PURCHASING AFFIDAVIT

MANDATE: Under W. Va. Code §5A-3-10a, no contract or renewal of any contract may be awarded by the state or any of its political subdivisions to any vendor or prospective vendor when the vendor or prospective vendor or a related party to the vendor or prospective vendor is a debtor and: (1) the debt owed is an amount greater than one thousand dollars in the aggregate; or (2) the debtor is in employer default.

EXCEPTION: The prohibition listed above does not apply where a vendor has contested any tax administered pursuant to chapter eleven of the W. Va. Code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Employer default" means having an outstanding balance or liability to the old fund or to the uninsured employers' fund or being in policy default, as defined in W. Va. Code § 23-2c-2, failure to maintain mandatory workers' compensation coverage, or failure to fully meet its obligations as a workers' compensation self-insured employer. An employer is not in employer default if it has entered into a repayment agreement with the Insurance Commissioner and remains in compliance with the obligations under the repayment agreement.

"Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceeds five percent of the total contract amount.

AFFIRMATION: By signing this form, the vendor's authorized signer affirms and acknowledges under penalty of law for false swearing (*W. Va. Code §61-5-3*) that neither vendor nor any related party owe a debt as defined above and that neither vendor nor any related party are in employer default as defined above, unless the debt or employer default is permitted under the exception above.

WITNESS THE FOLLOWING SIGNATURE:

Vendor's Name: Hatch Mott MacDonald

Authorized Signature: *Matthew M. Rice* Date: 6/10/14

RE: RFQ # DEP 16488
Expression of Interest for Professional Mapping and Design Services at the Bond Forfeited Permits of Carson One Mining, LLC O-4-84 and Gladly Fork Mining, Inc. D-35-82 and U-60-83
Upshur County

Dear Mr. Whittaker:

Hatch Mott MacDonald (HMM) is pleased to submit this proposal to provide professional mapping and design services for the West Virginia Department of Environmental Protection, Office of Special Reclamation (OSR). This project focuses on mapping, refuse reclamation, highwall elimination, stream bank protection, drainage control, and acid mine drainage issues which are core disciplines for our Morgantown office. Our managers have successfully designed numerous designs to address similar issues throughout the region for both the AML and Emergency Programs.

Our Morgantown and Charleston offices have several staff members that collectively have more than 100 years of direct design and management experience with mine reclamation design projects of all kinds. The Morgantown office employs a total staff of 25 with 4 separate design teams. These design teams consist of a mine reclamation experienced project manager, a CADD designer, and the necessary support staff to effectively complete this project on time and within budget. We are proud to announce that the Charleston office now employs 15 staff and also has a full design team functioning from that location. Also, please note that 2 members of our staff are certified in Natural Stream Design levels I-IV.

HMM has recently provided design services on several projects for WVDEP-AML that are very similar in scope to these projects. We have also permitted in excess of 70 permits under the SMCRA guidelines for various coal clients. We presently have the most current and up to date design details and specifications being used on your projects. Our experienced staffs are knowledgeable in estimation and construction and we are prepared to provide our services through the design and into the bidding and construction phases if needed. The many years of staff experience on AML projects enables us to provide engineering or project support during any phase of the project needed.

We appreciate the opportunity to submit this Expression of Interest and look forward to continuing our working relationship.

Respectfully submitted,
Hatch Mott MacDonald

Timothy M. Rice

[corporate history & experience]

INTRODUCTION

Hatch Mott MacDonald (HMM) is a leading North American consulting engineering firm with over a century of worldwide experience. HMM has designed and managed some of the world's most prominent projects. Proud of our role in major ventures across North America, we offer public and private clients the complete range of services from planning, feasibility studies/surveys, design, program/construction management, design/build, environmental, startup, and commissioning for projects across a broad range of facilities. HMM is well known and respected for its engineering expertise, currently ranking 31st in ENR's Top 500 Design Firms.

Our focus on risk management, innovation, and corporate dedication to quality has been widely recognized with numerous industry awards and accolades from clients. HMM has served public and private clients in North America for over 50 years, and internationally for over 100 years.

We have a reputation for developing cost-effective solutions and delivering projects on-time and within budget as demonstrated by our volume of repeat business. Our commitment to quality on our projects is enhanced with proven project management procedures that assure quality product delivery on-time and within budget. HMM's Integrated Management System is our implementation program registered under the ISO 9001 Standard. HMM offers specialized expertise and understanding of the key issues typical of engineering and construction management, with a complete range of consulting services covering all phases of project development and implementation.

LOCAL OFFICES

HMM is a leading North American consulting engineering firm with over 2,400 staff in 72 offices. Regionally, our offices are located at:

2601 Cranberry Square	405 Capitol Street
Morgantown, WV 26508	Suite 601
T 304.212.4390	Charleston, WV 25301
F 304.594.2814	T:304.356.3010
	F: 304.357.9222

CONSULTING AREAS

The resources of HMM are available through the following consulting areas:

- ◆ Construction Engineering Services
- ◆ Contract Operations
- ◆ Environmental Compliance & Remediation
- ◆ Environmental Site Assessment & Remediation
- ◆ Geographical Information Systems
- ◆ Hazardous Waste Management
- ◆ Hydraulic Infrastructure Evaluation & Rehabilitation
- ◆ Hydrogeological Services
- ◆ Industrial Wastewater Management
- ◆ Information Technology & Management

- ◆ Mining Environmental Services
- ◆ Municipal Engineering and Planning
- ◆ Pipeline Services
- ◆ Rails-To-Trails Projects
- ◆ Recreational Facilities
- ◆ Recycling/Solid Waste Management
- ◆ Site Development Engineering
- ◆ Storage Tank Management
- ◆ Stormwater & Watershed Management
- ◆ Transportation Engineering
- ◆ Wastewater Engineering and Management
- ◆ Water Supply Management
- ◆ Wetland / Ecological Studies

STAFFING

Hatch Mott MacDonald was formed as a joint venture between Hatch Associates of Canada, a leading design engineering firm, and Mott MacDonald, headquartered in London, an infrastructure and education consulting engineering firm. The combined resources of Hatch Associates and Mott MacDonald offer a worldwide engineering staff of over 20,000 people. In 2001, HMM acquired the environmental consulting firm of Killam Associates to offer water, wastewater and environmental services throughout North America. Our total US staff is now over 2,400 engineers, scientists and technical support personnel.

MANAGEMENT STRATEGIES

HMM uses the “Project Team” approach to efficiently manage and complete projects on time and within specified budgets. A Project Manager directs the team and interfaces with the client to ensure an uninterrupted flow of information. Capable managers draw upon the versatile personnel at HMM to provide pertinent technical knowledge relative to a particular project.

Hatch Mott MacDonald’s engineering professionals are fully supported by extensive computer resources (CADD, graphics, and an Information Technology staff), and highly trained field crews for surveying and environmental sampling and monitoring.

From the analysis stage to project implementation, the professional staff of HMM provides clients with cost-effective engineering and planning solutions for their environmental problems. HMM’s outstanding reputation is based upon dedicated service to clients and demonstrated technical abilities.

Hatch Mott MacDonald is proud of its established reputation, which is based on efficient project management, technical expertise, and knowledge of regulatory requirements. These features are reflected in HMM’s success at maintaining long-term client relationships. Experienced staff and an organizational approach make HMM extremely competent in meeting a client’s needs, now and in the future.

The Morgantown and Charleston offices are currently staffed to provide to provide five different design teams simultaneously. These teams generally consist of an experienced Project Engineer and the necessary design drafting and support staff.

EXPERIENCE AND QUALIFICATIONS

Hatch Mott MacDonald (HMM) is a full-service consulting engineering firm offering both public and private clients a complete range of services from conceptual, feasibility/ planning studies and environmental assessment through preliminary and detailed design to procurement, construction engineering inspection and project and construction management services, as well as operations and maintenance. Headquartered in New Jersey, HMM has hundreds of staff located in the northeast and Mid-Atlantic regions. More than 2,400 employees in 72 offices throughout the U.S. and Canada will support the local staff. This project will be performed from our Morgantown, WV office.

Our resources in the Appalachian Coal region have grown steadily over the past few years. HMM's focus on mining services has led to a staff of over 60 individuals in this service area. More specifically, the Morgantown and Charleston offices have over 40 staff members dedicated to the mining and energy service area, including engineers, geologists, biologists, scientists, and support staff. This growth is attributed to our corporate commitment to the industry and the values established by HMM. Hatch, one of our parent companies, has been in business for 50 years and focuses on mining services on an international level.

Mining Environmental Services

HMM offers a full spectrum of mining and mining-related environmental and design engineering services. Successfully completed projects range from reserve analyses, permitting and feasibility studies to complex mining and reclamation plans for surface and underground mining installation, prep plants and refuse handling facilities. Versatility is demonstrated by a proven ability to work with large and small operators. Personnel are accustomed to communicating effectively with both multi-department international companies and sole proprietors.

