WHEN RESPONDING TO RFQ, INSERT NAME AND ADDRESS IN SPACE ABOVE LABELED 'VENDOR'

Base Bid:

Base Bid pricing is to be based on all information enclosed within the bidding documents minus those listed as part of the add alternates listed below. In addition to these changes, the following should be included in the Base Bid:

- Include revised room finish schedule contained on SK-1 which modifies the schedule contained on Sheet A1.6 of the drawings.
- Include a revision to the duct system shown in the pool area. The duct system is to be changed to fabric duct system from aluminum. On Sheet M-1.1 Instead of the aluminum duct systems shown in the Pool Area, install fabric duct as specified in Section 15815 (modified below) and as stated in note on the drawing (SW end of pool). Fabric duct vendor shall be responsible for sizing duct and angling continuous vents in such a manner as to provide similar airflow, coverage, and pressure drops as shown originally on the Mechanical Drawings. In Specification Section 15815, Part 2.2 B. Change "continuous (sonic) vent" to "continuous mesh vent".

Add Alternate #1:

Provide pricing for the addition of two more lanes on the pool package – provide an 8-lane pool package in place of the base bid package of a 6-lane pool package.

Site Preparation

An area larger than the proposed building site was excavated and prepared for the proposed building. In order to enlarge the building as described in the additive alternate some additional site preparation will be required.

The contractor will include in the bid for the additive alternative if selected by the owner all equipment and labor for additional excavation and compaction to prepare the site for the proposed building addition. This excavation will be on the southeastern end of the building from Station 5 +40 to Station 5 +10. The width of the excavation will be 70 feet left and 70 feet right of the centerline. The depth of the excavation within these limits will be a minimum of 10 feet below the finished floor elevation. The side slopes of the excavation beyond the previous stated limits shall be graded to temporary stable slope.

Fill materials from 10 feet to 4 feet depth

The bottom of the excavation shall be proof rolled using a smooth drum vibratory roller, which has a minimum weight of 10 tons. The material from the excavation shall be stockpiled and segregated to remove large boulders, and any woody materials, which may be present. The boulders and rocks larger than 12 inches in diameter will be broken up prior to incorporation in the fill material. Fines shall be incorporated into the rock fill

Chief Logan State Park
Recreational Center

materials to eliminate voids. Material shall be placed in maximum 12-inch lifts and compacted with a vibratory roller.

Materials with less than 40% + 3/4 inch material by weight shall be compacted to 95% of its maximum dry density as determined by standard proctor testing. Compaction testing shall be performed using nuclear density tests methods. Moisture for the materials placed shall be monitored using nuclear tests methods. Moisture tolerances for the fill materials with less than 40% + 3/4 inch material shall be +3% and -4% of the optimum moisture content as determined by WVDOH one- point proctor methods. Testing shall be performed on each lift at a minimum rate of one test per 10,000 square foot of fill placed.

In-place density tests and one-point proctor tests shall be performed in general accordance with WVDOT MP717.

Fill materials from 4-foot depth to surface

The maximum size of this material shall be 6 inches. Maximum lift thickness will be 6 inches for this zone. Compaction shall be in accordance with methods described above.

Unsuitable and Borrow Materials

If unsuitable material is encountered in the excavation, which cannot be incorporated in the fill area, the unsuitable material shall be moved to a suitable disposal site near the proposed facility. Any borrow materials necessary to bring the site to final grade can be obtained at the nearby borrow area. The contractor will be responsible for grading the borrow area into a stable configuration and the re-vegetation of the borrow area prior to leaving the site.

Foundation Modifications

It is envisioned that if the building is extended the proposed column spacing in the pool area will be increased from the 25 feet shown on the drawings to 30 feet. The contractor shall include in his bid for this alternate all material and labor to increase the proposed Type C foundations shown on drawing S1.1 to Type D Foundations.

Floor Slab Modifications

If the additive alternate is selected the proposed concrete floor will be extended and the pool area will be increased. The contractor shall include in his bid the cost of any additional concrete floor system and associated control joints. It is anticipated that at least one additional control joint extending from the North wall to the South Wall will be required, as well as adjustments to control joint placement near the corners of the expanded pool.

Additional Sidewalk Work

BASE/ ALTERNATE BID DESCRIPTION

Chief Logan State Park
Recreational Center

The contractor shall include in his bid for the additive alternate all costs for extending the perimeter sidewalk on the southwest side of the building.

Architectural Modifications
