ATTN: MR. JOSEPH E. HAGER III, BUYER

Electronic Upload via wvOASIS

RE: WVDNR — Calvin Price State Forest Storage Building

Dear Mr. Hager and Members of the Selection Committee:

The Calvin Price State Forest Storage Building project represents an important investment in the long-term functionality and stewardship of the forest, and Thrasher is excited for the opportunity to partner with the West Virginia Division of Natural Resources on its successful delivery. This facility will play a critical role in supporting day-to-day operations within the forest, and we recognize the importance of providing a durable, well-designed solution that meets operational needs while respecting the surrounding natural environment.

Thrasher has a longstanding relationship with and dedication to the Division of Natural Resources, and while much of our past work has focused on environmental and site-related projects, this effort presents an exciting opportunity to demonstrate the full breadth of our services — particularly our architectural capabilities. Our team brings extensive experience in the design of maintenance facilities, steel buildings, site development, and construction administration, all supported by in-house engineering disciplines that allow us to deliver coordinated, efficient, and cost-effective solutions.

We also understand the importance of local knowledge and project presence. Thrasher is currently providing services for the boat launch project in Renick, as well as a breadth of projects for other clients in the area, placing our team in close proximity to the project site on a regular basis. This familiarity with the region, combined with our ongoing work nearby, allows us to be responsive, engaged, and readily available throughout the design and construction phases of this project.

Thank you for taking the time to review our qualifications for this effort. We look forward to the opportunity to discuss this project in more detail and demonstrate how The Thrasher Group can deliver a successful outcome that supports the mission and operational goals of the West Virginia Division of Natural Resources.

Sincerely,
The Thrasher Group, Inc.

Diverse services that
help communities grow.

THRASHER'S GOT IT

A critical component of a successful project is establishing a clear understanding of the owner's needs, operational constraints, and long-term vision. Thrasher's team has thoroughly reviewed the project background and objectives for the proposed heavy equipment maintenance and storage facility in Calvin Price State Forest and is confident in our ability to deliver a practical, durable, and code-compliant solution. With extensive experience in facility design, site development, and construction administration — particularly in environmentally sensitive settings — Thrasher is well prepared to support the Division of Natural Resources throughout all phases of this project, from initial investigation through construction completion.

We understand the goals for the design and construction administration of a 40 ft. x 60 ft. steel maintenance facility and will address them as follows:

GOAL 2.1

- » Thrasher will begin the project by reviewing all available existing plans, site conditions, and known operational requirements for the facility. Our team will work closely with the Division of Natural Resources to gain a clear understanding of current and concurrent operations and to develop a design approach that minimizes disruption to ongoing activities. Through regular communication and coordination meetings, we will identify phasing strategies, site access considerations, and construction sequencing concepts that allow the project to be implemented efficiently while meeting all stated objectives.