Surface Mining

- ◆ Surface Mining Permits
- ◆ Auger Mining Permits
- ◆ Feasibility Studies
- ◆ Land Reclamation & Remediation
- ◆ Permit Transfers
- ◆ Pre-Blast Surveys
- ◆ Acid Mine Discharge (AMD) Remediation

Underground Mining

- ◆ Deep Mine Permits
- ◆ Mine Design & Mapping
- ◆ Ventilation Plans
- ◆ Subsidence Plans
- ◆ Surface Support Plans
- ◆ Air Shaft Design & Coordination
- ◆ Incidental Boundary Revisions (IBR)
- ◆ Pre-Subsidence Surveys

Support Facilities

- ◆ Preparation Plant Permits
- ◆ Coal Yard & Loadout Permits
- ◆ Refuse Pile Reprocessing Permits
- ◆ Site Planning
- ◆ Air Quality Permits
- ◆ Coal Refuse/Fly Ash Permits
- ◆ Coal Refuse/Fresh Water Impoundments
- ◆ Portal Facilities Design & Construction Management

Mine Planning

- ◆ Geological Exploration
- ◆ Reserve Studies
- ◆ Economic Evaluations
- ◆ Aerial Mapping
- ◆ Drilling
- ◆ Environmental Site Assessment
- ◆ Natural Stream Design
- ◆ Stream Mitigation

Professional Surveying

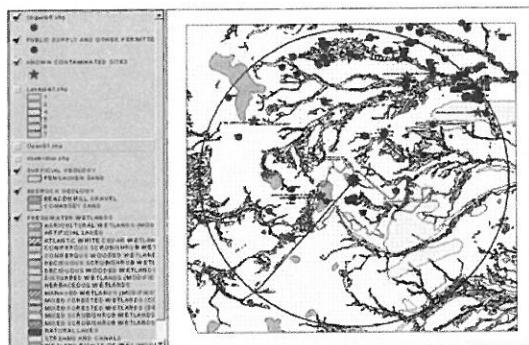

- ◆ Underground Coal Mine Surveys
- ◆ Stockpile Volumetric Surveys
- ◆ Construction Surveys
- ◆ Boundary Retracement
- ◆ Topographic Surveys
- ◆ Horizontal & Vertical Control Networks
- ◆ GIS/GPS Surveys

Operations Support

- ◆ Small Operator Assistance Program (SOAP) Preparation
- ◆ Thermal-graphic Equipment Analyses
- ◆ Machine & Equipment Appraisal & Analyses
- ◆ Conveyor System Analyses
- ◆ Electrical System Analyses

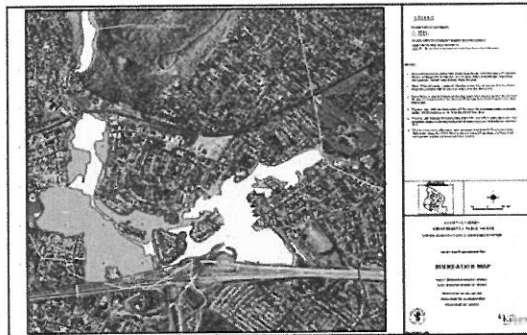

Geographic Information Systems

Over the last decade, HMM has responded to its clients' growing needs for Geographical Information System (GIS) through investments in software, hardware and employee training. The ability of GIS to integrate central databases with mapping that can be shared throughout an organization is making this information technology a standard for government agencies, utilities and private companies. HMM provides a full range of GIS services in the areas of: water/wastewater utility, stormwater utility, municipal government, hydrology and hydraulics, and natural resources.

Software Applications

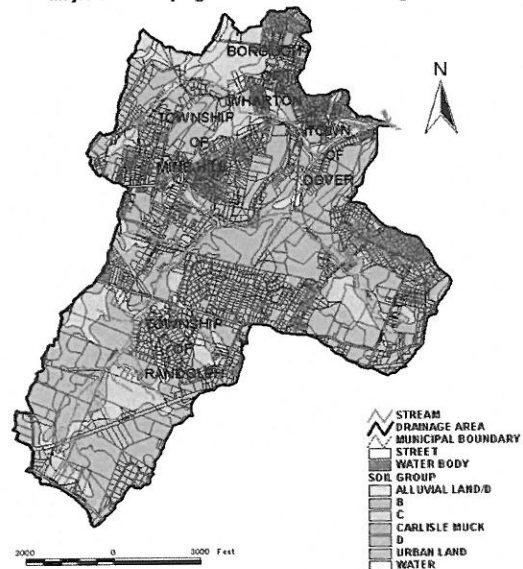

- ◆ ARC/INFO©
- ◆ ArcView©
- ◆ ArcCAD
- ◆ ArcFM
- ◆ AutoCAD/AutoCAD Map
- ◆ Microstation

Software Capabilities

- ◆ Infrastructure Modeling
- ◆ Document Management
- ◆ Hydrologic/Hydraulic Modeling
- ◆ Groundwater Modeling
- ◆ Coordinate Geometry (COGO)
- ◆ Geographical Positioning Systems (GPS)
- ◆ Digital Elevation/Terrain Modeling
- ◆ Integration of Third Party Modeling Software
- ◆ Internet/Intranet

Major Soil Grouping In Jackson Brook Drainage Area

Hardware Resources

- ◆ Hewlett-Packard 1055 & 755 Design Jet Plotters
- ◆ Dell Precision Workstation (750 MHz Processors with 256K RAM)
- ◆ Network through a 6300 Dell PowerEdge Server
- ◆ RAID-5 Array for Data Storage
- ◆ XEROX 8830 Scanners & Printers

Construction Engineering Services

HMM's established reputation in providing construction observation and project management services is based upon the firm's experienced professionals' technical expertise and knowledge of the construction field. Interaction with the firm's various design teams is undertaken so that the latest technologies will be implemented with the highest efficiency. State-of-the-art laser and computerized surveying equipment and techniques are employed for data gathering, processing, reporting and construction control.

Project Management

- ◆ CPM Scheduling Review
- ◆ Cost Controls
- ◆ Shop Drawing Review
- ◆ Payment Requests Processing
- ◆ Change Order Management
- ◆ Record Plan Preparation
- ◆ Claims Avoidance/Dispute Resolution
- ◆ Progress Meetings
- ◆ Information Management

Facilities

- ◆ Wastewater & Water Treatment Facilities
- ◆ Mining Facilities
- ◆ Biosolids Removal Facilities
- ◆ Pumping Stations
- ◆ Dams & Dikes
- ◆ Materials Recycling Facilities
- ◆ Solid Waste Transfer Stations
- ◆ Vehicle Maintenance Facilities
- ◆ Parking Garages
- ◆ Storage Facilities
- ◆ Airport Hangars & Terminals
- ◆ Office & Administration Buildings
- ◆ CSO & SSO Rehabilitation
- ◆ Sanitary Sewers & Water Mains
- ◆ Recreational Facilities

Resident Engineering

- ◆ Construction Surveys
- ◆ Construction Observation
- ◆ Concrete Testing & Inspection
- ◆ Safety Monitoring

Hydrogeological Services

HMM's hydrogeological specialists are employed on a wide range of projects, from small urban properties to entire watersheds. The majority of our staff holds advanced degrees and are registered professionals. They evaluate and develop groundwater resources; delineate contamination and predict impacts on human and ecological receptors; provide the technical basis for the design of subsurface wastewater disposal, construction dewatering and aquifer remediation systems; generate hydrogeologic models, frame computer simulations and perform statistical analyses for risk assessments and resource prospecting; provide full technical assistance in permitting in all these areas; provide peer review for the work of outside hydrogeologists; advise legal counsel and provide expert testimony.

Groundwater Resources

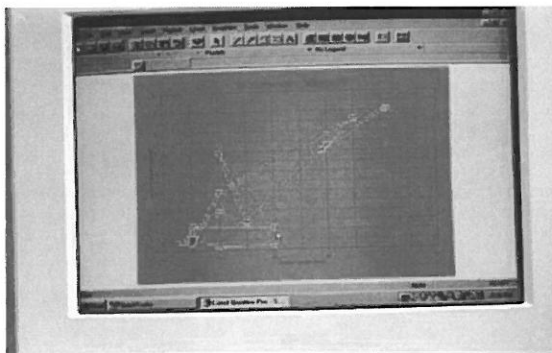

- ◆ Resource Evaluations
- ◆ Water Allocation Permits
- ◆ Well-Head Protection Area Delineation
- ◆ Diversion Impact Assessments

Dewatering

- ◆ Dewatering System Design
- ◆ Temporary Water Allocation Permits
- ◆ Dewatering Permits-by-Rule

Discharge to Groundwater

- ◆ Hydraulic Mounding Analysis
- ◆ Discharge to Groundwater Permits
- ◆ Dilution Modeling

Remedial Design

- ◆ Plume Control
- ◆ Treated Wastewater Disposal System Design
- ◆ Contaminant Fate & Transport Modeling
- ◆ Technical Support for Natural Remediation
- ◆ Aquifer Reclassification
- ◆ Ground Water Chemistry
- ◆ Expert Testimony
- ◆ Peer Review

Landfill Investigations

- ◆ Leachate Generation & Control Modeling
- ◆ Landfill Gas Venting System Design
- ◆ Aquifer Impact Assessments

Aquifer Investigations

- ◆ Pumping Test Design & Analysis
- ◆ Aquifer Modeling
- ◆ Simulation of Groundwater Flow
- ◆ Aquifer/Surface Water Interaction Analyses

Environmental Compliance Services

Effective management of ongoing environmental compliance issues is often difficult, especially as many companies continue to cutback on non-production personnel. As a result, many EH&S managers find themselves overloaded with multiple tasks. HMM can be a valuable resource that EH&S managers can use to more effectively and efficiently manage their company's environmental obligations, stay up-to-date with current state and federal regulatory trends, identify areas where cost-effective waste reduction measures can be implemented, and receive an objective third-party review of the company's environmental compliance level and/or liabilities. HMM can add value to the company's bottom line and help the management team to refocus resources on product quality and customer service, while staying abreast of regulatory changes and compliance issues.

