19. Use this space to provide any additional information or description of resources supporting your firm's qualifications to perform work for the WV Department of Environmental Protection: (CONT.)

We continue to work with federal and state agencies to field-test new technologies and develop guidance documents for their application. For example, Geosyntec partnered with the University of Illinois and Drexel University on a landmark 10-year study for U.S. EPA that identified methods to improve the long-term performance of municipal and hazardous waste landfills. Our senior practitioners, in collaboration with the academic community, authored the technical guidance for RCRA/CERCLA final cover systems for U.S. EPA. We worked closely with the Environmental Research and Education Foundation (EREF) and the Interstate Technology & Regulatory Council (ITRC) to develop new performance-based guidelines for assessing the post-closure care requirements of MSW landfills.

Solid and Hazardous Waste Services offered by Geosyntec include:

- Siting
- Permitting
- Geotechnical/Hydrogeological Investigations
- Liner and Cover System Designs
- Leachate Management, including passive treatment wetlands
- Vertical and Lateral Expansion Designs
- Surface Water Management
- Landfill Gas Management, including carbon/emissions trading and landfill-gas-to-energy systems
- Construction Management/CQA
- Closure/Post-closure Monitoring
- Remediation
- Groundwater Monitoring/Assessment

Geosyntec works with both public and private sector clients in the solid waste management industry. Representative Clients include:

Private Sector

- Waste Management, Inc.
- Allied Waste
- Waste Services Inc.
- Republic Services
- Waste Industries

Public Sector:

- California: Los Angeles County, Riverside County, San Diego County
- Florida: Escambia County, Indian River County, Miami-Dade DSWM
- Georgia: DeKalb County, Fulton County
- New York: Islip Resource Recovery Agency, City of New York, Town of Babylon

20. The foregoing is a statement of facts
