RE: AML – EOI Morgantown Airport Subsidence Phase II

CEOI 0313 DEP2500000001

POTESTA Project No. 0102-24-0323

Dear Mr. Hager:

Potesta & Associates, Inc. (POTESTA) is pleased to provide this Expression of Interest (EOI) to the West Virginia Department of Administration, Purchasing Division, to provide professional engineering services to the West Virginia Department of Environmental Protection, Division of Land Restoration, Office of Abandoned Mine Lands and Reclamation (WVDEP, DLR, AML) for design and construction oversight aspects for the Morgantown Airport Subsidence Phase II Project in Monongalia County, West Virginia. POTESTA has provided a detailed account of our firm's history, technical expertise, staff capabilities, key personnel, prior experience, and project management, along with the AML Consultant Qualification Questionnaire (Appendix A), the AML and Related Project Experience Matrix (Appendix B), and other required documents in the attached EOI.

INTRODUCTION

POTESTA boasts the foremost team in West Virginia specializing in resolving challenges related to the mitigation of issues associated with abandoned mine lands (AML). Our accomplished team comprises individuals with over 250 years of collective experience working on WVDEP, DLR, AML projects and contributing expertise to AML programs in various other states. We have completed several hundred projects encompassing thousands of acres. POTESTA is well-acquainted with the current applicable project standards, specifications, and reporting requirements for the Agency.

POTESTA has extensive experience in geotechnical engineering services related to mine subsidence exploration, analysis, and stabilization. Our team of experts utilizes advanced techniques to assess subsidence risks, employing geotechnical explorations, monitoring technologies, and analytical modeling to evaluate the effects on existing structures and the surrounding environment. We develop subsidence control plans and design remediation measures tailored to the specific conditions of the affected area, ensuring regulatory compliance, to effectively manage and address the instability caused by planned mining, as well as voids left by historical mining operations.

UNDERSTANDING OF PROJECT

The WVDEP, DLR, AML Local Concern Report, OSM-51, dated March 1, 2022, indicates that there are approximately 40 acres of potential subsidence areas beneath the Morgantown Airport facilities in Monongalia County, West Virginia, resulting from underground coal mining activities. Mine subsidence mitigation is expected to include, but is not limited to:

- Airport Terminal Main Apron A.
- Taxiways A, B, C, and D, and Main Runway 18-36.
- Existing Hanger Areas and Adjacent Aprons.
- Runway Extension Project Area.
- Borrow Area #1 Coal Removal and Treatment

POTESTA is thoroughly familiar with the specifics of this Project and the associated services required for its successful execution. We have attended numerous meetings with representatives from the Morgantown Airport, the City of Morgantown, and WVDEP, DLR, AML to discuss an Intergovernmental Agency Agreement between the City and the Agency, which would have enabled the City to issue the contract for this Project. Subsequently, the WVDEP, DLR, AML would have awarded a sub-grant to the City to carry out the activities related to this Project. POTESTA served as a Subconsultant to the lead engineering and consulting firm for this Project, contributing to the development of the Scope of Services. POTESTA did not agree with the lead consultant regarding their total design fee, which we found to be excessive. Unfortunately, our efforts did not yield the desired outcome. POTESTA looks forward to the opportunity to discuss the Project and associated services with the WVDEP, DLR, AML and to propose a scope of services leading to a significantly lower fee.

Currently, POTESTA is providing professional engineering services to Michael Baker International (MBI) related to the construction of a 1,001-foot runway extension at the Morgantown Municipal

Airport. POTESTA has provided recommendations and support to MBI and the Owner related to acid mine drainage (AMD) and in-place coal reserves encountered during the earthwork phases. Specific services for the runway extension project include:

- Evaluation of existing AMD treatment systems located on the site.
- Recommendations to improve the poor functioning AMD treatment systems.
- Cost estimates for the modifications to improve the treatment system.
- Historical research on previous mining at the site.
- Development and submittal of an AML Pilot Grant application.

KEY PROJECT PERSONNEL

Our Expression of Interest includes staff qualifications and related experience. Our key project personnel bring a wealth of experience and knowledge to the Project.

Principal-in-Charge: Mr. Dana L. Burns, P.E., P.S., Vice President

Mr. Burns is responsible for managing the design and permitting of various civil, geotechnical, and environmental engineering projects at POTESTA. His extensive background, spanning over 45 years, encompasses a diverse range of initiatives, including subsidence investigations and mitigation, portal sealing, refuse regrading, site assessments, preliminary feasibility evaluations, detailed design, and the preparation of construction documents. Mr. Burns has completed over 90 AML projects, including three open-ended contracts for the WVDEP, DLR, AML, demonstrating his expertise in addressing issues related to former mining sites. He also oversees daily operations in the engineering division, focusing on staffing, coordination, training, business development, and technical and support staff management.

Related Previous Experience

Mr. Burns' AML experience in and around the Morgantown Airport will provide valuable insight into the effective reclamation for this Project:

- Evaluation and design for mine subsidence under the Morgantown Airport access road adjacent to the airport.
- Evaluation and design for mine subsidence of the Mileground Road Trailer Park just north of the airport.
- Evaluation and design for the reclamation of drainage at Easton Hill Portals located between the north end of the airport runway and U.S. Route 119.

Mr. Josh Hager October 29, 2024 Page 4

Also, he has overseen the development of reclamation plans for several mine subsidence projects for the WVDEP, DLR, AML:

- Leivasy (Dorsey) Subsidence Emergency
- St. John's Road Subsidence
- Route 19/28 Subsidence
- Mt. Hope Subsidence
- MacArthur Phase I and Phase 2 Subsidence
- Jonben (Haga) Subsidence
- Huffman Street Subsidence

- Holden (Padgett) Subsidence
- Gray and Iaquinta Subsidence
- Duncan Hill Subsidence
- Beckley Subsidence
- Fairmont IV Subsidence
- Fairmont East Subsidence

Project Manager: Mr. Timothy M. Rice, E.I.T., Senior Engineer

With an extensive professional tenure exceeding 42 years, Mr. Rice has been involved in nearly 80 distinct AML projects spanning West Virginia, Maryland, Ohio, and Pennsylvania. His diverse AML experience encompasses abandoned surface and deep mine reclamation, mine subsidence, closures of mine portals and shafts, hydraulic and hydrologic design/evaluation, re-mining explorations, abatement and extinguishing plans for mine refuse and deep mine fires, slope stability analyses, and the preparation of construction drawings, specifications, and engineers' estimates. Additionally, Mr. Rice has a history of directing pre-bid and pre-construction meetings. He is well-versed in managing subcontractors, overseeing staff, and addressing equipment needs for the design team.

Related Previous Experience

Mr. Rice was the Project Manager for a WVDEP, DLR, AML project involving the engineering design and preparation of construction documents for the mine subsidence stabilization for residents on the west side of Route 32 in Thomas, West Virginia. This substantially large project was bid in three separate phases that included:

- Reclamation of approximately 59 acres on abandoned surface mines to redirect surface drainage away from abandoned deep mine sinkholes.
- Stabilization of approximately 70 structures, using nearly 200,000 cubic yards of grout and over 50,000 linear feet of drilling.

His experience in AML encompasses the successful completion of a mine subsidence project at the Terminal Building of Morgantown Airport. Mr. Rice has also managed and contributed to several other AML mine subsidence projects for the WVDEP, DLR, AML:

- 2022 AML Contract 5 Project North
- Stealy Avenue Subsidence

- Shinnston (Osbourne) Subsidence
- Pallota Subsidence

Mr. Josh Hager October 29, 2024 Page 5

- Ohio Avenue Subsidence
- Fairmont DAC
- Bethlehem (Toothman) Subsidence
- Huffman Street Subsidence
- Montana Mines Subsidence
- Glenwood Hills Subsidence

In addition, Mr. Rice has also supervised and worked on numerous subsidence projects for the Ohio Department of Natural Resources, the Maryland Department of the Environment, the West Virginia Board of Risk and Insurance Management, and the Ohio Mine Subsidence Underwriting Association.

D. Mark Kiser, P.E., L.R.S., Chief Engineer

With over 40 years of expertise in civil and environmental engineering projects, Mr. Kiser's skills encompass evaluation, design, preparation of plans and specifications, and construction administration. He has actively contributed to more than 75 different AML projects for WVDEP, DLR, AML. Mr. Kiser has overseen the design and implementation of various mitigation strategies, including mine subsidence investigations, mine subsidence stabilization, sealing mine portals, regrading disturbed land, and managing stormwater to prevent erosion and contamination. He routinely collaborates with regulatory agencies to ensure compliance with environmental standards.

Related Previous Experience

Mr. Kiser oversees the current WVDEP, DLR, AML 2023 AML Contract S2 and the most recent subsidence project, Marmet/McGrew Emergency. He has been the Project Manager and/or performed engineering services for the following WVDEP, DLR, AML subsidence projects:

- St. John's Road Subsidence
- MacArthur Phase I and Phase II Subsidence
- Jonben (Haga) Subsidence
- Gray and Iaquinta Subsidence
- Duncan Hill Subsidence
- Beckley Subsidence

Mr. David B. Sharp, P.E., Senior Engineer/Branch Manager of Morgantown Office

Mr. Sharp brings over 29 years of expertise in engineering and environmental consulting projects throughout the region. He has dedicated a significant portion of his career to geotechnical engineering and construction observation/management endeavors. He will assume the role of Geotechnical Engineer and Responsible Engineer In Charge for this Project. Mr. Sharp's extensive experience includes managing various projects related to mine subsidence evaluation/control plans, landslide investigation and repair, mine permitting, mine reclamation, acid mine drainage, hydrology, and other components typically encountered in abandoned mine reclamation efforts.

Related Previous Experience

As the Branch Manager, Mr. Sharp oversees all aspects of the WVDEP, DLR, AML 2022 AML Contract 5 Project North and actively serves as Project Manager for numerous slope stability projects for municipalities (including the City of Morgantown), regulatory agencies, developers, energy companies, and other miscellaneous clients. He has managed and been actively engaged in multiple WVDEP, DLR, AML reclamation projects for landslide repair, sealing of portals, regrading of refuse piles, and the design of drainage control structures in Monongalia, Preston, Mingo, Kanawha, and Harrison Counties.

Mr. Christopher A. Grose, L.R.S., Senior Engineering Associate

As an in-house consultant for this Project, Mr. Grose will concentrate on subsidence evaluation and the design of plans for surface stabilization and land restoration. He has over 33 years of extensive expertise encompassing geological and geotechnical explorations, surface and subsurface hydrology, hydrogeology, and the analysis, modeling, and repair of failed slopes and landslides. In addition to his AML experience, Mr. Grose has provided design consulting services to the mining industry including underground mine design, subsidence control plan development, and reserve study preparation. He has completed numerous mine subsidence studies within the southern Appalachian coal field and has provided expert witness study and testimony on several subsidence damage claims.

Related Previous Experience

Mr. Grose has been engaged in nearly 30 projects for the WVDEP, DLR, AML since 1990 including the recent Ragland (Mounts) Landslide Emergency, Marmet (Wells Drive) Landslide, and Leivasy (Dorsey) Subsidence Emergency. Additional mine subsidence projects include Jonben (Haga) Subsidence, Duncan Hill Subsidence, and Beckley Subsidence.

He has significant experience with the restoration of numerous failed slopes involving a range of activities aimed at stabilizing the slope, preventing further erosion, and restoring the area for clients ranging from private developers to large industrial companies.

PRIOR SIMILAR PROJECTS

Appendix B to the LOI outlines POTESTA's experience with AML and related projects. This information underscores POTESTA's expertise in mine subsidence, reclamation and environmental restoration. The section below details recent projects demonstrating the firm's qualifications and capabilities in effectively addressing mine subsidence.

WVDEP, DLR, AML - Emergency Program Consultant

POTESTA has been an approved Consultant Since 2020 for the WVDEP, DLR, AML – Emergency Program. POTESTA has been selected for several landslide and subsidence projects, which required accelerated plan development due to their emergency nature:

- Ragland (Mounts) Prepared design plans and specifications for a landslide in Mingo County that damaged a pre-manufactured home and caused it to shift off its foundation.
- Leivasy (Dorsey) Investigated whether underground mine subsidence may have contributed to the formation of a sinkhole near a privately owned structure in Nicholas County.
- Marmet (McGrew) Conducted a geotechnical exploration study and prepared a report to evaluate whether the observed ground movement near a residence in Kanawha County could potentially be attributed to mine subsidence.
- Verner (Grimmett) Prepared design plans and specifications for a landslide in Mingo County which deposited a large quantity of mud and debris in a residential yard and damaged a barn and outbuildings.
- WVU Tech Fayette Pike Subsurface exploration, surveying, and preparation of plans and specifications to control mine drainage in Montgomery.

WVDEP, DLR, AML – Contract 5 Project North

POTESTA was retained to provide realty services, planning, engineering design, permitting, and/or construction monitoring services for two projects in Monongalia and Harrison Counties:

- McAlpin (Lambert) Stabilization of a landslide and associated AMD issues that occurred in a regraded area below a highwall bench, triggered by a mining pool located above the highwall.
- Laurel Point (Travinski) Portals Mitigation of 6 open and collapsed portals spanning approximately 200 linear feet along, and approximately 20 feet above, the streambank of Dents Run north of US Route 19.

WVDEP, DLR, AML – MacArthur Subsidence

POTESTA was retained to develop a subsidence control/prevention plan for portions of the community of MacArthur in Raleigh County. MacArthur had experienced undermining, and several homeowners reported claims of subsidence. The project consisted of:

■ Phase I – 41 homes and 5 garages within the community with over 200 vertical and angled injection holes.

■ Phase II – 28 homes, 1 business, and 3 garages within the community with over 130 vertical and angled injection holes.

Columbia Gas - Subsidence Study for Grant Natural Gas Compressor Station

POTESTA was retained to complete a subsidence study to determine the potential cause of observed exterior ground movement and structural deformation within the Grant Natural Gas Compressor Station structure in Pie. This review was conducted to assess the as-built configuration of the compressor building foundations and to gain insight into the site conditions encountered during the site's development.

