These instructions provide critical information about requirements that if overlooked could lead to disqualification of a Vendor's bid. All bids must be submitted in accordance with the provisions contained in these instructions and the Solicitation. Failure to do so may result in disqualification of Vendor's bid.

2. MANDATORY TERMS: The Solicitation may contain mandatory provisions identified by the use of the words "must," "will," and "shall." Failure to comply with a mandatory term in the Solicitation will result in bid disqualification.

☒ A pre-bid meeting will not be held prior to bid opening

☐ A **MANDATORY PRE-BID** meeting will be held at the following place and time:

All Vendors submitting a bid must attend the mandatory pre-bid meeting. Failure to attend the mandatory pre-bid meeting shall result in disqualification of the Vendor's bid. Any individual that does attempt to represent two or more vendors will be required to select one vendor to which the individual's attendance will be attributed. The vendors not selected will be deemed to have not attended the pre-bid meeting unless another individual attended on their behalf.

An attendance sheet provided at the pre-bid meeting shall serve as the official document verifying attendance. Any person attending the pre-bid meeting on behalf of a Vendor must list on the attendance sheet his or her name and the name of the Vendor he or she is representing.

Additionally, the person attending the pre-bid meeting should include the Vendor's E-Mail address, phone number, and Fax number on the attendance sheet. DO NOT SUBMIT MATERIAL YOU CONSIDER TO BE CONFIDENTIAL, A TRADE SECRET, OR OTHERWISE NOT SUBJECT TO PUBLIC DISCLOSURE.

Submission of any bid, proposal, or other document to the Purchasing Division constitutes your explicit consent to the subsequent public disclosure of the bid, proposal, or document. The Purchasing Division will disclose any document labeled "confidential," "proprietary," "trade secret," "private," or labeled with any other claim against public disclosure of the documents, to include any "trade secrets" as defined by West Virginia Code § 47-22-1 et seq. All submissions are subject to public disclosure without notice.

22. WITH THE BID REQUIREMENTS: In instances where these specifications require documentation or other information with the bid, and a vendor fails to provide it with the bid, the Director of the Purchasing Division reserves the right to request those items after bid opening and prior to contract award pursuant to the authority to waive minor irregularities in bids or specifications under W. Va. CSR § 148-1-4.6. This authority does not apply to instances where state law mandates receipt with the bid.

Service providers should contact the West Virginia Division of Protective Services by phone at (304) 558-9911 for more information.

41. PREFERENCE FOR USE OF DOMESTIC STEEL PRODUCTS: Except when authorized by the Director of the Purchasing Division pursuant to W. Va. Code § 5A-3-56, no contractor may use or supply steel products for a State Contract Project other than those steel products made in the United States. A contractor who uses steel products in violation of this section may be subject to civil penalties pursuant to W. Va. Code § 5A-3-56. As used in this section:

- a. "State Contract Project" means any erection or construction of, or any addition to, alteration of or other improvement to any building or structure, including, but not limited to, roads or highways, or the installation of any heating or cooling or ventilating plants or other equipment, or the supply of and materials for such projects, pursuant to a contract with the State of West Virginia for which bids were solicited on or after June 6, 2001.
- b. "Steel Products" means products rolled, formed, shaped, drawn, extruded, forged, cast, fabricated or otherwise similarly processed, or processed by a combination of two or more or such operations, from steel made by the open hearth, basic oxygen, electric furnace, Bessemer or other steel making process.
- c. The Purchasing Division Director may, in writing, authorize the use of foreign steel products if:
 1. The cost for each contract item used does not exceed one tenth of one percent (.1%) of the total contract cost or two thousand five hundred dollars (\$2,500.00), whichever is greater. For the purposes of this section, the cost is the value of the steel product as delivered to the project; or
 2. The Director of the Purchasing Division determines that specified steel materials are not produced in the United States in sufficient quantity or otherwise are not reasonably available to meet contract requirements.

42. PREFERENCE FOR USE OF DOMESTIC ALUMINUM, GLASS, AND STEEL: In Accordance with W. Va. Code § 5-19-1 et seq., and W. Va. CSR § 148-10-1 et seq., for every contract or subcontract, subject to the limitations contained herein, for the construction, reconstruction, alteration, repair, improvement or maintenance of public works or for the purchase of any item of machinery or equipment to be used at sites of public works, only domestic aluminum, glass or steel products shall be supplied unless the spending officer determines, in writing, after the receipt of offers or bids, (1) that the cost of domestic aluminum, glass or steel products is unreasonable or inconsistent with the public interest of the State of West Virginia, (2) that domestic aluminum, glass or steel products are not produced in sufficient quantities to meet the contract requirements, or (3) the available domestic aluminum, glass, or steel do not meet the contract specifications. This provision only applies to public works contracts awarded in an amount more than fifty thousand dollars (\$50,000) or public works contracts that require more than ten thousand pounds of steel products.

