RASIA:
**LUCEE OR EQUAL APPLICATION
DEVELOPMENT SUPPORT**

PREPARED FOR

**WEST VIRGINIA DEPARTMENT OF
ENVIRONMENTAL PROTECTION**

Overview

West Virginia Department of Environmental Protection (Customer) is or will be using Lucee Server for various programmatic and web-based projects, and has requested training and technical support services.

Rasia, Inc. is a US-based corporation, and offers Lucee-centered support and professional services. This quote includes scope of work and fees for Lucee or Equal Application Development Support.

Lucee and CFML Support

Lucee or Equal Application Development Support

With the purchase of this Support Contract, the Customer is entitled to the following products and services:

Support tickets	110
Priority Level	2
Maximum response times	48 hours
Lucee Bug fixes	✓
Deployment Advice	✓
How-To Instruction	✓
Best Practice Advice	✓
Code reviews	✓
Annual fee	\$24,750

Any Lucee-related support request from Customer is covered by this Support Contract. This can include (but is not limited to) setup and configuration, Lucee operation and best practice guidance, code examples, and Lucee bug tracking and correction.

Using support tickets

With this Application Development Support Plan Customer has purchased a specific amount of support tickets - each support ticket covers up to 1 hour support time from Rasia. Every unique support request, once completed, will cost at least one support ticket. Rasia will continue to offer paid, direct support until Customer has used up all of their support tickets, at which time Customer is free to purchase more support tickets or let their support agreement lapse. There is no association between the time needed to complete a ticket and the number of support tickets.

Calculating support tickets

Tickets are charged for each support request. Each support request costs at least one support ticket. Additional tickets are charged when Rasia's support staff spend 15 minutes over the base hour. See examples below:

- **1 Support ticket:** A support request that takes less than one hour to complete
- **2 Support tickets:** A support request that takes longer than one hour, but less than 2 hours to complete.

For support requests that will take more than 8 hours to complete, Customer will receive an estimate of time necessary to complete the request and work will begin only upon Customer's approval and acceptance of the written estimate.

Support request logging and tracking

Customers can request support via email, telephone or via their web-based support portal (provided by Rasia). Each support request will get listed in the Customer's web-based support portal, with answers provided via phone, email and/or web-based support portal. A regularly updated total of available support tickets will be available in each client's support portal.

Support request response time

Customers who log a support request will get a response acknowledging the request within 1 business day (not including holidays or weekends). Work on the response will commence within 1 business days.

Support Contract Fees

This Support Contract costs \$24,750.

Support Ticket Lifecycle

Support tickets included in the Support Plans are redeemable for one calendar year from receipt of the signed Support Contract. Any unredeemed support tickets at the end of this calendar year are non-refundable and non-transferable.

Rasia Team Qualifications

The Rasia team is perfectly matched to the needs of WV DEP. Our team includes contributors to the Lucee, Railo, and Apache Tomcat, and all members are deeply experienced at performance tuning and problem solving for clients including Apple, Scientific American, CSX, Helsana, NATO and many more.

The Rasia team has a cumulative total of over 30 years at both:

1. Developing applications using Lucee/Railo and conversions from Adobe Coldfusion to Railo, and
2. Developing changes to the Lucee/Railo server system.

All members of the team will be available for the duration of the project, and for at least one calendar year following the commencement of this project.

Michael Offner: Michael is the lead architect of Lucee Server, and was the primary creator of the Railo project, which officially launched in 2003. His combined experience at Railo/Lucee is over 15 years. He spends his days deep in both Java & CFML; building a compiler, interpreter and designing applications and languages are his areas of expertise.

Michael earned his Masters degree in I.T. as a Software Engineer at the Department of Engineering and Information Technology in Bern. He started Railo as a diploma project. In late 2014 Michael left the Railo project, and a few months later he started the Lucee project.

Michael puts his heart and soul into programming. He's been working with ColdFusion since version 3.0, and Java nearly as long.

Gert Franz: Gert is well-known for his involvement in the CFML community and has extensive experience leading projects focused on improving clients' applications and website performance. Gert is an in-demand speaker, appearing at conferences around the world, focused on Lucee and CFML performance tuning.

A founder of the original Railo project, Gert has been deeply involved in Railo/Lucee for over 15 years, and has worked for over 20 years as a Senior Programmer for several different companies. Gert leads Rasia as CTO. Gert enjoys consulting engagements related to Lucee, CFML, databases, and system architectures. He is a specialist in performance tuning, especially with MSSQL and Lucee.

Igal Sapir: Igal is a contributor to both the Lucee Server and Apache Tomcat projects, and has deep insight into the intersection of CFML and Java. Igal leads technical engagements for Rasia's North American clients, and works to, improve Lucee

Server's capabilities and overall performance. Igal has been a primary contributor to the Railo/Lucee projects since 2012.

Igal's fascination with programming started in his early teens, over 30 years ago. Programming languages like Basic and Pascal were quickly replaced by Assembly and C, and later on with Java and C#. In the mid 1990's, Igal chose CFML as the language of choice for web application development, and has been a primary contributor to Railo, and now Lucee for years.

