DEP 13010 addendum

Pre-Bid questions and answers

- Q With regard to timber, can we wind row the timber?
A Logs will be stacked for the landowner, while smaller brush and tree tops will have to be burned on site.
- Q With regard to the limestone fill area, how deep do you anticipate the fill will be?
A Approximately ten to twelve feet and leave the bottom of the fill on slope to drain, we just want it to follow the pavement. Additionally, it was brought up by DEP that if you project from the original tree line, the ten to twelve feet would be a conservative estimate and we anticipate the pavement to be more shallow than that.
- Q Can we use sandstone for the grouted riprap section of the freshwater bypass channel?
A Yes, for the grouted section only. All non-grouted areas need to be limestone riprap.
- Q Does the freshwater bypass channel stay on the bank side of the hollow?
A Yes, the specs require that the channel stay on the left side facing downstream and that the left hillside be utilized as the left side of the channel.
- Q What is the freshwater bypass channel constructed of?
A Standard limestone riprap except for the grouted section, which can be sandstone.
