2019 Washington Street, East
P.O. Box 50130
Charleston, WV 25305-0130

RE: DEP14515 -- Brownton (McCord) Landslide Design

Dear Mr. Bowman,

HMB Professional Engineers, Inc. (HMB) is pleased to submit our Expression of Interest for the Brownton (McCord) Landslide Design. As our submittal clearly demonstrates, HMB draws upon an extensive list of AML project experience, most of which has been done for the West Virginia Office of Abandoned Mine Lands. HMB has recently added Bob Jones, P.E. to our AML staff, which shows our commitment towards providing the most experienced and qualified AML design staff possible. Bob recently retired from the KY Division of AML, where he completed 115 AML projects, many which involved many which involved slide abatement, re-grading / re-vegetating work, sealing portals, and designing drainage controls (surface channels, pipes & underdrains.)

HMB has long been a multi-disciplined firm, with a staff of over twenty (20) civil, structural, water and wastewater engineers capable of designing quality solutions for a wide variety of projects. State and Federal government agencies now place a large emphasis on environmental analysis and design. HMB has responded by expanding our staff to include environmental engineers, environmental technicians, geologists, biologists and a chemist. This additional staff has expertise in stream restoration, wetlands delineation, wetlands creation and mitigation, 401 and 404 permits, biological assessment, and all environmental analysis required to prepare NEPA documents.

As our proposal clearly demonstrates, HMB has an experienced staff that is dedicated to making this project a success. We hope that you consider using HMB's professional engineering services for this project.

Sincerely,
HMB PROFESSIONAL ENGINEERS, INC.

	2 OTHER (R/W acquisition)
	48 TOTAL PERSONNEL

TOTAL NUMBER OF WV REGISTERED PROFESSIONAL ENGINEERS IN PRIMARY OFFICE: 3
 *RPEs other than Civil and Mining must provide supporting documentation that qualifies them to supervise and perform this type of work.

Numbers shown in parenthesis indicate staff with multiple areas of experience and responsibilities. Those numbers are not included in the total personnel figure.

All AML design work will be done by our civil engineering staff. HMB's staff includes Sanitary and Structural engineers that will not be working on any AML projects, unless a specific need arises for their expertise.

10. HAS THIS JOINT-VENTURE WORKED TOGETHER BEFORE? ☐ YES ☐ NO

12. A. Is your firm experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering?

YES - HMB has completed over 80 AML projects in WV, KY, VA and IN. Several of those projects involved regrading refuse piles, stabilizing stream banks, and designing drainage channels. See Schedule "A" for a list of HMB's past AML projects.

NO

B. Is your firm experienced in Soil Analysis?

YES Description and Number of Projects:

NO - HMB is teaming with Novel Geo-Environmental, who will be providing subsurface investigations, geotechnical testing and geotechnical design. Their CCQQ is attached to this submittal.

C. Is your firm experienced in hydrology and hydraulics?

YES - Most of our past AML projects require hydrologic and hydraulic analysis. The attached Schedule "A" indicates which AML projects required hydrologic and hydraulic analysis.

NO

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

YES Description and Number of Projects:

NO - HMB is teaming with Photo Science, who will be providing photogrammetry and digital mapping services. Their CCQQ is attached to this submittal.

E. Is your firm experienced in domestic waterline design? (Include any experience your firm has in the evaluation of aquifer degradation as a result of mining.)

YES - HMB has an extensive list of past projects where the feasibility of extending water lines was analyzed and documented. HMB also has completed numerous water line extension projects in WV, KY, IN & TN. See the Similar Projects Section of this submittal for a list of past water line feasibility projects.

NO

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

YES - HMB has completed several projects where AMD was a problem. See the Similar Projects Section of this submittal for a list of past AML projects that involved AMD.

NO

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)

Professional Development

- Minimum Standards for Land Surveying
- Land Surveying Ethics
- Lessons in Professional Liability
- Contract Review & Revisions
- Preparation of Survey Reports
- Fundamentals of GPS
- Research techniques for boundary surveys
- Public Lands Surveying

Employment

- HMB Professional Engineers, Inc./2007-present
- Grider Engineers/1994-2007
- HMB Professional Engineers, Inc./1984-1994
- U.S. Army Corps of Engineers/1982-1984

Joe has over 25 years of engineering and land surveying experience that he has gained while designing AML, highway, airport and land development projects throughout Kentucky. Joe began his career at the U.S. Army Corps of Engineers in the Louisville District, where he worked from 1982 to 1984. Joe continued his career at HMB, where he worked from 1984 to 1994. From 1987 to 1991, Joe worked in the AML design section of HMB, where he was design engineer or project manager on the AML projects listed below. In 1994, Joe left HMB and started Zimmerman-Grider, Inc., which he owned and operated for nearly 14 years. During that time, Joe designed numerous residential and commercial land development projects. Services provided for these projects included project planning, conceptual design, final design, construction staking and contract administration. In addition to the land development design, Joe also completed numerous surveying projects, both large and small. Those surveys included boundary, control, topographic and construction staking surveys for major highway projects, airport projects, commercial land development and residential land development projects.

