Attention: Mr. Chuck Bowman, Buyer

Re: Expression of Interest to Provide Professional Design Services for the
Church Creek/Manown Highwall Project, Preston County, West Virginia
RFQ Number DEP14388

Dear Mr. Bowman:

Michael Baker Jr., Inc. (Baker) is pleased to submit this Expression of Interest to provide professional design engineering services for the Church Creek/Manown Highwall Project. To meet your design requirements, Baker has assembled a team of experienced personnel who have performed on previous similar assignments for the West Virginia Department of Environmental Protection. Our proposed design team members have also provided engineering services for numerous abandoned mine land reclamation and related projects over the years for a variety of clients as reflected in the attached documents.

We have illustrated our ability to deal with multiple projects without a reduction to the level of quality and service to the Department. We have selected Triad Engineering of Morgantown, West Virginia to assist us as required in areas of mapping, surveying, and exploratory drilling. We feel they will complement Baker as we proceed with tasks assigned under this contract.

Baker's staff is experienced in all aspects of AML/AMD projects. Baker has been providing engineering services for abandoned mine lands since the Federal government first enacted AML legislation. We have provided these Services for the West Virginia Department of Environmental Protection, the Pennsylvania Department of Environmental Protection, Ohio Department of Natural Resources, and the U.S. Office of Surface Mining to name a few. Our on-going experience since 1983 with WVDEP gives us the confidence to assure you our assignments will be completed on time and within established budgets.

This submittal illustrates our qualifications and experience to deal with this assignment of work arising from this contract. If you have any questions or require additional information concerning our qualifications, experience or approach, please contact me at 724.495.4273.

Sincerely,

MICHAEL BAKER JR., INC.

Gregory P. Hynes, P.E.
Project Manager

PURCHASING AFFIDAVIT

West Virginia Code §5A-3-10a states: No contract or renewal of any contract may be awarded by the state or any of its political subdivisions to any vendor or prospective vendor when the vendor or prospective vendor or a related party to the vendor or prospective vendor is a debtor and the debt owed is an amount greater than one thousand dollars in the aggregate

DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, limited liability company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. "Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceeds five percent of the total contract amount.

EXCEPTION: The prohibition of this section does not apply where a vendor has contested any tax administered pursuant to chapter eleven of this code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

LICENSING: Vendors must be licensed and in good standing in accordance with any and all state and local laws and requirements by any state or local agency of West Virginia, including, but not limited to, the West Virginia Secretary of State's Office, the West Virginia Tax Department, West Virginia Insurance Commission, or any other state agencies or political subdivision. Furthermore, the vendor must provide all necessary releases to obtain information to enable the Director or spending unit to verify that the vendor is licensed and in good standing with the above entities.

CONFIDENTIALITY: The vendor agrees that he or she will not disclose to anyone, directly or indirectly, any such personally identifiable information or other confidential information gained from the agency, unless the individual who is the subject of the information consents to the disclosure in writing or the disclosure is made pursuant to the agency's policies, procedures and rules. Vendors should visit www.state.wv.us/admin/purchase/privacy for the Notice of Agency Confidentiality Policies.

Under penalty of law for false swearing (West Virginia Code, §61-5-3), it is hereby certified that the vendor acknowledges the information in this said affidavit and are in compliance with the requirements as stated.

Vendor's Name: Michael Baker Jr., Inc.

Authorized Signature: William D. Trimbath Date: September 23, 2008

12. RELEVANT EXPERIENCE: Indicate number of projects per each discipline

A. Is your firm experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering?

YES Description and Number of Projects:

Baker has been assisting state and federal agencies with abandoned mine land (AML) restoration and acid mine drainage (AMD) remediation since 1977. Baker's experience began with Operation Scarlift and now includes well over 200 AML/AMD remediation projects ranging from subsidence control, mine sealing, reclamation of mine refuse piles, strip pit and high wall; drainage improvements, revegetation, stream relocation, restoration of streams and wetlands, landslide correction, and replacement of water supplies affected by abandoned mine lands to abatement of AMD problems. Baker has been assisting West Virginia Department of Environmental Protection with Abandoned Mine Lands Remediation/Mine Reclamation Engineering design services ever since WVDEP initiated its AML Reclamation Program in 1983. In addition to WVDEP, we are also currently assisting PADEP with AML reclamation and AMD remediation designs. The "AML and related Project Experience Matrix" table provided at the end of this CCQQ shows our experience on waterline extension and AML related projects for different state agencies and for private clients.

B. Is your firm experienced in Soil Analysis?

YES Description and Number of Projects:

In designing AML reclamation projects, generally three types of soil analysis are needed. These analyses may include: a) geotechnical analysis, b) soil analysis for revegetation potential (pH, Acid Base Accounting, Nutrients) and c) soil analysis for hazardous materials. Baker is involved in selecting and collecting the soil samples and analyzing the results of laboratory testing as required for design. Laboratory testing is performed by a subcontractor. Of the thirty (30) most recent AML projects, Baker was involved in soil analysis for 19 projects.

C. Is your firm experienced in hydrology and hydraulics?

YES Description and Number of Projects:

Baker's hydrology and hydraulic staff for AML/AMD remediation design are experts in the application of hydraulic models that include HEC-1, HEC-2, HEC-RAS, HY8, TR20, TR55, HAESTADS PONDS 2, FLOWMASTER, KYPIPE 2, CYBERNET, SEDCAD 4, UNET, and DAMBRK. Baker applies this experience to services such as stormwater management; culvert analysis; hydrologic and hydraulic studies; storm sewer design; floodplain modeling; channel design; watershed planning; energy dissipation; and waterline extension and distribution.

Expertise in hydrology and hydraulics is essential in any AML reclamation/AMD remediation design. Of the thirty (30) most recent AML projects, twenty six (26) projects needed hydrology/hydraulics expertise of the AML/AMD design group.

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

YES Description and Number of Projects:

Since 1983 Baker has been designing AML/AMD remediation projects for WVDEP. For all the projects to date, Baker was provided by WVDEP with contour maps developed from aerial photography of the project site. Baker's responsibility was to verify the topographic map by check field surveying.

Baker has a survey and photogrammetric department with a staff of 40. Baker routinely performs aerial photography and contour mapping for federal and several state agencies as well as for private clients. Baker's Survey and Photogrammetric Department is as old as the company itself. During the last five years Baker has completed more than 50 mapping projects. Nineteen (19) of those projects completed since the last two years are listed as follows:

<u>Project</u>	<u>Area</u>	<u>Scale / Contour Interval</u>
City of Richmond, VA	63 square miles	1"=100' / 2'
City of Suffolk, VA	430 square miles	1"=100' / 2'
Elkhart County, IN	464 square Miles	1"=100' / 2'
Saint Joseph County, IN	457 square miles	1"=100' / 2'
West Virginia DOH-Corridor H, Section 6 & 7 Reroutes	12 linear miles	1"=50' / 2'
Pennsylvania DOT – Missing Ramps I-79/I-279	1000 acres	1"=50' / 1'
New Jersey DOT – Rte. 52 Somers Point – Ocean City	565 acre	1"=30' / 1'
Immigration and Naturalization Services Texas / Mexico Border Mapping	14 linear miles	1"=100' / 2'
Arizona DOT – SR 87	3.3 linear miles	1"=50' / 1'
Iowa Army Ammunition Plant – Omaha District COE	32 square miles	1"=100' / 2 and 1"=30 / 1'
Immigration and Naturalization Services	16,600 acres total	1"=50' / 1'
Mapping of 166 Port of Entry Border Sites		
Pennsylvania DOT – Snyder County, SR 0015		
- Section 088	8.3 square miles	1"=50' / 1'
Grand Parkway Association – Texas DOT	52 linear miles	1"=50' / 1'
City of Scottsdale, AZ	185 square miles	1"=100' / 2' and 1"=50 / 1'
Maricopa County Flood Control District, AZ		
- Salt/Gila River Basins	180 square miles	1"=100' / 4'
Pennsylvania DOT – Cambria County S.R. 6219		
- Section 021	27.6 square miles	1"=200' / 5'
MAGLEV, Inc. Pittsburgh Area – High Speed MAGLEV Corridor	80 square miles	1:2500 / 2 meter
Louisiana Department of Transportation and Development – North-South Expressway	690 square kilometers	1:4800 / 1.5 meter
Arkansas State Highway and Transportation Department US 71 / I 40 to DeQueen	3000 square kilometers	1:7200 / 3 meter

12. RELEVANT EXPERIENCE. Include number of projects per each discipline

E. **Is your firm experienced in domestic waterline design? (Include any experience your firm has in evaluation of aquifer degradation as a result of mining.)**

YES **Description and Number of Projects**

Baker, to date, has designed eight (8) domestic waterlines for WVDEP and countless others for clients in West Virginia, Pennsylvania, Ohio, and elsewhere. In general, for each of these projects, Baker performed field surveying of proposed routes, subsurface investigation for storage tank site foundations, water distribution system hydraulic modeling and analyses, pipeline design, storage tank sizing, sizing and designing booster pumping station, and electric and telemetric system. For McDowell County Public Water Supply System, Baker also designed a water treatment and filtration plant. Construction plans, specifications, cost estimate and bid schedules were prepared for each project.

