RE: Response to Solicitation No. CRFQ SWC230000008

Dear Sir or Madam:

BYD Coach & Bus LLC (BYD) enthusiastically submits our qualifications to the State of West Virginia in response to the subject solicitation. We introduce BYD's ultra-modern and unparalleled Type A and Type D battery-electric school buses that are certain to make the short-list for all future school bus purchases. Our organization has over 25 years of experience developing safe, innovative, nontoxic battery technologies and has deployed approximately 70,000 electric buses currently operating around the world. As the world's largest electric vehicle manufacturing company, we are a driving force behind the technological innovations that are reshaping public transportation by giving commuters, shoppers and students the ability to travel in non-polluting, zero-emission buses with almost zero noise pollution.

BYD put the same ingenuity and advanced technology into our electric school bus as we did with our transit buses. We didn't just build an electric school bus, we revolutionized it. With unparalleled safety features and performance, wrapped in a sleek design, students will travel in the finest school bus anywhere. Below are just some of the features that separate our electric school buses from the competition;

Unmatched Battery Technology

BYD Lithium Iron Phosphate Battery (LFP) Systems are designed and manufactured to provide safe, consistent and reliable energy in the most demanding applications. In fact, our batteries have the highest battery capacity of all electric buses on the market. As well, our LFP Batteries are warranted to retain $\geq 60\%$ capacity up to 15 years, regardless of mileage. This long life is partly due to the unique chemistry and superb energy management systems thus they don't overheat. This means they don't lose life/capacity due to regular or fast charging—unlike most competing batteries.

Vehicle-To-Grid (V2G) Capability

BYD's electric school buses offer innovative vehicle-to-grid technology, allowing the vehicle to serve as a power storage resource when it is not transporting students. This bi-directional charging capability is a game changer. Our school buses can be charged overnight when energy demand is low, and clean emission-free energy can be fed back into the classroom during school hours when the bus is parked keeping classrooms well-lit and students and teachers plugged-in.

Built-In, State-of-the-Art Safety Features

BYD made safety the top priority in our school bus design. Features include electronic stability control to aid handling, a collision avoidance system, and a 360-degree monitoring system to detect pedestrians and cyclists when the bus is operating at slow speeds. Additionally, we added an additional layer of protection for children as they exit the bus with its Predictive Stop Arm™, which monitors approaching traffic and notifies students when it may not be safe to cross.

Enhanced Driver Comfort

Our team drew from the experience of thousands of bus operators to enhance comfort and ergonomics in designing the

driver's immediate surroundings. The driver's area features comfort seats, an 18-inch power steering wheel and telescopic steering column, high level of visibility, and easy to reach control switches. The driver can also control the air conditioning over the steering station in addition to controlling the system for passengers.

Thank you for your time. We are confident our battery electric school buses will exceed your expectations. Please note that BYD does not presently have any active licenses with the State of West Virginia or related agencies. We assure your department that we will obtain a business license in the State of West Virginia within 30 days, provided our firm is awarded a contract. If you have any immediate questions please contact Frank Chen, Project Manager, at (213) 446-4506 or by email at chen.yixuan1@byd.com. As well, feel free to contact me at (213) 880-8597 or by email at patrick.duan@byd.com.

Sincerely,

Patrick Duan
Vice President of Operations