Malcolm O'Keeffe: Malcolm provides project and account management for Rasia, and handles business management for Rasia's US operation.

Malcolm is the former CEO of BlueRiver, which he co-founded and led for 14 years. Malcolm oversaw dozens of Lucee-related projects and engagements while at BlueRiver.

Accepted and Agreed

The Customer has executed this Agreement below as acceptance of its terms.

RASIA:
CFML CONVERSION PROPOSAL

PREPARED FOR

**WEST VIRGINIA DEPARTMENT OF
ENVIRONMENTAL PROTECTION**

Overview

West Virginia Department of Environmental Protection (Customer) is or will be using Lucee Server for various programmatic and web-based projects, and has requested training and technical support services.

Rasia, Inc. is a US-based corporation, and offers Lucee-centered support and professional services. This quote includes scope of work and fees for professional services focused on assisting the WV DEP in converting their applications from Adobe ColdFusion to Lucee Server. Rasia, Inc. is a US-based corporation, and offers Lucee-centered support and professional services. This quote includes scope of work and fees for support of the conversion of the WV DEP codebase from Adobe ColdFusion to Lucee Server.

Process and Scope of Work

Initial code review

Rasia will work with WV DEP team members to review the WV DEP codebase and functionality. During this process, Rasia will identify code that will need to be adjusted to work correctly on Lucee Server.

Programming / Syntax updates

Rasia will work with WV DEP team members to update the WV DEP codebase; activities will include:

- Replacement of known CFML incompatibilities
- Automated updates that use scripted routines for updating deprecated/unsupported syntax
- Manual updates updating deprecated/unsupported syntax
- Creation of custom Lucee features if needed to maintain feature parity with Adobe ColdFusion Server
- Comprehensive application testing for errors (with updates posted)
- Identification of remaining issues
- Documentation of conversion
- Systematic issue tracking and resolution
- Conversion of DB from MS Access to MS SQL Server

Fees

Rasia will provide up to 110 hours of services at an hourly rate of \$225 under this agreement, for a fee of \$24,750.

Rasia Team Qualifications

The Rasia team is perfectly matched to the needs of WV DEP. Our team includes contributors to the Lucee, Railo, and Apache Tomcat, and all members are deeply experienced at performance tuning and problem solving for clients including Apple, Scientific American, CSX, Helsana, NATO and many more.

RASIA:
TRAINING: MIGRATING TO LUCEE

PREPARED FOR

**WEST VIRGINIA DEPARTMENT OF
ENVIRONMENTAL PROTECTION**

Overview

West Virginia Department of Environmental Protection (Customer) is or will be using Lucee Server for various programmatic and web-based projects, and has requested training and technical support services.

Rasia, Inc. is a US-based corporation, and offers Lucee-centered support and professional services. This quote includes scope of work and fees for the Two-Day Migrating to Lucee course we offer.

Course Content

Our two-day Migrating to Lucee training course provides attendees with a solid understanding of how to setup, configure and administer Lucee Server, and how to efficiently and effectively migrate code from other CFML engines to run on Lucee Server.

Day One provides an general introduction to Lucee Server, then focuses on installing and configuring Lucee. We then give an overview on Lucee Administration, and finish with a deep dive into using Lucee-specific features, including the built-in application debugging features, as well as adding extensions to Lucee in order to add capabilities beyond Lucee's out-of-the-box feature set.

Day Two is focused on application migration to Lucee Server. We begin with a look at the general process for migrating an application from another CFML engine to Lucee, including best practices for code management and application development. We'll review different known incompatibilities, how to spot them, and how to mitigate any issues that come up via error reporting and log file review.

Once we've looked at the general process, we'll take a look some specific examples from the WV DEP codebase, and follow the process from discovery of an issue through to resolution. We'll also provide a general overview of best practices for refining a legacy codebase to enable easier maintenance and better performance, and then take another look at a specific example from the WV DEP codebase.

Training Process

Rasia training staff will provide online access to an online collaboration platform, and will provide a unique Lucee instance for each attendee, along with electronic training materials. Attendees will be required to have a computer with a relatively modern web browser and audio/video capability.

Rasia training staff will lead attendees through the training material, taking time for questions along the way. In order to stay on track with each day's agenda, Question/Answer periods may be limited to specific time intervals as needed.

Rasia training staff will coordinate with WV DEP staff prior to the meeting to review curriculum, setup WV DEP code examples, and prepare WV DEP attendees for a successful training.

Training Course Fees

This Training Course costs \$24,600, and will include online training for up to 25 attendees on each day.

Rasia Team Qualifications

The Rasia team is perfectly matched to the needs of WV DEP. Our team includes contributors to the Lucee, Railo, and Apache Tomcat, and all members are deeply experienced at performance tuning and problem solving for clients including Apple, Scientific American, CSX, Helsana, NATO and many more.