Prior to designing each of the waterlines, under separate work directives from WVDEP, Baker performed water resources studies for each project area to determine if the pre-law mining had impacted the aquifer of the area from which the area residents got their water supply. Water resource studies involved evaluation of mining activities in the project area with regard to date and time of mining, and the effect of mining on the local aquifers and groundwater quality based on hydrogeologic data, resident interview, water sampling and testing. To date Baker has performed more than twelve (12) water resources studies.

12. RELEVANT EXPERIENCE. Include number of projects per each discipline.

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

YES Description and Number of Projects:

Baker is well experienced in the evaluation of acid mine drainage and the design of AMD abatement measures. Design experience includes both active and passive treatment system. Evaluation and design of AMD abatement system is based on the characterization of the AMD site as well as the flows and chemistry of the AMD. AMD sampling for chemical parameters as well as the flow measurements covering high and low flow periods are most important in developing AMD abatement system. To date Baker has evaluated and designed fourteen (14) AMD abatement systems. Three of these fourteen projects – one for PADEP (Dumans AMD Treatment), an active system, and the other two for the ODNR (Lindentree AMD Remediation and Mineral Zoar Road AMD Abatement), passive treatment systems, have been recently constructed and are currently in service except the Mineral Zoar Road AMD project which is under construction.

Baker has designed seven (7) AMD remediation projects for WVDEP. AMD remediation measures designed included: Open Limestone Channel (OLC), Anaerobic and Aerobic Wetlands and settling ponds, Limestone Sand dumping in the stream, and Alkaline Leach Bed/Anoxic Limestone Drains. Other AMD abatement designs were made for Baltimore and Nashville Districts of the U.S. Army Corps of Engineers.

18. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)

NAME & TITLE (Last, First, Middle Int.)	YEARS OF AML DESIGN EXPERIENCE:	YEARS OF AML RELATED DESIGN EXPERIENCE:	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE:
Trimbath, William, D., P.E. Vice President	6	12	3
Brief Explanation of Responsibilities			
<p>Mr. Trimbath is the Regional Office Manager for Michael Baker Jr., Inc.'s, Beaver, Pennsylvania office which provides civil, mining, geotechnical, mapping and telecommunication services to various government agencies and private clients. He has 25 years experience in civil, mining, geotechnical and environmental engineering, primarily in management positions; has served as civil engineer, project manager for environmental assessment and remediation projects; mine subsidence projects, landslides remediations, and drainage improvements; assumes responsibility for overall administration of major contracts, including financial, engineering and construction; experience in estimating, cost control, and scheduling methods designed to meet tight budgets and schedules.</p> <p>As Assistant Vice President of the civil engineering department in Beaver, PA, Mr. Trimbath was ultimately responsible for more than thirty AML reclamation projects studied and designed for the States of West Virginia, Ohio; and for the Corps of Engineers' Baltimore and Nashville Districts.</p> <p>Engineering Services. Pittsburgh Water and Sewer Authority (PWSA). Project Director. Baker has been providing services to PWSA since 1989 for a variety of projects including: Development of a Long-Term Control Plan for Combined Sewer Overflow; Fox Chapel Pump Station and rising Main; Feasibility Study of the Highland Park Reservoir No. 1 Cover; Herron Hill Reservoir Reconstruction and Cover Project; and the Bedford Reservoir Potable Water Storage Tank.</p> <p>Dennison/Route 800 Reclamation Project for the Ohio Department of Natural Resources (ODNR) - Uncontrolled drainage and seepages from coal and clay mines causing metal precipitation in roadside ditch and over flowing onto a major high creating hazardous driving condition. The reclamation plan was developed following test drilling to identify AMD sources. Abatement design included an underdrain to intercept seepage, a sedimentation pond followed by wetland to precipitate iron, improving road-side ditch and the drainage outlet to nearby stream; preparation of construction plans, specifications, and cost estimate are part of this project.</p> <p>Hardy Coal Company Bond Forfeiture Reclamation Project for the Ohio Department of Natural Resources. The project involved surveying and mapping, reviewing geological data, mine maps; and providing design of the reclamation measures for the site including environmental assessment, regarding, collection ditches, stream relocation, placement of soil cover revegetation; and preparation of construction plans, specifications and cost estimates.</p> <p>Maple Run Portals and AMD Reclamation for the West Virginia Division of Environmental Protection - Test drilling, site grading, sealing mine openings, drainage design, AMD treatment with limestone beds and aerobic Wetland; preparation of construction plans, specifications, and cost estimate.</p> <p>Emoryville Mine Complex Reclamation for the West Virginia Division of Environmental Protection - Test drilling, water quality date review and site survey; design of AMD abatement including open limestone channels, SAPS, aerobic wetlands, in-stream AMD treatment with limestone fines, E & S Control, drainage design including diversion and collection ditches and underdrain; site grading and revegetation; construction plans, specifications, and cost estimate.</p> <p>Feasibility Study for Ecosystem Restoration, Ely and Pucket Creek Subbasins of Powell River, Virginia for the Nashville District, U.S. Army Corps of Engineers - Site evaluation including geotechnical investigation, review of water quality data, determination of AMD sources at four sites, evaluation of AMD abatement alternatives; AMD abatement design including SAPS Cells, open limestone channel, metal precipitation ponds, aerobic wetlands and alkaline soil amendment; site grading, mine seals, diversion and collection ditches, E & S control, stream relocation; and preparation of plans, cost estimate and feasibility report.</p>

NAME & TITLE (Last, First, Middle Int.) Chakravorti, N.K. Engineering Manager	YEARS OF EXPERIENCE 26	YEARS OF AML RELATED DESIGN EXPERIENCE: 26	YEARS OF AML RELATED DESIGN EXPERIENCE: 26	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 9
--	--------------------------------------	--	--	--

Brief Explanation of Responsibilities

Mr. Chakravorti has extensive knowledge and experience related to mining, geotechnical and material handling projects. His professional experience has encompassed research, project planning and analysis, project management and report preparation for both governmental agencies and private clients. He is responsible for conducting a wide range of technical studies and designs involving reserve analysis and mine planning; abandoned mine land reclamation, acid mine drainage abatement, coal preparation and waste disposal; material transport by overland conveyor, slurry and pneumatic pipelines; refuse reclamation, mine drainage, subsurface investigation and geotechnical analysis for the design of shafts, tunnels, highway pavements, bridge and building foundations; landslide correction; and mine subsidence control. Experience relevant to this project includes:

Abandoned Mine Land Reclamation Projects for the West Virginia Department of Environmental Protection (formerly WVDOE). Project Manager for over 100 of these AML projects. His responsibilities involved project management, development of concept design, and quality control on all phases of abatement design. The projects included reclamation of refuse piles, landslide corrections, designing surface drainage, subsidence stabilization, sealing mine openings, stream restoration/re-location, and evaluation and design of AMD abatement measures.

Acid Mine Drainage Abatement (AMD) Feasibility Studies for the North Branch Potomac River Watersheds in Maryland and West Virginia, and for the Ely and Puckett Creek watersheds of Powell River basin in Virginia. Project Manager. These two projects were performed for Baltimore District and Nashville District Corps of Engineers respectively. Projects involved evaluation of the sites, AMD flow and characteristics, abatement alternatives, and designing of treatment systems including surface drainage, grading and reclamation of AMD sources, and development of construction costs for the AMD abatement measures.

Surface and Underground Mine Permitting Projects for various coal mining companies in Pennsylvania. Project Manager. Projects involved site investigations, environmental inventory and sampling, and preparation of surface and underground mining activities permit applications in accordance with the requirements of the regulatory agencies. Projects also included designing and permitting of several shafts and portal facilities, refuse disposal sites and slurry impoundments.

Management of Engineering Services Contracts for over 150 AML Projects in West Virginia, Ohio, Pennsylvania and for the Federal Office of Surface Mining. Principal Investigator and Coordinator. The projects required surveys, mapping, subsurface investigations, plans, specifications, and construction inspection. AML related problems included flood studies, watershed studies, stream restoration, mine subsidence, underground mine fires, mine drainage, vertical shaft filling, gob piles, landslides, refuse fires, grouting programs, and surface mine reclamation. Projects also included water supply extension design for AML problem area communities. Projects designed were over \$35 million in construction costs.

Abandoned Mine Drainage Problem in the village of Barton, Ohio, for the Ohio Department of Natural Resources. Principal Investigator. Responsibilities included evaluation of the problems (hillside instability, acid mine discharge, and stream pollution) and recommendation and preliminary designs of abatement measures. Responsibilities also included evaluation of the abandoned gob piles for their stability and the recovery potential of secondary resources from them.

