WHEN RESPONDING TO SOLICITATION, INSERT NAME AND ADDRESS IN SPACE ABOVE LABELED 'VENDOR'

Addendum Number: 1

The purpose of this addendum is to modify the solicitation identified as COR61568 ("Solicitation") to reflect the change(s) identified and described below.

Applicable Addendum Category:

- Modify bid opening date and time
- Modify specifications of product or service being sought
- Attachment of vendor questions and responses
- Attachment of pre-bid sign-in sheet
- Correction of error
- Other

Description of Modification to Solicitation:

1. Responses to vendor questions attached.
2. Pre-bid sign-in sheets attached.
3. The bid opening has moved from 10/03/2013 to 10/09/2013. The bid opening time remains at 1:30 pm.

Additional Documentation: Documentation related to this Addendum (if any) has been included herewith as Attachment A and is specifically incorporated herein by reference.

Terms and Conditions:

1. All provisions of the Solicitation and other addenda not modified herein shall remain in full force and effect.
2. Vendor should acknowledge receipt of all addenda issued for this Solicitation by completing an Addendum Acknowledgment, a copy of which is included herewith. Failure to acknowledge addenda may result in bid disqualification. The addendum acknowledgement should be submitted with the bid to expedite document processing.

ATTACHMENT AQuestions:

Q1: Do you know if they will be marking the basketball court with the appropriate lines?

A1: The basketball court will not be painted or marked.

Clarifications:

C2: Remove Section 1.01, Part C – Basketball Court in its entirety and replace with the following:

C. Basketball Court:

- 1) The new basketball court will be located to the front left side of building 'J'. There are two existing volleyball nets located to the left side of building 'J'. The new basketball court will be located in the area where the closest volleyball net is located to building 'J'. The DOC will remove the existing two (2) volleyball poles and net.
- 2) The new basketball court must be thirty-six (36') feet wide by sixty-five (65') feet long.
- 3) The DOC has purchased the two (2) basketball hoops, which also includes the backboards, nets, and poles. The contractor is to install the basketball hoops and assorted items previously mentioned. The DOC will turn over to the contractor for installation. The top of the basketball hoop must be ten (10') above finished grade. The basketball hoop poles must be installed three (3') feet deep with concrete poured around the poles. The concrete must be one (1') foot in diameter and three (3') feet deep. Poles must not be easily pushed over.
 - a) Site preparation for new basketball court:
 1. For the area where the basketball court will be located, the contractor must remove eleven (11") inches of existing soil for the thirty-six (36') feet wide by sixty-five (65') feet long area. Ground must be compacted. Any soil that is removed, the DOC has a location onsite that the spoils can be dumped.

- b) Installation of new base:
1. A new hard base made of number fifty-seven (#57) crush and run gravel must be put down and compacted to six inches (6") in height for the entire thirty-six (36') feet wide by sixty-five (65') feet long area. The contractor cannot lesson the thickness of the new base.
- c) Installation of asphalt:
1. For the thirty-six (36') feet wide by sixty-five (65') feet long area, a new course asphalt pavement (base #2) must be put down over top the new base. The course asphalt pavement base must be three (3") inches thick in height after rolled and compacted. A new wearing layer of asphalt pavement must be put down over top the course asphalt pavement base. The wearing asphalt layer must be two (2") inches thick after rolled and compacted.
 2. The entire thirty-six (36') feet wide by sixty-five (65') feet long area finished product must be even with the top of the existing ground. There must not be any tripping hazards on the sides of the new walking track.
 3. The new basketball court must be level and no standing water should puddle on top of the basketball court.
 4. The contractor cannot lesson the thickness of the previous stated amounts of asphalt pavement in items c(1). If the contractor must adjust the amount of gravel and soil to be removed to be more than what is specified previously, it is the contractor responsibility.

C3: Remove Section 1.01, Part D – Walking Track (Alternate #1) in its entirety and replace with the following:

D. Walking Track (Alternate #1)

- 1) In front of building 'J' there is an existing concrete sidewalk. Around the large field area, there is a gravel walkway that links to two (2) different areas of the existing concrete sidewalk. The existing gravel walkway is an estimated three (3") inches to six (6") inches thick. This is just an estimate and the DOC is not responsible for any misinformation in this measurements.

- 2) The new asphalt walking track will be located in the same area where the gravel walking track is located. The new walking track will be six hundred-eighty (680') feet long and eight (8') feet wide.
- a) Site preparation for new walking track:
1. At the end of the walking track closest to the main building, the contractor must remove eleven (11") inches of the existing gravel and soil below the existing normal ground level for the six hundred eighty (680') feet that must be at least eight (8') feet wide. Ground must be compacted. Any gravel and soil that is removed, the DOC has a location onsite that the spoils can be dumped. If all possible, please separate the gravel and soil.
- b) Installation of new base:
1. A new hard base made of number fifty-seven (#57) crush and run gravel must be put down and compacted to six inches (6") inch height for the entire six hundred eighty (680') feet by eight (8') feet wide. The contractor cannot lesson the thickness of the new base.
- c) Installation of asphalt:
1. For the six hundred eighty (680') feet by eight (8') feet wide, a new course asphalt pavement (base #2) must be put down over top the new base. The course asphalt pavement base must be three (3") inches thick in height after rolled and compacted. A new wearing layer of asphalt pavement must be put down over top the course asphalt pavement base. The wearing asphalt layer must be two (2") inches thick after rolled and compacted.
 2. The entire six hundred eighty (680)' feet long by eight (8') feet wide track finished product must be even with the top of the existing ground. There must not be any tripping hazards on the sides of the new walking track.
 3. The contractor cannot lesson the thickness of the previous stated amounts of asphalt pavement in items c(1) and c(2). If the contractor must adjust the amount of gravel and soil to be removed to be more than what is specified previously, it is the contractor responsibility.

C4: Contractor must use tac spray between the new course asphalt pavement (base #2) and the wearing asphalt layer.

Other Information:

1. Pre-bid sign in sheets attached.
2. The bid opening has been moved from 10/3/2013 to 10/09/2013. The bid opening time remains at 1:30 pm.
3. No additional questions will be accepted on this RFQ.
