Attn: Chuck Bowman, Buyer Supervisor

RE: Expression of Interest—Engineering Services for Earling Refuse Pile Design  
Requisition DEP14950

Dear Mr. Bowman:

Buchart Horn Inc. (BH) is pleased to present our Expression of Interest for engineering and construction phase services related to the Earling Refuse Pile Design project in Logan County. We have reviewed your project announcement and reviewed the project requirements. Based on our understanding of this information and a preliminary assessment of potential project solutions, we are very confident in our team's ability to provide you quality, cost efficient service for this assignment.

BH is a full-service engineering and architectural firm with offices in Charleston, Pittsburgh and 13 other locations in the eastern United States and Germany. We have strong experience in site stabilization and remediation design. Our local staff includes registered Professional Engineers and individuals with experience in the AML program. Our team also includes Novel GeoEnvironmental Services, a subconsultant firm that specializes in soils engineering and site characterization. G. Joseph Crittenden will serve as our Project Manager. Mr. Crittenden brings over 30 years of site design experience, including highwall, portal closure, and remediation projects. He most recently served as Project Manager for the Terry Branch Portals and Refuse project in Wyoming County. At his disposal are over 300 professionals including specialists in site and civil engineering, structural, geological, and hydrological engineering, planning, mapping, and site surveying.

In accordance with the instructions outlined in your Request for Expressions of Interest, this package contains a completed copy of the DEP AML Consultant Confidential Qualification Questionnaire. We have also provided additional details on our firm, recent relevant projects, and our proposed project team.

Should you have any questions concerning the information presented herein, please do not hesitate to contact me. We look forward to your favorable review of our Expression of Interest and the opportunity to serve the West Virginia Department of Environmental Protection.

Very truly yours,

BUCHART HORN, INC.

George J. Crittenden  
Project Manager

Project Overview	Section 1
Corporate Overview	Section 2
Project Management & Design Team	Section 3
Relevant Experience	Section 4
Required Forms	Section 5

## Project Overview

The Earling Refuse Pile Design site is located near West Virginia Route 10 with access provided by Omega Road. Omega Road is a local service road that gives access to the community of Earling from West Virginia Route 10.

The Earling Refuse Pile Design project consists of portals, refuse, and hazardous equipment or facilities. Observations made during a site visit include, unstable refuse piles, refuse within the stream bed, partial structures, equipment, debris from site visitors, and what appears to have been a temporary treatment applied to a refuse pile.

## Scope of Work

The Scope of Work for the Earling Refuse Pile design project is to accomplish:

- Create diversion channels, ditches, and/or under drains to transport the drainage.
- Stabilize the refuse areas.
- Install appropriate mine seals such as dry seals, wet seals, or bat gate seals.
- Dispose of garbage, debris, and structures.
- Provide stream bank protection.
- Reclaim and re-vegetate all areas disturbed by construction.

*Picture 1 is of a steep and severely eroded coal refuse pile littered with debris.*

*Picture 2 is of an area of coal refuse.*

*Picture 3 is close-up of the material covering a portion of the pile.*

*Picture 4 shows coal mining debris that eroded from the refuse pile and into the stream.*

*Picture 5 is of ruins from an abandoned structure.*

*Picture 6 is of abandoned equipment. Note that the hatch is easily accessible to site visitors.*

*Picture 7 is of another steep and severely eroded coal refuse pile littered with debris.*

## General Approach

The general approach will consist of, but not necessarily be limited to, the following items:

- First, the Project Team will meet on-site with the WVDEP-AML&R personnel. The site visit will set the project boundaries and locate the mine portals. The Project Team will identify the need for geotechnical services, and surveying services, identify a location to transport the mine drainage via underground piping to a safe and acceptable outlet location, discuss configuration of the refuse stabilization, discuss structure demolition, and discuss the disposition of the hazardous equipment or facilities.
- The surveying/mapping services will create a product that has sufficient accuracy to develop grading, drainage, mine closure, and erosion control plans with quantities. If aerial mapping is used to develop the plans, field check sections will verify the accuracy of the mapping. The team will establish sufficient referenced control points that will allow the contractor to reestablish any disturbed monuments.

Buchart Horn, Inc. will record comments from any meetings and distribute them in a memorandum format to the Department for review and approval.

- Second, if required, the Project Team will begin subsurface investigation layout, utility location investigations, water sampling/testing locations, material sampling/testing, slope stability, and if deemed appropriate locations to install piezometer(s).
- Third, Buchart Horn, Inc. will schedule a conceptual design meeting with WVDEP-AML&R personnel. The meeting will assure that the Project Team is in agreement with the Scope of Work, project limits, and direction of the design. At this time Buchart Horn will present their design to seal the mine portals, stabilize the refuse pile, disposition recommendations of the hazardous equipment/facilities, stream bank protection, and collection/encapsulation of the material covering the refuse pile.

Buchart Horn will work closely with the WVDEP and our Geotechnical Engineer to provide a slope design that will stabilize the refuse. Buchart Horn will assemble any project test data and present it to Department personnel at the conceptual design meeting.

Buchart Horn, Inc. will record comments from any meetings and distribute them in a memorandum format to the Department for review and approval.

- Fourth, Buchart Horn will incorporate comments from the conceptual design meeting into the plans and contract documents.
- Fifth, the design team will finalize the design and prepare the contract documents for bidding purposes.

For more than 64 years, **Buchart Horn, Inc. Engineers, Architects and Planners** has managed and successfully completed multi-disciplinary design projects throughout the eastern United States. As a full-service architectural and engineering firm that serves our clients through 15 operating offices, we are well positioned to assist our clients with any project.

*Engineering News Record* ranks Buchart Horn among the top 200 environmental firms and the top 200 international design firms. With more than 300 professional and support personnel, we have the ability to meet the most aggressive schedule.

**Locations**

Our firm serves public and private clients around the world from these locations:

- |  |                           |
|--|---------------------------|
| Pennsylvania: York, Harrisburg, New Cumberland, Pittsburgh, State College, Stroudsburg | Louisiana: Baton Rouge    |
| West Virginia: Charleston  | Maryland: Baltimore       |
| Germany: Frankfurt/Main, Kaiserslautern  | Mississippi: Batesville   |
|  | New Jersey: Marlton       |
|  | Tennessee: Memphis, Milan |

**Services**

We specialize in designing, improving, and solving infrastructure and structure problems and in helping our clients comply with environmental, life safety, and other codes and regulations. We provide:

- Abandoned Mine Reclamation
- Civil/Site development
- Architecture
- Landscape architecture
- Environmental planning, engineering, compliance
- Surveys/mapping
- HVAC, plumbing, energy conservation
- Construction Services
- Electrical systems and computer wiring
- Structural design
- Geographic Information Systems (GIS)
- Hazardous and toxic substances
- Highways, roads, streets, bridges
- Traffic and traffic management
- Recreation parks and trails
- Schools
- Telecommunications
- Telemetry and SCADA control systems
- Vulnerability assessments
- Wastewater treatment and systems
- Water treatment and systems

## Professional Services

With complete in-house capabilities, we can assemble a team from our full-service staff to match each client's particular needs.

## Environmental Engineering

Our environmental engineering services range from water treatment to sludge management and disposal. Our staff is familiar with code regulations. Services available include:

- Comprehensive planning
- Environmental assessments/impact studies
- Environmental auditing
- Environmental compliance: CAA, CWA, RCRA, UST, CERCLA/SARA, PCB, Asbestos, HMTA
- Environmental site assessments (Phases I-IV)
- Financial analysis/funding assistance
- Geological engineering
- Geophysical investigations
- Groundwater contamination investigation
- Highway noise analysis
- Hydrogeological studies
- Industrial and hazardous waste management
- Infiltration/inflow studies
- Instrumentation, telemetering, and controls
- Permitting and government regulations
- Pollution prevention plans
- Remedial action design and implementation
- Soil contamination studies
- Solid waste/air quality management
- Stormwater management/NPDES permitting
- Underground storage tank investigation
- Water and wastewater collection/treatment systems
- Water and sewage facilities planning
- Water distribution/storage systems
- Waterline feasibility studies (AML)
- Wetlands delineation and permit applications

## Planning

In our firm, planning is not a separate discipline. It is an important component in assisting our clients in making knowledgeable project and programming decisions. We provide planning for the following types of projects:

- Comprehensive planning
- Economic feasibility
- Environmental planning
- Facilities planning
- GIS/mapping
- Land planning
- Landscape architecture
- Master planning
- Public meetings
- Recreational planning
- Space planning
- Zoning and subdivision ordinances

## Civil Engineering

Buchart Horn's civil engineering group matches sophistication and execution to complex, project-specific, and regulatory requirements to leverage the latest technological and computer advances.

- Flood studies
- Grading and drainage design
- Parking studies and design
- Right-of-way services
- Sediment and erosion control
- Signalization
- Site development
- Stormwater management
- Traffic studies and analyses
- Utilities design

## Transportation

Our Transportation Division offers a full range of transportation-related experience including:

- Airport design
- Bridge design and inspection
- Dam design and inspection
- Flood studies and hydrological analyses
- General structural design
- Highway design
- Railroad and railroad bridge design
- Site grading, drainage, and stormwater design
- Traffic studies

## Construction Management

Our construction management engineers and inspectors serve as representatives of the client/owner, providing liaison with contractors so that construction complies with contract documents. We provide the full spectrum of construction phase services for all types of architectural and engineering projects including:

- Construction inspection
- CPM scheduling and evaluation
- Claims/change order management
- Constructability analysis
- Construction audits
- Construction management
- Contract administration
- Design/build
- Equipment start-up
- Grants administration
- Materials/equipment procurement
- Material sampling and testing
- Permit processing
- Specialized testing
- Videotaping

## Company Overview

Novel Geo-Environmental, PLLC (NGE) is a full-service geotechnical and environmental engineering firm with offices located in St. Albans, West Virginia, and Pittsburgh, Pennsylvania. Led by an experienced management team, NGE provides quality geotechnical services to a variety of clients in both the private industry and government sectors.

In business since 2002, NGE is one of the fastest growing engineering consulting firms in the country.

### **Who is NGE?**

Our staff includes professional engineers, geologists, scientists, construction managers, and foremen with experience in a broad range of technical disciplines. Our management team averages 15+ years of experience per person.

### **Why NGE?**

NGE is large enough to fulfill the needs of our client in-house, yet small enough to provide the personal focus each client deserves. With smaller overhead than larger companies, NGE can provide exceptional services at lower cost.

NGE is a Certified Disadvantaged Business Enterprise (DBE) in West Virginia, Pennsylvania, Ohio, Maryland, and New Jersey and is certified by the Small Business Administration as an 8(a) Small Disadvantaged Business.