<p>Hynes, Gregory P., P.E. Project Manager/Senior Engineer</p> <p>Brief Explanation of Responsibilities</p> <p>Mr. Hynes is an engineer with a strong background in the reclamation of abandoned mine lands including acid mine drainage abatement, earthwork and grading plans, hydrologic and hydraulic analysis, and erosion and sediment control structures. He additionally has extensive experience in the design of water distribution systems, hydraulic structures, sanitary collection systems, and permitting of mining facilities. While at Baker he has actively worked on over forty AML related projects which included reclamation of coal refuse piles, sealing of mine portals, subsidence grouting, passive and active water treatment, evaluation of pre-law mining impacts on drinking water supplies, and stream channel restoration. He has also been project engineer for over 30 water distribution projects located in OH, PA, and WV and is a former district engineer for a water utility company serving a population of over 40,000.</p> <p>Chalk Mountain Mine and Dump Site 4, Spruce Pine, N.C. The Feldspar Corporation. Project Manager. Duties included site investigation and preparation of disposal and reclamation plans for a strip mine including E&S controls and ponds, surface water ditches, soil cover placement, and revegetation. The project included review of available site rock and soils data, design and preparation of construction plans, narratives, and specifications.</p> <p>Miller Mountain Feasibility Study, Preston County, West Virginia Department of Environmental Protection. Senior Engineer. Provided conceptual water system evaluation and distribution system extension requirements including design, cost estimate, and narrative as part of a feasibility report which assessed pre-law mining impacts to local groundwater and provided water supply alternatives including the extension of a nearby distribution system.</p> <p>Kempton Refuse and AMD, Tucker County, West Virginia Department of Environmental Protection. Senior Engineer. Performed research of geological data and mining maps, review of water quality data, and design of acid mine drainage abatement measures, including open limestone channels, a limestone pond, a Successive Alkalinity Producing System, and an aerobic wetland. Prepared construction plans and specifications and attendance at pre-bid and preconstruction meetings for the project which included erosion and sedimentation control measures, site grading, mine seals, rock underdrains, collection and diversion ditches, backfilling a dangerous highwall, soil cover placement, revegetation, and reforestation.</p> <p>Fort Gordon Mine Closure Plans, Augusta, Georgia, US Army Corps of Engineers, New Orleans District. Task Manager Duties included site investigation and preparation of reclamation plans including E&S controls, surface water ditches, soil cover placement, backfilling of highwalls, and revegetation as required for permanent closure of seven mining sites at Fort Gordon, Georgia. The project included review of available site water, rock, and soils data, design and preparation of construction plans, narratives, and specifications.</p> <p>Borgman Portals and Refuse, Preston County, West Virginia DEP, Senior Engineer. Duties included research of geological data and mining maps, review of water quality data, and initial design of acid mine drainage abatement measures including open limestone channels, limestone ponds, and aerobic wetlands. Final design was provided without wetlands and ponds per request of the client. Prepared construction plans and specifications and attendance at pre-bid and preconstruction meetings for the project, which included site grading, mine seals, collection and diversion ditches, soil cover placement, and revegetation.</p> <p>Mineral Zoar Road AMD, Mineral City, Tuscarawas County, Ohio. Ohio Department of Natural Resources, Division of Mineral Resources Management. Project Engineer/Manager. Duties included site investigation to identify sources of acid mine drainage, conceptual design of abatement alternatives, and prediction of impacts to stream quality. The project implemented design measures recommended in the "Mineral City Park Abatement Feasibility Study." The overall project included abatement of acid mine drainage with passive treatment wetlands and a successive alkalinity producing cell. The final product included plans, specifications, and hydraulic design calculations for roadway culverts to convey surface water.</p> <p>Powell River Ecosystem Restoration Project, Virginia. U.S. Army Corps of Engineers, Nashville District. Senior Engineer. Performed research of geological data and mining maps, review of water quality data, and design of acid mine drainage abatement measures, including aerobic wetlands, successive alkalinity producing systems, metals settling ponds, open limestone channels, and fly ash soil amendments. Prepared plans, specifications, and detailed cost estimates for the project, which included site grading, mine seals, collection and diversion ditches, soil cover placement, and revegetation.</p> <p>EDUCATION (Degree, Year, Specialization) M.S., 1997, Civil Engineering; B.E., 1987, Civil Engineering</p> <p>MEMBERSHIP IN PROFESSIONAL ORGANIZATIONS</p>	17	17	21

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN: (Furnish complete data but keep to essentials)

NAME & TITLE (Last, First, Middle Init.)	YEARS OF EXPERIENCE	
	YEARS OF AML DESIGN EXPERIENCE:	YEARS OF AML RELATED DESIGN EXPERIENCE:
Dziubek, John A., P.E. Project Manager	13	11
		YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 3

Brief Explanation of Responsibilities

Mr. Dziubek has performed and managed engineering and design projects for more than 30 years. The projects range from subsurface investigations; building, industrial, and heavy and highway foundations; and site closures at industrial facilities; to remedial design and remedial action at Superfund sites. He has managed public and private sector projects for the Corps of Engineers, U.S. Navy, State DOT's, and major industrial clients. Larger projects have ranged from \$1 million to \$10 million and have required civil, geotechnical, mining and environmental engineering expertise.

Chalk Mountain Dump Site 4, Spruce Pine, N.C. The Feldspar Corporation. Project Manager. Duties included site investigation and preparation of plans and permit submission documents for a disposal area at an existing feldspar strip mine including slope stability analysis, grading, E&S controls, sedimentation pond enlargement, surface water ditches, soil cover placement, final reclamation plans, and revegetation. The project included review of available site rock and soils data, design and preparation of construction plans, cost estimates, narratives, and specifications.

Various Reserve Analyses and Mine Planning Projects, Ohio, Pennsylvania, Virginia, Kentucky, West Virginia and North Carolina. Ohio Edison, Veon Coal, Ashland Coal, Virginia Pocahontas, Koppers Company. Project Manager. Managed reserve analysis and mine planning projects for coal mines. These projects required computer models for determining mineral reserves, stockpile inventories, mining simulation, long range planning, cost studies, mine drainage, mine subsidence, and production monitoring.

Geotechnical Engineering Services, Ohio, West Virginia and Pennsylvania. U.S. Office of Surface Mining. Project Manager. Managed engineering services contract for more than 40 abandoned mine lands projects for the U.S. Office of Surface Mining. The projects required surveys, mapping, subsurface investigations, plans, specifications, and construction inspection. Mining-related problems included flood studies, mine subsidence, underground mine fires, mine drainage, vertical shaft filling, gob piles, landslides, refuse fires, grouting programs, and surface mine reclamation. Construction costs for project implementation were more than \$12 million.

Various Reclamation Projects, Ohio and West Virginia. Ohio Department of Natural Resources and the West Virginia Department of Natural Resources. Project Manager. Managed abandoned mine lands projects for the Ohio Department of Natural Resources and the West Virginia Department of Natural Resources. Projects included mine subsidence, flood studies, landslides, mine drains, mine seals, mine fires, mine stabilization and refuse bank reclamation. Construction costs were over \$5 million.

Various Coal Refuse Facilities Geotechnical Design, Ohio, Pennsylvania, West Virginia, Illinois, Virginia and Kentucky. North American Coal, Bethlehem Mines, Diamond Shamrock Coal, Exxon Coal, Sierra Coal. Geotechnical Manager. Supervised the geotechnical design of coal slurry impoundments and coal refuse embankments. Upstream and downstream construction methods were used. Design analyses included slope stability, hydrology and hydraulics, and structural design of primary and emergency spillway systems.

Unimin Trailings Dam Expansion, Virginia. Unimin Corporation. Project Manager. Managed design and construction phase of a phased capacity increase of a tailings dam for an industrial glass sand plant and quarry. The main embankment and dike were raised, the spillway redesigned, and the outlet pipe extended. Piezometric instrumentation was installed to monitor the phreatic surface through the main embankment.

<p>Lesko, John E. II, C.P. Mapping Supervisor</p> <p>Brief Explanation of Responsibilities</p> <p>Mr. Lesko has over 25 years of experience in photogrammetric data production. His experience includes photogrammetric data capture, DTM processing, and imagery conversion. Through his experience and education, he has developed the technical, managerial, and communication skills necessary for digital mapping and softcopy orthophoto production.</p> <p>Mr. Lesko is currently responsible for digital orthophoto production, including procurement of scanned imagery, scheduling, and training. Clients include private and public organizations. Mr. Lesko provides internal company support for imagery and imagery conversion. He has been employed with Baker since 1987.</p> <p>Montgomery Watson Buckley Orthos, Various. Montgomery Watson. Program Manager. Responsible for staff scheduling, production and QA/QC of digital orthophoto files. Baker obtained aerial photography, provided field surveys, conducted analytical triangulation, compiled DTM and planimetric data and prepared digital orthophotos for a mining operation site.</p> <p>Beagle Club Shaft Site, Pennsylvania. Mon View Mining. Project Manager. Planned and supervised the production of digital mapping of an industrial site. Responsible for obtaining aerial photography, field control, AT, digital compilation and digital orthophotography. Baker obtained aerial photography, provided field surveys, conducted analytical triangulation, compiled DTM and planimetric data and prepared digital orthophotos for a mining operation site.</p> <p>Chartiers Run Mapping, Pennsylvania. Brechbill & Helman Construction Co., Inc. Project Manager. Planned and supervised the production of digital mapping of an industrial site. Responsible for obtaining aerial photography, field control, AT, digital compilation and digital orthophotography. Baker obtained aerial photography, provided field surveys, conducted analytical triangulation, compiled DTM and planimetric data and prepared digital orthophotos for a mining operation site.</p> <p>2004 AERIAL PHOTOGRAPHY, Ohio. Lafarge Corporation Northern Division. Project Manager. Responsible for preparing scope of work, cost estimates, planning aerial photography, supervising mapping and orthophoto production. Baker obtained aerial photography, provided field surveys, conducted analytical triangulation, compiled DTM and planimetric data and prepared digital orthophotos for a mining operation site.</p> <p>I-64/U.S. 35 Interchange Study, I-64 to WV 34 Interchange, Putnam County, West Virginia. West Virginia Department of Transportation, Division of Highways. Mapping Supervisor. Responsible for photo rectifications, mosaics, final sheet extraction and CIR digital orthophoto production, as well as product budgeting and QA/QC. This project under first phase was for the study of two interchange sites on I-64, Cow Creek and Crooked Creek.</p> <p>This project under the final phase was for the complete preparation of right of way plans and construction plans for a new location of US 35 from I-64 (Crooked Creek location) to and including an interchange with WV 34.</p> <p>Mon/Fayette Expressway, PA 51 to I-376, Section Design Support Services, Allegheny County, Pennsylvania. Pennsylvania Turnpike Commission. Mapping Supervisor. Responsible for supervising the production of digital orthophotos. The Mon/Fayette Expressway is a 65-mile long, four lane limited access toll expressway connecting I-68 near Morgantown, West Virginia with Pittsburgh, Pennsylvania. As General Consultant to the Pennsylvania Turnpike Commission, Baker provided design overview, value engineering, and quality assurance/quality control services for the PA 51 to I-376 Section of the project.</p> <p>Open End Contract E00345, Statewide, Pennsylvania. Pennsylvania Department of Transportation, Central Office. Supervisor. As Orthophoto Supervisor, responsible for scheduling staff, coordinating production, and providing QA/QC for digital orthophoto production. Delivered products on CD or DVD. Files included compressed JPEG and uncompressed TIFF image files with a resolution of 5' or 1' pixels. Baker has provided surveying and mapping services to PennDOT under nine consecutive open-end contracts. The services include aerial photography; first, second, and third order conventional surveys; highway construction staking; GPS surveys; aerial triangulation; digital topographic mapping; and digital orthophotos. Work orders typically consist of design scale mapping at 1"=50' with 1 foot contours.</p>	-	-	-

