintaining a separate routing table for each connected VPN – or a VRF instance. The VRF contains only the routes for the VPN that it is associated with and that were learned either statically or through a dynamic routing protocol (e.g., BGP, RIP). These VRFs are separate from each other as well as from the global routing table. The Private IP core does not contain customer routes, but only those routes required for providing core reachability. These individual VRFs are further secured through the use of import and export targets with MP-BGP. A customer VPN is configured with a specific set of route targets and the associated VRFs only import/export routes for the specified VPN, helping protect them from non-customer route injections. VPNs only contain routes associated with their corporate VPN.

### Hiding the MPLS core structure

The second security principle of MPLS-based VPN design requires that knowledge of the core of the network is limited or completely hidden from the outside. In general terms, if a potential attacker does not know the detail (e.g., IP addressing) of their potential target, it makes that target difficult, if not impossible, to attack. So, Private IP does not unnecessarily reveal this and other information, even to customer VPNs.

When a dynamic routing protocol is run between the PE and CE (e.g., external BGP [eBGP]), the only information that is required is the address of the PE router. When security requirements dictate even stricter measures, static routing can be configured between the PE and CE, which would allow the Private IP MPLS core to be kept completely hidden.

### Resistance to attacks

Because of the routing separation provided to Private IP customers, it is impossible to gain access to other VPNs unless it has been explicitly configured (e.g., via an extranet configuration). The use of PRIVATE IP SECURITY 4 MP-BGP and route targets constrain the routing within the VPN only to those routes learned through the customer's CE-to-PE connection (static or dynamic). By design, there is no direct connectivity between the Private IP network and the public Internet. Private IP PEs are dedicated to providing the private Level 3 VPN service. Furthermore, the Verizon core is dedicated to MPLS switching and does not contain any Internet or customer routes. This architecture design limits the potential for unauthorized users and for external attacks.

Even though the potential for attack may be low and unlikely, the Verizon Private IP MPLS architecture does provide protection mechanisms against the following basic types of attacks:

- **Intrusions** – Where the underlying goal is to gain unauthorized access to resources
- **Denial of service (DoS) attacks** – Where resources become unavailable to authorized users

We have already discussed the inherent security provided by limiting customer VPN access to only those sites and interfaces explicitly configured. Through this mode of configuration, it is not possible to directly intrude into other VPNs. There are also numerous device-level controls in place that restrict access to and protect the Verizon Private IP service nodes and core from unauthorized use. These safeguards already provide a great deal of protection from intrusion at both the device and VPN levels. The Private IP core does not reveal unnecessary information about itself (e.g., addressing), which helps to further protect against unwanted attention and access.

The option of configuring static routing also exists, whereby the PE routers are manually configured with only those routes to specific customer networks listed behind each CE. The CEs themselves are then configured to statically point to the PE router for any network in other parts of the VPN (mostly a default route). If the CE-configured route to the PE points to the local interface, the CE router doesn't need to know any IP address of the core network, not even of the PE router.

Taking these optional steps provides additional levels of network security, as it is only visible and accessible to those resources and individuals who need it.

To help reduce the risks of DoS and unauthorized intrusion, the PE's routing processes are securely configured. This is done in various ways:

### **Access control lists (ACLs)**

ACLs are used on Private IP interfaces to restrict the routing protocol to only the CE router and nowhere else. Furthermore, ACLs are used to limit access to the PE from only known entities.

### **Parameter configuration**

Where practical, PE configurations are given parameters that are tuned to further secure communication. For example, Private IP VRFs are configured with a maximum number of routes, which helps to protect the router from receiving an abnormally large number of routes in a DoS attempt.

### **MD-5**

This is an optional configuration for authentication for routing protocols. This is available for BGP (RFC 2385) and Open Shortest Path First (OSPF) (RFC 2154) Private IP customers. It avoids the packets that could be spoofed from other parts of the customer network than the CE router. Note that this requires Verizon and the customer to agree on a shared secret between all CE and PE routers.

In summary, Verizon's PE routers offer multiple levels of security, especially on their interfaces to the CE routers. ACLs are configured to limit access only to the port(s) of the routing protocol and only from the CE router. MD-5 authentication is an optional customer configuration item and can be used on CE-PE peering.

### **Label spoofing**

Within the Private IP service core, network packets are forwarded based on labels that are prepended by the PE routers. The interface between any CE router and its PE router is an IP interface. The CE router is unaware of the MPLS. The "intelligence" or MPLS switching is all done within the PE device and the Private IP core. Because of this, a PE router will not accept a packet with a label from a CE router. Labeled packets arriving from a CE will be dropped by the receiving PE. As such, it is extremely difficult to insert or spoof "fake" labels.

### **Verizon security standards**

Verizon has several internal organizations that provide support functions for the Private IP network. All of these internal groups and their personnel have strict policies and controls in place to allow secure communication with and support of the Private IP architecture. These groups range from

ordering and provisioning to monitoring, reporting, and service on the network once in place. Over all of these groups and components, Verizon's internal security organization and the Verizon Network Security Operations Center (NSOC) has primary responsibility for internal security policies and their enforcement.

### **Verizon security organization**

Verizon's security organization has developed a consolidated approach and set of controls so that the Private IP service operates within designed levels of confidentiality, security, and availability. The security organization is responsible for the protection of all company assets, facilities, and information, as well as providing for those policies governing employee access for support of the Verizon service network.

Preventing incidents before they occur may be the most important aspect of Verizon's security plan. To this end, Verizon has in place a continual process of identifying, measuring, and implementing safeguards to reduce risk of an event impacting the integrity or availability of the Private IP service.

This process involves the regular scanning of internal systems and networks for vulnerabilities and remediation of any gaps found within. This is based on current understanding of existing and upcoming threats and risks within the industry and through direct participation in several security associations and continual research.

### **Personnel safeguards**

Verizon bases its own internal personnel security mechanisms upon widely accepted best practices. Verizon policies provide for the following:

- Verizon pre-employment screening and mandatory drug screening
- National Industrial Security
- Program requirements for U.S. government employees
- Ongoing security training and awareness covering a range of topics

The personnel security program provides clear roles and responsibilities for employees based upon the definition of their job function. Employees are only provided access to internal network and devices based on need as defined by their function. Whether due to normal termination of a job function (e.g., short-term, contractor) or other reasons, network access is swiftly removed per company policies so that access is available only when specifically required.

### **Verizon physical and environmental protection**

The physical protection of the actual facilities that house Verizon network equipment and systems is just as important to the overall security architecture as protection from network-level threats. Verizon categorizes physical security at several levels.

The first two levels address those areas of a facility where the public may have access. This is the building perimeter and internal "public space." These areas use appropriate signage, barriers (locked doors, manned desks, and turnstiles), and badge readers-among other mechanisms-so that individuals are made aware they are entering a secured area.

The third security level is defined as the employee space and is accessible only by workers and contractors as needed to conduct their work.

The fourth level is the highest security level assigned to facility access and is reserved for those locations and areas that house Verizon assets and information that may be accessed only by select employees. The Private IP network nodes are provided this level-4 protection, which includes these additional components:

- Personnel access controls, including access lists and badging-as well as the ability to authenticate active employees against HR records
- Physical protection using guard services, electronic card readers, and surveillance cameras

- Protection through physically limiting access to network terminals and resources, as well as sensitive software and documentation
- Physical controls during software development and related activities to help protect the software that is used for handling customer-sensitive information and data.

**Private IP device-level safeguards**

Numerous controls have been put in place to help protect Verizon network devices from unauthorized access and the inadvertent or malicious modification and destruction of data. At a high level, direct access to the Private IP PE routers is not permitted, and access is allowed only across the Verizon internal data network. Mechanisms include, but are not limited to:

- ACLs restricting access to required external devices and services only
- Turning off all unnecessary interfaces and services
- Internal Verizon user access limited to required personnel only, which is constantly monitored using two-factor authentication
- Logging of user actions on Verizon equipment with further controls allowing for administration and restriction of privilege levels, recording, and review of actions
- Performing configuration changes associated with provisioning or customer service via automation or application access whenever possible to help reduce the chance of manual error
- Backups of device-level configurations and other critical files, as well as regular testing of disaster recovery and restoration processes conducted on a regular basis.

**Private IP network architecture assessment**

Verizon utilizes a third-party vendor (SecureTrust, a Sysnet company) to conduct a Security Controls GAP Assessment focused within Verizon MPLS (Multiprotocol Network Switching) Information Solutions (Verizon MPLS) using Federal Information Management Act (FISMA) guidelines. The objective of this assessment is to perform a documentation and physical security review of the Private IP platform using NIST Special Publication (SP) 800-53 Rev. 5 and NIST SP 800-171 as security reference models. This is reviewed approximately every 3 years and the latest engagement was conducted from July 6th to November 19, 2021. A summary of Verizon MPLS’s “overall” compliance with NIST can be provided upon request.

**Summary and conclusions**

The Private IP service provides full address and routing separation. By design, Private IP does not reveal the addressing structures of the core or other VPNs, and its security controls help prevent intrusions into the core or other VPNs by abuse of MPLS mechanisms.

Verizon has put in place an internal security organization to help implement the proper controls, so that the Private IP service operates within designed levels of confidentiality, security, and availability.

For environments that require stricter control measures, additional optional security mechanisms may be put in place to meet customers’ unique internal needs. Customer- managed CE-CE encrypted tunnels, such as GetVPN or point-to-point or multipoint GRE + IPsec, are one such option and are supported across Private IP.

It should be noted that the overall security of any architecture depends on all solution components. While the Private IP service includes many security controls and features, public Internet access, remote access solutions, and traditional internal network access must also be secured to help prevent compromise to your network design.

**Internet Network Security**

Our IP network offers high-quality performance as well as multiple levels of data security. To protect its network, we use a combination of traditional defense-in-depth approaches along with perimeter

security approaches. We implement many layers of security, including physical, perimeter, host-based, personnel, and procedural security.

We collocate our hub equipment in telco facilities, all of which are subject to strong access restrictions. These facilities offer the highest degree of physical security. Our Internet network is also designed to keep transit traffic (e.g., IP packets being switched between hubs) away from any general-purpose computing systems (e.g., our mail or news servers) that could be used to capture transit traffic in the event of a security breach.

We also use LAN switching equipment, rather than ordinary LAN hubs, to help ensure that even in the case of a server breach, capturing traffic not destined for the breached server would be very difficult.

We isolate our internal computing infrastructure from external access electronically as well as physically. Internal support servers are kept separate (physically and topologically) from our IP backbone network links and customer service servers (e.g., mail and news).

We deploy extensive cryptographic authentication and encryption. These techniques greatly reduce the possibility of passwords passing over the network in the clear, and in many cases eliminate the need for reusable passwords that can be compromised.

In addition to other methods, we deploy Kerberos based authentication systems internally, while running SSL, and other industry standard remote access services for external connectivity.

Connections to our internal systems from outside the firewall are extremely limited, reinforced by security methods, including strong encryption, two factor authentication, firewall restrictions limiting specific services to a single IP, and use of internal DMZs where necessary.

In addition to using cryptography to authenticate users and encrypt traffic, we also rely on Kerberos-authenticated applications to administer service machines. We use Intrusion Detection Systems as well as log monitoring to detect anomalous behavior.

These systems strive to run the minimum number of Internet services needed to perform their functions, thus minimizing other possible points of attack. Our position in the Internet industry, combined with an Information Security Group that works closely with the company's vendors, gives us access to information on new attacks and methods to counter these attacks long before the general user community is aware of them.

The security of our IP network is critical to us and our customers, and our Information Security Group is devoted to maintaining that security. Our security staff includes security policy experts and engineers with extensive backgrounds in computer security.

This group maintains the proper levels of protection on our IP network, ensuring that all new projects and products comply with our rigid security standards and procedures. This group's knowledge of the necessary technologies, and its relationships with the FBI, CERT, Secret Service, and other agencies, enable them to achieve this goal.

*4.3.2.4.2. The Vendor will be responsible for resolving all security vulnerabilities that may affect equipment or transmission services provided to the customer.*

**Verizon's Response**

Q27/A27: As defined by OWASP, a vulnerability is a hole or a weakness in the application, which can be a design flaw or an implementation bug that allows an attacker to cause harm to the stakeholders of an application.

Q28/A28: The state is not looking for a vulnerability assessment

Q29/A29: This pertains to all vulnerabilities residing on vendor managed systems, infrastructure, or equipment. This does not include the state-managed/leased router.

Verizon has read, understands and will comply.

Within the Verizon Corporate infrastructure Verizon provides regular Nessus vulnerability scans. Nessus is an industry standard scanning tool that Verizon uses to scan our internal assets. Verizon MNS uses the Vulscan vulnerability management tool for scanning and remediating Verizon managed customer devices. Verizon MNS uses the results from Vulscan to determine appropriate remediation requirements based upon the severity of the vulnerability.

Verizon has a comprehensive Enterprise Vulnerability Management (EVM) program designed to identify and protect Verizon infrastructure components against this ever increasing threat landscape. Verizon's EVM program is based on the National Institute of Standards and Technology (NIST) Cybersecurity Framework and ensures that Verizon has sufficient tools, processes and people working to manage this risk.

Verizon's EVM Program includes the following:

**Policy** – Verizon anchors the EVM program across its enterprise with a comprehensive policy which outlines the core components, cadence and personnel responsibilities necessary to sustain a healthy and well-balanced vulnerability management program.

**Identification** - Verizon uses various external threat and vulnerability information sources to maintain a vigilant awareness of the current threat and vulnerability landscape. These sources include, but are not limited to, commercial, government, vendor, and publicly available sources (e.g. Common Vulnerabilities and Exposures (CVE)).

**Detection** – Verizon leverages both manual and automated detection methods, on a scheduled and real-time basis, to identify deployed IT assets within its network infrastructure. The discovery process of assets with potential vulnerabilities is performed with multiple techniques at the network and application layers.

- Network vulnerability scans of systems, devices, and network elements are performed on a scheduled basis.
- Static Application Security Testing (SAST) is performed to analyze application source code, byte code and binaries for coding and design conditions that are indicative of security vulnerabilities
- Dynamic Application Security Testing (DAST) is performed to detect conditions symptomatic of a security vulnerability in an application in its running state

**Risk Evaluation** – Identified vulnerabilities are assigned a severity classification based on their evaluated risk using an industry standard scoring model.

**Remediation** - Identified vulnerabilities are reported to the appropriate owners and custodians of the affected assets and who are included in the remediation process. Vulnerabilities that are determined not to be false-positives are then tracked and remediated per an established policy timeline. If remediation is not feasible within the policy timeframe, a work plan is developed and tracked. In rare circumstances, an exception may be approved, which is tracked in a central system of record as mitigating or compensating controls are considered and deployed.

**Metrics & Reporting** - Data is collected and retained for the purposes of stakeholder reporting and executive management visibility to ultimately ensure vulnerable assets have been remediated. Additionally, this data may serve other needs such as threat trending and the strategic planning of ongoing EVM program improvements.

Verizon Network Security group engages in a number of activities to proactively test the security of the Verizon network. Examples of such activities include:

- Periodically scanning our internal IP address ranges for vulnerabilities and targeting critical systems and network elements Monitoring access control lists (ACLs) and firewall rule lists from critical routers in our “demilitarized zone (DMZ)” every hour to verify device integrity.

- Auditing systems to closely scrutinize remote access to, and unusual data patterns within, our systems, the backbone, and our managed customers' systems. More specifically, some of these auditing tasks include:
  - Auditing and validating security rules on critical backbone routers.
  - Parsing firewall log messages in real-time from firewalls on backbone routers for analysis.
  - Automating attack responses; processing millions of external security events per day such as network/host scans. These automatic responses identify network owners of the attacking systems and send notifications back to the network owner. This data is also analyzed for any indication of DDoS or other unusual network activity via a fully automated program that runs hourly and that provides automated notifications and alerts to security experts. Information is routinely shared with the U.S. National Coordination Center (NCC).
  - Mitigating DOS attacks for customers by experienced teams that are on-call at all times using industry leading techniques and experience; tools include Blackhole Route Server and ICMP Backscatter Traceback.

Verizon utilizes a defense-in-depth strategy that incorporates a multi-tiered approach of security at each of these levels:

- Firewalls
- Network segmentation
- Authentication and authorization
- Encryption of authentication information
- Non-repudiation of transactions
- Audit trails
- Intrusion detection
- Honey pots
- Incident response

Please note that Verizon has made a conscious decision to not provide vulnerability reports to customers as doing so would potentially put all of our customers at risk due to the sensitive nature of the information contained. If the State of West Virginia is looking for Verizon to perform vulnerability scans of their environment that would be a Managed Security or Professional Services engagement that is not in scope of the RFP. For the same reason, Verizon does not answer questions about the status of specific vulnerabilities with regard to the use and/or nonuse of specific hardware, software, or third-party products deployed within the Verizon infrastructure. Verizon's substantial investment in the people, processes and tools necessary to secure the products and services that our customers trust and depend on each day, demonstrates our continued commitment to security excellence.

4.3.2.4.3. *The Vendor's policies, services, processes, or employees cannot create conflicts with the State's standard security policy requirements. In the event of a standard security policy conflict, the State's policy will prevail. (Policies available at <http://www.technology.wv.gov>)*

**Verizon's Response:**

Verizon read, understands and will comply. Verizon's proposed solution provides commercial commodity services based upon a Verizon IT system that is separate from the state's IT systems. Verizon will not be accessing the state's IT systems, applications, or data. Verizon's IT systems adhere to Verizon's Information Security Corporate Policy Instruction 810 (CPI-810), which correlates to the NIST Cybersecurity Framework (CSF). Where applicable, Verizon employees that are required to be onsite at State facilities and required to access State IT Systems will adhere to any potential State policy deviations.

**4.4. Qualifications and Experience:**

*Vendor should provide information and documentation regarding its qualifications and experience in providing services similar to those requested in this RFP. Information and documentation should*

include, but is not limited to, copies of any staff certifications or degrees applicable to this project, proposed staffing plans, descriptions of past projects completed (descriptions should include the location of the project, project manager name and contact information, type of project, and what the project goals and objectives were and how they were met.), references for prior projects, and any other information that vendor deems relevant to the items identified as desirable or mandatory below.