In October 2007, Joe rejoined HMB, and is currently serving as Principal-in-Charge of the AML, Construction Inspection and Surveying Divisions.

Joe's Past AML Project Experience

Each of the projects listed below involved coordinating and supervising the land surveys, coordinating the geotechnical drilling, gathering water and material samples, designing a grading plan, performing hydrologic analysis, performing hydraulic calculations, preparing an erosion control plan, designing construction details, writing contract specifications and attending pre-bid and pre-construction meetings.

Awards

- Tau-Beta Pi - Engineering Honor Society
- 1988 NREPC Outstanding Employee Award

Employment

- HMB Professional Engineers, Inc. - Starting 12/8/2008
- November 1984 - August 2008
KY Division of Abandoned Mine Lands

Experience Summary:

Bob has over twenty-three years of progressive civil design experience working in numerous capacities on Kentucky Abandoned Mine Lands (AML) Projects. Since late 1999, Bob was responsible for approximately 115 AML projects worth \$47 million of construction expenditures. Design work included reclamation projects in both Eastern & Western Kentucky for landslide abatement, refuse fires extinguishment, acid mine drainage treatment, coal refuse revegetation, corrective drainage measures, and portal closures. Experience related strengths:

- Extensive earthwork, drainage, and retaining wall design experience
- Procurement of engineering consultant services & obtaining permits from governing agencies
- Proficient with AutoCAD (19 year's experience) & Carlson SurvCadd engineering software (15 year's experience)
- Proficient with Total Station surveying equipment

Design Branch Manager (August 2005 - August 2008): Responsible for conceptual oversight and approval of all AML reclamation design plans and drawings generated by branch. Two four-person design teams along with realty and GIS personnel were under the direction of this position. Other duties included routine use of AutoCAD, SurvCadd, and Microsoft Excel along with other software as needed. Responsible for procurement of permits and geotechnical/photogrammetric consultant services on a case-by-case basis for design needs. Directed and oversaw the posting of AML's standard specifications (2006 & 2008) and standard details on website.

Design Section II Supervisor (October 1999 - July 2005): Managed a 3-person design team, which generated AML reclamation design plans, cost estimates and technical specifications. Extensive use of AutoCAD, Survcadd, Microsoft Excel along with other software during this period. Oversaw and performed land surveying utilizing total station equipment for construction layout, topographic mapping, and earthwork payment purposes. Strongly involved with the procurement of permitting and geotechnical/photogrammetric consultant services on a case-by-case basis for design needs.

Environmental Engineer Assistant Chief (March 1997 - September 1999): Responsible for generating AML reclamation plans and cost estimates under supervisory personnel. Extensive use of AutoCAD, Survcadd, and Microsoft Excel was performed along with other software as needed. CAD standardization (quasi CAD manager) efforts were performed and implemented by this position. Performed land surveying utilizing total station equipment for construction layout, topographic mapping, and earthwork payment purposes.

Environmental & Design Technician (April 1987 - February 1997): Advancing responsibilities in AML design work—performed and participated in land surveying work to support design and earthwork payments. During the late 1980's began utilizing AutoCAD as a drafting tool with migration to a design tool (e.g. cross sectioning and topographic map generation) by mid 1990's. Educational leave taken from Fall 1994 to Summer 1996 to attend University of Kentucky.

Environmental Engineering Assistant (November 1984 - March 1987): Board drafting work and other supporting work as needed was performed for numerous AML projects. Routine member of surveying crew with duties that included instrument person, rod person, and note man duties, as called upon.

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)			
NAME & TITLE (Last, First, Middle Int.) Blankenship, Bob PE, Principal In Charge		YEARS OF EXPERIENCE YEARS OF AML DESIGN EXPERIENCE: YEARS OF AML RELATED DESIGN EXPERIENCE: YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 29 years	
Brief Explanation of Responsibilities Bob joined HMB in 1989 as Manager of the Water and Wastewater Division. Currently, he is Principal-In-Charge of this division, as well as Vice President in charge of contracting, scheduling and production for HMB's Water and Wastewater, Construction and Environmental Remediation Divisions in Kentucky, Indiana, West Virginia, Tennessee and Alabama. As Vice President, Bob has direct oversight of these divisions to ensure professional and timely delivery of services to our clients. With over 29 years of experience as a Consulting Engineer, he has served as Project Manager on numerous projects from Ohio to Florida. In addition, he served as an Engineer Officer in the U.S. Marine Corps for eight years and then for an additional six years in the Marine Corps Reserves. He is Vice Chairman of the Versailles/Woodford Co. Planning & Zoning Commission, having served on this Commission since 1993. Bob currently serves on the HMB Board of Directors.