## *Geotechnical Engineering*

The natural complexity and variability present in the subsurface requires a specialized expertise to ensure reliable results. NGE investigates and evaluates subsurface soil, rock, and groundwater conditions to analyze their response to the needs of a given project, whether they be foundation loads, site grading operations/slope configuration, or retaining wall design. A sampling of the geotechnical services NGE provides includes the following:

- Foundation investigations - commercial/residential construction, WVDOH bridge and roadway, airport geotechnical design, public and private utilities (water storage tanks, communications towers, etc.)
- Landslide investigations/remediation - slope design, retaining wall design
- Forensic Engineering/Insurance investigations
- Mine subsidence investigations/ground stabilization
- Dam design/rehabilitation
- Pavement analysis and design
- Groundwater seepage analysis and design

## Drilling Services

NGE is equipped with a variety of versatile drilling equipment to meet the demands of our clients even in the most demanding of environments. This includes:

- Truck-mounted rotary drill rig equipped with hollow stem augers used primarily for Standard Penetration Testing (SPT). It can also be used for conventional rock coring.
- Custom manufactured state-of-the-art track-mounted rotary drill rig, also equipped with hollow stem augers for SPT sampling. This machine is also equipped for wire-line coring and is uniquely designed to access hard-to-reach areas (such as rugged terrain or limited access) with a minimum of disturbance.
- Portable Tri-Pod drill able to perform SPT sampling in areas that are inaccessible to conventional drilling equipment.
- Dynamic Cone Penetrometer - portable device designed to provide comparable SPT "N-values" in areas with very limited access

NGE also provides monitoring well installation services that meet the requirements for the State of West Virginia Certified Monitoring Well Driller program.

## Construction Monitoring and Inspection Services

NGE offers inspection services to support a wide variety of construction projects, including highway, building, and airport. Our technicians are qualified and certified in a variety of services and will meet the specific needs of the client in an efficient and competent manner. NGE is also a West Virginia certified DBE firm as well as a federal Disadvantaged Business (8[a]). NGE can provide and manage the following services:

- Materials Testing and Analysis (concrete, asphalt, fill placement)
- Independent Construction Inspection
- Contractor Submittal and Shop Drawing Review
- Documentation and Process Verification
- Bidding Assistance and Analysis
- Cost Estimating and Cost Control Monitoring
- Design Review
- Value Engineering
- Project Partnering
- Quality Assurance Monitoring

## Laboratory Testing Services

NGE can provide laboratory geotechnical testing in accordance with ASTM standards under controlled conditions to further estimate the engineering properties of soil and rock materials. Typical laboratory testing includes soil classification, compaction, compressibility, swell potential, and permeability.

## Crosshole Sonic Logging (CSL)

NGE provides Crosshole Sonic Logging (CSL) to test the integrity of drilled concrete shafts. CSL testing is a non-destructive method that checks the homogeneity and integrity of concrete in a deep foundation by sending ultrasonic pulses through the concrete from one probe to another. The test measures the propagation time and relative energy of the ultrasonic pulse between parallel access tubes (access tubes typically consist of 2-inch diameter steel tubes attached to the drilled shaft reinforcement cage). The pulse arrival time (a.k.a. first arrival time (FAT)) and energy are affected by the concrete. Uniform concrete yields consistent arrival times with reasonable wave speed and energy. Non-uniformities such as zones of poor quality concrete, honeycombing, voids, and soil inclusions exhibit delayed arrival times with corresponding reduced signal energy.

NGE's broad range of experience in each of the previously listed services enables us to provide our clients with high-quality geotechnical engineering, remediation and construction services while meeting budgets and deadlines.

---

## Project Management & Staffing

We believe that the goal of every successful project is a fully satisfied client and workable, cost effective solutions to problems. The element that enables a successful project is the people - skilled and experienced technical personnel committed to a successful project and supported by the management and owners of the firms. We have assembled an exceptional group of professionals to work on the design of the Earling Refuse Pile project.

**George J. Crittenden** will serve as Project Manager and Technical Lead. Joe brings more than 30 years of civil and site design experience, including 8 years of experience with the AML program. He recently served as Project Manager and Technical Lead for the Terry Branch Portals and Refuse Project detailed in Section 4. His specific project experience includes obtaining 404/401 permitting from the U.S. Army Corps of Engineers as well as technical and design work on the Marrowbone Waterline Extension in Mingo County, the Ragland-Delbarton Water Supply project in Mingo County, and the Glen Fork / Sabine AML Feasibility and Waterline Extension Study in Wyoming County.

His project responsibilities for this assignment will include:

- Formulating the Project Work Plan.
- Establishing the Project Schedule.
- Ensuring that all project milestones are met through the coordination and monitoring of the project schedule and budget for the entire project team.
- Conducting meetings with WV DEP to document decisions or open items (project issues) and to publish meeting minutes that document those decisions/open items.
- Identifying and monitoring all open items/project issues so that all key project information is acted upon/ responded to in a timely and professional manner.
- Participating with the team in site visits in order to assess existing conditions and to collect and verify all appropriate program needs and requirements.
- Confirming that all work is being performed in accordance with the project scope and guidelines.
- Coordinating and monitoring of project engineers/ architects to ensure consistency and quality of work via regular meetings.
- Communicating among all members of the project team to ensure the consistent application of all project standards, schedules and date decisions.

Other key members of our project team include:

**Michael A. Schober, PE** will serve as Principal-in-Charge. He has 24 years of experience in the field of municipal engineering, water and wastewater treatment, distribution and collection. He is responsible for coordinating the activities of professional staff as well as managing design projects and coordinating design teams. Mr. Schober's experience includes water distribution and storage design, filtration, and well development.

**Robert T. Zulick, PE** will serve as QA/QC Manager for this assignment. Bob brings more than 36 years of experience in civil, site, and water systems engineering. He is a registered Professional Engineer and currently oversees all our work in West Virginia, including both environmental and engineering projects. He is serving as Project Manager on a current water system assignment for the Oakland Public Service District in Weirton, and has been QA/QC Manager on two West Virginia DEP projects, including the Terry Branch Refuse and Portals project.

**Tony B. Kitzmiller, PE** brings over 28 years of experience in the design of water distribution systems, drainage systems, mine engineering, and civil engineering. He has experience with the supervision of design and construction for coal mining in Northern West Virginia, including water discharges, slurry, and refuse construction. He is intimately familiar with mining conditions and construction, including the design of portal closures and seals. He has experience in managing and construction of methane drainage wells.

**Donald Newman, PE** brings over 26 years of environmental and site design experience. He has been involved with several AML projects for the Pennsylvania DEP, including work at the 75 acre McIntyre Mine site and the 55 acre Sherwood Drive site. He has also performed hydrologic and hydraulic analysis for a stream relocation due to potential AMD impacts at a generating station in Homer City, PA.

**Thomas T Dancsecs, PE** has over 20 years of experience in all aspects of hydrology and hydraulics, including the design of drainage and stormwater management systems. This experience includes work with WVDOT.

**Teresa Blanch, PG** has over 20 years of varied experience in geology and hydrogeology. She has applied her knowledge of these two areas to soil investigations, groundwater studies, remedial investigations, underground storage tanks and environmental site assessments in both the private and public sectors in Maryland, New Jersey, Pennsylvania, Virginia and West Virginia.

**Matthew J Leisses** has extensive field experience, and has worked on a variety of environmental documentation including, but not limited to PA Department of Environmental Protection Permits and various NEPA documents. He routinely submits permits to PADEP for various clients. He has also been involved in meetings with USACE, USFWS, PADEP, PennDOT, and NJDOT. Mr. Leisses has established relationships with several governmental agencies along with numerous non-profit environmental groups.

**Laura M Danko, PWS** is certified as a Professional Wetland Scientist with 15 years of experience providing technical and managerial environmental and ecological consulting for both public and private sector clients on a wide range of natural resources planning, conservation, and design projects.

**Novel Geo-Environmental Services, PLLC, (NGE)** is a full-service geotechnical and environmental engineering firm with offices in St. Albans, WV and Bridgeville, PA. Led by an experienced management team, NGE provides quality geotechnical services to a variety of private sector and government clients. In business since 2002, NGE is one of the fastest growing engineering consulting firms in the country.

NGE is a Certified Disadvantaged Business Enterprise (DBE) in West Virginia, Pennsylvania, Ohio, Maryland, and New Jersey and is certified by the Small Business Administration as an 8 (a) Small Disadvantaged Business.

Project Manager

## Education:

Coursework/Tennessee State University

Coursework/Kentucky State University

## Registrations/Certifications:

NICET Level I

## Years of Experience:

34

Mr. Crittenden has 32 years of experience in providing design, technical services, and surveying for mine land reclamation projects, airports, residential subdivisions, and highways. His project experience includes:

**Terry Branch Portals and Refuse Remediation, WVDEP, Wyoming County, WV.** Project Manager responsible for delineation of access road into site, demolition and disposal of fan and fan house, reclamation of refuse pile, design of four bat gate mine seals and six dry mine seals. Addressed on-site drainage concerns, and re-vegetated all areas disturbed by construction.

**Water Line Feasibility Studies, West Virginia Department of Environmental Protection, Boone, Mercer, and Raleigh Counties, WV.** Project Manager responsible for studies of the water supplies of three areas in southern West Virginia to verify if the areas have been affected by mining activities.

**Glen Fork/Sabine Area Phase II Abandoned Mine Lands Water Feasibility Study and Water Line Extension, Wyoming County, WV.** Senior Design Technician responsible for interviewing all residents about the quantity/quality of their water source and updating maps to show houses/businesses to support an AML&R grant request to OSM to extend or install water systems in these impacted areas.

**Red Star Refuse and Coke Ovens, Fayette County, WV.** Senior Design Technician responsible for layout of survey work, layout of subsurface investigation, requesting and analyzing laboratory test results, and production of grading plans with details, project specifications and bid documents for backfilling, soil covering and re-vegetation of over 60 abandoned coke ovens and three refuse piles.

**Minden Mine Dump, Fayette County, WV.** Senior Design Technician responsible for layout of survey work, layout of subsurface investigation, requesting and analyzing laboratory test results, and production of grading plans with details, project specifications and bid documents to install wet seals to permanently lower the water level in the mine workings, to establish positive drainage to a nearby stream, to excavate and regrade the refuse piles, and to provide soil cover and re-vegetate the refuse and all disturbed areas.

**Little Slate Creek Refuse Pike, McDowell County, WV.** Senior Design Technician responsible for layout of survey work, layout of subsurface investigation, requesting and analyzing laboratory test results, and production of grading plans with details, project specifications and bid documents to regrade the refuse pile to establish stable slopes and establish drainage to a nearby stream.

**Scott Tipple, Barbour County, WV.** Senior Design Technician responsible for layout of survey work, layout of subsurface investigation, requesting and analyzing laboratory test results, and production of grading plans with details, project specifications and bid documents to correct two areas impounding water and coal refuse.

**Marrowbone Water Line Extension, Mingo County, WV.** Senior Design Technician responsible for layout of survey work, layout of subsurface investigation, requesting and analyzing laboratory test results, and production of grading plans with details, project specifications and bid documents to extend a water line into the Marrowbone area where the groundwater was found to be contaminated by mining activities.

