CSR § 148-10-1 et seq., for every contract or subcontract, subject to the limitations contained herein, for the construction, reconstruction, alteration, repair, improvement or maintenance of public works or for the purchase of any item of machinery or equipment to be used at sites of public works, only domestic aluminum, glass or steel products shall be supplied unless the spending officer determines, in writing, after the receipt of offers or bids, (1) that the cost of domestic aluminum, glass or steel products is unreasonable or inconsistent with the public interest of the State of West Virginia, (2) that domestic aluminum, glass or steel products are not produced in sufficient quantities to meet the contract requirements, or (3) the available domestic aluminum, glass, or steel do not meet the contract specifications. This provision only applies to public works contracts awarded in an amount more than fifty thousand dollars (\$50,000) or public works contracts that require more than ten thousand pounds of steel products.

The cost of domestic aluminum, glass, or steel products may be unreasonable if the cost is more than twenty percent (20%) of the bid or offered price for foreign made aluminum, glass, or steel products. If the domestic aluminum, glass or steel products to be supplied or produced in a

“substantial labor surplus area”, as defined by the United States Department of Labor, the cost of domestic aluminum, glass, or steel products may be unreasonable if the cost is more than thirty percent (30%) of the bid or offered price for foreign made aluminum, glass, or steel products. This preference shall be applied to an item of machinery or equipment, as indicated above, when the item is a single unit of equipment or machinery manufactured primarily of aluminum, glass or steel, is part of a public works contract and has the sole purpose or of being a permanent part of a single public works project. This provision does not apply to equipment or machinery purchased by a spending unit for use by that spending unit and not as part of a single public works project.

All bids and offers including domestic aluminum, glass or steel products that exceed bid or offer prices including foreign aluminum, glass or steel products after application of the preferences provided in this provision may be reduced to a price equal to or lower than the lowest bid or offer price for foreign aluminum, glass or steel products plus the applicable preference. If the reduced bid or offer prices are made in writing and supersede the prior bid or offer prices, all bids or offers, including the reduced bid or offer prices, will be reevaluated in accordance with this rule.

**44. INTERESTED PARTY SUPPLEMENTAL DISCLOSURE:** W. Va. Code § 6D-1-2 requires that for contracts with an actual or estimated value of at least \$1 million, the vendor must submit to the Agency a supplemental disclosure of interested parties reflecting any new or differing interested parties to the contract, which were not included in the original pre-award interested party disclosure, within 30 days following the completion or termination of the contract. A copy of that form is included with this solicitation or can be obtained from the WV Ethics Commission. This requirement does not apply to publicly traded companies listed on a national or international stock exchange. A more detailed definition of interested parties can be obtained from the form referenced above.

**45. PROHIBITION AGAINST USED OR REFURBISHED:** Unless expressly permitted in the solicitation published by the State, Vendor must provide new, unused commodities, and is prohibited from supplying used or refurbished commodities, in fulfilling its responsibilities under this Contract.

ADDENDUM # 1

Rigging for Carrollton Bridge

### ***Revised Specifications to add 3.1.1.4***

Tarps must be provided on either side of bridge. The tarp must be 40 threads per inch. The tarp must be attached from the bridge deck to the outside of the scaffolding. Each tarp shall be the length of the bridge or the length of the scaffold rigging per span. The tarp does not need to be one continuous section.

Built in 1856 by the O'Brien brothers (Emmett and Daniel), Carrollton Covered Bridge carries Barbour County Route 36 over the Buckhannon River approximately one mile upstream of its confluence with the Tygart River. It is a multiple Kingpost (Burr truss) truss design that relies on a timber arch for stiffening and a design closely associated with Lemuel Chenoweth. Although Mr. Chenoweth did not design or build Carrollton, it is often associated with him because of his involvement with the O'Brien brothers, who worked with him at Carrollton's more famous cousin down the road a bit in Philippi. Carrollton Covered is the second longest and third oldest surviving covered bridge in West Virginia.

In 1962, live load was removed from timber superstructure and a more modern channel beam superstructure was added, along with two piers. This allowed the bridge to continue to serve at legal road loadings, although there has always been a horizontal and vertical restriction. The only load carried by the original superstructure became its own self weight.