Brief Explanation of Responsibilities

Mr. Henry is a Geotechnical Engineer responsible for the development of subsurface explorations, preparation of geotechnical analyses, submission of design reports, and participation in proposal development. He has more than ten years of engineering experience in geotechnical investigations and construction consultation for a wide range of transportation, building, energy and dam projects.

Slope Stability Analysis, Pittsburgh, Pennsylvania. Pennsylvania Department of Transportation. Assistant Engineer. Conducted slope stability analysis and developed recommendations for embankments on a proposed limited access highway to Pittsburgh International Airport.

Landslide Remediation Design, Wheeling, West Virginia. U.S. Army Corps of Engineers, Baltimore District. Engineer. Participated in a landslide remediation design and construction project for an Army Reserve Center.

Rock Slope Remediation, Pittsburgh, Pennsylvania. Port Authority of Allegheny County. Engineer. Participated in rock slope investigations and in the development of slope remediation plans for the Airport Busway.

Landslide Slope Stability Analysis, Armstrong County, Pennsylvania. Buckeye Pipeline Company. Assistant Engineer. Conducted slope stability analysis for landslide remediation.

Rock Slope Investigation, Bedford, Pennsylvania. Pennsylvania Turnpike Commission. Engineer. Participated in a rock slope analysis and in the development of slope remediation plans and specifications.

Detention Pond Investigations, Mars, Pennsylvania. The Trees Development Corporation. Assistant Engineer. Performed subsurface investigations and slope stability analyses of 10 detention pond embankments for a residential development.

Detention Pond Stability Analysis, Morgantown, West Virginia. Allegheny Power Service Corporation. Assistant Engineer. Analyzed stability of several detention ponds for an ash disposal site.

Roadway Embankment Analysis, Chippewa to New Castle, Pennsylvania. Pennsylvania Turnpike Commission. Assistant Engineer. Analyzed several roadway embankments for the Beaver Valley Expressway that runs from Chippewa to New Castle.

Soil Reports and Construction Specifications, Pittsburgh, Pennsylvania. Pennsylvania Department of Transportation. Assistant Engineer. Prepared soil reports and construction specifications for Southern Expressway at Pittsburgh International Airport.

NAME & TITLE (Last, First, Middle Init.) Zang, Scott D., P.E. Senior Engineer	YEARS OF EXPERIENCE		YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: -
	YEARS OF AML DESIGN EXPERIENCE: 11	YEARS OF AML RELATED DESIGN EXPERIENCE: 11	

Brief Explanation of Responsibilities

Mr. Zang is a geotechnical engineer experienced in site investigation and design. His professional experience encompasses reconnaissance, field testing, laboratory testing, project analysis and design, report preparation and construction inspection for roadways, railroads, earth dams, buildings, hazardous waste studies, industrial facilities, airports and coal mines. His design experience also includes abandoned mine land reclamation and innovative AMD abatement design.

Raw Water Pump Station & Transmission Main, Wellsville, Ohio. Southern Columbiana County Regional Water District. Assistant Technical Manager. Performed the geotechnical investigation and made design recommendations for construction of a 30 foot deep dry well receiving water from a new intake system placed in the Ohio River. The design included evaluation of buoyancy effects, temporary shoring for the dry well and the intake piping, and remediation of a soft clay layer that would be encountered at the base of the excavation for the dry well.

Coal Refuse Pile Remediation Design Analysis and Plans, West Virginia. West Virginia Department of Environmental Protection. Engineer. Performed design analysis and prepared construction plans, specifications and cost estimates for remediation of several abandoned coal refuse piles. Projects included regraded slope stability analysis, retention structure design, subsurface water control and facilities design for surface water control of burning and non-burning refuse piles.

Coal Mine Subsidence Remediation Construction Plans, West Virginia. West Virginia Department of Environmental Protection. Engineer. Prepared construction plans, specifications and cost estimates for remediation of areas affected by subsidence of abandoned underground coal mines.

Private Residence Subsidence Evaluations, Western Pennsylvania. U.S. Department of the Interior, Office of Surface Mining. Assistant Engineer. Performed subsurface investigations to evaluate subsidence and subsidence-related incidents at several private residences. Project included surface distress cause determination and recommendation of remedial measures.

Manor Mine and Preparation Plant, Greene County, Pennsylvania. Consolidation Coal Company. Assistant Engineer. Conducted field testing program for foundations of several support buildings, a preparation plant, and coal storage silos.

Landini Mine Fire Remediation, Elizabeth, Pennsylvania. U.S. Department of the Interior, Office of Surface Mining. Assistant Engineer. Performed subsurface investigations and designed remedial measures to control a fire in an abandoned underground coal mine.

Acid Mine Drainage Abatement Project, Barton, Ohio. Ohio Department of Natural Resources. Engineer. Conducted water sampling program and field investigation during development of acid mine drainage abatement procedures at an abandoned underground coal mine and coal refuse area. Handled administration and office engineering during implementation of remedial measures.

Groundwater Monitoring Well Construction and Sampling, Pennsylvania and West Virginia. Various Clients. Assistant Engineer. Assisted with sampling and constructing groundwater monitoring wells at various locations.

<p>Ciucci, Ron J., P.E. Senior Engineer</p> <p>Brief Explanation of Responsibilities</p> <p>Mr. Ciucci is a senior engineer with experience in water and sanitary sewer systems, site development, hydrology and hydraulics, stormwater management, erosion and sedimentation control, and general municipal engineering. He also performed hydraulic/hydrologic analysis for several AML and AMD remediation projects.</p> <p>Fox Chapel Pump Station and Rising Main, City of Pittsburgh, Pennsylvania. Pittsburgh Water and Sewer Authority. Project Engineer. Prepared pump and system curve data and supporting calculations.</p> <p>Pittsburgh Water and Sewer Authority Pilot Plant, City of Pittsburgh, Pennsylvania. Pittsburgh Water and Sewer Authority. Project Engineer. Performed pump design/selection and prepared technical specifications.</p> <p>Campus-wide Water Distribution System Evaluation, University Park, Pennsylvania. The Pennsylvania State University. Senior Engineer. Responsible for review of exiting information relating to the campus water distribution system, verification, calibration and analysis of the University's 1,000 pipe hydraulic model.</p> <p>Potable Water Distribution System Evaluation, Weirton, West Virginia. Weirton Steel Corporation. Senior Engineer. Supervised modeling of the Weirton plant's water distribution system. The project included a comprehensive review of industrial water usage, existing plant mapping, model construction, model calibration via field testing, model simulations, alternate/upgrade analysis and final recommendations.</p> <p>Hydraulic Model Calibration and System-wide Fire Flow Analysis, North Sewickley Township, Pennsylvania. The Municipal Authority of North Sewickley Township. Senior Engineer. Supervised model calibration and preparation of a Township-wide fire flow analysis. Baker performed a comprehensive hydrant testing program that included over twenty test locations. The project included recommendations to the Authority to bring their hydrants into compliance with AWWA standards.</p> <p>Hydraulic Model and Maintenance, Various Locations throughout Beaver County, Pennsylvania. Borough of Baden, Center Township Water Authority, North and New Sewickley Townships, Beaver Falls Municipal Authority. Senior Engineer. Maintain and calibrate existing hydraulic model, some of which over 10,000 pipes in size.</p> <p>ALCOSAN Service Area Wide Flow Monitoring Program. Allegheny County Sanitary Authority. Task Manager. Served as field coordinator and data processor for a flow monitoring program that measured sewage flow from 83 contributing municipalities. Major watersheds include Saw Mill Run; Turtle Creek; Chartiers Creek; Thompson Run; Beck's Run; Streets Run; Lowmiers Run; Jack's Run; Girty's Run; and Pine Creek. The goal of the program was to quantify sewage flow from ALCOSAN communities and reduce wet weather flows to the treatment plant.</p> <p>ALCOSAN Deep Tunneling Flow Monitoring. Allegheny County Sanitary Authority. Task Manager. Responsible for site selection and equipment selection for monitoring of the Alcosan tunnel sewers which vary in depth from 40 to 120 feet deep. Monitoring equipment was installed in nine locations along the deep tunnel systems to measure level and flow within the system. This data was used to study storage capacity of the tunnels which is a requirement of the Nine Minimum Controls of CSO's.</p>	-	4	15