**Ragland-Delbarton Water Supply, Mingo County, WV.** Senior Design Technician responsible for layout of survey work, layout of subsurface investigation, requesting and analyzing laboratory test results, and production of grading plans with details, project specifications and bid documents to extend a Ragland Public Service District water line to serve approximately 150 potential customers due to the degradation of their water supply by coal mines abandoned prior to August 3, 1977.

**I-81 Tabler Station Interchange, West Virginia DOT, Martinsburg, WV.** Study, design, and preparation of construction contract plans and related documents for the new Tabler Station Connector Road including modification of ramps, replacement of an overpass bridge, and design of an industrial access road.

**Corridor H Final Design, WVDOT, Grant County, WV.** Design and development of construction documents for a four-lane divided highway with two major structures and a minor third structure including drainage and specialized erosion and sediment control due to the project location and ecological sensitivity of Greenland Gap.

**Route 206/Crusers Brook Final Scope Development, New Jersey DOT, Montgomery Township, NJ.** Final scope development for replacement of a deteriorating three-span structure with a new bridge. Work includes bridge design, highway design, geotechnical engineering, right-of-way engineering, utility engineering, maintenance and protection of traffic, and environmental permitting.

**Section 404 Permit, Rowlesburg Railroad Truss S339-51-0.74, Preston County, WV.** Temporary crossing of Saltlick Creek. Work included project narrative; hydraulic models of before, during, and after; determination of the ordinary high water elevation; determining excavation and embankment quantities (permanent and temporary) below OHW; determining drainage structure openings that would allow normal operation of Saltlick Creek. Produced location map, plan view, profiles, cross sections, and required quantities; and produced stream restoration drawings for the crossing removal.

## Years of Experience:

36

## Professional Affiliations:

American Society of Highway  
Engineers

American Water Works Association

Society of American Military  
Engineers

As an Associate Vice President with significant experience in administration and coordination of municipal and industrial water and wastewater projects from initial planning phase through design to project construction and facility start-up, Mr. Zulick has the authority to commit the full resources of the firm as necessary to successfully complete any project. He will secure additional resources your project requires when the Project Manager requests those resources, or if you should request those additional resources to meet agreed upon performance goals.

**Water Line Feasibility Studies, West Virginia Department of Environmental Protection, Boone, Mercer, and Raleigh Counties, WV.** QA/QC Manager responsible for studies of the water supplies of three areas in southern West Virginia to verify if the areas have been affected by mining activities.

**Terry Branch Portals and Refuse Remediation, WVDEP, Wyoming County, WV.** QA/QC Manager responsible for review of design for project, including demolition and disposal of fan and fan house, reclamation of refuse pile, design of four bat gate mine seals and six dry mine seals. Addressed on-site drainage concerns, and re-vegetated all areas disturbed by construction.

**Oakland Public Service District, Water System Improvements, Weirton, WV.** Project Manager responsible for preparation of an engineering report to assist the Client in securing funding for water system improvements including water storage tank rehabilitation or replacement, removal of iron and manganese from water, and water line extension along Chapman Road.

**Oakland Public Service District, Water System Improvements, Weirton, WV.** Project Manager responsible for design, bidding and construction phase services for Oakland Water System improvements including new water storage tank, treatment facilities to remove iron and manganese, Bell Hill to Ballantyne Road Water Line extension, and Golden Keys Water Storage Tank rehabilitation.

**Backwash Water Holding Tank Replacement, Kittanning Filter Plant, Pennsylvania American Water, Armstrong County, PA.** Project Manager responsible for design, bidding and construction administration services for a 175,000-gallon backwash water holding tank and related piping.

**Hays Mine Chemical Feed Building Evaluation, Pennsylvania American Water, Pittsburgh, PA.** Project Manager responsible for engineering/architectural review of deteriorating building and systems at the Hays Mine Treatment Plant to examine the feasibility of rehabilitation/replacement; our services included recommendations regarding chemical feed systems.

**Systemwide Water Treatment and Distribution Vulnerability Assessment, Pittsburgh Water and Sewer Authority, PA.** Project Manager responsible for this EPA-mandated security project that included a systemwide vulnerability assessment and review/recommendations for revisions/upgrades to the Authority's existing emergency response plan.

**Lowries Run Engineering Services, McCandless Township Sanitary Authority, Pittsburgh, PA.** Regional Manager responsible for overview of capacity evaluation of the Lowries Run Interceptor and preparation of existing conditions report for an interceptor serving seven contributing municipalities and a customer base near 25,000 persons. Work included flow monitoring and data analysis.

**ALCOSAN, Inspection and Hydraulic Analysis of Diversion Structures and Manhole Inspection Program, Pittsburgh, PA.** QA/QC Manager responsible for overview and quality control regarding project scope of service, schedule and budget that involved inspection, analysis and database development of manholes and diversion structures in the Eastern Basin of the ALCOSAN Service Area.

**ALCOSAN, Interceptor System Instrumentation Improvements, Pittsburgh, PA.** QA/QC Manager responsible for overview and quality control regarding project scope of service, schedule and budget that involved studies, design, and construction phase services for replacement of equipment associated with overflow monitoring at five interceptor pumping stations and level monitoring at nine access shaft structures.

**Pine Creek Flood Mitigation, Etna Borough, Pittsburgh, PA.** As the Consultant Engineer for Etna Borough near the City of Pittsburgh, Buchart Horn has been involved in a number of projects related to the mitigation of flooding from Pine Creek. In September of 2004, Etna Borough experienced catastrophic flooding of Pine Creek due to Tropical Storm Ivan. Buchart Horn provided continual on-site support following this event, including infrastructure assessments, debris removal, emergency funding applications, and engineering services required to restore normal infrastructure operations. Subsequently, we have supported a program of long term improvements to Pine Creek featuring over \$1.2 million in DCED/PADEP funded projects.

**PennDOT District 11-0, SR 19 Bridge Over SR 910, Allegheny County, PA.** Regional Manager responsible for overview of preliminary and final design of 146-foot, steel multi-girder bridge replacement, including structure configurations, review and coordination of geotechnical investigations, and reviews and determinations of roadway alignments.

**Group B Bridge Design, Allegheny County, Pittsburgh, PA.** Regional Manager responsible for overview oriented toward project staffing, quality of product, project schedule and budget for the replacement of Davis Run Bridge, Jack's Run Bridge and Homeville Creek Bridge including environmental studies, preliminary engineering, final design, additional structural design, right-of-way and deed research.

# Michael A Schober, PE

Principal-in-Charge

## Education:

Bachelor of Science/Civil  
Engineering

## Registrations/Certifications:

Professional Engineer

## Years of Experience:

24

## Professional Affiliations:

American Society of Civil Engineers

Chesapeake Water Environment  
Association

Water Environment Federation/  
Public Education Committee

Mr. Schober has 24 years of experience in the field of municipal engineering, water and wastewater treatment, distribution and collection. He is responsible for coordinating the activities of professional staff as well as managing design projects and coordinating design teams. Mr. Schober's experience includes water distribution and storage design, filtration, and well development.

**Water Line Feasibility Studies, West Virginia Department of Environmental Protection, Boone, Mercer, and Raleigh Counties, WV.** Principal-in-Charge responsible for studies of the water supplies of three areas in southern West Virginia to verify if the areas have been affected by mining activities.

**Terry Branch Portals and Refuse Remediation, WVDEP, Wyoming County, WV.** Principal-in-Charge responsible for construction of access road into site, demolition and disposal of fan and fan house, reclamation of refuse pile, design of three wet seal mine closures. Addressed on-site drainage concerns, and re-vegetated all areas disturbed by construction.

**Oakland Public Service District, Water System Improvements, Weirton, WV.** Principal-in-Charge responsible for design, bidding and construction phase services for Oakland Water System improvements including new water storage tank, treatment facilities to remove iron and manganese, Bell Hill to Ballantyne Road Water Line extension, and Golden Keys Water Storage Tank rehabilitation.

**Conewago Creek Watershed Conservation Plan, Pennsylvania Environmental Council, York County, PA.** Principal-in-Charge responsible for completion of a River Conservation Plan (RCP) and subsequent development of an interactive GIS Watershed Toolbox that includes recommendations for preservation, conservation, and restoration of the resources of the Conewago Creek Watershed.

**Watershed Conservation Plan, Muddy Creek Trout Unlimited, York County, PA.** Principal-in-Charge responsible for background research, basic data collection, analysis of issues and development of recommendations needed to prepare a long-term management plan for the entire Muddy Creek Watershed.

**Hartman Run Stream Stabilization, New York Wire, Mt. Wolf, PA.** Principal-in-Charge responsible for obtaining an emergency permit to fix and stabilize the Hartman Run stream due to significant damage to the gabions during a storm event, and proposed improvements consisting of re-alignment of the stream and installation of rock vanes to redirect the flow to reduce near bank shear stress along the outside bend (previous location of gabion baskets).

**Flood Protection Levee Federal Code Compliance Certification, City of Lock Haven, PA.** Principal-in-Charge responsible for engineering services leading to certification by the Federal Emergency Management Agency (FEMA) that the City of Lock Haven flood protection levee meets or exceeds the Code of Federal Regulations, including field surveys, hydrologic and hydraulic analysis, geotechnical evaluations, and operations and maintenance.

# Donald H Newman, PE

American Water Resources Association  
American Water Works Association  
National Ground Water Association  
National Trust for Historic Preservation

Mr. Newman has management responsibilities for the activities of professional and technical personnel for work on environmental engineering projects in the areas of water supply, sewage, stormwater, solid waste and industrial waste management. During his 32-year career, he has successfully executed over 350 engineering projects. Mr. Newman is also experienced in the siting and engineering of conveyance, treatment and disposal facilities, as well as related areas of comprehensive planning, sediment control, stormwater management, route and option assessment, occupancy/easement/regulatory permits, facility closure, geotechnical engineering, and cost estimating. In addition, he has extensive experience in complex environmental/natural resource/cultural resource assessments and transportation related environmental activities.

**Central West Virginia Regional Airport Authority, Yeager Airport Deicing Study, Charleston, WV.** Senior Staff Engineer responsible for Control/Treatment Alternatives under the second phase of the Deicing Fluid Runoff Study. The focus of this phase was to evaluate and give opinions of cost associated with options intended to abate nuisance conditions in an area downstream of a point of discharge from the airport stormwater drainage system. The abatement study examined collection of the deicer runoff and ultimate treatment and disposal. Estimated volume and concentrations from facility operations and use records in tandem with estimated runoff events: direct connection to the Charleston Sanitary Board (CSB) system, or construction of holding facilities - either a tank or pond - with removal to a remote site for treatment and disposal via six distinct conceptual alternatives.

**PADEP Abandoned Mines Lands (AML) Program for 75-acre McIntyre and 55-acre Sherwood Drive Refuse Sites.** Directed preparation of site grading and reclamation plans, facility design, construction documents, and permitting. Directed periodic site inspections and monitored progress during construction phase. Sherwood Drive design incorporated design and compaction requirements for the construction of a new interchange for the Pennsylvania Turnpike on part of the site.