Summit at Cheat Lake, LLC - 120-Acre Subdivision

POTESTA was retained to complete an extensive drilling program, prepare a mine evaluation report, and develop a grout stabilization plan for several sections of a 120-acre subdivision in Morgantown. The site included areas of previous surface mine operations, deep mine workings, and a WVDEP, DLR, AML acid mine drainage treatment facility. The grouting provided stabilization for the construction of residential housing and sections of the main access road into the development and other support areas.

<u>City of South Charleston – Park Place Development</u>

POTESTA was retained as the design engineer for the site development of a 500,000-square-foot retail, entertainment, and food/beverage development on a former fly ash disposal and manufacturing plant in South Charleston, West Virginia. POTESTA was also responsible for dewatering and filling the 38-acre fly ash pond located on the property, which included:

- Grouting of large diameter piping to abandon and close in place piping carrying stream under the fly ash basin. Over 3,500 cubic yards of fly ash/cement grout were placed to fill pipes up to 96 inches in diameter.
- Over 200,000 tons of No. 57 limestone were placed in the fly ash basin.
- Installed 1.5 million feet (284 miles) of prefabricated vertical wick drains through the stone blanket and fly ash, 7-foot triangular grid.
- Installed 42 settlement monitoring points for survey monitoring of the consolidation settlement.
- Geotextile for separation/stabilization placed over fly ash.
- 2-foot stone blanket for working platform and drainage layer placed over geotextile.
- Installed new bore and jack outlet to drain water collecting in the stone blanket. Once the new outlet was placed and functioning, grouted the existing 24-inch outlet pipe.
- Excavation and removal of 900,000 cubic yards of soil and rock from a borrow site at the West Virginia Regional Technology Park to be used as structural fill.

The JM Group, LTD. - The Quads at the Summit

POTESTA was retained to complete a drilling program to determine if areas of a proposed residential development located within the current Summit at Cheat Lake Development in Morgantown were undermined in the Pittsburgh coal seam. POTESTA recommended mine stabilization and grouting to minimize the potential effects of future mine subsidence on portions of this property. Additionally, POTESTA consulted the West Virginia Geologic and Economic Survey to obtain historic mine mapping of the area. POTESTA issued a technical report of the findings to the landowner.

North Hills Development, LLC – Lynch Property

POTESTA was retained to conduct a subsurface exploration to assess the presence and extent of historic underground coal extraction in an approximately 670-acre area near Cheat Lake in Monongalia County. This site is being evaluated for the construction of a mixed-use residential and commercial development. POTESTA's research confirmed that two coal seams have been historically mined at this site: the Sewickley Coal Seam and the Pittsburgh Coal Seam.

COMPETITIVE ADVANTAGE

POTESTA's comprehensive understanding of the region's mining history and mining at or adjacent to the Morgantown Airport, combined with our proficiency in AML mine subsidence/reclamation issues, positions us as the ideal provider of AML-related services for the Morgantown Airport Subsidence Phase II Project:

- POTESTA's personnel have significant experience in assessing and mitigating the long-term impacts of mining on various sites, including mine subsidence affecting private and commercial properties, public infrastructure, and both former and current mining sites.
- Our engineers are experienced in many facets of geotechnical engineering and geological disciplines related to mining, construction, environmental remediation, and waste disposal projects.
- POTESTA's offices are conveniently positioned in Charleston and Morgantown for easy access to the Morgantown Airport and facilities, the WVDEP, DLR, AML headquarters in Charleston, and the Northwest Regional Office in Fairmont.
- Our team possesses a thorough understanding of FAA regulations relevant to this Project, ensuring compliance and adherence to all necessary guidelines throughout the process.
- POTESTA has the knowledge and familiarity of the Pittsburgh coal seam, including its geological characteristics, historical mining practices, and the potential impacts of subsidence.
- POTESTA will execute this project from our Morgantown office, which is situated approximately 5 miles from the project site.

Mr. Josh Hager October 29, 2024 Page 10

> POTESTA staff, while employed elsewhere, have completed three mine subsidence projects and one mine drainage project at or adjacent to Morgantown Airport, providing them with extensive knowledge of the site.

CLOSING

POTESTA is committed to supporting the WVDEP, DLR, AML in any necessary efforts to mitigate the mine subsidence beneath the Morgantown Airport facilities. Please find our SOQ attached for your review. We look forward to your feedback and the opportunity to discuss how we can collaborate on this significant project. We greatly appreciate your consideration, and POTESTA looks forward to your response.

Sincerely,

POTESTA & ASSOCIATES, INC.

EXECUTIVE SUMMARY

POTESTA is familiar with engineering design, permitting, and preparation of contract documents (plans, specifications, bid form, engineer's opinion of probable construction cost estimate, calculations brief, and supporting documents) for drilling and grouting projects to abate mine subsidence problems. We have successfully completed projects for WVDEP, AML involving mine subsidence which included review of available geologic information, review of historical mining information and mapping, designing and implementing subsurface exploration programs including drilling and borehole video work, evaluation of results, preparation of mine subsidence stabilization plans, coordination of drilling and grouting plans with property owners, and support during construction.

POTESTA has also provided full-time construction oversight of injection hole drilling and casing; mobilization and set-up of a mobile grout batching, mixing, and pumping plant; temporary grout delivery piping; and injection of concrete and grout into underground mine voids to stabilize and control mine subsidence.

POTESTA is also familiar with restrictions required when working on airport property. POTESTA has worked previously on airport runway, taxiway, and apron resurfacing projects. POTESTA will work with the Morgantown Airport and Federal Aviation Administration to develop and prepare required safety plans, scheduling, work restrictions, etc. required for subsurface exploration, ground surveys, drilling and grouting operations, temporary batch plant assembly and operation, delivery of drilling and grouting materials, and quality control monitoring.

POTESTA is thoroughly familiar with the specifics of the Morgantown Airport Mine Subsidence Project and the associated services required for stabilization of underground mine workings. We have attended numerous meetings with representatives from the Morgantown Airport, the City of Morgantown (City), and WVDEP, DLR, AML to discuss an intergovernmental agency agreement between the City and WVDEP, DLR, AML, which would have enabled the City to issue the contract for this project. Subsequently, the WVDEP, DLR, AML would have awarded a sub-grant to the City to carry out the activities related to the project. POTESTA served as a subconsultant to the City's lead engineering and consulting firm for this project, contributing to the development of the scope of services. POTESTA did not agree with the lead consultant regarding their total design fee, which we found to be excessive. Unfortunately, our efforts did not yield the desired outcome. POTESTA looks forward to the opportunity to discuss the project and associated services with the WVDEP, DLR, AML and to propose a scope of services leading to a significantly lower fee.

Currently, POTESTA is providing professional engineering services to Michael Baker International (MBI) related to the construction of a 1001-foot runway extension at the Morgantown Municipal Airport. POTESTA has provided recommendations and support to MBI and the owner related to acid mine drainage (AMD) and in-place coal reserves encountered during the earthwork phases. Specific services for the runway extension project include:

- Evaluation of existing AMD treatment systems located on the site.
- Recommendations to improve the poor functioning AMD treatment systems.
- Cost estimates for the modifications to improve the treatment system.

EXECUTIVE SUMMARY

- Historical research on previous mining at the site.
- Development and submittal of an AML Pilot Grant application.

POTESTA will complete construction oversight work for this project. POTESTA routinely provides construction oversight services on our projects and has experienced, qualified monitors/inspectors. These services will include:

- Daily inspection with documentation for the duration of construction. Periodic monitoring through the warranty period until final release.
- Monitoring of injection hole drilling and casing.
- Monitoring of grouting operations including grout testing.
- Monitoring of borehole video and confirmation drilling.
- Engineering oversight/support, review and approval of contractor-provided as-builts.
- Final Engineer's Certification Report for the project.

POTESTA focuses on understanding the client's goals, needs, and requirements to achieve a successful project outcome. We believe POTESTA's track record with AML and civil engineering projects demonstrates our ability, experience, and commitment for the Morgantown Airport Subsidence Phase II project.

POTESTA has assembled a team that has historically served WVDEP, AML on numerous AML projects. In fact, our staff has worked on over 160 AML projects for WVDEP (and more in other states) on four different WVDEP, AML contracts dating back into the mid-1980s. We have an ongoing workload with WVDEP, AML.

We are currently providing engineering services to WVDEP, AML on the 2022 AML Contract 5 North group of two projects.

POTESTA and our experienced professional staff have completed numerous mine subsidence investigations, designed mine subsidence stabilization programs, prepared the necessary bid documents, and provided construction oversight for these projects. This Expression of Interest details this experience in the management and staffing sections, AML and Related Project Experience Matrix, and prior experience sections.

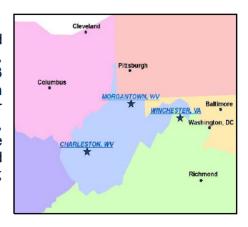

CORPORATE PROFILE

HISTORY

POTESTA was founded in 1997 as a full-service engineering and environmental consulting firm headquartered in Charleston, West Virginia. We have now expanded to a diverse staff of 83 experienced engineers, scientists, and support personnel with branch offices in Morgantown, West Virginia, and Winchester, Virginia. Our clients include local, state and federal agencies; mining, manufacturing and chemical companies; utility companies; waste management companies; K-12 schools/colleges/universities; land developers; attorneys; financial institutions; insurance companies; construction companies; and architects.

SERVICES

- AML Reclamation Engineering and Design
- Air Permitting
- Biological and Toxicological
- CADD/GIS
- Civil Engineering and Design
- Construction Monitoring
- Environmental Site Assessment
- Geotechnical Engineering

- Groundwater
- Hydrology and Hydraulics
- Landfills and Solid Waste
- Litigation Support
- Mining
- Occupational Safety and Health
- Oil and Natural Gas Consulting
- Permitting
- Remediation

- Roadway Engineering
- Sampling
- Site Design
- Storage Tanks
- Surveying and Mapping
- Water and Wastewater
- Water Quality
- Wetlands

LEADERSHIP

Our firm is managed by two principals driving POTESTA forward with their experience and emphasis on exceeding expectations. Ronald R. Potesta, President, has served as the Director and Deputy Director of West Virginia's Department of Natural Resources (WVDNR) which, during his tenure housed all of the environmental regulatory programs, had an annual budget of \$23 million and 700 full-time employees. The agency at that time encompassed state environmental regulatory programs, wildlife management, and law enforcement.

Dana L. Burns, P.E., Vice President, has more than 45 years' experience with civil, geotechnical, mining and environmental engineering projects. Mr. Burns, P.S., P.E., has managed numerous multi-discipline projects, including numerous AML projects and understands the importance of client communication and the internal coordination of various disciplines on a project. The public service and experience of our principals has provided POTESTA with personal relationships with many of the regulatory staff members and in-depth program knowledge of West Virginia and surrounding state's regulatory programs. POTESTA builds our contact base, stays informed on current issues, and strengthens relationships with the regulatory community by contributing and serving on various boards and commissions.

Ronald R. Potesta

Dana L. Burns

TECHNICAL EXPERTISE

The diversity of POTESTA's staff and their personal coal industry experience enable POTESTA to complete mining and mine reclamation projects in all phases, from design to permitting. POTESTA's staff members belong to the Kanawha Valley Mining Institute, West Virginia Coal Association, Kentucky Coal Association, and groups that meet periodically to discuss technical, regulatory, environmental and other mining-related issues. Knowledge of potential changes in policies, regulations, etc. is vital to keep our companies informed and projects on the forefront of a constantly moving regulatory system. POTESTA understands that cost-effective designs and responsiveness are of the utmost importance in order to complete our clients' projects.

POTESTA has completed numerous AML projects and projects similar to a WVDEP, AML type project. These include evaluation of mine subsidence and developing subsidence stabilization plans, design and permitting of landslide stabilization measures, refuse piles and slurry impoundments, evaluating mine drainage from pre-SMCRA sites, highwall reclamation and stabilization plans, reclamation designs for WVDEP, coal refuse/mine fires, sanitary and storm sewer design, landfill closure assistance program (LCAP) projects, stream monitoring, development of grading plans, mine reclamation liability assessments, watershed assessments including evaluation of impact from AMD including AMD from pre-SMCRA sites, detention pond designs, wetland/stream studies, natural stream design, mine site design and permitting, and design of numerous storm water structures.

We have the preeminent staff in West Virginia for addressing issues regarding the abatement of problems associated with abandoned mine lands. POTESTA has assembled a successful team of employees that have over 250 years' experience working on WVDEP, AML projects and AML projects in other states. POTESTA has 20+ employees with experience on WVDEP, AML projects.

- Subsidence Assessment and Remediation
- Passive Acid Mine Drainage Treatment
- Assessment of Contamination (e.g., PCBs, asbestos), Hazardous Waste Remediation
- Demolition of Structures
- Diversion and Control of Stormwater
- Identifying and Controlling Acid Mine Drainage
- Mine Fires
- Landslide Stabilization
- Slope Stabilization

- Reclamation of Refuse Piles
- Sealing Mine Portals
- Stream Relocations
- USCOE Permitting
- Water Line Design
- Water Supply Feasibility Studies and Design
- Inventory of Residential Water Supplies
- Wetland Assessments
- Revegetation Plan
- Environmental Permitting

POTESTA routinely provides construction phase services for projects including resident project representative, sampling and conformance testing, QA/QC certification, and preparation of daily field activity logs to document construction activities.

WVDEP, DLR, AML - Emergency Program Consultant

POTESTA has been an approved consultant since 2020 for the WVDEP, DLR, AML – Emergency Program. POTESTA has been selected for several landslide and subsidence projects, which required accelerated plan development due to their emergency nature:

TECHNICAL EXPERTISE

- Ragland (Mounts) Prepared design plans and specifications for a landslide in Mingo County that damaged a pre-manufactured home and caused it to shift off its foundation.
- Leivasy (Dorsey) Investigated whether underground mine subsidence may have contributed to the formation of a sinkhole near a privately owned structure in Nicholas County.
- Marmet (McGrew) Conducted a geotechnical exploration study and prepared a report to evaluate whether the observed ground movement near a residence in Kanawha County could potentially be attributed to mine subsidence.
- Verner (Grimmett) Prepared design plans and specifications for a landslide in Mingo County which deposited a large quantity of mud and debris in a residential yard and damaged a barn and outbuildings.
- WVU Tech Fayette Pike Subsurface exploration, surveying, and preparation of plans and specifications to control mine drainage in Montgomery.

