Contractor should coordinate the removal and/or relocation of those supplies with Cabot Oil & Gas Company, prior to any disturbance.

7.0 DRAINAGE STRUCTURES

7.1 Description

This work shall consist of furnishing all labor, equipment and materials necessary to construct the drainage structures shown on the drawings. Drainage structures shown include but are not limited to matting lined channels and rip-rapped channels, pipe, rip-rapped splash pads, rip-rapped low water crossings, and Type "G" WVDOH inlets.

7.2 Materials

7.2.1 All rock riprap used throughout the project site shall consist of locally available commercially purchased or on-site durable stone (except as noted otherwise) meeting the following requirements: The rock riprap shall have a maximum weighted loss of thirty percent when subjected to five (5) cycles of the Sodium Sulfate Soundness Test, 30% requirement—ASTM C88 (ASTM C88-99a Standard Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate), as modified by the American Association of State Highway and Transportation Officials (AASHTO) T-104. A certification on sodium sulfate soundness test shall be submitted to the WVDEP prior to delivery. Shale shall not be used for rock.

Rock for rip rap splash pad, related ditch extensions, channels, and low water crossings shall have a d50 as shown on the plans and gradation as shown on the details.

7.2.2 HDPE Pipes: The pipes shall consist of smooth-wall interior corrugated high density polyethylene pipe, such as Hancor's Hi-Q pipe, or approved equal, in accordance with Section 714.19 of the current version of the WVDOH Standard Specifications for Roads and Bridges.

7.2.3 Backfill for the pipes extending beneath the gravel/dirt roads shall be 1 ½" crusher run stone meeting the gradation requirements for Class I aggregate in the current edition of the WVDOT Standard Specifications for Roads and Bridges.

7.2.4 Backfill for the pipes extending beneath vegetated areas shall be 1 ½" crusher run stone meeting the gradation requirements for Class I aggregate in the current edition of the WVDOT Standard Specifications for Roads and Bridges to at least 1' above the top of the pipe. Select Backfill may be used above the crusher run. A minimum of 12" topsoil shall be placed on top of the select backfill to an elevation matching the existing grade, as shown in the detail.

- 7.2.5 Permanent erosion control matting shall meet the requirements of Type B Matting as defined in the current edition of the WVDOT **Standard Specifications for Roads and Bridges, Section 715.24**. Staples shall be a minimum 6 inches with a U-shaped top. The permanent erosion control matting shall be installed per the detail for vegetated "vee" channel provided in the plans.

7.3 **Construction Methods**

Excavation and construction of ditches and pipes shall be performed to the lines and grades shown on the project plans and details with no blasting deemed necessary nor permitted. These drainage structures are to be installed prior to initiating dewatering activities.

If excavation activities result in discharge of mine drainage above the base flow, the effluent shall be actively treated. The Contractor may be required to perform water quality tests on the discharge to verify that all applicable requirements are being achieved, with such testing being conducted as approved by the WVDEP and at the Contractor's cost.

- 7.3.1 The ditches shall be constructed to the approximate line, grade, and templates as shown on the plans or as directed by the WVDEP. Excess material from ditch and pipe trench excavation that is suitable for soil cover may be segregated, stockpiled and utilized to supplement "Revegetation" operations. Otherwise, excess material from ditch and pipe trench excavation will be required to be disposed of by the Contractor in an off-site disposal area obtained by the Contractor in accordance with Section VIII of the Special Provisions for these specifications. Sections of ditches that are cut to rock shall not require rock riprap but shall be paid the appropriate size riprap ditch.
- 7.3.2 Riprap shall be placed in accordance with the current version of the WVDOH **Standard Specifications for Roads and Bridges**.
- 7.3.3 The HDPE pipes shall be installed at the locations shown on the plans. The trench for the pipe shall be excavated in accordance with the details

10.0 SOIL COVER

10.1 DESCRIPTION

These works consists of covering the regraded refuse with a 12-inch, plus or minus 1-inch thick layer of topsoil from the excavation and/or from the potential borrow area. Any refuse that is encountered that is not shown on the plans as approved by WVDEP shall be covered with 12 inches plus or minus 1 inch, of soil and seeded in accordance with Section 6 "Revegetation" of these specifications.

10.2 MATERIALS

Soil cover material shall be naturally occurring topsoil form the excavations or from the potential borrow areas. This material shall be free of all rocks four (4) inches in size or larger.

Small quantities of soil cover material may be encountered during excavation, but these quantities are not sufficient enough to provide soil cover for all regraded areas. The Contractor shall obtain soil cover material from the designated borrow areas or from additional offsite soil borrow areas as necessary. All offsite borrow shall be performed in compliance with the conditions contained herein and also in accordance with specification Section 4.2.4 and the NEPA Requirements.