Rice, Steve Biologist, Project Manager		YEARS OF AML DESIGN EXPERIENCE: 0 years	YEARS OF AML RELATED DESIGN EXPERIENCE: 20+ years YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0 years
Brief Explanation of Responsibilities			
Steve joined HMB in 2003 and serves as a Project Manager and Biologist in our Highway Environmental Division. He is experienced in stream restoration assessment, design, and monitoring; field sampling and identification of aquatic and terrestrial animals and plants; wetland delineation and design; environmental impact analyses; and 404 and 401 Water Quality Certification permit applications including design of stream mitigation. During his 28 year career with the Kentucky Transportation Cabinet, Division of Environmental Analysis, Steve wrote over 50 ecological impact analysis documents and numerous biological assessments for federally endangered animals and plants. He conducted biological field surveys throughout Kentucky, identified animals and plants, managed the Aquatic Ecology Section and directed the 401 Water Quality Certification program. In the final four years of his career, he was a member of the 404 Permits Section, where he partnered on the assessment and design of several natural channel design projects.

10. HAS THIS JOINT-VENTURE WORKED TOGETHER BEFORE? YES

12. A. Is your firm experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering?

NO: Note that Novel Geo-Environmental (NGE) has not performed any AML design work to date, but our WV Office Manager (John E. Nottingham) and project geologist (Chuck Montgomery) have extensive AML experience with their former firm. Additionally, NGE currently holds a contract with WVDEP-AML for geotechnical drilling for the northern district of WV and has completed several drilling projects under this contract.

B. Is your firm experienced in Soil Analysis?

YES: NGE specializes in Geotechnical Engineering including foundation investigations, subsurface investigations, cut slope design, fill embankment analysis and design, slope stability analysis, landslide analysis and corrective design, mine subsidence investigations, geologic studies, groundwater seepage analysis, foundation design, retaining wall design, pavement design, subsurface drilling and monitoring well installation. NGE has performed a total of several hundred geotechnical engineering related projects since the company was formed in 2002.

C. Is your firm experienced in hydrology and hydraulics?

NO: While our firm has not performed any hydrology/hydraulics projects to date, our personnel have experience with former employers.

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

NO

E. Is your firm experienced in domestic waterline design? (Include any experience your firm has in evaluation of aquifer degradation as a result of mining.)

NO

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

NO

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)			
NAME & TITLE (Last, First, Middle Int.)		YEARS OF EXPERIENCE	
Nottingham, John, E. Principal Engineer, Vice President		YEARS OF AML DESIGN EXPERIENCE: 12	YEARS OF AML RELATED DESIGN EXPERIENCE: 4 YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
Brief Explanation of Responsibilities			
Mr. Nottingham was responsible for supervising field and design work for numerous AML related landslide abatement projects for the WVDEP while under the employment of Triad Engineering, Inc. In addition to landslide abatement projects, Mr. Nottingham was involved in subsidence determination investigations and subsidence abatement projects. Mr. Nottingham worked extensively on "emergency" projects which required quick field investigations and corrective designs.			
EDUCATION (Degree, Year, Specialization)			
Bachelor of Science in Civil Engineering, 1987, WVU, Specialization - Civil and Geotechnical Engineering Masters of Science in Civil Engineering, 1995, WVU, Specialization - Geotechnical Engineering			
MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS		REGISTRATION (Type, Year, State)	
American Society of Civil Engineering (ASCE) West Virginia Chapter of AIA		Professional Engineering, 1994, WV Professional Engineering, 2007, VA Professional Surveyor, 1996, WV	
13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)			
NAME & TITLE (Last, First, Middle Int.)		YEARS OF EXPERIENCE	
Montgomery, Charles, E. Project Manager		YEARS OF AML DESIGN EXPERIENCE: 10	YEARS OF AML RELATED DESIGN EXPERIENCE: 4 YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
Brief Explanation of Responsibilities			
Mr. Montgomery was responsible for coordinating field activities for AML landslide abatement projects for the WVDEP while employed with Triad Engineering, Inc. Mr. Montgomery has also participated in all project phases for other AML work involving subsidence determinations/abatement and impounded mine pools.			
EDUCATION (Degree, Year, Specialization)			
Bachelor of Science, Geology, 1991, Marshall University			
MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS		REGISTRATION (Type, Year, State)	
Association of Engineering Geologists Geological Society of America		Professional Geologist, 1999, Kentucky	

