RE: <u>RMA 12010</u>

WE ARE SENDING YOU

- Attached
- Facsimile of 38 sheets including this one. Original will ~~not~~ follow via FedEx
- Under separate cover via _____, the following items:

- Tracings
- Estimate
- Prints
- Copy of Letter
- Final Survey
- Descriptions
- Plot Plans
- Other _____
- Cut Sheets

COPIES	DATE	NO.	DESCRIPTION

THESE ARE TRANSMITTED as checked below:

- For approval
- For your use
- For review and comment
- Other _____
- Approved as submitted
- Approved as noted
- FOR BIDS DUE 12/8/2011
at 1:30pm.
- As requested
- Returned for corrections
- Prints returned after loan to us

REMARKS Original sent by FedEx but it is delayed. Copy of bid follows along with FedEx tracking info.

COPIES _____ SIGNED [Signature]

To: All Attendees of the October 26, 2011 Prebid Meeting for the Installation of Two Turnouts and Associated Trackwork on the South Branch Valley Railroad.

From: John Philbrick, Superintendent

Date: November 14, 2011

RE: Addendum #3 to RFQ #RMA12010 -- Two Turnouts and Associated Trackwork on SBVR

NOTE: This addendum answers the following two questions. There are no other changes to the previous addendum.

Question 1: In the materials being provided by the contractor under Item #3 "crossties," is 1,100 crossties. Is this a typo? Should it be 110 crossties? It is our understanding that we will be required to install all new ties for the 100 foot track extension (say 50 ties) and track restoration for the turnout removal (say 66 ties).

Answer: The reference to 1,100 ties should not have been in the addendum. The number of new ties required for the 100-foot extension of the side track and for the main track where the existing turnout is removed will be determined by the tie spacing given under the "ties" section of the addendum.

Question 2: We can re-use the rail being removed for the new turnout location to restore the main track where the existing turnout is being removed? The 132# rail being furnished would be just for the 100 foot track extension and for the new turnouts?

Answer: That is correct.

To: All Attendees of the October 26, 2011 Prebid Meeting for the Installation of Two Turnouts and Associated Trackwork on the South Branch Valley Railroad.

From: John Philbrick, Superintendent

Date: October 28, 2011

RE: Addendum to RFQ #RMA12010 -- Two Turnouts and Associated Trackwork on SBVR

NOTE: This addendum replaces the original RFQ in its entirety.

DESCRIPTION OF WORK

Green Spring Turnout and Trackwork: Install a new or reconditioned 132RE #10 RBM turnout approximately 100 feet north of the existing turnout, remove the existing turnout, replace the old switch ties with new crossties and connect the side track with the new turnout. The point of switch for the turnout will be marked in the field.

Moorefield Turnout and Trackwork: Replace the existing feed mill switch with a new or reconditioned 132RE #8 RBM turnout.

CONDUCT OF WORKGeneral

The Green Spring site is located within yard limits. This is non-controlled track that is used jointly by SBVR and CSX train crews. The Moorefield site is also located within yard limits. SBVR will provide roadway worker protection and communication with the control office in Moorefield at both work sites. Contractor will be given a three-day window over a weekend for each location. SBVR must be given at least two weeks' notice to inform SBVR customers and CSX.

There will be a mandatory pre-construction meeting held with the successful contractor prior to the start of work. This meeting will be held with SRA and SBVR employees and the contractor's project manager. The purpose of this meeting is to assure that everyone understands the entire scope of work as outlined in the awarded purchase order.

000004

A final inspection of all completed work will be conducted by the contractor, SRA and SBVR to assure that all work is completed as stated in the specifications. Final payment will be withheld until this inspection is complete.

The contractor will comply with all safety rules and regulations as required by the Federal Railroad Administration, SBVR and other parties as applicable.

The contractor is responsible for clean-up of the work site. All debris and refuse will be removed from SBVR property and disposed of properly. Old rail, switches and OTM will be placed in piles on the right of way clear of tracks and will remain the property of the SBVR.

On-track machinery and equipment can be stored on side tracks at Green Spring and Moorefield. There is no direct vehicular access to the Moorefield location. No materials or equipment may be placed on property adjacent to the SBVR right of way without the property owner's permission.

The contractor will use Heavy & Highway Construction Rates as established for Hampshire (Green Spring) and Hardy (Moorefield) Counties. These rates are pursuant to WV Code § 21-5A, et. Seq. and are available at www.wvsos.com/adlaw/wagerates. The contractor will be responsible for submitting certified payrolls to the SRA.