**Verizon’s Response**

Verizon is a Proven and Demonstrated Leader in Network Quality as indicated by the Industry Recognition below:

- Verizon is the most awarded for Network Quality, 27 times in a row according to J.D. Power -- more than any other carrier.
- Verizon has earned more than 170 J.D. Power Awards for Network Quality over the last 17 years.
- Verizon received the J.D. Power award in all six regions -- achieving the best score across all study factors.
- Verizon wins for overall network performance by RootMetrics, the nation’s most rigorous and scientific network tester.
- This is Verizon’s 16th consecutive RootMetrics win for overall network performance and network reliability.

Verizon is a Proven and Demonstrated Leader in Managed Services as indicated by the Industry Recognition below:

- Leader in the Gartner Magic Quadrant for Network Services for fourteen years. Gartner evaluates vendors on completeness of vision, and in 2020, Verizon continues to maintain its Leader position.
- Leader in the Magic Quadrant for Managed Internet of Things (IoT) Connectivity Services, Worldwide - With a comprehensive portfolio of transportation and asset management, home security, telematics, and utilities IoT solutions, we continue to innovate in this rapidly growing space.
- Leader in Gartner Magic Quadrant for Managed Security Services Worldwide for seven years in a row for our ability to execute and completeness of vision.
- Verizon recognized as Leader in Managed SD-WAN Services Worldwide in IDC MarketScape Report.
- Ranked Top 100 Government Contractor by Washington Technology.

Figure 4.4-1 provides a list of Verizon Account Team qualifications and proposed staffing plan.

**4.4.1 Qualification and Experience Information**

Vendor should describe in its proposal how it meets the desirable qualification and experience requirements listed below.

4.4.1.1. Vendor should provide three (3) examples demonstrating at least three (3) years of experience in providing state-wide or region-wide Ethernet Wan Services of a similar size and scope as this project, with at least one example being a public entity. Vendor should provide a summarization of each project including goals and objectives, total number of circuits deployed, length of time deployment took, if still in service, and reference for each example.

**Verizon's Response**

**Past Experience 1 - Commonwealth of Virginia:**

Doug Leslie  
 Strategic Sourcing Consultant  
 Virginia Information Technology Agencies  
 11751 Meadowville Lane  
 Chester, Virginia 23836  
 804-416-6161  
[doug.leslie@vita.virginia.gov](mailto:doug.leslie@vita.virginia.gov)

**Project Summary:**

Verizon provided Managed WAN/LAN/WLAN Services, Ethernet Private IP, Internet, and various technology-based services to the Commonwealth of Virginia and the Commonwealth of Virginia Executive Branch Agencies. All services and connections provided enable secure digital government for the Commonwealth and its Agencies. Verizon provides IP and Ethernet-based services to over 1500 locations across the Commonwealth of Virginia. Verizon has refreshed over 9000+ network devices and upgraded over 400+ sites from TDM to Ethernet. This transition was over a twenty-four month period, and Verizon continues to work to migrate the legacy TDM sites to Ethernet. The Commonwealth of Virginia has been a Verizon contracted customer for over 20 years and currently has several contracts that support both Wireless and Wireline services.

**Project Summary:**

Verizon provides Ethernet WAN Services to the Maryland State Government for a large statewide network. The service provides site to site connectivity to both in LATA and Across State lines. The objective of this network is to provide communications services to State agencies as well as other government locations. The current total number of Ethernet locations is 254 with speeds up to 10G. The timeframe for each site installation was 3 - 4 weeks. The contract began in 2016 and the state is continuing to build out the network by adding new sites and replacing TDM services where feasible.

**Past Experience 3 - Commonwealth of Pennsylvania**

**Project Summary:**

Verizon provided Managed WAN/LAN/MWLAN Services, Ethernet Private IP, and various technology-based services to the Commonwealth of Pennsylvania Executive Branch Agencies. All services and connections provided enable secure digital government for the Commonwealth and its Agencies. Verizon provides over 1,600 IP and Ethernet-based services to locations with speeds up to 10G across the Commonwealth of Pennsylvania. The timeframe for installation was approximately 2 to 2/12 years. Verizon continues to work to migrate the legacy TDM sites to Ethernet. The Commonwealth of Pennsylvania has been a Verizon contracted customer for over 25 years and currently has several contracts that support both Wireless and Wireline services.

*4.4.1.2. The State desires an Account Team (including Account Support Representative, Technical Support Representative, Solution Implementation Support Representative, Contract Manager, Billing Support Representative, Security/Compliance Specialist, and Project Manager) for the winning solution and life of the contract. Vendor should describe in detail the responsibilities of key roles and staff's experience in working in these roles.*

**Verizon's Response**

---

Please see Section 4.3.2.3.10.

*4.4.1.3. Vendor should describe its experience and provide an overview of their incident management process and cyber threat intelligence sharing process for incidents associated with the vendor provided solution.*

**Verizon's Response**

---

The Verizon Incident Response Plan provides a vehicle that will allow for an effective response to information security incidents of varying sizes and complexity. Verizon's Incident Response teams

have the responsibility for responding to security incidents across the enterprise and are composed of technical and security experts company-wide.

The primary objectives of the Incident Response Plan are to ensure timely reaction to suspected or verified security incidents, to minimize losses during an incident and the secure recovery of IT systems and related business processes affected by security incidents. Additionally, the Incident Response Plan is designed to allow Verizon to comply with the laws of the countries in which it conducts business and the contractual obligations to which it has agreed. Cybersecurity and information security issues and vulnerabilities (InfoSec/Cyber Risks) may be initially identified through various methods, such as Help Desks, technical support teams, IT workers or by customers simply noticing something suspicious. In general, a Verizon employee or contractor seeking to report an InfoSec/Cyber Risk is required to submit an email to a mailbox monitored by one of our Incident Response teams, although special procedures are established for specific types of events/incidents. Customers and other external parties can report cyber or information security issues to Verizon by calling the Verizon Security Control Center at 800.294.3496 or submitting an email to [EmergencyCyberReport@verizon.com](mailto:EmergencyCyberReport@verizon.com). Instructions for reporting cyber vulnerabilities can also be found in the "Contact Us" section of the [www.verizon.com](http://www.verizon.com) home page. The person wishing to report can simply select the "Report a Security Vulnerability" at the bottom of the page, under "Tools," which then displays a Security Vulnerabilities page. Instructions and contact information for reporting a cyber security vulnerability appear at the bottom of that page.

Verizon's Incident Response Plan reflects the following processes: Preparation – defined roles and responsibilities with collaborative procedures Monitoring – continuously observe systems and networks for suspicious activity Detection - identify impacted systems and scope of the incident Containment – limit the damage and prevent any further damage from occurring Eradication – removal and restoration of affected systems Recovery - getting systems back online and restoring availability of affected services Lessons Learned – what improvements can be made in the event of a similar incident Forensics and Threat Intel – evidence collection, preservation and management Verizon's Incident Response teams receive appropriate and regular training in relevant domains. New team members learn the basics of the policies, procedures and guidelines of Incident Response, while ongoing training is provided to personnel performing Incident Response to enable them to stay current on the latest advances in incident response, threats, attacks and other related information security topics. Periodic tabletop exercises are also conducted at a department and at an enterprise level to ensure coordination across business units and to verify documented procedures. Verizon's legal and regulatory support personnel are integrated with its Incident Response teams, so that Verizon's legal and regulatory interests are addressed as part of its Incident Response functions.

Verizon's Incident Response Plan is regularly reviewed and updated as required, no less than once per year. If Verizon learns of an incident, concerning its systems, that it has determined resulted in the unauthorized disclosure of a customer's confidential information, Verizon will comply with applicable legal, regulatory and contractual obligations in connection with that incident. Our general practice when responding to an unauthorized disclosure of a customer's confidential information is to use commercially reasonable efforts to (i) promptly notify the customer, and (ii) assist the customer in investigating and assessing the extent and nature of the unauthorized disclosure.

Verizon has unrivaled research over the last 14 years providing actionable insights into cyber threats with our Data Breach Investigations Report, Payment Security Report, Cyber Espionage Report, Mobile Security Index, Insider Threat Report.

Verizon's substantial investment in the people, processes and tools necessary to secure the products and services that our customers trust and depend on, demonstrates our commitment to security excellence every day. Our continuous improvement strategy strives to stay ahead of the curve by implementing forward thinking security controls and techniques to protect customer data and the Verizon Network. We are honored to have you as a customer and our continued goal is to provide you with the best security assurance possible to strengthen our business relationship.

**4.5. Oral Presentations (Agency Option):**

*The Agency has the option of requiring oral presentations of all Vendors participating in the RFP process. If this option is exercised, points will be allocated in Section 6.2 below at the time the RFP is issued, or via addendum prior to technical bid opening. During oral presentations, Vendors may not alter or add to their submitted proposal, but only clarify information. A description of the materials and information to be presented is provided below:*

*Materials and Information Requested at Oral Presentation:*

**Verizon's Response**

---

Verizon has read, understands, and will comply

**4.5.1. Vendor will give an overview of its bid response, explaining its approach and methodology to providing the services outlined in the RFP, as well as provide information regarding its experience.**

**Verizon's Response**

---

Verizon has read, understands, and will comply.

**4.5.2. The State of West Virginia will ask clarifying questions regarding the submission.**

**Verizon's Response**

---

Verizon has read, understands, and will comply

## SECTION 5: VENDOR PROPOSAL

### 5. ECONOMY OF PREPARATION:

---

*Proposals should be prepared simply and economically providing a concise description of the items requested in Section 4. Emphasis should be placed on completeness and clarity of the content.*

#### **Verizon's Response**

---

Verizon has read, understands and will comply.

#### **5.1. Incurring Cost:**

*Neither the State nor any of its employees or officers shall be held liable for any expenses incurred by any Vendor responding to this RFP, including but not limited to preparation, delivery, or travel.*

#### **Verizon's Response**

---

Verizon has read, understands and will comply.

#### **5.2. Proposal Format:**

*Vendors should provide responses in the format listed below:*

#### **Verizon's Response**

---

Verizon has read, understands and will comply.

**5.2.1. Two-Part Submission: Vendors must submit proposals in two distinct parts: technical and cost. Technical proposals must not contain any cost information relating to the project. Cost proposal must contain all cost information and must be sealed in a separate envelope from the technical proposal to facilitate a secondary cost proposal opening.**

#### **Verizon's Response**

---

Verizon has read, understands and will comply.

**5.2.2. Title Page: State the RFP subject, number, Vendor's name, business address, telephone number, fax number, name of contact person, e-mail address, and Vendor signature and date.**

#### **Verizon's Response**

---

Verizon has read, understands and will comply.

**5.2.3. Table of Contents: Clearly identify the material by section and page number.**

#### **Verizon's Response**

---

Verizon has read, understands and will comply.

**5.2.4. Response Reference: Vendor's response should clearly reference how the information provided applies to the RFP request. For example, listing the RFP number and restating the RFP request as a header in the proposal would be considered a clear reference.**

**Verizon's Response**

---

Verizon has read, understands and will comply.

**5.2.5. Proposal Submission: All proposals (both technical and cost) must be submitted to the Purchasing Division prior to the date and time listed in Section 2, Instructions to Vendors Submitting Bids as the bid opening date and time.**

**Verizon's Response**

---

Verizon has read, understands and will comply.

**SECTION 6: EVALUATION AND AWARD**

**6. EVALUATION PROCESS:**

*Proposals will be evaluated in two parts by a committee of three (3) or more individuals. The first evaluation will be of the technical proposal and the second is an evaluation of the cost proposal. The Vendor who demonstrates that it meets all of the mandatory specifications required, attains the minimum acceptable score and attains the highest overall point score of all Vendors shall be awarded the contract.*

**Verizon's Response**

Verizon has read and understands.

**6.1. Evaluation Criteria:**

*Proposals will be evaluated based on criteria set forth in the solicitation and information contained in the proposals submitted in response to the solicitation. The technical evaluation will be based upon the point allocations designated below for a total of 70 of the 100 points. Cost represents 30 of the 100 total points.*

**Evaluation Point Allocation:**

*Project Goals and Proposed Approach (§ 4.2)*

- *Approach & Methodology to Goals/Objectives (§ 4.2.1) 50 Points Possible*
  - Part 1:** *Technology Service & Solution for Ethernet WAN, DIA & 4G/5G Services 25 Points Possible*
  - Part 2:** *Vendor Ethernet WAN Services Migration Plan 5 Points Possible*
  - Part 3:** *Service and Support for WAN and DIA & 4G/5G Services 10 Points Possible*
  - Part 4:** *Security for WAN & DIA Services 10 Points Possible*
- *Approach & Methodology to Compliance with Mandatory Project Requirements (§ 4.2.2) 5 Points Possible*

*Qualifications and experience (§ 4.3)*

- *Qualifications and Experience Generally (§ 4.3.1) 10 Points Possible*

*(Oral interview, if applicable) (§ 4.4) 5 Points Possible*

*Total Technical Score: 70 Points Possible*

*Total Cost Score: 30 Points Possible*

***Total Proposal Score: 100 Points Possible***

**Verizon's Response**

Verizon has read and understands.

**6.2. Technical Bid Opening:**

*At the technical bid opening, the Purchasing Division will open and announce the technical proposals received prior to the bid opening deadline. Once opened, the technical proposals will be provided to the Agency evaluation committee for technical evaluation.*

**Verizon's Response**

---

Verizon has read and understands.

**6.3. Technical Evaluation:**

*The Agency evaluation committee will review the technical proposals, assign points where appropriate, and make a final written recommendation to the Purchasing Division.*

**Verizon's Response**

---

Verizon has read and understands.

**6.4. Proposal Disqualification:**

**6.4.1. Minimum Acceptable Score ("MAS"):**

*Vendors must score a minimum of 70% (49 points) of the total technical points possible in order to move past the technical evaluation and have their cost proposal evaluated. All vendor proposals not attaining the MAS will be disqualified.*

**Verizon's Response**

---

Verizon has read and understands.

**6.4.2. Failure to Meet Mandatory Requirement:**

*Vendors must meet or exceed all mandatory requirements in order to move past the technical evaluation and have their cost proposals evaluated. Proposals failing to meet one or more mandatory requirements of the RFP will be disqualified.*

**Verizon's Response**

---

Verizon has read and understands.

**6.5. Cost Bid Opening:**

*The Purchasing Division will schedule a date and time to publicly open and announce cost proposals after technical evaluation has been completed and the Purchasing Division has approved the technical recommendation of the evaluation committee. All cost bids received will be opened. Cost bids for disqualified proposals will be opened for record keeping purposes only and will not be evaluated or considered. Once opened, the cost proposals will be provided to the Agency evaluation committee for cost evaluation.*

*The Purchasing Division reserves the right to disqualify a proposal based upon deficiencies in the technical proposal even after the cost evaluation.*

**Verizon's Response**

---

Verizon has read and understands.

## 6.6. Cost Evaluation:

The Agency evaluation committee will review the cost proposals, assign points in accordance with the cost evaluation formula contained herein and make a final recommendation to the Purchasing Division.

**Cost Evaluation Formula:** Each cost proposal will have points assigned using the following formula for all Vendors not disqualified during the technical evaluation. The lowest cost of all proposals is divided by the cost of the proposal being evaluated to generate a cost score percentage. That percentage is then multiplied by the points attributable to the cost proposal to determine the number of points allocated to the cost proposal being evaluated.

**Step 1:**  $\text{Lowest Cost of All Proposals} / \text{Cost of Proposal Being Evaluated} = \text{Cost Score Percentage}$

**Step 2:**  $\text{Cost Score Percentage} \times \text{Points Allocated to Cost Proposal} = \text{Total Cost Score}$

Example:

Proposal 1 Cost is \$1,000,000

Proposal 2 Cost is \$1,100,000

Points Allocated to Cost Proposal is 30

Proposal 1: Step 1 -  $\$1,000,000 / \$1,000,000 = \text{Cost Score Percentage of } 1 (100\%)$

Step 2 -  $1 \times 30 = \text{Total Cost Score of } 30$

Proposal 2: Step 1 -  $\$1,000,000 / \$1,100,000 = \text{Cost Score Percentage of } 0.909091 (90.9091\%)$

Step 2 -  $0.909091 \times 30 = \text{Total Cost Score of } 27.27273$

### **Verizon's Response**

Verizon has read and understands.

# REQUEST FOR PROPOSAL

West Virginia Office of Technology (WVOT) CRFP SWC2200000001

- 6.7. **Availability of Information:** Proposal submissions become public and are available for review immediately after opening pursuant to West Virginia Code §5A-3-11(h). All other information associated with the RFP, including but not limited to, technical scores and reasons for disqualification, will not be available until after the contract has been awarded pursuant to West Virginia Code of State Rules §148-1-6.3.d.

By signing below, I certify that I have reviewed this Request for Proposal in its entirety; understand the requirements, terms and conditions, and other information contained herein; that I am submitting this proposal for review and consideration; that I am authorized by the bidder to execute this bid or any documents related thereto on bidder's behalf; that I am authorized to bind the bidder in a contractual relationship; and that, to the best of my knowledge, the bidder has properly registered with any State agency that may require registration.

**EXHIBIT A: PRICING PAGE**

The quantities indicated below (Column B) are the best estimate of network inventory near the time of release. If the inventory changed after data capture or was missed during the data capture, it does not change the evaluation. The evaluation will be based on the quantities represented in this section. Vendors must provide costs for each Service, including \$0 if applicable. If there were not any current installations of a circuit type being requested under this RFP, it was represented with a quantity of 1 for evaluation purposes. If a current circuit type was not being requested under this RFP, it was not included in this evaluation, but was left in the inventory for vendor reference regarding a potential installation site. Column D is calculated by multiplying twelve (12) months by Column B and Column C. Column F is calculated by multiplying Column B and Column E to show the total cost for Non-Recurring. Column G is calculated by adding Column D and Column F to show the total cost for both Annual and Non-recurring costs.

---

### Education

---

University of Charleston, Charleston, WV

- Bachelor of Science in Business Management
- Executive Master of Business (EMBA)

## **A.2 Solution Architect (Technical Support Representative)**

Kevin Walker – Solutions Architect

---

### **Work Experience**

---

**(2020 – Present)**

**Verizon, Charleston, WV**

#### ***Solutions Architect***

- Own technical relationship with clients, including managing product and solution briefings, proof of concept work, coordination of technical resources, and obtaining client requirements and translating them into a client specific solution design and/or Verizon solution design/offer.
- Develop individual skill-set and expand product knowledge to maximize value and deliver quality services to clients.