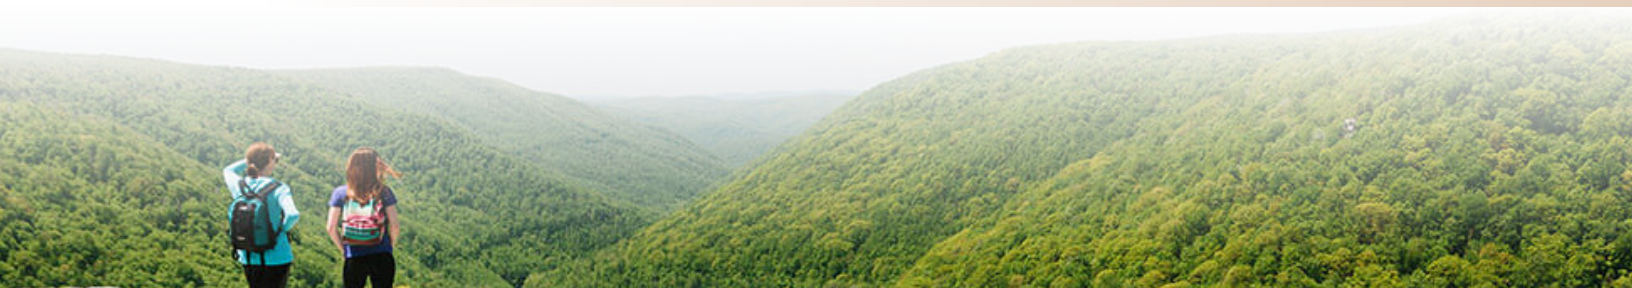

GOAL 2.2

- » As part of the comprehensive design process, Thrasher will provide all necessary professional services to design the proposed maintenance and storage facility in accordance with the Division of Natural Resources' needs, applicable laws, and current building codes. This will include coordinating a geotechnical investigation through our partners at NGE to evaluate subsurface conditions and soil bearing capacity, designing a foundation system capable of supporting heavy equipment loads, and developing site grading plans. Utility design will address power, water, and waste management needs, along with stormwater runoff and erosion and sediment control measures appropriate for the disturbed site conditions. Throughout the design process, Thrasher will remain focused on delivering a solution that meets performance requirements while adhering to established budget and schedule constraints.