Site Preparation

The SBVR has widened the grade at Green Spring for the new turnout and the extension of the side track. The light pole at Green Spring will be relocated by SBVR.

Turnouts and Track Layout

Both turnouts will be built to AREMA design specifications. Filter fabric will be placed under the ballast and switch stands shall be placed eight feet from the center line of the track. The point of switch for the Green Spring turnout will be marked in the field. Both turnouts will use bolted joints. The side track extension at Green Spring will have rail joints welded.

Ties

All ties shall be placed in the track at right angles to the centerline of the track. The end of the tie on the line side shall be 4'3" from the centerline of the track. Switch ties shall be lined on the straight side, unless otherwise noted on plans. Crossties will not be spaced in excess of 21" centers in main track or in excess of 24" in side tracks. Switch ties will be spaced according to design. Where an existing tie is being respiked, it must be adzed, when necessary, to give the tie plate a full bearing across the tie and parallel with the plane of the track. Spike holes shall be plugged prior to placement of rail.

Before placing tie plates on the tie, dirt and other substances shall be removed from the bottom of the tie plate and the top of the tie. Care must be taken that canted tie plates incline toward the center of the track and that plates having a different amount of cant or flat plates are not mixed.

000005

Rail

Rails shall be placed so that the joints in each line of rail shall be within the middle half of the opposite length of rail. To minimize the cutting of full length rails, short rails may be used in adjusting for proper spacing of joints, but no less than 33 feet in curves or 19'6" on tangents shall be used.

Flame cutting of rail shall not be permitted. Rail shall be cut with a rail saw. Bolt holes shall be drilled, not torch cut.

The bottom of the rail shall be cleaned before rail is laid. Rails shall be laid one at a time and, to ensure good adjustment, the rail ends brought squarely together against suitable rail expansion shims and bolted before spiking.

Bolted joints are to be centered between ties when possible. Field welded joints are to be centered between ties.

Contractor will perform any welding or grinding necessary to correct rail end mismatch.

Welded Rail Joints

Joints in the Green Spring side track extension are to be thermite welded per the manufacturer's instructions. Contractor will follow AREMA section 2.5 for thermite welding of rail joints. The quality of all welds shall be checked by the contractor using magnetic particle or ultrasound inspection in accordance with AREMA Specifications for Fabrication of Continuous Welded Rail. Test results are to be provided to the SBVR.

Spiking

Rail will be gaged to 56 ½ inches plus or minus ¼ inch measured on a plane 5/8 inch below top of rail. All ties shall be spiked with new spikes in the appropriate pattern as required by SBVR standards (Attachment A). Old spikes will not be reused. Spikes shall be started and driven vertically and square with the rail. Spikes shall have full bearing against the side of the rail base. Spikes shall not be overdriven; a gap of 1/8 to 3/16 inch shall remain between the underside of the spike and the top of the rail base.

Rail Anchoring

The Green Spring side track extension will have every other tie box anchored, i.e., an anchor on each side of a tie, on both rails, or four (4) anchors applied to one tie. Ties on the main track at Green Spring will be box anchored for 200 feet north of the point of switch. The Green Spring and Moorefield turnouts will have all ties possible box anchored on the through and diverging routes. Anchors shall be applied to the gage side of the rail against the same tie face on opposite rails. Rail anchors shall be securely fastened to the rail and have a solid bearing against the ties. They shall not be moved by driving them along the rail.

000006

Ballast Section

There will be at least six inches of ballast between the filter fabric and bottom of switch ties. There will be six inches of ballast between the ends of the ties and the slope of the ballast shoulder. Cribs will be filled but no ballast will be left on top of the ties.

Surfacing and Alinement

Both turnouts and the new section of track at Green Spring will be surfaced and lined to match existing tracks. When surfacing a turnout, tamping will continue for a distance of at least 100 feet beyond the turnout to ensure uniform surface through the turnout. Contractor will use a mechanical tamper. Two insertions will be made for each tie.

MATERIALS

SBVR will provide the following:

1. Ballast at Moorefield. (Contractor will transport ballast to job site and place in track.)
2. A&K EZ-OP 51-A switch stand for Moorefield turnout (from existing turnout).
3. Switch plates for Moorefield turnout (from existing turnout).

Contractor will provide the following:

All materials must conform to AREMA design specifications where applicable.