The cost of domestic aluminum, glass, or steel products may be unreasonable if the cost is more than twenty percent (20%) of the bid or offered price for foreign made aluminum, glass, or steel products. If the domestic aluminum, glass or steel products to be supplied or produced in a “substantial labor surplus area”, as defined by the United States Department of Labor, the cost of domestic aluminum, glass, or steel products may be unreasonable if the cost is more than thirty percent (30%) of the bid or offered price for foreign made aluminum, glass, or steel products. This preference shall be applied to an item of machinery or equipment, as indicated above, when the item is a single unit of equipment or machinery manufactured primarily of aluminum, glass or steel, is part of a public works contract and has the sole purpose or of being a permanent part of a single public works project. This provision does not apply to equipment or machinery purchased by a spending unit for use by that spending unit and not as part of a single public works project.

All bids and offers including domestic aluminum, glass or steel products that exceed bid or offer prices including foreign aluminum, glass or steel products after application of the preferences provided in this provision may be reduced to a price equal to or lower than the lowest bid or offer price for foreign aluminum, glass or steel products plus the applicable preference. If the reduced bid or offer prices are made in writing and supersede the prior bid or offer prices, all bids or offers, including the reduced bid or offer prices, will be reevaluated in accordance with this rule.

43. INTERESTED PARTY SUPPLEMENTAL DISCLOSURE: W. Va. Code § 6D-1-2 requires that for contracts with an actual or estimated value of at least \$1 million, the Vendor must submit to the Agency a disclosure of interested parties prior to beginning work under this Contract. Additionally, the Vendor must submit a supplemental disclosure of interested parties reflecting any new or differing interested parties to the contract, which were not included in the original pre-work interested party disclosure, within 30 days following the completion or termination of the contract. A copy of that form is included with this solicitation or can be obtained from the WV Ethics Commission. This requirement does not apply to publicly traded companies listed on a national or international stock exchange. A more detailed definition of interested parties can be obtained from the form referenced above.

44. PROHIBITION AGAINST USED OR REFURBISHED: Unless expressly permitted in the solicitation published by the State, Vendor must provide new, unused commodities, and is prohibited from supplying used or refurbished commodities, in fulfilling its responsibilities under this Contract.

45. VOID CONTRACT CLAUSES: This Contract is subject to the provisions of West Virginia Code § 5A-3-62, which automatically voids certain contract clauses that violate State law.

46. ISRAEL BOYCOTT: Bidder understands and agrees that, pursuant to W. Va. Code § 5A-3-63, it is prohibited from engaging in a boycott of Israel during the term of this contract.

4. CONTRACT AWARD, PERCENTAGE DISCOUNT, CATALOG:

4.1 Contract Award: This Contract is intended to provide the Agency with a discounted price on all Eligible Items. Notwithstanding the foregoing, the Purchasing Division reserves the right to award this Contract to multiple Vendors if it deems such action necessary.

4.2 Discount Percentage: Vendor shall quote a single Discount Percentage that will reduce the lowest price shown in the Catalog for every Eligible Item. The resulting Discounted Price shall be the price Agencies pay for purchases of that Eligible Item under this Contract.

Vendor shall not incorporate Discount Percentages into its Catalog unless the Vendor clearly shows the Catalog Price and then separately lists the applicable Discount Percentage and the Discounted Price for each Eligible Item.

The Discount Percentage and subsequent Discounted Price derived from that discount must take into account any and all fees, charges, or other miscellaneous costs that Vendor may require, including delivery charges as indicated below, because those fees, charges, or other miscellaneous costs will not be paid separately. The Agency shall only pay the appropriate Discounted Unit Price for items purchased under this Contract.

- 4.3 Pricing Pages:** Vendor should complete the Pricing Pages by filling in any blank spaces with the information requested. The information requested on the Pricing Pages for each frequently purchased Eligible Item includes the Vendor's Eligible Item manufacturer, the manufacturer's number for each Eligible Item, Catalog Prices, Units Provided for Catalog Price, Unit Prices, Discount Percentage, Discounted Unit Prices, and item total costs. The Vendor should also include the Total Bid Cost. Vendor should complete all columns as failure to complete the Pricing Pages in their entirety may result in Vendor's bid being disqualified.