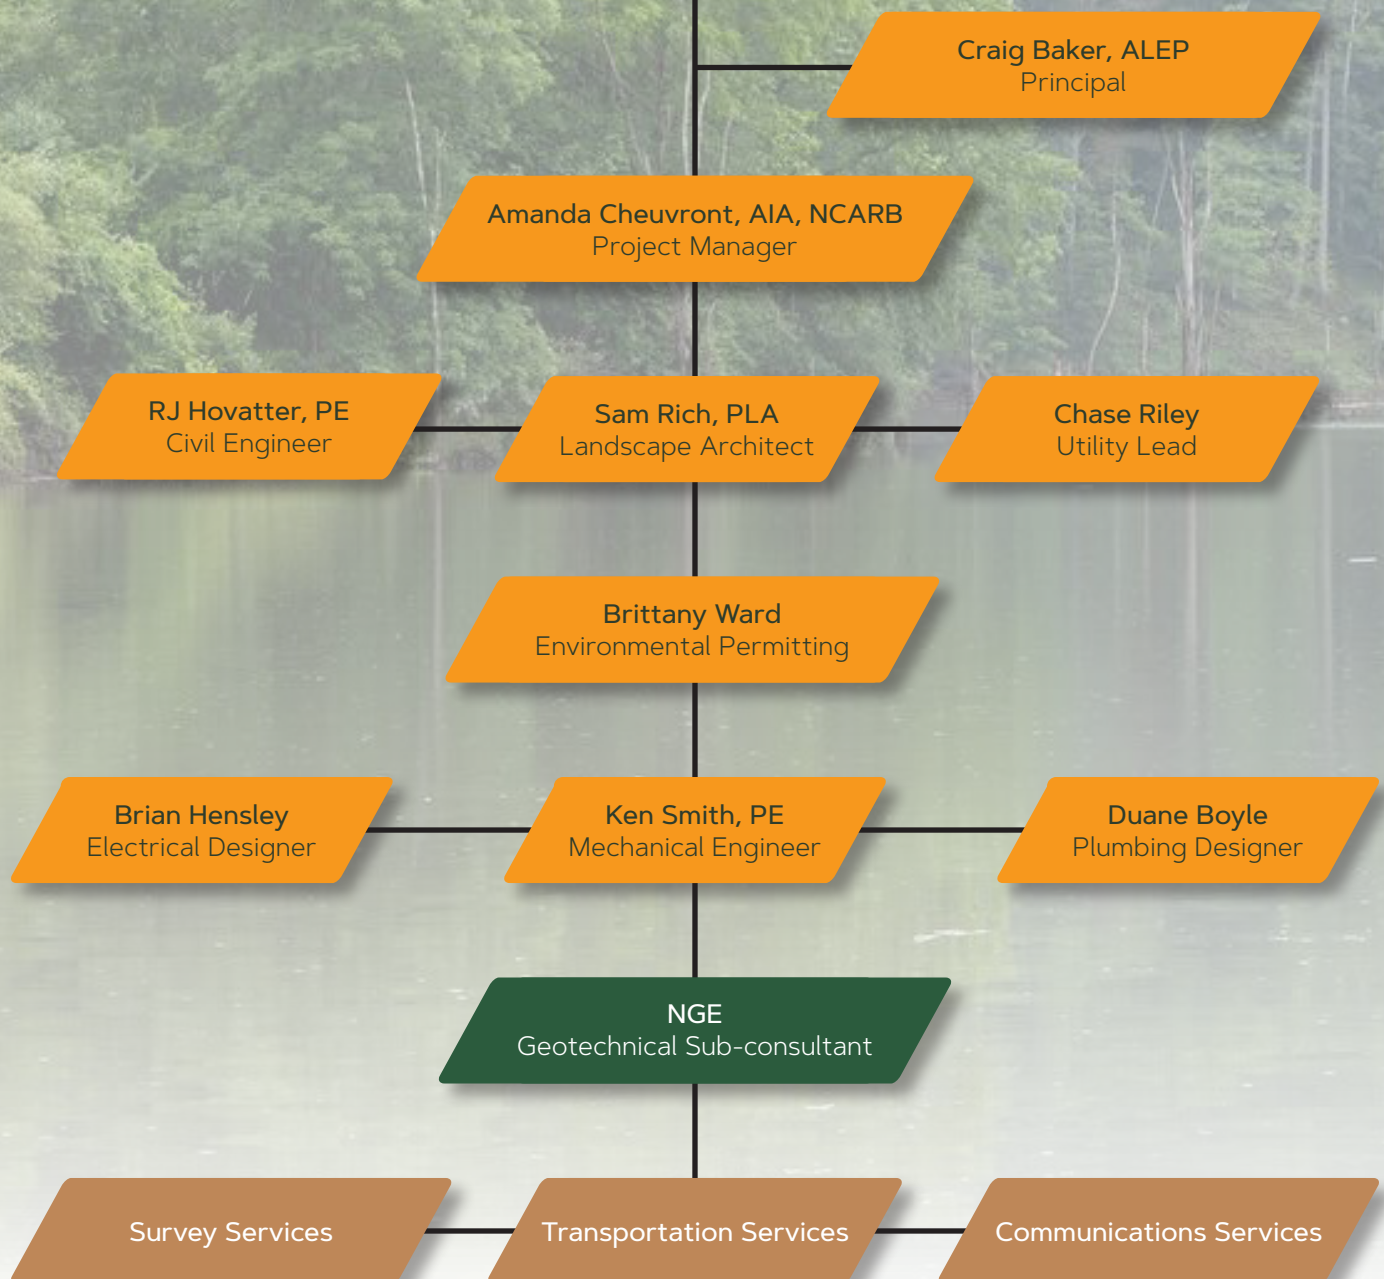

GOAL 2.3

- » Thrasher will provide Construction Contract Administrative Services through experienced and qualified professionals to support the Division of Natural Resources during construction. Our team will assist with contractor coordination, review of submittals and shop drawings, responses to requests for information, and periodic site observations to help ensure construction is consistent with the contract documents. We will maintain clear communication with all stakeholders, provide timely documentation, and proactively address issues as they arise to support a smooth construction process and successful project completion.

WEST VIRGINIA DNR

CRAIG BAKER, ALEP

PRINCIPAL

Craig Baker, ALEP, serves as the leader of the Architecture Division at The Thrasher Group. An experienced designer and manager with an extensive background working with clients to plan, design, and manage projects both large and small, he works hand-in-hand with staff and clients to ensure projects remain on time and within budget.

Throughout his tenure at Thrasher, Craig has worked on a wide variety of projects, including industrial facilities, administrative office spaces, recreational spaces, academic building design, government buildings, military facilities, residences, and medical facilities. This well-rounded range of experience has enabled him to be able to build strong relationships with clients across the Mid-Atlantic Region, continuously providing sound design services on a diverse array of projects. His dedication to each project he's a part of and his ability to understand his client's vision and goals for their projects has made him a highly sought-after designer and manager.

SAM RICH, PLA

LANDSCAPE ARCHITECT

Samuel Rich, PLA, leads the Planning and Outdoor Recreation efforts at The Thrasher Group, where he oversees design for recreational, commercial, residential, municipal, and industrial projects. He and his team guide clients from initial development through construction, offering services from site evaluation and cost estimating to final design and project marketing. One of his specialties is visualizing and evaluating design alternatives, enabling him to effectively communicate what a project will look like and how it will function long before construction begins.

Sam has worked on projects with a regional and community-based planning focus, including recreational trail and water access initiatives, as well as downtown and city-wide beautification efforts across the Mid-Atlantic Region. His broad experience, combined with a passion for community improvement and economic development, has made him a highly sought-after Landscape Architect, manager, and valued member of the Thrasher team.