1. Turnouts: One 132RB #8 RBMI turnout and one 132RE #10 RBMI turnout per AREMA design specifications. Switches may be new or reconditioned. Switch stand for the Green Spring turnout will be a new A&K EZ-OP 51-A. Self guarded frogs will not be accepted. The switch plates from the existing switch at Moorefield may be reused in the new switch.
2. Switch Ties: One set of switch ties for a #8 turnout and one set for a #10 turnout. Switch ties will be 100% end-plated, mixed hardwoods and oak, creosote pressure-treated to 7# or refusal.
3. Crossties: Ties shall be 7"x 9"x 8'6" industrial grade ties. The specifications set forth in Chapter 3 of the AREMA specifications will govern. The ties will be 100% end-plated, mixed hardwoods and oak, creosote pressure-treated to 7# or refusal. 1,100 crossties will be needed for the new runaround track.
4. Filter Fabric: For use beneath both turnouts. It shall be sixteen-ounce needle punch, non-woven.

000007

5. Tie Plates: Tie plates for the 132RE rail shall be double shouldered and inclined-surfaced with all plates having 1:40 cant. They shall have eight square spike holes. Round holes are not acceptable. Plates shall not be bent or have excessively worn spike holes. They shall be a minimum of 13 inches in length and 7-3/4 inches in width.

6. Tie Plugs: Tie plugs shall be 5/8 inch and creosote-treated. Foam spike hole filler may also be used.

7. Track Spikes: Spikes shall be new 5/8 inch by 6 inch.

8. Rail Anchors: These shall be new drive-on design and be the proper size for the rail to which they are applied.

9. Track Bolts: New standard heat-treated carbon steel track bolts and nuts shall conform to the type and weight of the track material being used. Spring washers of the appropriate size shall be used on each bolt.

10. 132RE Rail: Rail shall conform to the following:

- a. Wear shall be no greater than 1/4" on both the top and gage side.
- b. Rails shall be straight horizontally except that not more than 10% of the order may have horizontal curves not greater than indicated by the mid-ordinate of 1/4" in thirty feet.
- c. Rails shall be straight vertically with no upsweep or droop permissible.
- d. Rails shall be clean in appearance and free of obvious defects. Slight indentations or spike notching with a maximum depth of 1/8" and maximum length of 3/4" is permissible. Slight pitting is also allowable. Webs must be free of visual defects. Slight pitting is permissible. Rails shall have gage wear on one side only. Metal flow on rail head shall not exceed 1/8" per side. Engine burns shall not be greater than 1/2" wide by 1 1/2" long by 1/16" deep, shall not exceed two per rail and shall affect no more than 10% of the entire order.
- e. Manganese steel rails shall not be provided. All rails shall be control cooled in accordance with AREMA specifications in effect at the time of the rail's manufacture.

11. Joint Bars: Six holes per bar with drilling pattern to match the above rail.

12. Compromise Bars: 132RE/112RE, six holes per bar to connect Moorefield switch to feed mill lead.

13. Rail Weld Kits: Thermitic welds for the Green Spring side track extension.

14. Ballast: Contractor will provide ballast for Green Spring. The local supplier is Allegany Aggregates at 301-777-1777.

Ballast shall be crushed stone or slag and shall conform to the current AREMA "Specifications of Prepared Stone, Slag and Gravel Ballast." Size of ballast shall be AREMA #3 as indicated below:

000008

Size of Opening	Percent Passing by Weight
2 1/2"	100
2"	90 - 100
1 1/2"	35 - 70
1"	0 - 15
1/2"	0

Contractor may have materials shipped to SBVR at Moorefield. The SBVR must be notified in advance of such deliveries. Contractor will be responsible for transportation of all materials it supplies to the work site.

COMPLETION DATE

The completion date for this project is June 30, 2012. The cost to the SBVR for the administration of the contract as well as train delays that will be incurred after that date make it necessary for the SBVR to assess liquidated damages against the contractor for each calendar day any work remains uncompleted after that date. The charge will be \$500.00 per day.

BID REQUIREMENTS

The contractor MUST have previous experience in railroad track construction.

All questions are to go to Frank Whittaker at the Purchasing Division at 304-558-2316 or at frank.m.whittaker@wv.gov. Contractors are not to contact the State Rail Authority directly. Contractor is to give a unit cost for each item listed on the cost sheet. Low bid will be determined by the lowest total amount for all unit costs multiplied by the quantities as listed on the attached cost sheet.