WVDEP, DLR, AML - Contract 5 Project North

POTESTA was retained to provide realty services, planning, engineering design, permitting, and/or construction monitoring services for two projects in Monongalia and Harrison counties:

- McAlpin (Lambert) Stabilization of a landslide and associated AMD issues that occurred in a regraded area below a highwall bench, triggered by a mining pool located above the highwall.
- Laurel Point (Travinski) Portals Mitigation of six open and collapsed portals spanning approximately 200 linear feet along, and approximately 20 feet above, the streambank of Dents Run north of US Route 19.

WVDEP, DLR, AML - MacArthur Subsidence

POTESTA was retained to develop a subsidence control/prevention plan for portions of the community of MacArthur in Raleigh County. MacArthur had experienced undermining, and several homeowners reported claims of subsidence. The project consisted of:

- Phase I 41 homes and 5 garages within the community with over 200 vertical and angled injection holes.
- Phase II 28 homes, 1 business, and 3 garages within the community with over 130 vertical and angled injection holes.

Columbia Gas – Subsidence Study for Grant Natural Gas Compressor Station

POTESTA was retained to complete a subsidence study to determine the potential cause of observed exterior ground movement and structural deformation within the Grant Natural Gas Compressor Station structure in Pie. This review was conducted to assess the as-built configuration of the compressor building foundations and to gain insight into the site conditions encountered during the site's development.

TECHNICAL EXPERTISE

POTESTA was retained to complete an extensive drilling program, prepare a mine evaluation report, and develop a grout stabilization plan for several sections of a 120-acre subdivision in Morgantown. The site included areas of previous surface mine operations, deep mine workings, and a WVDEP, DLR, AML acid mine drainage treatment facility. The grouting provided stabilization for the construction of residential housing and sections of the main access road into the development and other support areas.

<u>City of South Charleston - Park Place Development</u>

POTESTA was retained as the design engineer for the site development of a 500,000-square-foot retail, entertainment, and food/beverage development on a former fly ash disposal and manufacturing plant in South Charleston, West Virginia. POTESTA was also responsible for dewatering and filling the 38-acre fly ash pond located on the property, which included:

- Grouting of large diameter piping to abandon and close in place piping carrying stream under the fly ash basin. Over 3,500 cubic yards of fly ash/cement grout were placed to fill pipes up to 96 inches in diameter.
- Over 200,000 tons of No. 57 limestone were placed in the fly ash basin.
- Installed 1.5 million feet (284 miles) of prefabricated vertical wick drains through the stone blanket and fly ash, 7-foot triangular grid.
- Installed 42 settlement monitoring points for survey monitoring of the consolidation settlement.
- Geotextile for separation/stabilization placed over fly ash.
- Two-foot stone blanket for working platform and drainage layer placed over geotextile.
- Installed new bore and jack outlet to drain water collecting in the stone blanket. Once the new outlet was placed and functioning, grouted the existing 24-inch outlet pipe.
- Excavation and removal of 900,000 cubic yards of soil and rock from a borrow site at the West Virginia Regional Technology Park to be used as structural fill.

The JM Group, LTD. - The Quads at the Summit

POTESTA was retained to complete a drilling program to determine if areas of a proposed residential development located within the current Summit at Cheat Lake Development in Morgantown were undermined in the Pittsburgh coal seam. POTESTA recommended mine stabilization and grouting to minimize the potential effects of future mine subsidence on portions of this property. Additionally, POTESTA consulted the West Virginia Geologic and Economic Survey to obtain historic mine mapping of the area. POTESTA issued a technical report of the findings to the landowner.

North Hills Development, LLC – Lynch Property

POTESTA was retained to conduct a subsurface exploration to assess the presence and extent of historic underground coal extraction in an approximately 670-acre area near Cheat Lake in Monongalia County. This site is being evaluated for the construction of a mixed-use residential and commercial development. POTESTA's research confirmed that two coal seams have been historically mined at this site: the Sewickley Coal Seam and the Pittsburgh Coal Seam.

TECHNICAL EXPERTISE

Appendix A includes our completed AML Consultant Confidential Qualification Questionnaire. Appendix B includes our AML and Related Project Experience Matrix. These documents provide information on the education, qualifications, and previous experience of our professionals and support staff. The AML and Related Project Experience Matrix especially shows the number of AML reclamation projects completed.

CIVIL ENGINEERING/SITE PLANNING

POTESTA's engineering staff has a broad background related to the vast field of civil engineering, including utility/infrastructure design, roadway design, development of grading plans, and storm water management. Our diverse staff of engineers, geologists, and scientists is routinely involved in these types of projects and works to support the project teams assigned to these projects on a daily basis to achieve a completed project that meets the client's expectations.

Once a project has been determined feasible through the preliminary planning stages, POTESTA's design professionals work to complete preliminary and final design plans. Frequent communication is made with the client and other design professionals to review the completed activities and obtain input for the design process.

- Site Selection/Siting Studies
- Access Roadway Design and Layout
- Utility Design/Relocation
- Earthwork Optimization
- Site Development Grading and Drainage Plans
- Hvdraulic Structure Design
- Earth Retaining Structures
- Stormwater Management Plans
- Erosion and Sediment Control Plans

POTESTA has a significant body of work in site design for residential, commercial and industrial clients. We have assisted numerous developers and development agencies with the creation of business industrial parks throughout West Virginia, and have been part of design teams for elementary, secondary and collegiate projects primarily associated with new building construction.

- Geometric Site Layout
- Vehicular and Pedestrian Circulation
- Grading and Drainage Plans, Including Excavation and Fill Optimization
- Water and Sewer Design
- Slope Stability Analysis
- Subsurface Drainage System Design
- Construction Drawings, Specifications, and Contract Document Preparation

TECHNICAL EXPERTISE

SURVEYING

POTESTA proposes to utilize our own survey crews for work on this project. POTESTA will perform the surveying required for this project using in-house personnel. Our surveyors are experienced in all aspects of surveying such as topographic mapping, boundary and property surveys, and construction surveys for layout of work, record drawings, and quantity measurements. Our surveyors have worked on numerous site development, roadway and bridge construction, utility construction, and landfill development projects.

POTESTA is equipped with modern surveying instruments

allowing efficient data processing and accurate gathering of field information. Total station instruments equipped with data collectors are utilized for complete field to office automation allowing for high levels of productivity in the field. The latest versions of software are then used to process survey data and create drawings or required end products.

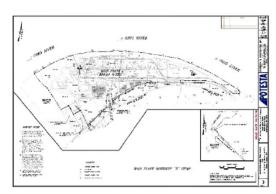

Small topographic mapping projects can be completed in-house using the aforementioned process. Larger projects are better suited for mapping using aerial photography. If necessary, POTESTA will provide the necessary surveying required for establishing ground control for aerial mapping in conjunction with our aerial mapping subcontractor. As a quality control measure, aerial mapping is field checked for accuracy by surveying cross sections or random points.

Surveys and mapping are completed to the standards as outlined by the National Map Standards as well as other applicable quality standards.

CADD

The CADD department utilizes the latest drafting/design software and computer hardware to maintain productivity at the high levels that clients demand and expect. We utilize Autodesk Civil 3D design software to prepare, revise, and manipulate drawings and engineering data efficiently. POTESTA's experienced and trained professionals allow clients' projects and assignments to be completed rapidly and at a reasonable cost.

- Surveying data manipulation including development of topographic mapping, cross sections, profiles, isopach drawings, etc.
- Site design including grading plans, drainage plans, utilities plans, right-of-way plans, etc.
- Roadway design
- Water, sanitary, sewer, electric, natural gas, and telecommunications design
- Permit drawings, maps, and exhibits
- Earthwork and planimetric quantity development
- Two- and three-dimensional graphics

TECHNICAL EXPERTISE

GEOTECHNICAL ENGINEERING

POTESTA's staff is very familiar with terrain ranging from plateaus to mountains. West Virginia encompasses rugged terrain, which presents unique challenges and hazards to mitigate threats. Our vast experience in our region has resulted in innovative approaches to the various challenges that the topography and geology present.

POTESTA can provide field engineers and geologists who are knowledgeable using the latest technologies for subsurface explorations, monitoring well and piezometer installations, foundation design recommendations, slope stability analysis, retaining walls, and remedial designs as they relate to construction, mining, waste disposal, environmental remediation, and other projects. Our knowledge of the proper procedures and familiarity with local conditions allows office and field personnel to adjust the exploration plan if unanticipated field conditions are found.

- Attend an initial meeting with the client
- Conduct preliminary site reconnaissance
- Develop a recommended exploration program

SLOPE STABILITY ANALYSIS AND REMEDIAL DESIGN

- Utilize various methods to predict slope stability
- Analysis of existing or proposed soil embankments, rock fills, dam analysis and design, landfill design and operation, assessing the causation of slope failure, and designing remedial measures
- Analyses circular or sliding block methods, interface friction angles, and estimate of the strength parameters of the soil or rock
- Develop preventive measures during initial project design or recommendations to repair slope failures
- Consider various remedial measures regrading the site to obtain more suitable conditions, management of groundwater, and design of retaining structures
- Familiar with wide variety of retaining structures gabion baskets, soldier beam and lagging walls, sheet piles, reinforced concrete and reinforced earth slopes

FOUNDATION DESIGN RECOMMENDATIONS

- Experience with various types of foundations and will recommend the appropriate type of foundation given the anticipated application and site conditions
- Foundations spread and strip footings, steel piles, auger-cast concrete piles, drilled piers, and reinforced mats
- Preliminary foundation design recommendations and cost analyses

TECHNICAL EXPERTISE

- Preliminary alternatives for final recommendation
- Construction documents
- Final recommendation construction drawings, technical specifications, recommendations for allowable bearing capacity, engineer's construction cost estimate, and contractor's bid sheet

PERMITTING

Acquiring environmental permits is a critical element for the success of every project. POTESTA offers its clients exceptional expertise and experience when it comes to the permitting process, including all phases of application preparation, negotiations, modifications, compliance, and renewal at all levels of government. POTESTA has prepared the required environmental documents for numerous roadways, cross country pipelines/high voltage power lines, and site developments. POTESTA has the experience and knowledge and the regulatory relationships to provide timely, cost-effective solutions to your permitting needs.

POTESTA has completed numerous projects including environmental assessments, environmental impact statements, categorical exclusions, cultural resource studies, endangered species assessments, environmental compliance with various federal and state regulations (Clean Water Act [CWA], NEPA, and Endangered Species Act), permitting, wetlands delineation/mitigation, sampling and remediation.

Permits typically required for projects:

- Environmental Site Assessments
- Environmental Impact Statements
- Stormwater Management Permits
- Air Quality Permits
- Wetland Delineation and Mitigation Permits
- National Pollutant Discharge Elimination System (NPDES) Permits
- Groundwater Protection Plans
- Spill Prevention, Control and Countermeasure Plans
- Floodplain Management Studies and Permits
- Stream Activity Permits

MANAGEMENT AND STAFFING

STAFF PROFILE

Total Staff: 83

- 19 Civil Engineers
- 15 Construction Technicians
- 3 Geotechnical Engineers
- 9 CADD Operators/Draftsman
- 6 Surveyors
- 1 Mechanical Engineer
- 2 Mining Engineers
- 1 Ecologist
- 4 Biologists
- 1 Environmental Engineer

- 2 Energy Land Management
- 2 Fish & Wildlife Specialists
- 1 GIS Specialist
- 1 Horticulturalist
- 2 Environmental Scientists
- 1 Toxicologist
- 1 Economist
- 1 Aquaculturalist
- 1 Information Technologist
- 10 Administrative Personnel

Included are 16 registered professional engineers (P.E.), 5 registered professional licensed land surveyors (P.S.), 4 Licensed Remediation Specialists (L.R.S.), 6 West Virginia Transportation Engineering Technicians, and one Ph.D. whose specialties include aquatic biology and water quality.

ABILITY OF STAFF

- POTESTA's current workload is such that we can immediately provide technicians, engineers, CADD
 designers, and survey crews to work on this project.
- Low turnover means interacting with the same POTESTA staff 16 registered Professional Engineers on staff with combined experience over 400 years and are supported by a capable team of engineers, designers, and surveyors.
- We have ability to take project from planning through construction we have successfully completed similar projects.
- We stand ready to commit the personnel and resources required to complete this project in a timely, technically sound, and cost-efficient manner.
- POTESTA's large staff size will allow us to work on this project on an accelerated schedule, if necessary.
- POTESTA carries a full line of insurance coverage, including general liability, errors and omissions, and workers' compensation.
- We also have and follow a stringent internal quality control system designed to provide our clients with quality products.
- POTESTA believes the quality of our work is best exemplified by approximately 85 percent of our workload coming from repeat clients.

Charleston Office

Morgantown Office

Winchester Office

MANAGEMENT AND STAFFING

KEY SENIOR PROJECT TEAM

Good communication is the key for successful project completion. POTESTA listens to our clients and works to specify products that meet your needs. POTESTA has experience in developing this type of project and moving through the process from start to finish.

Mr. Dana L. Burns, P.E., Vice President at POTESTA, will serve as principal-in-charge for this project. Mr. Burns is responsible for managing the design and permitting of various civil, geotechnical, and environmental engineering projects at POTESTA. His extensive background, spanning over 45 years, encompasses a diverse range of initiatives, including subsidence investigations and mitigation, portal sealing, refuse regrading, site assessments, preliminary feasibility evaluations, detailed design, and the preparation of construction documents. Mr. Burns has completed over 90 AML projects, including three open-ended contracts for the WVDEP, DLR, AML, demonstrating his expertise in addressing issues related to former mining sites. He also oversees daily operations in the engineering division,

focusing on staffing, coordination, training, business development, and technical and support staff management.

