Re: Expression of Interest to Provide Professional A/E Services for the WVDEP, Office of Abandoned Mine Lands and Reclamation - RFQ Number DEP-15001 Newtown (Kinder) Portals

Dear Mr. Estes:

L.A. Gates Company (Gates) is pleased to submit this Expression of Interest to provide professional architectural and engineering services for the Newtown (Kinder) Portals project located in Mingo County, West Virginia. This project's scope of work is a principal area of expertise for Gates' and our staff is uniquely qualified to complete the project.

The Newtown (Kinder) Portals project specifically relates to mining reclamation and hydrologic engineering, both strengths of our company. Our management and technical staff have completed over 50 such projects for surface mines, deep mines and coarse refuse facilities throughout the state. Additionally, I have personal knowledge of this area as I performed extensive work on the water and wastewater systems in Newtown while with the WVDHHR.

Gates looks forward to establishing a long-lasting, professional relationship with the West Virginia Department of Environmental Protection Agency Abandoned Mine Lands Office.

Sincerely,

Patrick M. Murphy, P.E.
Vice President of Environmental Engineering

L.A. Gates Corporate History

About L.A. Gates

L.A. Gates Company (Gates) is a third generation consulting engineering firm whose origin dates back to 1905. Our roots stem from Gates Engineering Company which had direct lineage to the E.M. Merrill Engineering Company organized in 1905 in Beckley, West Virginia. Gates Engineering Company closed its doors in 1985, at which time L.A. Gates created L.A. Gates Company. Today, Gates is a full-service consulting engineering firm offering a complete range of engineering services to both private and public clients. We are capable of providing services in civil, environmental and mining engineering; gas/oil; geology; feasibility studies; idle property management; construction management and inspections; due diligence; surveying and permitting. Our staff is capable of taking a project from the planning stage, through engineering and into construction, where resident engineering and inspection services are available. For special needs we can call on specialists such as soil scientists, archeologists, foresters, etc.

In an effort to more fully service our clients, Gates recently formed Gates Consultants, a subsidiary of L.A. Gates Company, with the specific goal to align associates from different facets of mining, a wide geographic range, and diverse background for the specific purpose of performing specialized services such as due diligence, financial analysis, mineral appraisals, operational management and process analysis. Gates Consultants is versatile in the fact that it has the flexibility to mix and match its various Associates in order to best meet the client's needs for almost any particular project. Gates Consultants have extensive experience in soft and hard rock mining both domestic and international.

Services Offered

Mining Engineering
Civil Engineering
Environmental Engineering
Natural Gas Engineering
Environmental Audits
Idle Property Management
Permitting
Surveying

L.A. Gates Company
Consulting Engineers
Beckley, West Virginia

Available WV AML Design Team

L.A. Gates Company proposes to assign the following personnel to the design project. The team possesses the design experience required to perform the tasks outlined in the project scope.

Project Engineer/Manager

Patrick M. Murphy, P.E.

CAD Designers

Rick McClung

Rob Rector

Engineer Techs

Patty McCormick

Ashley Murphy

Surveyors

Estil Brooks

Lawrence Brooks

The project manager will serve as the single point of contact between Gates and the WVDEP AML (AML) personnel. The project manager will be responsible for ensuring the scope of work is received and understood and the appropriate tasks assigned to the team members. The project manager will provide scheduled updates to AML detailing the project status. Gates is confident that these procedures and principles will ensure that the project is completed accurately and within budget.

L.A. Gates Company
Consulting Engineers
Beckley, West Virginia

WV Registered Professional Engineers (Civil or Mining) in the Primary Office

L.A. Gates Company employs five (5) WV Registered Professional Engineers in its Beckley, WV office. Patrick Murphy will serve as project manager/engineer on the project. Patrick has extensive experience in performing the reclamation engineering associated with this project.

L.A. Gates, P.E.
Principal Engineer/Owner

L.A. has over 30 years experience in managing civil and mining projects. As Principal Engineer, L.A. provides engineering oversight to all civil and mining projects that are performed within the L.A. Gates Company.