**(2010 – 2020)**

**Frontier Communications, Charleston, WV**

#### ***Solutions Engineer***

- Deliver pre-sales engineering support for Sales Account Executives to provide custom network solutions for customers.
- Work closely with customers, vendors, operations, and engineering departments on the implementation and coordination of network solutions.
- Generate customer presentations of designed solutions and assist in training initiatives on new technologies, processes, and company procedures that affect service delivery.

**(2000-2010)**

**Verizon, Charleston, WV**

#### ***Specialist – Network Trouble Center***

- Provided 24x7x365 Tier II support for trouble investigation and resolution, billing referral resolution, Carrier Access Services and Wireless Services investigations, and E-911 Emergency reroutes.
- Awarded a departmental “Ovation” award for role in WV 10-Digit Overlay Project.
- Awarded Departmental Achievement Award and nominated for Verizon Excellence Award for role in win-back project by minimizing customer outage involving City Police, Fire Department, and Mayor's office involving 24 PRI's and 5,280 DID numbers.
- Specialist – Voice Network Creation & Provisioning
- Exceeded as an individual contributor, without direct supervision, in a position requiring a high degree of expertise and professionalism.
- Maintained translations, the software defined portion of Central Office Switches, for Siemens EWSD, Lucent 5ESS, Nortel DMS, and GTD-5 switch types.
- Served as Technical expert witness on behalf of Verizon in court hearing proceeding in which Verizon obtained a favorable ruling from the judge – received a letter of commendation from President of Verizon, WV for outstanding work.

**(1994-2000)**

**Bell Atlantic, Charleston, WV**

#### ***Translations Engineer***

- Designed and maintained Bell Atlantic's network for business customer applications to ensure revenue by supporting all functions of Network Operations.
- Met 100% of dates requested for projects including an NPA Split in VA, Local Number Portability, Automatic Route Selection (ARS), and Primary Rate ISDN (PRI).
- Supported standardization efforts and helped group obtain ISO-9000 certification.

- Systems Engineer
- Provided technical support including the design, sales, and implementation of telecommunication systems involving voice, data, and video applications for over 50 large business customers.
- Developed custom sales proposals in response to customer Request for Proposals (RFPs).
- Assisted five Account Managers in meeting revenue objectives over \$10 million.

**(1992-1994)**

**Anchor Hocking Packaging, Lancaster, OH**

***Design Engineer***

- Designed, implemented, and performed troubleshooting for the electrical control systems of sealing machines utilized in the food packaging industry.
- Coordinated projects with customers, equipment manufacturers, and outside consulting firms for automation of complete packaging lines.
- Designed wiring and interconnect diagrams in adherence to the National Electric Code and programmed PLCs and variable frequency drives for motor control applications.

**(1987-1990)**

**Virginia Power, Richmond, VA**

***Project Engineer***

- Managed voice and data projects for Virginia Power's telecommunications headquarters as part of a Cooperative Education program with West Virginia Institute of Technology.
- Coordinated installation of voice and data circuits on radio, fiber optic, and leased facilities.
- Designed equipment used to test supervisory control and data acquisition (SCADA) master computers and remote terminal units (RTUs), designed closed circuit television (CCTV) security system, multiple zone public address (PA) system, and voice frequency channel (VFC) system.

**Education**

(12/1991)

- Bachelor of Science in Electrical Engineering (B.S.E.E.)
- West Virginia Institute of Technology, Montgomery, WV

**A.3 Client Service Manager/Technical Service Manager/Financial Service Manager (Billing Support Representative and Service Manager)**

Melanie L Lopez

**Experience**

- Experienced in Client Services Management
- Contract Management
- Technical Design Sales and Project Management
- Federal and WV State Code, Regulatory Rules, Tariff Interpretations
- Policy Witness Advocacy
- Network Planning and Engineering

**Work Experience**

**Lead Specialist - Client Services Manager (Verizon)**

- Responsible for life cycle relationship, governance, and support of contractual commitments for the State of WV voice over IP and Data contracts. Oversees the operational health of Verizon services from delivery through lifecycle support.
- Ensures and manages internal & external resources to deliver services to maintain compliance with contractual commitments.
- Governs reporting and financial management relative to contractual commitments and Service Level Agreements, including billing account strategy, setup and optimization.
- Responsible to coordinate the establishment of customer specific Service Plans with strategic focus on Continual Service Improvement.
- Acts as escalation point of contact to the State of West Virginia for all Service related matters.
- Leads efforts to escalate across internal and external functional groups to resolve Service or State of West Virginia business impacting issues.

**Information Services Manager - WV Office of Technology (WVOT) (State of WV)**

- Assisted Agencies and the Accounts Payable team in the understanding of contractual terms, service descriptions and rates, and the auditing of invoices for IT contracts.
- With the WV Board of Risk Management and the State Privacy Officer, examined and cared for contractual risks including cyber security threats and controls for sensitive data sets.
- Managed IT Procurement and CTO review personnel, working with the WVOT technical teams to develop concise specifications, solicitations and evaluations as well as vendor performance management; contracts valued at over \$8M annually.
- Directed efficient CTO review and approval processes authorized by WV Code for the technical interoperability and economic feasibility of IT purchases for the WVOT and State Agencies purchases estimated at over \$300M annually.

**Customer Relationship and project manager (State of WV)**

- Managed Customer Relationship Managers, worked as technical liaisons supporting Agency contacts to understand business requirements and provide business analysis and technical support for IT-based projects and work requests.
- Project managed Verizon-provided hosted VoIP and Virtual Contact Center services, collaborating with Network Engineering team and Agency/customer contacts to document project requirements, milestones, communication plans.

**Regional Alternate Channel Manager (Frontier)**

- Managed third-party relationships with multiple sales partners contracted to sell Frontier residential and commercial services. Sales channels included: Outbound Telemarketing, Door-to-

Door (D2D), Retail Agents, Aggregators (on-line partners). Responsible for Alternate Channel sales objectives in the states of New York, Pennsylvania, West Virginia, North Carolina and South Carolina (East Region).

- Successfully met Cost per Gross Add (CPGA) goals for new acquisitions while managing a \$5M annual budget.
- Successfully project managed the development and execution of a commercial door-to-door (B2B) program in April 2012, initially requested by the Southeast Region, made available nationally for all Regions. The development of this program led to the prospective on-boarding of a sales partner to target winback customers with Frontier's newly available Small Business IP Voice service in West Virginia.

#### **Senior Consultant - Regulatory/Public Policy (Verizon)**

- Successfully project managed the Verizon WV apportionment of the federal Universal Service Fund - High Cost Fund that included more than \$60M in network infrastructure improvements.
- Testified before the WV Public Service Commission (PSC) on modifications of LATA boundaries resulting from community of interest issues. As a result, the proceeding was dismissed in Verizon's favor with no requirement to petition the FCC for a modification of the LATA boundary or any requirement for additional network construction.
- Contributed to the approval of a statewide E911 database system and rate restructure (\$1M annual new revenue) with Verizon as the statewide provider; responsible for the coordination of other ILEC costs and the evaluation of the Verizon cost study with the Public Service Commission (PSC) Staff and Consumer Advocate Division (CAD).
- Accountable for the Verizon WV implementation of the Federal Low Income Fund. Successfully managed the implementation as a liaison with the WV PSC Staff, CAD and the WV Department of Health and Human Resources.
- Provided staff support for legal counsel and other witnesses on wholesale and retail issues leading to positive results for Verizon. Results included the reclassification of all digital data services and business exchange services to "competitive" in 2005 and 2008, respectively, allowing for significant increased revenues; the successful mediation of a key interconnection agreement proposal, resulting in a valuable precedent for Verizon's use nationwide; and the successful petition for a waiver of the harmful rules regarding "slamming" and issues surrounding customer of record changes.
- Responsible for the regulatory oversight of Verizon retail services' implementations, billing, tax and accounting implementations, including an emphasis of understanding and interpreting WV Public Service Commission rules, Verizon state and federal tariffs and WV law.
- Successfully served as liaison to the PSC Staff and CAD for regulatory issues.

#### **Sales Engineer III - Enterprise Solutions Group (Verizon/Bell Atlantic)**

- Established rapport and technical relationships with key customer contacts. Provided sales and technical design assistance for data networking implementations, including both transport and premise equipment expertise with significant sales results including: Gigabit Ethernet over Dedicated SONET ring sales to WV Treasury and Charleston Area Medical Center (CAMC) including data CPE sale to CAMC; outsourced IP sale to City Holding (valued at \$9M); multiple Frame Relay and ATM services to various customers; integrated network, CPE and maintenance services to Walker Machinery, Northwood Health Systems; Intellilight Entrance Facility service to McJunkin Corporation and General Electric Corporation.
- Promoted from Sales Engineer II to Sales Engineer III in August 2001 based on performance and results.
- Selected as the branch Subject Matter Expert for new managed services in 2000; awarded marketing's Sales Engineering honor in recognition of Virtual Office Solution sales to Connection Depot and Charleston Area Medical Center.

- Attended Verizon, Cisco and other educational training; developed working knowledge of leading edge security, disaster recovery and storage area networking solutions.

**Engineer - Interoffice Facility Planning and Engineering, Circuit Administration Center  
(Verizon/Bell Atlantic)**

- Successfully planned and engineered the interoffice facility (IOF) network for the geographic area of southern West Virginia. Duties included capital budgeting and overall coordination of the installation of new technologies including SONET and asynchronous survivable transport systems, digital cross-connect systems, synchronization systems and testing systems.
- Served as the planning and provisioning liaison with other local exchange carriers and wholesale providers for the purpose of interconnection facilities.
- Provisioned high capacity service orders for both retail and wholesale customers, designed and maintained the strict circuit diversity requirements for critical services including the SS7 and E911 networks.
- Worked with Outside Plant Planning, Customer Network Engineering and Sales personnel to implement custom solutions for business customers.
- Forecasted and serviced the switched trunking network for approximately fifty WV central offices.
- Represented C&P Telephone in the joint planning of the message network with other local exchange carriers and wholesale providers (cellular and long distance).
- Performed exchange code (NXX) administration and associated routing instructions for network switching implementations.

- Board of Directors, Director of Membership, Director of Community Development, Director of Individual Development
- Fundraising for Duke Cancer Center, Jaycee Burn Center, Habitat for Humanity, Food Bank, Carolina House Assisted Living, and other North Carolina Charities

**APPENDIX B SLAS**

---

**B.1 VERIZON INTERNET DEDICATED SERVICES SERVICE LEVEL AGREEMENT**

## INTERNET DEDICATED SERVICES SERVICE LEVEL AGREEMENT

### 1 General

- 1.1 **Germany Specific Terms.** For Agreements under German law, all of the quality objectives that follow should be understood as voluntary commitments on the behalf of Verizon, rather than amendments to the services description for the Service, which forms part of the SOF. They are not assurances in the sense of warranties for which Verizon is liable. These commitments are made free of charge and they are not meant to be guarantees by the means of the German Civil Code (BGB). They shall furthermore not extend the rights Customer is entitled to by the BGB if Verizon is in breach of contract. Claims for compensation are determined solely by the scope of services defined in the Service Description and the quality levels given therein.
- 1.2 **Austrian Specific Terms.** For Agreements under Austrian law, all of the quality objectives that follow should be understood as voluntary commitments on the behalf of Verizon, rather than amendments to the services description for the Service, which forms part of the SOF. They are not assurances in the sense of warranties for which Verizon is liable. These commitments are made free of charge and any liability of Verizon for their achievement is excluded.
- 1.3 **Claims.** In order to make a valid claim the Customer needs to: Report any fault that constitutes a failure to meet the Service Level Agreement (SLA) to Verizon by raising a trouble ticket within 72 hours of the fault; and make a claim in writing within 30 days from the time the trouble ticket is closed.
- 1.4 **Maximum Credit.** The maximum credit payable in any month in relation to the Service shall be the MRC in respect thereof.
- 1.5 **General Exclusions.** No Service Credits will be payable, if the failure to reach any Service Level Standard is due to
- CPE associated with the Service,
  - Customer-ordered access circuits,
  - Customer's applications, equipment or facilities,
  - acts or omissions of Customer or user of the Internet Dedicated Service authorized by Customer, including any scheduled maintenance on the part of Customer, Customer contractors or Customer vendors,
  - scheduled maintenance on the part of Verizon,
  - acts or omissions on the part of any third party other than a local access provider over which Verizon exercises control,
  - periods of Service degradation, such as slow data transmission, where a Priority 1 trouble ticket has not been opened with Verizon and Customer has not released its Service for immediate testing, A "Priority 1 trouble ticket" means a total loss of Service or degraded Service to the extent that it is unusable by Customer and Customer is prepared to release its Service for immediate testing.
  - Customer inquiry for circuit monitoring purposes only,
  - Force Majeure Events.
- 1.6 **"Scheduled Maintenance"** shall mean any maintenance on the Verizon hub to which Customer's circuit is connected of which Customer is notified 7 days in advance. Notice of Scheduled Maintenance will be provided to Customer's designated point of contact by a method elected by Verizon (e.g., email). Upon receiving such notice, Customer may request to have such maintenance postponed to a later date if agreed to by Verizon.
- 1.7 **Measurement of Network performance.** Network Latency, Network Packet Delivery, Network Jitter, and Network Mean Opinion Score (MOS) shall be measured by averaging sample measurements taken during a calendar month between Verizon-designated backbone routers ("Hub Routers"). Each month's Network performance statistics relating to Network Latency, Network Packet Delivery, Network Jitter, and Network MOS shall be posted at <http://www.verizonenterprise.com/about/network/latency/>.

### 2 Availability Service Level Standard

- 2.1 **Availability Scope.** Verizon's Availability Service Level Standard provides that the Network (as defined in the applicable Agreement) will be available 100% of the time.
- 2.2 **Network Availability.** "Network Unavailability" consists of the number of minutes that the Network or a Verizon-ordered access circuit was not available to Customer, and includes unavailability associated with any maintenance at the Verizon data center where Customer's circuit is connected other than Scheduled Maintenance (defined above).

Network Unavailability will not include any unavailability resulting from causes set out in the General Exclusions section above.

**3 Availability Remedy.** If Verizon fails to meet the Service Availability Service Level Standard during any given calendar month in accordance with the above, for each cumulative hour of Network Unavailability or fraction thereof in any calendar month, Customer shall be entitled to receive a Service Credit equivalent to the pro-rated charges for 1 day of the MRC for the Service with respect to which a Service Availability Service Level Standard was not met and the pro-rated charges for 1 day of the MRC Customer pays for Verizon-provided Access to the Service. For Services delivered in Spain, such Service Credit will be refunded to Customer automatically in the following invoice.

### 3 Time to Repair (TTR) Service Level Standard

**3.1 TTR Scope.** The TTR Service Level Standard is to restore the Service following an event that results in the outage of a circuit within

- 4 hours in USA,
- 5 hours in Canada, Europe and AsiaPacific, and
- 8 hours in Latam.

**3.2 TTR Measurement.** The TTR time starts when a trouble ticket is opened by Verizon or Customer after the outage of a circuit other than for outages associated with the General Exclusions stated above, and concludes with the restoration of the affected circuit.

**3.3 TTR Remedy.** If Verizon fails to meet the TTR Service Level Standard in a month, Customer shall be entitled to receive a Service Credit equivalent to the pro-rated charges for 1 day of the Verizon MRC for the Service with respect to which this TTR Service Level Standard has not been met, provided that Customer may obtain no more than 1 Service Credit per day, irrespective of how often in that day Verizon failed to meet the TTR Service Level Standard. For Services delivered in Spain, such Service Credit will be refunded to Customer automatically in the following invoice.

### 4 Network Latency Service Level Standard

**4.1 Network Latency Scope.** Verizon's Network Latency Service Level Standard provides average round-trip transmissions times in milliseconds (ms) for the following network areas:

- North America: 45 ms or less between Hub Routers in North America.
- Europe: 30 ms or less between Hub Routers in Europe.
- Transatlantic: 90 ms or less between a Hub Router in the New York metropolitan area and a Hub Router in the London metropolitan area.
- Transpacific: 160 ms or less between a Hub Router in the Los Angeles metropolitan area and a Hub Router in the Tokyo metropolitan area.
- Europe to Asia Pacific: 250 ms or less between a Hub Router in the United Kingdom and in a Hub Router in India.
- Asia Pacific: 125 ms or less between Hub Routers in Asia Pacific.
- Latin America: 140 ms or less between Hub Routers in Latin America.

**4.2 Network Latency Remedy.** If Verizon fails to meet any Network Latency Service Level Standard in a month, Customer's account shall be automatically credited for that month. The credit will equal the pro-rated charges for 1 day of the Verizon MRC for the Internet Dedicated Service with respect to which the Service Level Standard has not been met.