Periodic Reporting

- ◆ Annual SARA Reports (312/313)
- ◆ Annual Air Emission Reports
- ◆ Monthly DMR Sampling / Reports
- ◆ POTW Pretreatment Sampling / Reports
- ◆ Hazardous Waste Biennial Reports
- ◆ Residual Waste Biennial Reports
- ◆ Chemical Analysis of Wastes
- ◆ Source Reduction Strategies
- ◆ Storage Tank Registrations / Inspections

Contingency Planning

- ◆ Environmental Compliance Audits
- ◆ SPCC Plan Preparation / Recertification
- ◆ PPC Plan Preparation / Recertification
- ◆ Environmental Emergency Response Plans
- ◆ Storm Water Pollution Prevention Plans
- ◆ Hazard Communication Plans
- ◆ Risk Management Plans
- ◆ Training

Wastewater Management

- ◆ NPDES Part I/ Part II Permit Applications
- ◆ POTW Permit Applications
- ◆ Storm Water Runoff Permit Applications
- ◆ Treatment Plant Troubleshooting
- ◆ Toxicity Reduction Evaluations

Air Quality

- ◆ RFD Applications
- ◆ Plan Approval Applications
- ◆ Title V Permit Applications
- ◆ PSD / Permit Modifications
- ◆ System Testing / Balancing

Ecological Services

Hatch Mott MacDonald provides a wide range of scientific and environmental expertise needed to successfully address complex environmental problems and to design practical, cost-effective solutions. HMM is committed to assisting its clients by guiding projects through both the regulatory process and the construction phase utilizing cost effective design and engineering while protecting and enhancing the environment. We have provided ecological services to many types of clients including public and private utilities, state and municipal authorities and agencies, commercial site developers, energy companies, residential and other private property owners, municipalities and institutions. Our scientists and field technicians have the necessary technical expertise required to design and execute ecologically-focused surveys and studies and the capability to set a strategic course of action for projects to be successfully licensed and permitted at all regulatory levels.

Regulatory Compliance

- ◆ Agency Consultation and Coordination
- ◆ Ecological Resources Policy Development
- ◆ Environmental Audits
- ◆ Environmental Compliance Inspection
- ◆ Environmental Impact Statements and Assessments
- ◆ Environmental Monitoring
- ◆ Environmental Risk Assessment
- ◆ Expert Testimony and Litigation Support
- ◆ Federal, State and Local Permitting

Environmental Technology

- ◆ Bioengineering
- ◆ Bioremediation and Phytoremediation
- ◆ Engineered Wetlands for Water Treatment
- ◆ Ecological Restoration

Ecological Resource Surveys/Studies

- ◆ Biota and Ecosystem Baseline Surveys
- ◆ Ecological Resource Management
- ◆ Ecological Risk Assessment
- ◆ Habitat Evaluation and Assessment
- ◆ Rare, Threatened and Endangered Species Assessment
- ◆ Soils, Sediments and Water Quality Investigations
- ◆ Wetland Delineation and Assessment
- ◆ Wetland Mitigation, Replication and Monitoring

Other Related Services

- ◆ Erosion and Sedimentation Control Plans
- ◆ GPS Survey
- ◆ GIS Applications
- ◆ Stormwater Management Plans
- ◆ Vegetation Management Plans
- ◆ Landscape Planting Plans

Environmental Site Assessment and Remediation

For nearly two decades, HMM has performed Phase I/Phase II environmental site assessments at hundreds of sites. They have consulted with multi-national and local buyers of property, assisting them with their due diligence efforts prior to acquisition of new companies or properties. On properties where contamination is present in excess of acceptable levels, HMM has designed and implemented remediation measures. Such remediation projects have been completed under a variety of environmental programs, including CERCLA (Superfund), RCRA Corrective Action, ISRA, Pennsylvania Act 2 and other state Brownfield programs. Projects have been completed on numerous sites that have soil and/or groundwater contaminated with chlorinated solvents, petroleum from leaking storage tanks, heavy metals, PCBs, and other organic compounds. Our design engineers are specialists in groundwater collection and treatment, waste removal and facility closure design, and our field staff is fully equipped and instrumented, and appropriately trained and medically monitored.

Environmental Site Assessments

- ◆ Phase I Site Assessments (ASTM)
- ◆ Transaction Screening Assessments
- ◆ Phase II Site Investigations
- ◆ Geophysical Surveys
- ◆ Monitoring Well Installations/Borings
- ◆ Soil, Air & Water Sampling
- ◆ Waste Sampling & Characterization
- ◆ Groundwater Flow Modeling
- ◆ Contaminant Transport Modeling
- ◆ QA/QC Plans

Remedial Design

- ◆ Feasibility Studies / Alternatives Analysis
- ◆ Physical/Chemical Treatment
- ◆ Biological Treatment
- ◆ Thermal Treatment
- ◆ Recovery Well Designs
- ◆ Soil Vapor Extraction
- ◆ Air Sparging
- ◆ Hydraulic Containment
- ◆ Closure Plans
- ◆ Pilot & Demonstration Programs
- ◆ Cost Estimating
- ◆ Risk Based Corrective Action
- ◆ Natural Remediation Compliance Plans
- ◆ Permitting

Site Remediation

- ◆ Contract Administration
- ◆ Construction Oversight Services
- ◆ System Operations & Maintenance
- ◆ Closure Reporting
- ◆ Post-Remediation Monitoring
- ◆ Expert Testimony

Water Supply Management

HMM has demonstrated a unique combination of talent and experience in meeting hydraulic and water supply engineering challenges for over 60 years. The firm has demonstrated particular strength and developed broad experience in water system planning, hydraulic analysis, design, rehabilitation and implementation. We can provide a full range of water supply management services including hydraulic analyses, planning and feasibility studies, preliminary and final designs, preparation of contract drawings and specifications, construction cost estimates, time schedule outlines, bid analyses, complete resident engineering services during project construction and development of operation and maintenance manuals, as well as start-up assistance and operator training.

Planning

- ◆ Master Planning for Water Supply & Treatment
- ◆ Resource Management
- ◆ Resource Inventories
- ◆ Grant & Loan Application Assistance

Construction Services

- ◆ Field Services
- ◆ Liaison Representation
- ◆ Construction Management
- ◆ Contract Administration

Investigative Studies

- ◆ Hydraulic Analysis
- ◆ System Pressure & Fire Flow Analysis
- ◆ Water Quality Treatability
- ◆ Rate Studies
- ◆ Feasibility Studies
- ◆ Valuations
- ◆ Expert Testimony

Design

- ◆ Water Supply
- ◆ Water Treatment
- ◆ Air Stripping
- ◆ Pumping Stations
- ◆ Transmission & Distribution Pipelines
- ◆ Storage Facilities
- ◆ Rehabilitation
- ◆ Treatment Plant Optimization & Management

Storage Tank Management

HMM provides storage tank management through a highly trained staff of professional geologists and engineers. This staff can investigate, analyze and make recommendations to our clients on tank management plans, tank upgrades and/or new tank designs. All staff is familiar with current state and USEPA rules and regulations and can expertly assist our clients in compliance with current standards. Our design team is experienced in double-walled steel or fiberglass tanks as well as tank upgrades in compliance with the regulations.

Evaluation of Existing Tank Systems

- ◆ Registration, Permitting & Release Reporting
- ◆ Integrity Testing
- ◆ Abandonment In-Place
- ◆ Removals & Disposals
- ◆ Upgrades & Modifications per Federal Regulations

Tank Management Plans

- ◆ Evaluation of Existing Systems through Data Searches, Interview & Site Surveys
- ◆ Determination of Compliance/Non Compliance with Federal/State Regulations
- ◆ Determination of Future System Needs
- ◆ Determination of Tank Upgradability
- ◆ Scheduling Removals/Abandonment/Replacements
- ◆ Cost Estimating
- ◆ Recommendation of Sequenced Compliance

Design of New Tank Systems

- ◆ Corrosion Protection Systems
- ◆ Double-Wall Steel to 20,000 Gallons
- ◆ Fiberglass to 6,000 Gallons
- ◆ Vault or Below Ground Installations
- ◆ Above Ground Concrete
- ◆ Dispensing Units for Motor Fuel
- ◆ Multi-fuel Tank Partitioning for Gas & Diesel
- ◆ Instrumented Leak Detection Systems
- ◆ Canopies & Islands
- ◆ Specialized #6 Heating Oil Design
- ◆ Specialized Aviation Gasoline Designs
- ◆ Bid Plans & Specifications
- ◆ State & Local Construction Code Permitting
- ◆ Construction Management
- ◆ System Start-up
- ◆ Fuel & Fleet Management Systems

Municipal Engineering Services/ Public Works Management

As a result of the practical experience developed during more than six decades of engineering consultation, and through the utilization of the talents of staff experienced in engineering, planning and public works management, HMM can draw upon a vast depth of resources to provide consulting services for its public clients, particularly in the Public Works Area. HMM's multiple office locations, coupled with the diverse capabilities of the firm's experienced staff of certified public works managers, allow HMM to provide the Public Works Management service needed to meet the full range of the day-to-day demands of local government.