The Pricing Pages contain a list of frequently purchased items and estimated unit quantity that will be purchased. The estimated unit quantity for each item represents the approximate volume of anticipated purchases only. No future use of the Contract or any individual item is guaranteed or implied.

Vendors are **strongly encouraged** to complete the Pricing Pages through wvOASIS or electronically in Microsoft Excel. Doing so will reduce the number of, and the possibility for, calculation errors. The Pricing Pages were created as a Microsoft Excel document and Vendor can request an electronic copy for bid purposes by sending an email request to the following address: Larry.D.McDonnell@wv.gov

The Purchasing Division reserves the right to take Vendor's Pricing Pages and insert the appropriate numbers into the Microsoft Excel spreadsheet if Vendor chooses to complete the Pricing Pages in any other way.

Vendor's Catalog, or data from the Catalog entered into wvOASIS will be used by Agencies to order Eligible Items under this Contract.

Vendor should identify all items listed on the Pricing Pages by circling or highlighting those items in its Catalog and earmarking, tabbing, or listing the pages for those items, to assist in the evaluation and verification of the bids and pricing. If any discrepancies exist between the Pricing Pages and the actual price listed in the Catalog, the actual price shall prevail and the Pricing Pages may be corrected by the Purchasing Division buyer for evaluation purposes.

The Purchasing Division may waive the detailed listing requirement if it finds that doing so is in the best interest of the State. Unless an updated catalog is approved, the Eligible Items available under this Contract and prices for those items shall remain unchanged during the term of this Contract.

In the event that multiple vendors are awarded a contract under the Solicitation, the first priority vendor shall not be permitted to include in its updated Catalog items being sold by a vendor that is lower in ordering priority without the consent of that lower priority vendor.

Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash NFPA, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02169

<https://www.nfpa.org/codes-and-standards/all-codes-and-standards/list-of-codes-and-standards/detail?code=2112>

What Is Flame Resistant (FR) Clothing?

In the simplest terms, flame resistant clothing is engineered to self-extinguish upon removal of an ignition source. Specifically, FR clothing is:

- Made from natural or synthetic fabrics that are engineered to self-extinguish
- Designed to limit (not eliminate) burn injury

The difference between primary and secondary protective clothing:

Primary Protective Clothing

Clothing that is designed to be worn for work activities where significant exposure to molten substance splash, radiant heat, and flame is likely to occur.” *Example: firefighter turnout gear*

Secondary Protective Clothing

Clothing that is designed for continuous wear in designated locations where intermittent exposure to molten substance splash, radiant heat, and flame is possible.” *Example: FR coveralls*

NFPA 2112

- Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash Fire.
- Created for FR clothing manufacturers.
- Outlines the various performance requirements and testing methods for both the FR fabric and FR garments.
- Describes proper labeling and quality control requirements for the FR manufacturers.

In order to be compliant with NFPA 2112, fabrics must:

- Retain flame resistance through 100 cycles of laundering.

- Meet standards for heat transfer performance, thermal stability, and heat resistance.
- Result in less than 50% predicted body burn when tested on a thermal mannequin over 100% cotton underwear in a 3 second exposure.
- Meeting these thresholds, however, is not the final step. Independent third party evaluation of garments and components is required in order for FR clothing to be certified 2112 compliant. This includes meeting the following criteria:
 - Fabrics and findings are component recognized
 - Garments meet the requirements of the standard
 - Facilities maintain proper quality control procedures to ensure product consistency (audited regularly by independent third party)

Understanding Test Procedures Informs Better Decision-Making

It is helpful to understand how fabric is tested to be NFPA 2112 compliant. In addition to the usual fabric performance requirements for flame resistance, heat resistance and thermal shrinkage, NFPA 2112 has additional requirements:

- Flame resistance of each fabric layer is required to be tested as received and after 100 cycles of washing and drying and/or dry cleaning.
- Heat Transfer Performance (HTP), formerly known as TPP, must be tested both with the fabric specimen in contact with the sensor assembly and separated from the sensor by a ¼- inch spacer. A minimum HTP rating of 6.0 is required for “spaced” and 3.0 for “contact”.
- Coveralls made to a standard pattern from candidate fabrics are tested for overall flash fire exposure on an instrumented mannequin in accordance with ASTM Test Method F1930. The exposure heat flux is 84 kW/m² (2.02 cal/cm²/sec) with an exposure time of 3.0 seconds. The average total predicted body burn must not exceed 50%.