**Closure of Five Ash Disposal Sites Located throughout Western PA for Pennsylvania Electric Company.** Directed engineering, regulatory applications, and participated in negotiations in successful closure and reclamation of Homer City Station Emergency Ash Site, Williamsburg Ash Site, Seward Station Ash Sites Nos. 1 & 2, and Shawville Station Ash Disposal Site. The closure engineering consisted of interim and final site grading plans, hydrologic and hydraulic assessment for seepage and stormwater runoff, erosion and sediment control plans, groundwater monitoring plans and monitoring system installation, design of drainage and other related support facilities, construction cost estimates, preparation of construction drawings/specifications, construction inspection (with the exception of Williamsburg). As lead professional, provided post closure monitoring, compliance evaluation, certifications and review of as-built drawings. More complex project sites required assessment of subsurface conditions, evaluation of critical materials, stability & settlement analysis, liner design, flood routing, air emissions controls, and cover/re-vegetation plans.

**ALCOSAN, Inspection and Hydraulic Analysis of Diversion Structures and Manhole Inspection Program, Pittsburgh, PA.** Project Manager responsible for inspection, analysis and database development for manholes and diversion structures in the Eastern Basin of the ALCOSAN Service Area.

**ALCOSAN, Interceptor System Instrumentation Improvements, Pittsburgh, PA.** Project Manager responsible for studies, design, and construction phase services for replacement of equipment associated with overflow monitoring at five interceptor pumping stations and level monitoring at nine access shaft structures.

**Lowries Run Engineering Services, McCandless Township Sanitary Authority, Pittsburgh, PA.** Project Manager responsible for evaluation of the capacity of the Lowries Run Interceptor and preparation of an existing conditions report. The Lowries Run Interceptor currently serves seven contributing municipalities and a customer base over 20,000 persons. Prior work had supported management initiatives by the Owner, documented the location and number of connections, and established both base (dry) flow and peak (wet) flow through flow monitoring, data analysis results, areas of infiltration and/or inflow, and problem areas were identified preparatory to corrective actions in an existing conditions report. Directed modeling of the Lowries Run Interceptor using standard flow models SANSYS and SWMM. Incorporated the GPS based survey data and other specific physical details into models for interceptor management and corrective action purposes. Performed initial model calibration study from GIS data, water use records, and subbasin flow monitoring.

**Lowries Run Stormwater Capacity Analysis, McCandless Township Sanitary Authority, Pittsburgh, PA.** Project Manager responsible for an engineering assessment of the impact of a proposed MTSA treatment plant in the upper Lowries Run sewershed. The XP-SWMM Model analysis assumed that sewer flows presently contributed at MH 74 and MH 70 will no longer be conveyed by the Lowries Run Interceptor. The engineering evaluation provided information to MTSA on the projected downstream effects on conveyance capacity (i.e. surcharges, flooding, etc.) during wet weather conditions with updated hydraulic factors from a recently completed evaluation of the CAP metering data.

**Lowries Run Sewershed Wet Weather Management Program, McCandless Township Sanitary Authority, Pittsburgh, PA.** Project Manager responsible for engineering services for Lowries Run Sewershed to address longstanding concerns over the amount of extraneous water conveyed by the Lowries Run Interceptor.

**Ross Township, Hodil Road Overflow Data Analysis, Pittsburgh, PA.** Project Manager responsible for analysis of flow monitoring data to determine quality, installation information, and profile of hydrologic conditions of past overflow events.

**Pine Creek Flood Mitigation, Etna Borough, Pittsburgh, PA.** As the Consultant Engineer for Etna Borough near the City of Pittsburgh, Buchart Horn has been involved in a number of projects related to the mitigation of flooding from Pine Creek. In September of 2004, Etna Borough experienced catastrophic flooding of Pine Creek due to Tropical Storm Ivan. Buchart Horn provided continual on-site support following this event, including infrastructure assessments, debris removal, emergency funding applications, and engineering services required to restore normal infrastructure operations. Subsequently, we have supported a program of long term improvements to Pine Creek featuring over \$1.2 million in DCED/PADEP funded projects.

**Farmerie Alley Flood Drainage Improvements, Etna Borough, PA.** Design of drainage facilities and package pump station for stormwater conveyance.

**Poplar Street Slope Stabilization, Etna Borough, PA.** Design of a retaining wall along Poplar Street to correct slope failure due to undercutting of Pine Creek streambank during flood events.

# Tony B Kitzmiller, PE

Mine Shaft/Portal Engineer

## Education:

Bachelor of Science/Civil Engineering

## Registrations/Certifications:

Professional Engineer

## Years of Experience:

28

Mr. Kitzmiller has more than 10 years of coal mining experience as both a Superintendent and a Project Engineer.

### Coal Mining Experience, 10+ years

*Chief Engineer at the Blacksville Division.*

*Supervisor of Design and Construction of Northern West Virginia Region.*

- Duties: Supervised 13 surveyors and resident engineers.
- Permits - Pa mine subsidence, well permits for longwall mining thru oil and gas wells, water discharges, slurry and refuse construction. New shaft permits for drilling and conventional sinking.
- Designed bridges, roads, etc, and helped resolve underground mining problems.
- Managed methane drainage wells including construction of same.
- Project manager for outside construction. Annual budget varied from 10 to 17 million annually.

### Williamson Shaft Contracting, 2+ years

*Project Engineer and Superintendent*

#### As Superintendent:

- Batched concrete on site at mine shafts under construction.
- Planned daily work schedule. Procured materials and equipment for shaft construction.
- Worked three shifts per day. Directed the work force.

#### As Project Engineer:

- Calculated excavation, concrete, and reinforcing quantities for new shaft construction.
- Prepared drawings for underground rotary dump and shaft building.
- Prepared monthly invoices for numerous projects.
- Inspected the various projects on a biweekly schedule.

### Additional Experience

*To Date:* Performed design of water distribution systems and some sewer design. Assembled specifications, bid projects, secured permits and awarded contracts. Project manager for numerous water and sewage systems.

*Airport RPR, two years.* Repaired and renovated existing runways and taxiways plus airport drainage and lighting systems. Also inspected placement of P401 asphalt.

*Owner/Operator of Hydro Engineering and Contracting, 10 years.* Performed sandblasting and painting of chemical tanks, water towers, heat baked linings specialties, and installed special floor coatings to meet certain lab and shop requirements.

*Project Manager for Comsat Corporation of Washington D.C., 3.5 years.* Installation of microwave transmission towers to a second earthstation, managed 50,000 sq ft new construction expansion to the existing Edam Earthstation. Construction facility included new power switching yard, internal switch gear, UPS system, new A/C and Turbine engine emergency power. Numerous other items related to new construction.

# Thomas T Dancsecs, PE

Hydrology

RESUME

Thomas T Dancsecs, PE

## Education:

Bachelor of Science/Civil Engineering

## Registrations/Certifications:

Professional Engineer

## Years of Experience:

20

## Professional Affiliations:

American Society of Highway Engineers

Mr. Dancsecs has 20 years of experience in the field of hydraulics and drainage design. His background includes design of drainage and stormwater management systems for a variety of transportation projects, as well as experience in hydraulic modeling and permitting. He is familiar with the drainage design standards for numerous state transportation departments and agencies. In addition to drainage design for roadways, Mr. Dancsecs' abilities include hydraulic modeling for bridge projects over waterways, floodplain analysis, design of detention/retention ponds, scour analysis, design of underground detention systems, culvert design and analysis, stream encroachment permitting, and NPDES permitting.

**Preliminary Design, Route 168/Benigno Boulevard Intersection, New Jersey DOT, Borough of Bellmawr, Camden County, NJ.** Design of safety and traffic flow improvements to intersection of NJ 168 and Benigno Boulevard, including widening for turn lanes, consolidation of driveways on east side of NJ 168 to align with realigned Benigno Boulevard, new coordinated signals, lighting, stormwater management.

**Southard Street Bridge Replacement, Initial/Final Design, New Jersey DOT, Trenton, NJ.** Highway Engineer responsible for roadway drainage design. Also assisted with utility relocation issues.

**Route 206/Crusers Brook, Final Scope Development for Bridge Replacement, New Jersey DOT, Montgomery Township, NJ.** Highway Designer responsible for oversight/coordination with subconsultant performing hydraulic modeling for sizing of bridge opening as well as stormwater management design.

**United States Avenue Bridge Replacement, New Jersey DOT, Lindenwold, NJ.** Highway Designer responsible for utility relocation efforts, including identifying conflicts, developing schemes of accommodation, developing utility checklists, preparing utility agreement plans and specifications. Performed oversight of roadway drainage design and stormwater management. Also assisted with intersection grading, maintenance and protection of traffic, environmental permitting, and public involvement.

**Route 9 Sidewalk Improvements, NJDOT, City of Northfield, Atlantic County, NJ.** Task Manager responsible for performing a complete analysis of the existing roadway drainage system within the Route 9 project limits, including spread calculations, inlet capacity, and storm pipe capacity. Developed a preliminary design for an improved roadway drainage system that would also collect runoff from proposed sidewalks. Investigated stormwater management facility locations to comply with NJDEP regulations.

**Marlton Circle Elimination, Evesham Township, NJ.** Task Manager responsible for identifying all properties impacted by the circle elimination project, and checking impacted properties for compliance with the State Highway Access Management Code. Classified all access changes as Adjustments, Modifications, or Revocations and prepared access cutouts per NJDOT criteria. Used Autoturn program to establish design vehicle turn paths and site circulation. Also performed oversight of drainage design and utility relocation.

**Patterson's Mill Bridge and Avella Bridge Replacements, PennDOT District 12, Uniontown, PA.** Preliminary and final design services for the replacement of Patterson's Mill Bridge (SR 4029) over the North Fork of Cross Creek and the replacement of Avella Bridge (SR 4029) over the Middle Fork of Cross Creek.

## Registrations/Certifications:

Professional Geologist  
 OSHA 40-Hour Hazardous Waste Operations & Emergency Response  
 Underground Storage Tank Closure

## Years of Experience:

20

## Professional Affiliations:

Society of Women Environmental Professionals

Ms. Blauch has had varied experience in geology and hydrogeology. She has applied her knowledge of these two areas to soil investigations, groundwater studies, remedial investigations, underground storage tanks and environmental site assessments in both the private and public sectors in West Virginia, Virginia, Maryland, New Jersey and Pennsylvania. Some of her responsibilities have included direct drive soil collections and soil gas surveys. Groundwater studies have involved supervising well installation and development, selecting potential water supply well sites, water feasibility studies, and determining hydraulic gradient and direction. She has aided in implementation of vacuum extraction systems and air stripping towers and supervised excavation of contaminated material. Underground storage tanks included delineation of contaminated areas, registration, removal and closure of tanks according to state regulations. Some closures have proceeded to a groundwater characterization study and eventual remediation. With the advent of Pennsylvania's Act 2 "Land Recycling Program" and updates in New Jersey's "Technical Requirements for Site Investigations", she has kept up-to-date on both the academic requirements and the regulatory changes. Environmental site assessments according to ASTM Guidelines have been conducted on agricultural areas, commercial areas, and industrial areas. The assessments involved assessing past and present activities as to their potential negative impact on the surrounding environment.

