The multi-color engravable polymer sheet

King ColorCore is a versatile, environmentally stabilized sheet with multiple layers of contrasting color. Its thin cap layers and bright primary colors make it ideal for signage, marine, playground and recreational applications. For maximum versatility, standard colors are made to coordinate with King ColorBoard®. The sheets are easy to engrave and machine, as the cap is approximately .050" of nominal thickness for high production speeds. Base materials are FDA approved as are most materials. King ColorCore is made with high-impact-resistant polymer to handle more abuse than conventional sign materials. King ColorCore is a superior homogeneous sheet, made with a unique state-of-the-art continuous process called PolyFusion®, manufactured to the highest standards in the industry.

King ColorCore is upgradable to King MicroShield® with an exclusive antimicrobial additive, the latest technology for protecting the product surface against stain and odor causing bacteria, algae and fungi.

King ColorCore is upgradable with King FlameShield for ASTM E-84 Class A or B Flame Compliance and CAN/ULC-S102 for Canadian Compliance.
