Professional Svcs - Brownton Refuse #2

June 23, 2022

Mr. Joseph E. Hager III
Department of Administration, Purchasing Division
2019 Washington Street East
Charleston, WV 25305-0130

Re: EOI- 2022 AML Contract 8 Project North CEOI 0313 DEP2200000017

Dear Mr. Hager,

Please find enclosed Tetra Tech's Expression of Interest (EOI) for the 2022 AML Contract 8 Project North CEOI 0313 DEP2200000017

Tetra Tech has completed numerous similar mine reclamation and remediation projects in the past for numerous clients which include, but not limited to, landslide analyses design/remediations, design of portal seals, reclamation of coal refuse sites, highwall elimination, drainage design, mitigation of AMD drainage, and design or drainage facilities associated with the mining industry. Individual personnel to be assigned to these projects have as much as forty (40) to forty-five (45) years' experience in the mining industry addressing these items.

If you should have any questions or concerns please contact me at eric.cavazza@tetrattech.com or via phone at (412) 522-9764.

Sincerely,

Eric Cavazza, P.E., M.S.
Project Manager

Project: Brownton Refuse #2 -EOI

Attachment A

Attachment B

WVDEP-AMLR
EOI – Brownton Refuse #2

1. **Background:** Tetra Tech has extensive experience in the remediation and resolution of Civil/Mining Engineering projects.

Upon receipt of the formal notice to proceed, Tetra Tech would attend an on-site project kick-off meeting at the site with WVDEP personnel to discuss the project issues and work plan to reach a consensus on the technical approach for the site. The kick-off meeting would also provide the opportunity for WVDEP personnel to express to Tetra Tech their concerns, objectives, and initial thoughts on the project for discussion. Upon completion of the on-site project kick-off meeting a *Document of Understanding* will be prepared by Tetra Tech for the Project Area for review and input by WVDEP to create a work plan and goal-oriented document for the project.

Base mapping will be required for the project. It is Tetra Tech's assumption the mapping will be provided for the project, in which case, some additional checks, spot locations, and potential additional feature items may be required to be located for design purposes. If the base mapping is to be developed by Tetra Tech, a sub-contract surveying company will be utilized for these services.

Based on the initial and available information, a preliminary conceptual plan will be prepared for review by WVDEP personnel. The preliminary conceptual plan will identify the general layout of the site, specific issues identified, proposed water routing, areas of additional concern and in the case of land stability issues, soil borehole locations associated with the proposed geotechnical investigation. A geotechnical sampling plan will be developed for the site in order to address issues identified by the WVDEP/Tetra Tech team members. The soil sampling will be conducted, and appropriate testing will be performed by Tetra Tech's in-house soils laboratory. If desired by WV DEP, the geotechnical investigation would include an analysis of the refuse an/or coal slurry material at the site for use as fuel for a cogeneration (FBC) facility and/or for alkaline addition requirements to neutralize and acid forming materials to prevent future generation of AMD from the site.

The requested responses to the project goals and objectives as stipulated within the EOI are listed below:

Location: The project is located at the western side of the Community of Brownton, in Barbour County, WV, off CR 1/6 (Bear Mountain Road).

2. **Projects and Goals:** The project is for the regrade and soil cover of exposed coal refuse, reclamation of highwall (up to near 100-foot high), mitigation of water impoundments, and installation, repair and/or replacement of proposed and/or existing drainage controls and features.

2.1. NEPA tasks and IJA compliance.

Tetra Tech will use OSMRE REG-1, Handbook on Procedures for Implementing the National Environmental Policy Act (NEPA Handbook) (Revised 2019). Depending on the significance of the actual and potential impacts of the proposed project, one of three potential analytical approaches under NEPA may apply: 1) Categorical Exclusion (CE); 2) Environmental Assessment (EA), which may result in a Finding of No Significant Impact (FONSI) or a Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS); 3) Environmental Impact Statement (EIS) and Record of Decision (ROD).

To determine IJA compliance Tetra Tech will follow the Guidance on the Bipartisan Infrastructure Law (BIL) (Pub. L. 117-58), Abandoned Mine Land Grant Implementation provided by OSMRE.