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)			
NAME & TITLE (Last, First, Middle Int.) Nottingham, Larry C. Senior Engineer		YEARS OF AML DESIGN EXPERIENCE: 15	YEARS OF EXPERIENCE YEARS OF AML RELATED DESIGN EXPERIENCE: 5 YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
Brief Explanation of Responsibilities			
Dr. Nottingham planned and supervised several AML investigation and reclamation projects for WVDEP while employed by Triad Engineering. Projects included burning refuse pile investigations, unstable refuse pile investigations and remedial designs, landslide investigations and remedial designs, subsidence investigations, and underground mine fire investigations.			
EDUCATION (Degree, Year, Specialization) Bachelor of Science in Civil Engineering, 1965, Civil Engineering, West Virginia Institute of Technology Master of Science in Civil Engineering, 1966, Geotechnical Engineering, University of Pittsburgh Doctor of Philosophy, 1975, Geotechnical Engineering, University of Florida			
MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS Member, American Society of Civil Engineers Member, National Society of Professional Engineers		REGISTRATION (Type, Year, State) Professional Engineer, 1969, WV Professional Engineer, 1985, KY Professional Engineer, 1985, OH Professional Engineer, 2006, PA	
13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)			
NAME & TITLE (Last, First, Middle Int.) Christopher Dunlap Engineering Technician		YEARS OF AML DESIGN EXPERIENCE: 0	YEARS OF EXPERIENCE YEARS OF AML RELATED DESIGN EXPERIENCE: 0 YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
Brief Explanation of Responsibilities Mr. Dunlap has served as an engineering technician/field inspector on numerous government and commercial construction projects. His duties on these projects have included quality assurance/quality control (QA/QC), construction oversight and testing, coordination of field activities, liaison between general contractor and engineer, and project reporting.			
EDUCATION (Degree, Year, Specialization): A.S., Mechanical Engineering Technology, WVUIT; American Concrete Institute (ACI) Certified; WVDOH Certification for Fill Compaction Technician; WVDOH Certification for Concrete Technician; WVDOH Certification for Asphalt Inspector.			
MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS: NA		REGISTRATION (Type, Year, State): NA	

14. PROVIDE A LIST OF SOFTWARE AND EQUIPMENT AVAILABLE IN THE PRIMARY OFFICE WHICH WILL BE USED TO COMPLETE AML
DESIGN SERVICES

Three rotary drill rigs, one mounted on a four wheel drive one-ton truck, and two track-mounted rigs. Drills are equipped with hollow stem augers, split-spoon soil sampling equipment, and rock coring tools.

Portable dynamic cone penetrometer.

Electric concrete coring drill.

Two equipment hauling trailers.

Software includes: Word processing, PCSTABL - Slope Stability Analysis, LPILE Plus 4.0 - Pile Foundation Analysis, PYWALL 2.0 - Retaining Wall Analysis, ReSSA 2.0 - Reinforced Soil Slope Analysis, ReSlope 3.0 - Reinforced Soil Slope Design

Soil Laboratory Equipment: Soil Oven, Scales, Sieves, Liquid and Plastic Limits Machine

COMPANY BACKGROUND

Founded in 1974, Photo Science is a *Geospatial Services* firm, specializing in aerial imaging and data collection, photogrammetric mapping, GIS, remote sensing, and surveying services.

Initially, the company consisted of one (1) aircraft, ten (10) employees, and offered aerial photography and photogrammetric mapping services, predominantly to local area engineers and the coalfields of eastern Kentucky and throughout West Virginia. Through decades of planning and disciplined growth, Photo Science currently owns and operates nine (9) aircraft, employs more than 170 professional and technical staff in seven (7) production facilities across the country, and provides full-service geospatial solutions to our diversified client base.

The firm is currently registered to conduct business in 22 states, including West Virginia since 1998. We are registered in West Virginia to offer and provide engineering services (C01583) and land surveying services (6-5358). In addition, our staff consists of West Virginia registered Professional Engineers and registered Professional Land Surveyors.

We currently have a strong group of professionals, including 15 Certified Photogrammetrists, 18 Professional Land Surveyors, 3 Professional Surveyor and Mappers, 2 Professional Engineers, and 2 Certified Planners with many years of experience in all facets of geospatial solutions.

We have invested millions of dollars in state-of-the-art equipment over the past decade to stay current with the ever changing geospatial industry. Our aircraft are equipped with conventional precision film cameras; large-format Z/I Imaging Digital Mapping Cameras (DMC) — *being only one of five firms in the country to own this high-end large-format digital imaging capability*; medium-format Applanix Digital Sensor System (DSS) 322, and Leica ALS-50 LIDAR sensors. These sensors are integrated with our flight management systems, airborne GPS, and Inertial Measurement Unit technology. Additionally, we maintain a diversified platform of photogrammetric workstations and production resources that enables efficient, multi-task-order operations.

Photo Science has the equipment, staffing, and experience to meet the needs of the West Virginia Office of Abandoned Mine Lands. We offer:

- ✦ aircraft, sensors, and processors that are the most innovative equipment in the photogrammetric arena today;
- ✦ mapping and GIS professionals totaling more than 180 with a total of over 1,300 years of combined work experience and an average of over 10 years of experience working together;
- ✦ 30+ years of experience providing the same services as requested to various municipal, county, state, and federal agencies.