NFPA mandates strict labeling requirements for 2112 compliant clothing.

First, the label must bear the mark of the third-party certifier.

Secondly, the following words and the edition of the standard must appear on the label of a certified garment:

"THIS FLAME-RESISTANT GARMENT MEETS THE REQUIREMENTS OF NFPA 2112-current STANDARD ON THE FLAME-RESISTANT GARMENTS FOR THE PROTECTION OF INDUSTRIAL PERSONNEL AGAINST FLASH FIRE"

Without these two items the FR clothing in question is “not” certified compliant.

Hazard Risk Category Levels

The chart, based on specific job tasks, ranges from HRC 1 (which is low risk and allows for 100% treated cotton), up to HRC 4 (which is high risk and requires FR clothing with a minimum arc rating of 40). The HRC is used to determine the necessary arc rating of a garment worn during a given job task. Wearing multiple layers of clothing may be required to obtain the necessary rating required for your job.

NFPA® has identified four FR hazardous risk category levels, which are numbered by severity from 1 to 4. Hazard Risk Category is the level of arc flash protection clothing you must wear to protect against a minimum level of incident energy measured in calories per centimeter squared. Meaning, electrical equipment, depending upon the energy delivering capability, under fault conditions can cause an explosion, or arc fault of a certain level, again measured in calories per centimeter squared. That explosion can deliver a certain amount of heat to a certain distance. Each level, 0-4, is rated at a certain amount of flame resistance, again measured in cal/cm².

Hazard Risk Category	Minimum Arc Rating	Proper Apparel Needed
HRC 1	4 cal/cm ²	Arc-rated shirt and pants or arc-rated/flame-resistant coveralls
HRC 2	8 cal/cm ²	Arc-rated shirt and pants or arc-rated/flame-resistant coveralls
HRC 3	25 cal/cm ²	Arc-rated shirt and pants or arc-rated /flame-resistant coveralls and arc flash suit
HRC 4	40 cal/cm ²	Arc-rated shirt and pants or arc-rated /flame-resistant coveralls and arc flash suit

A value of the energy necessary to pass through any given fabric to cause with 50% probability a second or third degree burn. This value is measured in calories/cm². The necessary Arc Rating for an article of clothing is determined by a Hazard/Risk Assessment and the resulting HRC. Usually measured in terms of ATPV or EBT. Simple put the ARC rating determines the protective characteristics of the fabric. The higher the ARC rating value the greater the protection. When the product is sold to protect workers from arcing faults, clothing manufacturer are required in indicate the ARC rating.

NFPA® 2112 Explained

NFPA® 2112 provides minimum performance criteria and sets clear guidelines for minimum design, performance, certification requirements and test methods for Flame Resistant garments for use in areas at risk from flash fires—such as those where flammable gases or vapors, or combustible dusts might be present. The standard calls for flash fire testing to be conducted at three seconds with a pass/fail rate of 50% total body burn under ASTM F1930 (Standard Test Method for Evaluation of Flame Resistant Clothing for Protection Against Flash Fire Simulations Using an Instrumented Manikin) testing protocols. Garments should be certified by Underwriters laboratories to the requirements of NFPA® 2112, Standard on Flame Resistant Garments for Protection of Industrial Personnel Against Flash Fire, Workwear for protection against Hydrocarbon Flash Fire. NFPA® 70E - Basic Terms & Definitions

Arc Flash: An explosive release of energy caused by an electrical arc. An arc flash results from either a phase to ground or a phase to phase fault caused by such occurrences as accidental contact with electrical systems, build up of conductive dust, corrosion, dropped tools, and improper work procedures. During an arc flash, the temperature can reach 35,000° Fahrenheit, and exposure to an arc flash can result in serious burn injury and death. Every year, more than 2,000 people are admitted to burn centers with severe arc-flash burns.

Arc Rating: A value of the energy necessary to pass through any given fabric to cause with 50% probability a second or third degree burn. This value is measured in calories/cm². The necessary Arc Rating for an article of clothing is determined by a Hazard/Risk Assessment and the resulting HRC. Usually measured in terms of ATPV or EBT.

Calorie: The energy required to raise one gram of water one degree Celsius at one atmosphere pressure. Second-degree burns occur at 1.2 calories per centimeter squared per second (cal/cm²).

Flash Hazard: A dangerous condition caused by the release of energy from an electric arc.