Stewart, Michele, P.E. Engineering Manager	8	10	-	-

Brief Explanation of Responsibilities

Ms. Stewart is a Project Manager at Baker. Her specific project responsibilities have included project planning management, subcontract administration and coordination, engineering analysis, design, report preparation, and supervision/inspection of geotechnical construction activities. Ms. Stewart has also gained a significant amount of experience in the area of abandoned mine land reclamation and other mining related projects. Experience relevant to this project includes:

No. 8 Mine, Mine Drainage Evaluation, McDowell County, West Virginia. U.S. Steel Mining. Project Manager and Principal Investigator. Project involving the evaluation of treatment requirements and possible treatment alternatives for drainage emanating from an abandoned mine. Both direct and passive treatment alternatives were evaluated. Study results and recommendations, including conceptual designs, were summarized in a project report.

Numerous Abandoned Mine Land Projects, West Virginia and Pennsylvania. Office of Surface Mining and West Virginia Department of Natural Resources. Project Engineer. The types of problems encountered included mine subsidence damage, uncontrolled mine drainage, a mine fire and mining-related landslides. The scope of work for each project included investigation, engineering analysis, abatement design, and development of the construction contract documents (plans, specifications and engineer's cost estimate). Responsible for all phases of the project.

Shaft and Portal Site Design and Permitting Project, Waynesburg, Pennsylvania. Cyprus Cumberland Mine No. 6 Shaft. Project Manager. Provided engineering services needed for development of the site grading, surface water management, erosion/sedimentation control and ultimate site reclamation. The site work for this project included: a 1.6 mile access road over hilly terrain; a 1,000 foot long stream enclosure; a seven acre shaft and portal site; and a sedimentation pond and other erosion and sedimentation control structures. Responsibilities surrounding this project included planning/directing design and preparation of the project deliverables, client coordination and assisting the client with regulatory agency reviews.

Bleeder Shaft Site Design and Permitting Project, Waynesburg, Pennsylvania. Cyprus Cumberland Resources Corporation No. 2 Bleeder Shaft. Project Manager. Provided engineering services needed for development of the site grading plan, surface water management, erosion/sedimentation control plan, and ultimate site reclamation. Mine drainage is to be pumped from the No. 2 Bleeder Shaft site, therefore, the design for this facility included lined treatment ponds. Responsibilities surrounding this project included planning/directing design and preparation of facility construction documents and permit documents, client coordination, and assisting the client with regulatory agency reviews.

Shaft and Portal Site Design and Permitting Project, Waynesburg, Pennsylvania. Cyprus Emerald Resources Corporation No. 7 and No. 8 Shafts. Project Manager. Providing engineering services needed for development of the site grading plan, surface water management, erosion/sedimentation control plan, and ultimate site reclamation. Both site designs to provide for a bathroom/portal facility, 300car parking area, and separate rock dust borehole site. Also, both sites have been designed to be developed in two phases. Mine drainage is to be pumped from the No. 8 Shaft site, therefore, the design for this facility includes a lined treatment pond. The No. 8 Shaft facility also includes wetland encroachments. Responsibilities surrounding these two shaft projects include planning/directing design and preparation of facility construction documents and permit documents, client coordination, assisting the client with regulatory agency reviews, and participating in township planning and zoning hearing board meetings to obtain a zoning variance.

<p>Mr. Martin, Mark R., PG Assistant Geologist I</p>	<p>7</p>	<p>5</p>	<p>-</p>
<p>Brief Explanation of Responsibilities</p>			
<p>Mr. Martin is a geologist with experience in conducting and reporting results of geotechnical investigations including geologic research, site reconnaissance, preparing test drilling contracts, test boring inspection, and geotechnical laboratory testing.</p>			
<p>North Fork of Yellow Creek AMD Abatement, Jefferson County, Ohio. Nashville District, U.S. Army Corps of Engineers. Project Geologist. Duties included: Coordinating with the drilling firm; locating borings; inspecting test borings, including logging soil from auger cuttings and standard penetration tests and logging rock core from NX or NQ coring to determine coal refuse thickness, overburden thickness over mine portals and delineating mine voids; installing standpipe piezometers in mine voids to monitor water levels; performing field permeability tests in boreholes; selecting samples for laboratory testing, including classifications, nutrient analysis, compaction testing, and permeability testing; preparing typed boring logs from field originals using LogDraft program; coordinating with the Project Manager during field activities.</p>			
<p>Mine Drainage Subsurface Investigation, Clarksburg and Fairmont, West Virginia. West Virginia Department of Energy. Project Geologist. Conducted site reconnaissance, monitored test borings to identify mine voids and installed standpipe piezometers to evaluate presence of mine pools for mine drainage investigation.</p>			
<p>Mine Subsurface Subsurface Investigation, MacArthur, West Virginia. West Virginia Department of Environmental Protection. Project Geologist. Logged soil and rock core to identify mine voids and produced final test boring records to produce mine stabilization program.</p>			
<p>Abandoned Mine Lands Project, Cheat Lake, West Virginia. West Virginia Department of Environmental Protection. Project Geologist. Oversaw test drilling activities to determine amount and location of coal mine spoil/refuse, collected acid mine drainage samples for testing, installed piezometers and produced final test boring records.</p>			
<p>Abandoned Mine Lands Project, Masontown, West Virginia. West Virginia Department of Environmental Protection. Project Geologist. Conducted a site reconnaissance at four areas within the project location. Oversaw test drilling activities (i.e., logging soil and rock core) to determine amount/extent of coal mine spoil/refuse within the four designated areas, collected water samples from acid mine drainage locations, and produced final test boring records.</p>			
<p>Abandoned Mine Lands Project, Ely and Puckett Creeks, Virginia. Virginia Department of Mines, Minerals and Energy. Project Geologist. Conducted a site reconnaissance for four sites in southwestern Virginia. Oversaw test drilling activities including logging soil and rock core, conducted bore hole permeability tests, and conducted a survey of local residence for a Hazardous, Toxic, and Radiological Waste Investigation Report.</p>			
<p>Waterline Feasibility/Extension Project, Berwind, West Virginia. West Virginia Department of Environmental Protection. Project Geologist. Conducted a site reconnaissance, logged soil and rock core along the proposed alignment, collected water samples, and produced final testing boring records.</p>

13 PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN. (Furnish complete details, keep to essentials)

NAME & TITLE (Last, First, Middle Init.) Heilman, Gregory A., P.E. Senior Engineer	YEARS OF EXPERIENCE	
	YEARS OF AML DESIGN EXPERIENCE: 2	YEARS OF AML RELATED DESIGN EXPERIENCE: 7

Brief Explanation of Responsibilities

Mr. Heilman is a civil engineer with extensive professional experience including hydrologic and hydraulic analysis, environmental permitting and engineering, solid and hazardous waste management, and construction services.

Project engineer for the remedial design of the Buckeye Reclamation Landfill Superfund Site, located in Belmont County, Ohio. Responsible for overall site design including developing final grading plans; details; construction sequencing and schedule; and construction cost estimate. Responsible for designing the erosion and sediment control plan and the surface water management plan, which included relocating and lining 5,000 feet of an existing stream. Assisted in the preparation of the final report, technical specifications, Operation and Maintenance Plan, and Construction Quality Assurance (CQA) Plan.

Project engineer for the preparation of a solid waste permit application for a 120-acre restricted waste landfill for U.S. Steel Gary Works, Indiana. Primary responsibilities included coordination of site design, preparation of construction drawings, and preparation of a detailed construction cost estimate. Site design work involved development of grading plans, surface water management, leachate collection system, construction details and sequencing, liner and cover installation.

Project engineer for the development of several closure and post-closure plans for HWT-2 Neutralized Waste Acid Lagoons for U.S. Steel Gary Works, Indiana. Responsible for all aspects of the permit applications including developing closure concepts; site grading; drainage and erosion control; sludge stabilization; cap and cover design; preparation of drawings and technical specifications; a construction quality assurance plan; and cost estimates. The most recent alternative included groundwater extraction and the design of slurry walls.

Assisted in a feasibility study to evaluate dry disposal alternatives for flue gas desulfurization sludge and fly ash for Pennsylvania Power Company Bruce Mansfield Power Station. The project included comparing the alternatives for preliminary costs, technical feasibility and performance to meet all applicable regulations. Involved extensively in sludge dewatering options, the addition of dry additives, dry disposal operations, cost evaluation and screening and comparing of alternatives.

Site engineer for a waste removal/site remediation project in Carnegie, Pennsylvania. Managed removal operations for contaminated soil, conducted soil sampling, wrote inspection reports, inspected site backfill, and provided overall supervision of site activities.