The designated borrow area should contain sufficient borrow to cover all sites with the required soil cover. However, if offsite borrow areas are used it shall be the responsibility of the Contractor to obtain such areas, at no expense to the WVDEP, and in accordance with any applicable local, state, and/or federal regulations including compliance with NEPA requirements. All offsite borrow areas must be approved by the WVDEP, and the Contractor must provide a reclamation plan for approval. In addition, for all offsite borrow areas outside the construction limits, the Contractor must obtain from the property owner a right-of-entry agreement. The said rights of entry agreement must state that the property owner agrees to indemnify and hold harmless the WVDEP from all liability and/or damages resulting from the contractor's use of property for which the contractor was to obtain rights of entry for borrow, disposal, access or other purposes. Said indemnification shall include, but is not limited to, liability and damages resulting from the contractor's failure to obtain any or not all the rights of entry; failure to obtain the proper rights of entry; failure to utilize appropriate language in the rights of entry agreements; or failure to obtain permission and signature of all persons or entities holding a legal interest in the subject property(ies) covered by the rights of entry.

10.3 CONSTRUCTION METHODS

- 10.3.1 Prior to placement of soil cover material the regraded area shall be graded to remove all surface irregularities.
- 10.3.2 All regraded areas cut to grade in topsoil or topsoil substitute do not require soil cover. All regraded areas cut to grade otherwise shall be undercut six (6) inches and covered with twelve (12) inches of soil cover material, plus or minus (1) inch.
- 10.3.3 Soil cover material shall neither be frozen nor shall it be placed on frozen ground or under moisture conditions that prevent grading equipment from producing a uniform surface.
- 10.3.4 After placement, the soil cover material shall be compacted to ensure proper bonding of the soil cover material to the regraded area. Compaction equipment shall be capable of operating the slopes shown on the contract drawings and shall produce a uniform surface free of ruts and loose soil. No minimum density shall be required for compaction, but soil cover material shall be "tracked in" with on-site equipment. "Tracking-in" shall take place by operating the equipment up and down the regraded slope such that the cleat marks are parallel to the final contours.
- 10.3.5 The final grade of the soil cover shall be free of surface irregularities and shall be built to the lines and grades shown on the drawings.
- 10.3.6 As the soil cover material is placed and compacted, it shall be protected from erosion by the methods detailed in Section VIII "Erosion and Sediment Control" and shall also be seeded and mulched in accordance with Section 5 "Revegetation".
- 10.3.7 The Contractor shall provide survey cross sections before and after removal of material from the borrow area. These surveyed cross sections shall be performed in accordance with Section II "Construction Survey Control" of these specifications.
- 10.3.8 Upon completion of the work, the borrow area and related disturbance shall be neatly trimmed and all debris and all soil disposed of in an acceptable manner. All highwalls created are to be eliminated and final graded soil slopes shall not be steeper than 2H:1V unless otherwise proven to be stable or compatible to the reclamation project. All borrow areas shall require that a reclamation plan be submitted to the WVDEP for

11.2.4 Modified Bat Gate

All steel used for bat gate components shall be Grade 50 with Grade 46 steel for structural tubing. All welds shall be ¼" fillet welds, minimum.

Steel components include: 4" x 4" x 3/8" structural steel tubing, 6" x 6" x 3/8" angle steel, 4" x 4" x 3/8" angle steel; 8" x 3/8" steel plate; and 5/8" high strength A325 bolts, nuts and washers.

Modified Bat Gates, as shown on the details are to be installed where shown on the plans. Steel tubing and horizontal angled bars will be connected by a pipe ring to a pipe that is inserted into the mine opening.

11.3 Construction Methods

11.3.1 The modified bat gate seals will require excavation into the mine entries/collapsed portals for proper installation. The Contractor shall perform this work after taking all necessary precautions with regard to control and treatment of the impounded water, with all work being performed at the risk of the Contractor. The WVDEP accepts no responsibility or liability for any related construction activities. A dewatering plan shall be submitted to the WVDEP for approval prior to seal construction, with pool reduction possibly being provided from above with a well-point system or a similar dewatering scheme.

11.4 METHOD OF MEASUREMENT

11.4.1 Modified Bat Gate Seals shall be measured per mine seal installed and shall include all excavation, dewatering, stone, filter fabric, and pipe necessary to complete the seal.

11.4.2 Soda Ash Briquettes shall be measured per 50# bag used.

11.5 PAY ITEMS

Item 11.1 "Modified Bat Gate Seal", per each.

Item 11.2, "Soda Ash Briquettes (50 lb bag)", per each.
