DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, Limited Liability Company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. ENGINEERING, INC.
"Anticipated with Excellence"

ADDENDUM #1
Berwind Pool Renovations
w/ Meeting Minutes
Pre-Bid Meeting: 5 Jan 2012 2:00PM

CALL TO ORDER:

Meeting called to order by Robert Angus of Miller Engineering.

INTRODUCTIONS:

Introduced the Owner's Personnel and Agents in attendance including:
Brian Carney – Engineer, WVDNR Parks and Recreation
Robert Angus -- Construction Project Rep Miller Engineering

BIDDING / ADMINISTRATIVE:

Contractors reminded that the pre-bid was non-mandatory but they need to sign in to be sure to receive all Addenda. Addenda will also be sent to know plan holders.

Brian Carney reviewed the bidding procedures including the use of the provided bid forms, bid bond, contract time period, and liquidated damages, progress payments, and acknowledge of addenda. Failure to acknowledge any addenda will result in the bid not being accepted.

The project is a prevailing wage project and the Owner reserves the right to request certified payroll.

Brian cautioned that all verbal comments made related to the project are subject to verification in writing through meeting minutes and addenda. The plans and specifications, plus written minutes and addenda will be the basis of bidding.

All questions are to be in writing and directed to Frank Whittaker at WV Purchasing. Responses to questions are by written addendum only and distributed by WV Purchasing. The last day for questions is Wednesday January 11, 2012 at 4PM.

The Acknowledgement of Addenda for the bid packet was omitted; it will be included in Addendum #1.

Miller Engineering's phone number is incorrect on the bid packet. The phone number is 304-291-2234.

Substantial completion for this project will be the 15th of April 2012.

A properly executed Bid Bond Form ("WV form", with raised seal) is required for the bid. Review any questions regarding bid forms with Frank Whittaker of WV Purchasing Division.

TECHNICAL OVERVIEW:

MEI presented a general review of the project scope.

The project is the demolition of the deck and filter piping and installation of a concrete surge tank with piping. Also included are the installation of filter, pump, piping, and heater for the wading pool. All work is as indicated on the project drawings.

The work will include supporting electrical, plumbing and general trades.

CLARIFICATION OF WORK HOURS:

Despite what may or may not have been discussed at the Pre-Bid meeting, work hours will be 8:00 am to 8:00 pm with no other restrictions.

ATTACHMENTS:

Prebid attendance sheet and plan holder list.

BID DATE:

The bid date, time, and location remain unchanged.

QUESTIONS:

The following questions have been submitted since the pre-bid meeting:

Question 1) Due to the size and weight (8'x8'x6') of the precast concrete surge tank, can the tank be formed and poured on site with rubber water stop around the base. The 18"x18"x12" depressed sump can be poured into the floor for gravity drain.

ANSWER: The surge tank may be cast in place but may not have any cold joints; it must be monolithic. It may be cast on site using shotcrete. ACI standards for cast in place and shotcrete (pneumatically applied) concrete will apply. Nozzle operators must have at least 5 years documented experience.

Question 2) Is there a provision for hitting rock for the excavation of the surge tank and 4" gravity drain. The 4" line will be ran a minimum of 7' in the ground to daylight and it seems there may be a good possibility of hitting unknown rock during the dig. Instead of draining the tank completely during the winter a winter overflow could be installed below the plumbing level (2'-3' down) and could be opened during the winter to drain the plumbing and drain the tank down. If the tank ever needs to be drained completely it could be pumped out with an external sump pump.

ANSWER: The drain will be installed as indicated to drain the surge tank completely to daylight. Any rock determined to be not rippable with equipment in good repair will be treated as an unforeseen condition and be eligible for additional compensation by change order. The Owner/ Engineer must be informed immediately and the material must be left on site for Owner/ Engineer verification prior to disposal or wasting.

Question 3) Are there facilities at the lake (cabins with kitchen/bath) that could be used for lodging for the men during the work. If so what rate could be given to contractors?

ANSWER: There are no lodging facilities at the Park. There is a campground but we cannot speak to its availability. Contact the Park management to determine what facilities are available during the work period. The construction team does not set or regulate the use of park facilities in this way and the Park is in no way obligated to provide such facilities under this contract. All rules governing the use of facilities will be enforced by the Park personnel, not the design/ construction team. The contractor or personnel involved in such an arrangement will be considered as any other user of park space. There is no appeal to the construction team for disputes related to such use.

CLARIFICATIONS:

The scope of work of the project includes the installation of paddock 2424PCDC VGB covers over the existing outlet sumps. The installation will include field determined 316L stainless bracketing and support as necessary to secure the cover frames to the sump. The sump is concrete and the existing liner terminates at the edge of the sump and does not line the sump. The sump was previously coated with a hardening mastic material of unknown origin. Stainless 3/8" Hilti stud anchors will be used to install the frame supports/ brackets. They will be epoxied into place using Hilti NP1 to maintain the sump seal. Any sealant required around the brackets or in the sump will be Pecora Synthacaulk GC2+.

