Charles,

We are sending this correspondence because based on the specifications of the State of West Virginia for Statewide Contract for Digital Copiers, CRFQ 0212 SWC1700000008, Lexmark International, Inc. respectfully declines responding. A review of the criteria including the equipment specifications and the procurement requirements demonstrates a limited opportunity for Lexmark to help the State of West Virginia to save money, reduce printing and free up valuable resources for more mission critical projects.

Lexmark works everyday with our government customers who are:

- Looking for a new path to help with their shrinking budgets
- Want to print less, but always find their organization printing more and more
- Seeking to leverage MFP's to aid digital transformation initiatives

We would like to offer up the following information and considerations should you decide to explore a more strategic output infrastructure in the future.

- Change the A3 device requirement to optional or in proportion to actual need. Industry Trends show that less than 3% of all output is A3. This is validated by both worldwide analysts and manufacturers. In a recent study Lexmark conducted with a large West Virginia State Agency we found that the agency had 79 A3 capable devices. Their total monthly output volume on all of their devices was 1,230,297 pages, of which only 780 pages were 11 x 17(A3) sized. Their A3 printing needs could easily be met by fewer than 79 devices. In Lexmark's experience, this is typical of most state agencies. By allowing the right sizing of equipment to give the end user the same functionality and speed with added capabilities we can offer a smaller footprint and dramatically reduce your overall cost.
- As government entities implement digital transformations, they continue to increase their investments in an infrastructure of Smart MFP's, rather than copiers. Leveraging Smart MFP's as integration points for citizen engagement sets the stage for on-going savings opportunities and continuous improvement. Our Smart MFP's create an essential connection between systems, processes, and your citizens' paperwork by capturing information in real time, at the point of need. An agency worker can now capture supporting documents instantly extracting, perfecting and integrating at the correct point in the business process right at the MFP.

These are two of the many ways you can print less, save money and improve processes. Should your equipment strategy change or if you would like to talk about other ways a different output infrastructure could help save money, print less pages and improve processes for your citizens and employees, Lexmark would welcome an opportunity to meet with you.

Regards,

Michal Stimson