### 5 Network Packet Delivery Service Level Standard

**5.1 Network Packet Delivery Scope.** Verizon's Network Packet Delivery Service Level Standard provides average packet delivery percentages for the following network areas:

- North America: 99.5% between Hub Routers in North America
- Europe: 99.5% between Hub Routers in Europe.
- Transatlantic: 99.5% between a Hub Router in the New York metropolitan area and a Hub Router in the London metropolitan area.
- Transpacific: 99% between a Hub Router in the Los Angeles metropolitan area and a Hub Router in the Tokyo metropolitan area.
- Europe to Asia Pacific: 99% between a Hub Router in the United Kingdom and in a Hub Router in India.
- Asia Pacific: 99% between Hub Routers in Asia Pacific.
- Latin America: 99% between Hub Routers in Latin America

- 5.2 **Network Packet Delivery Remedy.** If Verizon fails to meet any Network Packet Delivery Service Level Standard in a month, Customer's account shall be automatically credited for that month. The credit will equal the pro-rated charges for 1 day of the Verizon MRC for the Internet Dedicated Service with respect to which the Service Level Standard has not been met.
- Network Jitter Service Level Standard** (available only for service in the USA and in Europe)
- 6.1 **Network Jitter Scope.** Verizon's Network Jitter Service Level Standard provides that average jitter will not exceed 1 ms between Hub Routers in North America, and between Hub Routers in Europe.
- 6.2 **Network Jitter Remedy.** If Verizon fails to meet the Network Jitter Service Level Standard in a month, Customer shall be entitled to receive a Service Credit equivalent to the pro-rated charges for 1 day of the Verizon MRC for the Internet Dedicated Service with respect to which the Network Jitter Service Level Standard has not been met.
- 7 **Network Mean Opinion Score (MOS) Service Level Standard** (available only for service in the USA and in Europe)
- 7.1 **Network MOS Scope.** Verizon's MOS Service Level Standard provides that the average MOS performance is not less than 4.0 between Hub Routers in North America, and between Hub Routers in Europe.
- 7.2 **Network MOS Remedy.** If Verizon fails to meet the Network MOS Service Level Standard in a month, Customer shall be entitled to receive a Service Credit equivalent to the pro-rated charges for 1 day of the Verizon MRC for the Internet Dedicated Service with respect to which the MOS Service Level Standard has not been met.
- 8 **Outage Reporting Service Level Standard**
- 8.1 **Outage Reporting Scope.** Verizon's Outage Reporting Service Level Standard is to notify Customer within 15 minutes after Verizon's determination that Customer's service is unavailable.
- 8.2 **Outage Reporting Process.** Verizon's standard procedure is to ping Customer's router. If Customer's router does not respond after 2 consecutive 5-minute ping cycles (for service in the Asia Pacific region, North America and Latin America) or 5.5-minute ping cycles (for service in Europe), Verizon will deem the service unavailable and will contact Customer's designated point of contact by a method elected by Verizon (e.g., e-mail). Customer is solely responsible for providing Verizon accurate and current contact information for Customer's designated points of contact. Verizon will be relieved of its obligations under this Outage Reporting Service Level Standard if Verizon's contact information for the Customer is out of date or inaccurate.
- 8.3 **Outage Reporting Remedy.** If Verizon fails to meet the Outage Reporting Service Level Standard, Customer shall be entitled to receive a Service Credit equivalent to the pro-rated charges for 1 day of the MRC for the Service with respect to which the Outage Reporting Service Level Standard has not been met, provided that Customer may obtain no more than 1 Service Credit per day, irrespective of how often in that day Verizon failed to meet this Outage Reporting Service Level Standard.
- 9 **Denial of Service (DOS) Attack Response Service Level Standard**
- 9.1 **DOS Attack Response Scope.** Verizon will respond to DOS attacks reported by Customer within 15 minutes of Customer opening a complete trouble ticket with the Verizon Customer Support. Verizon defines a DOS attack as more than 95% bandwidth utilization.
- 9.2 **DOS Attack Response Process.** To open a Trouble Ticket for DOS, Customer must call the Verizon Customer Support and state: "I am under a Denial of Service Attack". A complete Trouble Ticket consists of Customer's Name, Account Number, Caller Name, Caller Phone Number, Caller Email Address and Possible Destination IP address / Type of Attack. Once engaged, Verizon Customer Support within the Security Operations Centre (SOC) will investigate the problem. They will provide confirmation that Customer is targeted by a DOS attack (rather than experiencing an internal or external routing issue). If the SOC concludes that the Customer is under active attack, they will take measures commercially appropriate for the type and level of attack. These measures may include placing filters on the routers in our network, black holing connections from the attack source network or active co-operation with the Internet Provider that provides service to the source of the attack when it can be clearly defined. Any remedies offered will be subject to the full co-operation of Customer. Verizon cannot guarantee that they will be able to mitigate or find a resolution that provides continued service to Customer.
- 9.3 **DOS Attack Response Remedy.** If Verizon fails to meet the DOS Attack Response Service Level Standard in a month, Customer shall be entitled to receive a Service Credit equivalent to the pro-rated Charges for 1 day of the Verizon MRC for the Service with respect to which this DOS Attack Response Service Level Standard has not been met, provided that Customer may obtain no more than 1 Service Credit per day, irrespective of how often in that day Verizon failed to meet the DOS Attack Response Service Level Standard.

## 10 Installation Service Level Standard

10.1 **Installation Scope.** Verizon's Installation Service Level Standard is to have installation of a Verizon-ordered access circuit and activation of a Verizon port completed by the date to which Verizon commits to deliver the Service ("Customer Due Date").

10.2 **Installation Measurement.** The Installation Service Level Standard is calculated by computing the period of time beginning on the date Verizon accepts the Customer order and ending on the Service Activation Date.

10.3 **Installation Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section above, the Service Installation Service Level Standard does not include any minutes associated with the following:

- Delays in installation related to Customer actions, moves or scheduling difficulties.
- Delays resulting from changes to a previously accepted order for Service from Customer, its agents or vendors.
- Any delays resulting from unavailability of Customer's premises, equipment, or facilities required to install the Service.
- Delays attributed to extending the Local Access demarcation point.
- Delays resulting from inaccurate or incorrect order information from Customer.
- Delays resulting from an order suspension due to credit issues involving Customer.

Any periods of delay attributable to the reasons above will be deducted from the Service installation time period.

10.4 **Installation Remedy.** If Verizon fails to meet the Installation Service Level Standard, Customer shall be entitled to receive a Service Credit equivalent to 50% of the first month's MRC for the applicable service.

**B.2 VERIZON PRIVATE IP SERVICE + GLOBAL PRIVATE IP SERVICE LEVEL AGREEMENT**

## PRIVATE IP SERVICE + GLOBAL PRIVATE IP SERVICE LEVEL AGREEMENT

- Service Level Agreement Summary.** The Private IP Service Level Agreement (“PIP SLA”) covers Global Private IP Services (collectively, the “Service” or “Private IP Service”). The PIP SLA consists of several service level standards (“Service Level Standards”). Customer may qualify for credits when the Verizon PIP Network performance fails to meet the stated thresholds established for a Service Level Standard. The PIP SLA may also cover the transport components (not the CPE components) of the Managed Private IP Service product if offered as a part of a Managed Private IP solution. The managed service components of a Managed Private IP solution may be covered in a separate Managed Services, Service Level Agreement.
- Definitions of Terms.** Terms used in this document are defined in the Terms and Definitions section at the end of this document.
- Service Level Standard Performance Measures.** The PIP SLA Service Level Standards are:

Parameter	Access Type	Scope	U.S.	Global Tier A	Global Tier B	Global Tier C
Availability	Platinum	End-to-End	100%	100%	100%	NA
	Wireline/Wireline Dual Connection*** Gold/Silver/Bronze + Gold/Silver/Bronze	End-to-End	100%	100%	100%	NA
	Wireline/Wireless Dual Connection**** Gold/Silver/Bronze + Wireless Private Network	End-to-End	100%	NA	NA	NA
	Gold	End-to-End	99.9%	99.9%	99.9%	99.5%
	Silver	End-to-End	99.5%	99.5%	99.5%	99.0%
	Bronze	End-to-End	99.0%	99.0%	99.0%	99.0%
	Time To Repair (TTR)	Platinum	End-to-End	2 Hours	4 Hours	4 Hours
Gold		End-to-End	4 Hours	5 Hours	8 Hours	8 Hours
Silver		End-to-End	4 Hours	8 Hours	8 Hours	8 Hours
Bronze		End-to-End	24 Hours	24 Hours	24 Hours	24 Hours
Service Installation		End-to-End	≤ 1.5M** 30 Business Days  ≤ 45M** 45 Business Days  Others 100% by	100% by Customer's Due Date	100% by Customer's Due Date	100% by Customer's Due Date

			Customer's Due Date			
Moves, Adds or Changes (MAC)		End-to-End	10 Business Days (Excluding Local Access Requests)	100% by Customer's Due Date	100% by Customer's Due Date	100% by Customer's Due Date
Core Network Transit Delay (C-NTD)*		P-Core	≤ 36 ms	NA	NA	NA

\*Core Network Transit Delay (C-NTD) is only applicable to the US P-Core Network. Measurements between distinct PE pairs are given by the Packet Transit Delay (PTD) Service Level Standard in the table below.

\*\*Excludes any facilities builds.

\*\*\*Wireline/Wireline Dual Connection: Verizon provides a second equivalent circuit for the same Customer Site that may be configured as either active or passive, and as providing either Geographic Diversity or Router Diversity, as Customer elects. If a site has Dual Connection then only Dual Connection SLA can be claimed and not the individual circuit availability SLAs. Dual Connection SLA can only be claimed if both primary and secondary circuits are down. Dual Connection SLA will be paid on both primary and secondary Port and Access MRR.

\*\*\*\*Wireline/Wireless Dual Connection: Verizon Mobile Private Network provides wireless back-up for Private IP service. If a site has Dual Connection then only Dual Connection SLA can be claimed and not the individual circuit availability SLAs. Dual Connection SLA can only be claimed if both primary and secondary circuits are down. Dual Connection SLA will be paid on the primary (Wireline) Port and Access MRR.

Parameter	Scope	EF/COS5	AF4x/COS4	AF3x/COS3	AF2x/COS2	AF1x/COS1	BE/COS0
Packet Delivery Ratio (PDR)*	PE-to-PE	≥ 99.995%	≥ 99.99%	≥ 99.99%	≥ 99.99%	≥ 99.99%	≥ 99.5%
Packet Transit Delay (PTD)	PE-to-PE	See applicable Packet Transit Delay standards below					
Jitter	PE-to-PE	< 5 ms	< 15 ms	NA	NA	NA	NA
Mean Opinion Score (MOS)**	P-Core	≥ 4.0	NA	NA	NA	NA	NA

\*Packet Delivery Ratio (PDR): for Private IP Secure Cloud Interconnection ("SCI"), only BE/COS0 applies.  
 Mean Opinion Score (MOS) is only applicable to the U.S., EMEA and APAC regions.

**Private IP Gateway:**

Parameter	Service Type	Scope	U.S.	Global Tier A	Global Tier B	Canada, Puerto Rico, U.S.
Availability	SCI*	PE-to-PE	100%	100%	100%	N/A
	Satellite Gateway**	End-to-End	99.5%	N/A	N/A	99.5%
	Private Wireless Gateway	PE-to-PE	100%	100%	N/A	N/A
Time To Repair (TTR)	SCI*	PE-to-PE	4 Hours	4 Hours	4 Hours	N/A
	Satellite Gateway**	PE-to-PE	4 Hours	N/A	N/A	4 Hours
	Private Wireless Gateway	PE-to-PE	4 Hours	4 Hours	N/A	N/A

\*Private IP Secure Cloud Interconnection

\*\*The Satellite Gateway SLA is based on Verizon's standard CPE recommendations designed to support the specified customer service parameters. The Satellite Gateway SLA for Availability is measured between Verizon's origination (Satellite earth station Hub) and Customer's destination demarcation point, as measured by Verizon.

The PIP SLA Performance Measures and exclusions are defined in detail below.

4. **Coverage Categories.** Service Level Standards vary by Class of service, Access type, Outage type and Geographic location. These Service Level Standards are defined below.
- 4.1 **Class of Service.** The PIP SLA class of service delivery methodology and traffic priority Class of Service are identified as follows:

Private IP Layer 3 Queue	Private IP Layer 2 Queue	Naming
EF*	COS5*	Real Time / Voice
AF4 AF41, AF42/43	COS4	Video / Priority Data
AF3 AF31, AF32/33	COS3	Mission Critical Data
AF2 AF21, AF 22/23	COS2	Transactional Data
AF1 AF11, AF12/13	COS1	General Data
BE	COS0	General Business - Default

\*The EF and COS5 queues are not designed for packets larger than 300 bytes or Bursty Traffic.

4.2 **Access Types.** The PIP SLA Service Level Standard metrics may be based on the following Access Types as indicated on the Customer's Master Service Order Form.

- Platinum
- Gold
- Silver
- Bronze

4.3 **Outage Type.** The PIP SLA defines Service disruptions as:

- Hard Outage
- Service Issue

4.3.1 The Service restoration priority determines the ranking of the repair actions against other Service Issues.

Priority Level Criteria	
Priority 1	Total loss of Service or degraded Service to the extent that it is unusable by Customer and Customer is prepared to release its Service for immediate testing
Priority 2	Degraded Service, however Customer is able to use the Service and is not prepared to release its Service for immediate testing
Priority 3	A problem with the Service that does not impact the functionality of the Service; including a single non-circuit specific quality of Service inquiry.
Priority 4	Non Service affecting requests (e.g. a Customer request for an incident report) and all other queries not covered by Priority 1 – 3 above. Scheduled maintenance

4.3.2 A Hard Outage has Priority 1 Service restoration priority with the exception of Bronze Hard outages which are handled as a Priority 2 ticket. Availability and TTR apply to Hard Outages.

4.3.3 A Service Issue has Priority 2 Service restoration priority. PTD, PDR and Jitter apply to Service Issues.

4.3.4 Priority 3 and Priority 4 issues will be addressed by Verizon. However, Priority 3 and Priority 4 issues are not eligible for SLA credits.

4.4 **Geographical Location.** The PIP SLA covers Service in all countries where PIP Service is offered, except as specified in the exclusions and limitations stated below. The PIP SLA is divided into geographic regions because Service Levels available from access Providers around the world differ between countries. The location and access method of a Customer Site will determine the applicable Service Levels. As a result of continuing expansion of the Verizon Private IP Network the listing of the Global Tier countries is dynamic and changes periodically as new countries are added. At Customer's request Verizon will confirm country status and/or provide a listing of countries that fall into these categories. The countries covered under this SLA are divided into the following categories:

- **U.S.:** Contiguous 48 United States, Hawaii and Alaska.
- **Global Tier A:** Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Italy, Japan, Luxembourg, Netherlands, Norway, Singapore, South Korea, Spain, Sweden, Switzerland, United Kingdom.
- **Global Tier B:** Argentina, Argentina MVIC (via Telmex), Australia, Brazil, Brazil MVIC (via Embratel), Bermuda, Bulgaria, Chile, Chile MVIC (via Telmex), China, China MVIC (via China Unicom, China Telecom, China Mobile or CITIC), Colombia, Colombia MVIC (via Telmex), Costa Rica, Czech Republic,

Dominican Republic, Greece, Guam, Hungary, India, Indonesia, Israel, Latvia, Malaysia, Mexico, Mexico MVIC (via TelMex, Axtel or MetroRed), Morocco, New Zealand, Panama, Peru, Peru MVIC (via TelMex), Philippines, Poland, Portugal, Puerto Rico, Romania, Russia, Slovakia, Taiwan, Thailand, Turkey, Ukraine, United Arab Emirates (UAE), and Uruguay.

- Global Tier C:** Albania, Algeria MVIC (via CMC Networks or Tawasul), Angola MVIC (via CMC Networks or Vodacom), Anguilla, Anguilla MVIC (via C&W), Antigua and Barbuda, Antigua and Barbuda MVIC (via C&W), Argentina MVIC (via Claro), Azerbaijan, Bahamas, Bahamas MVC (via C&W), Bahrain, Bahrain MVIC (via Tawasul), Bangladesh, Barbados, Barbados MVIC (via C&W), Belarus, Belize, Belize MVIC (via C&W), Benin MVIC (via CMC Networks), Bermuda, Bermuda MVIC (via C&W), Bolivia MVIC (via Tigo), Bosnia & Herzegovina, Botswana (via CMC Networks or Vodacom), Bulgaria, Burkina Faso (via CMC Networks), Burundi MVIC (via CMC Networks), British Virgin Island, British Virgin Islands MVIC (via C&W), Cameroon MVIC (via CMC Networks or Vodacom), Cape Verde MVIC (via CMC Networks), Cayman Islands, Cayman Islands MVIC (via C&W), Central African Republic MVIC (via CMC Networks), China, Colombia MVIC (via C&W or Tigo), Cote d'Ivoire MVIC (via CMC Networks or Vodacom), Congo Democratic Republic MVIC (via CMC Networks), Costa Rica, Costa Rica MVIC (via C&W and Tigo), Croatia, Curacao, Curacao MVIC (via C&W), Djibouti MVIC (via CMC Networks or Vodacom), Dominica, Dominica MVIC (via C&W), Dominican Republic, Dominican Republic MVIC (via C&W), Ecuador, Egypt, Egypt MVIC (via TE Data), El Salvador, El Salvador MVIC (via C&W or Tigo), Estonia, Ethiopia MVIC (via CMC Networks or Vodacom), Gabon MVIC (via CMC Networks or Vodacom), Gambia MVIC (via CMC Networks), Ghana MVIC (via CMC Networks or Vodacom), Greece, Grenada, Grenada MVIC (via C&W), Guatemala, Guatemala MVIC (via C&W or Tigo), Guinea MVIC (via CMC Networks), Guyana, Guyana MVIC (via C&W), Haiti, Haiti MVIC (via C&W), Honduras, Honduras MVIC (via C&W or Tigo), Iceland, India MVIC (via Bharti or Reliance), Iraq MVIC (via Tawasul), Jamaica, Jamaica MVIC (via C&W), Japan MVIC (via Softbank), Jordan, Jordan MVIC (via Tawasul) Kazakhstan, Kenya MVIC (via CMC Networks or Vodacom), Kuwait, Kuwait MVIC (via Tawasul), Latvia, Lebanon, Lebanon MVIC (via Tawasul), Lesotho MVIC (via CMC Networks or Vodacom), Liberia MVIC (via CMC Networks), Lithuania, Macao, Macedonia, Madagascar MVIC (via CMC Networks or Vodacom), Malawi MVIC (via CMC Networks or Vodacom), Mali MVIC (via CMC Networks), Malta, Mauritius MVIC (via CMC Networks or Vodacom), Monaco, Montenegro, Mozambique MVIC (via CMC Networks or Vodacom), Namibia MVIC (via CMC Networks or Vodacom), Nicaragua, Nicaragua MVIC (via Tigo or C&W), Niger MVIC (via CMC Networks), Nigeria MVIC (via CMC Networks or Vodacom), Oman, Oman MVIC (via Tawasul), Pakistan, Panama, Panama MVIC (via C&W or Tigo), Paraguay, Paraguay MVIC (via Tigo), Puerto Rico, Puerto Rico MVIC (via C&W), Qatar, Reunion, Romania, Russia MVIC (via Beeline), Rwanda MVIC (via CMC Networks), Saudi Arabia, Saudi Arabia MVIC (via STC), Senegal MVIC (via CMC Networks), Serbia, Sierra Leone MVIC (via CMC Networks), Slovakia, Slovenia, South Africa, South Africa MVIC (via CMC Networks or Vodacom), Sri Lanka, St. Kitts and Nevis, St. Kitts and Nevis MVIC (via C&W), Saint Maarten MVIC (via C&W), St. Lucia, St. Lucia MVIC (via C&W) St. Martin, St. Martin MVIC (via C&W), St. Vincent, St. Vincent MVIC (via C&W), Sudan MVIC (via CMC Networks), Suriname, Suriname MVIC (via C&W), Swaziland MVIC (via CMC Networks or Vodacom), Tanzania MVIC (via CMC Networks or Vodacom), Togo MVIC (via CMC Networks), Trinidad and Tobago, Trinidad and Tobago MVIC (via C&W), Tunisia MVIC (via CMC Networks), Turkey, Turkey (Turknet), Turks and Caicos, Turks and Caicos MVIC (via C&W), United Arab Emirates (UAE) MVIC (via Etisalat), Uganda MVIC (via CMC Networks or Vodacom), Uruguay, U.S. Virgin Islands, U.S. Virgin Islands (via C&W), Venezuela, Vietnam, Yemen MVIC (via Tawasul), Zambia MVIC (via CMC Networks or Vodacom), Zimbabwe MVIC (via CMC Networks or Vodacom).

