OPERATING ENVIRONMENT

2.1 **Location:**

Directions to Simpson Creek Highwall, Tipple & Portals:

From Philippi travel 3.1 miles along US 119 north and turn left on State Route 76 West. Travel 2.8 miles and turn right on Point Pleasant Road (County Route 77/3) travel 50 feet and turn left. Proceed up the hill/driveway for 0.1 mile to the metal gate at the old haul road and park. Follow the haul road to the site.

2.2 **Background:**

Firms are to be licensed Architectural/Engineering Firms (A/E) and should be familiar with, and have a successful track record of design of similar projects. The anticipated contract will be for "full-service" A/E design. Aspects of the design are to include, but not be limited to, Civil, Structural, Geological and Hydrological.

*The successful A/E will be responsible for **Design** of the following:*

Located at site 1 are 700 LF of highwall with an average height of 20 feet, an estimated six collapsed portals, the standing remains of a tippie, collapsed remains of two loadouts, refuse, house hold trash, abandoned vehicles, and metal. The face is mostly sloughed in and partially vegetated with excessive amounts of loose material mass wasting from the face. Several large trees are leaning over the edge due to material eroding from the face of the highwall. All of the portals are completely collapsed with large discharges. Flows ranged from an estimated 25 to 75 gpm; pH ranged from 6.4 to 7.4 and Fe was greater than 10 mg/L. White precipitate in two of the discharge channels suggests high levels of aluminum in solution. Most of the portals had water impounded in front of them. One of the portals has the remains of an old air intake with the fanhouse remains partially submerged in iron precipitate. Iron has precipitated several feet deep in front of three of the portals making the areas hazardous should anyone try and cross. The drainage flows toward homes, SR 76, and farm fields below. The ruins of a standing tippie measured 20'W x 40'L x 25' H. The remains appear very unstable and the structure has shown signs of collapsing. Additionally, large amounts of mine drainage flow around and through the base of the tippie adding to the deterioration process. The derelict remains of two collapsed loadouts are also present; one is mostly decomposed with a few vertical beams still standing and the other is completely collapsed with a large pile of timber remaining. A 1/3rd acre, sparsely vegetated refuse pile is located on site. The out slope near the loadout (the one with vertical beams) is very steep and unstable. Located on the bench are several old vehicles, scattered metal, tires and household trash in various locations.

Located at site 2 are five collapsed portals and a series of three small surface impoundments. The face is mostly vertical, unvegetated and composed of large fractured rock. An ATV trail is located within 10 feet of the base of the highwall. All of the portals (5 total) are completely collapsed with large discharges. Flows ranged from and estimated 30 to 75 gpm; pH ranged from 5.8 to 6.8 and iron was greater than 10 mg/L. Three small impoundments are located in front of the portals. These impoundments range in size from 180 feet long x 30 feet wide to 40 feet long x 20 feet wide. An ATV trail crosses the outlets and parallels within 4 feet from the edge of the impoundments. Drainage from the portals flows near a home and under State Route 76.

Located at site 3 are three portals. These portals are completely collapsed and discharging a combined flow of approximately 75 gpm. The discharge in front of the portals has created a large area of iron saturated ground. This area measured 200 feet long and 40 feet wide. Drainage from the portals flows near homes and under State Route 76.

Located at site 4 are five collapsed portals. These portals are completely collapsed and discharge mine drainage in three locations off of the hill to the road ditch along State Route 76. Flows ranged from 15 to 25 gpm with pH measured at 5.5.

Located at site 5 are three collapsed portals discharging mine drainage through Galloway. Several residents stated that the increased flow from the portals causes the creeks to flood during high flow events because of the added mine water.

Preliminary design documents will be due 60 days from the issuance of the Purchase Order.

DEFINITIONS:

"Debt" means any assessment, premium, penalty, fine, tax or other amount of money owed to the state or any of its political subdivisions because of a judgment, fine, permit violation, license assessment, defaulted workers' compensation premium, penalty or other assessment presently delinquent or due and required to be paid to the state or any of its political subdivisions, including any interest or additional penalties accrued thereon.

"Debtor" means any individual, corporation, partnership, association, limited liability company or any other form or business association owing a debt to the state or any of its political subdivisions. "Political subdivision" means any county commission; municipality; county board of education; any instrumentality established by a county or municipality; any separate corporation or instrumentality established by one or more counties or municipalities, as permitted by law; or any public body charged by law with the performance of a government function or whose jurisdiction is coextensive with one or more counties or municipalities. "Related party" means a party, whether an individual, corporation, partnership, association, limited liability company or any other form or business association or other entity whatsoever, related to any vendor by blood, marriage, ownership or contract through which the party has a relationship of ownership or other interest with the vendor so that the party will actually or by effect receive or control a portion of the benefit, profit or other consideration from performance of a vendor contract with the party receiving an amount that meets or exceed five percent of the total contract amount.

EXCEPTION: The prohibition of this section does not apply where a vendor has contested any tax administered pursuant to chapter eleven of this code, workers' compensation premium, permit fee or environmental fee or assessment and the matter has not become final or where the vendor has entered into a payment plan or agreement and the vendor is not in default of any of the provisions of such plan or agreement.

Under penalty of law for false swearing (*West Virginia Code §61-5-3*), it is hereby certified that the vendor affirms and acknowledges the information in this affidavit and is in compliance with the requirements as stated.