RJ HOVATTER, PE

CIVIL ENGINEER

Richard 'RJ' Hovatter, PE, is an experienced Project Manager in Thrasher's Land Development Market. He brings expertise in a range of civil engineering work, including site design, slip repair, well pad design, pipeline routing, stormwater management, utility extensions, and Abandoned Mine Land reclamation. He has spent a large portion of his career evaluating and solving problems for both public and private clients, developing feasible, sustainable, and economically friendly solutions.

During his time at Thrasher, RJ has solidified his expertise in site development. His hands-on experience and diverse portfolio of work have given him insight into the challenges that come with these projects. He looks at a project site with a thorough understanding of the terrain, can identify potential issues with proposed designs, and develop unique solutions for his clients.

CHASE RILEY

UTILITY LEAD

Chase Riley is a Staff Engineer in Thrasher's Water Resources Market. He works with public utility clients across the Mid-Atlantic region, helping to solve complex water and sanitary sewer problems. His role primarily consists of the preparation of Preliminary Engineering Reports, cost estimates, submittal reviews, contract agreements, and design of water and sewer utilities.

Before his work in the office, Chase spent two summers interning as a Resident Project Representative for the Water Resources Department at Thrasher, inspecting and reporting on the installation of water and sewer systems in the North Central, West Virginia area. This experience is an asset to his current role, giving him in-depth knowledge of the construction process and a clear understanding of what should be included in his projects' daily reports.

BRITTANY WARD

ENVIRONMENTAL SCIENTIST

Brittany Ward is an Environmental Project Manager at The Thrasher Group, supporting water resources, land development, Abandoned Mine Lands, and transportation programs. She has 17 years of experience in environmental permitting, project and business management, field survey analysis, and has a particular focus on wetlands.

Brittany specializes in project oversight, managing field teams and contractors to collect wetland, stream, environmental media, and site condition data for permitting and site characterization. She brings expertise in federal, state, and local permitting, GIS, Autodesk CAD, biological surveys, water resource management, mitigation determinations, and NEPA development to help clients identify optimal solutions. She also manages project budgets, staff scheduling, quality control, and timelines to deliver consistent, professional results for every client.

DUANE BOYLE

PLUMBING DESIGNER

Duane Boyle, Plumbing Designer, brings Thrasher value in several capacities. He has provided plumbing designs for various project types over the years, such as tenant build-outs, schools, assisted living and memory care facilities, and warehouses. Several of Duane's daily duties consist of performing plumbing calculations, fixture selections, attending project development meetings, checking shop drawings, and coordinating with all other disciplines. Most of his work involves providing these design services from the beginning to end of a project using the most current versions of AutoCAD and Revit. Duane is capable of providing field verified documents of all existing plumbing systems on site and hand drawn existing systems for use in the design and development of new construction documents. He also performs field inspections and generates field reports of observations.

GEOTECHNICAL ENGINEERING & DRILLING SERVICES

Geotechnical Engineering

Geotechnical engineering is one of NGE's core areas of practice. Our highly qualified and experienced staff of geotechnical engineers, geologists, and technicians enables us to provide practical and economic solutions to a variety of geotechnical problems. We are especially experienced and qualified in dealing with the types of geotechnical issues typically encountered in the Appalachian region.

Some of the geotechnical engineering services NGE provide include:

- Commercial development geotechnical investigations and reports
- Shallow and deep foundation analysis
- Highway and bridge geotechnical studies
- Well pads and compressor stations geotechnical investigations
- Water storage tank investigations
- Freshwater and wastewater impoundment investigations
- Slope stability studies
- Fill embankment analysis and design
- Cut slope analysis and design
- Retaining wall design
- Landslide investigations and remedial designs
- Laboratory soil testing
- Geotechnical instrumentation
- Mine subsidence investigations
- Pile drivability studies
- Groundwater and seepage studies

Geotechnical Drilling Services

In addition to geotechnical engineering services, NGE also offers geotechnical drilling and exploration services with in-house experienced drilling personnel. Equipment available for use includes track-mounted drill rigs which can be used to access most sites, portable hand-operated equipment for difficult to reach sites, and dynamic cone penetrometer equipment. Some of the drilling and exploration services offered include:

- Test borings with Standard Penetration Sampling
- Rock coring and sampling
- Shelby tube sampling
- Piezometer and monitoring well installation
- Slope inclinometer installation
- Dynamic cone penetrometer testing
- Portable drilling equipment for difficult site access

The Thrasher Group has partnered with NGE on numerous projects over the years, building a strong working relationship grounded in trust, collaboration, and proven performance. Through this long-standing partnership, NGE has consistently demonstrated reliability, responsiveness, and a clear understanding of project objectives. Based on this experience, Thrasher has full confidence in NGE's ability to successfully perform on the DNR Storage Building project and deliver high-quality results on schedule.