Service in the countries without a MVIC designation listed above is provided via a backhaul to the nearest Verizon Provider Edge device. The PTD, PDR, and Jitter Service Level Standards for these locations are based on measurements at Verizon's Provider Edge device. Additional information on the locations of the Verizon Provider Edge is available through Customer's account team or on the Verizon Looking Glass portal for Private IP.

## 5. Service Level Standards Defined

### 5.1 Availability

5.1.1 **Definition.** End-to-end Circuit up-time.

5.1.2 **Standard.** See Service Level Standard for Performance Measurements above. Availability includes the local access from the Customer Edge (CE) to the Verizon PIP Provider Edge (PE) and the PIP Network. Availability excludes CPLL and the Customer CPE.

5.1.3 **Calculation.** Availability is determined by computing the total number of Eligible Hard Outage Minutes per Priority 1 trouble tickets in a calendar month for a specific Customer Circuit divided by the total number of minutes based on a 30-day calendar month. Availability is calculated after a trouble ticket is opened with Verizon and represents the percentage of time that the Circuit is available within a given calendar month.

$$\text{Availability (\%)} = \left( 1 - \left( \frac{\text{Total Eligible Hard Outage Minutes per Circuit per month}}{30 \text{ days} * 24 \text{ hours/day} * 60 \text{ minutes/hour}} \right) \right) \times 100$$

5.1.4 **Credit Structure.** The credit is based on the number of Eligible Hard Outage Minutes. Availability applies only in those cases in which a PIP trouble ticket is opened with Verizon and the Customer subsequently allows the necessary physical or logical access to its premises and facilities for testing if required by Verizon.

**Availability credit table:**

Availability				Credits as a percent of MRC					
PIP Network Down Time		% of Up Time		All Global Tiers and US	U.S. and Global Tier A	Global Tier B	Global Tier C	U.S. and Global Tier A	U.S. and Global Tier A & B
From (Mins)	To (Mins)	From %	To %	(Platinum or Gold/Silver/Bronze + Wireless Private Network)	(Gold, Silver or Bronze)	(Gold, Silver or Bronze)	(Gold, Silver or Bronze)	Satellite	SCI and Private Wireless Gateway
1	43	< 100%	≥ 99.9%	5%	NA	NA	NA	NA	5%
44	86	< 99.9%	≥ 99.8%	10%	10%	5%	NA	NA	10%
87	216	< 99.8%	≥ 99.5%	15%	10%	5%	NA	NA	15%
217	432	< 99.5%	≥ 99.0%	25%	15%	10%	5%	5%	25%
433	648	< 99.0%	≥ 98.5%	30%	15%	10%	10%	10%	30%
649	864	< 98.5%	≥ 98.0%	40%	20%	10%	10%	10%	40%
> 864		< 98.0%		50%	20%	10%	10%	10%	50%

5.1.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, Availability Service Level Standard measurements do not include the following:

- Any act or omission on the part of any third party other than a local access provider over which Verizon exercises control.

- Periods of Service degradation, such as slow data transmission, where a Priority 1 trouble ticket has not been opened with Verizon and Customer has not released its Service for immediate testing.
- Customer inquiry for circuit monitoring purposes only.
- Availability Service Level Standards for MVIC services are only applicable for MVIC locations where local access is provided by one of the corresponding MVIC partners identified above.
- Off-Net Bronze hard outage to be handled as a Priority 2 ticket.
- Verizon Wireless Private Network charges are excluded.

## 5.2 Time To Repair (TTR)

- 5.2.1 **Definition.** Time taken to restore end-to-end Services during a Hard Outage on a specific Circuit.
- 5.2.2 **Standard.** See Service Level Standard Performance Measurements table above. TTR includes the Local Access from the Customer Edge (CE) to the Verizon PIP Provider Edge (PE) and the PIP Network. TTR excludes CPLL and the Customer CPE.
- 5.2.3 **Calculation.** TTR is determined by computing the time taken to repair each Eligible Hard Outage Priority 1 trouble ticket in a calendar month for a specific Customer Circuit with the exception of Hard Outages for Bronze which is handled as a Priority 2 ticket. The duration of each Hard Outage on a specific Circuit is calculated after a trouble ticket is opened with Verizon.  $TTR (Hrs) = \text{Time taken to repair a specific Circuit experiencing an Eligible Hard Outage Priority 1 trouble. Bronze hard outage to be handled as a Priority 2 ticket.}$
- 5.4 **Credit Structure.** The credit is based on the number of Eligible Hard Outage Minutes. TTR applies only in those cases in which a PIP Hard Outage Priority 1 trouble ticket is opened with Verizon and the Customer subsequently allows the necessary physical or logical access to its premises and facilities for testing if required by Verizon and with the exception of Hard Outages for Bronze, which are handled as a Priority 2 ticket. Circuits may qualify for the TTR Service Level Standard in addition to the Availability Service Level Standard.

### TTR credit table:

TTR		Credit as a Percent of MRC						
PIP Network Outage Time		U.S.	Global Tiers A & B	U.S.	Global Tier A	Global Tier B	Global Tiers C	U.S. and Global Tier A & B
From Hr:Min:Sec	To Hr:Min:Sec	(Platinum)	(Platinum)	(Gold, Silver or Bronze)	(Gold, Silver or Bronze)	(Gold, Silver or Bronze)	(Gold, Silver or Bronze)	SCI, Satellite and Private Wireless Gateway
2:00:00	3:59:59	4%	NA	NA	NA	NA	NA	N/A
4:00:00	4:59:59	4%	4%	2%	NA	NA	NA	4%

≥ 12:00:00		10%	10%	4%	4%	4%	4%	10%

- 5.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, TTR Service Level Standard measurements do not include the following:
- Any act or omission on the part of any third party, other than a Local Access provider over which Verizon exercises control.

- Periods of Service degradation, such as slow data transmission, where a Priority 1 trouble ticket has not been opened with Verizon and Customer has not released its Service for immediate testing.
- Customer inquiry for circuit monitoring purposes only.
- TTR Service Level Standards for MVIC services are only applicable for MVIC locations where Local Access is provided by one of the corresponding MVIC partners identified above.
- Bronze hard outage to be handled as a Priority 2 ticket.

### 5.3 Core Network Transit Delay (C-NTD)

5.3.1 **Definition.** Core Network round trip delay average between Verizon-designated core backbone network nodes across a specific region.

5.3.2 **Standard.** See Service Level Standard Performance Measurements table above.

5.3.3 **Calculation.** Verizon calculates the C-NTD by using 64-byte packets for measuring round trip transit delay in milliseconds between Verizon-designated backbone network nodes across a specific region and averaging the results over a 30 day period. The measurements exclude any traffic that is re-routed as a result of a network outage or scheduled maintenance. The monthly measurements are available at the following link: <https://www.verizon.com/business/terms/latency/#pip>.

5.3.4 **Credit Structure.** To receive a credit, Customer must submit their request within 30 business days after the month in which the C-NTD Service Level Standard was not met. Such credit will equal the pro-rated charges for one day of the MRC for the Customer's Connections within the specific region during the calendar month in which the C-NTD Service Level Standard was not met.

#### C-NTD credit table:

For Standard not met	Credit
Core Network Transit Delay (C-NTD)	The pro-rated charges equal to one day's MRC for the Customer's Connections

5.3.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, C-NTD Service Level Standard measurements do not include the following:

- All Customer data traffic that is marked EF/COS5 by Customer and is not compliant with the subscribed EF/COS5 Real Time CAR or any other data traffic that is not compliant with the applicable subscribed CAR.
- All Customer data traffic that is marked by Customer using IP Precedence/DSCP settings not supported by the Verizon PIP Network.
- Core Network Transit Delay (C-NTD) is only applicable to the US P-Core Network

### 5.4 Packet Transit Delay (PTD)

5.4.1 **Definition.** Round trip data packets delay between origination and destination Ports.

5.4.2 **Standard.**

- PE PTD is the provider edge PE-to-PE monthly average round trip transit delay in milliseconds between respective Provider Edge device pairs on the Verizon PIP Network.
- The PE PTD Service Level Standards is applicable for the following traffic priority classes:
  - Standard PIP Service

- Enhanced Traffic Management (ETM) option
- PE PTD Service Level Standard Performance Measurements for international and U.S. locations are stated in the PIP PTD Matrix located in the Verizon Secure Guide portal at: [https://www.verizon.com/business/service\\_guide/secure/cp\\_pip\\_sla\\_matrix\\_SG.xlsx](https://www.verizon.com/business/service_guide/secure/cp_pip_sla_matrix_SG.xlsx).

5.4.3 **Calculation.** PTD is determined by using 64-byte packets for measuring transit delay in milliseconds across the Verizon PIP Network and averaging the results over a thirty day period.

- PTD calculation is as follows:  $PTD = T2 - T1$ . Where: T1 is the time in milliseconds when an IP packet leaves the ingress reference point (i.e., Packet exit event) and T2 is the time in milliseconds when an IP packet arrives back at the ingress reference point (i.e. Packet return event).
- PE PTD is measured between the respective origination and destination infrastructure ports, i.e. between the points where the packet enters and exits Verizon's PIP Network, regardless of the mode of access to Verizon's PIP Network. External factors, including, but not limited to, Local Access issues, are excluded from the measurement.

5.4.4 **Credit Structure.** If the PTD Service Level Standard is not met, it is a Service Issue and is considered a Service Restoration Priority 2. If the PTD metric for a pair of Customer Connections or Customer Sites is not being met, Customer may be eligible for a credit. To obtain a credit, a trouble ticket must be opened with Verizon when a PTD Service Level Standard is not being met or if a Service Issue is identified. Verizon will work with Customer to confirm that a PTD issue exists and repair the problem(s), as applicable. Once Verizon confirms that the PTD Service Level Standard is not being met, Verizon will have 30 calendar days to repair the Service to meet the PTD Service Level Standard and close the applicable trouble ticket, and in such an event, Customer will not be eligible for a credit. If, after 30 calendar days of opening the trouble ticket, the PTD Service Level Standard continues to not be met, Customer will qualify for a credit. Customer's measurement of PTD prior to opening a trouble ticket may be considered by Verizon in determining the need to repair the Service.

**PTD credit table:**

For Standard not met	Credit as % of MRC
Packet Transit Delay (PTD)	20%

5.4.4.1 Service Issues occur between pair Ports of the Private IP Network. Consequently, two Customer connections will be impacted by each Service Issue. For Service Issue Service Level Standard credit purposes, the MRC will be defined as the average of the MRCs for each of the two impacted Customer Connections.

5.4.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, PTD Service Level Standard measurements do not include the following:

- All Customer data traffic that is marked EF/COS5 by Customer and is not compliant with the subscribed EF/COS5 Real Time CAR or any other data traffic that is not compliant with the applicable subscribed CAR.
- All Customer data traffic that is marked by Customer using IP Precedence/DSCP settings not supported by the Verizon PIP Network.
- PTD Service Level Standards for MVIC locations are based on measurements at the Verizon owned Provider Edge devices and not the MVIC partner location.
- Any delay or dropped data packets caused by a Customer who subscribes to Access Oversubscription and Customer's traffic over a circuit exceeds 100% of the Access speed of the circuit.

**5.5 Packet Delivery Ratio (PDR)**

5.5.1 **Definition.** Effectiveness in transporting and delivering customer packets across the PIP Network.

5.5.2 **Standard.**

- PE PDR is the PE-to-PE monthly average Packet Delivery Ratio. The PE PDR Service Level Standards is applicable for the following traffic priority classes: Standard PIP Service and Enhanced Traffic Management (ETM) option.
- PE PDR Service Level Standard is:
- For the EF/COS5 traffic priority class: 99.995%
- For the AF/COS4, COS3, COS2, COS1 traffic priority class: 99.99%
- For the BE/COS0 traffic priority class: 99.5%

5.5.3 **Calculation.**

- PDR is determined by using 64-byte packets for measuring the number of packets within a specified traffic priority class that are successfully delivered divided by the total number of packets sent within the specified traffic priority class during a calendar month. For data consisting of packets within the specified traffic priority class, the PDR is as follows:

$$\text{PDR (\%)} = \frac{\text{Packets Delivered}}{\text{Packets Offered}} \times 100$$

- PE PDR is measured between the respective origination and destination infrastructure Ports, i.e. between the points where the packet enters and exits Verizon’s PIP Network, regardless of the mode of access to Verizon’s PIP Network. External factors, including, but not limited to, Local Access issues, are excluded from the measurement.

5.5.4 **Credit Structure.** If the PDR Service Level Standard is not met, it is a Service Issue and is considered Service Restoration Priority 2. If the PDR metric for a pair of Customer Connections or Customer Sites is not being met, Customer may be eligible for a credit. To obtain a credit, a trouble ticket must be opened with Verizon when a PDR Service Level Standard is not being met or if a Service Issue is identified. Verizon will work with Customer to confirm that a PDR issue exists and repair the problem(s), as applicable. Once Verizon confirms that the PDR Service Level Standard is not being met, Verizon will have 30 calendar days to repair the Service to meet the PDR Service Level Standard and close the applicable trouble ticket, and in such an event, Customer will not be eligible for a credit. If, after 30 calendar days of opening the trouble ticket, the PDR Service Level Standard continues to not be met, Customer will qualify for a credit. Customer’s measurement of PDR prior to opening a trouble ticket may be considered by Verizon in determining the need to repair the Service.

**PDR credit table:**

For Standard not met	Credit as % of MRC
Packet Delivery Ratio (PDR)	20%

5.5.4.1 Service Issues occur between pair Ports of the Private IP Network, including SCI. Consequently, two Customer connections will be impacted by each Service Issue. For Service Issue Service Level Standard credit purposes, the MRC will be defined as the average of the MRCs for each of the two impacted Customer Connections.

5.5.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, PDR Service Level Standard measurements do not include any of the following:

- Packets that are not delivered due in whole or in part to factors unrelated to Verizon's PIP/PIPL2 Network.
- Packets dropped at infrastructure ingress or egress due to improper Customer Port speed specifications of Customer Port speeds.
- All Customer data traffic that is marked EF/COS5 by Customer and is not compliant with the subscribed EF/COS5 Real Time CAR or any other data traffic that is not compliant with the applicable subscribed CAR.
- All Customer data traffic that is marked by Customer using IP Precedence/DSCP settings not supported by the Verizon PIP Network.
- PDR Service Level Standards for MVIC locations are based on measurements at the Verizon owned Provider Edge devices and not the MVIC partner location.
- Any delay or dropped data packets caused by a Customer who subscribes to Access Oversubscription and Customer's traffic over a circuit exceeds 100% of the Access speed of the circuit.

## 5.6 Jitter

5.6.1 **Definition.** Displacement of data packets from their ideal sequence or position in time.

### 5.6.2 Standard.

- PE Jitter is the monthly average mean deviation of the difference in packet arrival time at the receiver compared to the sender for a pair of packets one-way between respective Provider Edge Devices. The Jitter Service Level Standards is applicable for the following traffic priority classes:
- Enhanced Traffic Management (ETM) option:
  - PE Jitter is applicable to data packets marked EF by Customer and compliant with the subscribed EF Real Time CAR.
  - PE Jitter is applicable to data packets in the AF4 traffic class and compliant with the AF4 forwarding priority.
  - Other traffic classes are not available for PE Jitter Service Level Standards.
- PE Jitter Service Level Standard provides that the maximum delay variance between Verizon Private IP PE devices is less than 5 ms one-way for the EF traffic class and less than 15 ms one-way for the AF4 traffic class.
- If a Jitter issue is identified, packet fragmentation technologies or similar capability may be required to remedy the issue.

### 5.6.3 Calculation.

- Jitter is determined by using 64-byte packets for measuring the mean deviation of the difference in packet spacing at the receiver compared to the sender for a pair of packets. The mean is determined by sampling the PIP Network frequently and averaging the results over a thirty day period. The calculation for Jitter ( $J_i$ ) for two consecutive packets  $i$  and  $i+1$  is as follows:  $Jitter (J_i) = \Delta T_i - \Delta T_i'$

Where:

$T_i$  = time 1st byte of packet  $i$  is received by the source Port (ingress time)

$T_{i+1}$  = time 1st byte of packet  $i+1$  is received by the source Port (ingress time)

$T_i'$  = time 1st byte of packet  $i$  is received at the destination Port (egress time)

$T_{i+1}'$  = time 1st byte of packet  $i+1$  is received at the destination Port (egress time)

And:

$\Delta T_i = T_{i+1} - T_i$  ( $\Delta T_i$  is the time interval between packets at ingress)

$\Delta T_i' = T_{i+1}' - T_i'$  ( $\Delta T_i'$  is the time interval between packets at egress)

The Average Jitter (J-avg) is calculated as follows:

Average Jitter (J-avg) =  $\sum | J_i | / (N-1)$

Where:

N is the number of sample packets over 30 day period

- PE Jitter is measured between the respective origination and destination infrastructure Ports, i.e. between the points where the packet enters and exits Verizon's PIP Network, regardless of the mode of access to Verizon's PIP Network. External factors, including, but not limited to, Local Access issues, are excluded from the measurement.