Performed engineering design for the closure of an existing sludge bed at a hazardous waste surface impoundment for Armco Advanced Materials Company, Butler Works, Pennsylvania. Design included site grading, sludge settlement investigations, impermeable cover design, and storm water control facilities design.

Project engineer for the preparation of a permit application for the closure of a solid waste disposal facility for LTV Steel Hennepin Works, Hennepin, Illinois. Responsible for the development of the closure and post-closure plans including site grading; final cover design; drainage and erosion control; cost estimates; construction quality assurance plan; technical specifications and design drawings. Responsible for developing conceptual designs and cost estimates for the removal and disposal of 21,000 cubic yards of sludge for the closure of an existing sludge lagoon.

<p>Muller, Lois M., P.E. Engineering Manager</p> <p>Brief Explanation of Responsibilities</p> <p>Ms. Muller's experience includes areas of environmental site assessments, remedial design, remediation, regulatory review and negotiations, solid and hazardous waste management, construction management, foundations, and geotechnical investigations and analyses. Some of the specific projects she was involved on include:</p> <p>Project Manager to conduct expedited Phase II RCRA Facility Investigations (RFIs), and Corrective Measures Studies (CMSs) for specific Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs) at a large industrial manufacturing facility to meet the requirements of the facility's RCRA 3008(h) Consent Agreement with USEPA Region I. Ongoing work includes petitioning for a CAMU (Corrective Action Management Unit) designation for a pre-RCRA on-site landfill to facilitate closure of the landfill by stabilizing the existing waste slopes utilizing on-site soils from other SWMUs/AOCs as embankment materials as a buttress.</p> <p>As a project manager, developed conceptual design documents for the Army Corps of Engineers for remediation of lead and arsenic-contaminated soils at a former battery reclamation facility. The design included excavation of contaminated soils based upon both contaminant concentration levels in the soil and a maximum permissible depth of excavation, considering the presence of an artesian aquifer beneath the site. The excavated soils were processed through a soil washing facility to decrease lead and arsenic levels to acceptable concentrations. The treated soils are returned to the site for on-site disposal and capping of the site once all soil was returned and the site properly graded.</p> <p>Project Manager for the preparation of a RCRA Closure and Post-Closure Plan for combined closure of an in-place 4-acre tar decanter sludge impoundment regulated under Subtitle C and a Refuse Landfill regulated by IDEM restricted waste regulations for existing landfills. The closure Plan is being prepared to meet IDEM regulatory obligations for landfill closure. The disposal areas are contiguous and overlapping captive industrial facilities within a large industrial complex entering the RCRA Corrective Action process. Processes have been negotiated to streamline EPA and IDEM reviews and accelerate closure and achievement of EPA environmental indicators for the facility.</p> <p>Project manager for the site investigation, design (conceptual through final), permitting, and initial cell and treatment plant construction of a new 152-acre solid waste disposal facility in Indiana. The design, permitting, and initial construction activities have extended over a 7-year period throughout which Ms. Muller has been the project manager. Key activities that were conducted during this period include the following:</p> <ul style="list-style-type: none"> - Preparation of work plans. - Waste sampling and analyses in accordance with the approved work plans. - Determination of the wastes' chemical properties for IDEM and physical properties/volumes to develop cost effective waste solidification and handling procedures. - Preparation of the permit application/design that incorporated a composite liner system overlain by a leachate collection system. - Preparation of construction bid package, assistance in contractor selection, and construction oversight services in accordance with the approved Construction Quality Assurance (CQA) Plan for the construction of the first 13-acre cell. 	-	2	-

	YEARS OF AML DESIGN EXPERIENCE:	YEARS OF AML RELATED DESIGN EXPERIENCE:	
David K. Saylor, P.E.	10	21	1
Brief Explanation of Responsibilities			
<p>Southern Expressway Construction, Pittsburgh International Airport: Onsite professional engineer for excavation and disposal of municipal wastes within the right-of-way of a major highway construction project. Excavated wastes were disposed in a permitted onsite landfill while contaminated industrial wastes were disposed offsite in a non-RCRA disposal facility. Drums encountered during excavation were overpacked and delivered to an offsite RCRA incinerator and disposal facility. Approximately 465,000 cubic yards of solid waste and 280,000 cubic yards of unclassified soils were excavated.</p> <p>EPA Superfund Site, Summit Ohio: Investigator for field investigation, drilling, sampling, and well installation for an abandoned hazardous waste incinerator site listed as a priority EPA Superfund site. Fieldwork was performed to support RIFS work.</p> <p>Abandoned Mine Land Reclamation Program, West Virginia: Engineer for abandoned mined land projects in West Virginia. The majority of these projects involved the reclamation of abandoned, unstable coal refuse embankments. Prepared investigation programs to evaluate engineering and vegetation properties of materials, analyzed data to develop stable final configurations, and prepared contract documents, including drawings, specifications and cost estimates. Supervised the monitoring of construction for these projects.</p> <p>Office of Surface Mining Contractor: Performed investigations and designed mitigation methods for numerous structures damaged by deep mine subsidence in the Tri-State area as a contractor of Office of Surface Mining.</p> <p>General Geotechnical Projects: Performed and directed numerous geotechnical foundation investigations to develop recommendations for the design of foundation systems for both individual commercial office buildings and major mall developments. Scoped and implemented investigation programs, logged materials encountered, prepared geologic sections, and developed laboratory testing programs. Analyzed results of investigation to develop opinions and on most appropriate foundation systems and parameters for system design.</p> <p>General Coal Refuse Design Projects: Designed coal refuse slurry impoundments and refuse piles in West Virginia, Virginia, and Kentucky. Monitored investigation programs, including the drilling of borings and performance of in-place bedrock permeability packer testing. Services provided include stormwater runoff calculations, flood routing, embankment stability, permit application preparation, design drawings, and report development.</p> <p>Grove City Factory Shops, Grove City Pennsylvania: Engineer of record for the design of a water supply, storage, treatment, and distribution system for a major retail center in Pennsylvania. The water distribution system was approximately 2.5 miles long and supplied water to residences and businesses along the route. The source of water was a new community groundwater well.</p> <p>Grove City Factory Shops, Grove City Pennsylvania: Engineer of record for the design of an approximate 5 mile long sanitary sewer system to provide sewer for a major retail center in western Pennsylvania. The system was designed as a gravity flow system and required two pump stations to overcome hilly terrain. The system was designed as a gravity system to permit residences along the route to tap in and eliminate their on lot systems.</p> <p>AEG Building, Southpointe Business Park, Canonsburg, Pennsylvania: Developed investigation plan and designed and implemented repair for a landslide at a major industrial facility in Southwestern Pennsylvania. The toe of the embankment was immediately adjacent to a public roadway and public utilities.</p> <p>Allegheny Power Company, Hatfield Power Station, Greene County, Pennsylvania: Project manager for the redesign, repermitting, and construction of an approximate 30-acre dry coal combustion byproduct disposal area designed in accordance with revised Pennsylvania Residual Waste Regulations. Mr. Saylor served as Engineer-of-Record for both the design and construction of the facility.</p>

LaMont, Michael, J. CAD Designer	10	10	15
Brief Explanation of Responsibilities			
<p>Mr. LaMont is a designer with a background in pipelines, telecommunications, reclamation of abandoned mine lands including acid mine drainage abatement, earthwork, grading plans, stream channel restoration, sealing of mine portals and reclamation of coal refuse piles. While at Baker he has worked on many abandoned mine land reclamation and mine shaft site design and permitting projects. His site / civil qualifications also consist of parking lot layout and design, roadway geometry, right-of-way acquisition, drainage, storm sewer and sanitary sewer design. Additional telecommunications experience include fiber optic cable construction and installation drawings along highways, railroads and cross country routes, as well as stream and road crossing drawings and cross sections, and state, local and environmental permit drawings.</p>			
<p>He has 2 years international experience providing services for Baker.</p>			
<p>Maple Run Portals and Tipple, West Virginia. West Virginia Division of Environmental Protection. Prepared construction plan, profile, detail, and cross section sheets and earthwork balancing for the project, which included, site grading, mine seals, collection and diversion ditches, placement of soil cover, and revegetation.</p>			
<p>Emoryville Mine Complex, West Virginia. West Virginia Division of Environmental Protection. Prepared construction plan, profile, detail, and cross section sheets and earthwork balancing for the project which included erosion and sedimentation control measures, site regrading, mine seals, collection and diversion ditches, removal of abandoned barges and coal refuse from the North Branch of the Monongahela River, placement of soil cover, and revegetation.</p>			
<p>Watson Portal and Refuse Reclamation, West Virginia. West Virginia Division of Environmental Protection. Prepared construction plan, profile, detail, and cross section sheets and earthwork balancing for the project which included erosion and sedimentation control measures, site regrading, mine seals, collection and diversion ditches, removal of abandoned barges and coal refuse from the North Branch of the Monongahela River, placement of soil cover, and revegetation.</p>			
<p>Dennison/Route 800, Ohio. Ohio Department of Natural Resources, Division of Mines and Reclamation. Prepared construction plan, profile, detail, and cross section sheets and earthwork balancing for the project which included erosion and sedimentation control measures, site regrading, mine seals, collection and diversion ditches, placement of soil cover, and revegetation.</p>			
<p>Hardy Coal Company Bond Forfeiture, Ohio. Ohio Department of Natural Resources, Division of Mines and Reclamation. Prepared construction plan, profile, detail, and cross section sheets and earthwork balancing for the project which included erosion and sedimentation control measures, site regrading, collection ditches, and revegetation.</p>

