TANDBERG SOLUTIONS

Natural Presenter Package

The TANDBERG Natural Presenter Package (NPP) allows you to bring your presentations to life using PCs, document cameras, streaming and video.

NPP provides the most comprehensive, user-friendly suite of presentation features in the visual communications industry.

Common Uses

- in a video meeting when you want to see a live PC presentation and the presenter simultaneously
- during a debate when you want to see the panel and the audience at the same time
- during a demonstration when you want to see the person doing the demonstration and the product at the same time
- in a meeting when you want to see the speaker and a document or object at the same time

Four key features work together to ensure a true to life, interactive meeting environment:

DuoVideo

DuoVideo means that the video system can send and receive two pictures at the same time; one picture on one monitor, and one picture on the other. With two pictures, you'll feel like all the people in the meeting are in the same room. You can view two different angles of the same person, two different shots of people at the other sites, or slides, objects and people at the same time.

PC Presenter

With the PC Presenter you can connect a portable PC to the video system in one easy step. You can show live images and information from the PC monitor to the video monitor at the same time that you discuss the content: just plug and present (using the VGA-input) like you do with a multi-media projector.

The PC Presenter is useful when you want to share a presentation, internet site or any other type of data. The PC Presenter supports all file types including Word, Powerpoint and Excel. When used in combination with Duo Video, it is the ideal way to see the presenter and the presentation simultaneously.

PC SoftPresenter

Connect a PC to the video system using VNC (Virtual Network Computing) technology over the LAN. There is no need for any additional hardware and the required VNC server software is free, takes little disk space and is easily downloaded from the internet.

Digital Clarity

Whether you are in a point-to-point or multi-point call, Digital Clarity ensures clear, crisp images that make it easy to see fine details and print. Digital Clarity allows you to simultaneously transmit and receive PC and live video images in their own native resolution format. It also provides resolution that is over seven times (XGA) higher than standard video systems.

TANDBERG

INDUSTRY : EDUCATION

The T⁴ Program provides educational institutions with the necessary training for the successful implementation and adoption of TANDBERG visual communication solutions for the classroom.

Training is key. Perhaps the area that most impacts the success of interactive distance learning is an organization's willingness and commitment to train those who will use the technology for teaching. Providing initial and follow-up training for personnel is imperative, but many organizations tend to under-invest in this area despite the fact that the adoption of this technology relies on educators' skill and interest.

The TANDBERG Teachers Training Teachers Program (T⁴) enables schools and universities to optimize the use of video communication technology in the classroom. Designed by teachers, for teachers, the T⁴ Professional Services package provides educators with the knowledge and skills necessary for successfully implementing a distance learning program. Expert trainers work with your school personnel to ensure the training meets your specific needs.

BENEFITS OF THE T⁴ PROGRAM

- Cost-effective program for training a large number of educators at both local and dispersed location levels
- Maximizes adoption and ease-of-use by providing core training on TANDBERG's video communication solutions
- Provides framework, guidelines and hands-on activities for developing distance learning programs and classroom applications
- Tips for planning interactive distance learning content and delivery to achieve the greatest impact
- An individualized program, designed for the participants based on their needs, levels of experience, goals and availability

TEACHERS HAVE SAID:

"This training opened my eyes to the resources available outside my classroom."

"I didn't know we had so many high-quality teachers in our organization. The possibilities for sharing content and library tools are amazing."

"We just needed someone to show us what we could do and how to do it."

“Educators must learn how to develop and present content via video in order to achieve the greatest impact for interactive distance learning programs.”

T⁴ PROGRAM MODULE OVERVIEW

Module 1 — 4.5 hours

Participants will receive an overview of visual communication technology and will be given direct classroom implementation suggestions. Participants will also learn video basics such as how to connect and disconnect calls, camera positioning and switching between input sources (i.e., document cameras, VCRs, etc.). In addition, module 1 will cover basic applications such as:

- Recommendations on creating a “blended model” of delivery, incorporating present online course management systems
- Methods for engaging students at a distance
- Administrative applications

Module 2 — 2.5 hours

Participants will learn how to utilize peripheral equipment as a part of their videoconferencing experience. Each participating site should have access to:

- Document Camera
- VCR and/or DVD Player
- Internet
- Interactive Whiteboard

Participants will discuss the basics of a distance education environment. They will learn how to replace verbal instruction with visual instruction, manage the classroom setting with the technology and how to set up the content staging area. Participants will also work in small groups to formulate ideas for classroom videoconferencing projects and present the ideas to the entire group. Guidelines will be provided for preparing a lesson to be delivered over video in module 3.

Module 3 — 1.5 hours

In this module, participants will deliver a lesson of their choice over video, using appropriate peripherals as necessary. Participants will deliver their lessons either individually or with a partner, to another small group and then switch roles. Both groups will provide immediate feedback to each other. The trainers will record the lessons for an in-depth review and group discussion.

Module 4 — 1.5 hours

This module is evaluative in nature. Parts of module 3 lessons will be played back for participants with feedback from the trainers. Discussions will focus on how the participants can improve the content and delivery in order to produce the most impact for students and other educators. This last session wraps up with a discussion of “next steps” for the participants and a plan for going forward.

Distance Learning Training By PCS

Training is key to the successful implementation and adoption of new technologies in the classroom. That is never more true than the implementation of distance learning in the classroom. By working with educators to discover, develop, and deliver, we are empowering them to more fully utilize their technology investments.

discover

Discover the things that make Distance Learning possible:

- Content (Virtual Field Trips)
- Collaborations
- The ultimate in Distance Learning: Handing the remote to the kids

develop

Develop the skills necessary for connecting:

- Mastering the remote
- Camera skills
- Changing presentation modes
- Searching for content and collaborations
(CILC, Vandy Virtual, TANDBERG Connections, etc...)

deliver

Deliver instruction including:

- Keys to successful content delivery
- Proper methods for facilitating both onsite and remote
- Extra tools for the teacher – Promethean, PowerPoint, video, etc...

“The most evident power of the technology is when the technology disappears.”

C. Michael Lay
3d Lead Trainer

“The main reasons that I do business with PCS are their integrity and their training.”

Joan Gray
Director of Technology
Bedford County Schools

PCS 3d distance learning training employs a blended delivery system that brings together the power of on-site instruction and the use of distance learning technologies to deliver training remotely. By physically providing orientation to distance learning technologies, our trainers can help eliminate the intimidation that some educators feel regarding technology. Stressing the simplicity of the tools necessary to facilitate video conference connections, our trainers are able to make educators more comfortable with distance learning technology and more readily able to adopt it.

Pairing that with continued remote connections to introduce content sources, content delivery, and other teacher tools, PCS 3d distance learning trainers are able to graduate educators to a greater level of comfort and adoption of distance learning as a powerful classroom tool.