Flash Hazard Analysis: A study investigating the potential exposure to arc-flash energy that a worker faces while performing a specific job task. The data collected in a Flash Hazard Analysis is used for the purpose of injury prevention and the determination of safe work practices and the appropriated levels of FR clothing and PPE.

Flash Protection Boundary: The distance from an exposed live part within which a person could receive a second-degree burn if an electrical arc were to occur.

FR (Flame Resistant): FR refers to the ability of a material to self-extinguish upon the removal of an ignition source.

HRC (Hazard/Risk Category): The five Hazard/Risk categories are specified by the chart listed in NFPA® 70E. The chart, based on specific job tasks, ranges from HRC 1 (which is low risk and allows for 100% treated cotton), up to HRC 4 (which is high risk and requires FR clothing with a minimum arc rating of 40). The HRC is used to determine the necessary arc rating of a garment worn during a given job task.

NFPA® 70E: A work standard published by the National Fire Protection Association (NFPA®) that covers aspects of electrical safety in the workplace. It includes the recommendation that those who work with, on or around energized equipment use adequate protection, including FR clothing.

1. Contract items 3.1.79, 3.1.80, 3.1.93, and 3.1.94 - Safety Toe Shoes

Must meet ASTM F2413-current

ASTM F2413-current, Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear, ASTM International, West Conshohocken, PA, 2018, www.astm.org

<http://www.astm.org/cgi-bin/resolver.cgi?F2413>

This specification covers the minimum design, performance, testing, and classification requirements, and prescribes fit, function, and performance criteria for footwear designed to be worn to provide protection against a variety of workplace hazards that can potentially result in injury. It is not the intention of this specification to serve as a detailed manufacturing or purchasing specification, but can be referenced in purchase contracts to ensure that minimum performance requirements are met. Footwear conforming to this specification shall meet the performance requirements for the following: impact resistance for the toe area of footwear; compression resistance for the toe area of footwear; metatarsal protection that reduces the chance of injury to the metatarsal bones at the top of the foot; conductive properties which reduce hazards that may result from static electricity buildup, and reduce the possibility of ignition of explosives and volatile chemicals; electric shock resistance; static dissipative (SD) properties to reduce hazards due to excessively low footwear resistance that may exist where SD footwear is required; puncture resistance of footwear bottoms; chain saw cut resistance; and dielectric insulation.

ASTM F2413-current Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear covers minimum requirements for the design, performance, testing and classification of protective footwear. The purpose of this standard is the certification of protective footwear. The certification must be performed by independent third party laboratories.

Footwear certified as meeting ASTM F2413-current must first meet the requirements of Section 5.1 Impact Resistant Footwear and Section 5.2 Compression Resistant Footwear. Then the requirements of additional sections such as metatarsal protection, conductive protection, electric hazard resistance, static dissipative protection and protection against punctures can be met.

All footwear manufactured to the ASTM specification must be marked with the specific portion of the standard with which it complies. One shoe of each pair must be clearly and legibly marked (stitched in, stamped on, pressure sensitive label, etc.) on either the surface of the tongue, gusset, shaft or quarter lining. The marking must be enclosed in a rectangular border and a four-line format is suggested. Line four is used only when more than three sections of the standard applies to the footwear.

Each protective toe cap must be marked with the manufacturer's name, trademark or logo. The cap number or identification, toe cap size and R (right) / L (left) must be permanently stamped or marked in a conspicuous location. Each metatarsal and puncture-resistant device must be marked with the manufacturer's name, trademark or logo and device number or identification in a conspicuous location.

The following is an example of an ASTM F2413-current marking that may be found on protective footwear:

ASTM F2413-current
M I/75/C/75/Mt75
PR

Line #1: ASTM F2413-current

This line identifies the ASTM standard. It indicates that the protective footwear meets the performance requirements of ASTM F2413 issued in 2018.

Line #2: M I/75 C/75 Mt75

This line identifies the gender (M [Male] or F [Female]) of the user. It also identifies the existence of impact resistance (I), the impact resistance rating (75 foot-pounds), compression resistance (C) and the compression resistance rating (75) which correlates to 2500 pounds of compression. The metatarsal designation (Mt) and rating (75 foot-pounds) is also identified.

