## DISEASE INTERVENTION SPECIALIST 2

### **Nature of Work**

Under limited supervision, performs advanced level work involving the identification and location of high-priority sexually transmitted disease (STD) and Human Immunodeficiency Virus (HIV) cases, contacts, and associates through field investigations to ensure rapid examination and treatment of those at risk. These positions conduct personal interviews and field and internet investigations to obtain case-related information while maintaining strict patient confidentiality. These positions explain the disease process, treatment, prevention, and legal requirements; provides education, consultation, and technical assistance to health department staff. Responsible for a specific geographic area which may encompass more than one county. Works with a considerable degree of independence and may serve as a lead worker. Work is reviewed through reports and conferences with the supervisor. Considerable travel is required of this position. Performs related work as required.

### **Distinguishing Characteristics**

The Disease Intervention Specialist 2 is distinguished from the Disease Intervention Specialist 1 by the advanced level of work performed and the greater level of knowledge required regarding current health department programs, state-based programs, and STD/HIV statistics allowing the incumbent to address stakeholder needs in a clear and concise manner. Advanced level training in the public health care field is recognized as a lead function for non-supervisory positions.

### **Examples of Work**

- Leads case assignments, and reviews work for STD/HIV case investigations; provides training on standard and/or new work procedures, regulations, or policies, and in conducting case investigations and treatment guidelines for STD/HIV health conditions, diseases, health risk factors, and health behaviors.
- Interviews and/or re-interviews patients, contacts, and associates to complete medical history, elicits contact and suspect information in order to locate disease source, and determines additional testing and treatment needs for positive patients.
- Maintains regular contact with private physicians, laboratory personnel, and state and local health department personnel to improve case reporting and obtain diagnostic and/or treatment information on cases.
- Conducts testing for detection of STDs and HIV; provides HIV Rapid Testing and PrEP Education.
- Consults with other investigators on difficult cases and assists with non-compliant health care providers.
- Tracks and updates patient locating information to facilitate linkage to care activities.
- Maintains a high level of confidentiality when dealing with client, records, and all aspects of STD/HIV work.
- Participates in or advises local health departments or health providers in investigation of unusual STD/HIV studies, including outbreak or cluster investigations, standardized interviews of cases, and control methods.
- Performs Internet Partner Services (IPS) using IPS protocol and guidelines when appropriate and when all other locating methods have been exhausted.
- Gives educational presentations to professional groups, lay groups, and civic groups interested and involved in the eradication of STDs/HIV; secures and disseminates information and educational materials to local health departments, private physicians, public and civic organizations, and to the general public.
