PART 2

OPERATING ENVIRONMENT

2.1 **Location:**

Directions to Pringle Run #2

Site 1

From Philippi travel to Kingwood. At the intersection of Routes 7 and 26, travel east on Route 7 for 1.5 miles then turn right on Route 72. Travel south on Route 72 for 4.3 miles then turn right onto a stone base road, immediately after crossing the Pringle Run Bridge. Proceed through the gate, up the hill, for 0.5 mile to the site.

Site 2:

From Site #1 continue an additional 0.4 mile, bear right, continue straight ahead, then bear right again. Travel 0.1 mile, bear right again and travel 0.1 mile, then continue straight. Travel 0.4 mile, then turn right, and proceed through a metal gate. Travel 0.4 mile. After crossing the stream, park and walk the old haul road on the right for about 600 feet to the site, which is located just above the stream.

Site 3:

From the bridge at Site #2, continue an additional 0.2 mile, bear right, then travel 0.7 mile up the hill, to the site along both sides of the road.

2.2 Background:

Firms are to be licensed Architectural/Engineering Firms (A/E) and should be familiar with, and have a successful track record of design of similar projects. The anticipated contract will be for "full-service" A/E design. Aspects of the design are to include, but not be limited to, Civil, Structural, Geological and Hydrological.

*The successful A/E will be responsible for **Design** of the following:*

Site 1 consists of a hazardous structure, deep mine portals, highwall and acid mine drainage. A large steel tippie, measuring approximately 45' high x 15' wide x 15' long, sets beside the roadway and can be easily accessed by any of the numerous military and/or recreationalists that regularly visit the area. Attached to the top of the tippie is a 30' long steel framed conveyor belt leading back to a steel hopper, located near the top of the spoil outslope. On the highwall bench, above and behind the tippie, were three deep mine portals. One portal was open (2' high x 6' wide) while the other two were completely collapsed. All of the portals had discharges with flows ranging from an estimated 2-3 gpm to upwards of 50-75 gpm. Field water tests showed a pH of 3.4 with the iron content of 8 mg/L. The highwall was about 20 feet in height and approximately 400 feet long. Old tires and pieces of rusted metal were scattered on the bench near the hopper. Site visitation is evident due to the close proximity of the tippie to the Camp Dawson access and training area road and scattered debris behind the tippie.

Site 2 consists of three or possibly four mine portals, coal refuse, a metal conveyor, highwall, impounded water, scattered piles of metal and tires, and two small block/stone buildings. Two deep mine portals were completely collapsed and had discharges ranging from an estimated 1 to 30 gpm that flowed directly into Pringle Run. In front of one portal was a small, partially collapsed block building, about 6 feet wide x 10 feet long, which may have been an old powder

magazine. A third portal to the north had a 12' wide opening but was flooded to the roof and discharging an estimated 25 to 50 gpm. Located in front of the two southern portals was an unvegetated coal refuse pile covering about 1 acre and measured approximately 125 feet wide x 150 feet long x 15 to 20 feet in height with its toe extending down into the creek channel. At its base were numerous AMD seeps flowing directly into the stream. A second refuse area further to the north consisted of small scattered, partially vegetated piles located on the bench and covered a total of about 1 acre. Located near the county road is a small block and cut stone, partially collapsed, foundation measuring about 12' x 15' x 6' in height along with a small concrete box measuring 18" x 24" x 12" high, with no cover. Located on the northern refuse area was a rusted metal conveyor belt frame about 75' long x 15' high along with a smaller metal conveyor section nearby. Below the northern most portal was a ¼ acre surface impoundment filled with AMD that adversely impacts a 1 acre area below, next the stream. A partially sloughed-in highwall is also on site and measured 300' in length x 25 to 35 feet in height.

Site 3 includes portals, coal refuse, impounded water, acid mine drainage and a mine building. Near the northern edge of the site, above the road, were two partially open but flooded deep mine portals. Located in front of the portals was a 1/4 acre pond measuring about 50 feet x 75 feet, filled with AMD, and estimated to be 3 to 4 feet in depth. Flow from the pond was estimated to be about 50 gpm. Field water tests showed a pH of 3.9 with the iron content of 4 mg/L. About 300 feet east of the pond was the collapsed remains of a small, wooden shed measuring about 6' wide x 8' long. South of the pond, on the opposite side of the roadway, was a mostly unvegetated coal refuse pile covering an estimated 1 to 2 acres that extended down slope towards the stream. Site visitation was evident throughout the problem area with ATV trails, household garbage, and the close proximity of the country road to the site.

Location Map is attached (Attachment A1).

Preliminary design documents will be due 60 days from the issuance of the Purchase Order.
