DIVISION OF HIGHWAYS

SPECIAL PROVISION

FOR

STATE PROJECT NUMBER: _____

FEDERAL PROJECT NUMBER: _____

**SECTION 315
TRAIL SURFACE AGGREGATE (TSA)**

ADD THE FOLLOWING SECTION:

315.1-DESCRIPTION:

This work shall consist of furnishing, spreading, and compacting (TSA) on a prepared surface in accordance with these Specifications and in reasonably close conformity with the lines, grades, thicknesses, and typical cross sections shown on the Plans or established by the Engineer.

315.2-MATERIALS:

TSA Shall be crushed limestone or sandstone or any combination of these materials uniformly blended to conform to the quality requirements of Table 315.2A, gradation requirements of Table 315.2B. Test Methods for quality requirements on Table 315.2C.

Table 315.2A Quality Requirements

Deleterious Material, Percent max	Los Angeles Abrasion, Percent Max.	Liquid Limit Max,	Plastic Limit Max	pH Between
5%	40%	12 Max	6 Max	6 to 12

Plasticity Index	AASHTO T 90
pH	EPA 9045C

315.2.1-Quality Control Testing: Quality control of the TSA material is the responsibility of the Contractor as specified in section 106.1.

The Contractor shall maintain necessary equipment and qualified personnel to perform all sampling and testing necessary to determine the magnitude of the various properties of the material governed by the Specifications and shall maintain these properties within the limits of the Specifications.

The Contractor shall submit a quality control plan detailing the methods by which the quality control program will be conducted. This plan, prepared in accordance with the guidelines set forth in the appropriate portions of MP 307.00.50 and MP 717.04.21, shall be submitted to the Engineer at the preconstruction conference. The work shall not begin until the plan is reviewed for conformance with the contract documents.

315.2.2-Acceptance Testing: Acceptance sampling and testing of TSA materials base course is the responsibility of the Division, except for furnishing the necessary materials. Quality control sampling and testing performed by the Contractor may be used by the Division for acceptance.

315.2.3-Sampling and Testing: Frequency of sampling and testing shall be in accordance with the Contractor's quality control plan. The minimum frequencies shall be as indicated in applicable portions of MP 307.00.50. Crushed aggregate shall be sampled in accordance with MP 700.00.06, Aggregate Sampling Procedures.

315.2.4-Acceptance Procedure: Material conforming to the specification requirements will be accepted at full contract price. Material failing to comply with the quality requirements of Table 315.2A shall not be incorporated into the work.

Acceptance of TSA material for compaction and for gradation shall be in accordance with appropriate portions of subsection 307.2.4.1.

315.2.4.1-Acceptance Plan:

315.2.4.1.1-Compaction: The contractor shall use a vibratory roller with a minimum weight of three (3) tons. The initial pass of the TSA material shall be in the static mode.

The Contractor shall notify the Engineer prior to construction of the test strips as set forth in MP 700.00.24. The Contractor shall perform quality control compaction tests and record the data on the forms as set forth in the Materials Procedures (MPs). The test data shall be available to the Engineer at the time of testing or as indicated in the Contractor's quality control plan.

Maximum density, quality control density and acceptance density for crushed aggregate base course and aggregate subbase shall be determined in accordance with MP 700.00.24.

The TSA material shall be compacted to the target percentage of dry density of 95%. The maximum required dry density shall be determined in accordance with MP 700.00.24 Part I on a control test strip having a compacted thickness of six (6) inches or less. The in-place dry density of each base course layer shall be determined in accordance with MP 700.00.24 Part II. The maximum layer thickness, other than the test strip(s), shall not exceed six (6) inch or as specified in the project documents. The density of layers with thickness that differ from the thickness of the control test strip(s) shall be subject to the density requirements determined by the control test strip

315.2.4.1.2-For Gradation: The material shall be sampled and tested in accordance with Section 307.2.3. Acceptance for gradation shall be based on test results of consecutive random samples from a lot. A subplot is the quantity of material represented by a single gradation test as defined in MP 700.00.06. A lot shall be considered the quantity of material represented by an average test value, not to exceed five sublots. In the case where only one sample is needed for the total plan quantity, the subplot shall be considered the lot.

The average shall start on the second sample result. The average is continued for the third through fifth sample result, averaging all previous sample results. Thereafter, only the last consecutive five sample results will be averaged, i.e., second test value through sixth test value, third test value through seventh test value, and so forth as defined in MP 300.00.51.

When the test value of a lot and the test value of the last subplot, or when the last three consecutive individual test values of a lot fall outside the gradation limits of Table 704.6.2A, the lot of material represented will be considered nonconforming to the extent that the last of its sublots are nonconforming. When this occurs, the last subplot shall have *its price adjusted in accordance with Table 307.9.1.*

315.2.4.2-Degree of Nonconformance: When a subplot of material is to have its price adjusted, the percentage point difference between the nonconforming test value and the specification limit shall be determined for each sieve size determined to be nonconforming, and this value shall be multiplied by its appropriate multiplication factor as set forth in Table 307.2.4.2 to determine the degree of nonconformance on that sieve.

Table 307.2.4.2

Nonconforming Sieve Size	Multiplication Factor
1/2"	1.0
3/8"	1.0
#4	1.0
#8	1.5
#16	2.0
#200	2.5

The total measure of nonconformance of an individual subplot is the sum of all nonconformances on the various sieve sizes of that subplot.

When the total degree of nonconformance has been established and it is 12.0 or less, the material will be paid for at an adjusted contract price as specified in Table 307.9.1.