Jerry (Jay) W. Cantley, P.E.
Executive Vice President

Jay has over 20 years experience in civil engineering, primarily in water, wastewater and highway design. Jay has extensive experience in roadway design, surveying, site work, utilities, erosion and sediment control, construction coordination and management.

Patrick M. Murphy, P.E.
Vice President of Environmental Engineering

Patrick has over 12 years experience in mining and environmental engineering. He has extensive experience in performing AML engineering functions as they would relate to this project to include: stormwater and sediment control structure design, surface water hydrology, geotechnical design and stability analysis. Patrick also has extensive experience in managing mining and environmental projects.

Brian Bair, P.E.
Project Engineer

Brian has over 10 years experience in civil engineering. He serves as Gates' structural and bridge engineer.

Gary Keaton, P.E.
Project Engineer

Gary has over 15 years experience in civil engineering. He serves as Gates' oil and gas engineer.

L.A. Gates Company
Consulting Engineers
Beckley, West Virginia

Project Approach

L.A. Gates Company is familiar with the proposed project area and is experienced in the type of project for which your office is soliciting engineering services. Gates has a thorough understanding and comprehension of the engineering required of this project and is prepared to immediately tackle these tasks and provide AML with a first-rate product.

Gates will work closely and diligently with AML personnel and all associated regulatory agencies required to ensure this project is completed as efficiently and as cost-effectively as possible. Our permitting and mining staff work with various regulatory agencies on a daily basis and are well respected and trusted within the industry.

The scope of services that will be provided by Gates' include, but are not limited to:

- site visit to become more intimately knowledgeable of the site;
- surveying and contour mapping of the project area;
- coordination with all regulatory agencies;
- preparation of plans and specifications;
- participation in site visits and meetings;
- preparation of required permit applications;
- perform geotechnical designs and analysis;
- perform hydrologic/hydraulic designs and analysis; and

- any other services as directed by the WVDEP/AML office.

Our mission for this project is to:

- provide deliverables in a timely and efficient manner;
- keep our client informed during all facets of the project;
- integrate new technology into our designs while continuing to provide economical, practical solutions to our clients needs;
- ensure the project meets the performance standards set forth by the client and governing agencies;
- encourage professional integrity and quality service; and
- maintain a high level of professional excellence.

12. A. Is your firm experienced in Abandoned Mine Land Remediation/Mine Reclamation Engineering?

YES Description and Number of Projects: **Gates has performed mine reclamation engineering for 20 WVDEP OM&R projects.**
NO

B. Is your firm experienced in Soil Analysis?

Yes Description and Number of Projects:

No **Soils analysis is typically subcontracted.**

C. Is your firm experienced in hydrology and hydraulics?

YES Description and Number of Projects: **Gates has performed hydrology/hydraulics design and analysis for 20 WVDEP OM&R projects.**
NO

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

YES Description and Number of Projects:

NO **Gates does not perform its own aerial photography.**

E. Is your firm experienced in domestic waterline design? (Include any experience your firm has in Evaluation of aquifer degradation as a result of mining.)

YES Description and Number of Projects: **Gates has extensive experience in domestic waterline design.**
NO

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

YES **Gates is currently providing AMD evaluation and abatement design for the Tacoma Surface Mine located in Boone County, WV. Patrick Murphy has AMD evaluation and abatement design experience with the Buck Lilly Surface Mine in Greenbrier County, WV.**
NO

Nailer #79 Mine Slurry Impoundment Abandonment

Before Reclamation

The Nailer #79 ***Mine Slurry Impoundment*** project is located in Woodtick Hollow of Dents Run, Marion County, West Virginia. The impoundment was originally designed by Bowser-Morner Testing Laboratories, Inc. in 1979 and was initially recognized as the Dents Run Coal Refuse Slurry Impoundment. Over the years the official designation became known as the Nailer #79 Mine Slurry Impoundment.

The purpose of this ***abandonment design*** project was to provide the ***engineering design*** required for ***regrading the impoundment*** to a final configuration, ***provide stable slopes***, provide vegetative cover and to ***provide permanent drainage channels***.