LOCATION

The corporate headquarters of Photo Science is located in Lexington, Kentucky. Our principal offices are located at:

Address:	2670 Wilhite Drive Lexington, Kentucky 40503	Phone: 859-277-8700 FAX: 859-277-8901 Web Page: www.photoscience.com
----------	---	--

Our corporate headquarters' facilities currently occupy over 21,000 square feet with some of the most modern equipment used in photogrammetry. We now have seven (7) branch offices; located in Bangor, Maine; Colorado Springs, Colorado; Norcross, Georgia; Orlando and St. Petersburg, Florida; and Bowie, Maryland; and Exton, Pennsylvania.

CORE SERVICES	
Aerial Imaging and Data Collection	Aerial Photography
	Digital Aerial Imaging
	LIDAR Terrain Mapping
Photogrammetric Mapping	Aerotriangulation
	Stereocompilation / Feature Extraction
	Digital Orthophotography
Geographic Information Systems	Photographic Laboratory / Scanning
	Data Capture / Conversion
	Database Design
Remote Sensing	Application Software Development
	Training
	3-D Visualization
Surveys	Thematic Mapping
	Image Processing / Analysis
	Photointerpretation
	Change Detection
	Airborne GPS / IMU
	GPS Surveys / Geodetic Control
	Conventional Surveys

PROJECT STAFFING

G. Michael Ritchie, PE, PLS, PSM, CP is Principal-In-Charge and President of Photo Science. He has over 30 years of transportation engineering, surveying, and computer mapping experience. He has been responsible for many presentations and papers regarding digital base mapping and information mapping for various communities. He is qualified in all areas of technical expertise required for this project. He is a licensed civil engineer in 15 states, a licensed land surveyor in 7 states, and he is a nationally recognized Certified Photogrammetrist. **He is currently licensed in West Virginia as a Professional Engineer (8679) and as a Professional Land Surveyor (1163).**

Other key staff members include:

1. Jack L. Mitchell, PLS, CP Project Manager
2. Marcus G. Penrod, CP Assistant Project Manager
3. Mark E. Meade, PE, PLS, CP Survey Manager
4. Clay D. Smith, PLS, CP Production Manager
5. William R. Mitchell, CP QA/QC Manager
6. Forrest E. Godby, PLS Flight Coordinator

EXPERIENCE

Photo Science has been completing aerial photography and mapping projects since it opened 30 years ago. Our staff has vast experience completing projects with similar requirements to yours. We currently have nine statewide open-end contracts with various Departments of Transportation utilizing the same type services as those requested by the West Virginia Department of Transportation. The table below highlights those contracts and illustrates relative services being provided.

EQUIPMENT

Airworthy Aircraft. Photo Science owns and operates nine FAA-certified aircraft to provide aerial photo missions. Each aircraft is capable of supporting virtually any type of traditional and digital aerial photogrammetric mission and is equipped with airborne Global Positioning Systems (GPS) receivers, Inertial Measurement Units (IMU), Forward-Motion Compensation (FMC), and gyro-stabilized camera mounts.

Traditional and Digital Aerial Photography Acquisition. In support of traditional aerial photo missions, Photo Science offers four USGS tested and calibrated analog photogrammetric cameras. Additionally, Photo Science's state-of-the-art Z/I DMC provides for the direct capture of high-resolution, large-format, multispectral (R,G,B, NIR) aerial imagery. The DMC is the industry's most innovative and precise turnkey digital camera system supporting aerial photogrammetric missions for the broadest range of GIS and remote sensing applications. Photo Science is only one of five firms in the country to own this high-end, large-format digital imaging capability.

Tennessee DOT	◆	◆	◆	◆	◆	◆

Photo Science's most recent acquisition is the latest in aerial imaging – the Applanix DSS 322. The DSS 322 system is technology engineered to maximize the system's capability in generating high-quality color and color infrared (CIR) digital geospatial imaging products. The DSS is a ready-to-use, directly georeferenced, medium-format, airborne digital camera system.

LIDAR Data Acquisition. Photo Science is an industry leader in the collection and processing of airborne Light Detection and Ranging (LIDAR) information. LiDAR is an active remote sensing system that uses airborne laser scanning technology to emit pulses of light to illuminate the terrain. Photo Science utilizes the latest in LiDAR technology, employing the Leica Geosystems ALS50 II sensor. In addition to acquisition, Photo Science utilizes a variety of technologies to process the acquired, raw LiDAR information—converting ASCII point samplings to finished digital elevation models, surface terrain models, and digital contour products.