Mr. Burns' AML experience in and around the Morgantown Airport will provide valuable insight into the effective reclamation for this Project:

- Evaluation and design for mine subsidence under the Morgantown Airport access road adjacent to the airport.
- Evaluation and design for mine subsidence of the Mileground Road Trailer Park just north of the airport.
- Evaluation and design for the reclamation of drainage at Easton Hill Portals located between the north end of the airport runway and U.S. Route 119.

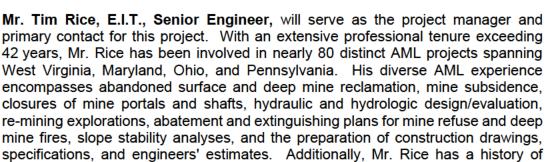

Also, he has overseen the development of reclamation plans for several mine subsidence projects for the WVDEP, DLR, AML:

- Leivasy (Dorsey) Subsidence Emergency
- St. John's Road Subsidence
- Route 19/28 Subsidence
- Mt. Hope Subsidence
- MacArthur Phase I and Phase 2 Subsidence
- Jonben (Haga) Subsidence
- Huffman Street Subsidence
- Holden (Padgett) Subsidence
- Gray and laquinta Subsidence
- Duncan Hill Subsidence
- Beckley Subsidence
- Fairmont IV Subsidence
- Fairmont East Subsidence

MANAGEMENT AND STAFFING

directing pre-bid and pre-construction meetings. He is well-versed in managing subcontractors, overseeing staff, and addressing equipment needs for the design team.

Mr. Rice was the Project Manager for a WVDEP, DLR, AML project involving the engineering design and preparation of construction documents for the mine subsidence stabilization for residents on the west side of Route 32 in Thomas, West Virginia. This substantially large project was bid in three separate phases that included:

- Reclamation of approximately 59 acres on abandoned surface mines to redirect surface drainage away from abandoned deep mine sinkholes.
- Stabilization of approximately 70 structures, using nearly 200,000 cubic yards of grout and over 50,000 linear feet of drilling.

His experience in AML encompasses the successful completion of a mine subsidence project at the Terminal Building of Morgantown Airport. Mr. Rice has also managed and contributed to several other AML mine subsidence projects for the WVDEP, DLR, AML:

- 2022 AML Contract 5 Project North
- Stealy Avenue Subsidence
- Shinnston (Osbourne) Subsidence
- Pallota Subsidence
- Ohio Avenue Subsidence
- Fairmont DAC
- Bethlehem (Toothman) Subsidence
- Huffman Street Subsidence
- Montana Mines Subsidence
- Glenwood Hills Subsidence

In addition, Mr. Rice has also supervised and worked on numerous subsidence projects for the Ohio Department of Natural Resources, the Maryland Department of the Environment, the West Virginia Board of Risk and Insurance Management, and the Ohio Mine Subsidence Underwriting Association.

MANAGEMENT AND STAFFING

Mr. David B. Sharp, P.E., is the Branch Manager of POTESTA's Morgantown office, and will serve as the alternate project manager/technical reviewer. Additionally, he will serve as the responsible engineer in charge for the project and will sign and seal final documents. Mr. Sharp is a registered professional engineer in Maryland, West Virginia, Pennsylvania, Ohio, and Kentucky. Mr. Sharp brings over 29 years of expertise in engineering and environmental consulting projects throughout the region. He has dedicated a significant portion of his career to geotechnical engineering and construction observation/management endeavors. He will assume the role of Geotechnical Engineer for this Project. Mr. Sharp's extensive experience includes managing various projects related to mine subsidence evaluation/control plans.

landslide investigation and repair, mine permitting, mine reclamation, acid mine drainage, hydrology, and other components typically encountered in abandoned mine reclamation efforts.

As the Branch Manager, Mr. Sharp oversees all aspects of the WVDEP, DLR, AML 2022 AML Contract 5 Project North and actively serves as Project Manager for numerous slope stability projects for municipalities (including the City of Morgantown), regulatory agencies, developers, energy companies, and other miscellaneous clients. He has managed and been actively engaged in multiple WVDEP, DLR, AML reclamation projects for landslide repair, sealing of portals, regrading of refuse piles, and the design of drainage control structures in Monongalia, Preston, Mingo, Kanawha, and Harrison Counties.

Mr. Christopher Grose, L.R.S., Senior Engineering Associate, will be an in-house consultant for this project, Mr. Grose will concentrate on subsidence evaluation and the design of plans for surface stabilization and land restoration. He has over 33 years of extensive expertise encompassing geological and geotechnical explorations, surface and subsurface hydrology, hydrogeology, and the analysis, modeling, and repair of failed slopes and landslides. In addition to his AML experience, Mr. Grose has provided design consulting services to the mining industry including underground mine design, subsidence control plan development, and reserve study preparation. He has completed numerous mine subsidence studies within the southern Appalachian coal field and has provided expert witness study and testimony on several subsidence damage claims.

Mr. Grose has been engaged in nearly 30 projects for the WVDEP, DLR, AML since 1990 including the recent Ragland (Mounts) Landslide Emergency, Marmet (Wells Drive) Landslide, and Leivasy (Dorsey) Subsidence Emergency. Additional mine subsidence projects include Jonben (Haga) Subsidence, Duncan Hill Subsidence, and Beckley Subsidence.

He has significant experience with the restoration of numerous failed slopes involving a range of activities aimed at stabilizing the slope, preventing further erosion, and restoring the area for clients ranging from private developers to large industrial companies.

MANAGEMENT AND STAFFING

Mr. Mark Kiser, P.E., Chief Engineer, has over 40 years of expertise in civil and environmental engineering projects. Mr. Kiser's skills encompass evaluation, design, preparation of plans and specifications, and construction administration. He has actively contributed to more than 75 different AML projects for WVDEP, DLR, AML. Mr. Kiser has overseen the design and implementation of various mitigation strategies, including mine subsidence investigations, mine subsidence stabilization, sealing mine portals, regrading disturbed land, and managing stormwater to prevent erosion and contamination. He routinely collaborates with regulatory agencies to ensure compliance with environmental standards.

Mr. Kiser oversees the current WVDEP, DLR, AML 2023 AML Contract S2 and the most recent subsidence project, Marmet/McGrew Emergency. He has been the Project Manager and/or performed engineering services for the following WVDEP, DLR, AML subsidence projects:

- St. John's Road Subsidence
- MacArthur Phase I and Phase II Subsidence
- Jonben (Haga) Subsidence
- Gray and laquinta Subsidence
- Duncan Hill Subsidence
- Beckley Subsidence

Mr. Terence C. Moran, P.E., Senior Engineer, will serve as project advisor if needed for this project. Mr. Moran has served as project manager/project engineer or assisted with over 60 AML projects in West Virginia and Virginia. Mr. Moran has 36 years of experience in civil and environmental engineering projects, including evaluation, design, preparation of plans and specifications, and construction administration. Mr. Moran has co-authored multiple papers, including one on the abatement of AMD at the Omega Mine site and another on evaluating AMD of AML sites during pre-acquisition site assessments. Messrs. Kiser and Moran have worked on AML projects that addressed such technical issues as AMD, sealing portals, regrading refuse, diverting stormwater, landslides, subsidence and water

supply. Mr. Moran is familiar with requirements of AML projects and will ensure that WVDEP is satisfied with POTESTA's work by ensuring that proper QA/QC and timeliness are adhered to.

Mr. Peter S. Potesta, Staff Engineer, has 11 years of experience in geotechnical engineering with an emphasis in landslide design, repair, and causation investigation. Other areas of expertise include civil and site development projects with an emphasis in geotechnical engineering and construction. Responsibilities have included geotechnical evaluations including management of subsurface explorations, settlement analysis, slope stability modeling, foundation analysis, well pad and horizontal directional drill construction, roadway improvements/repairs, and commercial/residential construction.

MANAGEMENT AND STAFFING

Ms. Jessica Yeager, MS, Senior Scientist, is an aquatic biologist and toxicologist with 30 years of experience in evaluating the effects of anthropogenic activities on aquatic communities. She reviews and prepares environmental assessments, biological assessments and other environmental impact studies, as well as environmental permits for energy and industrial clients. Ms. Yeager is proficient in incorporation of GIS in project development and has worked as a project manager for T&E and SHPO coordination/consultation. Other specialties include developing impact assessments for planned disturbances and accidental releases, establishing and implementing recovery plans for streams and rivers, supervising the field personnel conducting impact assessments, designing benthic macroinvertebrate

and fish studies for permitting needs, biological assessments of federally threatened and endangered species, and advising clients on issues pertaining to the Endangered Species Act, CWA, and the National Environmental Policy Act. Ms. Yeager is a certified wetland soil scientist, botanist, and hydrologist with field experience in Kentucky, Virginia and West Virginia. Ms. Yeager is also a recognized forensic delineation professional. She has completed numerous environmental studies for large energy projects.

Mr. Timothy Ferguson, Senior Scientist, has over 18 years of experience in environmental compliance and permitting and has served as project manager for numerous projects. He specializes in stream and wetland identification and delineation, mitigation development and planning, and permitting with the following agencies: USACE, WVDEP, WVDNR, West Virginia State Historical Preservation Office (SHPO), United States Fish and Wildlife Service and United States Environmental Protection Agency. He is formally trained in the use of the 1987 USACE Wetland Delineation Manual from Ohio State University in 2008 and has been utilizing the Eastern Mountains and Piedmont Regional Supplement since its issuance.

Abbreviated personal history statements of primary staff and more detailed descriptions of staff experience are presented in the AML Consultant Confidential Qualification Questionnaire in **Appendix A**, and the AML and Related Project Experience Matrix in **Appendix B**.

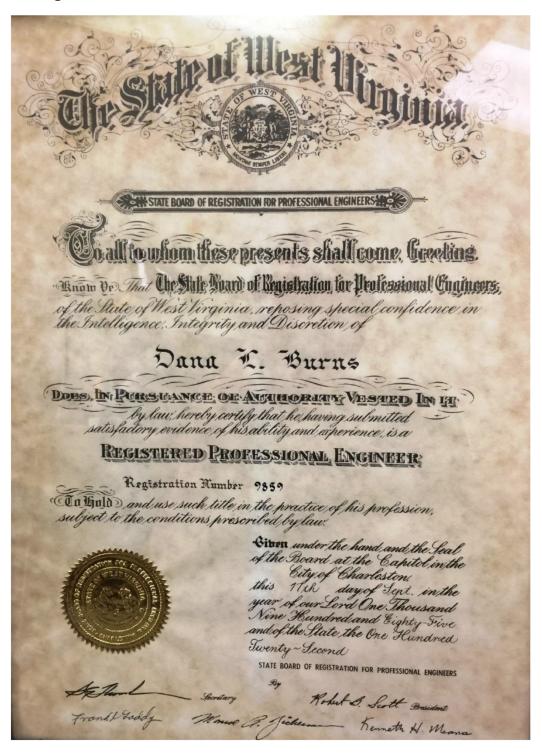

Mr. Burns' and Mr. Sharp's Registered Professional Engineer certificates are included on the following pages, along with an organizational chart. Our capabilities, qualifications, and expertise in design of AML projects are further exemplified in the Prior Experience section.

STATEMENT OF QUALIFICATIONS

PRIOR EXPERIENCE

LEIVASY (DORSEY) SUBSIDENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Nicholas County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection, Office of Abandoned Mine Lands and Reclamation (WVDEP-AML), to investigate the potential that underground mine subsidence could have contributed to the formation of a sinkhole near a privately owned structure near the Community of Leivasy, Nicholas County, West Virginia. The landowner's property was undermined in the Sewell Coal seam by Quinwood Mining Company in the mid-1960s and an existing farm pond had allegedly been leaking for many years. In June 2023, a sinkhole formed along the ground surface near the owner's driveway, prompting the landowner to submit a claim with the WVDEP-AML. POTESTA's scope of services included the coordination and advancement of three subsurface borings on the property. Each of these borings were advanced to depths ranging from 120 to 160 feet below the ground surface through the underlying Sewell Coal seam and associated abandoned Quinwood Imperial Mine No. 2 workings. The boring locations were determined following an examination of available historic mine mapping.

A POTESTA technician was on site during the duration of the exploration field work. One of the three borings encountered the mine void; however, following careful examination and measurement of the recovered rock core, no evidence was found of fracturing within the overburden rock strata. A subsequent examination of the sinkhole determined the presence of a buried concrete structure which was believed to be the source of the sinkhole development. POTESTA worked with the drilling contractor and WVDEP-AML officials to fill the sinkhole with stone.

Following the field work, POTESTA prepared a summary letter presenting the results of the drilling program which indicated that there was no evidence of mine subsidence at the site.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection- AML Raleigh County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection, Office of Abandoned Mine Lands and Reclamation, to develop a subsidence control/prevention plan for a portion of the community of MacArthur in Raleigh County, West Virginia. MacArthur had been undermined and several claims of subsidence were being reported by home owners. The project consisted of developing a subsidence control plan for 41 homes and 5 garages within the community. In addition to the subsidence control/prevention plan,

POTESTA developed technical specifications for the project. A total of 18 holes were drilled throughout the community to estimate the location and thickness of the mine workings and to log the overburden strata. Down-hole camera surveillance was performed at selected borehole locations in an attempt to discover the condition of the overlying rock strata in the borehole, as well as collection of video at the mine level. The subsidence control/prevention plan included vertical and angled drilling of injection holes for placement of grout and concrete in the mine workings. The subsidence control/prevention plan was only developed to prevent subsidence under the 41 homes and 5 garages. The construction phase of the project has been completed and included over 200 vertical and angled injection holes.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection- AML Raleigh County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection, Office of Abandoned Mine Lands and Reclamation, to develop a subsidence control/prevention plan for a portion of the community of MacArthur in Raleigh County, West Virginia. Additional home owners reported subsidence problems in an area adjacent to Phase I of the MacArthur Subsidence project. Due to the construction cost related to Phase I of the project, it was determined that an additional phase would be required.