Master Planning, Design, Budget & Implementation

- ◆ Municipal Improvements
- ◆ Drainage & Flood Control Facilities
- ◆ Wastewater Collection, Pumping & Treatment Facilities
- ◆ Roadway Construction, Resurfacing & Reconstruction
- ◆ Intersection & Signalization Improvements
- ◆ Water Supply Treatment, Storage & Distribution Systems
- ◆ Beach Erosion Control, Marine & Coastal Structures & Flood Zone Management
- ◆ Parks, Golf Courses & other Recreational Facilities
- ◆ Solid Waste Management & Recycling
- ◆ Building Design Services
- ◆ Land Surveying
- ◆ Tax Map Revisions & Street Address Map Revisions
- ◆ Energy Audits

Advisory Consultation

- ◆ Governing Body
- ◆ Planning Board

Pipeline Services

HMM has demonstrated experience in virtually all aspects of the natural gas transmission pipeline industry from routine operation and maintenance related matters to design and construction. The firm has successfully completed a wide variety of projects ranging from relatively small scopes of work through major multi-state construction projects. It is this understanding and our extensive resources that enable HMM to quickly and effectively respond to clients' needs, regardless of project size or scope. Our unique geographic office locations further enable us to quickly respond to the needs of the interstate natural gas pipeline industry. Our offices are located in the vicinity of many strategic pipeline hubs. HMM is unique in the industry in its ability to provide our clients with a wide variety of services including: surveying, planning, design, construction phase services and environmental compliance. As a result of our experience, we also understand the importance of close communication throughout any project undertaken.

Project Management

- ◆ Feasibility Studies
- ◆ Schedule Control
- ◆ Project Organization & Staffing

12. A. Is your firm experienced in Acid Mine Drainage water treatment and remediation? <p style="margin-left: 40px;">YES Description and number of projects: Several members of the WV office have a combined 100+ years of AML design experience. They also have completed over 300 AML design projects.</p> <hr style="border: 1px solid black;"/> <p style="margin-left: 40px;">NO</p>		

EXPRESSION OF INTEREST

Carson One Mining, LLC O-4-84, Gladly Fork Mining, Inc. D-35-82 & U-60-83
DEP16488

B. Is your firm experienced in soil analysis and coal refuse analyses?

YES Description and number of projects: **Our experienced staff routinely provides expertise to our mining and municipal clients for projects requiring reclamation or reprocessing. We have and continue to provide revegetation and reforestation (ARRI) design on AML, permitting, and municipal projects in West Virginia and surrounding states. HMM also has multiple staff with strong wetland delineation backgrounds and skills.**

NO

C. Is your firm experienced in hydrology and hydraulics for handling mine water discharges on mining sites?

YES Description and number of projects: **Our current projects include the study of hundreds of streams and drainage structures over a 1,400 square mile area in southwestern PA and north central WV. This work includes sampling, flow monitoring, modeling, mitigation, remediation, hydrologic and hydraulic analyses, and mapping. We have also performed mine pool risk evaluations.**

NO

D. Does your firm produce its own aerial photography for development of contour mapping and have your own surveying crew?

YES Description and number of projects: _____

NO We subcontract the aerial photography; however, in-house we can provide GPS, surveying and development of the mapping as needed.

E. Is your firm experienced in design of highwall elimination, grading and material handling plans for land reclamation?

YES Description and Number of Projects: **Our experienced staff has completed over 100 highwall elimination projects as well as numerous special handling projects such as refuse piles, burning refuse, toxic overburden, and deep mine fires throughout WV,PA,MD and OH. Our combined professional experience with mine reclamation among our design team members is over 100 years in all aspects of mining issues.**

NAME & TITLE (Last, First, MI) Rice, Timothy M. Project Director/Project Manager	YEARS OF EXPERIENCE	
	YEARS OF OSR DESIGN EXPERIENCE 25	YEARS OF OSR RELATED DESIGN EXPERIENCE 34
Brief explanation of responsibilities		
<p>Mr. Rice presently serves as Area Manager for the Hatch Mott MacDonald Morgantown, WV office.</p> <p>Mr. Rice is experienced in project management, coordination and supervision for permitting, design, drafting, surveying and drilling projects. His expertise is in reclamation design; mining permits; design of acid mine drainage abatement plans; water resources studies; pre/post mining surveys; hydraulic and hydrological analysis; pre-blast surveys; slope stability analysis; geotechnical design; Phase I environmental audits; storm water management analysis and design; civil site designs; and commercial and residential inspections.</p> <p>Mr. Rice has also received Levels I – IV of Natural Stream Channel Design Certification. He coordinated mitigation, remediation, and restoration projects for several clients in close proximity to the Morgantown office.</p>

NAME & TITLE (Last, First, MI) Law, Jeffrey L. Project Engineer/Project Manager	YEARS OF EXPERIENCE	
	YEARS OF OSR DESIGN EXPERIENCE 21	YEARS OF OSR RELATED DESIGN EXPERIENCE 29
Brief explanation of responsibilities Mr. Law is a Project Engineer/Manager for Hatch Mott MacDonald. His experience includes design of AML reclamation plans, permit for 1,000-acre deep mine, barge loading facility, highway entrance permits, mine subsidence evaluations, impoundments, hydrology studies for refuse sites and public water supplies, and has designed storm water management plans for residential and commercial projects. His expertise is in mine subsidence remediation and design; mine facility layout and design; reclamation design; mining permits; design of acid mine drainage abatement plans; pre/post mining surveys; hydraulic and hydrological analysis; pre-blast surveys; slope stability analysis; geotechnical design; storm water management analysis and design; civil site designs; and commercial and residential inspections. Mr. Law has also conducted floodplain evaluations and construction inspection of commercial properties. Mr. Law has experience in project management, coordination and supervision for construction and design of various mining related projects.

NAME & TITLE (Last, First, MI) Buckel, William D Project Engineer/Project Manager	YEARS OF EXPERIENCE	
	YEARS OF OSR DESIGN EXPERIENCE 2	YEARS OF OSR RELATED DESIGN EXPERIENCE 10
Brief explanation of responsibilities		
<p>Mr. Buckel is a Project Manager at Hatch Mott MacDonald (HMM). Mr. Buckel's work experience has been primarily in the land surveying and civil engineering design areas. He has considerable experience in property, engineering and construction surveying, heavy construction administration, project engineering, inspection, and supervision. He also has some sewer, water, and surface mining design experience; AML project lay-out, supervision, and execution, including start-up, post audit and compliance assurance. He has also done various permitting and project designs for many construction, coal mining and energy clients. Mr. Buckel has been the owner of his own consulting firm for over 23 years and has also worked for different construction companies, an electric utility, mining companies and design firms as well, on projects of various sizes and types.</p>

NAME & TITLE (Last, First, MI) Cline, Jeremiah C. Engineer	YEARS OF EXPERIENCE	
	YEARS OF OSR DESIGN EXPERIENCE 4	YEARS OF OSR RELATED DESIGN EXPERIENCE 6
Brief explanation of responsibilities		
<p>Mr. Cline is experienced in ASTM Standard materials testing, construction and environmental inspection services, monitoring the many different physical parameters of streams, and GPS surveying. He is capable of making keen observations with respect to the effects of longwall mining to surface features above ground. At this time he is creating estimates for several large scale stream monitoring projects. Mr. Cline is also managing equipment and people in a dynamic schedule that he created to track all monitoring tasks for each of nearly 30 persons at 5 deep mine sites, on a daily basis. He has had several classes in natural stream design and stream restoration that includes Rosgen Level One – Fluvial Geomorphology for Engineers and other classes hosted by Canaan Valley Institute.</p>

Mannington District, Marion
County, West Virginia

Client

Confidential Mining Client

Project Type

Permitting

Services

Stream Mitigation

Duration

Start date: September 2008

End date: August 2009

Project Description

A confidential mining client planned to add a surface facility known as the 9 South No. 3 Air Shaft located in Mannington District, Marion County, West Virginia.

To construct the air shaft an Incidental Boundary Revision (IBR) application would have to be prepared and submitted to the West Virginia Department of Environmental Protection (WVDEP) for review and approval.

HMM Role

HMM was retained to provide permit related services for the preparation of the IBR application revision.

In addition to the IBR application, HMM prepared a United States Army Corps of Engineers (USACE) 404 permit, a WVDEP 401 permit and a WVDNR Stream Activities permit for the proposed stream impacts. A complete compensatory mitigation plan was prepared to account for permanent stream impacts resulting from several hundred feet of stream enclosure.

An off-site, but in-kind compensatory mitigation plan was developed for a comparable section of intermittent stream to that of the impact area. The mitigation plan utilized Natural Stream Design techniques, bio-engineering, riparian buffer restoration and upland reforestation.

As a condition of the WVDEP 401 permit, pre-impact stream channel conditions, including cross sections and a longitudinal profile, were surveyed and assessed. The pre-impact stream channel survey provides a reference condition for reclamation of the impacted site.

Highlights

- Natural Stream Design principles applied
- Bio-engineering technique used for bank stabilization and channel restoration
- Identified comparable stream reaches suitable for off-site, in-kind compensatory mitigation

Project Description

Hatch Mott MacDonald (HMM) has provided consulting services to various clients in association with the preparation of Coal Mining Activities Permit (CMAP) applications for the installation of air shaft facilities in Pennsylvania. HMM has also prepared Incidental Boundary Revision (IBR) applications for the installation of air shaft facilities in West Virginia.