NAME & TITLE (Last, First, Middle Int.)	YEARS OF AML DESIGN EXPERIENCE:	YEARS OF AML RELATED DESIGN EXPERIENCE:	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE:
<p>Schroeder, Kevin S. Environmental Scientist</p> <p>Brief Explanation of Responsibilities</p> <p>As a Senior Environmental Scientist, Mr. Schroeder's responsibilities include leading and documenting field studies for various environmental reports as required under the National Environmental Policy Act, Section 404 of the Clean Water Act and FHWA requirements, in addition to local and state regulatory requirements. As an experienced wetland ecologist, Mr. Schroeder applies his aquatic biology background in wetland and stream studies. Mr. Schroeder is proficient in wetland identification, delineation, functional assessment, monitoring, permitting and remote sensing. He is emerging in the creation and restoration arena for both wetlands and streams. Mr. Schroeder has already applied Level I Rosgen Training - Applied Fluvial Geomorphology in Western Pennsylvania.</p> <p>Proposed Mining Air Shaft and Access Road, Greene County, Pennsylvania. Cyprus Cumberland Resources Corporation. Task Leader. Performed wetland delineations and water quality analysis of the project area streams utilizing the EPA's Rapid Bio-assessment Protocols. Submitted necessary permits including state and federal wetland encroachment permits. Author of stream and wetland sections of the Bureau of Deep Mine Safety's Module 14.</p> <p>Coal Conveyor Belt Right-of-Way, Beckley, West Virginia Area. Norfolk Southern. Environmental Specialist. While with another firm, performed wetland delineations and stream surveys for a five-mile coal conveyor belt right-of-way near Beckley, West Virginia, proposed by Norfolk Southern. Advised client on tower placement to minimize wetland impacts and high quality stream encroachments.</p> <p>Wetland Mitigation Sites, Raccoon Creek Marsh and Taxiway E, Allegheny County, Pennsylvania. Allegheny Department of Aviation. Environmental Scientist. Monitored wetland mitigation sites as required by the PADER to evaluate the success of the replacement wetlands. Included with the Wetland Monitoring Report and WET functions and values analysis, and aquatic and wildlife species observation list. Suggested corrective action items for existing and potential problems regarding the success of the mitigation wetlands.</p> <p>Natural Gas Pipeline Projects, Various Sites: Ohio, Pennsylvania, New York, Virginia and West Virginia. Columbia Gas Transmission Corporation. Environmental Specialist. While with another firm, performed wetland determinations for several natural gas pipeline projects. Filed FERC reports and applied for and was granted multiple Nationwide Permits - 12, 14, and 26, as well as state wetland and stream encroachment permits, hydrostatic test water discharge permits and land disturbance permits.</p> <p>Surface and Groundwater Sampling, Shippingport, Pennsylvania. Pennsylvania Power Company. Environmental Specialist. While with another firm, assisted in collecting various surface and groundwater samples at the Bruce Mansfield Power Station. Field sampling included basic water quality measurements and laboratory preparation of samples.</p> <p>Surface Water Sampling, West Elizabeth Pennsylvania. Hercules Incorporated. Environmental Specialist. While with another firm, collected surface water samples at various locations within the Hercules chemical plant as required by the NPDES Permit. Sampling included basic water quality measurements and laboratory preparation of samples.</p>	-	4	-

14. PROVIDE A LIST OF SOFTWARE AND EQUIPMENT AVAILABLE IN THE PRIMARY OFFICE WHICH WILL BE USED TO COMPLETE AML DESIGN SERVICES

Various computer software and equipment (surveying and mapping) used by Michael Baker Jr., Inc. for ongoing projects are as follows:

HYDROLOGY

SEDCAD4 – Storm Routing through Detention Structures, Channel Design and Riprap Sizing.
TR20 – Project Formulation – Hydrology by SCS
TR55 – Urban Hydrology for Small Watersheds by SCS
HAESTADS POND2 – Storm Routing through Detention Structures
HEC1 – Flood Hydrograph Package by U.S.A.C.O.E.
HAESTADS QTRSS – Urban Hydrology for Watersheds

HYDRAULICS – OPEN CHANNEL AND CULVERT

HEC RAS/ - river Analysis System/Flood Plain Analysis/Water Surface Profile
HEC2 – Water Surface Profiles by U.S.A.C.O.E.
HY8 – Culvert Analysis by FHWA
FLOWMASTER – Channel and Pipeline Hydraulics by HAESTAD, Inc.

PIPELINE HYDRAULICS

WATERCAD – Water Distribution System Modeling
KPIPE2 – Water Distribution System Modeling
CYBERNET – Water Distribution System Modeling

GEOTECHNICAL

STABL5M – Slope Stability
REAME – Slope Stability
SAMM – Loads on Concrete Pipe

DRAFTING AND SITE DESIGN

AutoCAD – LANDDEVELOPMENT 2000 Desktop for Earthwork, Survey, Quantity, Calculations,
Terrain Modeling, Coordinate Geometry, Site Grading, etc

SURVEYING AND MAPPING

SURVEY EQUIPMENT AND SOFTWARE

Survey/Global Positioning System (GPS)
 Leica System 500 - SR 530 RTK - GPS Receiver
 Leica GS50 C/A Code Receiver with Rascal Correction Service
 Trimble Pathfinder Pro XRS - with Omnistar Correction Service
 Trimble 4000SSE - Dual Frequency Receivers
 Trimble 4400 - RTK - Dual Frequency Receivers

Pipe/Cable Locators
 Metrotech Model 9890
 CAT & Jenny Locators
 Metrotech Model 810

Total Stations
 Topcon GTS 3B
 Nikon DTM A5LG
 Wild TC 2000

Total Stations with Onboard Data Collection

Leica TCRM 1103 – Motorized w/Reflectorless EDM
 Leica TCA 1103 - Robotic w/Auto-Target Recognition (ATR)
 High Precision Wild T3

Data Collectors

Wild GRE 4
 PENTAX SC5
 Leitz SDR33
 Topcon FC1

Levels (Engineering)

Zeiss Ni 2
 Leica NA 2002 Digital Level w/2 rods
 Wild N-3

19. USE THIS SPACE TO PROVIDE ANY ADDITIONAL INFORMATION OR DESCRIPTION OF RESOURCES SUPPORTING YOUR FIRM'S QUALIFICATIONS TO PERFORM WORK FOR THE WEST VIRGINIA ABANDONED MINE LANDS PROGRAM.

Baker has been providing engineering services for water treatment and distribution systems for over 50 years and has been providing abandoned mine lands (AML) reclamation and acid mine drainage (AMD) remediation since the federal government first enacted legislation. Baker currently provides engineering services for water systems owned by large municipalities serving many thousands of connections such as the City of Pittsburgh, small water systems such as the Ohioville Borough Municipal Authority (Pa) water system serving fewer than 2,000 residents, and privately owned water companies such as Virginia American Water. Baker has ongoing retainer agreements and acts as municipal engineering representative to over 20 municipalities in western Pa alone.

In addition, our work experience in AML/AMD started with Operation Scarlift in the 1970's, and since 1983, we have been providing our engineering services in these areas to the West Virginia Department of Environmental Protection (WVDEP), Pennsylvania Department of Environmental Protection (PADEP), Ohio Department of Natural Resources (ODNR), and U.S. Office of Surface Mining (OSM), to name a few. Our recent experience on numerous AML reclamation and AMD remediation projects for the WVDEP, ODNR, PADEP and Nashville District of the U.S. Army Corps of Engineers, illustrates our track record for the completion of assignments on time and within budget.

Although the projects presented in the Project Experience Matrix of Attachment "C" of the Consultant Confidential Qualification Questionnaire (CCQQ) clearly show Baker's AML/AMD design, water system design, and related experience, they only hint at the extensive human and material resources which especially qualify our firm for this project. The following narrative further describes our experience and provides insight into the special capabilities of Michael Baker Jr., Inc.

Comprehensive Services

The civil and mining engineering, surveying and mapping, environmental, and geotechnical services of Michael Baker Jr., Inc. are available to immediately respond to the needs of WVDEP. Working from our Beaver, Pennsylvania office, which provide excellent highway and airline transportation, Baker can provide the full spectrum of services needed in water distribution system design as well as mine reclamation and mine drainage abatement operations. Some of the more important services our firm can provide to WVDEP include:

- Mapping and aerial photography
- Surveying
- Environmental evaluations and assessments
- Data acquisition and interpretation
- Geotechnical engineering
- Engineering design
- Plans/specifications preparation
- Construction management.

