PART 2 OPERATING ENVIRONMENT

2.1 **Location:**

Directions to the Drews Creek "A" Highwall:

Travel West on Route 3 (Harper Road) from Beckley towards Naoma. Just past the Naoma Post Office, turn left onto County Route 10/5. Travel on this road for approximately 2 Miles. Turn right onto Drews Creek Road. The road is marked as Drews Creek Road. Travel on this road for approximately 3.5 miles. This is a dirt road after about 2.5 miles. Stay on the dirt road past several old homes and one church on the left and right side of the road. Where the road forks in three places - take the road up a steep hill. The slide is visible on the left side of the creek and the highwall and portals are at the top of the road, where it meets the old contour strip bench. The portals are directly behind an active gas well at the base of the highwall.

Location Map is attached (Attachment A1).

2.2 **Background:**
Firms are to be licensed Architectural/Engineering Firms (A/E) and should be familiar with, and have a successful track record of design of similar projects. The anticipated contract will be for "full-service" A/E design. Aspects of the design are to include, but not be limited to, Civil, Structural, Geological and Hydrological.

*The successful A/E will be responsible for **Design** of the following:*

Drews Creek "A" Highwall:

DH – The highwall is approximately 5,400 feet long, 80 feet wide, and 40 feet high. The highwall consists of fractured sandstone and shale strata. The area above the highwall and its bench are easily accessible by any type of vehicle due to the presence of several gas, power, and mining company roads. There is recent

evidence that individuals use this bench with motorized vehicles and also for foot traffic.

DS – The slide started below a pre-law surface mine bench and consists mostly of “shoot and shove” material. A local resident stated that he saw a large stream of water flowing out of the toe for several days during the initial stages. The toe of the slide is located next to the stream bank. Large boulders and very large trees have fallen over and are obstructing the stream flow. This slide is approximately six (6) acres in size. Most of the six acres is exposed soil, eroding very fast during rain events. Approximately 0.25 miles below this slide is a community of approximately 50 people living in close proximity to the creek. The slide has the potential of impounding water (during heavy rain events), in the waterway, and therefore, the potential to flood these 50 people and homes exists.

P – Two (2) partially collapsed draining mine portals exist on the site. One portal is 4 feet wide and 3 feet high; the second is 6 feet wide and 3 feet high. Both of these portals have mine drainage seeping from the partially collapsed openings. These portals are located on the above mentioned highwall bench, and are easily accessible by humans.

Preliminary design documents will be due 90 days from the issuance of the Purchase Order.