HMM Services

- Acts 67/68 Notification (PA)
- Public Notification
- Property Interests
- Pennsylvania Historical and Museum Commission Notification
- Pennsylvania Natural Diversity Inventory (PNDI) Notification
- Environmental Resources Mapping
- Geologic Structure Mapping
- Water Sampling

- West Virginia Department of Natural Resources (WVDNR) Stream Activity Permit

HMM Air Shaft Site Permit Projects:

Dana Mining Company of Pennsylvania, LLC – #4 West Eisenhower Air Shaft

Dana Mining Company contracted HMM to prepare a CMAP application to reopen an abandoned and sealed coal mine air shaft at the former Shannopin Mine Complex, located in Perry Township, Greene County, Pennsylvania, for the purpose of mining the Sewickley coal seam that overlies the Pittsburgh coal seam. The site comprises three acres and is now referred to as the #4 West Eisenhower Shaft site. The CMAP application has been approved and a permit has been issued by the California office of the PADEP.

Confidential Mining Client – Roberts Run Air Shaft Site

A confidential mining client contracted HMM to prepare a CMAP application to add surface acreage for a new air shaft facility known as the Roberts Run Air Shaft, located in Gilmore Township, Greene County, Pennsylvania. The CMAP application has been approved by the California office of the PADEP, but a revision to the application may be required if a property owner does not grant access.

Confidential Mining Client – 12 West Air Shaft Site

A confidential mining client contracted HMM to prepare a CMAP application to add surface acreage for a new air shaft facility known as the 12 West Air Shaft located in Gilmore Township, Greene County, Pennsylvania. HMM will also prepare a PennDOT Highway Occupancy Permit application and a USACE Stream Activity Permit application for any stream encroachment and/or relocation. The preparation of the CMAP application is currently underway.

Confidential Mining Client – 9 South No.3 Air Shaft Site

A confidential mining client contracted HMM to provide permit related services to apply for an IBR permit for a new air shaft facility known as the 9 South No. 3 Air Shaft, located in Mannington District, Marion County, West Virginia. In addition to the IBR, HMM prepared the USACE 401/404 and WVDNR Stream Activity permits that were needed to complete a proposed stream enclosure. The IBR application has been approved and the client is awaiting permit issuance from the Philippi office of the WVDEP.

Confidential Mining Client – 18-D Air Shaft Site

A confidential mining client contracted HMM to provide permit related services to apply for an IBR permit for a new air shaft facility known as the 18-D Air Shaft, located in Mannington District, Marion County, West Virginia. The IBR application has been approved and a permit issued by the Philippi office of the WVDEP.

\$

**Construction
Completion Date****Project Description**

A confidential mining client planned to add a surface facility known as the 9 South No. 3 Air Shaft located in Mannington District, Marion County, West Virginia. The proposed facility encompasses approximately 18 acres and includes an air shaft, erosion and sedimentation controls and all necessary support structures.

To construct the surface facility an Incidental Boundary Revision (IBR) application, a United States Army Corps of Engineers (USACE) 404 permit, a West Virginia Department of Environmental Protection (WVDEP) 401 permit, and a West Virginia Department of Natural Resources (WVDNR) stream activities permit. As a condition of the USACE 404 and the WVDEP 401 permit all aquatic resources within the projects boundaries delineated and a compensatory mitigation plan developed for unavoidable impacts to identified aquatic resources.

**HMM Role**

HMM was retained to provide all permit related services for the preparation of all required state and federal permits.

HMM utilized a multidisciplinary team of wetland and environmental scientists, geomorphologists, geologists, and engineers to delineate the aquatic resources within the project boundaries. As required by both federal and state permits wetlands were identified following USACE regulations, and stream channel longitudinal profiles and cross sections were surveyed. Potential environmental impacts to the identified aquatic resources were evaluated, and alternatives to impacts explored. HMM's multidisciplinary team of scientists identified an off-site mitigation location, and developed a comprehensive watershed and stream restoration plan to mitigate for unavoidable impacts to an intermittent stream at the proposed surface facility project site.

The comprehensive compensatory mitigation plan implemented a variety of restoration techniques, including Natural Stream Design principles, bio-engineering, as well as riparian zone restoration and upland reforestation. Over 900' of a high gradient mountain stream impacted by previous land use was redesigned to create a more natural and aesthetically pleasing pattern and profile, while simultaneously providing an ecological lift to watershed.

Highlights

- Identified potential stream and watershed mitigation sites through extensive field and aerial photograph reconnaissance
- Implemented Natural Stream Design principles to restore an adversely impacted stream
- Created in channel features using bio-engineering techniques
- Addressed the health and function of the stream using a watershed based approach

Sustainability

- Utilized on-site downed trees in the stream restoration plan to create large woody debris step pool features.
- Developed a riparian restoration and upland reforestation plan that used only native, locally available plant species.

**Construction
Completion Date****Project Description**

A confidential mining client planned to add a surface facility known as the 12 West Air Shaft located in Gilmore Township, PA. The proposed facility encompasses approximately 40 acres and includes an air shaft, erosion and sedimentation controls, and all necessary support features.

To construct the air shaft and related support features a United States Army Corps of Engineers (USACE) Nationwide 50 Permit (NWP 50) and a Pennsylvania Department of Environmental Protection (PADEP) Coal Mining Activity Permit (CMAP) would have to be prepared and submitted for review and approval. As a component of both the NWP 50 and the CMAP all aquatic resources had to be delineated and pre-disturbance water quality and flow monitoring completed.

**HMM Role**

HMM was retained to provide all permit related services for the preparation of the USACE Nationwide 50 Permit and the PADEP Coal Mining Activity Permit.

HMM utilized wetland and environmental scientists, geomorphologists, geologists and engineers to delineate all aquatic resources within the proposed permit boundary and to monitor stream flow and water quality. Monitoring of stream flow and water quality was performed at fixed monitoring locations identified during preliminary site visits. Assessment of aquatic resources included wetland delineation, surveying of stream channel longitudinal profiles and cross sections, and a benthic macroinvertebrate survey. Potential environmental impacts to aquatic resources were also assessed.

HMM environmental staff coordinated with the USACE and PADEP to determine required compensation for unavoidable impacts to aquatic resources. Compensatory mitigation for impacts to streams involved the creation and enhancement of riparian zones adjacent to stream segments within the permit boundaries not affected by construction of the air shaft facility.

Highlights

- Streamlined the assessment and delineation of aquatic resources by utilizing highly qualified, multidisciplinary staff
- Evaluated compensatory mitigation options to provide optimal environmental benefit while controlling cost to the client

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the reclamation of an abandoned surface mine in Barbour County, WV. Pre-1977 surface and deep mining activities have created an environmental impact on this site that is situated along the Tygart River. Approximately 6,000 lineal feet of highwall ranging in height from 30-45 feet was left un-reclaimed. Four deep mine portals were left un-scaled. Scattered coal refuse and mine spoil are contributing to the production of acid mine drainage (AMD) on this site. This AMD is discharging directly into the Tygart River.

HMM's work included all design documents necessary for construction and the project specific Corps of Engineers permits. The abandoned mine entries were sealed utilizing dry mine seals, wet mine seals, and bat gates. Drainage channels were designed to safely carry surface water as well as mine discharges utilizing limestone drains and channels as a form of treatment. A wetland is being designed to intercept and treat some of the AMD being generated on-site. All disturbed areas will be soil covered and revegetated.

- Construction Specifications
- Engineering Cost Estimate

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the stabilization of a shallow, abandoned deep mine in Harrison County, WV.

This project was performed under the WVDEP-Emergency Program and consisted of a single family residence which had experienced subsidence damages. Multiple sinkhole features had appeared in the surrounding lawn area and adjacent properties. The abandoned Pittsburgh coal workings were located approximately 35 feet beneath the structure. HMM provided the initial site assessment, historical data search, geotechnical investigation, and developed a grout stabilization plan. HMM prepared design plans, construction specifications, engineers estimate, and a pre-bid meeting was performed. This fast tracked project was delivered to client within two weeks of initial contact and notification of emergency.

Construction required by this design included in excess of 500 feet of vertical and angled injection borings and the placement of approximately 500 cubic yards of grout. Site restoration and revegetation was also performed. Construction estimate was approximately \$75,000.00.

Project Description

Hatch Mott MacDonald (HMM) has provided consulting services to a Confidential Gas Client in association with the production and transmission of Marcellus Gas.

HMM Services

- Pipeline Route Selection
- Wetland Determinations/Delineations
- Benthic Studies
- Well Pad Engineering & Design
- Slope Stability Analysis
- Access Road Engineering & Design
- USACOE Permitting (401/404)
- Highway Occupancy Permits (HOP)
- Site Selection of Fresh Water Impoundments
- Impoundment Engineering & Design
- Cost Estimation

HMM Projects:**Weekley Well Pad Site & Fresh Water Impoundment**

HMM performed wetland determination/delineation on a proposed well pad located in Wetzel County, West Virginia. HMM was also called in to perform a slope stability analysis on the proposed location. A complete subsurface investigation and analysis was performed on the site. The well pad site is currently under construction by the client. HMM also engineered and designed a 12.2 million gallon fresh water impoundment in the vicinity of the well pad location to support multiple well sites.

Buddy CPF Site

HMM performed the engineering and design of a compressor pad and associated access road. The access road included a bridge replacement that required notification and permitting through the USACOE. Services on this project also included wetland determinations, aerial mapping, property line verification and surveying, and pipeline route selection assistance.