REQUEST FOR QUOTATION

The West Virginia Purchasing Division for the agency, the West Virginia State Rail Authority (SRA), is soliciting bids for the construction of two turnouts and associated trackwork on the South Branch Valley Railroad (SBVR).

DESCRIPTION OF WORK

Green Spring Turnout and Trackwork: Install a new or reconditioned 132RE #10 RBM turnout approximately 100 feet north of the existing turnout, remove the existing turnout, replace the old switch ties with new crossties and connect the side track with the new turnout. The point of switch for the turnout will be marked in the field.

Petersburg Turnout and Trackwork: Install a new or reconditioned 100RB #8 RBM turnout in Petersburg Yard to connect the south end of Greer side track with the main track. The point of switch for the turnout will be marked in the field. The distance from the point of switch of the new turnout and the connection with the existing side track is 265 feet.

CONDUCT OF WORK

General

The Green Spring site is located within yard limits. This is non-controlled track that is used jointly by SBVR and CSX train crews. The Petersburg site is also located within yard limits. SBVR crews operate to Petersburg twice a week. The SBVR will provide roadway worker protection and communication with the control office in Moorefield at both work sites.

There will be a mandatory pre-construction meeting held with the successful contractor prior to the start of work. This meeting will be held with SRA and SBVR employees and the contractor's project manager. The purpose of this meeting is to assure that everyone understands the entire scope of work as outlined in the awarded purchase order.

A weekly status report must be submitted to the SBVR. This report will be signed by the contractor and railroad representative and will list the work completed for the week. A final inspection of all completed work will be conducted by the contractor, SRA and SBVR to assure that all work is completed as stated in the specifications. Final payment will be withheld until this inspection is complete.

1:2

The contractor will comply with all safety rules and regulations as required by the Federal Railroad Administration, SBVR and other parties as applicable.

The contractor is responsible for clean-up of the work site. All debris and refuse will be removed from SBVR property and disposed of properly. Old rail and OTM will be placed in piles on the right of way clear of tracks and will remain the property of the SBVR.

On-track machinery and equipment can be stored on side tracks at Green Spring and Petersburg. There is vehicular access to each of these locations. No materials or equipment may be placed on property adjacent to the SBVR right of way without the property owner's permission.

The contractor will use Heavy & Highway Construction Rates as established for Hampshire (Green Spring) and Grant (Petersburg) Counties. These rates are pursuant to WV Code § 21-5A, et. Seq. and are available at www.wvsos.com/adlaw/wagerates. The contractor will be responsible for submitting certified payrolls to the SRA.

Grade Preparation

The SBVR will widen the grade in both locations to accommodate the turnouts and extended tracks.

Turnouts and Track Layout

Both turnouts will be built to AREMA design specifications. Filter fabric will be placed under the ballast and switch stands shall be placed eight feet from the center line of the track. The point of switch for each turnout will be marked in the field. The Green Spring turnout will be all-welded while the Petersburg turnout will use bolted joints. The side track extensions will have jointed rail.

Ties

All ties shall be placed in the track at right angles to the centerline of the track. The end of the tie on the line side shall be 4'3" from the centerline of the track. Switch ties shall be lined on the straight side, unless otherwise noted on plans. Crossties will not be spaced in excess of 21" centers in main track or in excess of 24" in side tracks. Switch ties will be spaced according to design. Where an existing tie is being respiked, it must be adzed, when necessary, to give the tie plate a full bearing across the tie and parallel with the plane of the track. Spike holes shall be plugged prior to placement of rail.

Before placing tie plates on the tie, dirt and other substances shall be removed from the bottom of the tie plate and the top of the tie. Care must be taken that canted tie plates incline toward the center of the track and that plates having a different amount of cant or flat plates are not mixed.

Rail

Rails shall be placed so that the joints in each line of rail shall be within the middle half of the opposite length of rail. To minimize the cutting of full length rails, short rails may be used in adjusting for proper spacing of joints, but no less than 33 feet in curves or 19'6" on tangents shall be used.

Flame cutting of rail shall not be permitted. Rail shall be cut with a rail saw. Bolt holes shall be drilled, not torch cut.

The bottom of the rail shall be cleaned before rail is laid. Rails shall be laid one at a time and, to ensure good adjustment, the rail ends brought squarely together against suitable rail expansion shims and bolted before spiking.

Bolted joints are to be centered between ties when possible. Field welded joints are to be centered between ties.

SBVR will perform any welding or grinding necessary to correct rail end mismatch.