Photo Lab. Photo Science maintains two full-service photographic laboratories for film processing, precision photographic reproductions, enlargements, and color proofing. We own two state-of-the-art Vexcel 4000 high-resolution image scanners, as well as a Z/I PhotoScan 2000 roll-feed, high-resolution image scanner. These scanners represent two of the top scanners in the photogrammetric marketplace today. They are capable of bearing multiple resolutions up to 7.5 microns including 14 microns as specified. Additionally, these scanners can operate as roll-feed or with single or dual film diapositives. In addition, by staffing the lab 24 hours per day during the peak flying seasons (spring and fall), Photo Science is able to maintain direct control of project schedules.

Field Control Surveys. Photo Science performs aerial photography and photogrammetric services over the eastern United States and as such, has completed survey requirements of all types in a variety of locations. We have worked with hundreds of consulting engineers who perform their own control surveys. We have 20 Trimble GPS receivers available immediately for this project including RTK capability. We have complete software including the GeoSurv software for better vertical adjustments and Trimble GP Survey.

Aerotriangulation. Photo Science has complete in-house facilities for analytical triangulation control extension. Our team has performed in-house aerotriangulation to support photogrammetric compilation and orthophoto production for many years. Intergraph ISAT aerotriangulation software is the software package most often utilized by our staff to determine the position and rotation angles of each of the acquired aerial photos and to establish their relationship to the ground.

Stereo Compilation (Digital Data Capture). Photo Science has 34 stereo plotters with experienced staff and computers to assign to this project. We utilize KORK and Atlas mapping software to insure exact project specifications and formatting of data. Our stereo compilation experts are highly experienced providing both large scale (1"=20') and small scale (1"=2,000') planimetric and terrain feature extraction in support of topographic mapping. The scope of our project experience ranges from small, engineering level survey and mapping projects to comprehensive and extensive statewide mapping initiatives. We have performed hundreds of DTM corridor-type projects including CEAL translations for the West Virginia Department of Transportation as well as for a wide variety of consultants.

Interactive Graphics - Photo Science utilizes the latest equipment for data processing and formatting to clients' needs. We utilize software capable of delivery in the several formats. Final ink-on-mylar drawings are produced on Hewlett Packard inkjet drum plotters. Services are available for laser or electrostatic plots.

Digital Terrain Modeling. DTM experience is an everyday occurrence at Photo Science; all of our projects are compiled using DTM techniques. Photo Science uses a combination of breaklines and mass points for a true and accurate Triangulation Irregular Network (TIN) file for contour generation. Photo Science uses the Plus III Terramodel software for contour generation at every stereoplotter for instant on-line quality control checks. In addition, our raw data is easily loaded into our Intergraph "select" system for processing in the "In Roads," "Road Works", or "Engineering Site Package" and "In-Roads Select" as well. We routinely provide this data to clients who use ArcInfo, AutoCAD, Intergraph, and other modeling software systems. We also produce TTN files on our Intergraph Imagestations and have produced this data in ArcInfo, ASCII, CEAL, GeoPak, and Caice formats.

Metric Data. Photo Science has completed several hundred projects requiring data in metric units. All of our equipment can readily fulfill this requirement.

Airborne GPS. Photo Science is a leader in airborne GPS services, using our considerable knowledge and experience to make effective use of this new technology. All of our aircraft are equipped for airborne GPS (ABGPS) and Inertial Measurement Unit (IMU) missions and have undergone rigorous testing to ensure accurate determination of the three-dimensional position of each photographic exposure.

TIME SCHEDULE

Photo Science is committed to assign adequate resources to complete the West Virginia Department of Transportation projects in a timely manner. We would recommend progressive delivery of specific priority projects so as to allow you and your consultants to meet design schedules.

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES (Furnish complete data but keep to essentials)			
NAME (Last, First, Middle Initial) Adkins, Lonnal Photogrammetrist Photo Lab Manager	YEARS OF EXPERIENCE

Spewing Camp Refuse – Floyd Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Construction Period:
October 2002 – September 2004

Design Engineer:
Robert D. Jones PE, PLS

Approx. Construction Cost:
\$2.9 million (Spewing Camp only)
\$3.6 million (including Hoods Fork & Curtis Johnson Slides)

The Spewing Camp Refuse AML project consisted of approximately 7 million cubic yards of un-vegetated refuse, which encompassed approximately 60 acres. For decades this material was eroding and depositing large amounts of coal waste into Left Fork of Beaver Creek.

The conceptual design included refuse grade-work which provided a stabile and positive drainage configuration. Once grade-work was complete, it was followed by placement of an agricultural limestone barrier and lastly cover material capable of supporting vegetation. Required cover material was generated on site and was excavated & transported from two nearby AML slide “satellite projects”, Hoods Fork and Curtis Johnson as designed. This helped reduce the overall cost of reclamation for Spewing Camp and provided for successful slide reclamation efforts at the satellite projects.

