Addendum No. 1

1. What are the elevation references of the lines to and from the junction box, especially from the junction box to the new 1000 gallon septic tank?

To be determined by the contractor during the time of installation. All gravity sewer lines are to be installed with a slope to provide a minimum of 2 ft/s flow.

2. What are the soil compaction testing requirements for the septic tanks?

Soil compaction testing shall not be required. Any settlement around any underground installations which may develop within the one year contract will be required to be filled in by the contractor.

3. Can the extra soil from the septic tank pits be disposed of on the park property?

Only if it can be contoured with the ground in the project areas as approved by the Owner.

4. Please clarify the statement that the 1500 gallon concrete septic tank shall be water tight and made from materials that will not corrode as described in 1.2G.

The tank shall be corrosion resistant and be sealed as approvable by the Health Dept.

5. Should the conditions specified for the 1500 gallon concrete septic tank described in 1.2G also apply to the 1000 gallon concrete septic tank described in 1.2E? (materials that will not corrode)

Yes

6. 1.2M states that the contractor shall install a high water alarm placed in the superintendent's residence and also the park office. Does the electric supply to the superintendent's residence have to be installed underground?

The high water alarm shall be placed in the park office only.

7. Has the owner obtained any required approvals from the Board of Health for the sewer treatment modifications, including the 364 linear feet Elgin shallow leach field sewage treatment system described in 1.2R and shown on drawing 10101-2?

The contractor is required to obtain all approvals and permits. The system design has been in collaboration with the local Health Department.

8. Both concrete tanks shall have access manholes and be a minimum of 4'X4' square or 4' in diameter if circular.

9. The following will be the requirements for soil preparation and seeding:

- A. The lawn should be graded properly so it is easy to mow, water doesn't collect into puddles. Slopes should be kept as gentle as possible. On fill there should be placed 4" to 6" of top soil. Where soil cannot be compacted over the leach field or the concrete tanks, enough soil should be placed so as to account for settling. All rocks and stones near the surface should be removed.
- B. The area should be tilled to a depth of 4" to 6". Lime and fertilizer should be incorporated before the last tillage operation. The seed bed should be firm for seeding.
- C. Lime should be added to correct the soil pH to between 6.0 and 6.5.
- D. Fertilizer should be based on a soil test. If the contractor decides not to test, apply 100 to 150 lbs. of 10-20-10 prior to seeding.
- E. Seed is to be sown using acceptable seeder. All equipment should be calibrated before use. Seed is to be divided in two lots. The second lot should be seeded at right angles to the first. All seedbeds should be firm before seeding and packed or rolled after seeding.
- F. The seed species to be used is Red Fescue at 80 lbs/acre.
- G. Mulch all areas for temporary erosion control. Mulch may be straw, hay, wood fiber or mulch netting. Apply straw or weed free hay at 2 Tons/acre. Apply wood fiber at 1,000 to 2,000 lbs/acre. Apply mulch netting according to manufacturer's recommendations.
- H. Anchor all mulch to insure it stays in place.