Welded Rail Joints

Joints in the Green Spring turnout are to be thermite welded per the manufacturer's instructions. Contractor will follow AREMA section 2.5 for thermite welding of rail joints. The quality of all welds shall be checked by the contractor using magnetic particle or ultrasound inspection in accordance with AREMA Specifications for Fabrication of Continuous Welded Rail. Test results are to be provided to the SBVR.

Spiking

Rail will be gaged to 56 ½ inches plus or minus ¼ inch measured on a plane 5/8 inch below top of rail. All ties shall be spiked with new spikes in the appropriate pattern as required by SBVR standards (Attachment A). Old spikes will not be reused. Spikes shall be started and driven vertically and square with the rail. Spikes shall have full bearing against the side of the rail base. Spikes shall not be overdriven; a gap of 1/8 to 3/16 inch shall remain between the underside of the spike and the top of the rail base.

Rail Anchoring

Every fourth tie shall be box anchored, i.e., an anchor on each side of a tie, on both rails, or four (4) anchors applied to one tie. Turnouts will have all ties possible box anchored on the through and diverging routes. They shall be applied to the gage side of the rail against the same tie face on opposite rails. Rail anchors shall be securely fastened to the rail and have a solid bearing against the ties. They shall not be moved by driving them along the rail.

Ballast Section

There will be at least six inches of ballast between the filter fabric and bottom of switch ties. There will be six inches of ballast between the ends of the ties and the slope of the ballast shoulder. Cribs will be filled but no ballast will be left on top of the ties.

Surfacing and Alinement

The turnouts and new sections of track will be surfaced and lined to match existing tracks. When surfacing a turnout, tamping will continue for a distance of at least 100 feet beyond the turnout to ensure uniform surface through the turnout. Contractor will use a mechanical tamper. Two insertions will be made for each tie.

MATERIALS

SBVR will provide the following:

1. Ballast at Moorefield. (Contractor will transport ballast to job sites and place in track.)
2. Petersburg Turnout: 100RB rail, tie plates, joint bars and compromise joint bars.

Contractor will provide the following:

All materials must conform to AREMA design specifications where applicable.

1. Turnouts: One 100RB #8 RBMI turnout and one 132RE #10 RBMI turnout per AREMA design specifications. Switches may be new or reconditioned. Switch stands will be the New Century 51-A complete with bow handles. Self guarded frogs will not be accepted.

2. Switch Ties: One set of switch ties for a #8 turnout and one set for a #10 turnout. Switch ties will be 100% end-plated, mixed hardwoods and oak, creosote pressure-treated to 7# or refusal.
3. Crossties: Ties shall be 7"x 9"x 8'6" industrial grade ties. The specifications set forth in Chapter 3 of the AREMA specifications will govern. The ties will be 100% end-plated, mixed hardwoods and oak, creosote pressure-treated to 7# or refusal. 1,100 crossties will be needed for the new rumaround track.
4. Filter Fabric: For use beneath both turnouts. It shall be sixteen-ounce needle punch, non-woven.
5. Tie Plates: Tie plates for the 132RE rail shall be double shouldered and inclined-surfaced with all plates having 1:40 cant. They shall have eight square spike holes. Round holes are not acceptable. Plates shall not be bent or have excessively worn spike holes. They shall be a minimum of 13 inches in length and 7-3/4 inches in width.
6. Tie Plugs: Tie plugs shall be 5/8 inch and creosote-treated. Foam spike hole filler may also be used.
7. Track Spikes: Spikes shall be new 5/8 inch by 6 inch.
8. Rail Anchors: These shall be new drive-on design and be the proper size for the rail to which they are applied.
9. Track Bolts: New standard heat-treated carbon steel track bolts and nuts shall conform to the type and weight of the track material being used. Spring washers of the appropriate size shall be used on each bolt.
10. 132RE Rail: Rail shall conform to the following:
 - a. Wear shall be no greater than 1/4" on both the top and gage side.
 - b. Rails shall be straight horizontally except that not more than 10% of the order may have horizontal curves not greater than indicated by the mid-ordinate of 1/4" in thirty feet.
 - c. Rails shall be straight vertically with no upsweep or droop permissible.
 - d. Rails shall be clean in appearance and free of obvious defects. Slight indentations or spike notching with a maximum depth of 1/8" and maximum length of 3/4" is permissible. Slight pitting is also allowable. Webs must be free of visual defects. Slight pitting is permissible. Rails shall have gage wear on one side only. Metal flow on rail head shall not exceed 1/8" per side. Engine burns shall not be greater than 1/2" wide by 1 1/2" long by 1/16" deep, shall not exceed two per rail and shall affect no more than 10% of the entire order.
 - e. Manganese steel rails shall not be provided. All rails shall be control cooled in accordance with AREMA specifications in effect at the time of the rail's manufacture.