Phase II of the project consisted of developing a subsidence control/prevention plan for 28 homes, 1 business and 3 garages within the community. Phase II of the project is located to the east and adjacent to Phase I. In addition to the subsidence control/prevention plan, POTESTA developed technical specifications for the project. A total of 9 holes were drilled throughout the community to estimate the location and thickness of the mine workings and to log the overburden strata. Down-hole camera surveillance was performed at selected borehole locations in an attempt to discover the condition of the overlying rock strata in the borehole, as well as collection of video at the mine level. The subsidence control/prevention plan included vertical and angled drilling of injection holes for placement of grout and concrete in the mine workings. The subsidence control/prevention plan was only developed to prevent subsidence under the 28 homes, 1 business and 3 garages. POTESTA has estimated that over 130 vertical and angled injection holes will be required to complete construction of the project.

PRIOR EXPERIENCE

2022 AML CONTRACT 5 PROJECT, NORTH

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Monongalia, Preston and Harrison Counties, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection (WVDEP) to provide realty services; planning and NEPA compliance; prepare design plans, specifications, and related bidding documents; complete required permit applications and obtain necessary regulatory permits/approvals; and provide construction monitoring services and construction certification for four projects in Monongalia, Preston and Harrison Counties.

These projects included:

- Laurel Point (Travinski) Portals
- Left Fork of Little Sandy Subsidence
- McAlpin (Lambert) Landslide
- Smith Run Portal

Projects included courthouse and field work to obtain ownership documentation and right of entry for design and reclamation work, environmental planning to document NEPA compliance and obtain project authorization, surveying and development of topographic mapping, subsurface exploration, development of drawings, specifications and engineer's construction cost estimate, preparing applications for necessary permits, conducting pre-bid and pre-construction meetings, construction monitoring and documentation, and related services.

Projects included mine portal closures, stream subsidence stabilization, landslide abatement/stabilization, drainage control, demolition of dangerous mine structures, refuse regrading, and vegetation of disturbed areas.

PRIOR EXPERIENCE

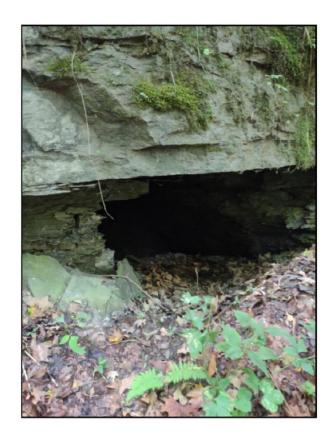

PAINT BRANCH COMPLEX

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Kanawha County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection (WVDEP) to prepare design plans and specifications to reclaim 23 abandoned mine portals, remove abandoned structures and mining related debris, install access roads, install temporary stream crossings, install drainage channels and road crossings, install erosion and sediment controls, and revegetate disturbed areas.

POTESTA prepared a conceptual reclamation plan; met with WVDEP, AML representatives to review the conceptual plan; prepared and submitted 60 and 90 percent review documents (plans, specifications, bid form, and engineer's construction cost estimate); responded to WVDEP review comments; and prepared an application for coverage of reclamation activities under the WVDEP general construction stormwater permit.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Mingo County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection (WVDEP) to prepare design plans and specifications for an emergency landslide project along Rockhouse Fork Road in the community of Ragland, West Virginia. The problem included a landslide which damaged a pre-manufactured home and moved it off of its foundation.

POTESTA completed a subsurface exploration and designed a stabilization/reclamation plan for the property. Reclamation included excavation and removal of saturated, landslide soils, installation of a rock buttress, installation of surface and subsurface drainage control measures, restoration of the modular home, erosion and sediment control, and revegetation of disturbed areas.

This project required expedited plan development since it was handled as an emergency.

PRIOR EXPERIENCE

SUNDIAL (HATFIELD) REFUSE PILES

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Raleigh County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to prepare a reclamation design for the Sundial Refuse Piles in Raleigh County, West Virginia. The site was a former mining complex and included four distinct refuse piles that lacked vegetation and were eroding, open mine portals, and abandoned structures such as hoist houses.

As part of this project, the following were completed:

- Ground survey.
- Geotechnical exploration.
- Preparation of construction drawings, technical specifications, bid form, and engineer's estimate of probable construction costs.

The reclamation design anticipated approximately 372,000 cubic yards of earthwork, 15,000 feet of drainage channel, 3,000 feet of underdrains, 26 mine seals, and demolition and removal of numerous structures, including historic mine cars.

The project was bid at a construction price of approximately \$3,700,000.

As part of the project, POTESTA assisted the WVDEP with contract administration and performed construction observation services during the construction phase of the project.

PRIOR EXPERIENCE

WILLIAMSON (HATFIELD) NURSING HOME LANDSLIDE MAINTENANCE

West Virginia Department of Environmental Protection - Office of Abandoned Mine Lands Williamson, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection - Office of Abandoned Mine Lands (WVDEP) to evaluate and perform geotechnical engineering services for a landslide below the parking lot of the Mingo Manor Nursing Home and above the Hatfield residence. The project area was the site of a former WVDEP reclamation project 15 years earlier. The previous project included regrading of the mine spoil that had been formerly disposed of in this area, as well as drainage improvements.

A landslide occurred in the hillside threatening damage to the residence at the base of the hillside, as well as causing damage to the nursing home parking lot at the top of the hillside and potentially threatening damage to structures at the nursing home facility.

POTESTA performed a subsurface exploration to assist in evaluating the landslide condition. The remedial measures to correct the landslide area included the design of a 456-foot steel soldier beam and wood lagging retaining wall. The retaining wall included a rock anchor tie-back system to minimize the potential for additional settlement of the nursing home parking lot area and potential future damage to the structures within the nursing home facility.

As part of the project, POTESTA assisted the WVDEP with contract administration and performed construction observation services during the construction phase of the project.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Masontown, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to evaluate the Mountain Run Refuse and Portals Project. This project consisted of 15 collapsed mine portals, five refuse piles covering 3 acres, and the demolition/removal of miscellaneous areas of mining debris, garbage, abandoned mine structures, and rail timbers. Our services included:

- Drilling of the refuse piles, mine portals and potential soil borrow areas.
- Field survey to develop site mapping.
- Regrading of the refuse piles to stabilize the slopes.
- Design of drainage control channels including a limestone channel to reduce acid mine drainage.
- Design of five wet mine seals and 11 dry mine seals, with the wet seals including a modified outlet pipe to maintain the current discharge from the portal which is used as a portion of a local resident's water supply.

POTESTA prepared drawings, technical specifications, contractor's bid forms, engineer's construction cost estimate, and calculations brief for the project. POTESTA also attended the pre-bid and pre-construction conferences to assist WVDEP with the project.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Marion County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to evaluate three sites to upgrade access roads, regrade/cover all refuse material with at least 12 inches of topsoil, and to dismantle and remove all buildings, equipment and debris from the site. The project also included construction of drainage control structures to carry water safely offsite and revegetation of all areas disturbed by the construction.

Site 1 was regraded and all refuse was covered with 1 foot of soil. An access road for a gas well was regraded across this site.

Site 2 was a refuse pile located behind a residence. This area was regraded to lower the pile by 10 feet and flatten the slopes on the sides. A drainage ditch was placed between the refuse pile and the house.

Site 3 was an existing impoundment. The site was regraded to remove the dam and place a grouted riprap drainage system at an existing drainage structure. All buildings and debris were removed from this site.

POTESTA prepared drawings, technical specifications, contractor's bid forms, engineer's construction cost estimate, and calculations brief for the project. POTESTA also attended the pre-bid and pre-construction conferences to assist WVDEP with the project.

PRIOR EXPERIENCE

SARDIS (SAAS) LANDSLIDE

West Virginia Department of Environmental Protection Division of Land Restoration Office of Abandoned Mine Lands and Reclamation Harrison County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection, Division of Land Restoration, Office of Abandoned Mine Lands and Reclamation (WVDEP-DLR-AML) to provide engineering and design services for remediation of two landslides and acid mine drainage (AMD) that is being discharged from an abandoned deep mine in Harrison County, WV near the community of Sardis. The project consisted of two problem areas. One being a landslide that previously impacted CR 22 and was emitting AMD drainage to the existing roadside ditch and associated hillside. The landslide continued to show signs of instability and could impact the county road again in the future. The other problem area included a previous AML project located approximately 1500-2000 feet south of the slide area causing AMD drainage issues that were impacting local residential properties and their dwellings.

Based on observations and discussions with WVDEP-DLR-AML during the site visit, POTESTA implemented the following reclamation approach.

- Performed field surveying to supplement mapping to be provided by WVDEP-DLR-AML.
- Performed subsurface exploration at the landslide and mine portals to estimate current water levels, void thicknesses, and portal floor elevations.
- Provided design to stabilize the landslide.
- Wet mine seals, seep collectors, or horizontal borings were provided for the various mine entries and seeps identified within the project area.
- Drainage channels and/or subsurface drains were provided to convey mine drainage to nearby ditches, culverts and receiving streams.
- Areas disturbed during drilling were revegetated.

PRIOR EXPERIENCE

MORGAN MINE ROAD (BURKEY) MINE FIRE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Arthurdale, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection (WVDEP) to prepare and design plans and specifications to reclaim an abandoned mine land site located near Arthurdale, West Virginia. The project consisted of an approximate 6.4-acre area of mine reserve that was burning. The area had previously been strip mined around the extent of the mine seam being evaluated and the WVDEP AML Emergency Group had performed reclamation in this area in an attempt to suffocate the fire.

The area continued to exhibit signs of burning so the WVDEP retained POTESTA to perform an evaluation of the fire and recommend potential methods to extinguish the area. POTESTA's scope of services included advancing 20 borings throughout the area being evaluated and by obtaining downhole temperature readings. Along with temperatures and proximate coal analysis obtained from some of the borings, POTESTA determined the likely extents of the fire.

POTESTA then prepared preliminary plans to extinguish the fire by removal of the seam and regrading of the project area. The plans included an excavation plan, erosion control plans, drainage plans, and final regrading plans. After the plans and technical specifications were developed, the WVDEP was able to make an informed decision regarding the potential reclamation costs associated with the project as compared to the potential ramifications of a "No-Reclamation" option.

PRIOR EXPERIENCE

JESSOP HIGHWALL #10

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Tunnelton, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection (WVDEP) to prepare design plans and specifications to reclaim three abandoned mine land (AML) sites located near Tunnelton, West Virginia. Work to reclaim the three sites included sealing of abandoned mine portals, regrading of highwalls and collection of drainage from some of the abandoned mine portals and seeps. POTESTA utilized aerial mapping and ground survey to create topographic mapping of the sites.

Site 1

- Regraded approximately 1,150 feet of highwall averaging approximately 25 feet in height.
- Monitored test borings at the proposed mine portal sites to determine the location and the depth of mine voids, and the amount of water in the voids.
- Designed the closure of seven abandoned mine portals using a wet seal or bat gate mine seal.
- Designed drainage channels to collect water from the mine portals to discharge into a nearby stream.
- Designed a mine portal collection system that included 18 HDPE manholes.
- Incorporated a previously designed acid mine drainage collection and treatment system into our design.

Site 2

- Regraded approximately 7,500 feet of highwall averaging approximately 20 feet in height.
- Monitored test borings at the proposed mine portal sites to determine the location and depth of mine voids, and the amount of water in the voids.
- Designed the closure of three abandoned mine portals using a wet seal or modified mine seal.
- Designed drainage channels to collect water from the mine portals to discharge into a nearby stream.

Site 3

 Designed an underdrain system behind a residence and garage to prevent damage to the structures from a seep discharging acid mine drainage.

POTESTA prepared drawings, technical specifications, contractor's bid forms, engineer's construction cost estimate, and calculations brief for the project. POTESTA also attended the pre-bid and pre-construction conferences to assist WVDEP with the project.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Georges Creek, Kanawha County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands to design mine seals for abandoned mine openings along Georges Creek and U.S. Route 60.

Design included a total of 28 mine seals. The following types of seals were utilized:

- Urethane Foam with Applied Mortar
- Typical West Virginia Wet Seals
- Wet Seals with Bat Gates
- Dry Seals

In addition to mine seals, the design included piping to convey mine drainage to receiving streams. The conveyance piping layout required two West Virginia Division of Highways road crossing permits. An underdrain was utilized to convey subsurface drainage.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Fairmont, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to provide engineering services regarding the conveyance of mine seepage around residential areas and into the City of Fairmont's storm sewer system. The project area is located along Palatine Avenue and Mason Street. Abandoned underground mine works caused flooding problems along these streets.

POTESTA performed the following tasks to complete this project:

- Mine map review.
- Survey to develop mapping.
- Subsurface exploration.
- Design of mine drainage collection system and storm sewer system to convey runoff to the City of Fairmont's storm sewer system.
- Design of collection system consisting of 15-inch corrugated plastic pipe to City of Fairmont's standards, including pavement overlay to impacted streets.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Monongalia County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to evaluate the Lake Lynn Complex Project. This project consisted of three separate sites including 15 mine portals, three highwalls (totaling approximately 1,400 lineal feet), and the demolition/removal of miscellaneous areas of mining debris, garbage, and abandoned mine structures. Our services included:

- Drilling of the refuse piles, mine portals and potential soil borrow areas.
- Field survey to develop site mapping.
- Regrading of the refuse piles to stabilize the three highwalls that included 50,000 cubic yards of earthwork.
- Design of drainage control structures including limestone lined channels to reduce acid mine drainage.
- Design of nine wet mine seals and six dry mine seals, with seven of the wet seals and two of the dry seals including bat gate outlets.

POTESTA performed a subsurface exploration, prepared construction level drawings, technical specifications, bid documents, engineer's opinion of probable cost, and a calculations brief for the project. POTESTA also prepared permit applications for WVDEP stormwater and West Virginia Division of Highways project entrances. POTESTA also attended pre-bid and pre-construction conferences with WVDEP.