Twenty-five diversion benches were an integral part of the grading which was designed to properly move runoff to receiving aggregate lined side drains / rock toe buttresses. Nearly one mile of rock toe buttresses were designed and installed to ensure long-term stability and erosion control. All disturbed areas were revegetated and have successfully sustained vegetative growth.

For this project, the Kentucky Division of Abandoned Mine Lands received 3 awards as presented by the Federal Office of Surface Mining: National Award for Outstanding Reclamation, the Appalachian Regional Award for Outstanding Reclamation and the People’s Choice Award. All design plans were generated utilizing AutoCAD 2000 & Carlson SurvCADD.

Above Picture: This aerial was taken in May 2000 approximately two years & half years before construction activities started. As depicted, the refuse material was highly erosive and unable to support vegetation.

Left Picture: This shot was taken in November 2004 just after project completion.

Brian Prater Slide – Pike Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Construction Period:
April 2005 – October 2005

Design Engineer:
Robert D. Jones PE, PLS

Approx. Construction Cost:
\$461,000

This project addressed a dangerous slide which was undercutting a foundation of a house. The slide was heavily saturated with further movement most likely without reclamation efforts. Numerous open mine portals on a nearby mine bench along with mine drainage problems were part of the reclamation scope.

A pile and lagging wall system was determined to be best suited to correct the slide and ensure long term stability of the house. Benefits of this design wall design virtually eliminated the need for excavation work to be performed at the house seat level as compared to other types of wall systems (e.g. gabion, concrete). The piles were seated into competent bedrock and tied together with a reinforced concrete footing; reinforced concrete lagging panels were installed atop footing. Lastly, aggregate was placed behind the wall to provide a long term free draining stable

medium. A secondary reinforced concrete wall was constructed to address more localized slope failure effecting the driveway. Three existing portals were closed with wildlife access. Mine drainage problems were addressed with pipes and surface ditches lined with gabion/erosion control blanket as designed.

All design plans were generated utilizing AutoCAD 2005 & Carlson SurvCADD.

Above Picture: This shows the slide under cutting the foundation of the residential structure. The toe of the slide was severely saturated with mine water which greatly increased the likelihood of further movement.

Left Picture: This shot shows the completed pile and lagging wall protecting the house foundation.

Elkhorn City Portals Group – Pike Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Dates: April 2006 – February 2007

Design Engineer: Robert D. Jones PE,
PLS.

Approx. Construction Cost: \$177,000

The Elkhorn City Portals Group project consisted of four sites: Elkhorn City, Randy Lester, Weddington Fork, and Randolph Watson. The project addressed a variety of AML type problems as further discussed. The

Elkhorn City Portals site consisted of 14 mine openings which were located just above a heavily populated residential area of Elkhorn City. Several of the portals were draining and posed a risk to the residential properties below. Furthermore, the road leading to seven of the portals as well as the

bench itself, served as access to both gas and water utilities for the city. Reclamation efforts consisted of portal closures with wildlife access and/or wet seals. A series of pipes and surface drains were also constructed to channel mine drainage safely to an existing inlet and ensure long-term access would be available to the utilities. The Randy Lester site consisted of installation of a deep seated subdrain to eliminate drainage problems; a rock toe buttress was also installed to provide for slope stability at the property. Work at Weddington Fork concerned repair of an existing gabion ditch and to provide shoulder stability for the county road. Randolph Watson site consisted of surface drainage work around a residential area.

Above Picture (Elkhorn City Site):
This shot depicts uncontrolled mine drainage prior to construction efforts leading from the bench down the access road leading to Elkhorn City.

Left Picture (Elkhorn City Site):
This shot shows a constructed ditch designed to move drainage mine drainage to an existing inlet located within the residential area (top left of photo.)

East Pike County Group – Pike Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Dates: September 2005 – June 2006

Design Engineer: Robert D. Jones PE,
PLS.

Approx. Construction Cost: \$230,000

The East Pike County Group project consisted of five sites: Larry Daniels, Ray Justice, Anderson, Crystal Blair/Verda Smith and Ervin Francis. The project addressed a variety of AML problems which included small slides, uncontrolled mine drainage and mine portals. In all 7 small slides and 18 portals closures were abated along with numerous drainage problems as discussed further.

The Larry Daniels site included design and construction of a concrete gravity wall to ensure proper drainage around the residential area. Ray Justice included excavation of four small slides, mine drainage problems and portal closures. The Anderson site consisted of a geo grid reinforced road embankment design, installation of a grouted gabion ditch and portal closures. Slide abatement work at Crystal Blair/Verda Smith included rock toe buttressing and excavation work on three small slides; portal closures and drainage controls were constructed. The Ervin Francis site addressed numerous portals which were draining heavily. The portals were closed using a combination of wildlife closures / wet seals. Drainage controls including road side ditches and pipes were installed/ upgraded along the county road. All disturbed areas were revegetated as standard practice.