11. Joint Bars: Six holes per bar with drilling pattern to match the above rail.

12. Rail Weld Kits: Thermitite welds for the Green Spring turnout.

Contractor may have materials shipped to SBVR at Moorefield. The SBVR must be notified in advance of such deliveries. Contractor will be responsible for transportation of all materials it supplies to the work site.

COMPLETION DATE

The completion date for this project is June 30, 2012. The cost to the SBVR for the administration of the contract as well as train delays that will be incurred after that date make it necessary for the SBVR to assess liquidated damages against the contractor for each calendar day any work remains uncompleted after that date. The charge will be \$500.00 per day.

BID REQUIREMENTS

The contractor MUST have previous experience in railroad track construction.

A mandatory prebid meeting will be held on October 26, 2011 at 10:00 am at the SBVR interchange tracks at Green Spring, WV. Contractors wishing to attend should inform Frank Whittaker at 304-558-2316 by October 25, 2011. Questions prior to the prebid meeting must be submitted in writing and will be addressed at the meeting. Please e-mail any questions to Frank Whittaker at frank.m.whittaker@wv.gov. All questions prior to the prebid meeting and all questions after the prebid meeting are to go to Frank Whittaker at the Purchasing Division. Other than questions addressed the day of the prebid meeting, contractors are not to contact the State Rail Authority directly.

Contractor is to give a unit cost for each item listed on the cost sheet. Low bid will be determined by the lowest total amount for all unit costs multiplied by the quantities as listed on the attached cost sheet.

REQ.P.O# RMA12010
Bond # 33387

BID BOND

KNOW ALL MEN BY THESE PRESENTS, That we, the undersigned, Fritz-Rumer-Cooke Co., Inc.
of Columbus, Ohio, as Principal, and Companion Property and Casualty Insurance Company
of Reynoldsburg, Ohio, a corporation organized and existing under the laws of the State of South Carolina
with its principal office in the City of Atlanta, GA, as Surety, are held and firmly bound unto the State
of West Virginia, as Obligee, in the penal sum of Fifteen Thousand and No/100 (\$ 15,000.00) for the payment of which,
well and truly to be made, we jointly and severally bind ourselves, our heirs, administrators, executors, successors and assigns.

The Condition of the above obligation is such that whereas the Principal has submitted to the Purchasing Section of the
Department of Administration a certain bid or proposal, attached hereto and made a part hereof, to enter into a contract in writing for
Two Turnouts and Associated Trackwork on SBVR

NOW THEREFORE,

- (a) If said bid shall be rejected, or
- (b) If said bid shall be accepted and the Principal shall enter into a contract in accordance with the bid or proposal attached hereto and shall furnish any other bonds and insurance required by the bid or proposal, and shall in all other respects perform the agreement created by the acceptance of said bid, then this obligation shall be null and void, otherwise this obligation shall remain in full force and effect. It is expressly understood and agreed that the liability of the Surety for any and all claims hereunder shall, in no event, exceed the penal amount of this obligation as herein stated.

The Surety, for the value received, hereby stipulates and agrees that the obligations of said Surety and its bond shall be in no way impaired or affected by any extension of the time within which the Obligee may accept such bid, and said Surety does hereby waive notice of any such extension.

IN WITNESS WHEREOF, Principal and Surety have hereunto set their hands and seals, and such of them as are corporations have caused their corporate seals to be affixed hereunto and these presents to be signed by their proper officers, this
8th day of December, 2011.

PURCHASING AFFIDAVIT

West Virginia Code §5A-3-10a states: No contract or renewal of any contract may be awarded by the state or any of its political subdivisions to any vendor or prospective vendor when the vendor or prospective vendor or a related party to the vendor or prospective vendor is a debtor and the debt owed is an amount greater than one thousand dollars in the aggregate.

DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, limited liability company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. "Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceeds five percent of the total contract amount.

EXCEPTION: The prohibition of this section does not apply where a vendor has contested any tax administered pursuant to chapter eleven of this code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

Under penalty of law for false swearing (West Virginia Code §61-5-3), it is hereby certified that the vendor affirms and acknowledges the information in this affidavit and is in compliance with the requirements as stated.