At some point during the next two decades, the modern superstructure degraded to the point of needing replacement. In 2003, the channel beams were replaced by prestressed concrete box beams, and Carrollton was once again structurally capable. In August of 2017, an arsonist burnt the historic superstructure.

**Vendor Questions**  
**CRFQ 0803 DOT2100000158**  
**Rigging for Carrollton Covered Bridge**

1. Can you describe the work that the rigging will support? Anticipated occupancy? Description of live loads applied?

The rigging will support our laborers, scaffold, and some specialized timbers and lumber during the reconstruction of the covered portion of the bridge superstructure. Five men per group, with perhaps 2 groups working at different locations. Live loads would be walking/working loads and scaffold load.

2. What is the desired design live load capacity of the proposed rigging in PSF units?

50 pounds per square foot is the desired live load capacity.

3. Will a live load deflection limit be imposed? If so, what value?

No, unless the vendor recommends a specific deflection requirement that is suitable.

4. Will you require submission of rigging design calculations, stamped by a PE?

Yes. Yes.

5. Will you provide copies of the covered bridge rehabilitation drawings? Prestress box beam shop drawings? The construction plans associated with the installation of the prestress box beams?

Yes. Shop drawing have already been sent to Kristy. Other documents are available upon request.

6. Will you assume responsibility for coordinating with and obtaining all railroad access permits?

Yes. We do not believe any will be necessary.

7. Will any limitations with respect to vertical clearances to the waterway be imposed? If so, what?

No vertical clearance limits will be imposed. It would be prudent to consider minimal storm events like the Q2 and Q10 and try to design around them.

8. What is the right of way width at the bridge approaches?

We maintain a 60' right of way width, 30' from centerline on each side.

9. What is the railroad right of way width at the south approach?

Our district ROW agent says that our right of way is part of an old Turnpike and should have senior rights to the railroad.

10. Are full bridge traffic closures permitted? If so, what would the maximum duration be?

Full bridge closures will be permitted. Duration will be commensurate with job specific requirements.

11. Will work days or hours be limited for flagging operations or scaffold erection? If so, please detail the limitations.

We would prefer all scaffolding operations be performed during daylight hours. Other than that, we will try to accommodate traffic control, as necessary.

12. Will a finished rigging walking surface elevation of approximately 1' below the bottom of the prestress beams be acceptable?

Yes, as discussed in field.

13. Will limiting the platform width to approximately 6' from the outside face of the existing covered bridge siding be acceptable in lieu of the 8-foot listed under 3.1.1.1?

Yes, limiting the width to 6' will be acceptable.

14. Will temporary concrete anchors be approved for attachments to the precast beams and curbs?

Temporary concrete anchors are approved for curb application. More precise location information is necessary to approve their use in the prestressed box beams. We are willing to work with your needs.

15. Will temporary timber lag bolts be approved for attachments to the timber guardrail and pedestrian railing?

Yes. But anything else will require separate approval.

16. Will "preference for use of domestic steel products" provisions apply to this project? Note that all installed items are rented monthly and removed upon project completion.

Foreign steel cannot be accepted.

17. Will you assume responsibility for removing the bottom timber pedestrian rail that remains on the north end of the bridge?

Yes, we will remove the bottom handrail.

18. Do prevailing wage or Davis Bacon wage rates apply to this project?

No.

19. What is the anticipated number of months that this rigging will be utilized?

We anticipate six months at a minimum. It could be a year though. We have never performed this type of work.

20. Will fabrication, delivery and installation of the rigging be held to the 14 calendar day standard referenced in 6.1? Note that lead times for most off of the shelf products associated with this project range from 30-45 days. Would a 60 day period for delivery and installation be acceptable? Will evidence of back order be sufficient to negotiate an time extension in lieu of contract cancellation?

We realize this is specialized work. We will work with you to determine a reasonable amount of time for delivery and installation. Sixty days would be acceptable if necessary. Yes.

21. Will the duration of removal of the rigging following project completion be limited to a number of calendar days? If so, how many?

No, we will not limit the removal in any way.
