Deluxe Selective Control Valves (300, 301, and 450 Series)

CQ294041-UN-31JUL12

A - Constant Flow

B - Detent

C - No Lock

Deluxe selective control valves have three functions that are selected with the control knob at the top of the valve:

A - Constant flow function maintains the engaged SCV lever in the Raise or Lower position until it is manually moved. Use this function to supply equipment that requires a constant oil flow, such as hydraulic motors.

B - Detent function keeps the SCV lever in the Raise or Lower position until the hydraulic system pressure reaches a predetermined value, for example: when a hydraulic cylinder reaches the limit of its travel. After that, the SCV lever automatically returns to the Neutral position.

C - In this position, no lock is engaged. The SCV lever returns to Neutral position when released.

The pressure connection (for example, the extendible cylinder) can be connected to the lower or upper quick coupler.

These selective control valves prevent loss of pressure through leaks when the engine is stopped.