5.6.4 **Credit Structure.** If the Jitter Service Level Standard is not met it is a Service Issue and is considered Service Restoration Priority 2. If the Jitter metric for a pair of Customer Connections or Customer Sites is not being met, Customer may be eligible for a credit. To obtain a credit, a trouble ticket must be opened with Verizon when a Jitter Service Level Standard is not being met or if a Service Issue is identified. Verizon will work with Customer to confirm that a Jitter issue exists and repair the problem(s), as applicable. Once Verizon confirms that the Jitter Service Level Standard is not being met, Verizon will have 30 calendar days to repair the Service to meet the Jitter Service Level Standard and close the applicable trouble ticket, and in such an event, Customer will not be eligible for a credit. If, after 30 calendar days of opening the trouble ticket, the Jitter Service Level Standard continues to not be met, Customer will qualify for a credit. Customer's measurement of Jitter prior to opening a trouble ticket may be considered by Verizon in determining the need to repair the Service.

**Jitter credit table:**

For Standard not met	Credit as % of MRC
Jitter	20%

5.4.1 Service Issues occur between pair Ports of the Private IP Network. Consequently, two Customer connections will be impacted by each Service Issue. For Service Issue Service Level Standard credit purposes, the MRC will be defined as the average of the MRCs for each of the two impacted Customer Connections.

- 5.6.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, Jitter Service Level Standard measurements do not include any of the following:
- PE Jitter applicable to the AF4 traffic class is available only for Video traffic that uses either AF41 or CS4 classification when the AF4 queue facilitating such Video traffic is not mixed with any other type of traffic.
  - All Customer data traffic that is marked EF by Customer and is not compliant with the subscribed EF Real Time CAR or any other data traffic that is not compliant with the applicable subscribed CAR.
  - All Customer data traffic that is marked by Customer using IP Precedence/DSCP settings not supported by the Verizon Private IP Network.
  - Jitter Service Level Standards for MVIC locations are based on measurements at the Verizon owned Provider Edge devices and not the MVIC partner location.
  - Jitter Service Level Standard is not applicable to Private IP Layer 2 services.

**5.7 Service Installation**

5.7.1 **Definition.** Period of time beginning on the Order Acceptance date and ending on the date Verizon completes installation of the Service and the Service is up and billable. Customer's Due Date is defined as the date to which Verizon commits to deliver the Service.

2 **Standard.** See Service Level Standard Performance Measurements table above.

5.7.3 **Calculation.** The Service Installation Service Level Standard is calculated by computing the period of time beginning on the Order Acceptance date and ending on the date Verizon completes installation of the Service and the Service is up and billable.

5.7.4 **Credit Structure.** To obtain a credit, Customer must report the delay in Service installation to the Verizon account team as described in the in the Credit Section of the SLA.

**Service Installation credit table:**

For Standard not met	U.S.	Global Tier A	Global Tier B	Global Tier C
Service Installation	50% of the first month's MRC on the applicable Connection	50% of the first month's MRC on the applicable Connection	50% of the first month's MRC on the applicable Connection	50% of the first month's MRC on the applicable Connection

5.7.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, the Service Installation Service Level Standard does not include any minutes associated with the following:

- Delays in installation related to Customer actions, moves or scheduling difficulties.
- Delays resulting from changes to a previously accepted order for Service from Customer, its agents or vendors.
- Any delays resulting from unavailability of Customer's premises, equipment, or facilities required to install the Service.
- Delays attributed to extending the Local Access demarcation point.
- Delays resulting from inaccurate or incorrect order information from Customer.
- Delays resulting from an order suspension due to credit issues involving Customer.

Any periods of delay attributable to the reasons above will be deducted from the Service Installation time period.

**5.8 Moves, Adds or Changes (MAC)**

5.8.1 **Definition.** The MAC interval is the period of time beginning on the Order Acceptance date and ending on the date Verizon completes the Order for the Service. Customer's Due Date is defined as the date to which Verizon commits to deliver the Service.

5.8.2 **Standard.** See Service Level Standard Performance Measurements table above.

5.8.3 **Calculation.** The MAC Service Level Standard is calculated by computing the period of time beginning on the Order Acceptance date and ending on the date Verizon completes the order for the Service.

5.8.4 **Credit Structure.** To obtain a credit, Customer must report the delay in Service order completion to the Verizon account team as described in the Credit Section of the SLA.

**MAC credit table:**

For Standard not met	U.S.	Global Tier A	Global Tier B	Global Tier C
----------------------	------	---------------	---------------	---------------

MAC	50% of MRC on the applicable Connection	50% of MRC on the applicable Connection	50% of MRC on the applicable Connection	50% of MRC on the applicable Connection
-----	---	---	---	---

5.8.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, the MAC Service Level Standard does not include any minutes associated with the following:

- Delays in installation related to Customer actions, moves or scheduling difficulties.
- Delays resulting from changes to a previously accepted order for Service from Customer, its agents or vendors.
- Any delays resulting from unavailability of Customer's premises, equipment, or facilities required to install the Service.
- Delays attributed to extending the Local Access demarcation point.
- Delays resulting from inaccurate or incorrect order information from Customer.
- Delays resulting from an order suspension due to credit issues involving Customer.
- MAC problems for services provided pursuant to any promotional Move, Add or Change offerings might not be eligible for credit refunds.

Any periods of delay attributable to the reasons above will be deducted from the MAC installation time period.

5.9 **Mean Opinion Score (MOS)**

5.9.1 **Definition.** Quality level of the audio fidelity and clarity of a voice call.

5.9.2 **Standard.** See Service Level Standard Performance Measurements table above.

5.9.3 **Calculation.** Verizon calculates MOS by sampling performance scores for the EF traffic class, using the standards based ITU-T G.107 (E-model) and assuming a G.711 codec, between Verizon-designated core backbone network nodes and averaging the results over a thirty day period. The monthly measurements are available at the following link: <https://www.verizon.com/business/terms/latency/#pip>.

5.9.4 **Credit Structure.** To receive a credit, Customer must submit their request within 30 business days after the month in which the MOS Service Level Standard was not met. Such credit will equal the pro-rated charges for one day of the MRC for the Customer's Connections within the specific region during the calendar month in which the MOS Service Level Standard was not met.

**MOS credit table:**

For Standard not met	Credit
Mean Opinion Score (MOS)	The pro-rated charges equal to one day's MRC for the Customer's Connections

5.9.5 **Exclusions.** In addition to the General Exclusions, as set out in the General Exclusion Section below, MOS Service Level Standard measurements do not include the following:

- The MOS Service Level Standard applies only to data packets marked EF by Customer and compliant with the Customer's subscribed EF Real Time CAR.
- The MOS Service Level Standard applies only to the U.S., EMEA and APAC regions.
- The MOS Service Level Standard is not applicable to the Private IP Layer 2 services.

## Credit Requests and Application Process

### 6.1 Service Level Agreement Credit Application Structure.

- For any calendar month in which Verizon fails to meet any of the Service Level Standards stated in this document the credit structure for the Service Level Standards listed above will be applied to the corresponding net billing MRC for the specific Connection(s) affected by a PIP Network Hard Outage(s) or Service Issue(s).
- The total of all credits within any one month is limited to a maximum of 100% of the MRC for the specific Connection or Site, as applicable, which was impacted by any non-compliance with the Service Level Standard(s). Credits are not cumulative month to month.
- Credits for Hard Outages are determined based on Eligible Hard Outage Minutes and Customer may claim the TTR Service Level Standard credit in addition to the Availability Service Level Standard credit in a given calendar month. Customer may claim only one credit within a particular Service Issue Service Level Standard category during a given month. Customer cannot claim credits from both the Hard Outage and Service Issue categories for the same event. Customer can request to have compliance checked for all of the standard Service Level Standard commitments when requesting credits in any given month.
- To receive a credit, a trouble ticket must be opened with Verizon and Customer must submit their credit request no later than the stipulated time allowed to claim the specific Service Level Standard credit. The appropriate refund amount will be credited to the Customer's account at the billing account number (BAN) level in one lump sum, as opposed to each individual circuit or all circuits under multiple BANs. The appropriate refund amount will be appearing as a line item on a bill delivered within 90 calendar days following Verizon's confirmation of non-compliance with the Service Level Standard.
- Credits do not apply to Local Access or backhaul charges.

### 6.2 Process for Customer to Apply for Service Level Agreement Credits. The process to apply for SLA credits is provided below for each of the Service Level Standards.

**6.2.1 Opening a Trouble Ticket.** In the case that a trouble ticket is required to document an outage or service event for credit compliance, this can be done either through the Customer Service Center or through the web-based Verizon Enterprise Center. The number for the assigned Customer Service Center is printed on Customer's invoice. Access to the Verizon Enterprise Center can be requested at the first use by registering at the Verizon Enterprise Center portal <https://enterprisecenter.verizon.com/>.

**6.2.2 Submitting a Service Level Agreement Credit Request.** The request for a SLA credit is submitted in writing from Customer to the account team. The timing and content of the request varies by Service Level Standard. This communication can be through email or by fax.

### 6.2.3 Trouble Ticket and Credit Request by Service Level Agreement

**6.2.3.1 Availability and Time To Repair (TTR).** In order for the Hard Outage to qualify for an SLA credit Customer must do the following:

**6.2.3.1.1** A trouble ticket is opened with Verizon within 72 hours of the time the Hard Outage.

**6.2.3.1.2** Submit an SLA credit request to Verizon within 30 days of the closing of the trouble ticket. The request may be submitted in writing to Customer's account team or via the Verizon Enterprise Center portal. The credit request must contain the following information:

- The date the Hard Outage occurred.
- The time the Hard Outage began and ended.

- The circuit ID(s) for each circuit(s) that was impacted.

6.2.3.2 **Packet Transit Delay (PTD), Packet Delivery Ratio (PDR) and Jitter.** In order for the Service Issue to qualify for an SLA credit Customer must do the following:

- A trouble ticket is opened with Verizon within 72 hours of the time the Service Issue arose.
- Submit an SLA credit request to Verizon within 30 days of the closing of the trouble ticket. The request may be submitted in writing to Customer's account team or via the Verizon Enterprise Center portal. The credit request must contain the following information:
  - The date the Service Issue occurred.
  - The time the Service Issue began and ended.
  - The circuit ID(s) for each circuit(s) that was impacted.

6.2.3.3 **Core Network Transit Delay (C-NTD) and Mean Opinion Score (MOS).** To receive a credit, Customer must make a credit request in writing (e-mail or fax) to the Verizon account team within 30 business days after the month in which the C-NTD or MOS Service Level Standard was not met.

6.2.3.4 **Service Installation and Moves, Adds, or Changes (MAC).** Customer must report the delay in Service installation or MAC to the appropriate Customer Service Center when the target date is missed. Customer must make a credit request in writing (e-mail or fax) to Verizon account team within 30 days of the date that Verizon completes the installation of the circuit. Customer must document the following information when requesting the credit:

- The date on which the Service Installation Period or MAC interval began.
- The date specified for Service Installation or Service order completion in the Customer's order.
- The date installation or Service order was completed.
- The Port and Local Access ID numbers for the installed Service or the related Service order.

6.3 **Service Level Agreement Credit Time Limitation.** Service Credits made by Verizon to Customer under this Service Level Agreement are the sole and exclusive remedy available to Customer in respect of any failure to meet a Service Level Standard. Notwithstanding the preceding sentence, Customer may pursue the following options after three consecutive months of non-compliance with the PIP Service SLA:

6.3.1 Customer may elect to continue the Service for the affected connection inclusive of the credit. Customer can only receive a maximum of six months of credits for any individual Service Level Standard within a 12-month period regardless of the number of Connections.

6.3.2 Customer may elect to discontinue all PIP Service for an affected Connection without liability except for charges incurred prior to discontinuation of the Service. To cancel the Service for a Connection, Customer must submit a written disconnect notice to its Verizon account team within 30 days following the end of either the third or subsequent consecutive month of Verizon's failure to meet the Service Level Standard.

7. **General Exclusions.** The following exclusions apply to all Service Level Standards contained in this document:

7.1 Service Level Standards is limited to measurements taken at and service events occurring at or within the Provider Edge for Private IP services delivered when using the following access methods to Private IP:

- Network to network interface (NNI) partner via a MVIC.
- Satellite Port.
- Customer Provided Access.
- International Private Line (IPL).

- 7.2 No Service Level Standards are provided for the following nor will any Service level standard not met be considered for:
- Service installations prior to acceptances by Customer.
  - Packets marked EF/COS5 by Customers that are larger than 300 bytes.
  - Bursty Traffic in the EF/COS5 queue.
- 7.3 Private IP Layer 2 Specific Exclusions:
- Private IP Layer 2 excludes Mean Opinion Score (MOS) and Jitter Service Level Standards.
  - Private IP Layer 2 Coverage Exclusions:
    - All MVIC locations.
    - The following countries: Argentina, Brazil, Canada, Chile, Colombia, Mexico, Panama, Peru, Puerto Rico and Venezuela.
- 7.4 Service Level Standard measurements do not include periods of PIP Network Outage resulting in whole or in part from one or more of the following causes:
- Any Hard Outage minutes associated with failure of CPLL.
  - CPE associated with the PIP Service.
  - Any act or omission on the part of the Customer, its contractors or vendors, or any other entity over which the Customer exercises control or has the right to exercise control.
  - Any scheduled maintenance on the part of Customer, Customer contractors or Customer vendors.
  - Any scheduled maintenance on the part of Verizon or Verizon Service partners which are within Verizon's maintenance windows.
  - Any scheduled maintenance on the part of Verizon's Service partners, including without limitations, MVICs.
  - Any Force Majeure events as defined in the Contract.

## 8. Terms and Definitions

Term	Definition
Assured Forwarding (AF)	A set of priority Class of Service types intended to support data prioritization and precedence.
Best Effort (BE)	A Class of Service type intended to support General Business transactions.
Billing Account Number (BAN)	The account number to which all the Service charges are linked.
Bursty Traffic	Traffic where the minimum packet arrival gap in ms is the same or less than $[(\text{the largest expected voice packet sizes in bytes}) * 8000 / (\text{link speed in bits/sec})]$ .
CE-to-HUB	Satellite Gateway SLA is measured between Verizon's-origination (Satellite earth station Hub) and customer-destination demarcation point.
Circuit	A circuit is a Connection, port, CAR and local access.
Class of Service (COS)	Priority classes that enable the network to differentiate data packages and assign routing precedence based on the customer data networking settings.
Committed Access Rate (CAR)	Committed Access Rate (CAR) is the amount of bandwidth to which Customer subscribes on a logical port by logical port basis. CAR can be equal to or less than the logical port speed.
Connection	Connection is a port on Customer's virtual private network (VPN) connected to the Verizon PIP Network. Customer subscribes to a CAR for each Connection.
Core Network	The Core Network, also referred as the Provider Core or P-Core Network, is a dedicated and redundant backbone network with a resilient topology engineered to optimized network routes, maximize stability and minimize failover times. The

	Core Network has been designed to provide quality of service excellence and to enable intelligent adaptability to new generation technologies. The Core Network is a secure, reliable and fast backbone network platform dedicated solely to Private MPLS network traffic. The Core Network supports Private MPLS network traffic but does not support direct customer access connections.
CPE	Customer Premise Equipment. Telecommunications equipment located at the Customer Site.
Customer Edge (CE)	Routers and CPE connected to the local access loop.
CE-to-CE	Customer Edge to Customer Edge. The network segment to and from the customer demarcation point that includes the local loop and the PIP network but excludes the customer CPE.
Customer Provided Local Loop (CPLL)	Customer remits payment for local access directly to their local access provider and Verizon does not invoice Customer for local access charges.
Customer Service Center	Verizon locations where Customer reports Service issues.
Eligible Hard Outage Minutes	Total number of Connection Hard Outage minutes less any Outage minutes attributed to events excluded by the PIP SLA.
End-to-End	The network segment in which Verizon Business has control. It includes the Local Loops if it is furnish or ordered by Verizon Business or a Verizon Affiliate from a third party carrier, and where Verizon Business invoices the Local Access cost to Customer. It excludes the CPE.
Enhanced Traffic Management Service (ETM)	Service that provides priority traffic routing with Class of Service features.
Expedited Forwarding (EF)	A priority Class of Service type intended to support applications that require real time traffic flows.
Hard Outage	Complete loss of Service where Customer cannot use the Service and is prepared to release it for immediate testing.
Hub	The satellite infrastructure located at a Verizon earth station which is interconnected to Private IP.
International Private Line(IPL)	Provides dedicated connections (point-to-point or point-to-multipoint circuits) between customer sites in numerous countries around the globe.
IP	Internet Protocol.
Layer 2	The Data Link Layer of the OSI Model.
Layer 3	The Network Layer of the OSI Model.
Local Access	On-Net, Off-Net or Customer Provided connection from the Provider Edge to the Customer Edge.
Managed Services	A Verizon Service designed to provide customers with a range of management options, from the proactive monitoring to complete outsourcing, of the Customer's data or voice networks.
MPLS	Multi-Protocol Label Switching. An IETF standard.
MRC	Monthly Recurring Charge. MRC includes net port and CAR charge, less any applicable discounts, and does not include local access charges.
MVIC	Private IP MPLS VPN Interconnect Services provided through a partner network and interconnected with Verizon through the MVIC.
Network	Verizon MPLS VPN Service, known as PIP. A network-based IP VPN service that utilizes IP-over-MPLS (Multi-Protocol Label Switching) technology to deliver IP VPN services to its customers in a secure, reliable and fast manner.
Network Outage	A Network Outage is defined as an unscheduled period in which the Service is interrupted and unavailable for use by Customer for 60 or more Unavailable

	Seconds (UAS). UAS is the American National Standards Institute standard (ANSI) T1.231.
NNI	Network to Network Interface (NNI) which provides an efficient interface between two data networks.
Off-Net	A location that is interconnected to Verizon Business using Local Access Circuits not wholly furnished via facilities owned or operated by Verizon Business or a Verizon Affiliate but ordered by Verizon Business or a Verizon Affiliate from a third party carrier. Off-net is offered at three levels of performance: Premium, Standard and Basic.
On-Net	A location that is interconnected to Verizon Business using Local Access Circuits wholly furnished via facilities owned or operated by Verizon Business or a Verizon Business Affiliate.
Order Acceptance	When Customer has provided all information required by Verizon, Customer has successfully passed a credit check (if required), and Verizon's ordering systems has processed the Customer's information and have accepted the order as ready for provisioning.
OSI Model	Open Systems Interconnection Reference Model. A standard description for how data should be transmitted between any two points in a telecommunication network. Its main purpose is to define the networking framework for the consistent delivery of products and services over a telecommunications network. The reference model defines seven layers of functions that take place at each end of a telecommunication network: Application (Layer 7), Presentation (Layer 6), Session (Layer 5), Transport (Layer 4), Network (Layer 3), Data-Link (Layer 2) and Physical (Layer 1).
P-Core	Provider Core. Dedicated and redundant backbone network with a resilient topology engineered to optimized network routes, maximize stability and minimize failover times. The P-Core has been designed to provide quality of service excellence and to enable intelligent adaptability to new generation technologies. The P-Core is a secure, reliable and fast backbone network platform dedicated solely to Private MPLS network traffic. The P-Core supports Private MPLS network traffic but does not support direct customer access connections.
PIP	Private IP Service.
PIP Network	The Verizon Private IP Network consisting of the devices and transport making up the MPLS cloud.
Port	An entrance to and/or exit from a network.
Provider Edge (PE)	The edge of the Verizon PIP Network. It is the point in which customer traffic enters or exits the Verizon PIP Network.
PE-to-PE	Provider Edge to Provider Edge. The network segment consisting of the PIP Network but excluding the Local Loops and the customer CPE.
Private IP Layer 2	Private IP Layer 2 is a technology using Virtual Private Wire Services (VPWS) to provide point-to-point routing and to allow Customers to retain control of routing, architectural and topology changes.
Private IP Layer 3	Private IP Layer 3 is a Network-Based IP VPN service using IP-over-MPLS technology to deliver high-performance IP VPN solutions to customers in a secure, reliable and fast manner.
Service or PIP Service	Service or Private IP Service is defined as Customer port and CAR and Local Accesses.
SLA	Service Level Agreement.