**Clock Towers Site Groundwater Remediation, General Dynamics, Lancaster, PA.** Professional services for monthly site visits, monitoring via modem every other day, system troubleshooting, minor repairs and maintenance of equipment, carbon change-out (if necessary), semi-annual PADEP well search, monthly effluents sampling and analysis, semi-annual groundwater sampling and analysis, annual groundwater sampling and analysis, quarterly water level monitoring, and biennial residential well sampling.

**Water Supply Test Well, New Freedom Borough, PA.** Coordination with PADEP, preparation of pre-drilling plan and installation of a test well.

**Buchart Horn "Brownfields" Headquarters Preliminary Environmental Site Assessment, York, PA.** Engineering Geologist responsible for conducting environmental borings and cores for analysis of volatile organic compounds and heavy metals. Provided technical support on how to properly close storage tank located within a concrete vault.

**General Machine Act 2 Special Industrial Site Closure, York, PA.** Senior Geologist who conducted a fate and transport analysis of an abandoned manufacturing facility to comply with requirements of Act 2 "Land Recycling Program", Special Industrial Sites. Using data generated from slug tests, determined hydraulic conductivity of underlying unconfined aquifer. Determined groundwater flow rate and direction from water levels in monitoring wells.

**Loucks Mill Road Plant Remediation, Northrop Grumman Corporation, York, PA.** Site had been used for manufacturing metal furniture. It was abandoned in the late 1980's. A Phase I environmental site assessment was conducted on this 10.4-acre site according to ASTM guidelines. The Phase I and resultant follow-up resulted in 45 Areas of Concern (AOC). Each AOC was investigated using appropriate field techniques. Soil samples were collected to characterize the subsurface. Groundwater monitoring wells were advanced to determine groundwater flow direction and the influence of an on-site stream on the water table. Slug tests were performed on select wells, and the data was used to generate

aquifer characteristics from computer-aided programs. The technical requirements for obtaining a release of liability under Act 2 "Land Recycling Program" Site-Specific and Statewide Health Standards for soil, groundwater and surface water were ascertained. Coordination with PADEP personnel was maintained. Physical properties of the on-site contaminants (including heavy metals and chlorinated solvents) were reviewed and incorporated into the site conceptual model.

**Kennedy Van Saun Health Risk Assessment, Danville, PA.** Engineering Geologist responsible for the installation of monitoring wells for industrial site in response to a release of petroleum products. Collected groundwater and surface water samples to determine impact on the water quality.

**Keystone/Adscoc Landfill, Adams County, PA.** Engineering Geologist who conducted azimuthal resistivity survey to characterize fracture orientations. Collected groundwater samples quarterly as per PADEP requirements.

**Knox Gelatin Supplemental Remedial Investigation Work Plan Preparation, Camden Redevelopment Agency, NJ.** Development of a Remedial Investigation Work Plan involving field investigation to collect and analyze soil and/or groundwater samples for presence of hazardous materials.

**Southard Street Bridge Replacement, Initial/Final Design, New Jersey DOT, Trenton, NJ.** Development of plans for three-span over steel structure over US Route 1 and Conrail, including bridge design, highway design, utility engineering, right-of-way, geotechnical engineering, drainage, traffic detour, lighting, permitting, hazardous waste investigations and context sensitive design.

**Hazardous Waste Investigations Indefinite Delivery Contract, New Jersey DOT, Statewide, NJ.** Engineering Geologist responsible for geophysical surveys, borings, Geo-Probe sampling, monitoring well installation, and groundwater and surface water testing to determine impact on future road improvements.

**NJDOT-owned Maintenance Yards, Trenton, NJ.** Senior Geologist who comprised and implemented NJDEP-approved remedial action work plans at five maintenance yards. Performance of activities adhered to NJDEP regulations and guidance. Supervised the removal of dry wells at two of the maintenance yards. Collected requisite confirmatory soil samples. Conducted groundwater investigations at all five maintenance yards. Supervised monitoring well installation and groundwater sample collection. Compared analytical results with groundwater quality criteria. Determined contaminant trends based upon historic data. Provided remedial action progress reports to NJDEP.

**Agway Energy Products, Washington Plant Remediation, NJ.** Senior Geologist responsible for conducting site characterization and remedial investigation in a glacial till environment. Tasks included monitoring well installation, groundwater sampling, Geo-probe soil sampling, and a receptor study. The vertical and horizontal delineation of both soil and groundwater contamination was investigated. Discussed remedial options with NJDEP, and agreed upon possible reclassification of aquifer. Provided necessary NJDEP documentation.

**Washington County Water & Sewer, Water Intake Rehabilitation/Relocation Study, Sharpsburg, MD.** Engineering Geologist responsible for regional groundwater study via published data, area reconnaissance, and fracture trace analysis to determine if an economical supply of groundwater could be obtained from the underlying aquifer and where the optimal location of the wells would be.

RESUME

Matthew J Leisses

## Education:

Coursework/Biology  
Coursework/Rosgen Applied  
Geofluvial Morphology Level 1  
Coursework/38-Hour Wetland  
Delineation Program  
Coursework/Pennsylvania  
Stormwater Symposium  
Coursework/Native Plants  
Coursework/Wetland Identification  
Coursework/EPA Mid-Atlantic  
Region 3 Macroinvertebrate  
Training

Mr. Leisses has worked in and around streams and wetlands and has extensive knowledge of aquatic monitoring; native and invasive plant species; riparian buffers; streambed restoration; workshop/lesson plan research, development, and implementation; grant writing; and community relations. In his prior work for the Codorus Creek Improvement Partnership, he has experience in identifying wetlands, stream restoration, in teaching watershed education, and has frequently attended workshops on varying wetland and watershed topics. His field experience includes habitat assessment; chemical, physical, and biological water quality monitoring; and coordination and execution of watershed restoration.

In addition to his extensive field experience, Mr. Leisses has worked on a variety of environmental documentation including, but not limited to PA Department of Environmental Protection Permits and various NEPA documents. He routinely submits permits to PADEP for various clients. He has also been involved in meetings with USACE, USFWS, PADEP, PennDOT, and NJDOT. Mr. Leisses has established relationships with several governmental agencies along with numerous non-profit environmental groups.

## Years of Experience:

4

**Hartman Run Stream Stabilization, New York Wire, Mt. Wolf, PA.** Buchart Horn obtained an emergency permit to fix and stabilize the Hartman Run stream due to significant damage to the gabions during a storm event, and proposed improvements consisting of realignment of the stream and installation of rock vanes to redirect the flow to reduce near bank shear stress along the outside bend (previous location of gabion baskets).

## Professional Affiliations:

Codorus Creek Improvement  
Partnership/Chair  
Codorus Creek Watershed  
Association  
Watershed Alliance of York/Board  
Member

**Water Supply Test Well, New Freedom Borough, PA.** Coordination with PADEP, preparation of pre-drilling plan and installation of a test well.

**Conewago Creek Watershed Conservation Plan, Pennsylvania Environmental Council, York County, PA.** Completion of a River Conservation Plan (RCP) and subsequent development of an interactive GIS Watershed Toolbox that includes recommendations for preservation, conservation, and restoration of the resources of the Conewago Creek Watershed.

**Watershed Conservation Plan, Muddy Creek Trout Unlimited, York County, PA.** Project Manager responsible for background research, basic data collection, analysis of issues and development of recommendations needed to prepare a long-term management plan for the entire Muddy Creek Watershed.

**Retainer Services for Water Projects, West Manchester Township Authority, York, PA.** Retainer services for design of small scale water projects, including water main replacements, permitting, and review of proposed designs, as well as several larger projects of note, including the design of a groundwater well for public supply, a vulnerability assessment, and a security upgrade study.

**Riverfront Park: Riverbank Stabilization and Flood Control Design and Construction Management, City of Sunbury, PA.** Preliminary assessments and studies, schematic and final engineering designs, and bidding and construction phase services for the riverfront park and associated facilities, including design of appropriate stabilization and restoration measures for the riverbank and preserving the structural integrity of the existing levee/floodwall system.

**Packers Island Water Main Replacement, PA American Water, White Deer District, Northumberland Borough, PA.** Design of a water main replacement using HDD with multiple river crossings.

**West Manheim Water Main Extension Wetland Determination, York Water Company, Adams County, PA.** Project Manager responsible for on-site determination as to presence or absence of wetlands in vicinity of five proposed water line stream crossings and approximately 4,000 feet of proposed alignment between Hostetter Road and Sell's Station Road in Oxford, Mount Pleasant, and Union Townships.

**Bullfrog Valley Run PADEP Permits, Township of Derry Board of Supervisors, Hershey, PA.** Preparation and obtaining of PADEP permits GP 5 and GP 11 for construction of a footbridge.

**Broad Creek Basin Sewer Rehabilitation, Washington Suburban Sanitary Commission, Laurel, MD.** Final engineering design, field investigations and constructability reviews, preparing bid packages, and conducting a community outreach program for pipe rehabilitation and stream restoration in Broad Creek basin.

# Laura M Danko, PWS

Cumberland County Master Gardener Program, Education Symposia Committee Chairperson dedicated to developing and facilitating horticultural and ecological educational programs for the benefit of our local communities

Ms. Danko is certified as a Professional Wetlands Scientist with 15 years of experience providing technical and managerial environmental and ecological consulting on a wide range of natural resources planning, conservation, and design projects. Her experience includes conducting wetland/environmental delineations and function/value assessments; wetland, stream, and wildlife habitat restoration and mitigation design; regulatory permitting services; environmental monitoring services; wetland and stream construction management and inspection; natural resource inventories; wildlife species, habitat, and biodiversity survey and analysis; technical document and open-end contract proposal development; project committee and advisory board liaison services; coordination and facilitation of project meetings, public events, and presentations; development of technical project documents and specifications; quality control review of technical reports; preparation of construction specifications, bid documents, and cost estimates; and technical and impact analysis documents including feasibility studies, hydrology determinations, habitat studies, species studies, and NEPA documents.

**Packers Island Water Main Replacement, PA American Water, White Deer District, Northumberland Borough, PA.** Design of a water main replacement using HDD with multiple river crossings.

**Riverfront Park: Riverbank Stabilization and Flood Control Design and Construction Management, City of Sunbury, PA.** Preliminary assessments and studies, schematic and final engineering designs, and bidding and construction phase services for the riverfront park and associated facilities, including design of appropriate stabilization and restoration measures for the riverbank and preserving the structural integrity of the existing levee/floodwall system.

**Water Supply Test Well, New Freedom Borough, PA.** Coordination with PADEP, preparation of pre-drilling plan and installation of a test well.