Regrade (reclamation) design was performed utilizing Carlson Civil Software package SurvCAD. Utilizing aerial topo, ***3D grid models*** were developed to depict the existing and original configurations of the area. Utilizing the 3D models, cut/fill areas were

identified in order to create a final configuration utilizing existing refuse materials. ***3D mapping*** was then generated to demonstrate the final configuration for construction.

Stability analysis of the final regraded facility was performed utilizing the REAME 2004 stability analysis software package. Original soil and refuse engineering properties used for the stability analysis were obtained from published engineering reports and previous testing of the materials.

Hydrologic and hydraulic analysis and design was performed utilizing SEDCAD 4 TM developed by Dr. Richard C. Warner, University of Kentucky and Ms. Pamela J. Schwab, Civil Software Design. An analysis of the watershed was performed to determine peak flow discharges for the facility. Utilizing these peak flows ***diversion channels*** were designed to convey the peak discharge with appropriate freeboard and erosion protection.

After Reclamation

Tacoma Surface Mine –Water Treatment Evaluation/Abatement

The Tacoma Surface Mine project is located near Prenter in Boone County, West Virginia. The site consists of reclaimed surface mine with two valley fills and three sediment control and water treatment ponds. **Acid Mine Drainage** is currently being discharged from the toe of the fills. The AMD is likely be produced by the underdrain material and/or abandoned deep mines with seeps into the fill. The ponds are currently being treated for the removal of **manganese, iron, aluminum and suspended solids**.

Gates' responsibility with this project is to **evaluate the current treatment procedures** to include: physical treatment, chemical treatment, maintenance procedures and any extenuating environmental concerns associated with the discharge from this permit; **identify any deficiencies** and **development remediate/abatement procedures** to correct the deficiencies.

To date, Gates has already identified a change is chemical usage that will relate to an **80% reduction in annual chemical costs**.

Beckley, West Virginia

Attachment C – AML and Related Project Experience Additional Information

Buck Lilly Surface Mine Mining and Special Reclamation Designs

(Personal Experience Related to the Project Engineer, Patrick Murphy)

The Buck Lilly Surface Mine project is located near Anjean in Greenbrier County, West Virginia. The **site consists of abandoned surface mine activity with existing exposed refuse piles, buildings, ponds and roads.** The site is currently an environmental hazard in that it is producing acid mine drainage from all of the exposed refuse.

The purpose of this project was to **develop designs for removing all of the usable refuse, ponds and buildings; to surface mine and auger any remaining reserves; regrade to extent possible with available spoil and to design conveyance systems that would keep current AMD water and fresh water separated throughout the mining and during post-mining.** The designs had to be a joint effort to satisfy both the Office of Mining and Reclamation Regulations for mining and the Office of Special Reclamation to address AMD issues.

Regrade design was performed utilizing Carlson Civil Software package SurvCAD. Utilizing 3D grid modeling the final reclaimed

configuration was developed to conform as close to the original contours as possible and to emulate the premining drainage patterns as close as possible.

Stability analysis of the final regraded facility was performed utilizing the REAME 2004 stability analysis software package. Regrade stabilities were performed for during mining and final regrade scenarios.

Hydrologic and hydraulic analysis and design was performed utilizing SEDCAD 4 TM developed by Dr. Richard C. Warner, University of Kentucky and Ms. Pamela J. Schwab, Civil Software Design. Utilizing the SEDCAD software, peak discharges were determined for all surface water runoff scenarios. Anticipated discharges from the auger/highwall mining entries were calculated based on industry standard practices for the area being mined and depth of cover. The following were designed for this project: **wet seals** for the auger/hwm entries; **regrade underdrains** to **segregate AMD and fresh water drainage**; **dual diversions to separate AMD and fresh water** drainage, **culverts** and ponds.

Attachment C – AML and Related Project Experience Additional Information

Tate Run Surface Mine – Regrade and Drainage Designs

The Tate Run Surface Mine project is located near Drennen in Nicholas County, West Virginia. The site consists surface mining activities with valley fills, roads, ponds and other drainage control structures..