Mills–Wetzel & Maury Fresh Water Impoundments

HMM was contracted to provide site selection assistance for two separate fresh water impoundment locations. Multiple potential sites were evaluated based on topography, wetland existence, and engineering logistics. Two sites were ultimately chosen for fresh water impoundment locations. HMM also performed the engineering and design of the two impoundment sites that measured 8 and 10 million gallons, respectively.

Nice & Potts Drill Pad Sites

HMM performed the initial site selection assistance, which included a wetland determination at the proposed pad locations and the associated access roads. Wetland delineations were performed at any found wetland location. HMM coordinated completion of aerial mapping and subsurface investigations at both sites. HMM also provided engineering and design for both well pad sites and their associated access roads.

Oddfellows Site

HMM will provide wetland determinations/delineations and engineering & design for the proposed construction of a well pad site and associated 1.5 mile access road and a 10 million gallon fresh water impoundment. HMM is also providing all necessary permitting associated with the site.

Future Well Sites

HMM is currently providing initial site reconnaissance and selection assistance on all of the client's projected 2011 well sites in West Virginia and Pennsylvania. Our services will include site evaluation, construction costs, and permitting along with final engineering & design.

\$4,000,000 annually

Project Description

This confidential coal mining client is among the nation's top energy companies. They mine more high-Btu bituminous coal than any other producer in the United States, and is the nation's leader in underground coal mining. The client has operations located throughout major US coal-producing regions. They are the largest producer of coal bed methane in the US. For 140 years, the client and its predecessor companies have been industry leaders in production, profitability, safety, and environmental stewardship. Hatch Mott MacDonald (HMM) is currently assisting this client in managing, and developing an extensive study of the streams that overlie longwall coal mines. The study involves studying and documenting the streams' flow; geomorphology, hydrology and noting any changes in streams or the surrounding ecosystem. The accurate and consistent collection of the data is critical to the integrity and quality of the study. The end result is a significant amount of field data that accurately portrays the streams and watersheds of the mining surface areas.

HMM Role

Hatch Mott MacDonald (HMM) is currently assisting the client in managing, and developing an extensive study of the streams that overlie longwall coal mines. The study involves studying and documenting the streams' flow; geomorphology, hydrology and noting any changes in streams or the surrounding ecosystem. The accurate and consistent collection of the data is critical to the integrity and quality of the study. The end result is a significant amount of field data that accurately portrays the streams and watersheds of the mining surface areas.

Project Highlights

- ♦ **Project Development** – The project development was undertaken by client and HMM teams. The data collection and entry as well as data management are critical to the success of the study. Additional areas of development include
 - Stream data collection techniques and equipment evaluation
 - GIS and GPS data collection and organization
 - Landowner contacts and area logistics
 - Project Scheduling and Information Exchange
 - Web based access to data
- ♦ **Data Collection** – Work included setting up flow monitoring stations along designated sections of streams within the study areas being long-wall mined. Over 600 different flow-monitoring stations and more than 144 miles per month of stream morphology are uploaded into Trimble Geo XH sub-foot GPS units and traversed every month. These units were then used to navigate to each individual site of study. Once sites were located, stream flow measurements, water samples and digital photos were taken. Any changes along the length of stream in the geologic rock structures, stream channel conditions or stream flow were documented photographed, and filmed and entered into the GPS. The stream flow measurements were taken using a Marsh-McBirney Flo-mate 2000. All flow-monitoring sites are monitored monthly at a minimum and daily on a maximum basis. All field data collected is entered into a large data base where the data can be queried and printed for the clients at any given time for regulatory agencies, historical record, or research for expansion in new permit areas.
- ♦ **Landowner Contacts and Logistics** – Managing the landowner contacts, issues, and incidents is essential to the continuity and success of the project. HMM coordinated this activity with the client's land agents and many other consultants being used by the client.
- ♦ **Project Scheduling and Information Exchange** – All HMM field teams and other field teams are scheduled using an open web based system developed by HMM called File Share. Mapping, documents and data can be shared and exchanged using the File Share system.
- ♦ **Web Based Access to Data** –HMM assisted the Client in developing an extensive web based data access system.

Client

Project Type

Hydraulic Analysis

Services

Hydraulic Analysis Study

Duration

September 2004 –
February 2005

Project Description

The client had an inactive mine site where they were operating a treatment plant to treat acid mine drainage. During large storm events, the steep slopes of the site caused rapid increases in the flow conveyed through the onsite drainage network. These increases in flow resulted in sudden spikes in the flow rates entering the treatment plant. This project was conducted to provide an evaluation of alternatives for reducing the peak flow rates during storm events that would allow the treatment plant to maintain operation within a preferred flow range during.

**HMM Role**

HMM was tasked with performing a hydraulic and hydrologic study of the site and providing specific alternatives for reducing peak flows at the treatment plant. These alternatives included additional detention basins and the application of real time controls to better utilize storage available within the existing drainage network. HMM also provided supplementary services including collecting the necessary flow monitoring and rainfall data to calibrate the hydraulic model. In addition, HMM provided survey services of the various drainage paths throughout the site that forms the basis of the hydraulic model.

Highlights

- Performed GPS surveying of open drainage channels and various culverts throughout the site
- Collected flow monitoring data using both weirs (open channel) and area-velocity meters (culverts) in an aggressive chemical environment.
- Utilized the calibrated hydraulic model to evaluate various alternatives to reduce peak flows entering the treatment plant in addition to reducing the overall operational costs of the plant.

On-going

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the reclamation of an abandoned surface mine in Gilmer County, WV. This area consisted of approximately 2,700 linear feet of highwall ranging in height from 25-30 feet., two collapsed portals with mine drainage, remains of a 12'W x 10'H x 85'L coal load out, 5 mine cars, and miscellaneous trash. The highwall was mostly vertical and unvegetated with large pieces of overhanging rock that are actively slipping from the face. Four mine cars were underwater and the collapsed mine portals were submerged due to beavers building dams on the bench. The portals were the source of mine drainage flowing from the site.

HMM's work included the preparation of design documents that included the regrading of the area to eliminate or reduce the highwall and associated impounded water, reestablishing original contours, and reconnecting drainways that have been interrupted by mining activities. The design also included installing wet mine seals at the two portal locations that will direct the drainage safely off site. The dilapidated, unstable coal load out structure and the abandoned mine cars were razed and properly disposed of. A revegetation plan was established to ensure revegetation of all disturbed areas of the project.

HMM assisted the WVDEP with all necessary permitting requirements, regulatory meetings, the pre-bid meeting, the pre-construction meeting, and quality assurance during construction.

Monongalia County, WV

ClientWest Virginia Department
of Environmental
Protection**Services**

- Surveying
- Geotechnical Investigations
- Mapping
- Reclamation Plan
- Construction Plans and Details
- Construction Specifications
- Engineering Cost Estimate

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the reclamation of an abandoned surface mine in Monongalia County, WV. This abandoned mine land reclamation project consisted of three separate sites.

The first site included two dilapidated, unsafe coal tipple structures and the remains of a coal load out structure that were designed to be demolished and removed from the site. The site also included three sections of abandoned, unsafe highwall, four open mine portals, and approximately five acres of coal refuse material. The site was designed to be regraded such that the highwall areas were eliminated and original contours were reestablished. The mine portals were closed through installation of dry seals, wet seals, and bat gate seals, depending on the conditions of each portal. The refuse was regraded, covered, and amended to promote vegetation.

The second site consisted of approximately 2,500 feet of highwall. The highwall face ranged from vertical with overhanging rocks to sloughed in and vegetated. An existing local high school is located less than 500 feet from the top of the highwall. The site also include seven open mine portals. HMM's design consisted of eliminating the dangerous highwall and reestablishing the original contours. The mine portal locations were sealed using dry, wet, and bat gate mine seals where appropriate.

The third site consisted of the stabilization of a roadway and utility corridor that had been impacted due to the subsidence of the underground mine workings. HMM was responsible for geotechnical investigation, additional mapping to augment the provided aerial mapping, and the preparation of a stabilization design, bid plans and specifications, engineers estimate, and construction services for all three sites.

HMM's work included all design documents necessary for construction and the project specific Corps of Engineers permits. The abandoned mine entries were sealed utilizing dry mine seals, wet mine seals, and bat gates. The area was regraded to eliminate surface irregularities and provide positive drainage. Drainage channels were designed to safely carry surface water as well as mine discharges utilizing limestone drains and channels as a form of alkaline treatment. All disturbed areas will be soil covered and revegetated.

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the stabilization of an abandoned, deep surface mine in Marion County, WV. This project was performed under the WVDEP- Emergency Program and was completed within two weeks of initial notification.

This project involved the subsidence investigation and stabilization of a multi-unit apartment complex in downtown Fairmont, WV. An abandoned deep mine in the Pittsburgh coal seam was causing damage to the structure and had caused numerous water main leaks in the past. A previous geotechnical study had been performed and the drilling information was used to develop a stabilization plan. HMM was responsible for a site review, mapping, historical records search, development of a stabilization plan, bid plans and specifications, and a pre-bid meeting. Traffic control and pavement protection plans were part of this project.

Construction estimates included in excess of 1,500 linear feet of drilling and the placement of 900 cubic yards of grout. Estimated cost of project was \$225,000.00.