<p>Service Restoration Priorities</p>	<p>Process by which Service disruptions are ranked by the Customer Service Center. A "Priority 1" is a total loss of Service, or degraded Service to the extent that it is unusable by Customer and Customer is prepared to release its Service for immediate testing. A "Priority 2 is degraded Service, however Customer is able to use the Service and is not prepared to release its Service for immediate testing.</p>
<p>Site</p>	<p>A site is Customer's Service location which includes CPE and a Connection.</p>
<p>Service Issue</p>	<p>A degradation of Service where Customer is able to use the Service and is not prepared to release the Service for immediate testing. Service Issues are a Priority 2 restoration priority.</p>
<p>Trouble Ticket</p>	<p>A trouble ticket is defined as the official method used to document a perceived problem with the Service or non-compliance with a Service Level Standard.</p>
<p>Virtual Private Network (VPN)</p>	<p>A virtual network that provides the equivalent of a dedicated private network service over a shared data telecommunications infrastructure. A VPN maintains privacy through security network protocols. A VPN uses a logical connection to route traffic between network sites. One of the key attributes of a VPN is that it can provide the same capabilities of a Private Network but usually at a much lower cost.</p>

# Powerful tools to manage your business in one place

## Order

Save time and control costs with a simple ordering process.

## Pay

Manage your billing information in one place.

## Monitor

Access near real-time data about your network's performance.

## Analyze

Make informed decisions about your network investments.

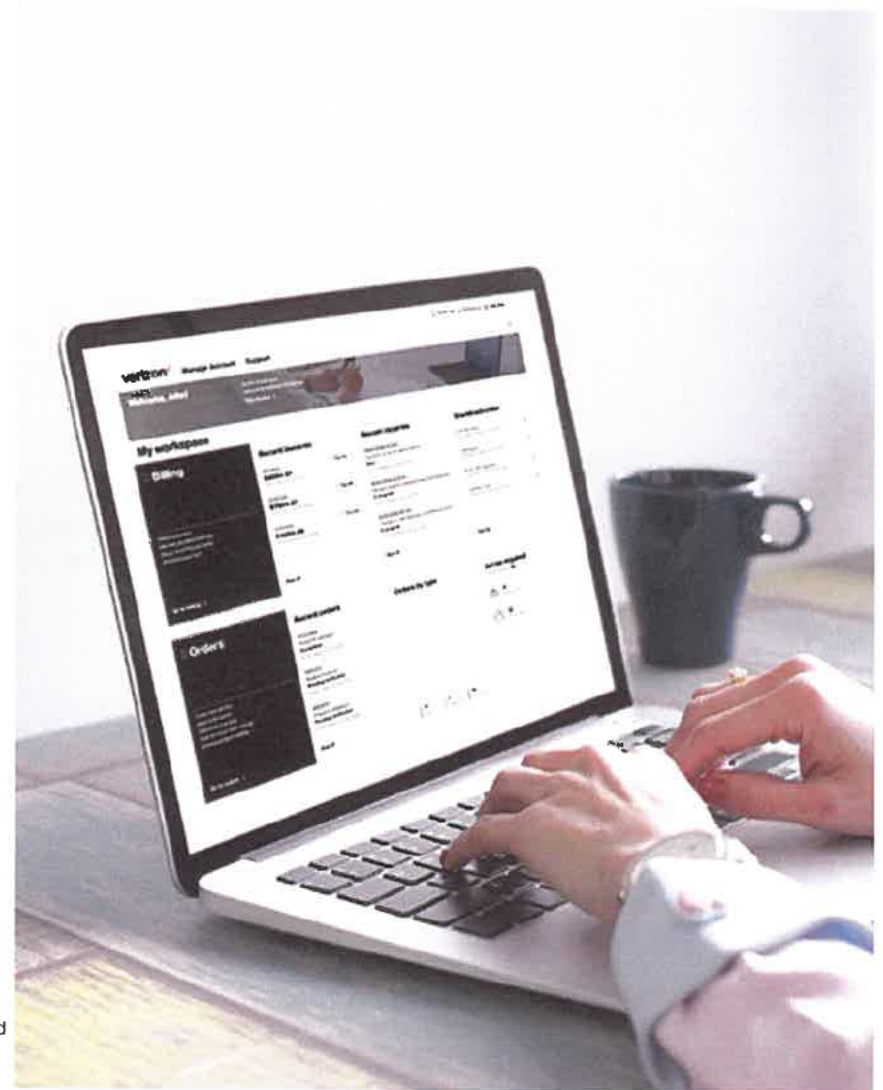

## Upgrade

Fine-tune your network infrastructure.

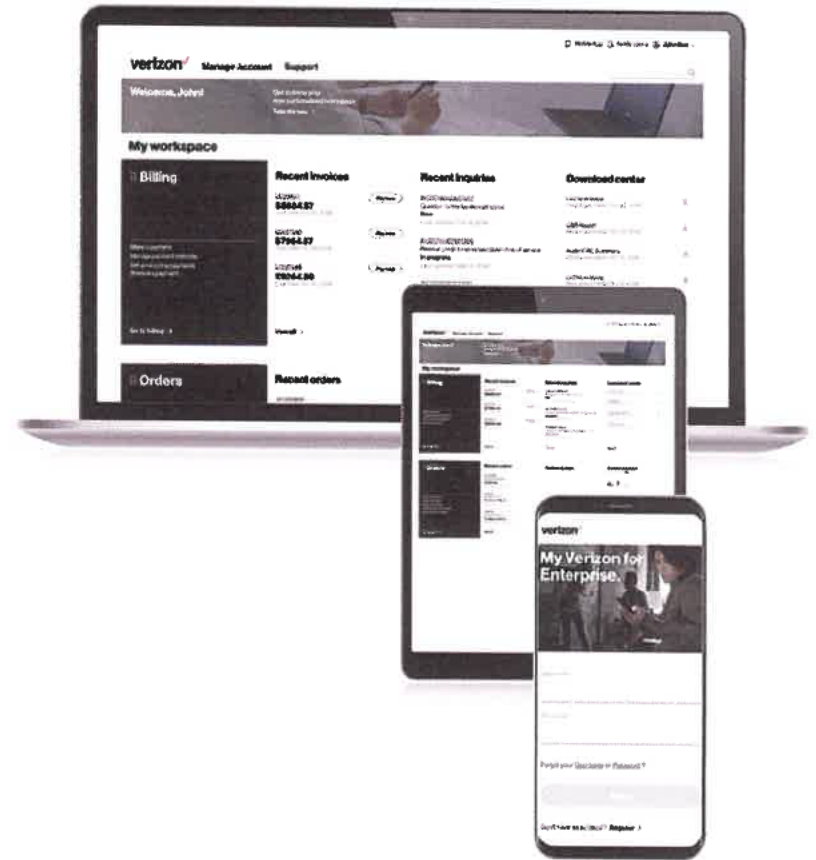

## Repair

Create and track change requests and incident tickets.

# Why Verizon Enterprise Center?

- Manage your Verizon services, streamline business processes, and control critical business functions in the office or on the go
- Get secure, simple and fast access to capabilities like opening trouble tickets, paying bills, and ordering new services
- Access powerful reporting tools for instant access to the information you need to make business decisions
- Use a comprehensive suite of digital tools to manage your services and support your business goals
- Take your business on the go or leave it all behind at the office - flex seamlessly between desktop, tablet and smartphone
- Stay ahead of the curve, managing your products in real-time by making changes to services that impact your network and business

# Service management

Access the data and the tools you need to better manage your services.

## Key features:

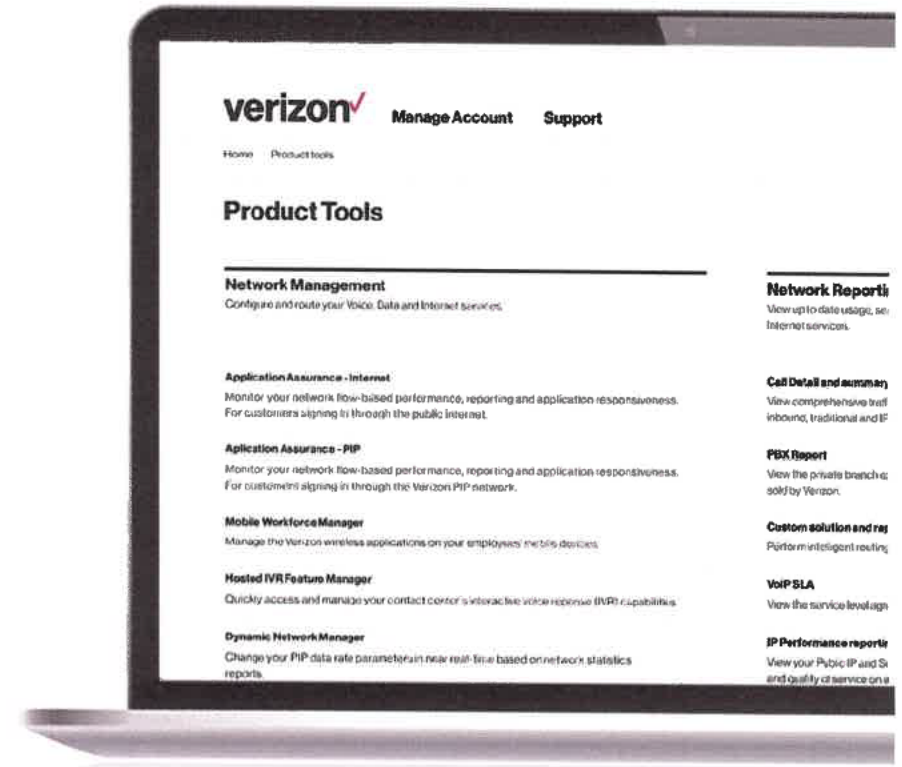

- View network health at-a-glance on a color-coded map
- Manage services: Place move, add, change and disconnect requests
- Access calendar of maintenance events and change requests impacting your services
- View and download inventory
- Replace equipment that has reached end-of-life

# Product management tools

Verizon Enterprise Center offers a variety of tools to manage products like Private IP, SD-WAN, Secure Cloud Interconnect, VoIP, and UCaaS to help you:

- Configure and route Voice, Data and Internet services
- Track product performance and customize services
- Upgrade bandwidth on demand
- Manage inbound numbers more efficiently
- Build alternate routing plans
- Generate reports to analyze capacity, view utilization and traffic statistics
- Track application and network performance
- Make network policy management changes

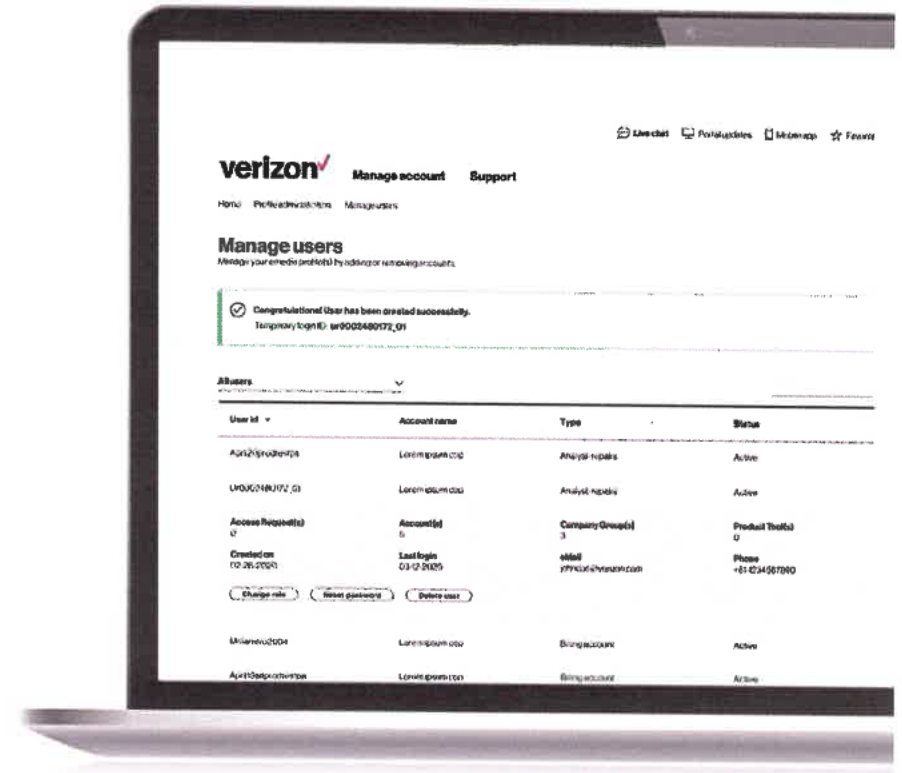

# Role-based access

Manage user permissions with ease.

## Key features:

- User administration capabilities (create, delete and update users)
- Grant and revoke Customer Proprietary Network Information (CPNI)
- Manage access to accounts and product tools
- Monitor active vs. pending users and take actions
- Review and approve access requests
- Grant access to productivity tools for users to manage the network and take action in real-time

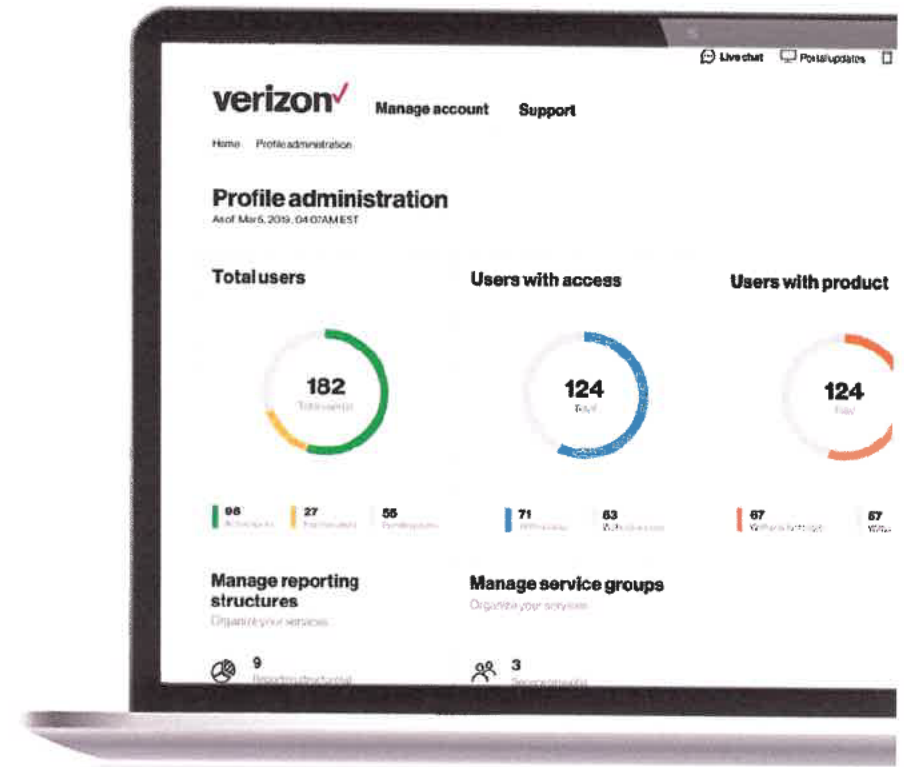

# Primary Contact Authorization requests

**Review and authorize Primary Contact (POC) authorization requests quickly and easily.**

The Primary Contact (POC) role enables customers to assign a company administrator to determine who can access the Verizon Enterprise Center.