**Watershed Conservation Plan, Muddy Creek Trout Unlimited, York County, PA.** Background research, basic data collection, analysis of issues and development of recommendations to prepare a long-term management plan for the Muddy Creek Watershed.

**Conewago Creek Watershed Conservation Plan, Pennsylvania Environmental Council, York County, PA.** Environmental Scientist responsible for development/compilation of natural resource data and development and assessment for watershed protection, conservation, and restoration strategies.

**Sewage Facilities Expansion Design, Bonneauville Borough Municipal Authority, PA.** Environmental Scientist responsible for wetland/stream and site investigation for construction plan and permit application, development and submittal of State General Permit application for environmental impact, and initial concept development/recommended strategy for stream stabilization efforts.

**Watershed Study, St. Mary's County, MD.** Project Manager responsible for the study of two watersheds to determine areas considered suitable for development. Project involved both GIS analysis and ground-truthing to determine sensitive areas throughout each watershed that were in need of protection. Study included consideration of numerous rare, threatened or endangered species, including the dwarf wedge mussel, a federal endangered species. Final product consisted of a Sensitive Area Protection Report and Mapping.

**County Park Wetland/Area 6 Stream Restoration, Department of Planning, Bureau of Environmental Services, Carroll County, MD.** Project Manager responsible for a complex design project to restore proper channel dimensions to an urban stream and to create viable wetlands. The project involved stream bank stability restoration, stream geometry restoration, re-vegetation, wildlife habitat creation, creation of stormwater management and water quality improvement/Best Management Practices (BMPs), creation of a wetland to provide wildlife habitat, and detainment of high storm flows.

**Winters Run Wetland Delineation, Department of Environmental Protection and Resource Management (DEPRM), Baltimore County, MD.** Performed wetland and stream delineation on an approximately 25-acre tract of land as part of the Baltimore County Winters Run Stream Restoration Project. Responsibilities included performing initial site assessment, wetland/stream field-delineation, and preparation of wetland/stream delineation report.

**Potee Street Bridge Replacement, City of Baltimore and Maryland State Highway Administration.** Environmental Manager responsible for the preparation of a Joint Federal/State Permit application including pertinent graphic plates depicting wetland and stream impacts, review of roadway design for determination of impacts, wetland avoidance and minimization efforts and alternative analyses, selection and design of the wetland mitigation site, regulatory agency coordination, development of Categorical Exclusion document to fulfill NEPA requirements, coordination with Chesapeake Bay Critical Area Commission (CBCA) for impacts within the Critical Area and associated 100-foot buffer, development of CBCA mitigation plans totaling more than three acres, presentation to the CBCA Commission for request of project and mitigation approval.

**Rock Creek, Woodrow Wilson Bridge, Maryland State Highway Administration and Virginia Department of Transportation.** Developed vegetative restoration plans, landscaping plans, construction specifications, and quantity and cost estimates for fish passage improvements and bank stability measures for Rock Creek in Rock Creek National Park, Washington D.C., as part of the compensatory stream mitigation for the Woodrow Wilson Bridge Replacement project.

# John E. Nottingham, P.E., P.S.

Mr. Nottingham has served as lead Geotechnical Engineer on numerous government and commercial design and construction projects. His responsibilities on these projects include direction and coordination of all geotechnical engineering activities. Duties on these projects have included foundation investigation report production, foundation and retaining wall design, fill embankment and cut slope design, dam design and analysis, slope stability analysis, pavement design, design of drainage systems, supervision of subsurface drilling programs, field activity coordination, laboratory data computation and processing, performance of field work, client relations, and supervision of staff and project level geotechnical engineers.

## Fields of Competence

- Highway & Airport Geotechnical Design
- Foundation Investigations

Reclam  
116 Industrial Dr  
Oak Hill, WV 25901

## WVDEP, Terry Branch Portals & Refuse Remediation Design

Buchart Horn provided design services in support of the West Virginia Department of Environmental Protection Office of Abandoned Mine Lands and Reclamation for the reclamation of the Terry Branch Portals and Refuse in Wyoming County. Services included site surveys, development of preliminary and final plans, preparation of cost estimates, specifications, and potentially construction inspection services. Buchart Horn also coordinated the work of geotechnical consultants. Final plans have been submitted.

The project location is near the Town of Mullens, and is situated within the Guyandotte River watershed. Site features include four open mine portals, six collapsed portals, one fan house, and a coal refuse pile that has steep slopes and is eroding into the creek. The area is used extensively for recreational purposes, and is also accessible by ATVs. The existing site poses several threats to area residents and users of the area. Four of the portals are open and evidence of visitors, household garbage and other debris can be seen inside of the openings. The fan house is deteriorating and the large metal fan is still present. The refuse pile has steep and unstable slopes. The slopes have the potential to slip and create a dam across the creek. This situation could pose a flooding hazard to the downstream residents.

Buchart Horn's remediation design includes the following features:

- Regrade to establish positive drainage around all mine portals
- Provide dry seals for the collapsed portals and bat gate mine seals for the open portals
- Provide removal of all structures and equipment including fan house and mine cars
- Delineate areas to obtain necessary soil cover
- Reestablish vegetation on all disturbed areas
- Delineate contractor access

Relevant to Services Required

# WV DEP Water Line Feasibility Studies

Buchart Horn performed studies of water supplies for three communities in southern West Virginia: Bone County Rts. 28, 28/1, and 28/1, served by the Boone County PSD; Fairdale, Raleigh County Rtes. 1/12 and 2/4, served by Glen White—Trap Hill PSD; and Mercer County Rts. 71/11 and 71/20 served by Lashmeet PSD. The studies are intended to verify whether the areas have been affected by pre-law (prior to August 3, 1977) mining activities and would be valid candidates for funding for improvements. The scope of services for each area included field reconnaissance of the study area to define affected residences and business to be evaluated, review of historical data for the areas, field sampling and analysis of water supplies, interviews with local residents, development of mapping showing pre- and post- mining characteristics for the areas, and development of a report summarizing the findings of the studies.

# Site Grading Plan, Acid Drainage Mitigation, Abandoned Strip Mine, Buckeye Run

As part of a U.S. Office of Surface Mining site restoration, Buchart Horn, Inc. designed a site grading plan for the surface mined, 67-acre Buckeye Run area in southwestern Clearfield County, PA. The area had been abandoned for over 40 years.

The runoff discharged from the mined area contained high levels of dissolved iron and aluminum sulfates in conjunction with pH values less than 4.5 (acidic). It is produced when oxygen dissolved in water reacts with pyritic (iron sulfide) materials found in association with most coal deposits. Acid mine drainage (AMD) degrades the water quality of streams and water supplies, often to the point of eliminating all biological activity within the AMD-contaminated stream.

In addition to the pollutants, there were also several dangerous highwalls and spoil piles remaining from the final cut of the surface mining operation. Buchart Horn developed regrading/erosion and sediment control plans to eliminate the highwalls, the low points, and various spoil piles. Stormwater and normal surface water were conveyed in vegetated swales to tributaries of Buckeye Run. The vegetated swales prevent erosion and further assist in keeping runoff away from potentially acidic materials.

Weirton, WV 26062

## Oakland Public Service District, Water System Improvements

The Oakland Public Service District (PSD), located in Hancock County, West Virginia, is operated under the West Virginia Department of Health and Human Resources Bureau for Public Health, Permit Number WV3301517. This PSD operates two separate water distribution systems: the Golden Keys System and the Oakland System. Buchart Horn prepared a Preliminary Engineering Report and assisted with a funding application submitted to the West Virginia Infrastructure and Jobs Development Council for water system improvements to the Oakland System.

The area involved is located northeast of the City of Weirton and southeast of the City of New Cumberland, generally around Wylie Ridge Road and Hardins Run Road. The system is comprised of three main parts: the four active wells and treatment facility, the distribution mains, and the 200,000-gallon water standpipe.

The current raw water sources contain high concentrations of iron and manganese, and the PSD had received water quality complaints from its customers. The Public Service Commission of West Virginia ordered the PSD to develop alternatives for the removal of iron and manganese, including the construction of a treatment facility or the purchase of water from an adjacent utility. Buchart Horn recommended in the Preliminary Engineering Report the installation of filters to remove these high concentrations of iron and manganese.

The Wheeling Office of Environmental Health Services District Office's November 10, 2005 Sanitary Survey recommended an evaluation of the inside and outside coating of the existing water storage tank. The coating has reached the end of its life expectancy. In addition, the existing available water volume is not sufficient during peak day demands and fire demands. Buchart Horn recommended both the construction of a new tank in addition to the rehabilitation of the existing water tank.

Relevant Services Provided

### Water Quality Studies and Treatment

At the request of potential customers, new distribution mains are recommended to be extended east of Wylie Ridge Road. The new water mains are to be installed in portions of Chapman Road, Gibson Road, Tope Road, and Cameron Hollow Road.

Upon consideration of the preliminary funding application, the Infrastructure and Jobs Development Council determined that the District should utilize an available Hancock County grant, a local contribution, pursue a Bureau of Public Health (BPH) design grant and a Rural Utilities Service loan to fund the recommended water system improvements.

## WVDOT, Corridor H, Section 4, Final Design

Buchart Horn provided preliminary and final design services for an approximately two-mile segment of Corridor H near Greenland Gap in Grant County, WV. The project also included two major bridges and one minor stream crossing.

Initially, we were responsible for a watershed-based study of the effects of several alignment alternatives on a major four-lane highway on new alignment. The project site was in a naturally sensitive area surrounded by historic rural residential villages, dense old growth forests, vast agricultural lands, pristine high quality streams, habitat for rare and endangered species, and a unique geological feature - the Greenland Gap.

Buchart Horn evaluated the existing preferred alternative and compared it to two options on an environmental basis. This study not only looked at the direct impact to the immediate surroundings but also looked at the impacts each alternative would have on the entire watershed and sub-watersheds. The technical report generated from this study was an in-depth evaluation of each watershed and sub-watershed and how it would respond to various alignment options. The results were recommendations on how to avoid environmentally and culturally damaging impacts associated with the project.

Subsequent to the initial study, Buchart Horn advanced the project through the preliminary engineering phase and performed final design.

**Award**

Buchart Horn was awarded an *Engineering Excellence Award* for the 2008 "Large Bridge Category" from the West Virginia Division of Highways for the Dual Bridges on US48 (Corridor H) over Grant County Bridge Route 1, North Fork Patterson Creek and Grant County Route 42/3 through Greenland Gap near Scherr, West Virginia.

# Olyphant Local Flood Protection Program

Buchart Horn, Inc. proposed the installation of a system of inlets and closed pipe to intercept runoff that would pond behind the levee structures being considered as flood protection for the Borough of Olyphant. The U.S. Army Corps of Engineers originally suggested a large concrete channel to collect the runoff, but the inlets and closed pipe would achieve the same result with a greater degree of safety and at lower cost.

