SPECIFICATION SECTION 15430 – PLUMBING SPECIALTIES – RPZ BACKFLOW PREVENTER DEVICE

PART 1 – GENERAL

1.1 SUMMARY

- A. At Huntington Work Release Center, two (2) RPZ (Reduced Pressure Zone) Backflow Preventer Devices must be installed in front of the building between the sidewalk by the parking area and the front of the building. The area is ten (10') feet wide in front of building. The area is eighteen (18') feet between the front of the building and to the sidewalk. Please see attached drawing. A section of the existing pipe will have to be cut out and removed. The devices will have to be installed above ground. There will have to be 90 degree pipe fittings installed to the pipes and concrete will have to be poured in place to prevent the new pipe from blowing loose once the water is turned on. The devices will have to have a hot-box enclosure that is insulated and has a heater.
- B. There is a six inch (6") fire protection line and a three-quarter inch (¾") domestic line that the devices will be required to be connected too. The existing 6" pipe maybe transite pipe. The existing ¾" domestic line is most likely hard plastic or copper piping.
- C. All work that can be completed before the water has to be turned off should be done on both the fire protection and domestic lines. During the time period that the domestic water is turned-off for the tie-in, porta-johns will be required for the Facility if the tie-in will take longer than one (1) hour to complete. For the males, provide two (2) porta-johns. For the females, provide one (1) porta-john. The porta-johns will be placed in the fenced in area at the back of the Facility.

- D. New electrical circuit for the heaters inside the hot box enclosure will need to be installed from electrical panel located in the basement. Please note there are no other locations for new circuits in the Panel. Remove breaker #4, 20 amp, and install two half size 20 amp breakers in the same place. Reconnect the existing circuit for breaker #4. New circuit to be installed in 3/4" EMT conduit inside building and 3/4" PVC conduit outside building. Wire size to be #12 AWG if less than 100' and #10 AWG if longer than 100'. Number of wires for circuit to be three (3). Wire type to be THHN.
- E. In the front of the building, there is a sign that is 61-1/2" wide that is supported by two (2) 4" x 4" boards. On the sign there are two existing lights (attached to the sign). The electrical feed will have to be removed back to the receptacle on the front of the building. The sign, poles, and lights must be removed before construction and set aside until the devices and hot box enclosure is installed. Install the sign, poles, and lights in the area between the front side of the hot box enclosure and the side walk. Top of the 4" x 4" poles to be 79" above ground when re-installed. New electrical service for the lights to be feed from power to the heaters on the hot box enclosure.
- F. In the area where the devices and the hot box enclosure will be installed, there are existing shrubs and mulch that will need to be removed before construction. The shrubs will have to be relocated and replanted to a different area that is not in the construction zone. The existing mulch will need to be raked back away from the construction zone. Once construction is completed, felt paper and mulch must be spread back over the construction area around the hot box enclosure.
- G. There are solar power lights in the area close to the sidewalk. If any of the solar lights are removed for construction, they must be installed after construction is completed.