Line #3: PR (puncture resistant)

2. Contract Items 3.1.32, 3.1.33, 3.1.75, and 3.1.76 – Rain Jackets and Safety Vests

Must meet ANSI/ISEA 107-current Class III high visibility

ANSI/ISEA 107-current: American National Standard for High Visibility Safety Apparel and *American National Standards Institute/International Safety Equipment Association, ANSI/ISEA 107*“American National Standard for High-Visibility Safety Apparel and Head Wear” Arlington, VA • 1999 (rev. 2004, 2010, 2015)

<https://webstore.ansi.org/Standards/ISEA/ANSIISEA1072015>

Approved in 2015, the ANSI/ISEA 107-2015 revision updates the ANSI/ISEA 107-2004, 2010 standard. The standard specifies the types, classes and colors of high-visibility clothing required by workers exposed to traffic hazards, such as road construction workers, surveyors and others who work on or near roadways.

The basic high-visibility garment includes three components: background material, retroreflective material (bands) and combined-performance material (a combination of retroreflective and fluorescent material that may separate the two). The color of the background material and the combined-performance material can either be fluorescent yellow-green or fluorescent orange-red. Combined performance material is considered part of the background for purposes of total area required. Retroreflective material reflects light back to the source when light shines on it.

The standard specifies three classes of high-visibility garments based on the wearer's activities. Garment classes are differentiated by the amount of background material; the width of retroreflective material used and garment design.

Class 3 Wearer/Activities

Workers with high task loads in a wide range of weather conditions where traffic exceeds 50 mph. The standard recommends these garments for all roadway construction personnel, vehicle operators, utility workers, survey crews, emergency responders, railway workers and accident site investigators.

Class 3 Garment

Superior visibility – the highest level of conspicuity. Background material must total 1240in. Garment must have sleeves with retroreflective material between the shoulders and elbows. The width of retroreflective bands shall not be less than 50mm wide.

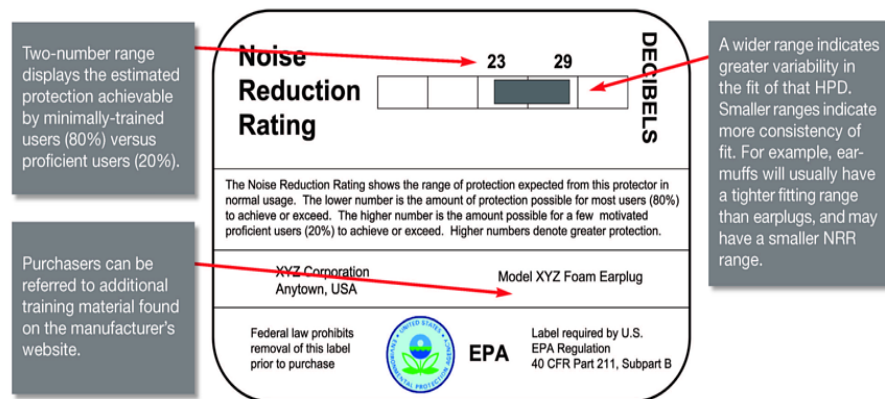

Design requirements and minimum performance criteria are found in Sections 6, 7 and 8 of the standard. ANSI/ISEA 107-2015 requires that the background material and retroreflective or combined-performance material used in the construction of a finished garment be certified by an accredited, independent third-party laboratory to ensure that the materials meet the specified performance criteria imposed by the standard.

National Institute of Justice 0101.06 Level II and IIIA Ballistic Resistance body armor standards. <https://www.ncjrs.gov/pdffiles1/nij/223054.pdf>

Explanatory Material for Section 2 NIJ Body Armor Classification The ballistic threat posed by a bullet depends on its composition, shape, caliber, mass, angle of incidence, and impact velocity, among other things. Because of the wide variety of bullets and cartridges available in a given caliber and the existence of hand loaded ammunition, armors that will defeat a standard test round may not defeat other threats of the same caliber. An armor that defeats a given lead bullet may not resist perforation by other bullets of the same caliber having different construction or configuration. The test ammunitions specified in this standard represent higher velocity versions of threats that law enforcement officers may face in the United States, but which also are among the more difficult threats to safely stop. By testing armors against these threats, the armor will generally be able to stop a wide variety of similar and lesser threats. As of the publication of this standard, ballistic resistant body armor suitable for full-time wear throughout an entire shift of duty is available in classification Types IIA, II, and IIIA, which provide increasing levels of protection from handgun threats. Type IIA body armor

will provide minimal protection against smaller caliber handgun threats. Type II body armor will provide protection against many handgun threats, including many common, smaller caliber pistols with standard pressure ammunition, and against many revolvers. Type IIIA body armor provides a higher level of protection, and will generally protect against most pistol calibers, including many law enforcement ammunitions, and against many higher powered revolvers.
