EOI Engineering Design Services

April 14, 2022

Mr. Joseph E. Hager III
Department of Administration, Purchasing Division
2019 Washington Street East
Charleston, WV 25305-0130

Re: EOI- AML Carbondale (Hill) Portals Phase II CEOI 0313 DEP2200000010

Dear Mr. Hager,

Please find enclosed Tetra Tech's Expression of Interest (EOI) for the AML Carbondale (Hill) Portals CEOI 0313 DEP2200000010

Tetra Tech has completed numerous similar mine reclamation and remediation projects in the past for numerous clients which include, but not limited to, landslide analyses design/remediations, design of portal seals, reclamation of coal refuse sites, highwall elimination, drainage design, mitigation of AMD drainage, and design or drainage facilities associated with the mining industry. Individual personnel to be assigned to these projects have as much as forty (40) to forty-five (45) years' experience in the mining industry addressing these items.

If you should have any questions or concerns please contact me at eric.cavazza@tetrattech.com or via phone at (412) 522-9764.

Sincerely,

Eric Cavazza, P.E., M.S.
Project Manager

EEC
Enclosures

WVDEP-AMLR
EOI – Carbondale (Hill) Portals

Location: Fayette County, West Virginia

Project Goals and Objectives:

Tetra Tech has extensive experience in the remediation and resolution of Civil/Mining Engineering projects. The initial approach prior to addressing the *Project Goals and Objectives* is as follows:

Upon receipt of the formal notice to proceed, Tetra Tech would attend an on-site project kick-off meeting at the site with WVDEP personnel to discuss the project issues and work plan to reach a consensus on the technical approach for the site. The kick-off meeting would also provide the opportunity for WVDEP personnel to express to Tetra Tech their concerns, objectives, and initial thoughts on the project for discussion. Upon completion of the on-site project kick-off meeting a *Document of Understanding* will be prepared by Tetra Tech for the Project Area for review and input by WVDEP to create a work plan and goal-oriented document for the project.

Base mapping will be required for the project. It is Tetra Tech’s assumption the mapping will be provided for the project, in which case, some additional checks, spot locations, and potential additional feature items may be required to be located for design purposes. If the base mapping is to be developed by Tetra Tech, a sub-contract surveying company will be utilized for these services.

Based on the initial and available information, a preliminary conceptual plan will be prepared for review by WVDEP personnel. The preliminary conceptual plan will identify the general layout of the site, specific issues identified, proposed water routing, areas of additional concern and in the case of land stability issues, soil bore hole locations associated with the proposed geotechnical investigation. A geotechnical sampling plan will be developed for the site in order to address issues identified by the WVDEP/Tetra Tech team members. The soil sampling will be conducted, and appropriate testing will be performed by Tetra Tech’s in-house soils laboratory.

The requested responses to the project goals and objectives as stipulated within the EOI are listed below:

Goal/Objective 2.1: Develop constructions plans and technical specifications for all aspects to reclaim mine portals, drainage control, slope stabilization and erosions and sediment control.

Reclaim mine portals: Detailed grading plans will be provided showing existing contours, proposed final grading contours, location of Erosion and Sedimentation Control devices such as silt fence, super silt fence, sumps, swales, erosion control blankets, compost filter socks and other erosion control devices. In addition, a proposed seeding and revegetation plan will be included on the plans and within the specifications.

Detailed design plans and specification will be prepared for other conditions encountered on the project site. Other conditions may include the following:

- A plan and specifications to mitigate AMD drainage, including possible horizontal borings would be prepared. The plan would consider the quantity, flow rate and chemical properties of the AMD drainage. Alternative solutions would be considered within the final design.
- Design of multiple portal seals and regrades. Tetra Tech has extensive experience in the development and design of the mine portal seals. Designs have included drilling from a location above and at an angle from the proposed seal and injecting designed grout to form the seal/bulkead and designs have also utilized polyurethane grout as a portal seal. This technique of designing and developing the portal seal has proven to be more effective and safer than excavating at the portal entry location then constructing the concrete or concrete block portal seal. Mine portals will be sealed in accordance with WV DEP approved methods. If endangered species are present, such as various bat species, appropriate bat gates or other structures will be incorporated into the project design.
- Design of temporary and permanent access or accesses for construction and future maintenance. Temporary and permanent access will be designed utilizing AutoCad software. Plan view, designed profile, and roadway cross sections shown at an appropriate interval will be prepared and will be included within the final drawing package. Typical sections will be shown to indicate design features such as roadway cross slopes, pavement composition (gravel, asphalt, or concrete) and thickness, side slopes of embankments/cut slopes and proposed ditching. The roadway will be design in accordance with WVDEP mining and reclamation standards or other standards as determined by WVDEP. Final design of the roadway will attempt to design the roadway to a balanced cut/fill situation, if possible. Cut and fill quantities will be listed on the plans.

Drainage Control: Drainage areas within the project area will be determined. If possible, diversion ditches will be located in the upstream area in order to control and divert the drainage around the project area. Acid mine drainage (AMD) water will be identified on the plans and designed to be routed separately from the “clean” surface drainage, all drainage ditches, swales, underdrains and culverts will be sized and designed in accordance with standard engineering practices. Size, slope, and lining of the proposed ditches and culverts will be specified on the plans and be based on required storm events. Design of drainage conveyances, including drainage channels, underdrains and /or other controls to safely convey water off -site will be designed in accordance with standard engineering practices and will fully consider the safety of the existing public dwellings and structures near the project areas. Hydrologic and hydraulic analyses will be performed for the site and existing structures. HydroCAD Stormwater Modeling program will be utilized in analyzing and sizing drainage structures for the project.

