Our newest product is a hydraulically powered blower designed for skid steer loaders and compact tractors up to 40HP with quick mount loaders. A minimum of about 14 gal./min. flow is required to power this blower. Consequently the higher the flow, the better. Presently, we offer five different sizes of drive motors to accommodate different flow rates. See table below. For higher than 30 gal./min. flow rate, call or email for other options. A close coupled mount is also incorporated for increased stability. The cutting widths are 66 and 78". The fan is 24" Dia., top auger is 11" Dia., and the bottom auger is 15" Dia.

Choosing the Best Model for Your Tractor

Care must be taken when choosing the model of snow blower that will best suit your tractor. There are a few important factors that will affect which model to choose. Tractor horsepower, width of the wheels, speeds, etc.

Tractor Horsepower - Never exceed the maximum rated HP of the blower. The power take-off (PTO) shaft will only handle a certain amount of power. Normally, tractors with higher HP ratings are higher above the ground, putting smaller PTO shafts at a greater angle. This angle greatly reduces the power being transmitted to the blower, and is absorbed into the PTO shaft in the form of friction. This friction greatly hinders the ability of the PTO shaft to telescope during use. This will put undue stress on the gearbox of the blower and the PTO output of the tractor. Therefore, the PTO shaft must be as straight as possible. Putting too large a tractor on a particular model of snow blower will cause premature wear and nothing but problems, and will void the warranty.