ACKNOWLEDGEMENT:

The minutes, questions, answers and comments detailed herein are part of the project documents for this project and are to be acknowledged as ADDENDUM #1.

Submitted this 12th day of January 2012 by Miller Engineering; for distribution by WV State Purchasing.

ADDENDUM #2
Berwind Pool Renovations
19 January 2012
Pre-Bid Questions

QUESTIONS:

The following questions have been submitted since the pre-bid meeting:

1. On Drawing P101 the Engineer identifies a Skimmer at the wading pool. Please clarify.

The drawings are indicating where the existing skimmer is installed on the wading pool.

2. On Drawing P101 the Engineer identifies a winter drain at the bottom of the surge tank to drain the pool. The piping is noted to drain to daylight. (How many feet does the Engineer anticipate to run the piping. There is an access road below the area the Engineer has identified. Are we to extend the piping below this access road into the existing swale below?

The winter drain is to extend to the lower side of the road to prevent the road from being disturbed during winter draining. Pipe is to be pitched slightly to drain completely. Bidder is to field verify distance.

3. What is the SVRS-Model # VA2000SVRS?

VGB Approved safety vacuum release system made by Vac-Alert

4. Is the Engineer calling out for new piping and new valves from the existing main pool pump?

The drawings and specifications clearly indicate the necessary methods required to separate the wading pool plumbing from the wading pool. All plumbing for the wading pool is to be new from the filter room to the point where it is re-connected to the existing plumbing after is CROSSES the surge tank. Valves will be installed as indicated if they are not existing.

5. The drawings indicate the pool heater to be mounted on the exterior of the filter building. Is this correct?

Yes, the alternate specifies a Hayward pool Heat Pump. It must sit outside and must have a concrete or polymer equipment pad.

6. Will the project be awarded quickly and will the purchase order be processed quickly?

The project will be awarded in a manner such that it may be completed within the specified time allotment.

7. Will the AIA A201-2007 Supplementary Conditions be processed during the 10 day request for Bonds & Insurance to expedite the Contract in order to meet the Substantial Completion Date?

See response to Question #6

8. The specifications include Electrical Service Entrance & Panel Boards. Are we to provide a new electrical service entrance, which includes metering transformer cabinets and meter bases? (Section 26 2701) (Section 26 2416)

No, disregard reference.

9. The new pump motor starter indicated on drawing P102. Is this not where the existing motor starter for the main pool is located? Or is this motor starter identified for the wading pool pump?

The new motor starter is for the wading pool. Engineer will determine precise location in field if there is a conflict between new and existing. This applies to the entire new equipment installation.

10. Is there any other electrical requirements other than supplying electrical for the wading pool pump, heater (alternate).

Supplying power for the wading pool pump is within the scope of work for the base bid. Power for the wading pool heater will be supplied under the scope of work for the alternate if it is selected by the owner.

11. Section 22 5100 Page 4 of 6 2.05 Pool Water Treatment (Chlorine Injection). Are we to include in our Proposal a Chemical Feed System for both the wading pool and main pool?

The model number listed in the project documents provides a controller that will control two separate bodies of water. Separate test and flow cells, chemical feed pumps, piping, isolation valves, etc are required for each pool as indicated.

12. Should the wading pool return and drain independently from the main pool? If a child would have an accident in the wading pool. The pool is supposed to be drained and refilled once the mess has been cleaned up. Looks like we have all the piping from both wading pool and main pool entering one designated area (surge tank). With this being said we could have contaminated water in the surge tank, which would require to be

drained and refilled. If not caught right away or if there is no valve to close, then the main pool is subject to contaminated water. That may need to be drained and refilled. (Please clarify)

The drawings clearly indicate the wading pool piping passing through the surge tank only. Each pipe is to have a drop leg tee installed in the surge tank for the purpose of winter draining only. The plumbing between the pools is to be totally separated in terms of filtration when the pool is in operation. The filter pump assembly can be used to drain the wading pool in the event of a fecal incident.

A 1-1/2" interconnection pipe will be installed between the main pool filter discharge and the wading pool return line using tees on each with ball isolation valves. The interconnect allows the wading pool to be filled from the main pool to return the wading pool to service. The Engineer will determine the locations of the tees during construction.

13. What is the possibility of extending the winter drain line to the backwash holding tank in lieu of extending several 100 feet to daylight? (If the elevations will allow.)

This option might be considered during construction if the elevations work. For the purposes of bidding, refer to and bid based on the answer for question #2 and the construction documents.

14. Is the 1-1/4" PVC to septic tank a discharge line for the pool heater?

The 1 1/4" line referenced on the drawings which runs to the backwash holding tank is an existing backwash drain line used for the water softener. It is listed for reference only

ACKNOWLEDGEMENT:

The minutes, questions, answers and comments detailed herein are part of the project documents for this project and are to be acknowledged as ADDENDUM #2.