Hima Tipple Group – Whitley, Laurel, & Clay Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Dates: February 2007 – June 2007

Design Engineer: Robert D. Jones PE,
PLS.

Approx. Construction Cost: \$81,000

The Hima Tipple Group project consisted of five sites: Hima Tipple, Ann Hail, Larry Parker, Wendell Ball and Verna Jones. The project addressed a variety of AML type problems as further discussed. Hima Tipple site consisted of demolition / disposal of a dangerous abandoned tipple that included a metal silo, tram system and other structural components typically found with industrial mining operations. **Ann Hail** site consisted of four mine opening closures with wildlife access. These portals were located near a heavily populated residential area in Corbin KY. Larry Parker site abated numerous areas of sub subsidence and surface drainage problem. Wendell Ball site corrected severe mine drainage issues affecting a residential area. Verna Jones site corrected drainage and a small slide behind home.

This picture shows one of the completed closures at the Ann Hail site being inspected with Office of Surface Mining (OSM) personnel in June 2007. Access to the portals was heavily wooded therefore special emphasis for access was scoped during design reconnaissance to ensure disturbance would be minimal.

Shirley Haynes Slides – Knott Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Construction Period:
April 2006 – August 2008

Design Engineer:
Robert D. Jones PE, PLS

Approx. Construction Cost:
\$1.7 million

This project included three dangerous slide areas A, B, & C (11 acres approx.) which were threatening several residences below. During one occurrence mud and silt (3 feet deep approx.) was deposited on the back of a single family dwelling. Preliminary design reconnaissance work was conducted in 2005 to generate design alternatives and conceptual plans.

Ultimately correction for these slides included excavation efforts whereby two of the slides were excavated to bedrock with the third area excavated & re-graded to a stable and positive drainage configuration—over 200,000 C.Y of unstable material was excavated. All excavated material was transported to four areas which were identified and delineated during the conceptual design phase. All material placed in these areas was graded and compacted to ensure long term stability of the fill material. Drainage work was also designed and installed within the residential areas to ensure surface water runoff from the excavation work above would safely move runoff to a nearby receiving stream. Drainage work designs included pipes, gabion channels, aggregate lined channels, and concrete channels. Erosion control measures included silt traps and silt bales located to prevent silt and other debris from entering the nearby streams. Utility relocation was an integral part of the project as an active gas line intersected slide area B and was subsequently addressed to ensure no disruption of service

occurred. All disturbed areas were revegetated to ensure long term stability and erosion control. All design plans were generated utilizing AutoCAD 2005 & Carlson SurvCADD.

Above Picture: This shows the top of Slide Area A including the scarp line—approximately 100,000 C.Y. of unstable slide material was removed from this area. This shot was taken during design reconnaissance work in December 2005.

Left Picture: This shows Slide Areas A & B (in the distance) with all unstable slide materials successfully removed and properly placed in the designated waste areas. This shot was taken nearing the completion of the project in March 2008.

Coiltown Mines / Pits – Hopkins Co. KY

State:
Kentucky

Agency:
KY Division of Abandoned Mine Lands

Construction Period:
November 2002 – November 2003

Design Engineer:
Robert D. Jones PE, PLS

Approx. Construction Cost:
\$1.35 million

The Coiltown Mines / Pits AML project consisted of 120 acres of un-vegetated, eroding acid bearing mine refuse, which was located on four distinct sites (A, B, C, & E) and one designated 35 acre off-site borrow area. For decades this eroding material severely affected downstream water quality.

The conceptual design included refuse grade-work to provide for a positive drainage configuration. Once grade-work was complete, it was followed by placement of an agricultural limestone barrier and lastly cover material capable of supporting vegetation—approximately 150,000 C.Y. of cover material was uniformly placed on the four sites. The grading design called for slopes typical (3.5 horizontal: 1 vertical or less) of the topography in this region. The grading plan also eliminated numerous acid mine water pits which were significant contributors to the acid mine drainage problems. Suitable borrow material was generated within the site areas and from the offsite borrow area as designed. Approximately 10,000 linear feet of aggregate lined channels were designed to treat acid mine drainage along with 2,500 linear feet of stream restoration performed. Pipes were designed and installed beneath John Lansden road to convey surface flow between sites A and B. Other significant aspects addressed existing utilities, water treatment, mine debris removal, and traffic control. All areas were successfully re-vegetated as defined in the contract specifications.

All design plans were generated utilizing AutoCAD 2000 & Carlson SurvCADD.

Above Picture: This is an aerial of Site A which consisted of 44 acres of coal refuse. Sites B, C & E (not shown) were “very similar” to Site A with un-vegetated, eroding acid bearing materials.

Left Picture: This shot is looking up drain at Site A. It was taken at the end of construction activities. This site along with the other sites has sustained strong vegetative growth.