2.2. Determine legal ownership of properties and provide legal documentation to substantiate legal ownership findings (if required).

Tetra Tech will research legal ownership of properties by conducting a thorough search of deed records at the county courthouse and provide legal documentation to substantiate legal ownership findings (if required).

2.3. Develop construction plans and technical specifications for all aspects to reclaim mine portals, demolition of structures (silo, buildings, etc.), drainage controls and systems, slope stabilization, coal refuse reclamation, stream restoration, subsidence repair, limits of disturbance, storm water and erosion and sediment control, regrade and revegetation, and all other conditions encountered on the project sites.

Regrade and soil cover of exposed coal refuse: Refuse shall be regraded and capped with suitable soil found on-site. In the event a suitable soil cannot be found, a borrow area would need to be identified. This may be discussed during the pre-design meeting. Soil testing would be completed by Tetra Tech's in-house soil laboratory located in Morgantown, West Virginia.

Reclamation of highwall: A reclamation plan will be developed to achieve a minimum two

to one final slope (2 h:1 v). Specifications will indicate compaction requirements such as degree of compaction, lift thickness and other quality control parameters for compaction during highwall reclamation.

Mitigation of water impoundments: Impoundments will be dewatered in a controlled manner while also considering the safety of any existing public dwellings and structures downstream of the project areas and impacts to the receiving stream. Sumps and rock check dams will be positioned between the impoundment and the receiving stream. Following dewatering activities, the outside berms will be pushed and compacted in specified lifts to final grade. All impacted areas will be revegetated according to the proposed seeding and revegetation plan.

Installation, repair and/or replacement of proposed and/or existing drainage controls and features: Drainage areas within the project area will be determined. If possible, diversion ditches will be located in the upstream area in order to control and divert the drainage around the project area. All drainage ditches, swales, underdrains and culverts will be sized and designed in accordance with standard engineering practices. Size, slope, and lining of the proposed ditches and culverts will be specified on the plans and be based on required storm events. Design of drainage conveyances, including drainage channels, underdrains and /or other controls to safely convey water off-site will be designed in accordance with standard engineering practices and will fully consider the safety of the existing public dwellings and structures near the project areas. Hydrologic and hydraulic analyses will be performed for the site and existing structures. HydroCAD Stormwater Modeling program will be utilized in analyzing and sizing drainage structures for the project.

Detailed grading plans will be provided showing existing contours, proposed final grading contours, location of Erosion and Sedimentation Control devices such as silt fence, super silt fence, sumps, swales, erosion control blankets, compost filter socks and other erosion control devices. In addition, a proposed seeding and revegetation plan will be included on the plans and within the specifications.

Erosion and Sediment Control: The Erosion and Sediment Control Plans (E&SCP) will include:

- Narrative and description of Best Management Practices (BMPs)
- Construction Sequence
- Narrative and description of post-construction stormwater management

- E&SCP with detail drawings
 - A general vicinity location map
 - Erosion and Sediment Control plan sheets
 - Post Construction Stormwater Management plan sheets
 - E&SCP details will be per the WVDEP's E&S standards manual.

Detailed design plans and specification will be prepared for other conditions encountered on the project site. Other conditions may include the following:

- *Design of temporary and permanent access or accesses for construction and future maintenance.* Temporary and permanent access will be designed utilizing AutoCad software. Plan view, designed profile, and roadway cross sections shown at an appropriate interval will be prepared and will be included within the final drawing package. Typical sections will be shown to indicate design features such as roadway cross slopes, pavement composition (gravel, asphalt, or concrete) and thickness, side slopes of embankments/cut slopes and proposed ditching. The roadway will be designed in accordance with WVDEP mining and reclamation standards or other standards as determined by WVDEP. Final design of the roadway will attempt to design the roadway to a balanced cut/fill situation, if possible. Cut and fill quantities will be listed on the plans.

Construction drawings and specifications will be developed based on the design concept approved by WVDEP and in conformance with the WVDEP Guidelines for Preparation of Design Plans & Specifications. Drawings will be 24" x 36" format and produced from base mapping files in AutoCAD 2019 format. Final drawings and specifications will be provided for use for review by WVDEP and for use by the selected contractor. Plans and specifications will be prepared

Detailed specifications will be prepared in a manner compatible with the WVDEP contracting documents and consistent with base specifications available from the WVDEP website. Complete technical specifications in Microsoft Word will be provided with the final submission.