Since we can furnish all of the engineering related services required for abandoned mine lands reclamation projects, we can work very efficiently and meet the strictest of schedules. Our efficiency is further heightened by the use of interactive graphics and AutoCAD compatible design software to perform computer-assisted mapping, design and drafting. Baker is a pioneer in mining applications of interactive graphics and is one of only a few firms capable of digitizing mapping directly from aerial photography using photogrammetric stereoplotters. When mapping already exists, we can manually digitize the information into the computer system. Some of the functions applicable to design projects for which Baker routinely employs the Interactive Graphics System and AutoCAD LAND DEVELOPMENT Desktop include:

- Contour mapping of the surface and subsurface
- Facilities layout and site design
- Earthwork volume computations and cost estimates
- Drafting of plans profiles and cross sections

The Interactive Graphics System and AutoCAD LAND DEVELOPMENT Desktop Civil Design software are powerful cost saving tools for abandoned mine land projects since they can evaluate numerous configurations rapidly. They are especially useful for projects requiring extensive waterline plan and profile drawings and can interface with hydraulic models such as WaterCAD for analysis and design. They are also useful for projects requiring extensive backfilling and grading, such as may be required for water tank and pump station sites, and for the grading of refuse banks and gob piles, elimination of highwalls, and reclamation of other abandoned surface disturbances.

Potable Water Treatment, Distribution and Process Design Capabilities and Experience

Baker has extensive experience with potable water treatment, distribution and process engineering projects. Our services include municipal representation, master planning, system assessments, design of new and rehabilitation of existing systems and facilities. Baker acts as engineering representatives to over 20 local municipalities and authorities and performs conceptual designs, detailed designs, bid phase assistance, construction inspection, and operations assistance with our full service capabilities. Baker is able to provide the following services:

- System mapping and inventory
- Permitting services (WVDOH, WVBPH, WVPSC, NPDES, etc.)
- Feasibility and service studies
- Rate evaluations
- Storage Tank and Reservoir design and rehabilitation
- Pumping/booster station design
- Distribution system design
- Water treatment plant design
- Vulnerability studies
- Water quality analysis
- Hydraulic modeling

Due to the size, extent, and topography of the project area, Baker anticipates that one of the key design elements will be the development of a water distribution model. If selected as the preferred design firm, Baker will develop such a model for use in pump station design, water main sizing and pressure class optimization, water storage tank design, and locating other key distribution facilities such as pressure reducing valve stations. Water distribution system modeling involves developing a computerized mathematical model of a water distribution system, and using it to simulate and analyze hydraulics and water quality within the system. Baker began steady state hydraulic modeling in the early 1980's using KYPipe, developed by the University of Kentucky. This program is considered by the industry as the pioneer of water distribution modeling software. As modeling needs grew, Baker remained in the forefront with the purchase of Haestad Method's Cybernet and WaterCAD software in the early 1990's. With continuous software upgrades and training, Baker provides modeling support to many municipal, industrial and educational agencies. Baker's experience is unparalleled in model calibration and methods, planning of system improvements, extended period simulations and fire flow analysis & protection. Typical Model Applications Include:

- Fire Flow Analysis
- System Extension Evaluations
- Sizing and Designing New Facilities
- Development of System Maps
- Water Quality Modeling
- Emergency Planning
- Water System Protection Studies

Abandoned Mine Lands and Existing Mines Experience

The experience of the key project personnel is not limited to water distribution and treatment, but also includes abandoned mine operations, since we continually serve many of the country's largest coal and mineral producers as well as industrial clients. Several personnel listed under Item 13 of the CCQQ have experience in all phases of mining services, from survey, mapping, exploration and reserve analysis through mine planning, permitting, design, construction management, and final closure and reclamation. Since mining projects (and

WVDEP assignments in particular) comprise a large segment of our business, we work to assure that the mining services provided meet the needs and expectations of our clients and any regulatory agencies involved. Some of the many coal producers we have served are listed below:

- U.S. Steel Mining Co., Inc.
- Westmoreland Coal Company
- RAG Emerald Resources Corp.
- AMAX Coal Company
- Consolidation Coal Company
- RAG Cumberland Resources Corp.
- Jim Walter Resources, Inc.
- Ashland Coal, Inc.
- Sierra Coal Company
- Exxon Research and Engineering Company

Since it is not possible to describe all of the work done for these mining clients and numerous governmental agencies, a detailed project description will be provided. These key projects, due to their magnitude and/or requirements, further demonstrate the full service capabilities of Michael Baker Jr., Inc. These projects are listed under the type of work performed.

● **State Funded Mine Reclamation and Pollution Abatement Projects – Pennsylvania**

As a result of its abandoned mine lands inventory of the East Branch Clarion River Basin, Michael Baker Jr., Inc. was retained by the Pennsylvania Department of Environmental Resources to prepare detailed design plans, specifications and bid packages for two reclamation projects under Operation Scariff.

The first project involved the design of mine seals to abate mine drainage originating from two abandoned drift openings and a seepage zone between them. A series of nine core holes were placed to determine rock conditions above and below the mine void, and to determine the condition of the drift entries and the mine void. Hydraulic seals, consisting of front and rear bulkheads (aggregate material) with a concrete center plug were designed for construction in the entries. All material was placed from the surface through core drill holes.

The two drift entries were located 450 feet apart. A seepage zone existed at the outcrop between the entries. To abate the AMD seepage, a grout curtain extending between and beyond the entries was designed. Grout material was injected under pressure through core drill holes to seal off water flow through the seepage zone.

The second design project involved preparation of detailed plans and specifications for regrading and reclaiming 14 separate abandoned surface disturbances. These consisted of strip mines, a preparation plant site, refuse disposal areas, and haul and access roads totaling 70 acres. Grading plans were prepared specifying filling of ponds, grading to provide positive drainage, and covering of toxic materials with three feet of non-toxic material and/or soil. Specifications for revegetation were prepared, including soil amendments, seed mixtures and mulching.

Michael Baker Jr., Inc. also provided supervision and inspection services during construction. This included scheduling of construction activity, direction of contractors, and materials and compaction testing.

In House Facilities and Resources

As a large, diverse engineering firm, Michael Baker Jr., Inc. has facilities available to properly conduct water distribution extension, abandoned mine land reclamation, and AMD remediation projects. The use of in-house facilities can speed project completion and facilitate tracking of progress. The in-house facilities include:

- Data Processing
- Interactive Graphics and AutoCAD
- Word Processing
- Printing and Reproduction

Summary

To summarize Baker's qualifications to provide engineering services for waterline and abandoned mine land projects, we offer the following response to the evaluation factors:

1. Bidder Experience in all aspects of surveying and mapping, subsurface investigation, and design engineering.
 - Extensive experience in each area. Items 17 and 18 of the CCQQ describe various projects for which we provided these services during the last 5 years. Projects listed under item 12 of the CCQQ describes typical of various projects for which we provided our services to WVDEP.
 - Strong capabilities in each area. Item 13 of the CCQQ lists our personnel by discipline. Our large multi-disciplinary staff is experienced in all aspects of water distribution and AML reclamation; civil, environmental, mining, geotechnical and reclamation engineering applied to surface and underground coal mining; land restoration; stream and water restoration; and land use and natural resources planning. The attached "Project Experience Matrix" show various projects performed for various clients and also show primary participants responsible for these projects.
2. Qualification of Personnel with respect to background, general experience, and experience relative to the requirements of the project.
 - Baker's key personnel are registered professional engineers experienced in a broad variety of water distribution and similar projects, as indicated item 13 of the CCQQ.
 - Our Project Manager and Project Engineers are veterans of many similar projects including past WVDEP projects, including waterline assignments from WVDEP funded through AML since 1983.
3. Corporate Specialized Experience and Demonstrated Abilities with similar projects.
 - Baker's specialized experience with AML related problems is summarized in the AML and Related Projects Matrix in Appendix C. Our work has addressed the full spectrum of AML problems including water projects for clients such as WVDEP, PADEP and others.
 - The firm has a wealth of experience on similar projects, as evidenced by projects performed for mining and mineral companies. Moreover, Baker's transportation, site development, and water resource projects in the tri-state area typically address AML problems.

19. USE THIS SPACE TO PROVIDE ANY ADDITIONAL INFORMATION OR DESCRIPTION OF RESOURCES SUPPORTING YOUR FIRM'S QUALIFICATIONS TO PERFORM WORK FOR THE WEST VIRGINIA ABANDONED MINE LANDS PROGRAM.

4. Management Plan and Location of Facilities

Baker's Management Plan provides for:

- Project Management and Organization – Leadership by an experienced Project Manager, Project Engineers, and Technical Quality Control staff; organization capable of performing multiple projects simultaneously.
- Technical Approach – Knowledge of the sequencing and scheduling for typical tasks performed for AML projects.
- Contract Administration and Control – Computerized budgeting and scheduling; regular progress reporting; total quality management.
- Location of Facilities – Design work performed in Baker's Beaver, PA office. Baker successfully completed previous assignments for WVDEP from this location since DEP initiated the AML reclamation program.

5. Continuous Improvement (CI)

Baker has a highly effective, corporate-wide Continuous Improvement (CI) program. The ultimate beneficiaries of CI are Baker's clients, such as the WVDEP. Benefits include improved client satisfaction, a reliable product/service, reduced costs, improved communications and added value.

Client satisfaction; service, reliability, and value will be the overriding responsibility of the project's technical quality manager, and the goal of the entire project team. A variety of formal and informal techniques will be used throughout the project life to monitor our success. These techniques will range from visits and phone calls to status meetings and quality audits. If any deficiencies are identified, corrective actions will be implemented by the management team.

Based on Baker's extensive experience in design and preparation of water distribution and AML reclamation plans, our veteran staff, our familiarity with WVDEP assignments, and the strength and location of our facilities, we believe that Baker is best qualified to assist WVDEP in this very important water project.
