ISO 95+™ GL Flat and Tapered

DESCRIPTION:

Firestone ISO 95+ GL flat and tapered roof insulation consists of a closed-cell polyiso foam core laminated to a black glass reinforced facer on both major surfaces. Flat and tapered ISO 95+ GL provide outstanding thermal performance on commercial roofing applications, while providing positive roof top drainage to help eliminate ponding water when tapered ISO 95+ GL is used.

All Firestone polyiso insulations use EPA accepted blowing agents and qualify under the Federal Procurement Regulation for Recycled Material. Flat and tapered ISO 95+ GL with IsoGard™ Foam Technology incorporates a HCFC-free blowing agent that does not contribute to the depletion of the ozone (ODP-free).

METHOD OF APPLICATION:

Insulation shall be neatly fitted to all roof penetrations, projections and nailers. No more insulation shall be installed than can be covered with membrane and completed before the end of each day's work or before the onset of inclement weather.

ISO 95+ GL FLAT AND TAPERED MUST BE INSTALLED USING:

Fasteners and plates, hot asphalt or Firestone approved insulation adhesives.

For ballasted systems, the top layer of Firestone insulation may not be mechanically attached.

- C. Exposure: Do not install more EPS insulation in a day than can be covered with roofing membrane before end of work day or before onset of weather conditions which can damage EPS insulation.

ED NOTE: Coordinate below three paragraphs Division 7 roofing section for use of vapor retarder.

- D. Ballasted Membrane Over Metal Deck: Install EPS board insulation over metal deck, either loose-laid or fully adhered and mechanically secured to deck substrate. Span deck flutes in accordance with roofing system assembly fire rating and insurance underwriter's requirements.
- E. Adhered Single-Ply Membrane Re-Roof: Install EPS board insulation over roof deck fully adhered and mechanically secured to deck substrate.

SYSTEMS

Molded EPS

CELLOFOAM EPS insulation board is certified under the AIA Green Program of The Society of the Plastics Industry, which assures quality and consistency of manufactured products through third party certification.

Adhered Single-Ply Membrane Re-Roof

- Adds high insulation value but little weight to existing roof.
- Mechanical fasteners penetrate EPS and attach to deck
- Stone ballast may be used if weight is not a limitation
- A vapor retarder may be required

Built-Up Roof Over Metal Deck

- Economically achieves good insulation value as well as meeting most fire codes and ratings
- May use EPS/fiberboard composite or mop and flop fiberboard or perlite to EPS with asphalt
- Thermal barrier such as perlite* or gypsum board* may be factory laminated or attached with mechanical fasteners, asphalt or adhesive
- Use flat or tapered
- Consult your local building code

Ballasted Membrane Over Metal Deck

- A lightweight system which delivers long-term performance
- Flat or tapered CELLOFOAM EPS insulation panels can be loose-laid under membrane or fully adhered and mechanically secured to achieve a smooth, exposed surface
- Span deck flutes and meet code/insurance requirements with specified underlayment board
- The use of barrier sheet for EPS insulation may be required by some membranes

The examples given are not recommendations, but general guidelines for use of EPS insulation in roofing types.

CELLOFOAM EPS insulation, as manufactured by Cellofoam North America Inc, is a modified expanded polystyrene. It is a rigid, foamed plastic with resilient closed cells, molded in a range of densities and sizes to meet your application specifications/requirements.

Our Most Practical...

Tapered **CELLOFOAM EPS** Insulation saves on heating/cooling costs and provides positive drainage to eliminate ponding on new or retrofit roofs. **CELLOFOAM Tapered Insulation** is available precut with a minimum 1/16" slope per foot EPS only, or laminated with your choice of materials.

CELLOFOAM EPS provides each of the characteristics required for long-term performance: permanent R-value, inherent water resistance, excellent physical strength, and dimensional stability. Recognizing this commitment to quality, major membrane manufacturers approve the roof insulations produced by Cellofoam North America Inc.