The Stormwater Transport System as presently designed will collect the runoff from storm events up to and including a 100-year storm for a drainage area of approximately 80 acres. The system includes 238 feet of 72-inch-diameter concrete pipe; 154 feet of 60-inch pipe; 406 feet of 54-inch pipe; 417 feet of 48-inch pipe; 200 feet of 36-inch pipe; and 33 concrete inlets.

## Scranton Flood Protection Project

Using preliminary plans prepared by the Corps of Engineers, Buchart Horn, Inc. finalized design and prepared plans and specifications to produce complete and biddable construction contract documents for a one mile flood control project along the Lackawanna River in Scranton, Pennsylvania. Significant major project features are levees, mechanically stabilized earth (MSE) walls, concrete floodwall, closure structures, interior drainage structures, and removal of the Pocono Northeast Railroad Bridge.

## Environmental Consulting, Harley Davidson Motor Company

Since 1998, Buchart Horn, Inc. has been the environmental and regulatory consultant for the York, Pennsylvania facility of Harley Davidson Motor Company Operations, Inc. We address any issues that arise related to solid waste (residual and hazardous), air quality, and water quality.

Specific reporting requirements and services provided include the following:

- Preparation of Pennsylvania Department of Environmental Protection (PADEP) annual and biennial residual waste reports
- Preparation of Environmental Protection Agency (EPA) biennial hazardous waste report
- Preparation of EPA Toxic Chemical Release Inventory Form R Report
- Preparation of Pennsylvania Department of Labor & Industry Bureau of Pennsafe Tier II Report
- Preparation of EPA Air Information Management System (AIMS) Report
- Preparation of Pennsylvania Department of Labor & Industry Bureau of Pennsafe Hazardous Substance Survey Form (HSSF)
- Aboveground and underground storage tank monitoring
- Annual update of Preparedness Prevention and Contingency (PPC) Plan, Spill Prevention Control and Countermeasure (SPCC) Plan, and Off-site Response (OSR) Plan
- Preparation of PADEP 25R Source Reduction Strategies
- Monthly Audits of facility's air, waste management, and storage tank provisions to ensure environmental compliance
- Preparation of Discharge Monitoring Reports (PADEP) and Self-Monitoring Reports (Springettsbury Township)
- Preparation of Quarterly volatile organic compounds (VOC) emission reports for PADEP submittal
- Management of projects relating to environmental compliance and awareness
- Preparation of Title V Air Quality permit and management of the associated monitoring program
- Review of environmental regulations to determine the potential impacts to the facility
- Assistance with efforts to obtain ISO 14001 certification

## Howard Road Outfall Stormwater Planning & Facility Design

This project consisted of a stormwater management plan and design of retention and detention facilities to protect a downstream residential area from flooding. Protection was for rainfall events up to the 100-year return interval.

This project resulted in the design and construction of the Howard-McVay Detention Basin, as well as other needed drainage improvements within the Howard Road Outfall drainage basin. The Stout Road Detention Alternative Study, a part of the Howard Road Outfall Alternate Detention Basin Study, involved development of alternatives to stop flooding in a residential area currently drained by a concrete-lined channel that was sized for a storm event expected to arrive approximately every four years. This area experiences frequent flooding due to the under-capacity channel. Alternatives studied included rebuilding and enlarging the existing channel, bypassing the existing channel with a box culvert, and building a detention basin upstream of this area in order to slow the drainage entering into the existing undersized channel. All of the alternatives would require a Stormwater Pollutant Prevention Plan (SWPPP) for construction.

## Codorus Creek Corridor Revitalization/Renovation, City of York

Building on the success of its “Recapture the Riverfront” campaign, the City of York, in collaboration with the Women’s Giving Circle, the Codorus Watershed Endowment of the York County Community Foundation, and other stakeholders, is taking the next step toward a new Codorus Creek Corridor through the City.

Revitalizing the Codorus Creek Corridor is a major step in revitalizing the City of York. To accomplish this, a series of community design workshops garnered community leaders’ and citizens’ inputs alike. Once the concepts were on paper, it became Buchart Horn’s responsibility to convert the conceptual drawings, sketches, renderings, and descriptions to engineering drawings on which cost estimates could be based.

During the firm’s work on the engineering drawings, we were consulted a number of times regarding our opinions on various solutions and approaches. We provided those professional opinions and, when approved, incorporated them in the engineering drawings and cost estimates.

Our being under contract was an advantage to this major community project, as we were able to make practical and logical changes to the overall design under the terms of our contract. The result is a series of drawings and cost estimates approaching the project from different angles and directions, thereby providing civic leaders with a more precise tool to use in their quest to secure funding for the project.

**Client:**

New York Wire  
 152 North Main Street  
 PO Box 0866  
 Mt. Wolf, PA 17347-0866

## New York Wire, Hartman Run Stream Stabilization

The New York Wire Company's Mt. Wolf facility, located in York County, PA, applied for and received a permit to erect gabion baskets along Hartman Run. The purpose of these gabion baskets was to stabilize a short section of Hartman Run adjacent to the facility's driveway which was threatened by severe erosion. The design at the time called for gabions to be stacked four high to an elevation approximately 12' above the stream. The resultant gabion basket wall was approximately 37' in length.

Relevance for Services Required

- Stream/Site Stabilization
- Stream Realignment Design
- Natural Design Techniques

Hartman Run generally flows west to east toward the Susquehanna River. In the vicinity of the New York Wire Mt. Wolf facility, Hartman Run turns north at the gabion wall and immediately flows under a stone railroad crossing. The creek was "pinched" between the railroad and the existing facility such that the current alignment of Hartman Run required the stream to turn 90 degrees before entering the stone culvert. This situation reduced efficiency of the stream to convey runoff and sediment. Additionally, the stream flowed directly into the gabion basket wall before heading north.

The gabion basket wall has experienced numerous flooding and high flow events. A few gabions of the bottom row have been compromised due to the alignment of the gabion basket wall with the stream. Additionally, due to this compromise, the gabions began to move laterally upstream and began to severely slump.

A more recent storm event has caused significant damage to the gabions. The damage was severe enough to require New York Wire to close a portion of their driveway which affects the ability to unload and load products and supplies for daily operation. The gabion basket wall was severely unstable, and complete collapse into Hartman Run was imminent. Should this have happened before or during a storm event, the collapsed gabions would have most likely caused severe flooding for the adjacent facility.

To alleviate this situation, the New York Wire Company hired Buchart Horn to obtain an emergency permit to fix and stabilize the stream. The short-term solution being proposed for this emergency permit is part of the long-term fix being investigated by New York Wire.

The overall proposed improvements consisted of re-alignment of the stream and the installation of rock vanes to redirect the flow so as to reduce near bank shear stress along the outside bend (previous location of gabion baskets). Other alternatives were investigated; however, concrete and gabion basket walls have been used in the past with a poor success rating.

The bottom two rows of gabion baskets were left in place and buried. Across the stream from the gabions existed a large point bar that is covered with debris. This point bar and debris were removed and used appropriately as fill around the remaining gabion baskets. The right bank was extended out approximately 5-10 feet and incorporated into a bankfull bench. Remaining gabions from the top two rows were dismantled, and the rock was used in the creation of the bankfull bench.

The channel was relocated and realigned to increase the radius of curvature of the meander heading into the railroad crossing. Two woody shrub species appropriate for this application were utilized to stabilize the sloped areas above the bankfull bench. The streamco willow and silky dogwood are both riparian species very well adapted to growing along streams and waterways. These species help reduce flood stage and increase stability along the banks. The remainder of the exposed bank was stabilized with a standard conservation/streamside seed mix.

The left bank was stabilized using tree trunks and branches from recently felled trees. The railroad company routinely cuts down trees within the channel. The woody debris was drilled, and rebar was used to anchor the logs into the banks. Erosion control matting with conservation seed was placed as a base layer below the logs. A biolog or coconut roll was anchored at waters edge to prevent sediment from entering the stream. Over time, the matting and biolog will deteriorate and leave behind established vegetation that will stabilize the bank. Voids between the anchored logs will eventually fill in with sediment and vegetation taking form as a typical stream bank.

This project utilized natural stream restoration methods while meeting the practical goals and objectives of the client - stabilizing the stream as was designed to alleviate the costly cycle of erosion and armoring of the bank. Creative techniques and native materials were used in the design that decreased cost and increased the stabilization of the stream.

## West Tennessee River Basin Authority, Environmental Engineering, Surveying, and Related Services

Buchart Horn, Inc. is providing engineering, surveying, and related services to the West Tennessee River Basin Authority (WTRBA), a public agency operating autonomously under the Tennessee Department of Environment and Conservation (TDEC). Since the 1960s, the WTRBA has managed most of the major watershed resources within an area bounded by the Kentucky state line, the Mississippi state line, the Tennessee River, and the Mississippi River. This includes the watersheds of the Obion, Forked Deer, Hatchie, and Loosahatchie Rivers, but excluding the Wolf River watershed.

As a part of the overall management of watershed systems throughout West Tennessee, the WTRBA undertakes many types of improvement and maintenance projects including grade control structures, bank stabilization, natural stream restoration, erosion mitigation of upland watersheds, bioengineering, stormwater detention and retention, and other types of channel and stormwater improvements and controls.

The project scope of work includes:

- Engineering design
- Hydraulic/hydrologic analyses
- Conventional surveys
- GPS surveys
- GIS development
- Feasibility studies
- Planning
- Field inspections

**PURCHASING AFFIDAVIT**

**West Virginia Code §5A-3-10a states:** No contract or renewal of any contract may be awarded by the state or any of its political subdivisions to any vendor or prospective vendor when the vendor or prospective vendor or a related party to the vendor or prospective vendor is a debtor and the debt owed is an amount greater than one thousand dollars in the aggregate.

**DEFINITIONS:**

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, limited liability company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. "Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceeds five percent of the total contract amount.

**EXCEPTION:** The prohibition of this section does not apply where a vendor has contested any tax administered pursuant to chapter eleven of this code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

Under penalty of law for false swearing (*West Virginia Code* §61-5-3), it is hereby certified that the vendor affirms and acknowledges the information in this affidavit and is in compliance with the requirements as stated.

12. A. Is your firm experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering?

XXX YES Description and Number of Projects: Buchart Horn has performed complete design for the Reclamation of the Buckeye Run Abandoned Surface Mine in Clearfield County, PA. We recently completed design for the Terry Branch Portals and Refuse project in Wyoming County. In addition, we offer extensive experience in water distribution and storage, stormwater and drainage, land remediation, slip repair and grading.

NO

B. Is your firm experienced in Soil Analysis?

XXX YES Description and Number of Projects: Buchart Horn's Earth Sciences group brings experience in the soils evaluations and analysis. We have existing relationships with a number of qualified soils testing laboratories who provide our professional engineers and geologists with quantitative data from which we can provide analysis and recommendations.

NO

C. Is your firm experienced in hydrology and hydraulics?

XXX YES Description and Number of Projects: Through our work in providing bridge and roadway design for the West Virginia Department of Transportation Division of Highways, we have extensive experience in the development of Hydrologic and Hydraulic Plans and Reports.

