Mandatory Pre-Bid Meeting

Questions from Contractors and GSD Engineering Responses.

1. Are the doors to be insulated and if so what is the R-value of the insulation?
Page 24 of the RFQ also printed as Page 7 in the specifications in Section 2.3 ELECTRICALLY OPERATED BI-FOLDING AIRCRAFT HANGAR DOOR ASSEMBLIES (2) sub-section 4. Finish: Exterior / Interior states that "Interior side of doors (2) will include weather seal with hardboard insulation covered by an insulation blanket and inside liner for both the inside bottom half of the frame and the inside top half of the frame". The insulation must have a minimum R-value of 15.
2. What security will be necessary during construction?
Last sentence on Page 12 of the RFQ states that the aircraft hangar and the space around the aircraft hangar are to be considered a secured area. Existing security will be adequate for this project.
3. What type of secure structure will be required for the openings between removal of existing doors and the installation of the new doors?
The type of secure structure necessary will be either canvas or sheeting that will fully enclose the door openings and maintain a workable interior temperature while concealing interior contents.
4. Is the hiring of security guards at the project site acceptable?
No.
5. Are any windows to be in the doors?
Only a "peep window" for security purposes that is to be in the walk through door in the aircraft hangar door itself. See question #6 response.

6. Are any access doors in the hangar doors required?

Only one hangar door will require an access or walk through door (1). This walk through door is to be a part of the manufacturing process of the hangar door and is not to be performed on site by the Contractor. The walk through door is to be located in the interior far right hand side area within the hangar door. The walk through door is to be insulated and have a security window. The dimensions of the walk through door are to be the height and width of a standard entry door and have a keyed lockset. The walk through door must have a "peep window" for security purposes and the window must be approximately 8" wide and 6" long and have a spring closing operation attached to the inside of the window with a metal cover located on the interior side of the window. The metal window cover must be no less than ¼" thick and be finished to match the walk through and hangar doors. The metal cover must cover the window entirely. The metal cover for the window must have a closing hand operated latch system to maintain the closed position of the metal window cover when desired by the Owner. Window is to be double insulated glass and be centered in the topmost area of the walk through door.

7. What are the door dimensions?

See RFQ Page 21

Section 1.7 PROJECT CONDITIONS

A. Field Measurements

1. Established Dimensions.

8. Are the doors to be hydraulically operated?

9. Do the doors require remote control operational features?