Cellofoam's Estimating Department stands ready to assist you with your contract documents. Each custom tapered roof system is professionally laid out from the architectural drawings in a single layer or a multiple layer system to provide the specified R-value and slope consistent with project requirements.

CELLOFOAM EPS economically adds R-value to single-ply membrane systems and built-up roof systems, providing maximum dimensional stability and high thermal efficiency at low cost.

Cellofoam's Tapered EPS insulation boards, manufactured at all plant locations, are cut, coded, and shipped to your jobsite to provide efficient installation. Every tapered system design is backed with professional sales support and service to make each project go smoothly from start to finish.

Each piece is coded as it is manufactured to coincide with the actual shop drawing, thus eliminating guesswork by the installers as to the placement of the insulation.

GSD116432 Technical Question and Answers

Building #27 - Surplus Property

Q#1: In reference to the specifications, page 12 Scope Item 1 & 2 calls for filling flutes with ISO insulation and covering with 1/2" dens deck. The additional weight added to the structure is approximately: dens deck at 1.97 lbs/sq ft (R-.56) 1.25" ISO at .295 lbs/sq ft (R-7.3) for a total additional weight of 2.265 lbs/sq ft. I am requesting that you change the flute filler to expanded polystyrene (EPS) insulation and covering with 1" ISO. By changing the filler to an expanded polystyrene (EPS) insulation the new weight would be 1 1/4" at 1.25lbs/sq ft (R-4.8) and 1" ISO at .259 lbs/sq ft (R-6) for a total additional approximate weight of 1.51 lbs/sq ft. In addition the cost for the material should go down also. Please note, all weights are taken from manufacturers technical charts. Exact weight should be conducted by a structural engineer.

A#1: This approach is acceptable.

Q#2: Is the building engineered to accept the weight from the spec driven 1/2" Dens Deck?

A#2: The weight is within limits.

Q#3: Can the flutes be filled with EPS Insulation and then overlay the entire roof with 1" polyisoinsulation? The 1" will weigh less and have 10.7 times the R-value. (R-6) versus (R 5.6)

A#3: Yes.

Q#4: Will wood blocking be installed at all perimeters? What type (of wood block) and what type of fasteners will be used to attach it?

A#4: Treated wood and stainless mechanical screw fasteners

Q#5: Can a Black EPMD be used instead of white? This will allow a savings on energy when heating the building.

A#5: No, white shall be used.

Q#6: What gauge of metal will be used for fabricating the down spouts?

A#6: Per the RFQ, Scope of work #4, 24 gauge metal should be used.

Q#7: Flute fill is specified to be polyisocyanurate. A 1/2" dens deck coverboard is specified for installation over the flute fill. Dens deck is a heavy material; is the structure adequate to support this? If it is, the specification should be changed to Dens Deck Prime material as regular dens deck cannot be glued down.

A#7: No change is necessary. Item 2, under the "Scope" section in the RFQ, specifies "Mechanically attach by fasteners (per industry standard spacing) 1/4 inch Dens Deck (or equal) insulation board over the entire roof area."

Q#8: Typically, expanded polystyrene insulation is used as flute fill. (Is this acceptable?)

A#8: Yes

Q#9: A durable alternative to dens deck would be ½" high density polyisocyanurate insulation cover board. This high density insulation is extremely durable and rigid. (Is this acceptable?)

A#9: Yes

Q#10: There is one (1) roof vent at the ridge of the roof. The specification calls for the roof vent to be replaced, however, no product is specified. Can a roof vent specification be provided? Given the condition of the existing vent, it is unlikely it can be re-used. Typically, these types of vents can be done away with. Is this vent necessary?

A#10: Replace with a like type vent.

Q#11: Is the new rake flashing to match the profile of the existing rake flashing?

A#11: Yes

DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, limited liability company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. "Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceeds five percent of the total contract amount.

EXCEPTION: The prohibition of this section does not apply where a vendor has contested any tax administered pursuant to chapter eleven of this code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

Under penalty of law for false swearing (*West Virginia Code §61-5-3*), it is hereby certified that the vendor affirms and acknowledges the information in this affidavit and is in compliance with the requirements as stated.