2.4. Obtain/maintain/release all required permits.

Tetra Tech will prepare and submit to obtain the required permits as determined at the Pre-Design Meeting. Required permit applications will be prepared for submittal for the project. All required plans, specifications and required additional data will be included

within the application. Required permits may include the following:

- 401/404 Stream and Wetland Permits
- Construction Stormwater General Permit
- WVDOH Occupancy Permit (Driveway Permit)
- NPDES Modification
- Any other local, state, or federal permit identified as being required for the project

2.5. Provide resident project representative, QA/QC certification, and prepare daily field activity logs summarizing construction activities.

Tetra Tech will provide a qualified resident project representative, QA/QC certification, and prepare daily field activity logs summarizing construction activities.

12. A. Is your firm's personnel experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering?

YES Description and Number of Projects: Tetra Tech has extensive experience with AML/Mine Reclamation Engineering. Tetra Tech is currently working on several AML projects in several states. Tetra Tech has also worked on AML related projects within the state of West Virginia. In the last 5 years Tetra Tech has performed 20+ of these types of projects.

B. Is your firm experienced in Soil Analysis?

YES Description and Number of Projects: Tetra Tech has a whole team dedicated to Geotechnical investigations including soil analysis. In the last 5 year this team has performed 20+ projects specifically associated with Soil Analysis.

C. Is your firm experienced in hydrology and hydraulics?

YES Description and Number of Projects: Tetra Tech has performed several project looking at hydrology and hydraulics, specifically Tetra Tech specializes in mine pool analysis and AMD treatment systems. In the last 5 years Tetra Tech has performed 20+ projects looking at hydrology and hydraulics.

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

YES Description and Number of Projects: Tetra Tech does produce its own Aerial Photography with the use of drone technology and we use that photography to develop contour mapping. We use this service across all disciplines and industries with hundreds of flights and maps developed on a yearly basis.

E. Is your firm experienced in domestic waterline design? (Include any experience your firm has in evaluation of aquifer degradation as a result of mining.)

YES Description and Number of Projects: Tetra Tech's large size and extensive resources provides for skilled individuals in various disciplines, Tetra Tech does have experience in domestic waterline design in conjunction with other projects.

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

YES Description and Number of Projects: Tetra Tech has a whole team dedicated to Acid Mine Drainage projects, we are currently working on 5 projects specifically looking at AMD treatment with 10+ projects completed in the last 5 years.

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES **RESPONSIBLE FOR AML PROJECT DESIGN** (Furnish complete data but keep to essentials)

NAME & TITLE (Last, First, Middle Int.) Cavazza, Eric E. P.E.	YEARS OF EXPERIENCE		
	YEARS OF AML DESIGN EXPERIENCE: 37	YEARS OF AML RELATED DESIGN EXPERIENCE:37	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE:

Brief Explanation of Responsibilities
Mr. Eric Cavazza has over thirty-seven (37) years of extensive experience administering state and federal environmental programs including extensive experience managing the development, design and construction of environmental restoration projects to eliminate hazards and restore environmental degradation associated with abandoned mine lands. He served as Pennsylvania's AML Program Director for 9 years before retiring from there in December 2020.

EDUCATION (Degree, Year, Specialization)
BS, 1983 Mining Engineer/ MS, 1995 Environmental Engineering

MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS SME	REGISTRATION (Type, Year, State) PE in PA (1989)

19. Use this space to provide any additional information or description of resources supporting your firm's qualifications to perform work for the West Virginia Abandoned Mine Lands Program.
 Tetra Tech has extensive knowledge and vast resources to allow for a comprehensive approach to any problem. Tetra Tech works extensively with Abandoned Mine Lands and is well versed on solutions to any problem. Tetra tech has a strong presence in West Virginia in Fairmont and Charleston, with offices in Pittsburgh, PA and St. Clairsville, OH regularly performing work in the state. The Tetra Tech Pittsburgh office has worked with WVDEP on several Special Reclamation projects throughout the state.