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the reclamation of an abandoned surface mine in Preston County, WV. Pre-1977 surface and deep mining activities are creating an environmental impact on the headwaters of Heather Run. Sixteen (16) deep mine entries were left unscaled. Of these entries, only 6 are partially collapsed. Some entries are situated such that surface water drainage is allowed to enter the abandoned mine. Others are discharging acid mine drainage (AMD) at an approximate rate of 200 gpm. This AMD discharge is of poor quality, pH 2.6 and Fe > 10 mg/L. Also, approximately 2,000 linear feet of highwall was left abandoned; coal refuse and spoil was left un-covered, and scattered mine debris was left on the site. This site is generating AMD and discharging directly into Heather Run, a tributary of the Cheat River.

HMM's work included all design documents necessary for construction and the project specific Corps of Engineers permits. The abandoned mine entries were sealed utilizing dry mine seals, wet mine seals, and bat gates. The area was regraded to eliminate surface irregularities and provide positive drainage. Drainage channels were designed to safely carry surface water as well as mine discharges utilizing limestone drains and channels as a form of alkaline treatment. All disturbed areas will be soil covered and revegetated.

Client

Confidential Coal Client

Services

- Grout Injection Work Plans
- Subsurface Investigation
- Surveying
- Utility camera survey
- GIS Mapping
- Liner Design
- Cost Analysis
- Construction Inspection

Project Description

Hatch Mott MacDonald (HMM) was retained by a private coal client to assist in the mitigation and remediation of an existing private impoundment that had been affected by longwall mining.

Work included investigation of subsurface data, groundwater monitoring, hydrologic modeling, and flow loss analysis. HMM developed a combination grout injection plan and geosynthetic liner design. This grout injection plan consisted of a shallow, low-pressure injection of a mixture of Portland cement and bentonite to seal fractures and reduce water loss. The geosynthetic liner design utilized an impermeable bentonite mat at select locations within the pond bottom. A utility camera was used to observe infiltration and leakage of the pipe principal spillway.

HMM performed the construction inspection and construction management of the project. This work included full-time inspection, evaluation of contractor performance and work product, and approval of contractor quantities.

Estimate

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide an engineering assessment of the existing conditions of a flooded, abandoned deep mine and its potential public safety concerns in Allegany County, MD.

This project involved the evaluation of the Kingsland deep mine located in Allegany County along Douglas Avenue in Lonaconing, Maryland for the potential of an uncontrolled discharge (blowout). The area had been extensively deep mined within the Pittsburgh coal seam. A recent “blowout” on the Tyson (Sewickley) seam, located above the Pittsburgh seam, prompted this investigation. HMM utilized subsurface investigations, field reconnaissance, surveying, and a review of the mining history to prepare a report of our findings. This report included an evaluation of the existing conditions, a risk assessment, the probable impacts of a blowout, potential methods to control a blowout, and recommendations for additional immediate action.

HMM’s work included an extensive historical review of the available mine workings records, development of a detailed comprehensive map depicting all known workings and intersections, field reconnaissance, water quality analysis, flow studies, and the installation of two permanent piezometers for mine pool studies. Study included breach analysis and damage predictions.

Private Coal Client – Marion County, WV Mine

The project consisted of the construction of a water supply pipeline along an existing 5-mile surface beltline conveyor system associated with an existing deep mine. A function of the water supply will be to provide fire and dust suppression associated with the beltline system. Hatch Mott MacDonald was contracted to provide the permitting services for this project. Specific permit services are detailed below.

Private Coal Client – Greene County, PA & Monongalia County, WV

This project consisted of Coal Mining Activities Permit (CMAP) Revision to include the construction of an 8,300 linear foot pipeline. This pipeline will be utilized to transfer mine water to an underground injection point. This project was located in both Pennsylvania and West Virginia, which required multiple permits in both states. Specific permit services are detailed below.

Permit–Related Services Required on Above Projects:

Bureau of Historic Preservation (BHP) notification – PA
State Historic Preservation Office (SHPO) notification – WV
Pennsylvania Natural Diversity Inventory (PNDI) – (Endangered Species) notification/search/report – PA
Land Inquiries – (Endangered Species) notification/search/report – WV
Submittals to the Pennsylvania Department of Conservation and Natural Resources (DCNR), the Pennsylvania Fish & Boat Commission, and Pennsylvania Game Commission.
Submittals to the West Virginia Department of Natural Resources
Pennsylvania Acts 67 & 68 – municipal and county notifications
Municipal and county zoning permits, as required.
General Permits – through regional office – waterway crossings, road crossings, etc.

Client

Harrison County
Commission, WV

Project Type

Flood Modeling/Mapping

Services

Site Characterization
Hydrologic/Hydraulic
Evaluations

Duration

July 2004 - March 2005

Project Description

The Lost Creek Floodplain Investigation provided the Harrison County Commission with detailed floodplain information for Lost Creek between the Town of Lost Creek corporate limit and Lost Creek's downstream confluence with the West Fork River. Prior to this investigation, Lost Creek was characterized as approximate Zone A on the Harrison County, WV (Unincorporated Areas) Flood Insurance Study (FIS) and Flood Insurance Rate Maps (FIRMs). A final report was prepared for the Harrison County Planning Commission with all necessary documentation and analysis to support a revision to the Flood Insurance Rate Map for the Town of Lost Creek, WV.

HMM Role

Site Characterization - HMM prepared the detailed flood hazard mapping for Lost Creek by conducting field investigations and performing detailed hydraulic evaluations within the project study area. A combination of traditional land surveying and GPS surveying were used to identify cross sections of Lost Creek at set intervals. HMM combined the new cross section survey data with USGS DEM data to create a new Triangular Irregular Network (TIN) in ArcView. Cross sections were automatically extracted from the GIS TIN using HEC-GeoRAS and imported into HEC-RAS for performing the hydrologic and hydraulic evaluations.

Hydrologic/Hydraulic Evaluations - HMM used HEC-RAS to establish the peak flow for the 100-year storm using current US Geological Survey (USGS) regression equations for rural watersheds. The resulting floodplain and floodway boundaries for the 100-year storm event were mapped on digital topographic maps overlaid with color aerial photographs. A water surface profile was established for the 100-year storm for the establishment of Base Flow Elevations along Lost Creek.

Project Highlights

- ◆ Development of hydrologic/hydraulic models
- ◆ Site characterization and delineation of Waterway flood elevation
- ◆ Deterioration of floodway boundaries and development of Flood Insurance Rate Map updates.

- Mapping
- Grout Stabilization Plan
- Construction Plans and Details
- Construction Specifications
- Engineering Cost Estimate

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the stabilization of an abandoned deep mine in Marion County, WV.

This project included the stabilization of six residential structures and several garages. There were also three sinkhole features that were stabilized using geosynthetics and aggregate. HMM was responsible for geotechnical investigation, additional mapping to augment the provided aerial mapping provided, and the preparation of a stabilization design, bid plans and specifications, engineers estimate, and construction services. The sinkholes were stabilized using encapsulated aggregate plugs.

The work performed under this design included approximately 7800 linear feet of vertical and angled injection borings, placement of 5000 cubic yards of grout material, installation of 3 encapsulated aggregate plugs, site restoration, and revegetation. The engineers estimate for this project was \$1.1M.

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the reclamation of an abandoned surface mine in Tucker County, WV. Pre-law mining activities intercepted Pendleton Creek and has forced the stream flow to be directed into an abandoned deep mine complex that lies under the community of Thomas, WV. The introduction of this flow is causing deterioration of the coal pillars that support the mine roof and is also generating acid mine drainage (AMD) on the waters of the Blackwater River. Portions of the un-reclaimed surface mine are also generating AMD throughout the project site.

Pendleton Creek is a pristine, Tier III stream which flows southward for less than 2 miles before entering Pendleton Lake in Blackwater Falls State Park. Blackwater Falls is one of the most popular of West Virginia's thirty-four state parks, with Pendleton Lake being one of its many attractions. This lake is used for recreation by thousands of visitors each summer, and much of the land between the project's construction limits and the lake is U.S Fish and Wildlife designated wetlands.

HMM's work included all design documents necessary for construction and the project specific Corps of Engineers permits. Portions of the highwall were reclaimed to provide positive drainage of surface waters. Two separate streams were designed utilizing natural stream design techniques and geosynthetic liners to control losses and maintain stability. Regrading was proposed for selected portions of the abandoned surface mine to reduce the impact of AMD. All disturbed areas were revegetated using ARRI reforestation procedures and native species. The Pendleton Creek Strip project has been selected as the "Excellence in Reforestation" regional award winner for 2011. Also, the Pendleton Creek project has been nominated for the Office of Surface Mining National Reclamation Award, to be determined in the fall of 2012

Services

Feasibility Study

Duration

Start date: January 2010

End date: July 2010

Project Description

Hatch Mott MacDonald (HMM) conducted a water supply feasibility study for an area along Route 60 in Greenbrier County, West Virginia between the towns of Rainelle and Rupert. The study focused on determining what affect pre-1977 mining activities may have had on the private water wells used by residents in the study area. The study area included approximately 500 homes and businesses located along the Meadow River. The mining of multiple coal seams was researched and evaluated to determine potential impacts to the private water supplies of residents within the study area.

HMM Role

HMM was selected by the West Virginia Department of Environmental Protection – Office of Abandoned Mine Lands & Reclamation to provide engineering services necessary to conduct a water supply feasibility study in Greenbrier County, WV.

