Proposed use of BTOP funds provided by the State of WV

StratusWave Communications proposes to use the requested \$875,000 to expand and enhance our existing broadband network in West Virginia. StratusWave will build approximately 200 miles of open access wireless broadband transport connectivity that will be available on a non-discriminatory basis. StratusWave will purchase and install the necessary equipment to increase capacity and availability, which includes but is not limited to: wireless broadband equipment from Cambium Networks / Exalt Communications / Radwin / Carlson Wireless, including point to point links, base stations, CPEs, routers, switches and NMS upgrades. This equipment will allow StratusWave to offer enhanced services to community anchor institutions, businesses and residents within the Northern half of the State of WV. In addition, this upgrade will assist us in continuing to expand broadband into rural areas of the State that are currently unserved / underserved.
