ADDENDUM NO. 1

Huttonsville In House Gas Service Line

QUESTIONS, ANSWERS & CLARIFICATIONS

- 1C: The work to switch Huttonsville Correctional Center's source of heat from propane and heating oil to natural gas is being carried out by Mountaineer Gas Company(MGC), with a couple of sub contractors retained by MGC. Therefore, the Division of Corrections is working cooperatively and closely with Mountaineer Gas Company to complete these responses.
- 1Q: How deep does gas line have to be?
- 1A: A minimum of 24"
- 2Q: Does gas line have to have gravel or sand around it?
- 2A: limestone sand or suitable rock free backfill. If on rocky ditchline, 2" of limestone sand or equivalent on bottom of ditchline and 6" on top of pipe.
- 3Q: Does gas line have to be put in conduit to hang off bridge?
- 3A: Yes. Plastic pipe is not allowed in casing above ground. Coated Steel pipe inserted thru steel pipe with casing insulators a minimum of every 10'. Link seals or equivalent to seal the ends of casings.
- 4Q: Does gas line have to be 10ft off the perimeter of the fence?
- 4A: First, it will be field located to suit the existing location. Second, 10 -12 ft is reasonable. Please use some kind of markings to locate pipe(s).
- 5Q: Can 6 inch steel pipe in boiler house be threaded instead of welded?
- 5A: Any steel houseline above 2" has to be welded.
-

6Q: Are there any in line poly valves to be installed in this gas system, if there are how many and what size?

6A: We recommended a valve be installed within 6' on any lines branching off the 6" trunkline. This will enable Huttonsville Correctional Center to shut down the branchline and leave gas on the mainline.

7Q: What kind of connection is there to be at the Mountaineer Gas meter house? Size and what type of tie-in for material?

7A: Huttonsville Correctional Facility houseline will be reduced to enable a tie-in by electrofusion coupling to MGC's outlet leg of the set. That will be 4" plastic outlet leg so it will require a 4" electro fusion tie-in.

8Q: What is to be installed at each termination point? Warden's house, Educational Industrial building, Etc., What is to be installed? Plastic cap or flex riser with valve?

8A: A pre-fab riser with a lock-wing valve, then a union before going thru the wall. If the wall is concrete or block, a wall sleeve is required.

9Q: Has anyone discussed what is to be installed in the boiler house? Who is responsible for final connection to boilers? What size pipe must feed each unit?

9A: The successful vendor is responsible for final connection to boilers. Approximately three or four inch (3-4) pipe, we believe will fit. The firm that installed the Boilers, Johnson Boiler Works out of Benwood, West Virginia is available for reference.

10Q: Is pipe in boiler house steel welded or screw pipe? What kind of certification is needed to work hooking up to these boilers?

10A: Any steel pipe above 2" has to be welded.

11Q: Basically do we design the system to what we think or is there somebody there to tell us what they want? Please do not misunderstand me but there is a lot of generalities and not specifics to bid from for a lump sum price.

11A: You will have an inspector on site and Mountaineer Gas will be available for advice and reference.

12Q: What is the pressure rating for: A. PE pipe (SDR____?) B. Steel pipe (schedule____?)

12A: referring to Manufacturers specks on Driscoplex 2406 pipe:

SDR 11.5 operates less than 76# psi

SDR 11 operates less than 80# psi (This is the grade of pipe that MGC typically uses in the distribution system.)

SDR 10 operates less than 89 # psi

SDR 13.5 operates less than 64# psi

13Q: What are the aggregate bedding & backfill requirements? What type? How much?

13A: Limestone sand or equivalent; priced by the ton. If it is a rocky ditch line, a 2" bed of sand below pipe and at least 6" above pipe. We recommend a depth of 30" to the top of the pipe; tracer wire should be installed with plastic pipe and warning tape is recommended in the top 6" to 12" of cover.

14Q: The drawing provided shows no valves? What locations require valves?

14A: MGC recommends a valve at each building above ground on the riser and before the regulator.

MGC recommends installing a valve within 6' on each line that is branched off the trunk line. This will enable the line after the tee to be shut down without interrupting gas flow to the rest of the complex if needed.

15Q: What is the pressure rating of the system? We need to find the right regulators.

15A: By the rating information provided, the system after MGC regulation and metering will be operated at 10# psi.

16Q: We were told that we would suspend our casing pipe (what type?) from the bridge when crossing the stream. Are any design showing fasteners, hangers or support brackets available?

16A: I have info on systems from GLAS MESH CO. INC. @ glasmesh.com. I am sure there are plenty others out there.

17Q: It is unclear where the 2" service lines end. Do we stop at the risers with shut-off?

17A: Not viewing what was provided to the contractors, per MGC engineer Rich Pistner, MGC recommends using 2" pipe to cross to the buildings across route 250. A smaller lateral could be used to branch off to each building depending on the load of each building. MGC recommends using a shut-off above each riser at all buildings.

18Q: Will regulators be necessary in the boiler building?

18A: Yes, at each boiler

19Q: There could be one on the 6' main or three (one at each boiler)?

19A: Yes must be at each boiler, separate regulators are needed at the unit

20Q: What is the main line pressure expected to be?

20A: By the rating information provided, the system after MGC regulation and metering will be operated at 10# psi.

21Q: What pressure reduction will be needed at each boiler?

21A: The existing gas trains on each boiler have regulating actuators provided and they are good to 10 PSIG. However, **if the gas pressure would ever exceed 10 PSIG, the excessive pressure could damage and destroy the regulating actuator.** For that reason, we would recommend a "cut" regulator, or a regulator that would cut the supply pressure from 10 PSIG to about 5PSIG prior to the regulating actuator