Site 2: Proposed Bat Gate Wet Mine Seal Location/Highwall Area

PRIOR EXPERIENCE

MILL CREEK REFUSE PILE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Gary, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection (WVDEP) to prepare and design plans and specifications to reclaim an abandoned mine land site located near Gary, West Virginia. Work to reclaim the site included the removal of debris, refuse relocation and compaction, 1-foot soil placement, tree removal, and regrading.

Development of engineering reports, construction plans, and specifications for the stabilization of the Mill Creek mine refuse site.

Provision of plans and specifications which include, but are not limited to, plan views, cross sections, maps, photographs, and drawings.

Final design is to meet the WVDEP standards.

PRIOR EXPERIENCE

KOPPERSTON – JOHN'S BRANCH REFUSE PILE EMERGENCY AML PROJECT

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands and Reclamation Wyoming County, West Virginia

Potesta & Associates, Inc. (POTESTA) was selected by the West Virginia Department of Environmental Protection, Office of Abandoned Mine Lands and Reclamation (WVDEP, AMLR) to design an emergency plan, prepare bidding and contract documents, and provide support to abate problems from an eroding coal refuse dam. Coal refuse, soil, and rock were eroding from the steeply sloped, uncovered portion of the coal refuse pile. Eroded coal refuse washed over two Norfolk Southern Railroad tracks suspending service to a coal loadout facility. POTESTA was requested to expedite engineering work in order that WVDEP,

AMLR could bid the project and stabilize the eroding coal refuse so that the railroad could be placed back into service.

POTESTA performed field reconnaissance, analyzed surface runoff flow patterns, and quantified surface runoff discharge rates from the approximately 40-acre refuse pile located at the bottom of a 160-acre watershed.

POTESTA provided a survey crew and engineer that selected and staked proposed drainage channels and culverts in the field. Utilizing the survey information, POTESTA prepared plan view drawings, channel and culvert profiles, and details depicting the proposed abatement measures to control surface water and minimize erosion.

The plan included 7,150 linear feet of riprap and grouted riprap channels to carry surface runoff over and around the steep coal refuse pile. The project included twin 72-inch reinforced concrete pipes

installed beneath the railroad and a 5-foot by 10-foot concrete box culvert to carry runoff under WV Route 85 to the receiving stream. POTESTA obtained approvals from Norfolk Southern Railroad and the West Virginia Division of Highways so that construction could proceed.

PRIOR EXPERIENCE

JOHN'S BRANCH COAL REFUSE DAM AML RECLAMATION PROJECT

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands and Reclamation Wyoming County, West Virginia

Potesta & Associates, Inc. (POTESTA) was selected by the West Virginia Department of Environmental Protection, Office of Abandoned Mine Lands and Reclamation (WVDEP, AMLR) to design a reclamation plan and prepare bidding and contract documents for the John's Branch Coal Refuse Dam Project in Wyoming County. The site was an abandoned, unreclaimed coal refuse pile and impoundment, approximately 40 acres in size. A large portion of the coal refuse pile was poorly vegetated with steep slopes and severe erosion. Eroded coal refuse was eroding from the site and entering

surface water receiving streams. The eroding coal refuse was also impacting the Norfolk Southern Railroad by filling railroad ditches, blocking cross culverts, and covering the railroad tracks. Rail service on the tracks was suspended due to the severe erosion.

POTESTA developed a reclamation design; prepared technical specifications, drawings, contractor's bid form, engineer's construction cost estimate and calculations brief; prepared a construction stormwater National Pollutant Discharge Elimination System (NPDES) application; and assisted WVDEP, AMLR with pre-bid and pre-construction meetings. POTESTA's reclamation design included regrading of the coal refuse pile to flatten steeply sloped portions of the refuse pile and to establish benches or terraces on the face of the coal refuse pile to control erosion and surface runoff. POTESTA designed a system of surface water drainage

channels to control runoff. The reclamation plan included soil covering coal refuse and revegetation. A portion of the top of the coal refuse pile was covered with wetland vegetation. Two natural gas wells also existing on the top of the refuse pile. POTESTA's reclamation plan preserved and protected these areas, avoiding negative impacts.

POTESTA identified soil and rock borrow areas for the contractor's use for obtaining soil cover material and rock riprap for surface water channel linings. POTESTA also coordinated with a natural gas producer to temporarily move natural gas production lines crossing the surface of the coal refuse pile so that reclamation could be completed.

PRIOR EXPERIENCE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Wyoming County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to regrade/cover all refuse material with at least 12 inches of topsoil, remove all debris from the site, and to stabilize Measle Fork and the stream bank due to refuse encroaching the water way.

The Measle Fork Refuse area was a 25-acre site with 7 acres of steep slopes with exposed refuse to be regraded and covered. Approximately 2,600 feet of Measle Fork were stabilized to protect the stream and prevent further erosion of the stream bank and potential for refuse to enter the stream. The regrading and stream bank protection included three terraced planting areas. The site was also provided with 4,500 feet of drainage channels.

POTESTA prepared drawings, technical specifications, contractor's bid forms, engineer's construction cost estimate, and calculations brief for the project. POTESTA also attended the pre-bid and pre-construction conferences to assist WVDEP with the project.

PRIOR EXPERIENCE

GEORGE'S CREEK (LUCAS) LANDSLIDE MAINTENANCE

West Virginia Department of Environmental Protection - Office of Abandoned Mine Lands Kanawha County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection - Office of Abandoned Mine Lands (WVDEP) to evaluate and perform geotechnical engineering services for a landslide related to historic mining activity which was threatening a nearby residential structure.

A portion of the existing hillside immediately adjacent to the rear of the residential structure was excavated prior to construction of the structure to a near vertical

slope exposing weathered shale and a coal seam near the slope's base. The exposed coal seam was determined to be the No. 2 Gas seam which was reportedly mined in the 1950s. Some drainage was noted flowing from the coal seam and the resulting water was conveyed through a nearby culvert to Georges Creek. Attempts were made by WVDEP to excavate loose rock and soil from the hillside in an effort to improve stability of the slope. Following this initial work, the slope continued to slough with periodic small slides and slope movement believed to be caused by continued subsidence of the underground mine works.

POTESTA performed a subsurface exploration to assist in evaluating the landslide condition, including the type and condition of the rock located in the slope, as well as the attitude, thickness and condition of the underlying coal seam. POTESTA survey crews also completed a topographic survey of the affected area including the surrounding residential structure, drains and wooded hillside. The remedial measures to correct the landslide area included the design of a 25-foot high steel soldier beam and concrete lagging retaining wall with sloped, compacted backfill constructed from on-site materials. The retaining wall design required the application of a

rock anchor tie-back system due to mine voids existing at the base of the hillside slope that were encountered during the subsurface exploration.

As part of the project, POTESTA assisted the WVDEP with contract administration and performed construction observation services during the construction phase.

PRIOR EXPERIENCE

TAYLORVILLE (CANTRELL) DRAINAGE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Mingo County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) to evaluate and develop a reclamation design for mine drainage impacting a community in Taylorville, Mingo County, West Virginia. POTESTA completed field reconnaissance and surveying to develop topographic mapping, and prepared construction bid documents for the reclamation design.

The Taylorville project included three different sites. The first site included mine drainage along the

POTESTA designed underdrains to collect and convey drainage from the first two sites to the West Virginia Division of Highways (DOH) right-of-way. Approximately 1,100 feet of new corrugated plastic pipe with DOH Type G drop inlets were designed to convey mine drainage to Pigeon Creek, while also handling storm water from the DOH roadway. A standard wet mine seal was designed with riprap channels to handle the mine drainage at the third site.

POTESTA prepared drawings, technical specifications, contractor's bid forms, engineer's

construction cost estimate, and calculations brief for the project. POTESTA also attended the pre-bid and pre-construction conferences to assist WVDEP with the project.

PRIOR EXPERIENCE

LANDO (EDWARDS) DRAINAGE

West Virginia Department of Environmental Protection Office of Abandoned Mine Lands Lando, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the West Virginia Department of Environmental Protection's Office of Abandoned Mine Lands (WVDEP) for a project that included the regrading of mine spoil that had been formerly disposed of in this area, as well as installation of mine portal seals and drainage improvements. The project consisted of three sites:

- A refuse pile graded to flattened slopes and topped with a soil cover.
- Channeling and diverting into nearby streams some drainage affecting nearby residences.
- Rehabilitating two existing mine seals and installing one new mine seal.

POTESTA's work on the project included surveying and development of mapping, as well as development of the repair, drainage and reclamation plans.

POTESTA prepared drawings, technical specifications, contractor's bid form, engineer's construction cost estimate, and calculations brief for the project. POTESTA also attended the pre-bid and pre-construction conferences to assist WVDEP with the project.

PRIOR EXPERIENCE

MONONGAHELA BOULEVARD ROCKFALL

West Virginia University Morgantown, West Virginia

Potesta & Associates, Inc. (POTESTA) was contacted by West Virginia University (WVU) after a substantial rockfall occurred along Monongahela Boulevard in Morgantown, West Virginia. POTESTA obtained Lidar mapping, aerial drone footage, and an orthophoto from a drone. POTESTA assessed the hillside and worked with GeoStabilization International (GSI) to determine potential remedial actions. POTESTA performed several site visits and participated in numerous meetings with WVU to discuss the failure and potential remediation options.

POTESTA was the Owner's representative for WVU during construction. The following services were provided:

- Coordinating with the selected repair contractor in assessing the stability of the rockfall areas.
- Review of shop drawings submitted as part of the remedial design.
- Serving as liaison between the contractor and WVU during the design, as well as during construction including attending meetings as requested.

PRIOR EXPERIENCE

JACOB STREET SLIP REPAIR TOPOGRAPHIC SURVEY

City of Morgantown Monongalia County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the City of Morgantown, West Virginia to provide civil engineering design services for the Jacob Street Slip Repair. This project included a subsurface exploration study, engineering design, and a global stability evaluation of the failed slope in a residential area. The slope stabilization method involved the installation of a soldier beam and lagging retaining wall located in the area of the scarp just off the edge of the road. The remaining failed slope material below the wall was removed and replaced with compacted soil backfill.

 Civil Site – Retaining wall design and grading plan including cut/fill for the construction site. Site plan and profile, retaining wall section and profile, pavement plan and detail, and erosion and sediment control details.

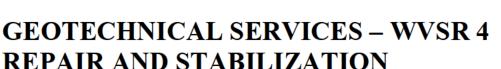

in bid review and decision making.

pre-bid and pre-construction meetings to assist the client

 Construction Observation/Administration – Various services during the construction phase including schedule coordination between client and contractor(s), and on-site inspection and materials testing (compaction, concrete, etc.).

PRIOR EXPERIENCE

WVDOT/WVDOH Various Locations, West Virginia

Potesta & Associates, Inc. (POTESTA) has recent experience working for the WVDOT/DOH for repairs and stabilization of three separate sections of WVSR 4, which were undercut and washed out during the June 2016 floods. The project was completed for Orders Construction Company and CDM Smith under an Emergency Design/Build contract. POTESTA's services included the completion of a subsurface exploration, evaluation of subsurface soil and rock conditions, and the development of geotechnical design recommendations for the installation of two sections of soldier beam and lagging retaining walls, as well as the sizing and foundation design for a new structural box culvert to replace a failed and washed out section of culvert under WVSR 4 at a third location.

PRIOR EXPERIENCE

BOWSER STREET LANDSLIDE REPAIR

Town of Granville Granville, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the Town of Granville (Granville) to complete a subsurface exploration and to prepare a repair and stabilization design for a section of failed soil and weathered rock slope along Bowser Street in Granville, West Virginia. The slope failure was situated immediately down slope from a residential home limiting access to the site. POTESTA completed the following tasks in accomplishing the repair:

- Preliminary and continued surveying to establish limits of disturbance and property boundaries, as well as verify quantities during construction.
- Five subsurface borings were completed above, below, and within the slope in order to examine soil conditions and bedrock location.
- Cost-effective analysis on various possible solutions.
- Design of an engineered soil slope with a rock toe key at the base of the slip.
- Erosion and sediment control plans.
- Grading and drainage plans.
- Participated in condemnation hearings on select property.
- Coordinated with property owners.
- Construction administration (i.e., preparing a bid package and working with the town to receive bids and select contractor for the project).
- Construction monitoring, including bearing capacity and compaction testing.

Slide Before Repair

During Construction of Repair

PRIOR EXPERIENCE

BONA VISTA DRIVE SLIP REPAIR SOLDIER BEAM & LAGGING RETAINING WALL

Travelers Insurance/City of Charleston Charleston, Kanawha County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by Travelers Insurance to provide civil engineering design services to repair a section of hillside below Bona Vista Drive in Charleston, West Virginia. This project included a subsurface exploration study, engineering design, and a global stability evaluation of the failed slope in a residential neighborhood. The slide was caused by a water main break beneath the paved Bona Vista Drive. The slope stabilization method involved the installation of a soldier beam and lagging retaining wall located in the area of the scarp just off the edge of

the road. The remaining failed slope material below the wall was removed and replaced with compacted soil backfill.

- Surveying Topographic mapping of the project area.
- Coordination and Consulting with Various Groups/ Agencies – Working with the City of Charleston's Engineering Department, coordination with landowner(s) and utility providers in the area. Also, attendance of pre-bid and pre-construction meetings to assist the client in bid review and decision making.
- Civil Site Design and Construction Documents Retaining wall design and grading plan including cut/fill for the construction site, and construction documents.
 - Construction Detail Drawings Site plan and profile, retaining wall section and profile, pavement plan and detail, and erosion and sediment control details.
 - Bid Documents Preparation of bid tables, contract documents, and review of contractors' bids.
- Construction Observation/Administration Various services during the construction phase including schedule coordination between client and contractor(s), and on-site inspection and materials testing (compaction, concrete, etc.).

