Limestone Sand

To provide Limestone Sand for use in direct instream treatment of streams acidified by precipitation or mine drainage.

Limestone shall have greater than 90% calcium carbonate content with particle size distribution as follows:

10% maximum remain on a number 8 mesh screen

50% maximum retained on a number 20 mesh screen

20% maximum passing a number 170 mesh screen

Vendors will be required to submit bid prices for limestone sand per the above specifications and delivered to the watershed destinations in the attached table. Estimated quantities of limestone sand required per year per watershed are listed to provide guidance to vendors in the bidding process. Actual quantities of limestone sand used will vary from these estimates depending upon need.

To be considered for a contract award, vendors must provide a bid price for delivered limestone sand in every watershed listed in the table. It is anticipated that contracts could be awarded to multiple vendors. Contracts will be watershed-level contracts awarded to the lowest bidder for that watershed. If a vendor is awarded contracts for more than a single watershed, those contracts will be bundled into a single contract for that vendor.

See Attached Table of Watersheds.
