**RE: BPH-OEHS-SWAP Office Justification For
NO COST EXTENSION
USGS Ohio River Alluvial Aquifer Water Quality Study**

The West Virginia Legislature has task the OEHS Source Water Assessment and Protection (SWAP) Program with determining which Public Water Systems are Surface-Water-Influenced Groundwater (SWG) systems. SWIG systems include any underground public-water supply which is heavily influenced by the quality of surface water in the immediate area of a water well.

Ohio River alluvial aquifers have been identified as highly susceptible to infiltration of surface water from the Ohio River. Large groundwater withdrawals from the alluvial aquifer, the proximity of the aquifer to the Ohio River, and the composition of alluvial sediments may make the aquifer vulnerable to river contaminants such as bacteria, nutrients, volatile organic compounds, pesticides and endocrine disruptors. This information will allow the SWAP Program to protect public drinking water sources in this highly susceptible aquifer in accordance with the Legislative requirements that govern this program.

Due to unforeseen complications associated with the COVID 19 Pandemic and precedence being given to the Legislatively mandated PFAS Sampling Project, additional time is needed to complete the Ohio River Alluvial Aquifer Water Quality Study. The SWAP program is in favor of allowing a NO COST EXTENSION from July 1, 2022, to December 31, 2022.

Thank You,

Brian A. Carr, P.G., Program Manager
Source Water Assessment and Protection

RE: No Cost Extension for USGS Ohio River Alluvial Aquifer Water Quality Study

The parties to this agreement (CCT EHS2000000002) agree to extend the term of said agreement for a no cost time extension to December 31, 2022. The US Geological Survey will honor the terms, conditions, pricing, and specifications of the original contract including all change orders.

Sincerely,

Mark R. Bennett