Highlights

The project had many challenges and opportunities including:

- ♦ Review of mining, geologic and hydrogeologic records
- ♦ Prepare maps of study area
- ♦ Collect and analyze water samples from private water wells
- ♦ Interview residents on the adequacy of their water source
- ♦ GPS of well locations
- ♦ Plotting of sample data on Piper Diagram

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the stabilization of an abandoned deep mine in Harrison County, WV.

This project was performed under the WVDEP-Emergency Program and consisted of a single family residence which had experienced subsidence damages. The abandoned Pittsburgh coal workings were located approximately 40 feet beneath the structure. HMM provided the initial site assessment, historical data search, geotechnical investigation, and developed a grout stabilization plan. Design plans, construction specifications, engineers estimate, and a pre-bid meeting were performed. This fast tracked project was delivered to client within two weeks of initial contact and notification of emergency.

HMM's work included all design documents necessary for construction. Work included approximately 650 linear feet of vertical and angled injection borings and the placement of 700 cubic yards of grout. Engineers estimate was in excess of \$150,000.00.

Design/Oversight Cost

\$250,000 annually

Project Description

This confidential coal mining client is among the nation's top energy companies. Hatch Mott MacDonald (HMM) is currently assisting this client in managing, and developing an extensive study of the streams that overlie longwall coal mines. The study involves studying and documenting the streams' flow; geomorphology, hydrology and noting any changes in streams or the surrounding ecosystem. In conjunction with these studies, HMM has a developed mitigation strategy to address any adverse impacts to the streams by mining activities. A key component of these activities is the ability to temporarily augment stream flows. The ability to collect and distribute surface and groundwater supplies to problematic areas is paramount to the success of the remediation efforts.

HMM Role

Hatch Mott MacDonald (HMM) is currently assisting the client in designing, developing, monitoring, and maintaining an extensive network of augmentation systems supplying water throughout multiple mines. Our responsibilities involve identifying problem areas, locating water sources, sizing systems, route selection, monitoring outfalls and quantity, study of drawdown and reserves, and providing detailed operational reporting on daily basis. We are currently involved with client to automate these systems with PLC control systems.

Project Highlights

- ◆ **Project Development** – The project development was initiated in January 2007 and has continually grown to the current size of over 200,000 linear feet of PVC pipeline ranging from 2" to 10" in diameter and having more than 140 valved outfalls.
- ◆ **Stream Flow Analysis** – Work included setting up flow monitoring stations along designated sections of streams within the study areas being long-wall mined. Over 600 different flow-monitoring stations and more than 144 miles per month of stream morphology are uploaded into Trimble Geo XH sub-foot GPS units and traversed every month. These units were then used to navigate to each individual site of study. Once sites were located, stream flow measurements, water samples and digital photos were taken. Any changes along the length of stream in the geologic rock structures, stream channel conditions or stream flow were documented photographed, and filmed and entered into the GPS. The stream flow measurements were taken using a Marsh-McBirney Flo-mate 2000. All flow-monitoring sites are monitored monthly at a minimum and daily on a maximum basis. All field data collected is entered into a large data base where the data can be queried and printed for the clients at any given time for regulatory agencies, historical record, or research for expansion in new permit areas.
- ◆ **System Design and Review** – Includes pipe sizing based on identification of future flow needs and pump selection to provide adequate pressures to meet the site conditions. Often the systems must be designed for portable power sources.
- ◆ **GIS and GPS Data Collection** – All system components are continually located and updated using GPS devices and current system mapping is maintained for web-based shared access.
- ◆ **Route Selection** –HMM assists client with GIS analysis of system requirements and field GPS units are used to locate pipeline routes.
- ◆ **System Mapping** – Continual modification and updating is needed to operate system. Stream needs are variable and systems are designed so augmentation location can be quickly added or deleted based on need.
- ◆ **Well Studies** – Static water levels are continually monitored and placed in database. In addition, water quality analysis is performed to prevent stream degradation.
- ◆ **Augmentation Oversight** – Outfalls are monitored and reported on regular basis.
- ◆ **System Automation** – currently working with client to provide PLC control system that will allow web based control of multiple systems from central control room.

Project Description

Hatch Mott MacDonald (HMM) was retained by a private coal client to assist in the mitigation and remediation of over 13,000 lineal feet of streams that have been affected by longwall mining.

Work includes surface and groundwater monitoring, hydrologic modeling, and subsurface investigations to determine minimum base flows for development of augmentation plans. Geologic conditions assessments are used to prepare mitigation plans and develop a grout injection design for remediating the loss segments of the affected streams. This grout injection design consists of a shallow, low-pressure injection of portland and bentonite to seal fractures and reduce water loss. Stream surveying of the remediation sites and control streams was used to establish a stable stream geometry that would effectively carry bankfull flows. Trimble GPS units and GIS software were used to develop maps showing the flow advancement downstream as construction progressed.

HMM performs the construction inspection and construction management of the project. This work includes full-time inspection, evaluation of contractor performance and work product, and approval of contractor quantities.

Feasibility Study

Duration

Start date: January 2010

End date: July 2010

Project Description

Hatch Mott MacDonald (HMM) conducted a water supply feasibility study for the Whispering Woods Community in Monongalia County. The study focused on determining what affect pre-1977 mining activities may have had on the private water wells used by residents in the study area. This study area was comprised of two subdivisions linked by a county roadway. Both surface and deep mining had occurred within the watershed during both pre and post 1977 SMRCA laws which dictate available funding sources.

HMM Role

HMM was selected by the West Virginia Department of Environmental Protection – Office of Abandoned Mine Lands & Reclamation to provide engineering services necessary to conduct a water supply study for a location in Monongalia County, WV.

Highlights

The project has many challenges and opportunities including:

- Review of mining, geologic and hydrogeologic records
- Prepare maps of study area
- Collect and analyze water samples from private water wells
- Interview residents on the adequacy of their water source
- GPS of well locations
- Plotting of sample data on Piper Diagram

Project Description

Hatch Mott MacDonald (HMM) was retained by the client to provide engineering design documents for the reclamation of an abandoned surface mine and coal loadout facility in Fayette County, WV. Pre-1977 surface and deep mining activities created an environmental impact along Keeney Creek. Steep refuse slopes were encroaching on the stream and threatening to cause blockage. Outcrops were unvegetated and allowing toxic runoff to occur. Design included stabilizing the streambanks along Keeney Creek, regrading steep outcrops to a stable configuration, designing stable drainage structures to eliminate erosion, and revegetating the impacted area. The loadout area was regraded to provide positive drainage, divert runoff away from potentially toxic areas, and revegetate. Four bat gates were installed in the mine openings along the highwall located above these areas.

HMM's work included all design documents necessary for construction and the project specific Corps of Engineers permits.

Project Description

The Sanitary Sewer Board of the City of Fairmont, West Virginia (SSB) owns a combined sewer system that serves 9, 725 customers in Marion County, WV. The West Virginia Department of Environmental Protection issued a consent order to the SSB that required submission of a Combined Sewer Overflow Long Term Control Plan by November 8, 2010.

The SSB operates and maintains a 9 MGD wastewater treatment plant, 28 sewage lift stations, and 165 miles of sewer mains. The combined sewer system also has 33 Combined Sewer Overflows that discharge when flows exceed the capacity of the wastewater system.

The SSB has previously implemented the Nine Minimum Controls (NMCs) and recently completed a phase I Long Term Control Plan.

HMM Role

The SSB hired HMM to prepare a Combined Sewer Overflow Long Term Control for the 33 CSOs in the combined sewer system. Due to the limited time available, HMM prepared the LTCP only with available information supplied by the SSB.

Highlights of LTCP

- Builds off of previously approved Phase I plan that was completed by SSB in 2009.
- Covers a 20 year period.
- Summarizes the CSO program of the SBB, and details the implementation of the NMCs, as well as the Phase I LTCP project.
- Initially calls for flow monitoring and sewer system evaluation survey of problematic CSO basins.
- Calls for a Comprehensive Plan to be prepared within six years outlining the proposed CSO improvements.
- Construction of improvements as outlined in Comprehensive to be completed by December 31, 2025.

Coal Mining Activities
Permit (CMAP) Application

Duration

Start date: July 2008
End date: August 2009

Project Description

Coresco, LLC planned to increase the project limits for an existing coal refuse disposal area at the Cobra Mining Refuse Dump #4 site, located in Monongahela Township, Greene County, Pennsylvania.

The purpose of the expansion of the permit limits was to allow Coresco, LLC to place additional coal refuse material at the site. The additional refuse will be placed and compacted atop existing refuse areas.

To increase the project limits, a Coal Mining Activity Permit (CMAP) application revision would have to be prepared and submitted to the Pennsylvania Department of Environmental Protection (PADEP) for review and approval.

HMM Role

HMM was retained by Coresco, LLC to provide permit related services for the preparation of the CMAP application revision.

Subsurface exploration, laboratory testing and stability evaluations were performed to gather data to determine the ability of the site to accept more refuse material.

An Acid Base Accounting analysis was conducted to determine the optimal blend of alkaline material and coal refuse to neutralize any potential acid mine drainage from the refuse site.

The final reclamation plan was developed with the intent to provide an aesthetically pleasing view from a national park located across the Monongahela River from the site.

Highlights

- Slope Stability Analysis
- Wetland Delineation
- Endangered Species Investigation
