Technical Questions

1. Question:

Is this RFQ for material only or will the vendor be required to install the UPS systems?
If material only is material to be received at the dock or will inside delivery be required?

Response:

Review Exhibit B Specifications 3.1.7 and 3.1.8. which references Rack installation and start up. The new UPS system shall be delivered to the loading dock of Building 5, per Exhibit B Specifications 6.2. WVDOT will handle moving the equipment after delivery to the rooms where the UPS system will be installed.

2. Question:

Is adequate power available in each of the rooms that the UPS systems will be installed?
If not, who is responsible for getting power to each room?

Response:

Power is available. Vendor will need to move and extend the current conduit (1-1/4") to the UPS during installation outside of normal working hours. There is a local cutoff switch in the same room.

3. Question:

Are there existing UPS systems in each room and if so, who is responsible for disassembling and removing them?

Response:

Vendor will remove the existing UPS from the Tripp-Lite rack already installed and set the old UPS aside. The rack is to be re-used for the new UPS. WVDOT will follow state guidelines for disposal of the old UPS.

Question

Would the West Virginia Department of Transportation be responsible for the appropriate split phase power and connections at the racks for the new Eaton UPS equipment?

Answer

Two phase power required is currently connected to the old UPS. There is a breaker switch in the room that can be used to disconnect utility power. Vendor will disconnect the old UPS. Then re-use that power with the new UPS install. The 1-1/4" conduit will need some work done by the vendor to connect it.