Below is a sampling of projects on which Thrasher and NGE have partnered:

PROJECT HISTORY:

Doddridge Athletic Complex

» *Doddridge County, WV*

Scouting America Welcome Center

» *Fayette County, WV*

City of Beckley Police Department

» *Raleigh County, WV*

America's Best Block Facility

» *Mineral County, WV*

Jefferson County Airport

» *Jefferson County, WV*

Huntington Tri-State Airport

» *Wayne County, WV*

Bridgeport CVB Farmers Market

» *Harrison County, WV*

Young Life Wild Ridge Camp

» *Nicholas County, WV*

WVU Milan Puskar Stadium Renovations

» *Monongalia County, WV*

WVDVA Beckley Veterans Home

» *Raleigh County, WV*

Scouting America JW Marriott Leadership Center

» *Fayette County, WV*

City of Summersville Recreation Complex

» *Nicholas County, WV*

MULTI-PURPOSE BUILDING

DODDRIDGE COUNTY SCHOOLS

The Thrasher Group has worked with Doddridge County Schools on a number of projects over the years. One of our recent projects is the creation of a new, multi-purpose building for the County that provides both a maintenance facility and several vocational classrooms.

The facility houses space for maintenance and staff. This side of the building is primarily used to house buses, facility vehicles, and related staff members. It also supports one of the new vocational classes that is housed in this building – Diesel Mechanics.

In addition to the diesel class, this building features classes for welding, digital media, and oil and gas. These classrooms have been designed with the newest technology in mind, while meshing the look and feel of the surrounding educational buildings.

This project was a cross-divisional effort for Thrasher. Our Architecture Division led the effort, providing design services, while our Survey Division provided traditional survey and aerial mapping for the project. Our Utilities Division was also involved.

DOMINION HOPE

Thrasher was hired by Dominion Transmission to do a design/build project located along Goshen Road in Monongalia County, WV. The project consisted of 17,000 SF and houses an administrative office space, storage areas, garage, and a welding shop.

For this \$4 million dollar project, Thrasher was responsible for all of the QAM in addition to the design, site work, survey, and construction management.

Thrasher and Harper teamed up for the HVAC, plumbing, electrical, fire alarm, and sprinkler system for this project.

MAINTENANCE BUILDING

STONEWALL RESORT

The Thrasher Group partnered with Stonewall Resort to develop comprehensive plans for a new Maintenance Building to support the Resort's ongoing operational needs. Site selection for the facility presented several challenges during the design phase, requiring additional survey work as well as environmental and regulatory reviews. Due to the sensitive nature of the site, coordination and approvals were required from the U.S. Army Corps of Engineers (USACE), the West Virginia Division of Natural Resources (DNR), and the West Virginia Department of Environmental Protection (DEP). Thrasher worked closely with the Resort throughout this process, preparing and managing the necessary

plans, technical files, and documentation to successfully navigate agency requirements and advance the project.

The Maintenance Building was thoughtfully designed to improve efficiency and functionality for Resort staff. The layout allows vehicles and maintenance equipment to be driven directly into the building for routine cleaning, servicing, and repairs. Supporting spaces—including offices, restrooms, a dedicated chemical room, and multiple storage areas—are strategically arranged along one side of the building to centralize operations. This configuration ensures all essential services are contained within a single, well-organized facility, enhancing workflow, safety, and day-to-day convenience for maintenance personnel.