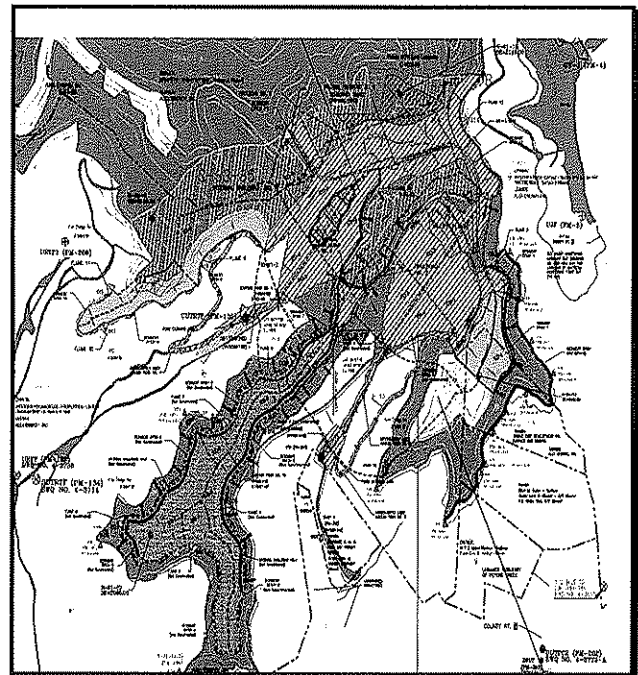

The purpose of the project was to **analyze the current drainage control structures** (except the pond) and **existing regrade** to determine if they met the current mining and reclamation design standards and to **redesign the structures** as necessary. All structures analyze for this project required redesign. Field surveying of the current regrade and drainage structures was performed and 3D models of the site created utilizing the Carlson Civil Software package SurvCAD.

Hydrologic and hydraulic analysis and design was performed utilizing SEDCAD 4 TM developed by Dr. Richard C. Warner, University of Kentucky and Ms. Pamela J. Schwab, Civil Software Design. An analysis of

the watershed was performed to determine peak flow discharges for the facility.

Stability analysis of the final regraded facility was performed utilizing the REAME 2004 stability analysis software package. REAME 2004 is a 2D and 3D analysis program which can use multiple methods of analysis to include: Normal, Simplified Bishop, Spencer, Modified Spencer and Janbu.

Utilizing the survey data and 3D grid models the existing diversion and sediment control structures and the existing regrade were re-designed in order to meet current design standards. Final design documents provided included all plan views, sections, profiles, stability analysis and hydrologic design sheets for all structures.

Cranberry Creek Improvement

The Cranberry Creek Improvement project sought to make modifications to the existing Cranberry Creek in order to address frequent flooding of the North Eisenhower Drive (WV Route 16) area. The project scope was to analyze the of the existing drainage facilities on various storm events in order to determine what corrective actions were required. The analysis included hydraulic computations, conceptual design, cost analysis and recommended alternatives.

The total length of the improvement was approximately 10,900 feet. It extends from the upstream end of the Beckley Plaza Shopping

Center to a point just downstream of its intersection with State Route 41.

Much of the area prior to improvement was heavily developed with commercial facilities and extensive paved areas. The stream had little gradient and was constricted in several areas by filling of the flood plain for commercial use. The improved stream consists of deepened channels with protected banks of grouted rip rap and retaining walls. Numerous box culverts were designed to carry the flood waters beneath existing road crossings.

L.A. Gates Company provided all hydraulic analysis and design as a sub-consultant to Tri-State Engineering & MC, Inc. under contract of the United States Soils Conservation Service.

PURCHASING AFFIDAVIT

West Virginia Code §5A-3-10a states: No contract or renewal of any contract may be awarded by the state or any of its political subdivisions to any vendor or prospective vendor when the vendor or prospective vendor or a related party to the vendor or prospective vendor is a debtor and the debt owed is an amount greater than one thousand dollars in the aggregate.

DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, limited liability company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. "Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceeds five percent of the total contract amount.

EXCEPTION: The prohibition of this section does not apply where a vendor has contested any tax administered pursuant to chapter eleven of this code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

Under penalty of law for false swearing (*West Virginia Code §61-5-3*), it is hereby certified that the vendor affirms and acknowledges the information in this affidavit and is in compliance with the requirements as stated.