When the degree of nonconformance is greater than 12.0, the nonconforming subplot shall be resolved on an individual basis, requiring a special investigation by the Engineer to determine the appropriate course of action to be followed. Pending resolution of the matter, additional lifts of base or pavement shall not be placed over the nonconforming material.

315.2.4.4-TSA Base Material: The TSA base material shall be Class 1 or Class 10 material placed and compacted in accordance with Section 307 of the West Virginia Specifications. When a crown or cross slopes are in the plans the crown shall be established in the base layer and reflected in the TSA layer.

CONSTRUCTION METHODS

315.3-EQUIPMENT:

A small paver or a combination of machines, or equipment which will handle the material without segregation and produce the completed TSA meeting these Specifications for handling, spreading, moistening, mixing and compacting may be used when approved by the Engineer.

315.3.1-PLACEMENT: Material shall be placed starting from the furthest point from the source working backward to the source. The TSA material shall be placed by means of a paver. If the working site does not permit the use of a paver the Engineer may permit the contractor to dump and spread the TSA material. At no time shall the TSA material be overworked to the point of segregation. The moisture content of the TSA material prior to and during compaction shall be uniformly distributed throughout each layer. TSA materials shall have placement moisture content less than or equal to the optimum moisture content. Backfill material with a *placement moisture content in excess of the optimum moisture content shall be removed and reworked until the moisture content is uniformly acceptable throughout the entire lift.* The moisture content of the TSA shall be maintained at a level sufficient to facilitate compaction.

315.3.2-TOLERANCE:

315.3.2.1 Surface Tolerance: The completed surface shall not vary more than 3/8 inch above or below Plan grade, nor more than 3/8 inch from a straightedge ten (10) feet long applied parallel to the centerline of the pavement. Deviations shall be corrected by scarifying, adding additional approved aggregate if necessary, reshaping, and recompacting.

Shoulder surfaces on resurfacing projects adjacent to concrete or asphalt pavement do not need to be checked with a straightedge.

315.3.2.2-Thickness Tolerance: The base course shall be checked for proper thickness after final compaction. The Contractor shall refill all test holes with approved *base course material and adequately recompact the material.*

Any deficiency in total thickness of the base course in excess of ½ inch shall be corrected.

315.3.2.3-Maintenance: The surface of the completed base shall be protected against the loss of fine material by the addition of moisture when necessary, and it shall be maintained in a satisfactory and smooth condition until such time that it is accepted.

315.4-METHOD OF MEASUREMENT:

315.4.1-Cubic Yard Measurement: The quantity of work done will be the number of cubic yards measured in place. Any additional work beyond the scope of the original Plans but authorized by the Engineer will be measured in cubic yards in place and paid for at the unit bid price for this item, subject to the provisions of 104.2 and 109.2.

TSA constructed outside the lines, dimensions, and cross sections shown on the Plans or designated will not be measured for payment.

315.4.2-Ton Measurement: The quantity of work done will be the number of tons of material complete in place and accepted.

The number of tons shall be determined by the total of the weights shown on receipted railroad freight bills when materials are shipped by rail; by actual measured displacement of barges certified by the producer when water shipments are made, providing materials delivered by the methods are not stockpiled or stored; or determined by the Contractor from the total of weigh slips for each vehicle load weighed on an approved standard scale or from digital printout slips from an automatic batching plant, and certified by the Contractor to be correct.

Truck scales shall be provided by the producer or Contractor, except that truck scales are not required where the material is weighed at properly calibrated automatic batching plant facilities which are equipped with digital print-out equipment. The scales shall be of sufficient size and capacity to weigh the heaviest loaded trucks that are used for delivery of the material.

All truck scales shall be mounted on solid foundations, which will insure their remaining plumb and level. All truck scales shall be inspected and sealed by the West Virginia Division of Labor, Bureau of Weights and Measures, or other appropriate agencies of the State or its political subdivisions. The Division may, at its option, accept inspection and sealing by out of state agencies when the material is weighed outside West Virginia.

The producer shall provide a weigh person. The weigh person shall certify that the weight of the material, as determined from the digital printout of the weights, is correct.

Each truck shall be weighed empty prior to each load, except at automatic batch plants approved to operate without truck scales. A digital recorder shall be required on all truck scales. The digital recorder shall produce a printed record of the gross, tare and net weights, and the time, date, truck identification and project number. Provision shall be made for constant zero compensation and further provision shall be made so that the scales may not be manually manipulated during the printing process. The system shall be interlocked so as to allow printing only when the scale has come to rest.

In case of a breakdown of the automatic equipment, the Engineer may permit manual operation for a reasonable time, normally not to exceed 48 hours, while the equipment is being repaired.

315.5-BASIS OF PAYMENT

The quantities, determined as provided above, will be paid for at the contract unit price bid for the items listed below, which price and payment shall be full compensation for furnishing all the materials including water for compaction, scarification and manipulation of existing surface, and doing all the work prescribed in a workmanlike and acceptable manner, including all labor, tools, equipment, supplies, and incidentals necessary to complete the work.

315.5.1-Price Adjustment: Aggregates not conforming with the gradation requirements as described in 307.2.4.1 will be paid for at the adjusted contract price based on the degree of nonconformance as specified in Table 315.6.1.

TABLE 315.6.1

Adjustment of Contract Price for Gradation not Within Specifications	
Degree of Nonconformance	Percent of Contract Price to be Reduced
1.0 to 3.0	2
3.1 to 5.0	5
5.1 to 8.0	8
8.1 to 12.0	12
12.1 to 16.0	16
Greater than 16	*