NEW EMS FACILITY

BROOKE COUNTY COMMISSION

The Thrasher Group was hired to design a new headquarters for Brooke County EMS. The new 5,179 square foot facility houses the emergency management office, a billing office, a conference room, 4 bunk rooms, men's and women's locker rooms, a large day room, a special decontamination area, a secure medication storage area, a workout

area, and 4 apparatus bays. Above the apparatus bay is a large storage area for County Commission use. The building is constructed using a combination of metal studs and masonry with pre-engineered wood trusses. Exterior materials include Metal building panels with imitation stone veneer and a metal roof. The project is currently under construction and is expected to be completed in the summer of 2024.

NEW BUS GARAGE

DODDRIDGE COUNTY SCHOOLS

The Thrasher Group provided comprehensive architectural and engineering design services for the new Board of Education bus garage, a facility intended to support the storage, servicing, and routine maintenance of the county's school bus fleet. Thrasher was responsible for the full development of the project, including schematic design, coordination of building systems, and preparation of complete construction documents.

The project consists of a pre-engineered metal building totaling more than 6,000 square feet and features three full-length, drive-through service bays designed to accommodate efficient bus circulation and maintenance operations. The facility includes dedicated storage areas for equipment and parts, a mechanic pit to support vehicle inspections and repairs, and administrative office space to support daily operations. Employee amenities such as restrooms were incorporated to improve functionality and comfort for staff. The overall design emphasizes durability, operational efficiency, and long-term serviceability to meet the ongoing needs of the school district.

MAINTENANCE FACILITY

PEA RIDGE PUBLIC SERVICE DISTRICT

The Thrasher Group was selected by the Pea Ridge Public Service District to design and oversee construction of a new maintenance facility to support operations at the District's wastewater treatment plant. Having partnered with Thrasher on numerous wastewater improvement projects over the years, Pea Ridge PSD was confident in the firm's ability to deliver a facility that would enhance efficiency, reliability, and long-term system performance.

The resulting two-story, 1,500-square-foot building was designed to serve as a centralized office and maintenance hub for daily PSD operations. The layout includes dedicated

administrative space, staff work areas, and operational support rooms arranged for optimal workflow. To meet the District's maintenance and equipment needs, the building features two full-size garage bays capable of housing service vehicles and equipment, as well as five covered exterior storage bays that provide secure, weather-protected space for tools, parts, and materials.

Thrasher provided full-service design, permitting, and construction-phase services to ensure the facility met the District's operational and budgetary goals. Delivered at a construction cost of approximately \$900,000, the project reflects a cost-effective, durable, and thoughtfully designed solution that supports the ongoing needs of the PSD.

NEW BUS GARAGE

HARRISON COUNTY SCHOOLS

The Thrasher Group was hired by the Harrison County Board of Education to provide design services for a new, centrally located bus maintenance facility to better support daily transportation operations. The project consists of a 3,500-square-foot, three-bay pre-engineered metal building strategically sited adjacent to the existing County maintenance facility to

maximize efficiency and shared resources. The facility is designed to accommodate routine maintenance and repair of the county's bus fleet, with bays sized for full-size school buses and layouts that support safe vehicle circulation and workflow. Thrasher's scope included coordination with county staff and mechanics to ensure the building's configuration, systems, and functionality meet operational needs while providing a durable, low-maintenance solution for long-term use.

VARIOUS GARAGE PROJECTS

BERKELEY COUNTY FIRE BOARD, CITY OF BRIDGEPORT, CITY OF BECKLEY, & CITY OF LEWISBURG

The Thrasher Group has a proven record of designing public safety facilities built to accommodate heavy equipment, complex site circulation, and demanding 24/7 operations. Through a full-service, integrated approach, Thrasher delivers durable, high-performance fire stations tailored to the needs of first responders.

Thrasher has designed multiple fire stations across West Virginia, ranging from 10,000 to 20,000 square feet, featuring four-bay and drive-through apparatus garages, administrative and training spaces, bunk rooms, fitness

areas, and support facilities. These projects emphasize efficient vehicle movement, safe separation of operations, and infrastructure capable of supporting large fire and EMS apparatus. Site designs incorporate multiple access points, drive-through circulation, utility coordination, and compliant stormwater management systems.

Structural and building systems are engineered for long-term performance under heavy use, including steel-framed construction, durable exterior materials, radiant-heated apparatus floors, tempered garages, and efficient mechanical, electrical, and plumbing systems. Collectively, these projects demonstrate Thrasher's expertise in designing facilities that reliably support heavy equipment, operational efficiency, and the health and safety of first responders.