PRIOR EXPERIENCE

PRIBBLE STORAGE TANK LANDSLIDE STABILIZATION

Stone Energy Corporation
New Martinsville, Wetzel County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by Stone Energy Corporation to develop a stabilization plan for a failed soil fill slope immediately adjacent to two primary 2.5-million gallon storage tank structures. The failed slope impacted and undermined the concrete foundation of the secondary containment tank which surrounded both primary storage tanks. The primary tanks served to store recirculated water utilized for hydraulic fracturing efforts in the associated Marcellus Shale reserve. POTESTA's services included exploration of failed slope which included several

subsurface borings, field testing, and sample collection for laboratory testing. Following completion of the field exploration, POTESTA prepared several regrading alternatives which were analyzed for long-term stability. The final alternative was developed to provide a final slope configuration which included a toe buttress, several rock toe keys/underdrains, and a surface drainage channel to collect, control, and convey surface and groundwater seepage from the regraded fill slope.

Following completion of the stability evaluation, POTESTA prepared construction documents which included construction plans and details, as well as a bid sheet and specifications for the work. Since the unsupported section of tank wall was situated near the top of the slope, the work was completed in two distinct phases, the initial phase included preparation of a site access road, clearing and grubbing, removal of saturated failed soil material near the mid-slope and toe, and excavation and establishment of the toe key foundation at the toe of the regraded slope. Upon completion of the

toe excavation and placement of the slope buttress fill, off-site borrow material was imported to the site for placement and compaction of the slope. This work continued with 15 of the unsupported tank foundations, at which time work was suspended until the affected portion of the tank was disassembled and removed using a crane. Following removal of the tank, fill placement and compaction operations continued until the reconstructed slope reached the target final elevation. Once the slope was completed, the replacement tank foundation was installed and the replacement tank walls were erected. POTESTA provided full-time construction observation and field testing services during the entire duration of the slope reconstruction.

PRIOR EXPERIENCE

GRANDVIEW SLIP REPAIR

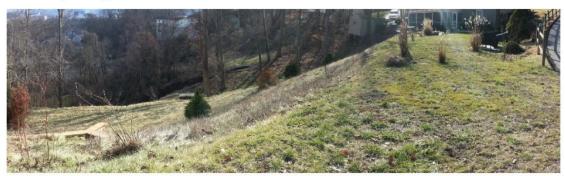

City of Charleston Kanawha County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by the City of Charleston to provide civil engineering design services for a slip that occurred on Charleston, West Virginia's Westside. This project involved a geotechnical assessment and development of regrading construction plans for the repair of a failed 50-foot-tall section of a soil slope below Grandview Drive in Charleston, West Virginia. The slope failure occurred between two adjacent residential structures and encompassed a sanitary sewer main, as well as storm drainage pipe. The stabilization plan involved the removal of the failed mass beginning at the toe of

the slope and then working progressively upslope to result in a stabilized and regraded slope surface. The work required the removal of all failed material to the underlying bedrock surface and included the installation of a shot rock toe buttress which was installed along a natural topographic bench near the toe. Following the completion of the slope repair, the affected utilities were installed either below or outside the limits of the regraded slide area.

- Surveying Topographic mapping of the project area.
- Geotechnical Exploration was completed to determine the extent of the failed soil mass, as well
 as determine the depth of the underlying bedrock.
- Civil Site Design and Construction Documents Regraded soil slope design with grading plan including cut/fill for the construction site.
 - Construction Detail Drawings Site plan and profile, cross-section profiles, rock toe key detail, and erosion and sediment control details.
- Construction Observation/Administration Various services during the construction phase
 including schedule coordination between client and contractor, and on-site inspection and soil
 density testing.

PRIOR EXPERIENCE

WHEELING CREEK #7 DAM LANDSLIDE REPAIR

West Virginia Conservation Agency, Northern Panhandle Conservation District Triadelphia, Ohio County, West Virginia

Potesta & Associates, Inc. (POTESTA) was hired by the West Virginia Conservation Agency (WVCA) and the Northern Panhandle Conservation District (NPCD) to evaluate a landslide that has developed on within the Wheeling Creek Dam #7 Impoundment. The landslide is currently impacting a handicap access and public fishing area and is encroaching into the normal pool elevation of the impoundment. POTESTA completed a subsurface evaluation which included drilling six borings and completing a laboratory testing

program. Field surveys were completed, and a topographic map developed that served as a baseline map for the design of repair options. A slope stability analysis was performed, and recommendations made for final repair options.

PRIOR EXPERIENCE

West Virginia Conservation Agency, Northern Panhandle Conservation District Marshall County, West Virginia

Potesta & Associates, Inc. (POTESTA) was hired by the West Virginia Conservation Agency (WVCA) and the Northern Panhandle Conservation District (NPCD) to evaluate a landslide that developed on the slope of the auxiliary spillway at the Upper Grave Creek Impoundment in Marshall County, West Virginia. The slide occurred near the toe of the slope and has dislodged a volume of soil that caused undue pressures on the uphill side of a water treatment clarifier operated by the Town of Cameron for public water supply. POTESTA completed a subsurface evaluation which included drilling four borings,

equipping two of the borings with piezometers to measure groundwater levels, and completing a laboratory testing program. Field surveys were completed, and a topographic map developed that served as a baseline map for the design of repair options. A slope stability analysis was performed, and recommendations made for final repair options.

PRIOR EXPERIENCE

Huntington Municipal Development Authority Huntington, West Virginia

Potesta & Associates, Inc. (POTESTA) was hired by the Huntington Municipal Development Authority (HMDA) to remediate the Kinetic Park landslide in the City of Huntington, West Virginia. The park developed a large landslide on the western facing fill slope. The landslide was approximately 4 acres in size and over 150 feet tall. It was very important for POTESTA to design a permanent stabilized design as the landslide was located within the city limits and impacted both residential and commercial properties.

The landslide damage neighboring property below the hill, impacted a stream and resulted in the uncontrolled discharge of stormwater from Kinetic Park.

POTESTA completed a substantial subsurface exploration to aid in the development of the landslide remediation plans, as well as completing topographic mapping of the entire area.

Following the completion of the subsurface exploration, POTESTA prepared a full set of plans to remediate the landslide. The remediation included:

- The regrading of the hillside to promote global stability with the construction of two rock toe keys. One at the bottom of the slope as well as one at the mid-slope.
- The 680 feet of 48-inch corrugated plastic stormwater pipe that collects stormwater from the top of Kinetic Park.
- Numerous surface stormwater collection devices, as well as thousands of feet of underdrains, were installed to collect and convey the groundwater.

The final design of the stabilized hillside resulted in three benches and well over 100,000 cubic yards of material excavated and placed. Due to the nature of onsite soils, POTESTA also utilized cement reinforced soils to allow for construction to advance even during the winter months.

PRIOR EXPERIENCE

NORTH EDGEMONT SLOPE STABILIZATION

Huntington Sanitary Board Huntington, West Virginia

Potesta & Associates, Inc. (POTESTA) was hired by the Huntington Sanitary Board (HSB) to maintain sanitary sewage pipeline and remediate damages caused by breaks for the City of Huntington, West Virginia. A damaged sanitary line contributed to a landslide just below North Edgemont Road.

The landslide was situated along a natural section of wooded hillside below North Edgemont Road. The landslide was approximately 90 feet in total height from top to bottom with an affected area of approximately 4 acres and extends downward behind two existing multi-story apartment condominium structures.

POTESTA monitored the landslide over the course of approximately a year in which an inclinometer was used to monitor the hillside movement. The monitoring program was done to understand the depth, rate and extent of the hillside movement.

Following the completion of the monitoring program, POTESTA prepared a full set of plans to remediate the landslide utilizing the information collected during the monitoring phase. The remediation included:

- The regrading of the hillside to promote global stability.
- The installation of two soldier beam and lagging walls.
- New stormwater surface controls as well as new stormwater inlets and pipe.
- Replacement of a section of damaged sanitary line and installation new manholes.

POTESTA also completed a subsurface exploration to aid in the preparation of the remediation plans. The subsurface exploration included the advancement of eight borings, and three of the borings had inclinometer easing installed for the monitoring phase.

PRIOR EXPERIENCE

NIXON RIDGE SLIP REPAIR

K&N Contracting, Inc. Moundsville, West Virginia

Potesta & Associates, Inc. (POTESTA) was hired by K&N Contracting, Inc. (KN) to monitor and provide field quality testing for the slip repair along Nixon Ridge outside of Moundsville, West Virginia. This landslide was located along a section of right-of-way owned and maintained by a natural gas distribution company.

The landslide damage caused a 36-inch high pressure gas line to break which resulted in a large explosion that scorched and damaged numerous acres. The landslide that caused this section of line to break was approximately 350 feet tall and 50 to 100 feet wide.

POTESTA was onsite during the installation of a pier wall at the toe of the slope, as well as the regrading and slip repair efforts along the right-of-way.

Due to the nature and location of the remediation work, a steep slope safety plan was prepared by POTESTA to aid in the winching of tracked equipment up and down the slope. POTESTA evaluated each piece of equipment that was utilized on the steep slope. POTESTA's calculation showed the gas company that each piece of equipment that was working on the slope could do so in a safe manner while connected to a winch capable piece of equipment.

POTESTA had a field technician onsite during the construction to complete daily logs and to perform soil density tests using a nuclear density gauge. POTESTA's field technician also provided onsite concrete testing for the pier wall and established a testing regiment for the sampled concrete.

PRIOR EXPERIENCE

Allegheny Energy Supply Company, LLC Monongalia County, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by Allegheny Energy Supply Company, LLC to develop a permit renewal application associated with a coal combustion by-product (CCB) landfill expansion. The project is located near Maidsville, West Virginia. POTESTA developed a West Virginia/NPDES permit renewal application related to the existing portion of the Class F Industrial Landfill, as well as encompassing the expansion area of just under 100 acres.

POTESTA prepared a solid waste/NPDES water pollution control permit including supplemental evaluation of candidate sites for the expansion area; field exploration involving collection of soil, geological, and hydrological data; wetland and stream impact delineation; detailed design; and preparation of construction/bid documents for the landfill expansion. In conjunction, the project included two large leachate storage ponds and a composite landfill liner system. The capacity of the expansion area is approximately 8.7 million cubic yards of CCB.

POTESTA also performed construction observation/construction administration for the landfill project. Services provided by POTESTA included soil density testing, concrete testing, nondestructive and destructive testing for the liner system. POTESTA provided between one and four construction technicians to observe the contractor's construction activities, document construction activities and construction quality assurance testing, preparation of daily field activity logs, preparation of records of quality assurance testing, take photographs of the construction, and attend weekly progress meetings. POTESTA also prepared a summary of construction report for final approval of the construction by the West Virginia Department of Environmental Protection and prepared certifications of construction for each layer of the landfill liner system.

PRIOR EXPERIENCE

Brooke County Sanitary Landfill Colliers, West Virginia

Potesta & Associates, Inc. (POTESTA) was retained by Brooke County Sanitary Landfill to provide construction quality assurance for the installation of the geosynthetic components of the liner system for Cell F-3a at the Brooke County Sanitary Landfill.

CERTIFICATION OF CELL F-3a

The liner system consisted of five geosynthetic layers placed over a prepared soil subgrade. POTESTA provided a full-time construction monitor to observe placement and witness quality control testing for the construction of the new cell. Cell F-3a was approximately 2.5 acres. POTESTA reviewed quality assurance/quality control test results provided by the manufacturer,

Construction of the 60-mil HDPE geomembrane over the prepared soil subgrade and excavation of perimeter anchor trenches,

observed and documented the arrangement of panels for the geosynthetic materials, observed placement and tying of two HDPE drainage net layers for leak detection and leachate collection, observed and documented daily trial seaming and testing for 80-mil HDPE geomembrane (primary liner) and 60-mil HDPE geomembrane (secondary liner), and observed and documented destructive and nondestructive seam testing of HDPE geomembrane panels.

HDPE drainage net was installed as the leak detection layer above the 60-mil HDPE geomembrane.

POTESTA provided construction certifications for each geosynthetic layer and prepared a final summary of construction report for submittal to the West Virginia Department of Environmental Protection.

PRIOR EXPERIENCE

LANDFILL CAPPING PROJECT

Client Confidential Kanawha County, West Virginia

Placement of the final soil cover layer over the geosynthetic layers of the cap.

Potesta & Associates, Inc. (POTESTA) was retained by a chemical manufacturing company to provide engineering services for the design of a synthetic capping system for a closed landfill disposal cell. POTESTA initially performed a site assessment to evaluate environmental conditions at the landfill. The site characterization included surveying, monitoring well abandonment, leachate and surface water sampling, leachate collection and discharge for treatment, review of historical records, site reconnaissance. leachate level monitoring, development of a conceptual closure plan, and interface with the West Virginia Department of Environmental Protection, Division of Water Resources (WVDEP-DWR).

POTESTA prepared a detailed design of the cap plan. Included were regrading of the site, construction of a leachate collection underdrain, final cap design, and drainage channel design. POTESTA prepared construction drawings, technical specifications, engineer's construction cost estimates and bid documents.

POTESTA provided construction quality assurance monitoring for the capping project. POTESTA provided a technician to monitor construction on a full-time basis. POTESTA also reviewed contractor submittals for materials, quality control tests, and payment applications.

The project included reconstruction of a leachate collection underdrain line; regrading of the site; excavation of an anchor trench; installation of a 2.2-acre gas collection layer; installation of a 2.2-acre, 40-mil HDPE cap layer; installation of a 2.2-acre drainage layer; installation of a 2.2-acre soil cover layer; construction of a drainage diversion ditch; and construction of an access road.

POTESTA prepared a final summary report and prepared submittals for the WVDEP-DWR.

Post construction photograph showing revegetated landfill cap.

PROJECT MANAGEMENT

Management Plan

POTESTA's proposed project organization chart including key staff and subcontractors was presented previously in this EOI. Work will be performed out of POTESTA's Morgantown, West Virginia office or on site as may be required.