Top 5 tasks a Primary Contact can perform in Verizon Enterprise Center:

- Create and delete users
- Change users' roles and permissions
- Grant access to additional accounts
- Grant access to most product tools
- Organize your services into custom groups

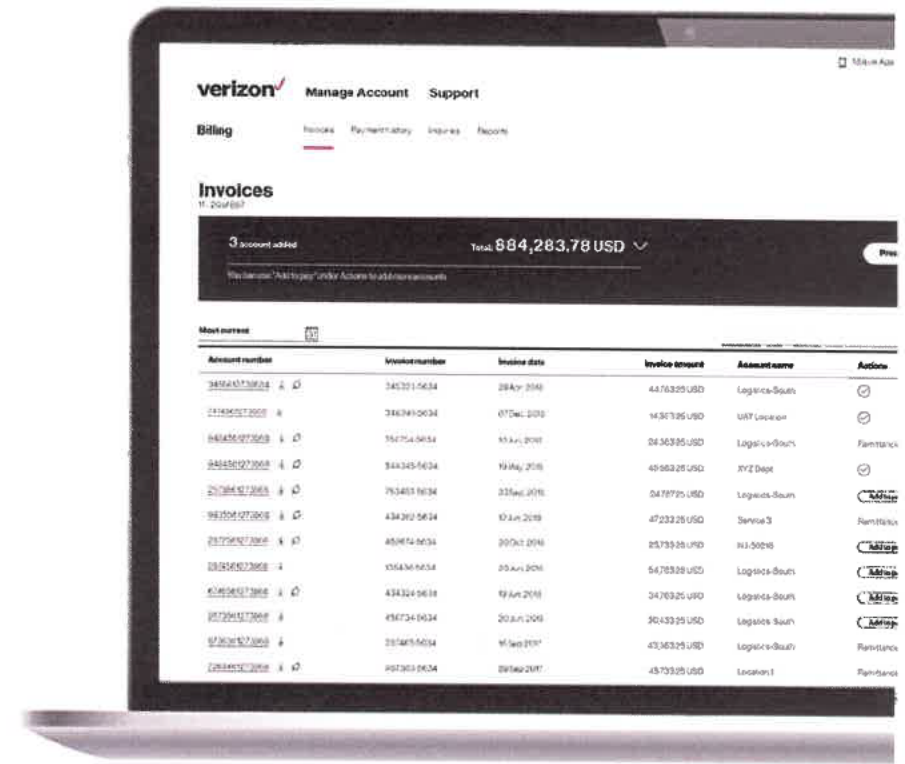

# Billing & payments

## Manage invoices.

- Retrieve invoices (up to seven years of past data)
- View invoices in print-image PDF or drill-down format
- Manage paperless and other bill media (i.e., EDI, Direct Data)
- Submit billing inquiries online

## Pay invoices (billed in US\$).

- Make payments via bank/credit card or ACH (Bank Account)
- One-time, recurring and scheduled payments
- Review payment status and history

The screenshot shows the Verizon Manage Account Billing interface. At the top, there are navigation links for 'Manage Account' and 'Support'. Below that, the 'Billing' section is active, with sub-links for 'Invoices', 'Payment history', 'Inquiries', and 'Receipts'. The 'Invoices' section displays a summary for 11/20/2017, showing '3 account added' and a total amount of '884,283.78 USD'. Below this is a table of invoices with columns for Account number, Invoice number, Invoice date, Invoice amount, Account name, and Action.

Account number	Invoice number	Invoice date	Invoice amount	Account name	Action
3456789012	3456789012	28 Apr 2016	44,763.25 USD	Logistics-South	Print
1111111111	3456789012	07 Dec 2016	14,367.85 USD	WTF Location	Print
9876543210	3456789012	11 Jun 2016	28,363.85 USD	Logistics-South	Print
0987654321	3456789012	19 May 2016	49,982.25 USD	XYZ Dept	Print
2109876543	7654321098	22 Feb 2016	24,797.25 USD	Logistics-South	Print
9876543210	4321098765	07 Jun 2015	47,233.25 USD	Service 3	Print
1234567890	8765432109	20 Oct 2016	25,759.25 USD	ABC0000	Print
0987654321	1098765432	25 Jun 2016	54,783.25 USD	Logistics-South	Print
4321098765	4321098765	19 Apr 2016	34,783.25 USD	Logistics-South	Print
0987654321	4321098765	20 Jun 2016	30,439.25 USD	Logistics-South	Print
9876543210	2109876543	16 Sep 2016	43,363.25 USD	Logistics-South	Print
2109876543	9876543210	29 Mar 2017	45,733.25 USD	Location 1	Print

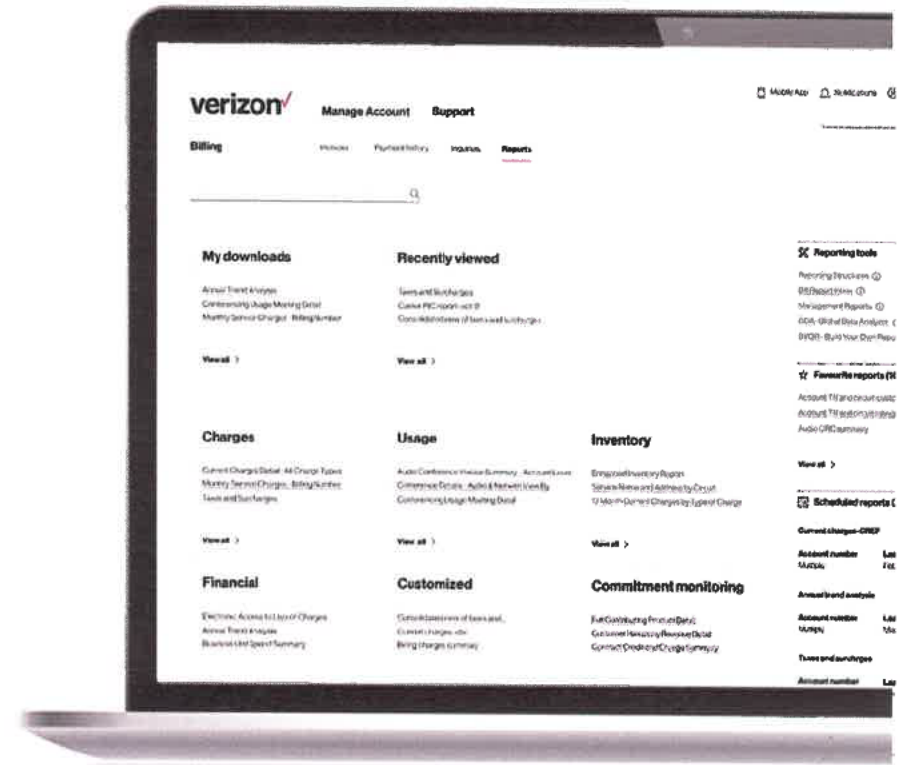

# Analytics & reporting

Quickly access reports using dashboard settings and keyword searches. Generate reports using simple filters and customizations.

## Key features:

- Dashboard view
- Keyword search
- Simplified report providing option for field filters
- Defined reporting categories for favorite and customized reports
- Scheduled reports
- Recent reports

# Repairs

Open, track, or update trouble tickets. Find Service IDs on an interactive map.

## Key features:

- Manage time sensitive repair requests on Verizon Enterprise Center, no need to call Verizon to open a ticket
- Seamless access point to internal Verizon repair SMEs via ticket update options
- Holistic, personalized workspace flexible for one or multiple repair tickets
- Pre-defined options such as request for update, add additional information, request escalations
- Powerful filters enabling drill-down based on criteria meaningful to you and your organization
- Ideal for multi-user incident managers - enables teams to see singular view and in near real-time

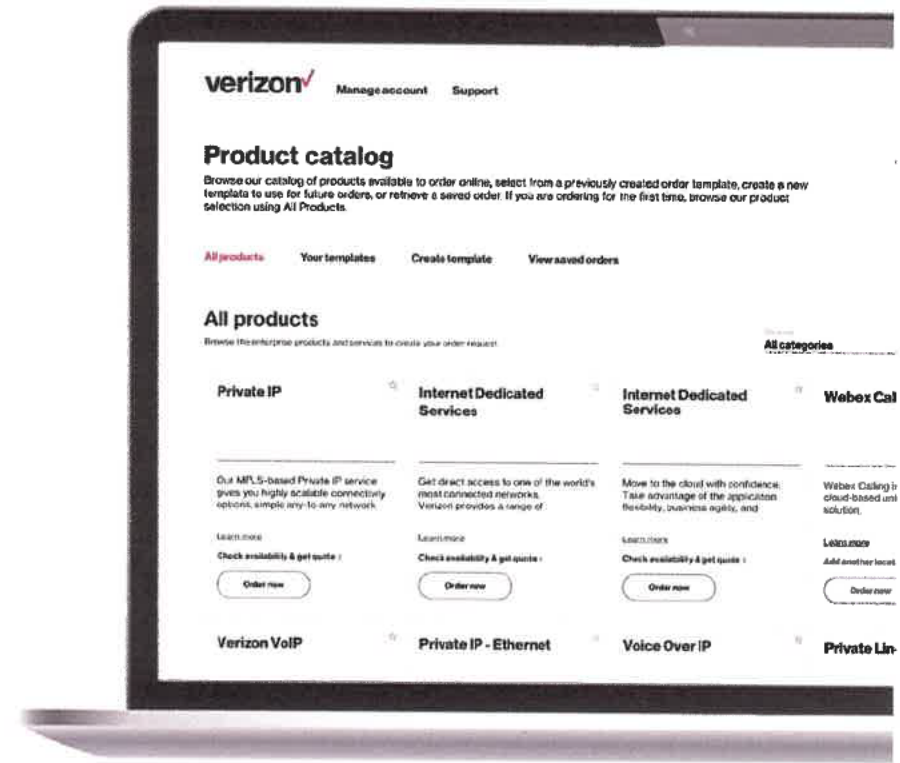

# Orders

A simple quoting and ordering process helps you save time and manage costs.

## Key features:

- View, accept and manage price quotes online for 32 global products
- Manage multiple quotes and orders easily
- Verify orders online quickly and easily
- Track the status of your global orders
- Select services from robust inventory to request changes, moves and disconnects - globally
- Contractual pricing displayed using the automated ordering tool for U.S. locations of VoIP, Private IP, Internet Dedicated and Secure Cloud Interconnect
- For VoIP: porting checks online, add/remove call paths, add more numbers

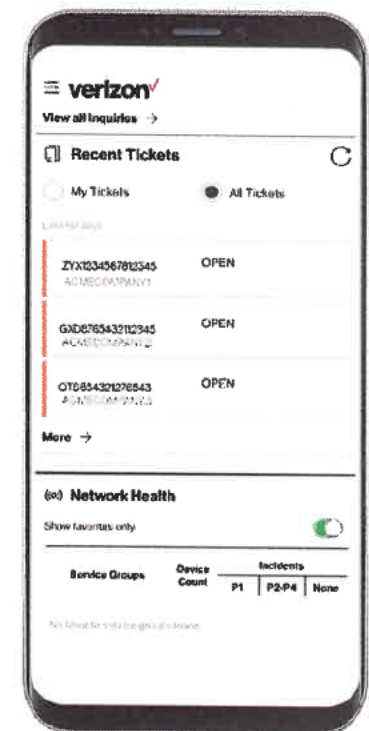

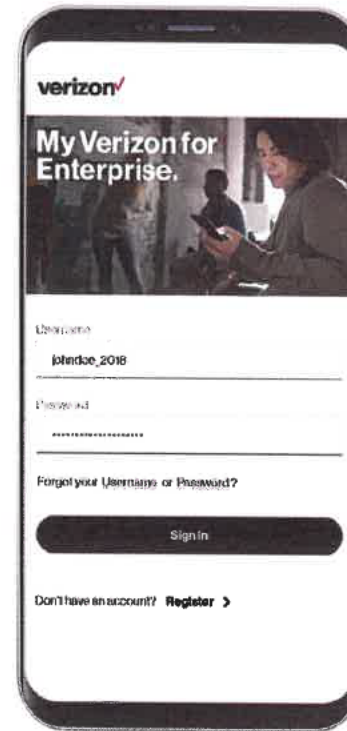

# My Verizon for Enterprise

A mobile app to conveniently manage your Verizon accounts from nearly anywhere at anytime.

## Key features:

- Personalized homepage
- Repairs ticket submission and ticket lifecycle management
- View invoices and billing inquiries
- Push notifications for repair tickets and alarms
- Review and track orders
- View inventory by country, service and service group
- View network health by service group
- View scheduled events and change requests

# Customer Training & Resources

**Register at:** [customertraining.verizon.com](https://customertraining.verizon.com)

- Create your User ID and password
- Sign in with your credentials
- Access complimentary training resources: Instructor-led classes and Self-paced tutorials
- Once registered, you can access the New User Orientation Program which includes the following self-paced training:
  - Verizon Enterprise Center - Overview
  - Verizon Enterprise Center - Navigation Video
  - Verizon Enterprise Center - Registration
  - Verizon Enterprise Center - Roles & Permissions
  - Verizon Enterprise Center - Primary Contact
- Click [here](#) for additional information about Verizon Enterprise Center
- Need more information? Click [here](#) to view Verizon Enterprise Center Support pages
- [View](#) the different user roles and what each role can see and do in Verizon Enterprise Center

## APPENDIX D ACRONYM LIST

Acronym	Definition
ACH	Automated Clearing House
ACL	Access control list
AI/ML	artificial intelligence and machine learning
API	application programming interfaces
ARS	Automatic Route Selection
AS	autonomous systems
ASN	Autonomous System Number
ASR	Access Service Request
ATM	Asynchronous Transfer Mode
B2B	business to business
BGP	Border Gateway Protocol
BI	Background investigations
BOT	Back Office Transition
BU	Business Unit
CAD	Consumer Advocate Division
CAMC	Charleston Area Medical Center
CAR	Customer Premises Equipment
CCNA	Cisco Certified Network Associate
CCSA	Check Point Certified Security Administrator
CCSE	certification Security Certification CCNA CCSA CCSP
CCSP	Cisco Certified Security Professional
CCTV	closed circuit television
CE	Customer edge
CIS	Corporate Information Security
CISO	Chief Information Security Officer
CISSP	Certified Information Systems Security Professional
CNS	Customer Network Support
CPE	Customer Provided Equipment
CPGA	Cost per Gross Add
CSF	CyberSecurity Framework
CSP	Cloud Service Providers
CTO	Chief Technology Officer
CVE	Common Vulnerabilities and Exposures
CoS	Class of Service
D2D	door-to-door
DAST	Dynamic Application Security Testing
DDOS	Distributed Denial of Service Attack
DHCP	Dynamic Host Configuration Protocol
DIA	Dedicated Internet Access
DMARC	Domain-based Message Authentication, Reporting, and Conformance)
DMZ	demilitarized zone
DNS	Domain Name Services
DWDM	Dense Wavelength Division Multiplexing
DoS	Denial of service
EMBA	Executive Master of Business
ESL	Eligible Services List
ETP	Eligible Telecommunications Provider
EVC	Ethernet Virtual Connection
EVM	Enterprise Vulnerability Management

Acronym	Definition
FCC	Federal Communications Commission
FCDL	Funding Commitment Decision Letter
FISMA	Federal Information Management Act
FRN	Funding Request Numbers
GETS	Government Emergency Telecommunications Service
GIAC	Global Information Assurance Certification
GPON	Gigabit Passive Optical Network
HR	Human Resources
ICB	individual case basis
IDS	Internet Dedicated Service
IEEE	Institute of Electrical and Electronic Engineers
IGP	Interior Gateway Protocol
ILEC	Incumbent Local Exchange Carrier
IOF	interoffice facility
IOT	Internet of Things
IP	Internet Protocol
IPJ	IP Justification
IPR	Internet Reporting Statistics
IPv4	means Internet Protocol Version 4
IPv6	means Internet Protocol Version 6
IS	If a physical site survey
IS-IS	Intermediate System to Intermediate System
ISAC	Information Sharing and Analysis Centers
ISDN	Integrated Services Digital Network
ISO	Information Security Officers
ISP	Internet Service Providers
IT	Information Technology
ITIL	Infrastructure Technology Information Library
IoT	Internet of Things
KPI	key performance indicators
LAN	Local Area Network
LATA	Local access and transport area
LCP	Lowest Corresponding Price
MAS	Minimum Acceptable Score
MBPS	Megabits per second
MEF	Metro Ethernet Forum
MMF	Multimode Fiber
MNS	Managed Network Services
MP-BGP	Multiprotocol BGP
MPLS	MultiProtocol Label Switching
MRC	Monthly Recurring Charge
MSO	Management Services Organization
MSOF	Managed Services Order Form
MSS	Managed Security Service
MTTR	means Mean Time To Repair
N/A	Not applicable
NA	Network Analysis
NCC	National Coordination Center
NIST	National Institute of Standards and Technology
NIST-CSF	National Institute of Standards and Technology Cybersecurity Framework

Acronym	Definition
NNI	Network Node Interface
NOC	Network Operations Center
NSOC	Network Security Operations Center
NSPE	Number Circuit ID Special
OLA	operating level agreement
OSA	Operational Support and Analysis
OSPF	Open Shortest Path First protocol
OWASP	Open Web Application Security Project
PA	public address
PBX	Private Branch Exchange
PE	provider edge
PIA	Program Integrity Assurance
PID	Project Initiation Document
PIP	Private IP
PLC	Programmable logic controller
PMBOK	Project Management Body of Knowledge
PMI	Project Management Institute
PMO	Project Management Office
PMP	Project Management Professional
PPO	Planning Protection and Optimization
PRI	Primary Rate ISDN
PSC	Public Service Commission
PoP	Point of Presence
QOS	Quality of Service
QoS	Quality of Services
RAN	Radio Access Network
RCV	Release Control Validation
RD	route distinguisher
RFC	Request for Change
RFO	Reason for Outage
RFP	Request for Proposal
RTU	remote terminal units
SAST	Static Application Security Testing
SCADA	supervisory control and data acquisition
SD	Software Defined
SD-WAN	Software Defined Wide Area Network
SIEM	Security Incident and Event Management
SLA	Service Level Agreements
SLC	synchronous link control
SLD	Schools and Libraries Division
SMF	Single mode Fiber
SOA	Service Offerings and Agreements
SOC	Security Operations Center
SOW	Statement of Work
SP	Special Publication
SPI	Service Provider Invoice
SPIN	Service Provider Identification Number
SSL	Secure Sockets Layer
T&T	Transition Transformation

Acronym	Definition
TCO	total cost of ownership
TCR	Telecommunications Change Request
TDM	Time Division Multiplex
TIN	Transaction Identification Number
TSP	means Telecommunications Service Priority
ULH	Ultra Long Haul
UNI	User Network Interface
USAC	Universal Service Administrative Company
USB	Universal Serial Bus
USF	Universal Service Fund
VEC	Verizon Enterprise Center
VFC	voice frequency channel
VLAN	Virtual Local Area Network
VOIP	Voice Over Internet Protocol
VPC	Virtual Private Cloud
VPN	Virtual Private Network
VRF	Virtual Routing and Forwarding
VRF	Virtual Routing Forwarding
VoIP	voice over IP
WAN	Wide Area Network
WBS	work breakdown structures
WISP	Wireless Internet Service Providers
WLAN	Wireless local area network
WSR	Wholesale Standard Routing
WVOT	WV Office of Technology
WVDA	means West Virginia Department of Administration
WVDE	West Virginia Department of Education
WVLC	West Virginia Library Commission
WVOT	West Virginia Office of Technology