Slope Stabilization: In order to develop the construction plans and technical specification for slope stabilization, the development of the geotechnical investigation plan would be completed. The geotechnical plan would consist of the drilling and sampling of soils in the vicinity of the landslide. Tetra Tech will provide a geotechnical engineer on site during the drilling operations. The number, locations, and depths of borings would be dependent on the extent and size of the landslide. In addition to the sampling of soils, the geotechnical boring plan would attempt to identify existing slip planes, the extent and locations of any perched aquifers as well as elevation of phreatic surfaces at the completion of the drilling and 24 hours thereafter. Soil testing would be completed by Tetra Tech’s in-house soil laboratory located in Morgantown, West Virginia. Potential soil tests and number of tests to be conducted would be determined following the geotechnical drilling and sampling operations but could possibly include the following tests:

Potential Soil Tests

- Visual Description
- Grain Size Analyses
- Hydrometer Test
- Moisture Content
- Direct Shear
- Standard Proctor
- Atterberg Limits

Plan and cross section views will be developed to provide the design of the stabilization and remediation of the landslide area. Plan and cross section views will provide the location and design parameters of the final slope configuration and will show the location and details of proposed subsurface drainage underdrains, final slopes, proposed keyways, and typical detail slope saw-cut excavation as part of the reconstructed/stabilized slope. Stability analyses will be completed utilizing the Slide 2 program to assist in determining the stable configuration of the

final slope configuration with a minimum standard safety margin of 1.5. Specifications will be developed indicating compaction requirements such as degree of compaction, optimum moisture, plus or minus variance on moisture, lift thickness and other quality control parameters for compaction during construction.

Erosion and Sediment Control: The Erosion and Sediment Control Plans (E&SCP) will include:

- Narrative and description of Best Management Practices (BMPs)
- Construction Sequence
- Narrative and description of post-construction stormwater management
- E&SCP with detail drawings
 - A general vicinity location map
 - Erosion and Sediment Control plan sheets
 - Post Construction Stormwater Management plan sheets
 - E&SCP details will be per the WVDEP's E&S standards manual.

Construction drawings and specifications will be developed based on the design concept approved by WVDEP and in conformance with the WVDEP Guidelines for Preparation of Design Plans & Specifications. Drawings will be 24" x 36" format and produced from base mapping files in AutoCAD 2019 format. Final drawings and specifications will be provided for use for review by WVDEP and for use by the selected contractor. Plans and specifications will be prepared

Detailed specifications will be prepared in a manner compatible with the WVDEP contracting documents and consistent with base specifications available from the WVDEP website. Complete technical specifications in Microsoft Word will be provided with the final submission.

Goal/Objective 2.2: Obtain all required permits.

Response: Tetra Tech will prepare and submit to obtain the required permits as determined at the Pre-Design Meeting. Required permit applications will be prepared for submittal for the project. All required plans, specifications and required additional data will be included within the application. Required permits may include the following:

- 401/404 Stream and Wetland Permits
- Construction Stormwater General Permit

- WVDOH Occupancy Permit (Driveway Permit)
- Bat Survey/Clearance of Buffer Zones.
- NPDES Modification
- Any other local, state, or federal permit identified as being required for the project

12. A. Is your firm's personnel experienced in Abandoned Mine Lands Remediation/Mine Reclamation Engineering?

YES Description and Number of Projects: Tetra Tech has extensive experience with AML/Mine Reclamation Engineering. Tetra Tech is currently working on several AML projects in several states. Tetra Tech has also worked on AML related projects within the state of West Virginia. In the last 5 years Tetra Tech has performed 20+ of these types of projects.

B. Is your firm experienced in Soil Analysis?

YES Description and Number of Projects: Tetra Tech has a whole team dedicated to Geotechnical investigations including soil analysis. In the last 5 year this team has performed 20+ projects specifically associated with Soil Analysis.

C. Is your firm experienced in hydrology and hydraulics?

YES Description and Number of Projects: Tetra Tech has performed several project looking at hydrology and hydraulics, specifically Tetra Tech specializes in mine pool analysis and AMD treatment systems. In the last 5 years Tetra Tech has performed 20+ projects looking at hydrology and hydraulics.

D. Does your firm produce its own Aerial Photography and Develop Contour Mapping?

YES Description and Number of Projects: Tetra Tech does produce its own Aerial Photography with the use of drone technology and we use that photography to develop contour mapping. We use this service across all disciplines and industries with hundreds of flights and maps developed on a yearly basis.

E. Is your firm experienced in domestic waterline design? (Include any experience your firm has in evaluation of aquifer degradation as a result of mining.)

YES Description and Number of Projects: Tetra Tech's large size and extensive resources provides for skilled individuals in various disciplines, Tetra Tech does have experience in domestic waterline design in conjunction with other projects. Tetra Tech also has on staff PhD hydrologist Eric Perry who retired from Office of Surface Mining where his responsibility was hydraulic monitoring of mine pools and effects of mining on aquifers.

F. Is your firm experienced in Acid Mine Drainage Evaluation and Abatement Design?

YES Description and Number of Projects: Tetra Tech has a whole team dedicated to Acid Mine Drainage projects, we are currently working on 5 projects specifically looking at AMD treatment with 10+ projects completed in the last 5 years.