POTESTA's professional, technical, and support staff have extensive experience on WVDEP-AML reclamation projects including many subsidence stabilization, coal refuse reclamation, mine portal reclamation, drainage control, landslide abatement, and other AML problem areas. We are well qualified to serve WVDEP on this project. We stand ready to commit the personnel and resources required to complete this project in a timely, technically sound, and cost-efficient manner. POTESTA's large staff size will allow us to work on this project on an accelerated schedule if necessary.

POTESTA's principal-in-charge will be responsible for contract management (administration) and shall coordinate and direct all aspects of the project. The principal-in-charge will review the proposed project, work with the project manager to assemble a project team and appoint key staff to develop a proposed scope of work. The principal-in-charge and project manager will visit the site with WVDEP, AML to review site conditions and the proposed services to be completed and guide the preparation of a detailed proposal and cost estimate. A written proposal including a detailed scope of work and an associated manhour and cost estimate will then be prepared and submitted to WVDEP, AML for review. The project manager will review the proposal with the WVDEP, AML including a task-by-task discussion of work items and the related costs. Upon WVDEP, AML's approval of the proposal, the project manager will arrange for the start of project activities. The principal-in-charge will provide the project manager the required staff and resources necessary to complete the project activities, will review the project budget and schedule during performance of the project, and will provide a final QA/QC review of the documents prior to submittal to the WVDEP, AML. Mr. Dana Burns, P.E. will serve as the principal-in-charge on this project. Day-to-day project activities for this project will be performed under the direction of our project manager, Mr. Tim Rice. The project manager will develop a detailed step by step project work plan so that the project activities are completed in a correct manner, on budget, and on time. They will also review work products at intermediate points and prior to project completion. They will conduct project status reports which may include weekly meetings, memos, or telephone calls with the WVDEP, AML project manager as required. The project manager will supervise the day-to-day work in progress, will coordinate with POTESTA's subcontractors to provide necessary services, and review work products at intermediate points and prior to submittal to the WVDEP, AML.

POTESTA will utilize the appropriate classification of staff to conduct activities required for the project. Our large, experienced staff allows us to respond quickly, provides flexibility, and will provide for the opportunity of high-level input from in house experts on complex multi-disciplinary projects. Our normal method of staffing projects is to assign a small project team with total responsibility for completion of the work to the client's satisfaction and budget. Where necessary, the team can draw on the expertise available within POTESTA's large staff. POTESTA offers a large staff with the efficiency and rates normally associated with a small firm.

PROJECT MANAGEMENT

Project Budget Control

The project manager will be responsible for monitoring the project budget and keeping the principal-in-charge and WVDEP informed of its status. POTESTA's staff enters time into POTESTA's InFocus computer system on a daily and/or weekly basis. POTESTA's project managers can access InFocus at any time, thus allowing "real time" control of project costs. In addition, field representatives routinely keep track of subcontractor costs on a daily basis. Thus, we can, in effect, keep track of the total project costs on a weekly basis. Our subcontractors commonly invoice at monthly intervals and there is seldom a discrepancy between our field representative's pay items and our subcontractor's invoice.

Schedule Control

Direct responsibility for schedule control lies with the project manager. Initially, the project manager will review schedule requirements to see how they can be achieved given the anticipated scope of work. As the project progresses, the project manager will monitor progress and compare it with the established schedule on a weekly basis keeping the principal-in-charge aware of the schedule's status. In this manner, the principal-in-charge can make staff adjustments to allow the project manager to maintain the project schedule. If circumstances develop that make it impossible to maintain the project schedule, the project manager will contact the WVDEP project manager to develop a mutually acceptable adjustment to the schedule and/or work plan.

Location of Facilities

POTESTA will complete the work under this contract in our Morgantown, West Virginia office. Our subcontractors are located in the Morgantown area or other strategic locations and are quite familiar with work anticipated for this project.

Quality Assurance/Quality Control

Submittals to the WVDEP will be reviewed and commented on by the project manager and the principal-in-charge prior to submittal to the WVDEP. Both the project manager and the principal-in-charge have worked on numerous WVDEP, AML projects, and thus understand the level of detail and expectations for WVDEP, AML projects. POTESTA utilizes standardized Quality Assurance/Quality Control (QA/QC) practices such as consistency checks, color coding of checked copies/calculations, and review of method of measurements versus quantity tallies to meet QA/QC expectations.

PROJECT MANAGEMENT

Certificate of Liability Insurance

POTESTA carries a full line of insurance coverage including general liability, errors and omissions, and workers' compensation.

CLOSING

We look forward to continuing to serve WVDEP, AML on the Morgantown Airport Subsidence Phase II Project and bring it to completion. Our staff has an abundance of experience with AML reclamation projects throughout West Virginia and will make our experienced personnel immediately available for this project. Our commitment is to provide quality service, rapid response, project completion, and to exceed your expectations for services performed under this project. We believe the track record of our professionals demonstrates our abilities and we look forward to once again serving WVDEP, AML and our great Mountain State.

12. A. Is your firm's personnel experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering? \boxtimes YES \square NO	
Description and Number of Projects: POTESTA's principal-in-charge, Dana L. Burns, P.E. and project managers, Messrs. Mark Kiser, P.E., Terence Moran, P.E., and Tim Rice, EIT, have each worked on over 70 AML projects dating back to 1986, including landslide exploration and abatement, mine subsidence stabilization projects, acid mine drainage treatment, refuse piles, mine drainage, mine portal seals, and water supply projects. POTESTA has 35 plus staff with experience on AML projects. Many of the previous AML projects won reclamation awards including: Bear Run Refuse; Kimball Refuse Piles; Owings Mine Complex; Pine Creek (Omar) Refuse; Turner-Douglas Complex; and Grass Run Refuse. These projects were completed by Dana Burns, Mark Kiser, and Terry Moran.	
B. Is your firm experienced in Soil Analysis? ⊠ YES □ NO	
Description and Number of Projects: POTESTA's staff is experienced in all aspects of soil analysis, including geotechnical and environmental soil analysis. POTESTA's staff has worked on 30+ AML projects involving soil science, including slope stability and revegetation. POTESTA is experienced in soil analysis as it relates to this project. POTESTA's principal engineers have developed and implemented plans for nutrient and lime requirements testing to determine revegetation requirements, acid-base accounting of rock samples to evaluate the potential of excavated materials to generate acidity, and analysis of coal refuse to determine the potential for reprocessing.	1
C. Is your firm experienced in hydrology and hydraulics? $oxtimes$ YES \Box NO	
Description and Number of Projects: POTESTA's staff is experienced in hydrology and hydraulics as it relates to AML projects in West Virginia. POTESTA's staff has worked on over 70 AML projects that involved sizing channels, culverts, and waterlines. POTESTA has developed well over 100 storm water management plans for mines, industrial facilities, and new site development projects throughout West Virginia.	,
D. Does your firm produce its own Aerial Photography and Develop Contour Mapping? $oxtimes$ YES \Box NO	
Description and Number of Projects: POTESTA's staff routinely develop contour mapping for use with design. We subcontract aerial mapping development but complete the ground control necessary for developing mapping. On smaller projects, we perform the topographic survey work and subsequently develop the contour mapping. POTESTA has completed 200+ mapping development projects in the last five years.	
E. Is your firm experienced in domestic waterline design? (Include any experience your firm has in evaluation of aquifer degradation as a result of mining.)	
Description and Number of Projects: POTESTA's staff is exceptionally experienced at domestic waterline design. POTESTA's staff has worked on waterline designs and water treatment plant designs for municipalities, WVDEP AML, and private utilities. POTESTA's staff includes one project manager, Terence C. Moran, P.E., who has managed design of numerous AML waterlines, including 20+ mile Cow Creek-Sarah Ann Extension and 30+ mile/2,800 GPM Water Treatment Plant Mill Creek Regional Water Supply project. We are also exceptionally well qualified to evaluate aquifer degradation, including aquifer degradation by AML sites. Our staff has worked on 80+ evaluations of aquifer degradation. POTESTA has performed over 40 water line design projects totaling several hundred miles of installed water line.	r
F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design? $oxtimes$ YES \Box NO	
Description and Number of Projects: POTESTA has completed numerous projects addressing acid mine drainage evaluation and abatement design. POTESTA's staff has worked on 30+ projects involving AMD evaluation and 10+ projects involving AMD abatement design. In both cases, many of the projects involved AML sites. We have worked extensively with Anker Energy, Dominion Generation, and the WVDOH, among others with acid-base accounting evaluations and the subsequent development of plans to prevent/abate AMD generation. Additionally, we worked	Ĺ

19. Use this space to provide any additional information or description of resources supporting your firm's qualifications to perform work for the West Virginia Abandoned Mine Lands Program.

Potesta & Associates, Inc.'s (POTESTA) Expression of Interest for the Morgantown Airport Subsidence Phase II Project supports this questionnaire in providing POTESTA's qualifications and resources for serving the West Virginia Department of Environmental Protection, Office of Abandoned Mine Lands and Reclamation on this project. In summary, POTESTA:

- 1. Has assembled a team of in-house personnel and subcontractors who have historically worked on AML projects. POTESTA's in-house staff includes 16 Professional Engineers including 11 in the primary office, 3 in Morgantown, and 1 in Winchester. Our staff has worked on over 160 AML projects for WVDEP on four different WVDEP AML contracts dating back to the mid-1980s.
- 2. Has a large local staff with a unique multidiscipline technical emphasis (including civil engineering, structural engineering, geological engineering, hydrological engineering, mine land reclamation, with a strong emphasis on water quality and aquatic life and toxicity).
- 3. Has 20+ employees with experience on WVDEP AML projects. POTESTA employees have worked on and have experience in the following type of WVDEP AML projects:
 - Passive Acid Mine Drainage Treatment
 - Assessment of Contamination (e.g., PCBs, asbestos)
 - Demolition of Structures
 - Diversion Structures
 - Identifying Acid Mine Drainage
 - Inventory of Residential Water Supplies
 - Water Supply Feasibility Studies and Design
 - Mine Fires

- Landslides
- Reclamation of Refuse Piles
- Sealing Mine Portals
- Stream Relocations
- Subsidence Assessment and Remediation
- USCOE Permitting
- Wetland Assessments
- 4. Can handle a substantial AML workload (more than our competitors) since POTESTA has three Professional Engineer (P.E.) Project Managers each with experience on 80+ AML projects.
- 5. Offices located in Charleston, WV near WVDEP's Charleston office, office in Morgantown, WV close to WVDEP Bridgeport office, and support office in Winchester, Virginia.
- 6. Staff has had a positive relationship with WVDEP, AML in the past, which we would like to continue.

DESIGNATED CONTACT: Vendor appoints the individual identified in this Section as the Contract Administrator and the initial point of contact for matters relating to this Contract.

(Printed Name and Title) Tim Rice, Project Manager
(Address) 125 Lakeview Drive, Morgantown, WV 26508
(Phone Number) / (Fax Number) (304) 225-2245 / (304) 225-2246
(email address) tmrice@potesta.com

CERTIFICATION AND SIGNATURE: By signing below, or submitting documentation through wvOASIS, I certify that: I have reviewed this Solicitation/Contract in its entirety; that I understand the requirements, terms and conditions, and other information contained herein; that this bid, offer or proposal constitutes an offer to the State that cannot be unilaterally withdrawn; that the product or service proposed meets the mandatory requirements contained in the Solicitation/Contract for that product or service, unless otherwise stated herein; that the Vendor accepts the terms and conditions contained in the Solicitation, unless otherwise stated herein; that I am submitting this bid, offer or proposal for review and consideration; that this bid or offer was made without prior understanding, agreement, or connection with any entity submitting a bid or offer for the same material, supplies, equipment or services; that this bid or offer is in all respects fair and without collusion or fraud; that this Contract is accepted or entered into without any prior understanding, agreement, or connection to any other entity that could be considered a violation of law; that I am authorized by the Vendor to execute and submit this bid, offer, or proposal, or any documents related thereto on Vendor's behalf; that I am authorized to bind the vendor in a contractual relationship; and that to the best of my knowledge, the vendor has properly registered with any State agency that may require registration.

By signing below, I further certify that I understand this Contract is subject to the provisions of West Virginia Code § 5A-3-62, which automatically voids certain contract clauses that violate State law; and that pursuant to W. Va. Code 5A-3-63, the entity entering into this contract is prohibited from engaging in a boycott against Israel.

NOTE: This addendum acknowledgement should be submitted with the bid to expedite document processing.

ABANDONED MINE LANDS (AML) CONTRACTOR INFORMATION FORM

You must complete this form for your AML contracting officer to request an eligibility evaluation from the Office of Surface Mining Reclamation and Enforcement (OSMRE) to determine if you are eligible to receive an AML contract. This requirement can be found under OSMRE's regulations at 30 CFR 874.16. NOTE: This form must be signed and dated within 30 days of submission to be considered for a current bid.

Business Name: Potesta & Associates, Inc. 311509066 Tax ID #: 7012 MacCorkle Avenue, SE Address: Charleston, WV 25304 City, State, & Zip: Phone Number: (304) 342-1400 Email Address: dlburns@potesta.com

Part B: Obtain an Organizational Family Tree (OFT) from the Applicant Violator System (AVS)

If you plan to certify the existing AVS information or submit updates under Part C, you must include an OFT. Instructions for downloading an OFT from the AVS can be found at: https://www.osmre.gov/sites/default/ files/2022-02/OMB%201029-0119%20instructions.pdf. If you require assistance you may contact the AVS Office by phone at: 800-643-9748, or by email at: avshelp@osmre.gov.

Part C: Certifying and updating information in the AVS

Part A: General Information

Sele

Select	one of the options, follow the in	nstructions for the selected option,	sign, and date below.
Ι, .	Dana L. Burns (Print Name)	, have expres	ss authority to certify that:
	1. Our business is listed in the this option, you must attack	AVS. The information is accurate, on the AVS to the state of the AVS to the A	complete, and up to date. (If you select his form). <u>Do not</u> complete Part D.
	2. Our business is in the AVS. attach an Entity OFT from corrected information.	The information needs to be update the AVS to this form). Complete F	ed. (If you select this option, you must Part D to provide the missing or