NO

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

XXX YES Description and Number of Projects: Buchart Horn has an in-house aerial mapping group. We have performed developed contour mapping from aerial photography for hundreds of water line, sewer line, roadway, and bridge projects, in support of our in-house design efforts and as a subconsultant to other firms.

NO

E. Are your firm's personnel experienced in domestic waterline design? (include any experience your firm has in evaluation of aquifer degradation as a result of mining.)

XXX YES Description and Number of Projects: Buchart Horn has performed the design of hundreds of waterline projects, including distribution systems, booster stations, storage facilities, and treatment plants.

NO

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

YES Description and Number of Projects:

XXX NO Buchart Horn has not performed abatement design for acid mine drainage. We have provided designs for related groundwater treatment systems related to industrial runoff, airport runway deicing facilities, underground storage tanks and contaminated soils cleanup.

13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)

NAME & TITLE (Last, First, Middle Int.) Michael A. Schober, PE Principal-in-Charge	YEARS OF AML DESIGN EXPERIENCE: 0	YEARS OF AML RELATED DESIGN EXPERIENCE: 5	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 20
--	--------------------------------------	--	--

Brief Explanation of Responsibilities

As the Principal-in-Charge on this project, Mr. Schober will meet regularly with the Project Manager to monitor schedules and budgets. He will also periodically contact you to confirm that you are satisfied with the progress being made and with our performance throughout the course of this project. Mr. Schober is available to discuss any aspect of this project with you at your request.

NAME & TITLE (Last, First, Middle Int.) Robert T. Zulick, PE Quality Assurance/Quality Control	YEARS OF AML DESIGN EXPERIENCE: 1	YEARS OF AML RELATED DESIGN EXPERIENCE: 5	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 15
--	--------------------------------------	--	--

Brief Explanation of Responsibilities

As Associate Vice President of the firm's Pittsburgh office with significant experience in administration and coordination of municipal and industrial water and wastewater projects from initial planning phase through design to project construction and facility start-up, Mr. Zulick has the authority to commit the full resources of the firm as necessary to successfully complete any project. As QA/QC Manager, he will coordinate with the Project Manager to verify that the project plan is followed and that all work meets local, state, and federal codes as well as Buchart Horn policy.

NAME & TITLE (Last, First, Middle Int.) Donald H Newman, PE, Project Designer	YEARS OF AML DESIGN EXPERIENCE: 3	YEARS OF AML RELATED DESIGN EXPERIENCE: 16	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 11
<p>Brief Explanation of Responsibilities  Mr. Newman has management responsibilities for the activities of professional and technical personnel for work on environmental engineering projects in the areas of water supply, sewage, stormwater, solid waste and industrial waste management. During his 24-year career, he has successfully executed over 350 engineering projects. Additional responsibilities include technical input, quality control and the planning/scheduling of engineering services. He is also experienced in the siting and engineering of conveyance, treatment and disposal facilities, as well as related areas of comprehensive planning, sediment control, stormwater management, route and option assessment, occupancy/easement/regulatory permits, facility closure, geotechnical engineering, and cost estimating. In addition, he has extensive experience in complex environmental/natural resource/cultural resource assessments and transportation related environmental activities.</p> <p>EDUCATION (Degree, Year, Specialization)  MS/1977/Water Pollution Control/Water Quality Mgmt./Env. 13. PERSONAL HISTORY STATEMENT OF PRINCIPALS AND ASSOCIATES RESPONSIBLE FOR AML PROJECT DESIGN (Furnish complete data but keep to essentials)

NAME & TITLE (Last, First, Middle Int.) Thomas T Dancsecs, PE Hydrology	YEARS OF AML DESIGN EXPERIENCE: 0	YEARS OF EXPERIENCE YEARS OF AML RELATED DESIGN EXPERIENCE: 20	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
---	--------------------------------------	--	---

Brief Explanation of Responsibilities  
Mr. Dancsecs has more than 19 years of experience in the field of hydraulics and drainage design. His background includes design of drainage and stormwater management systems for a variety of transportation projects, as well as experience in hydraulic modeling and permitting. He is familiar with the drainage design standards for numerous state transportation departments and agencies. In addition to drainage design for roadways, Mr. Dancsecs' abilities include hydraulic modeling for bridge projects over waterways, floodplain analysis, design of detention/retention ponds, scour analysis, design of underground detention systems, culvert design and analysis, stream encroachment permitting, and NPDES permitting.

NAME & TITLE (Last, First, Middle Int.) Tony B Kitzmiller, PE Mineshaft/Portal Engineer	YEARS OF AML DESIGN EXPERIENCE: 38	YEARS OF EXPERIENCE YEARS OF AML RELATED DESIGN EXPERIENCE: 38	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
---	---------------------------------------	--	---

Brief Explanation of Responsibilities  
Mr. Kitzmiller has over 37 years of experience in the design of water distribution systems, drainage systems, mine engineering, and civil engineering. He has experience with the supervision of design and construction for coal mining in Northern West Virginia, including water discharges, slurry, and refuse construction. He is intimately familiar with mining conditions and construction, including the design of bridges and roadways near mines. He has experience in managing and construction of methane drainage wells.

NAME & TITLE (Last, First, Middle Int.) Teresa Blauch, PG Geologist	YEARS OF AML DESIGN EXPERIENCE: 1	YEARS OF EXPERIENCE YEARS OF AML RELATED DESIGN EXPERIENCE: 20	YEARS OF DOMESTIC WATERLINE DESIGN EXPERIENCE: 0
---	--------------------------------------	---	---

Brief Explanation of Responsibilities  
 Ms. Blauch has varied experience in geology and hydrogeology. She has applied her knowledge of these two areas to soil investigations, groundwater studies, remedial investigations, underground storage tanks and environmental site assessments in both the private and public sectors in Maryland, New Jersey, Pennsylvania, Virginia and West Virginia. Some of her responsibilities have included direct drive soil collections and soil gas surveys. Groundwater studies have involved supervising well installation and development, selecting potential water supply well sites, water feasibility studies, and determining hydraulic gradient and direction. She has aided in implementation of vacuum extraction systems and air stripping towers and supervised excavation of contaminated material.

19. Use this space to provide any additional information or description of resources supporting your firm's qualifications to perform work for the West Virginia Abandoned Mine Lands Program.

Buchart Horn, Inc. is a multi-disciplinary organization that provides architectural, engineering, environmental, planning, project management, construction services, and administrative services. Our experience and resources facilitate cost effective solutions. Our "strong Project Manager" approach clarifies project responsibilities and promotes project communication.

Established in 1946, Buchart Engineering Corporation evolved into Buchart Horn, Inc., Consulting Engineers, Architects, and Planners. Today, *Engineering News Record* ranks us among the top consulting firms.

We specialize in designing, improving, and solving the problems of infrastructure and structures, and in helping our clients comply with environmental, life safety, and other codes and regulations. Our work includes: Airports; Architecture; Bridges; Civil/Site development; Construction services; Electrical systems and computer wiring; Energy conservation; Environmental planning, engineering, compliance; Geographic Information Systems (GIS); Hazardous and toxic substances; Highways, roads, streets; Landscape architecture design; Mechanical systems-HVAC, plumbing, energy conservation; Recreation parks and trails; Schools; Structural design; Surveys/mapping; Telecommunications; Telemetry and SCADA control systems; Traffic and traffic management; Wastewater treatment and systems; and Water treatment and systems.

Given our corporate experience, our people, and our company-wide voice and data network, we are able to quickly identify the in-house experts best suited to assist you. And because we can send CAD, text, data, or voice across our network, we can mobilize and focus this expertise on your challenge without the delay and expense of travel. We thus have the flexibility to meet the most aggressive schedules, and are able to quickly marshal skilled professionals to meet your needs.

20. The foregoing is a statement of facts.

## BUCHART HORN, INC. STANDARD EQUIPMENT

The following lists equipment typically used by Buchart Horn that will be made available as needed for this project.

### ITEM JOB TITLE

#### NO.

#### Sampling & Testing Equipment

- 1 American Sigma Tipping Bucket Rain Gage
- 2 American Sigma Depth/Velocity Flow Meter
- 3 American Sigma 800SL discrete/composite sampler
- 4 American Sigma Stormwater discrete/composite sampler  
Minimum 1 week rental
- 5 Electronic well probe
- 6 Dissolved oxygen meter and field probe
- 7 Portable pH meter
- 8 Portable conductivity meter
- 9 Geo Pump Peristaltic Pump
- 10 Field filtration filters (disposable)
- 11 Field decontamination equipment
- 12 Deionized Water
- 13 COLIWISSA, composite liquid waste sampler (disposable)
- 14 Bailers (disposable)
- 15 Soil Gas Sampling Equipment
- 16 Soil Gas (expendable) tip & tubing
- 17 Soil scoops (disposable)
- 18 Stainless steel soil scoops
- 19 Bucket auger
- 20 Split spoon sampler
- 21 Up-Z-Dazy Submersible Pump Puller
- 22 4" Submersible pump
- 23 2" Submersible pump
- 24 Electric Generator
- 25 Infiltrometer System
- 26 Hermit Environmental Data Logger
- 27 Transducer (each)
- 28 ISCO Flow Poke
- 29 6" V-Notch Weir
- 30 8" V-Notch Weir
- 31 10" V-Notch Weir
- 32 12" V-Notch Weir
- 33 15" V-Notch Weir
- 34 6" Cherne Muni-Ball Plug
- 35 8" Cherne Muni-Ball Plug
- 36 10" Cherne Muni-Ball Plug
- 37 12" Cherne Muni-Ball Plug
- 38 15" Cherne Muni-Ball Plug

**ITEM JOB TITLE**  
**NO.**

**Sampling & Testing Equipment** (contd)

- 39 Solinist Interface probe
- 40 Balmac Model 216D Vibration Analyzer and Chart Recorder  
(4 hour min. charge)
- 41 Terrameter & leads
- 42 Stream Velocity Meter
- 43 Slump Cone
- 44 Electronic Paint Dry Film (DFM) Gauge
- 45 Troxler 3440 Surface Moisture-Density Gauge
- 46 NJDEP VOC Soil Sampling Kit

**Field Safety Equipment**

- 47 PhotoIonization detector
- 48 Facepiece assembly respirator
- 49 Organic vapor cartridges (max. 1 day use - disposable)
- 50 Vinyl gloves - pair (disposable)
- 51 Coveralls - set (disposable) (Tyvek)
- 52 Sensidyne Pump
- 53 Drager Tubes
- 54 Homelite Blower - 3 HP Gasoline with 20' hose
- 55 Tripod
- 56 LEL/O<sub>2</sub> Monitor
- 57 Confined Space Entry Equipment, Complete
- 58 Air Sampler, Personal

**Video Equipment**

- 59 Video Camera and Records (Tapes not included)

**Field Vehicles**

- 60 Four-wheel drive field vehicles

## BUCHART HORN, INC. STANDARD SOFTWARE

Fiscal Year 2010

The following water-related software is licensed to Buchart Horn and available for use.
